The MBCA recognizes that a share split or a share dividend in the same class of shares does not affect the value of the corporation or the shareholders' wealth, because no assets have been transferred from the corporation to the shareholders. The effect is like that produced by taking a pie with four pieces and dividing each piece in half. Each person may receive twice as many pieces of the pie, but each piece is worth only half as much. The total amount received by each person is unchanged.

Therefore, the MBCA permits share splits and share dividends of the same class of shares to be made merely by action of the directors. The directors merely have the corporation issue to the shareholders the number of shares needed to effect the share dividend or split. The corporation must have a sufficient number of authorized, unissued shares to effect the share split or dividend; when it does not, its articles must be amended to create the required number of additional authorized shares.

Reverse Share Split A *reverse share split* is a decrease in the number of shares of a class such that, for example, two shares become one share. Most of the state corporation statutes require shareholder action to amend the articles to effect a reverse share split because the number of authorized shares is reduced. The purpose of a reverse share split is usually to increase the market price of the shares.

A reverse share split may also be used to freeze out minority shareholders. By setting a high reverse split ratio, a majority shareholder will be left with whole shares while minority shareholders will have only fractional shares. Corporation law allows a corporation to repurchase fractional shares without the consent of the fractional shareholders. Freeze-outs are discussed in Chapter 42.

Share Repurchases

Declaring a cash or property dividend is only one of the ways in which a corporation may distribute its assets. A corporation may also distribute its assets by repurchasing its shares from its shareholders. Such a repurchase may be either a *redemption* or an *open-market repurchase.*

The right of **redemption** (or a call) is usually a right of the corporation to force an *involuntary* sale by a shareholder at a fixed price. The shareholder must sell the shares to the corporation at the corporation's request; in most states, the shareholder cannot force the corporation to redeem the shares.

Under the MBCA, the right of redemption must appear in the articles of incorporation. It is common for a corporation to issue preferred shares subject to redemption at the corporation's option. Usually, common shares are not redeemable.

In addition, a corporation may repurchase its shares **on the open market.** A corporation is empowered to purchase its shares from any shareholder who is willing to sell them. Such repurchases are usually *voluntary* on the shareholder's part, requiring the corporation to pay a current market price to entice the shareholder to sell. However, a corporation may force a shareholder with a fractional share to sell that fractional share back to the corporation.

A corporation's repurchase of its shares may harm creditors and other shareholders. The MBCA requires a corporation repurchasing shares to meet tests that are the same as its cash and property dividend rules, recognizing that financially a repurchase of shares is no different from a dividend or any other distribution of assets to shareholders.

Ensuring a Shareholder's Return on Investment

Obtaining a return on her investment in a corporation is important to every shareholder. In a publicly held corporation, a shareholder may receive a return in the form of dividends and more significantly an increase in the value of her shares, which she may sell in the public securities markets.

For a shareholder in a close corporation, obtaining a return on his investment is often a problem, especially for minority shareholders. The majority shareholders dominate the board of directors, who usually choose not to pay any dividend to shareholders. And since the close corporation has no publicly traded shares, minority shareholders have little if any ability to sell their shares. The majority shareholders in a close corporation don't suffer the same effect, because they are usually officers and employees of the corporation and receive a return on their investment in the form of salaries.

What can a minority shareholder do? Rarely will a court, as in *Dodge v. Ford,* require the payment of a dividend. The only way a minority shareholder can protect himself is to bargain well prior to becoming a shareholder. For example, a prospective minority shareholder may insist on a mandatory dividend, that he be employed by the corporation, or that the corporation or majority shareholders be required to repurchase his shares upon the occurrence of certain events, such as the failure of the corporation to go public after five years. There is a limit to what a minority shareholder may demand, however, for the majority shareholders may refuse to sell shares to a prospective shareholder who asks too much.

Shareholders' Lawsuits

Shareholders' Individual Lawsuits

A shareholder has the right to sue in his own name to prevent or redress a breach of the shareholder's contract. For example, a shareholder may sue to recover dividends declared but not paid or dividends that should have been declared, to enjoin the corporation from committing an *ultra vires* act, to enforce the shareholder's right of inspection, and to enforce preemptive rights.

Shareholder Class Action Suits

When several people have been injured similarly by the same persons in similar situations, one of the injured people may sue for the benefit of all the people injured. Likewise, if several shareholders have been similarly affected by a wrongful act of another, one of these shareholders may bring a **class action** on behalf of all the affected shareholders.

An appropriate class action under state corporation law would be an action seeking a dividend payment that has been brought by a preferred shareholder for all of the preferred shareholders. Any recovery is prorated to all members of the class.

A shareholder who successfully brings a class action is entitled to be reimbursed from the award amount for his *reasonable expenses,* including attorney's fees. If the class action suit is unsuccessful and has no reasonable foundation, the court may order the suing shareholder to pay the defendants' reasonable litigation expenses, including attorney's fees.

Shareholders' Derivative Actions

When a corporation has been harmed by the actions of another person, the right to sue belongs to the corporation and any damages awarded by a court belong to the corporation. Hence, as a general rule, a shareholder has no right to sue in his own name when someone has harmed the corporation, and he may not recover for himself damages from that person. This is the rule even when the value of the shareholder's investment in the corporation has been impaired.

Nonetheless, one or more shareholders are permitted under certain circumstances to bring an action for the benefit of the corporation when the directors have failed to pursue a corporate cause of action. For example, if the corporation has a claim against its chief executive for wrongfully diverting corporate assets to her personal use, the corporation may not sue the chief executive because she controls the board of directors. Clearly, the CEO should not go unpunished. Consequently, corporation law authorizes a shareholder to bring a **derivative action** (or derivative suit) against the CEO on behalf of the corporation and for its benefit. Such a suit may also be used to bring a corporate claim against an outsider.

If the derivative action succeeds and damages are awarded, the damages ordinarily go to the corporate treasury for the benefit of the corporation. The suing

shareholder is entitled only to reimbursement of his reasonable attorney's fees that he incurred in bringing the action.

Eligible Shareholders Although allowing shareholders to bring derivative suits creates a viable procedure for suing wrongdoing officers and directors, this procedure is also susceptible to abuse. **Strike suits** (lawsuits brought to gain out-of-court settlements for the complaining shareholders personally or to earn large attorney's fees, rather than to obtain a recovery for the corporation) have not been uncommon. To discourage strike suits, the person bringing the action must be a current shareholder who also held his shares at the time the alleged wrong occurred. In addition, the shareholder must fairly and adequately represent the interests of shareholders similarly situated in enforcing the right of the corporation.

One exception to these rules is the **double derivative suit,** a suit brought by a shareholder of a parent corporation on behalf of a subsidiary corporation owned by the parent. Courts regularly permit double derivative suits.

Demand on Directors Since a decision to sue someone is ordinarily made by corporate managers, a shareholder must first **demand** that the board of directors bring the suit. A demand informs the board that the corporation may have a right of action against a person that the board, in its business judgment, may decide to pursue. Therefore, if a demand is made and the board decides to bring the suit, the shareholder may not institute a derivative suit.

Ordinarily, a shareholder's failure to make a demand on the board prevents her from bringing a derivative suit. Nonetheless, the shareholder may initiate the suit if she proves that a demand on the board would have been useless or **futile.** Demand is futile, and therefore **excused,** if the board is unable to make a disinterested decision regarding whether to sue. Futility may be proved when all or a majority of the directors are interested in the challenged transaction, such as in a suit alleging that the directors issued shares to themselves at below-market prices.

If a shareholder makes a demand on the board and it **refuses** the shareholder's demand to bring a suit, ordinarily the shareholder is not permitted to continue the derivative action. The decision to bring a lawsuit is an ordinary business decision appropriate for a board of directors to make. The business judgment rule, therefore, is available to insulate from court review a board's decision not to bring a suit.

Of course, if a shareholder derivative suit accuses the board of harming the corporation, such as by misappropriating the corporation's assets, the board's refusal will not be protected by the business judgment rule because the board has a conflict of interest in its decision to sue. In such a situation, the shareholder may sue the directors despite the board's refusal.

Shareholder Litigation Committees In an attempt to ensure the application of the business judgment rule in demand refusal and demand futility situations, interested directors have tried to isolate themselves from the decision whether to sue by creating a special committee of the board, called a *shareholder litigation committee* (SLC) (or independent investigation committee) whose purpose is to decide whether to sue. The SLC should consist of directors who are not defendants in the derivative suit, who are not interested in the challenged action, are independent of the defendant directors, and if possible, were not directors at the time the wrong occurred. Usually, the SLC has independent legal counsel that assists its determination whether to sue. Because the SLC is a committee of the board, its decision may be protected by the business judgment rule. Therefore, an SLC's decision not to sue may prevent a shareholder from suing.

Shareholders have challenged the application of the business judgment rule to an SLC's decision to dismiss a shareholder derivative suit against some of the directors. The suing shareholders argue that it is improper for an SLC to dismiss a shareholder derivative suit because there is a *structural bias.* That is, the SLC members are motivated by a desire to avoid hurting their fellow directors and adversely affecting future working relationships within the board.

When demand is **not futile,** most of the courts that have been faced with this question have upheld the decisions of special litigation committees that comply with the business judgment rule. The courts require that the SLC members be *independent* of the defendant directors, be *disinterested* with regard to the subject matter of the suit, make a *reasonable investigation* into whether to dismiss the suit, and act in *good faith.*

When demand is **futile or excused,** most courts faced with the decision of an SLC have applied the rule of the *Zapata* case, which follows.

Zapata Corp. v. Maldonado *430 A.2d 779 (Del. Sup. Ct. 1981)*

Zapata Corporation had a share option plan that permitted its executives to purchase Zapata shares at a below-market price. Most of the directors participated in the share option plan. In 1974, the directors voted to advance the share option exercise date in order to reduce the federal income tax liability of the executives who exercised the share options, including the directors. An additional effect, however, was to increase the corporation's federal tax liability.

William Maldonado, a Zapata shareholder, believed that the board action was a breach of a fiduciary duty and that it harmed the corporation. In 1975, he instituted a derivative suit in a Delaware court on behalf of Zapata against all of the directors. He failed to make a demand on the directors to sue themselves, alleging that this would be futile since they were all defendants.

The derivative suit was still pending in 1979, when four of the defendants were no longer directors. The remaining directors then appointed two new outside directors to the board and created an Independent Investigation Committee consisting solely of the two new directors. The board authorized the committee to make a final and binding decision regarding whether the derivative suit should be brought on behalf of the corporation. Following a three-month investigation, the committee concluded that Maldonado's derivative suit should be dismissed as against Zapata's best interests.

Zapata asked the Delaware court to dismiss the derivative suit. The court refused, holding that Maldonado possessed an individual right to maintain the derivative action and that the business judgment rule did not apply. Zapata appealed to the Supreme Court of Delaware.

Quillen, Justice We find that the trial court's determination that a shareholder, once demand is made and refused, possesses an independent, individual right to continue a derivative suit for breaches of fiduciary duty over objection by the corporation, as an absolute rule, is erroneous.

Derivative suits enforce corporate rights, and any recovery obtained goes to the corporation. We see no inherent reason why a derivative suit should automatically place in the hands of the litigating shareholder sole control of the corporate right throughout the litigation. Such an inflexible rule would recognize the interest of one person or group to the exclusion of all others within the corporate entity.

When, if at all, should an authorized board committee be permitted to cause litigation, properly initiated by a derivative stockholder in his own right, to be dismissed? The problem is relatively simple. If, on the one hand, corporations can consistently wrest bona fide derivative actions away from well-meaning derivative plaintiffs through the use of the committee mechanism, the derivative suit will lose much, if not all, of its effectiveness as an intracorporate means of policing boards of directors. If, on the other hand, corporations are unable to rid themselves of meritless or harmful litigation and strike suits, the derivative action, created to benefit the corporation, will produce the opposite, unintended result. It thus appears desirable to us to find a balancing point where bona fide shareholder power to bring corporate causes of action cannot be unfairly trampled on by the board of directors, but the corporation can rid itself of detrimental litigation.

We are not satisfied that acceptance of the business judgment rationale at this stage of derivative litigation is a proper balancing point. We must be mindful that directors are passing judgment on fellow directors in the same corporation and fellow directors, in this instance, who designated them to serve both as directors and committee members. The question naturally arises whether a "there but for the grace of God go I" empathy might not play a role. And the further question arises whether inquiry as to independence, good faith and reasonable investigation is sufficient safeguard against abuse, perhaps subconscious abuse.

We thus steer a middle course between those cases that yield to the independent business judgment of a board committee and this case as determined below, which would yield to unbridled shareholder control.

We recognize that the final substantive judgment whether a particular lawsuit should be maintained requires a balance of many factors—ethical, com-

mercial, promotional, public relations, employee relations, fiscal, as well as legal. We recognize the danger of judicial overreaching but the alternatives seem to us to be outweighed by the fresh view of a judicial outsider.

After an objective and thorough investigation of a derivative suit, an independent committee may cause its corporation to file a motion to dismiss the derivative suit. The Court should apply a two-step test to the motion. First, the Court should inquire into the independence and good faith of the committee and the bases supporting its conclusions. The corporation should have the burden of proving independence, good faith, and reasonable investigation, rather than presuming independence, good faith, and reasonableness. If the Court determines either that the committee is not independent or has not shown reasonable bases for its conclusions, or if the Court is not satisfied for other reasons relating to the process, including but not limited to the good faith of the committee, the Court shall deny the corporation's motion to dismiss the derivative suit.

The second step provides the essential key in striking the balance between legitimate corporate claims as expressed in a derivative stockholder suit and a corporation's best interests as expressed by an independent investigating committee. The Court should determine, applying its own independent business judgment, whether the motion should be granted. The second step is intended to thwart instances where corporate actions meet the criteria of step one, but the result does not appear to satisfy its spirit, or where corporate actions would simply prematurely terminate a stockholder grievance deserving of further consideration in the corporation's interest. The Court of course must carefully consider and weigh how compelling the corporate interest in dismissal is when faced with a non-frivolous lawsuit. The Court should, when appropriate, give special consideration to matters of law and public policy in addition to the corporation's best interests.

The second step shares some of the same spirit and philosophy of the statement of the trial court: "Under our system of law, courts and not litigants should decide the merits of litigation."

Judgment reversed in favor of Zapata. Case remanded to the trial court.

Litigation Expenses If a shareholder is successful in a derivative suit, she is entitled to a reimbursement of her reasonable litigation expenses out of the corporation's damage award. On the other hand, if the suit is unsuccessful and has been brought without reasonable cause, the shareholder must pay the defendants' expenses, including attorney's fees. The purpose of this rule is to deter strike suits by punishing shareholders who litigate in bad faith.

Defense of Corporation by Shareholder

Occasionally, the officers or managers will refuse to defend a suit brought against a corporation. If a shareholder shows that the corporation has a valid defense to the suit and that the refusal or failure of the directors to defend is a breach of their fiduciary duty to the corporation, the courts will permit the shareholder to defend for the benefit of the corporation, its shareholders, and its creditors.

Shareholder Liability

Shareholders have many responsibilities and liabilities in addition to their many rights. You have already studied shareholder liability when a shareholder pays too little consideration for shares, when a corporation is defectively formed, and when a corporation's veil is pierced. In this section, four other grounds for shareholder liability are discussed.

Shareholder Liability for Illegal Distributions

Dividends and other distributions of a corporation's assets received by a shareholder with *knowledge of their illegality* may be recovered on behalf of the corporation. Under the MBCA, primary liability is placed on the directors who, failing to comply with the business judgment rule, authorized the unlawful distribution. However, the directors are entitled to contribution

from shareholders who received an asset distribution knowing that it was illegally made. These liability rules enforce the limits on asset distributions that were discussed earlier in this chapter.

Shareholder Liability for Corporate Debts

One of the chief attributes of a shareholder is his *limited liability:* Ordinarily, he has no liability for corporate obligations beyond his capital contribution. Defective attempts to incorporate and piercing the corporate veil are grounds on which a shareholder may be held liable for corporate debts beyond his capital contribution. In addition, a few states impose personal liability on shareholders for *wages owed to corporate employees,* even if the shareholders have fully paid for their shares.

Sale of a Control Block of Shares

The per share value of the shares of a majority shareholder of a corporation is greater than the per share value of the shares of a minority shareholder. This difference in value is due to the majority shareholder's ability to control the corporation and to cause it to hire her as an employee at a high salary. Therefore, a majority shareholder can sell her shares for a *premium* over the fair market value of minority shares.

Majority ownership is not always required for control of a corporation. In a close corporation it is required, but in a publicly held corporation with a widely dispersed, hard-to-mobilize shareholder group, minority ownership of from 5 to 30 percent may be enough to obtain control. Therefore, a holder of minority control in such a corporation will also be able to receive a premium.

Current corporation law imposes no liability on any shareholder, whether or not the shareholder is a controlling shareholder, *merely* because she is able to sell her shares for a premium. Nonetheless, if the premium is accompanied by wrongdoing, controlling shareholders have been held liable either for the amount of the premium or for the damages suffered by the corporation.

For example, a seller of control shares is liable for selling to a purchaser who harms the corporation if the seller had or should have had a *reasonable suspicion* that the purchaser would mismanage or loot the corporation. A seller may be placed on notice of a purchaser's bad motives by facts indicating the purchaser's history of *mismanagement and personal use of corporate assets,* by the purchaser's *lack of interest in the physical facilities* of the corporation, or the purchaser's great *interest in the liquid assets* of the corporation. These factors tend to indicate that the purchaser has a short-term interest in the corporation.

The mere payment of a premium is not enough to put the seller on notice. If the *premium is unduly high,* however, such as a $50 offer for shares traded for $10, a seller must doubt whether the purchaser will be able to recoup his investment without looting the corporation.

When a seller has, or should have, a reasonable suspicion that a purchaser will mismanage or loot the corporation, he must not sell to the purchaser unless a *reasonable investigation* shows there is no reasonable risk of wrongdoing.

A few courts find liability when a selling shareholder takes or sells a *corporate asset.* For example, if a purchaser wants to buy the corporation's assets and the controlling shareholder proposes that the purchaser buy her shares instead, the controlling shareholder is liable for usurping a corporate opportunity.

A more unusual situation existed in *Perlman v. Feldman.*[1] In that case, Newport Steel Corporation had excess demand for its steel production, due to the Korean War. Another corporation, in order to guarantee a steady supply of steel, bought at a premium a minority yet controlling block of shares of Newport from Feldman, its chairman and president. The court ruled that Feldman was required to share the premium with the other shareholders because he had sold a corporate asset—the ability to exploit an excess demand for steel. The court reasoned that Newport could have exploited that asset to its advantage.

Shareholders as Fiduciaries

A few courts have recognized a fiduciary duty of controlling shareholders to use their ability to control the corporation in a fair, just, and equitable manner that benefits all of the shareholders proportionately. This is a duty to be **impartial**—that is, not to prefer themselves over the minority shareholders. For example, controlling shareholders have a fiduciary duty not to cause the corporation to repurchase their own shares or to pay themselves a dividend unless the same offer is made to the minority shareholder.

[1] 219 F.2d 173 (2d Cir. 1955).

One of the most common examples of impartiality is the **freeze-out** of minority shareholders, which is wrongful because of its **oppression** of minority shareholders. It occurs in close corporations when controlling shareholders pay themselves high salaries while not employing or paying dividends to noncontrolling shareholders. Since there is usually no liquid market for the shares of the noncontrolling shareholders, they have an investment that provides them no return, while the controlling shareholders reap large gains. Such actions by the majority are especially wrongful when the controlling shareholders follow with an offer to buy the minority's shares at an unreasonably low price.

Some courts have held that all close corporation shareholders—whether majority or minority owners—are fiduciaries of each other and the corporation, on the grounds that the close corporation is an incorporated partnership. Thus, like partners, the shareholders owe fiduciary duties to act in the best interests of the corporation and the shareholders as a whole.

Some statutes, such as the Statutory Close Corporation Supplement to the MBCA, permit close corporation shareholders to dispense with a board of directors or to arrange corporate affairs as if the corporation were a partnership. The effect of these statutes is to impose management responsibilities, including the fiduciary duties of directors, on the shareholders. In essence, the shareholders are partners and owe each other fiduciary duties similar to those owed between partners of a partnership.

In the following *Rexford Rand* case, the court found that a minority shareholder of a close corporation breached his fiduciary duty to the corporation by taking the name of the corporation, even though he did so in retaliation for his being frozen out of the corporation by the controlling shareholders.

Rexford Rand Corp. v. Ancel *58 F.3d 1215 (7th Cir. 1995)*

Rexford Rand Corporation was a chemical manufacturing firm incorporated in Illinois. A close corporation, its only shareholders were Selwyn Ancel, owner of 50 percent of the company, and his two sons, Gregory and Albert, each an owner of 25 percent of the company. Rexford Rand sold over 200 products to 5,800 customers in many states, generating annual sales of $1.75 million. The name "Rexford Rand" appeared on the corporation's business cards, product literature, labels, containers, packaging, invoices, stationery, advertising, and buildings. Rexford Rand sold primarily to repeat customers.

Albert was the president and CEO, Selwyn was chairman of the board, and Gregory the vice president and treasurer. Gregory's salary from the corporation was his sole source of income. In December 1991, Gregory was fired from his positions as vice president, treasurer, and employee of Rexford Rand. Gregory contended that he was frozen out by Albert and Selwyn. After his firing, he received neither salary nor other benefits from Rexford Rand. Rexford Rand had never paid dividends to its shareholders.

In 1993, Rexford Rand failed to file its annual report with the state of Illinois, and as a result, the corporation was administratively dissolved. The dissolution caused the name "Rexford Rand" to become available. Gregory discovered that the corporation had been dissolved but did not inform Albert or Selwyn. Instead, Gregory reserved the name Rexford Rand Corporation and filed articles of incorporation in the name of Rexford Rand Corporation. This action prevented Rexford Rand from reincorporating under its original name.

Rexford Rand sued Gregory on the grounds he breached his fiduciary duty as a minority shareholder in a close corporation. The trial court ordered the return of the original name to Rexford Rand and permanently enjoined Gregory from conducting business under the name Rexford Rand. Gregory appealed.

Flaum, Judge Generally, imposing a fiduciary duty on shareholders in a close corporation shields minority shareholders from oppressive conduct by the majority. Shareholders in close corporations have often invested a substantial percentage of their assets in the corporation, and their position in the corporation may provide them with their only source of income. Minority shareholders are vulnerable to freeze-outs or squeeze-outs, where the majority, for personal rather than legitimate business reasons, deprives the minority shareholder of his office, employment, and salary. Moreover, because no active market exists for the corporation's stock (and prospective purchasers may be wary of

buying into a small enterprise where dissension has already occurred), the minority stockholder most likely will not be able to sell his shares for any sum approaching their fair value. Consequently, an oppressed shareholder in a close corporation may seek a judicial remedy.

In addition, minority shareholders owe a duty of loyalty to a close corporation in certain circumstances. Minority shareholders have an obligation as de facto partners in the joint venture not to do damage to the corporate interests. Gregory acknowledges that, under normal circumstances, he would have owed a duty of loyalty to Rexford Rand. He argues, however, that his duty terminated after the alleged freeze-out, which deprived him of his position in the corporation as well as the benefits of his stock ownership.

The Illinois courts have never decided whether a freeze-out terminates a minority shareholder's duty of loyalty to a close corporation. Generally, a shareholder's fiduciary duty continues after he resigns as an officer, director, or employee of a close corporation. Only one court has addressed the question whether a freeze-out terminates a shareholder's fiduciary duty to a close corporation. In *J Bar H, Inc. v. Johnson* (1991), the Supreme Court of Wyoming stated that:

> where a shareholder/director/employee of a close corporation has been wrongfully terminated from employment with the corporation and has been unjustly prevented from fulfilling her function as a director or officer, she can no longer be considered to act in a fiduciary capacity for the corporation.

The court reasoned that the fiduciary duty not to compete depends on the ability to exercise the status which creates it. A minority shareholder who has been frozen out no longer exercises the influence over corporate affairs that gives rise to fiduciary duty. Consequently, no fiduciary duty should remain after a freeze-out.

While we understand the reluctance of the *J Bar H* court to place a fiduciary duty on a shareholder who has been frozen out, we do not believe that *J Bar H* achieves the optimal result. Gregory may have been the victim of oppressive activity, and he may have believed that reserving the Rexford Rand name for his own use would induce Albert and Selwyn to buy out his stock at a fair price. Gregory's desire to obtain a fair buyout is not itself objectionable; in fact, courts will occasionally order forced buyouts as a remedy for oppression. The method by which he sought to induce a settlement, however, is troubling. By appropriating the corporate name, Gregory threatened to cause serious damage to the well-being of the corporation, and to imperil Selwyn and Albert's investment as well as his own. The freeze-out did not deprive Gregory of his status as a shareholder, and as a shareholder in a close corporation, Gregory should have placed the interests of the corporation above his personal interests.

Illinois allows oppressed shareholders to seek a judicial remedy, and Gregory should have relied on his suit against Albert and Selwyn seeking damages. If shareholders take it upon themselves to retaliate any time they believe they have been frozen out, disputes in close corporations will only increase. Rather, if unable to resolve matters amicably, aggrieved parties should take their claims to court and seek judicial resolution.

Judgment for Rexford Rand affirmed.

Members' Rights and Duties in Nonprofit Corporations

In a for-profit corporation, the shareholders' rights to elect directors and to receive dividends are their most important rights. The shareholders' duty to contribute capital as promised is the most important responsibility. By contrast, in a nonprofit corporation, the members' rights and duties—especially in a mutual benefit corporation—are defined by the ability of the members to use the facilities of the corporation (as in a social club) or to consume its output (as in a cooperative grocery store) and by their obligations to support the enterprise periodically with their money (such as dues paid to a social club) or with their labor (such as the duty to work a specified number of hours in a cooperative grocery store).

Nonprofit corporation law grants a corporation and its members considerable flexibility in determining the

rights and liabilities of its members. The Model Nonprofit Corporation Act (MNCA) provides that all members of a nonprofit corporation have equal rights and obligations with respect to voting, dissolution, redemption of membership, and transfer of membership, unless the articles or bylaws establish classes of membership with different rights and obligations. For other rights and obligations, the MNCA provides that all members have the same rights and obligations, unless the articles or bylaws provide otherwise.

For example, a mutual benefit corporation that operates a golf country club may have two classes of membership. A full membership may entitle a full member to use all the club's facilities (including the swimming pool and tennis courts), grant the full member two votes on all matters submitted to members, and require the full member to pay monthly dues of $500. A limited membership may give a limited member the right to play the golf course only, grant the limited member one vote on all matters submitted to members, and require the limited members to pay monthly dues of $300 per month.

While members are primarily concerned about their consumption rights and financial obligations—such as those addressed above—that are embodied in the articles and the bylaws, they have other rights and obligations as well, including voting, inspection, and information rights similar to those held by shareholders of for-profit corporations.

Members' Meeting and Voting Rights

A nonprofit corporation must hold an annual meeting of its members and may hold meetings at other times as well. Members holding at least 5 percent of the voting power may call for a special meeting of members at any time.

All members of record have one vote on all matters submitted to members, unless the articles or bylaws grant lesser or greater voting power. The articles or bylaws may provide for different classes of members. Members of one class may be given greater voting rights than the members of another class. The articles or bylaws may provide that a class has no voting power.

Members may not act at a meeting unless a quorum is present. Under the MNCA, a quorum is 10 percent of the votes entitled to be cast on a matter. However, unless at least one-third of the voting power is present at the meeting, the only matters that may be voted on are matters listed in the meeting notice sent to members. The articles or bylaws may require higher percentages.

Members may elect directors by straight or cumulative voting and by class voting. The articles or bylaws may also permit members to elect directors on the basis of chapter or other organizational unit, by region or other geographical unit, or by any other reasonable method. For example, a national humanitarian fraternity such as Lions Club may divide the United States into seven regions whose members are entitled to elect one director. Members also have the right to remove directors they have elected with or without cause.

In addition to the rights to elect and to remove directors, members have the right to vote on most amendments of the articles and bylaws, merger of the corporation with another corporation, sale of substantially all the corporation's assets, and dissolution of the corporation. Ordinarily, members must approve such matters by two thirds of the votes cast or a majority of the voting power, whichever is less. This requirement is more lenient than the rule applied to for-profit corporations. Combined with the 10 percent quorum requirement, members with less than 7 percent of the voting power may approve matters submitted to members.

However, the unfairness of such voting rules is offset by the MNCA's notice requirement. A members' meeting may not consider important matters such as mergers and articles amendments unless the corporation gave members fair and reasonable notice that such matters were to be submitted to the members for a vote.

In addition, the MNCA requires approval of each class of members whose rights are substantially affected by the matter. This requirement may increase the difficulty of obtaining member approval. For example, full members of a golf country club may not change the rights of limited members without the approval of the limited members. In addition, the articles or bylaws may require third person approval as well. For example, a city industrial development board may not be permitted to amend its articles without the consent of the mayor.

Members may vote in person or by proxy. They may also have written voting agreements. However, member voting agreements may not have a term exceeding 10 years. Members may act without a meeting if the action is approved in writing by at least 80 percent of the voting power.

Member Inspection and Information Rights

A member may not be able to exercise his voting and other rights unless he is informed. Moreover, a member must be able to communicate with other members

to be able to influence the way they vote on matters submitted to members. Consequently, the MNCA grants members inspection and information rights.

Members have an absolute right to inspect and copy the articles, bylaws, board resolutions, and minutes of members' meetings. Members have a qualified right to inspect and copy a list of the members. The member's demand to inspect the members' list must be in good faith and for a proper purpose—that is, a purpose related to the member's interest as a member. Improper purposes include selling the list or using the list to solicit money. Members also have a qualified right to inspect minutes of board meetings and records of actions taken by committees of the board.

A nonprofit corporation is required to maintain appropriate accounting records, and members have a qualified right to inspect them. Upon demand, the corporation must provide to a member its latest annual financial statements, including a balance sheet and statement of operations. However, the MNCA permits a religious corporation to abolish or limit the right of a member to inspect any corporate record.

Distributions of Assets

Because it is not intended to make a profit, a nonprofit corporation does not pay dividends to its members. In fact, a nonprofit corporation is generally prohibited from making any distribution of its assets to its members.

Nonetheless, a mutual benefit corporation may purchase a membership and thereby distribute its assets to the selling member, but only if the corporation is able to pay its currently maturing obligations and has assets at least equal to its liabilities. For example, when a farmer joins a farmers' purchasing cooperative, he purchases a membership interest having economic value—it entitles him to purchase supplies from the cooperative at a bargain price. The mutual benefit corporation may repurchase the farmer's membership when he retires from farming. Religious and public benefit corporations may not repurchase their memberships.

Resignation and Expulsion of Members

A member may resign at any time from a nonprofit corporation. When a member resigns, generally a member may not sell or transfer her membership to any other person. A member of a mutual benefit corporation may transfer her interest to a buyer if the articles or bylaws permit.

It is fairly easy for a nonprofit corporation to expel a member or terminate her membership. The corporation must follow procedures that are fair and reasonable and carried out in good faith. The MNCA does not require the corporation to have a proper purpose to expel or terminate a member but only to follow proper procedures. The MNCA places no limits on a religious corporation's expulsion of its members.

The MNCA does not require a nonprofit corporation to purchase the membership of an expelled member, and—as explained above—permits only a mutual benefit corporation to purchase a membership. Members of mutual benefit corporations who fear expulsion should provide for repurchase rights in the articles or bylaws.

Derivative Suits

Members of a nonprofit corporation have a limited right to bring derivative actions on behalf of the corporation. A derivative action may be brought by members having at least 5 percent of the voting power or by 50 members, whichever is less. Members must first demand that the directors bring the suit or establish that demand is futile. If the action is successful, a court may require the corporation to pay the suing members' reasonable expenses. When the action is unsuccessful and has been commenced frivolously or in bad faith, a court may require the suing members to pay the other party's expenses.

Dissolution and Termination of Corporations

The MBCA provides that a corporation doing business may be dissolved by action of its directors and shareholders. The directors must adopt a dissolution resolution, and a majority of the shares outstanding must be cast in favor of dissolution at a shareholders' meeting. For a **voluntary dissolution** to be effective, the corporation must file articles of dissolution with the secretary of state. The dissolution is effective when the articles are filed.

A corporation may be also dissolved **without its consent** by administrative action of the secretary of state or by judicial action of a court. The secretary of state may commence an administrative proceeding to dissolve a corporation that has not filed its annual re-

port, paid its annual franchise tax, appointed or maintained a registered office or agent in the state, or whose period of duration has expired. **Administrative dissolution** requires that the secretary of state give written notice to the corporation of the grounds for dissolution. If, within 60 days, the corporation has not corrected the default or demonstrated that the default does not exist, the secretary dissolves the corporation by signing a certificate of dissolution.

The shareholders, secretary of state, or the creditors of a corporation may ask a court to order the involuntary dissolution of a corporation. Any **shareholder** may obtain judicial dissolution when there is a deadlock of the directors that is harmful to the corporation, when the shareholders are deadlocked and cannot elect directors for two years, or when the directors are acting contrary to the best interests of the corporation. The **secretary of state** may obtain judicial dissolution if it is proved that a corporation obtained its articles of incorporation by fraud or exceeded or abused its legal authority. **Creditors** may request dissolution if the corporation is insolvent.

Under the MBCA, a corporation that has not issued shares or commenced business may be dissolved by the vote of a majority of its incorporators or initial directors.

Many close corporations are nothing more than incorporated partnerships, in which all the shareholders are managers and friends or relatives. Recently, corporation law has reflected the special needs of those shareholders of close corporations who want to arrange their affairs to make the close corporation more like a partnership. The Close Corporation Supplement to the MBCA recognizes that a **close corporation shareholder** should have the same dissolution power as a partner. This section, like similar provisions in many states, permits the articles of incorporation to empower any shareholder to dissolve the corporation at will or upon the occurrence of a specified event such as the death of a shareholder.

Winding Up and Termination

A dissolved corporation continues its corporate existence but may not carry on any business except that appropriate to winding up its affairs. Therefore, winding up (liquidation) must follow dissolution. Winding up is the orderly collection and disposal of the corporation's assets and the distribution of the proceeds of the sale of assets. From these proceeds, the claims of creditors will be paid first. Next, the liquidation preferences of preferred shareholders will be paid. Then, common shareholders receive any proceeds that remain.

After winding up has been completed, the corporation's existence terminates. A person who purports to act on behalf of a terminated corporation has the liability of a person acting for a corporation prior to its incorporation. Some courts, like the court in the *Equipto* case, which follows, impose similar liability on a person acting on behalf of a dissolved corporation, especially when dissolution is obtained by the secretary of state, such as for the failure to file an annual report or to pay annual taxes.

Equipto Division Aurora Equipment Co. v. Yarmouth

950 P.2d 451 (Wash. Sup. Ct. 1998)

Jerry Yarmouth incorporated J & R Interiors, Inc., in 1990. Yarmouth was the sole shareholder, director, and officer of the corporation. Thomas Farrow was the registered agent of the corporation, and the corporation's registered office was Farrow's law office. In 1991, Thomas Farrow closed his firm. Some time in 1991, the Secretary of State mailed notice of the due date for payment of J & R's annual fee and filing of the annual report. Yarmouth alleges the 1991 notice was sent to J & R's registered office—Farrow's old business address—and was returned as undeliverable to the State. As a result of J & R's not receiving the notice, Yarmouth failed to pay J & R's annual fee and to file the annual report. On August 19, 1991, in light of the unpaid fee and missing annual report, the Secretary of State administratively dissolved J & R. Yarmouth claims that notice of the dissolution was sent to Farrow's old address and returned as undeliverable; thus, Yarmouth claims he never received notice of the dissolution.

Yarmouth operated J & R as an ongoing business after its dissolution. In fall 1992, J & R purchased a $20,000 workbench from Equipto Division Aurora Equipment. J & R failed to pay the bill on its December 1992 due date. Equipto sued Yarmouth personally in February 1994. Equipto supported its claim against

Yarmouth by showing that J & R had been dissolved in 1991. Yarmouth claimed this was his first notice of J & R's administrative dissolution. Yarmouth immediately contacted the Secretary of State, but was told he could not reincorporate the "old" J & R because more than two years had passed since its dissolution. Yarmouth incorporated a new corporation just days after he allegedly first learned of the dissolution. The "new" J & R had the same name, the same Washington business identification number, and the same federal tax identification number as the old.

The trial court granted summary judgment to Equipto, holding Yarmouth personally liable for the $20,000 debt. Yarmouth appealed, and the Court of Appeals affirmed. Yarmouth appealed to the Washington Supreme Court.

Dolliver, Justice No party contests that J & R was properly incorporated. Once incorporated, however, a corporation has yearly responsibilities to maintain its corporate status. A domestic corporation must pay an annual $50 license fee and it must file an annual report with the Secretary of State. Yarmouth does not dispute J & R failed to file its annual report or pay the $50 annual license fee in 1991, 1992, and 1993.

A corporation's failure to pay its annual fee or file its annual report is grounds for administrative dissolution of the corporation by the Secretary of State. Once a cause or dissolution arises, the corporation is notified and has 60 days to correct the condition. If the corporation fails to correct the condition, the Secretary of State will administratively dissolve the corporation. Once dissolved, the corporation continues its corporate existence but may not carry on any business except that necessary to wind up and liquidate its business and affairs and notify claimants.

The statutory scheme allows for the reinstatement of an administratively dissolved corporation. Under former Washington corporation law, in effect in 1994, a corporation could apply for reinstatement within two years of dissolution. [Now the period is five years.] If the Secretary of State found that the grounds for dissolution had been corrected, the Secretary of State would reinstate the corporation. Reinstatement related back to the effective date of the original dissolution, and the corporation resumed its business as if the dissolution had never occurred. J & R was administratively dissolved in August 1991, and this two-year reinstatement window closed in 1993. When Yarmouth attempted to reinstate J & R in 1994, the Secretary of State required Yarmouth to form a new corporation because the two-year reinstatement period had passed.

Since Yarmouth continued to conduct "ongoing" business after J & R was dissolved in August 1991, the Court of Appeals held his acts were *ultra vires,* and the corporation did not have the capacity to form the contract which gave rise to the debt. The court claimed no statutes addressed the question of Yarmouth's liability, so the court's analysis departed from the Washington Business Corporation Act (WBCA). Instead, the court applied the following common law agency principle:

> A person who purports to contract in the name of a principal that exists but lacks capacity to contract may be liable on the contract, but only if he or she . . . (b) knows or should know of the principal's lack of capacity, and the other contracting party does not.

The court found Yarmouth should have known J & R had been dissolved and should have known J & R could not carry on business after dissolution. Since he should have known of the principal's lack of capacity, the court found Yarmouth personally liable.

We decline to adopt the Court of Appeals' application of agency law to the issue of postdissolution liability. While the chapter on dissolution does not specifically address the question of a corporate officer's liability for conducting business as usual after the corporation has been dissolved, the WBCA does contain a general provision regarding personal liability. The main question presented in Yarmouth's petition for review is whether the WBCA resolves the legal question in this case, thereby precluding application of a common law agency analysis. Is Yarmouth's liability governed by Rev. Code of Washington section 23B.02.040?

RCW 23B.02.040 states:

> All persons purporting to act as or on behalf of a corporation, knowing there was no incorporation under this title, are jointly and severally liable for liabilities created while so acting except for any liability to any person who also knew that there was no incorporation.

The first phrase of the statute, "all persons purporting to act as or on behalf of a corporation," is straightforward. When Yarmouth conducted business with Equipto, he purported to act as or for J & R, a corporation. The third phrase, "are jointly and severally liable for liabilities created while so acting," also applies to Yarmouth. The exception contained in the statute does not apply to the facts of this case—no party has argued Equipto knew J & R was dissolved when the contracts were made.

The second phrase of the statute, "knowing there was no incorporation under this title," presents the greatest difficulty in this analysis. The first, and most obvious, scenario addressed by the phrase is a situation where one acts as a corporation before the corporation has been formed, or before "incorporation." This kind of liability usually involves a promoter's liability for preincorporation contracts.

Yarmouth urges us to read the second phrase to encompass the situation where one acts after a corporation has been dissolved. This argument makes some sense. While it is obvious incorporation cannot exist prior to the filing of corporate papers, there must also be some point at the end of a corporation's existence where there ceases to be incorporation. One can act as a corporation, while knowing there was no incorporation, both before the corporation has come into existence and after the corporation ceases to exist. The difficulty with this argument is that a corporation's existence does continue after dissolution, albeit in a very narrow, restricted sense.

A dissolved corporation continues its existence so as to wind up business affairs, but it is prohibited from conducting any other business. Yarmouth would have us apply the phrase "knowing there was no incorporation" to the point in time where a corporation is administratively dissolved. One could argue a corporation's "incorporation" conditionally ends at the time of dissolution, since the corporate existence continues for the sole purpose of winding up the business—for all other purposes the corporate form is meaningless. The dissolution is conditional because the corporation can be reinstated within five years (formerly two years) of dissolution, and reinstatement dates back to the date of dissolution as if the administrative dissolution had never occurred. Under this broad interpretation urged by Yarmouth, the RCW 23B.02.040 phrase, "knowing there was no incorporation," attaches upon the date of dissolution: All knowing, unauthorized acts after dissolution potentially incur personal liability.

Yarmouth allegedly had a good faith belief that his corporation had not been dissolved, and as soon as he discovered the dissolution, he corrected the deficiency and reestablished J & R as a corporation. In the inverse situation, one who knows a corporation is dissolved and continues to act as the corporation could be personally liable under RCW 23B.02.040.

We hold RCW 23B.02.040 does apply to post-dissolution transactions that violate the statutory restriction of winding up the corporate business. When we apply the actual knowledge requirement in RCW 23B.02.040 to this case, it becomes a question of fact as to whether Yarmouth knew J & R had been dissolved. The fact that he reestablished the corporation within days of allegedly learning of the dissolution supports his claim of lack of knowledge. On the other hand, the record is devoid of any documentary evidence supporting Yarmouth's claim that he never received any of the correspondence from the State, precluding us from resolving the factual issue. We reverse summary judgment for Equipto and remand for further fact-finding.

Judgment reversed in favor of Yarmouth. Remanded to the trial court.

Dissolution of Nonprofit Corporations

A nonprofit corporation may be dissolved voluntarily, administratively, or judicially. Voluntary dissolution will usually require approval of both the directors and the members. However, a nonprofit corporation may include a provision in its articles requiring the approval of a third person also. For example, such a third person might be a state governor who appointed some of the directors to the board of a nonprofit corporation organized to encourage industrial development in the state. The dissolution is effective when the corporation delivers articles of dissolution to the secretary of state

Concept Review

Roles of Shareholders and the Board of Directors

Corporate Action	Board's Role	Shareholders' Role
Day-to-Day Management	Selects officers; supervises management	Elect and remove directors
Issuance of Shares	Issues shares	Protected by preemptive right
Merger and Share Exchange	Adopts articles of merger or share exhange	Vote to approve merger or share exchange; protected by dissenters' rights
Amendment of Articles of Incorporation	Proposes amendment	Vote to approve amendment
Dissolution	Proposes dissolution	Vote to approve dissolution
Dividends	Declares dividends	Receive dividends
Board of Directors Harms Individual Shareholder Rights	Has harmed shareholders	Bring individual or class action against directors or the corporation
Directors Harm Corporation	Sues wrongdoing directors	Bring derivative action against wrongdoing directors

and the secretary of state files them. The dissolved corporation continues its existence, but only for the purpose of liquidating its assets and winding up its affairs.

The secretary of state may administratively dissolve a nonprofit corporation that fails to pay incorporation taxes or to deliver its annual report to the secretary of state, among other things. Minority members or directors may obtain judicial dissolution by a court if the directors are deadlocked, the directors in control are acting illegally or fraudulently, or the members are deadlocked and cannot elect directors for two successive elections, among other reasons.

Ethical and Public Policy Concerns

1. Why should shareholders in a close corporation be permitted to make a long-term voting agreement that permits them to control the corporation? Who benefits from shareholder voting agreements? Does the corporation benefit from such an agreement? Who is harmed by such an agreement? May such an agreement harm shareholders who are parties to the agreement? Is it possible for persons harmed by such agreements to protect themselves? Should there be a maximum legal time period for such agreements?

2. Are dissenters' rights to seek appraisal of their shares the only protection a shareholder needs when the corporation's board of directors proposes a merger harmful to the corporation? Should the shareholder be content with the fair value of his shares although he would rather stop the merger? How can shareholders use their dissenters' rights to deter the board of directors from effecting a merger harmful to the corporation?

3. Should a corporation be permitted to use a shareholder litigation committee (SLC) to decide the future of a shareholder derivative suit? Should the business judgment rule apply to the decision of a SLC, or should the *Zapata* two-step test apply? Do your answers depend on whether the shareholders are suing the directors or someone outside the corporation? How could it ever be in the best interests of a corporation not to sue directors who have personally profited by mismanaging the corporation?

4. Do you agree with the decision in the *Perlman v. Feldman* case, which is discussed on page 948? Do you agree that Newport Steel lost its ability to exploit excess demand for steel merely by being acquired by another corporation? After the acquisition, Newport became a subsidiary of the acquiring corporation. Thinking back to the discussion of piercing the corporate veil (Chapter 40, History and Nature of Corporations) and the discussion of conflicts of interests (Chapter 42, Management of Corporations), what price must the parent corporation pay when it buys steel from Newport?

Problems and Problem Cases

1. At the annual shareholders' meeting of Levisa Oil Corporation, management proposed to increase the number of directors to five from four. Quigley and one other shareholder owning together more than 50 percent of the outstanding shares objected to the proposal. When Quigley was ruled out of order by the chairman of the board, Quigley and the other opposing shareholder stormed out of the meeting. The remaining shareholders voted to elect a five-member board. The new board then voted to issue new shares, which were issued to the minority shareholders. The effect of the issuance was to give the minority shareholders majority ownership of the corporation. Quigley later objected to the actions taken at the meeting. Were the actions taken after Quigley left invalid due to the lack of a quorum?

2. Edward and Harry Hall each owned 50 percent of the shares of a corporation and were its only directors. Edward died leaving his shares to his wife, Margaret. In compliance with the bylaws, Harry filled the vacancy on the board of directors by appointing his wife, Florence. As directors, Harry and Florence elected each other president and vice president. Subsequently, Harry and Florence refused to call an annual shareholders' meeting, and Harry failed to attend when Margaret called a shareholders' meeting. Without a quorum, no action could be taken. As a result, Harry and Florence continued as directors and officers. Will Margaret be able to obtain a court order requiring Harry to attend a shareholders' meeting?

3. Texas International Airlines, Inc. (TIA), proposed a merger that would strengthen its financial position. The merger required the approval of each of the four classes of TIA shares. Jet Capital Corporation owned all the Class C shares. Jet Capital believed the merger would benefit TIA, but it would also cause Jet Capital to suffer adverse tax consequences due to Jet Capital's ownership of warrants to purchase TIA shares. The adverse tax impact could be eliminated by Jet Capital's exercising the warrants before the merger, but it required a cash payment of $3,000,000, which Jet Capital could not afford. In exchange for Jet Capital's agreeing to vote for the merger, TIA lent Jet Capital $3,000,000 at a below-market interest rate. Since the cash lent to Jet Capital was paid back to TIA when Jet Capital exercised the warrants, the loan had virtually no impact on TIA's financial position. The loan agreement was challenged as an illegal vote-buying agreement. Was it illegal?

4. Dale Waters was minority shareholder of Double L, Inc., a business engaged in manufacturing agricultural machinery and related products. When Double L became financially distressed, the directors agreed to sell to Pioneer Astro all of Double L's real property and equipment and to issue sufficient shares to make Pioneer Astro an 80 percent shareholder of Double L. To improve Double L's financial position, Pioneer Astro agreed to pay cash for the assets and shares and to loan money to Double L. To allow Double L to continue its business, Pioneer Astro agreed to lease the purchased assets back to Double L. At a shareholder meeting, shareholders approved the transaction with Pioneer Astro. Waters, however, abstained from voting and demanded that Double L pay him the fair value of his shares pursuant to dissenters' rights under Idaho law. Are dissenters' rights available in this context?

5. William Carter owned 317 shares of Wilson Construction Company. He also owned 20 percent of the shares of Wilson Equipment Leasing, Inc., a company that leased equipment to and engaged in other transactions with Wilson Construction. Carter worked for Wilson Construction until he resigned his position in November 1983. Immediately, he organized and became a part owner and employee of C & L Contracting, Inc., a competitor of Wilson Construction. Carter offered to sell his shares to Wilson Construction, but his offer was rejected. In 1984, Carter demanded that Wilson Construction make available to him its books, records of account, minutes, and record of shareholders, on the grounds that he had been told and believed that the financial condition of Wilson Construction had deteriorated due to improper management. In addition, he requested the information to determine the value of his shares, the financial condition of the corporation, and whether it was efficiently managed in the best interests

of the corporation. Must Wilson Construction comply with Carter's request?

6. Historically, Liggett Group, Inc., had paid quarterly dividends to its shareholders in March, June, September, and December of each year. On May 14, 1980, the Liggett board of directors recommended that shareholders accept a tender offer by GM Sub Corporation at $69 per share. The tender offer provided that if GM Sub acquired more than 50 percent of the Liggett shares, GM Sub and Liggett would merge; the Liggett shareholders who did not tender during the tender offer would receive $69 per share under the merger. Subsequently, 87.4 percent of Liggett shareholders tendered their shares. The cash-out merger was effected on August 7. Because the Liggett board believed that it would have been unfair to the shareholders who accepted the tender offer, the board skipped the June 1980 dividend. The board believed that the shareholders who did not tender should not be rewarded for refusing to tender their shares to GM Sub knowing that they would receive the same price per share in the merger. Also, the board believed that $69 was a fair price for the shares. Gabelli & Co. surrendered its Liggett shares pursuant to the merger agreement but then sued Liggett to force payment of the June 1980 dividend. Did Gabelli succeed?

7. Fred and Maxine Brandon and their four children owned all the shares of Brandon Construction Co., a family corporation. Fred and Maxine owned a majority of the shares. In 1987, the shareholders agreed that Fred and Maxine each would receive a monthly salary of $12,500. Two months later, daughter Betty Brandon alleged that the salaries were excessive, and that Fred and Maxine were dismantling the corporation and distributing its assets to themselves, without regard for the children's rights as minority shareholders. She initiated a derivative action against her parents, but her siblings responded that Betty did not represent their interests as minority shareholders and that they were content with the salaries paid to their parents. Is Betty a proper person to bring a derivative suit?

8. Three brothers—Joseph, Myer, and Samuel Sugarman—owned equal amounts of the shares of Statler Tissue Corporation. Over time, Myer's son Leonard became the majority shareholder of the corporation: Samuel gave some of his shares to his son Hyman and to Hyman's children, James, Marjorie, and Jon Sugarman; Hyman sold his shares to Leonard; Joseph Sugarman's shares were repurchased by the corporation. By 1974, Leonard owned 61 percent of the shares and was president and chairman of the board. James, Marjorie, and Jon Sugarman owned 22 percent of the shares. Marjorie had sought employment with the corporation but was not hired. Jon was employed from 1974 until his discharge in 1978. James never sought employment with the company. After 1975, Myer's value to the corporation was nearly zero because he had Alzheimer's disease; nonetheless, Myer was employed by the corporation and received a salary equal to Hyman's salary. In 1980, Leonard caused the company to double Myer's salary to $85,000 for 1980 and 1981, when Myer was 87 and 88 years of age. Hyman received no such increase. When Myer retired in 1982, Leonard caused the corporation to pay Myer a yearly pension of $75,000. When Hyman retired in 1980, he received no pension. The corporation paid no dividends. In 1980, Leonard offered to buy Jon's and Marjorie's shares for $3.33 per share. At that time, Price Waterhouse had advised Leonard that the book value of the corporation's shares was $16.30 per share. Does Leonard have liability to Jon and Marjorie?

9. H. F. Ahmanson & Co. was the controlling shareholder of United Savings and Loan Association. There was very little trading in the Association's shares, however. To create a public market for their shares, Ahmanson and a few other shareholders of the Association incorporated United Financial Corporation and exchanged each of their Association shares for United shares. United then owned more than 85 percent of the shares of the Association. The minority shareholders of the Association were not given an opportunity to exchange their shares. United made two public offerings of its shares. As a result, trading in United shares was very active, while sales of Association shares decreased to half of the formerly low level, with United as virtually the only purchaser. United offered to purchase Association shares from the minority shareholders for $1,100 per share. Some of the minority shareholders accepted this offer. At that time, the shares held by the majority shareholders were worth $3,700. United also caused the Association to decrease its dividend payments. Has Ahmanson done anything wrong?

10. East Side Metals, Inc., a Missouri corporation, fails to file an annual registration statement required by Missouri corporation law. Consequently, East Side forfeits its corporate charter. Harlin, Louis, and Bernice Mitauer are East Side's directors and officers at the time of the forfeiture. Do the Mitauers risk personal liability if they continue to operate East Side's business instead of winding it up?

- *A. Registration of Securities*
  - *1. Registration by Coordination*
  - *2. Capital Markets Efficiency Act of 1996*

Modern securities regulation arose from the rubble of the great stock market crash of October 1929. After the crash, Congress studied its causes and discovered several common problems in securities transactions, the most important ones being:

1. *Investors lacked the necessary information to make intelligent decisions whether to buy, sell, or hold securities.*
2. *Disreputable sellers of securities made outlandish claims about the expected performance of securities and sold securities in nonexistent companies.*

Faced with these perceived problems, Congress chose to require securities sellers to disclose the information that investors need to make intelligent investment decisions. Congress found that investors are able to make intelligent investment decisions if they are given sufficient information about the company whose securities they are to buy. This *disclosure scheme* assumes that investors need assistance from government in acquiring information but that they need no help in evaluating information.

Purposes of Securities Regulation

To implement its disclosure scheme, in the early 1930s Congress passed two major statutes, which are the hub of federal securities regulation in the United States today. These two statutes, the **Securities Act of 1933** and the **Securities Exchange Act of 1934,** have three basic purposes:

1. To require the disclosure of meaningful information about a security and its issuer to allow investors to make intelligent investment decisions.
2. To impose liability on those persons who make inadequate and erroneous disclosures of information.
3. To regulate insiders, professional sellers of securities, securities exchanges, and other self-regulatory securities organizations.

The crux of the securities acts is to impose on issuers of securities, other sellers of securities, and selected buyers of securities the affirmative duty to disclose important information, even if they are not asked by investors to make the disclosures. By requiring disclosure, Congress hoped to restore investor confidence in the securities markets. Congress wanted to bolster investor confidence in the honesty of the stock market and thus encourage more investors to invest in securities. Building investor confidence would increase capital formation and, it was hoped, help the American economy emerge from the Great Depression of the 1930s.

Securities and Exchange Commission

The Securities and Exchange Commission (SEC) was created by the 1934 Act. Its responsibility is to administer the 1933 Act, 1934 Act, and other securities statutes. Like other federal administrative agencies, the SEC has legislative, executive, and judicial functions. Its legislative branch promulgates rules and regulations; its executive branch brings enforcement actions against alleged violators of the securities statutes and their rules and regulations; its judicial branch decides whether a person has violated the securities laws.

SEC Actions

The SEC is empowered to investigate violations of the 1933 Act and 1934 Act and to hold hearings to determine whether the acts have been violated. Such hearings are held before an administrative law judge (ALJ), who is an employee of the SEC. The administrative law judge is a finder of both fact and law. Decisions of the ALJ are reviewed by the commissioners of the SEC. Decisions of the commissioners are appealed to the U.S. courts of appeals. Most SEC actions are not litigated. Instead, the SEC issues consent orders, by which the defendant promises not to violate the securities laws in the future but does not admit to having violated them in the past.

The SEC has the power to impose civil penalties (fines) up to $500,000 and to issue **cease and desist orders.** A cease and desist order directs a defendant to stop violating the securities laws and to desist from future violations. Nonetheless, the SEC does not have the power to issue injunctions; only courts may issue injunctions. The 1933 Act and the 1934 Act empower the SEC only to ask federal district courts for injunctions against persons who have violated or are about to violate either act. The SEC may also ask the courts to grant ancillary relief, a remedy in addition to an injunction. Ancillary relief may include, for example, the

disgorgement of profits that a defendant has made in a fraudulent sale or in an illegal insider trading transaction.

What is a Security?

The first issue in securities regulation is the definition of a security. If a transaction involves no security, then the law of securities regulation does not apply. The 1933 Act defines the term **security** broadly:

> Unless the context otherwise requires the term "security" means any note, stock, bond, debenture, evidence of indebtedness, certificate of interest of participation in any profit-sharing agreement, . . . preorganization certificate or subscription, . . . investment contract, voting trust certificate, . . . fractional undivided interest in oil, gas, or mineral rights, . . . or, in general, any interest or instrument commonly known as a "security."

The 1934 Act definition of security is similar, but excludes notes and drafts that mature not more than nine months from the date of issuance.

While typical securities like common shares, preferred shares, bonds, and debentures are defined as securities, the definition of a security also includes many contracts that the general public may believe are not securities. This is because the term **investment contract** is broadly defined by the courts. The Supreme Court's three-part test for an investment contract, called the *Howey* test, has been the guiding beacon in the area for more than 50 years.[1] The *Howey* test states that an investment contract is an investment of money in a common enterprise with an expectation of profits solely from the efforts of others.

In the *Howey* case, the sales of plots in an orange grove along with a management contract were held to be sales of securities. The purchasers had investment motives (they intended to make a profit from, not to consume the oranges produced by the trees). There was a common enterprise, because the investors were similarly affected by the efforts of the sellers who grew and sold the oranges for all investors. The sellers, not the buyers, did all of the work needed to make the plots profitable.

In other cases, sales of limited partnership interests, Scotch whisky receipts, and restaurant franchises have been held to constitute investment contracts and, therefore, securities.

Courts define in two ways the common enterprise element of the *Howey* test. All courts permit horizontal commonality to satisfy the common enterprise requirement. Horizontal commonality requires that investors' funds be pooled and that profits of the enterprise be shared pro rata by investors. Some courts accept vertical commonality, in which the investors are similarly affected by the efforts of the person who is promoting the investment. In the following *Unique Financial* case, the court addressed both the horizontal and vertical commonality tests.

[1] *SEC v. W. J. Howey Co.,* 328 U.S. 293 (U.S. Sup. Ct. 1946).

Securities and Exchange Commission v. Unique Financial Concepts, Inc.

196 F.3d 1195 (11th Cir. 1999)

In October 1997, Ernest Patti and Frederick Hollander organized Unique Financial Concepts, Inc. Unique offered investors the opportunity to purchase foreign currency options; that is, the right to buy or sell foreign currencies in the future at a price set at the time the option is purchased. Unique advertised heavily on television, newspapers, and the Internet, promising large returns on small investments. Prospective investors were sent a packet containing an offering document that described the foreign exchange market, a customer agreement, and a disclosure of risk statement.

The original customer agreement explained that the investments of all the investors would be pooled together and that Unique had sole discretion over the investments. In August 1998, Unique modified its customer agreement by removing the language concerning the pooling of investments and Unique's sole discretion over these investments. After receiving initial investments from investors, Unique deposited the funds into its bank account at Southern Bank in Fort Lauderdale, Florida. Unique sales representatives advised the investors which currencies they should invest in and how many currency options they should buy. The investor then spoke to a Unique compliance officer, who explained the details of the investment and requested the investors' assent to the purchase.

Unique raised over $6.5 million from investors. Of this amount, $2.5 million (38 percent) was wired to the Bahamas to clearinghouses that were responsible for carrying out the investors' option trades. The remainder of the investors' money was divided as follows: about $700,000 was paid to Unique sales representatives; about $1.2 million was paid for advertising (including $761,000 paid to DRE consulting, a company co-owned by Patti from which he received a substantial salary); about $300,000 was paid to Patti, Hollander, and Nicholas DeAngelis, the lead sales representative; and about $1.6 million was paid for business and personal expenses, including checks made payable for car rentals and personal loans. In addition, about $640,000 of the investors' funds was distributed to new investors.

After the initial investment, Unique aggressively solicited the investors for additional investments. Eventually, however, Unique representatives were extremely hard to reach and often failed to return phone calls. The investors lost significant amounts of money on their investments.

The United States Securities and Exchange Commission asked the district court to issue a preliminary injunction against Unique to stop Unique's solicitation of investors. The district court found that Unique was selling securities and thus was subject to the Securities Act.

The district court found that no credible evidence existed to show that Unique's clearinghouses ever placed trades on behalf of investors. The court could find no transaction or wire verifications indicating that the clearinghouses actually executed any trades. No bank records indicated the occurrence of the alleged trades. Patti testified that he did not know how the Bahamian clearinghouses executed the trades, and that he did not know how the clearinghouses were compensated for their services. Furthermore, Unique's compliance officer testified that she did not know what the clearinghouses did and did not even know what the term clearinghouse meant. Unique's accountant, Morris Berger, stated that the "only thing we had to deal with is really the Unique data. And we don't have the Bahamian trading data. . . . Do I know that there was actual trading in the Bahamas? The answer is, no, I don't."

In essence, the district court found that Unique was operating a Ponzi scheme. That is, rather than executing currency trades, Unique was keeping over 60 percent of the money. Unique paid the rest of the money back to the investors to fool them into thinking they were making money and should therefore invest more.

The district court awarded the SEC's request for a preliminary injunction. Unique appealed to the 11th Circuit Court of Appeals on the grounds that the SEC had no authority to regulate the transaction because there was no security involved.

Black, Circuit Judge The determinative question is whether the contracts offered and sold by Unique were investment contracts, and thus securities, under federal securities law. If the contracts were investment contracts, then the SEC had jurisdiction under the federal securities laws to bring this suit.

In *S.E.C. v. W. J. Howey Co.,* 328 U.S. 293 (1946), the Supreme Court established the classic test for determining whether a transaction is an "investment contract" within the meaning of Section 2(a)(1) of the Securities Act. In *Howey,* the Court explained that for the purposes of the Securities Act, an investment contract is "a contract, transaction, or scheme whereby a person invests his money in a common enterprise and is led to expect profits solely from the efforts of the promoter or a third party. . . . " This Court has divided the *Howey* test into the three elements: (1) an investment of money, (2) a common enterprise, and (3) the expectation of profits to be derived solely from the efforts of others. Both parties agree the first prong of this test has been satisfied. There is distinct disagreement, however, as to the second and third prongs.

With respect to the second prong, we have adopted the concept of vertical commonality, holding that a common enterprise exists where the fortunes of the investor are interwoven with and dependent on the efforts and success of those seeking the investment of third parties. The fact that an investor's return is independent of that of other investors in the scheme is not decisive. Rather, the requisite commonality is evidenced by the fact that the fortunes of all investors are inextricably tied to the efficacy of the promoter. *SEC v. Koscot Interplanetary, Inc.,* 497 F.2d 473 (5th Cir. 1974). The thrust of the common enterprise test is that the investors have no desire to perform the chores necessary for a return. Unlike the more stringent concept of horizontal commonality, utilized by the Second, Third, Sixth, and Seventh Circuits, this flexible standard

does not require investor funds to be pooled nor does it require profits to be shared on a pro rata basis.

At trial, the district court found that the language of the original customer agreement, in conjunction with its conclusion that Unique's operations were a sham, supported the existence of a common enterprise. The agreement, in relevant part, reads as follows:

> By executing this agreement, Client authorizes [Unique] in its sole discretion to use the total funds on deposit in the omnibus account which includes the funds of the undersigned to execute single trades or transactions and to apportion the gains, losses, commissions, and clearing expenses proportionally to each account. The results of each trade will be apportioned and applied proportionately (per unit) to all accounts open on the trade and rounded down to the nearest US dollar.

On appeal, Unique contends that, despite the language of the original agreement, in actual practice it did not operate a horizontal investment pool but rather maintained individual, independent investment accounts. As support for this contention, Unique points to cash flows between Unique and the Bahamian clearinghouses, the alleged trade reports, as well as testimony regarding the trades and trade reports. Unique claims we should rely on the actual operation of its investment contracts, rather than the language of the original agreement, to hold that Unique's investment accounts do not meet the common enterprise prong.

However, given the absence of any credible documentation of trades, the absence of any persuasive testimony concerning these trades, as well as the fact that Unique invested less than 40 percent of investors' money, we conclude the record supports the district court's finding that Unique's operations were a sham. Consequently, we look, as did the district court, to the terms of the offer to determine whether Unique's activities are covered by the Securities Act. As noted above, the terms of the offer explicitly state that investors' funds will be pooled and apportioned proportionately by Unique to each account. This language clearly presents an offer for an investment in a common enterprise and thus supports the common enterprise prong of the *Howey* test.

Unique claims that the language of the original agreement was a mistake, and that the language was changed to accurately reflect Unique's operations. The district court, however, made a factual finding that Unique switched their customer agreement in August 1998 specifically to avoid liability under the federal securities laws.

There is also distinct disagreement over whether Unique's operations meet the "expectation of profits" element of the *Howey* test. In *Howey,* the Supreme Court explained that this prong requires that investors expect their "profits to come solely from the efforts of others." The courts have suggested several interpretations of the word "solely," with the disagreement centered on whether "solely" means all or merely predominant. The view this Court adopted in *Koscot* asks "whether the efforts made by those other than the investor are the undeniably significant ones, those essential managerial efforts which affect the failure or success of the enterprise." One year after *Koscot,* the Supreme Court reaffirmed *Howey* and revisited this question in *United Housing Foundation, Inc. v. Forman,* 421 U.S. 837 (1975). In *Forman,* the Supreme Court held that "the touchstone" of an investment contract for purposes of the Securities Acts is "the presence of an investment in a common venture premised on a reasonable expectation of profits to be derived from the entrepreneurial or managerial efforts of others."

In addition, this Court has clearly stated that "the crucial inquiry for the third prong is the amount of control that the investors retain under their written agreements. While we have yet to resolve the precise level of control dictated by *Forman,* we conclude Unique's operation meets any reasonable interpretation of "solely."

First, contrary to Unique's assertion, Unique did not manage nondiscretionary investment accounts in which individual investors made all key strategic decisions. Rather, Unique did not engage in any actual trading, but instead operated a fraudulent scheme which misappropriated investors' funds. Thus, the investors retained no control over their investments, since there were no investments to control. Second, the original customer agreement specifically gave Unique the sole discretion to use the total funds deposited by the investors. Consequently, both the language of the agreement and Unique's actual operations support the district court's finding that Unique's operations met the third prong of the *Howey* test.

Judgment for SEC affirmed.

Courts have used the *Howey* test to hold that some contracts with typical security names are not securities. The courts point out that some of these contracts possess few of the typical characteristics of a security. For example, in *United Housing Foundation, Inc. v. Forman,*[2] the Supreme Court held that although tenants in a cooperative apartment building purchased contracts labeled as stock, the contracts were not securities. The "stock" possessed few of the typical characteristics of stock and the economic realities of the transaction bore few similarities to those of the typical stock sale: The stock gave tenants no dividend rights or voting rights in proportion to the number of shares owned, it was not negotiable, and it could not appreciate in value. More important, tenants bought the stock not for the purpose of investment but to acquire suitable living space.

However, when investors are misled to believe that the securities laws apply because a seller sold a contract bearing both the name of a typical security and significant characteristics of that security, the securities laws do apply to the sale of the security. The application of this doctrine led to the Supreme Court's rejection of the sale-of-business doctrine, which had held that the sale of 100 percent of the shares of a corporation to a single purchaser who would manage the corporation was not a security. The rationale for the sale-of-business doctrine was that the purchaser failed to meet element 3 of the *Howey* test because he expected to make a profit from his own efforts in managing the business. Today, when a business sale is effected by the sale of stock, the transaction is covered by the securities acts if the stock possesses the characteristics of stock.

In 1990, the Supreme Court further extended this rationale in *Reves v. Ernst & Young,*[3] adopting the **family resemblance test** to determine whether promissory notes were securities. The Supreme Court held that it is inappropriate to apply the *Howey* test to notes. Instead, applying the family resemblance test, the Court held that notes are presumed to be securities unless they bear a "strong family resemblance" to a type of note that is not a security. Types of notes that are not securities include consumer notes, mortgage notes, short-term notes secured by a lien on a small business, short-term notes secured by accounts receivable, and notes evidencing loans by commercial banks for current operations.

Securities Act of 1933

The Securities Act of 1933 (1933 Act) is concerned primarily with public distributions of securities. That is, the 1933 Act regulates the sale of securities while they are passing from the hands of the issuer into the hands of public investors. An issuer selling securities publicly must make necessary disclosures at the time the issuer sells the securities to the public.

The 1933 Act has two principal regulatory components: (1) registration provisions and (2) liability provisions. The registration requirements of the 1933 Act are designed to give investors the information they need to make intelligent decisions whether to purchase securities when an issuer sells its securities to the public. The various liability provisions in the 1933 Act impose liability on sellers of securities for misstating or omitting facts of material significance to investors.

Registration of Securities under the 1933 Act

The 1933 Act requires that *every* offering of securities be registered with the SEC prior to any offer or sale of the securities, unless the offering or the securities are exempt from registration. That is, an issuer and its underwriters may not offer or sell securities unless the securities are registered with the SEC or exempt from registration. Over the next few pages, we will cover the registration process. Then the exemptions from registration will be addressed.

Mechanics of a Registered Offering

When an issuer makes a decision to raise money by a public offering of securities, the issuer needs to obtain the assistance of securities market professionals. The issuer will contact a managing underwriter, the primary person assisting the issuer in selling the securities. The managing underwriter will review the issuer's operations and financial statements and reach an agreement with the issuer regarding the type of securities to sell, the offering price, and the compensation to be paid to the underwriters. The issuer and the managing underwriter will determine what type of underwriting to use.

In a **stand-by underwriting,** the underwriters obtain subscriptions from prospective investors, but the issuer sells the securities only if there is sufficient investor interest in the securities. The underwriters receive warrants—options to purchase the issuer's securities at a bargain price—as compensation for their efforts. The stand-by underwriting is typically used only to sell common shares to existing shareholders pursuant to a preemptive rights offering.

With a **best efforts underwriting,** the underwriters are merely agents making their best efforts to sell the issuer's securities. The underwriters receive a commission for their selling efforts. The best efforts underwriting is used when an issuer is not well established and the underwriter is unwilling to risk being unable to sell the securities.

The classic underwriting arrangement is a **firm commitment underwriting.** Here the managing underwriter forms an underwriting group and a selling group. The underwriting group agrees to purchase the securities from the issuer at a discount from the public offering price—for example, 25 cents per share below the offering price. The selling group agrees to buy the securities from the underwriters also at a discount—for example, 12½ cents per share below the offering price. Consequently, the underwriters and selling group bear much of the risk with a firm commitment underwriting, but they also stand to make the most profit under such an arrangement.

Securities Offerings on the Internet Increasingly, issuers are using the Internet to make public securities offerings, especially initial public offerings (IPOs) of companies' securities. The Internet provides issuers and underwriters the advantage of making direct offerings to all investors simultaneously, that is, selling directly to investors without the need for a selling group. The first Internet securities offering that was approved by the SEC was a firm commitment underwriting. Internet offerings have increased dramatically since 1998. In the future, the Internet will become the dominant medium for marketing securities directly to investors.

Registration Statement and Prospectus

The 1933 Act requires the issuer of securities to register the securities with the SEC before the issuer or underwriters may offer or sell the securities. Registration requires filing a **registration statement** with the SEC. Historical and current data about the issuer and its business, full details about the securities to be offered, and the use of the proceeds of the issuance, among other information, must be included in the registration statement prepared by the issuer of the securities with the assistance of the managing underwriter, securities lawyers, and independent accountants. Generally, the registration statement must include audited balance sheets as of the end of each of the two most recent fiscal years, in addition to audited income statements and audited statements of changes in financial position for each of the last three fiscal years.

The registration statement becomes effective after it has been reviewed by the SEC. The 1933 Act provides that the registration statement becomes effective automatically on the 20th day after its filing, unless the SEC delays or advances the effective date.

The **prospectus** is the basic selling document of an offering registered under the 1933 Act. Most of the information in the registration statement must be included in the prospectus. It must be furnished to every purchaser of the registered security prior to or concurrently with the sale of the security to the purchaser. The prospectus enables an investor to base his investment decision on all of the relevant data concerning the issuer, not merely on the favorable information that the issuer may be inclined to disclose voluntarily.

Although most prospectuses are delivered in person or by mail, the growth of the Internet as a communication tool has resulted in many issuers transmitting their prospectuses in their Web pages.

Section 5: Timing, Manner, and Content of Offers and Sales

The 1933 Act restricts the issuer's and underwriter's ability to communicate with prospective purchasers of the securities. Section 5 of the 1933 Act states the basic rules regarding the timing, manner, and content of offers and sales. It creates three important periods of time in the life of a securities offering: (1) the pre-filing period, (2) the waiting period, and (3) the post-effective period.

The Pre-Filing Period Prior to the filing of the registration statement (the pre-filing period), the issuer and any other person may **not offer or sell** the securities to be registered. A prospective issuer, its directors and officers, and its underwriters must avoid publicity about the issuer and the prospective issuance of securities

during the pre-filing period. Press releases, advertisements, speeches, and press conferences may be deemed offers if their intent or effect is to condition the market to receive the securities.

SEC Rule 135 permits the issuer to publish a notice about a prospective offering during the pre-filing period. The notice may contain only the name of the issuer and a basic description of the securities and the offering. It may not name the underwriters or state the price at which the securities will be offered.

The Waiting Period The waiting period is the time between the filing date and the effective date of the registration statement, when the issuer is waiting for the SEC to declare the registration statement effective. During the waiting period, Section 5 permits the securities to be **offered but not sold.** However, not all kinds of offers are permitted. Face-to-face oral offers (including personal phone calls) are allowed during the waiting period. However, written offers may be made only by a statutory prospectus, usually a **preliminary prospectus** that often omits the price of the securities. (A final prospectus will be available after the registration statement becomes effective. It will contain the price of the securities.) Other so-called "free writings" are not permitted during the waiting period.

General publicity during the waiting period may be construed as an illegal offer because it conditions the market to receive the securities. One type of general advertisement, called the **tombstone ad,** is permitted during the waiting period and thereafter. The tombstone ad, which appears in financial publications, is permitted by SEC Rule 134, which allows disclosure of the same information as is allowed by Rule 135 plus the general business of the issuer, the price of the securities, and the names of the underwriters who are helping the issuer to sell the securities. In addition, Rule 134 requires the tombstone ad to state that it is not an offer.

Issuers making public offerings will typically send their CEOs and other top officers on the road to talk to securities analysts and institutional investors during the waiting period. These road shows are permissible, provided investors and others who attend the meetings are able to ask unlimited questions of the issuer. Otherwise, the meetings could be construed as illegal written offers.

The Internet is an exceptional medium to communicate with investors during the waiting period. Investors may easily view a tombstone ad and download a prospectus from an offering Web page. Care must be taken, however, not to allow investors to easily link to the issuer's homepage, where additional information about the issuer is available that may violate the waiting period's free writing prohibition.

There is an issue whether the Internet may permit investors to ask questions about the offering during the waiting period, because the issuer's responses will be written, not oral, and therefore may be illegal written offers. This should not be an obstacle, however, if investors are able to ask unlimited questions and receive immediate answers. In that case the Internet is more akin to a conversation than a written communication. Yet there can still be a problem with the Internet if many investors ask so many questions that the issuer is unable to respond to all requests. Nonetheless, the Internet is the best medium to provide valuable information to all investors who are seeking information on a particular issuer. In the future, the SEC is expected to liberalize the communications that may be made on the Internet during the waiting period.

The waiting period is an important part of the regulatory scheme of the 1933 Act. It provides an investor with adequate time (at least 20 days) to judge the wisdom of buying the security during a period when he cannot be pressured to buy it. Not even a contract to buy the security may be made during the waiting period.

The Post-Effective Period After the effective date (the date on which the SEC declares the registration effective), Section 5 permits the security to be **offered and also to be sold,** provided that the buyer has received a **final prospectus** (a preliminary prospectus is not acceptable for this purpose). Written offers not previously allowed are permitted during the post-effective period, but only if the offeree has received a final prospectus.

The Internet can be used extensively during the post-effective period. From the issuer's Web page, an investor may be required to download a final prospectus in order to obtain access to a chatroom or other written information about the issuer and the offering. Since the final prospectus download would be a delivery of the final prospectus to the investor, all communications thereafter would be legal even if they were written.

Liability for Violating Section 5 Section 12(a)(1) of the 1933 Act imposes liability on any person who violates the provisions of Section 5. Liability extends to any *purchaser* to whom an illegal offer or sale was made. The purchaser's remedy is *rescission* or damages.

Concept Review

Communications with Investors by or on Behalf of Issuer Permitted by Section 5 during a 1933 Act Registration

	Filing Date of Registration Statement		Effective Date of Registration Statement
Type of Communication	**Pre-Filing Period**	**Waiting Period**	**Post-Effective Period**
Annual Reports, Press Releases, and Quarterly Reports	Permitted, unless designed to assist the placement of securities or arouse interest in a prospective sale of securities	Permitted, unless designed to assist the placement of securites or arouse interest in a prospecitve sale of securities	Permitted, without restriction, if used contemporaneously with or after delivery of final prospectus
Notice of Proposed Offering (Rule 135)	Permitted	Permitted	Permitted
Tombstone Ad (Rule 134)	Not permitted	Permitted	Permitted
Offer by Preliminary Prospectus	Not permitted	Permitted	Not permitted
Offer by Final Prospectus	Not permitted	Not permitted	Permitted
Oral One-on-One Offers (including telephone calls)	Not permitted	Permitted	Permitted
Oral Offers at Road Shows	Not permitted	Permitted, if each investor has an opportunity to ask unlimited questions	Permitted, if each investor has an opportunity to ask unlimited questions, or if each investor has received a final prospectus
Written Offers Other than a Prospectus (so-called free writing)	Not permitted	Not permitted	Permitted, contemporaneously with or after delivery of final prospecus
Sales	Not permitted	Not permitted	Permitted, contemporaneously with or after delivery of final prospectus

Exemptions from the Registration Requirements of the 1993 Act

Complying with the registration requirements of the 1933 Act, including the restrictions of Section 5, is a burdensome, time-consuming, and expensive process. Planning and executing an issuer's first public offering may consume six months and cost in excess of $1 million. Consequently, some issuers prefer to avoid registration when they sell securities. There are two types of exemptions from the registration requirements of the 1933 Act: securities exemptions and transaction exemptions.

Securities Exemptions

Exempt securities never need to be registered, regardless who sells the securities, how they are sold, or to whom they are sold. The following are the most important securities exemptions.[4]

1. Securities issued or guaranteed by any government in the United States and its territories.
2. A note or draft that has a maturity date not more than nine months after its date of issuance.
3. A security issued by a nonprofit religious, charitable, educational, benevolent, or fraternal organization.
4. Securities issued by banks and by savings and loan associations.
5. Securities issued by railroads and trucking companies regulated by the Interstate Commerce Commission.
6. An insurance policy or an annuity contract.

[4]Excluded from the list of securities exemptions are the intrastate offering and small offering exemptions. Although the 1933 Act denotes them (except for the section 4(6) exemption) as securities exemptions, they are in practice transaction exemptions. An exempt security is exempt from registration forever. But when securities originally sold pursuant to an intrastate or small offering exemption are resold at a later date, the subsequent sales may have to be registered. The exemption of the earlier offering does not exempt a future offering. The SEC treats these two exemptions as transaction exemptions. Consequently, this chapter also treats them as transaction exemptions.

Although the types of securities listed above are exempt from the registration provisions of the 1933 Act, they are not exempt from the general antifraud provisions of the securities acts. For example, any fraud committed in the course of selling such securities can be attacked by the SEC and by the persons who were defrauded under Section 17(a) of the 1933 Act and Section 10(b) of the 1934 Act.

Transaction Exemptions

The most important 1933 Act registration exemptions are the transaction exemptions. If a security is sold pursuant to a transaction exemption, that sale is exempt from registration. Subsequent sales, however, are not automatically exempt. Future sales must be made pursuant to a registration or another exemption.

The transaction exemptions are exemptions from the registration provisions. The general antifraud provisions of the 1933 Act and the 1934 Act apply to exempted and nonexempted transactions.

The most important transaction exemptions are those available to issuers of securities. These exemptions are the intrastate offering exemption, the private offering exemption, and the small offering exemptions.

Intrastate Offering Exemption

Under section 3(a)(11), an offering of securities solely to investors in one state by an issuer resident and doing business in that state is exempt from the 1933 Act's registration requirements. The reason for the exemption is that there is little federal government interest in an offering that occurs in only one state. Although the offering may be exempt from SEC regulation, state securities law may require a registration. The expectation is that state securities regulation will adequately protect investors.

The SEC has defined the intrastate offering exemption more precisely in Rule 147. An issuer must have at least 80 percent of its gross revenues and 80 percent of its assets in the state and use at least 80 percent of the proceeds of the offering in the state. Resale of the securities is limited to persons within the state for nine months.

Rule 147, however, is not an exclusive rule. In the *Busch v. Carpenter* case, the court applied only the statutory standard of section 3(a)(11).

Busch v. Carpenter *827 F.2d 653 (10th Cir. 1987)*

Sonic Petroleum, Inc., was incorporated in Utah for the purpose of acquiring, extracting, and marketing natural resources such as oil, gas, and coal. Its corporate office, books, and records were in Utah. During October and November 1980, Sonic publicly offered and sold 25 million shares entirely to residents of Utah. The proceeds were $500,000. Sonic did not file a Securities Act registration statement with the SEC, instead relying on the exemption from registration for intrastate offerings. At the time of the offering, Sonic had not undertaken any business activities in Utah or anywhere else.

Craig Carpenter, Sonic's president, negotiated Sonic's acquisition of an Illinois drilling corporation owned by William Mason. On May 25, 1981, Sonic issued a controlling block of its shares to Mason in exchange for Mason's corporation. Shortly thereafter, Sonic deposited in Illinois $350,000 of the proceeds from the sale of shares to Utah residents. At about the same time, Mason and Carpenter helped create a public market for Sonic shares. As a result, Paul and Linda Busch, who were California residents, purchased Sonic shares from Utah residents who had purchased shares in October and November 1980. When the shares' value dropped, the Busches sued Carpenter for selling unregistered securities. The trial court held that Sonic sold the shares pursuant to the intrastate offering exemption and, therefore, did not need to register the shares. The Busches appealed.

Seymour, Circuit Judge Section 5 of the Securities Act of 1933 prohibits the offer or sale of any security unless a proper registration statement has first been filed with the SEC. However, Congress also recognized that the protections of the 1933 Act were not essential for those securities that could be supervised effectively by the states. Section 3(a)(11) therefore exempts from the Act's registration requirements

> Any security which is part of an issue offered and sold only to persons resident within a single State or Territory, where the issuer of such security is a person resident and doing business within or, if a corporation, incorporated by and doing business within, such State or Territory.

In order to fall within the intrastate exemption, initial sales to state residents must be bona fide. The intrastate exemption becomes unavailable whenever sales or purchases by a subsequent purchaser circumvent the federal securities laws. The SEC has consistently maintained that a distribution of securities must have actually come to rest in the hands of the resident investors—persons purchasing for investment intent and not for purpose of resale.

The Busches contend that Sonic had the burden to prove that the original buyers bought with investment intent. We reject this argument. The intrastate offering exemption requires that the issue be "offered and sold only to persons resident within a single state." In face of Sonic's undisputed showing that all of the original buyers were Utah residents, the Busches were therefore required to produce evidence that the stock had not come to rest but had been sold to people who intended to resell it out of state. The interstate purchases of freely trading shares several months after the completion of the intrastate offering do not, without more, impugn the investment intent of the original buyers.

The Busches alternatively contend that Sonic was not entitled to the intrastate exemption because the corporate issuer was not doing business in Utah as required by section 3(a)(11). An issuer cannot claim the exemption simply by opening an office in a particular state. Conducting substantially all income-producing operations elsewhere defeats the exemption, as do the plans of recently organized companies to invest the net proceeds of initial public offerings only in other states.

Here Sonic never did more than maintain its office, books, and records in Utah. Sonic transferred essentially all of its assets to Illinois and made no prior efforts whatever at locating investment opportunities within Utah. Sonic may have been intending all along to invest its assets outside the state. A newly formed company may not claim the exemption while planning covertly to invest the proceeds of a local offering in other states.

Judgment reversed in favor of the Busches; remanded for trial.

Private Offering Exemption

Section 4(2) of the 1933 Act provides that the registration requirements of the 1933 Act "shall not apply to transactions by an issuer not involving any public offering." A private offering is an offering to a small number of purchasers who can protect themselves because they are wealthy or because they are sophisticated in investment matters and have access to the information that they need to make intelligent investment decisions.

To create greater certainty about what a private offering is, the SEC adopted Rule 506. Although an issuer may exempt a private offering under either the courts' interpretation of section 4(2) or Rule 506, the SEC tends to treat Rule 506 as the exclusive way to obtain the exemption.

Rule 506 Under Rule 506, which is part of Securities Act Regulation D, the issuer must reasonably believe that each purchaser is either (a) an accredited investor or (b) an unaccredited investor who "has such knowledge and experience in financial and business matters that he is capable of evaluating the merits and risks of the prospective investment." Accredited investors include institutional investors (such as banks and mutual funds), wealthy investors, and high-level insiders of the issuer (such as executive officers, directors, and partners).

An issuer may sell to no more than 35 unaccredited purchasers who have sufficient investment knowledge and experience; it may sell to an unlimited number of accredited purchasers, regardless of their investment sophistication.

Each purchaser must be given or have access to the information she needs to make an informed investment decision. For a public company making a nonpublic offering under Rule 506, purchasers must receive information in a form required by the 1934 Act, such as a 10-K or annual report. The issuer must provide the following audited financial statements: two years' balance sheets, three years' income statements, and three years' statements of changes in financial position.

For a nonpublic company making a nonpublic offering under Rule 506, the issuer must provide much of the same nonfinancial information required in a registered offering. A nonpublic company may, however, obtain some relief from the burden of providing audited financial statements to investors. When the amount of the issuance is $2 million or less, only one year's balance sheet need be audited. If the amount issued exceeds $2 million but not $7.5 million, only one year's balance sheet, one year's income statement, and one year's statement of changes in financial position need be audited. When the amount issued exceeds $7.5 million, the issuer must provide two years' balance sheets, three years' income statements, and three years' statements of changes in financial position. In any offering of any amount by a nonpublic issuer, when auditing would involve unreasonable effort or expense, only an audited balance sheet is needed. When a limited partnership issuer finds that auditing involves unreasonable effort or expense, the limited partnership may use financial statements prepared by an independent accountant in conformance with the requirements of federal tax law.

Rule 506 prohibits the issuer from making any general public selling effort. This prevents the issuer from using the radio, newspapers, and television. However, offers to an individual one-on-one are permitted.

In addition, the issuer must take reasonable steps to ensure that the purchasers do not resell the securities in a manner that makes the issuance a public distribution rather than a private one. Usually, the investor must hold the security for a minimum of one year.

In the *Mark* case, the issuer failed to prove it was entitled to a private offering exemption under Rule 506.

Mark v. FSC Securities Corp. *870 F.2d 331 (6th Cir. 1989)*

FSC Securities Corp., a securities brokerage, sold limited partnership interests in the Malaga Arabian Limited Partnership to Mr. and Mrs. Mark. A total of 28 investors purchased limited partnership interests in Malaga. All investors were asked to execute subscription documents, including a suitability letter in which

the purchaser stated his income level, that he had an opportunity to obtain relevant information, and that he had sufficient knowledge and experience in business affairs to evaluate the risks of the investment.

When the value of the limited partnership interests fell, the Marks sued FSC to rescind their purchase on the grounds that FSC sold unregistered securities in violation of the Securities Act of 1933. The jury held that the offering was exempt as an offering not involving a public offering. The Marks appealed.

Simpson, Judge Section 4(2) of the Securities Act exempts from registration with the SEC "transactions by an issuer not involving any public offering." There are no hard and fast rules for determining whether a securities offering is exempt from registration under the general language of section 4(2).

However, the "safe harbor" provision of Regulation D, Rule 506, deems certain transactions to be not involving any public offering within the meaning of section 4(2). FSC had to prove that certain objective tests were met. These conditions include the general conditions not in dispute here, and the following specific conditions:

> (i) Limitation on number of purchasers. The issuer shall reasonably believe that there are no more than thirty-five purchasers of securities in any offering under this Section.
>
> (ii) Nature of purchasers. The issuer shall reasonably believe immediately prior to making any sale that each purchaser who is not an accredited investor either alone or with his purchaser representative(s) has such knowledge and experience in financial and business matters that he is capable of evaluating the merits and risks of the prospective investment.

In this case, we take the issuer to be the general partners of Malaga. FSC is required to offer evidence of the issuer's reasonable belief as to the nature of each purchaser. The only testimony at trial competent to establish the issuer's belief as to the nature of the purchasers was that of Laurence Leafer, a general partner in Malaga. By his own admission, he had no knowledge about any purchaser, much less any belief, reasonable or not, as to the purchasers' knowledge and experience in financial and business matters.

Q: What was done to determine if investors were, in fact, reasonably sophisticated?

A: Well, there were two things. Number one, we had investor suitability standards that had to be met. You had to have a certain income, be in a certain tax bracket, this kind of thing. Then in the subscription documents themselves, they, when they sign it, supposedly represented that they had received information necessary to make an informed investment decision, and that they were sophisticated. And if they were not, they relied on an offering representative who was.

Q: Did you review the subscription documents that came in for the Malaga offering?

A: No.

Q: So do you know whether all of the investors in the Malaga offering met the suitability and sophistication requirements?

A: I don't.

FSC also offered as evidence the Marks' executed subscription documents, as well as a set of documents in blank, to establish the procedure it followed in the Malaga sales offering. Although the Marks' executed documents may have been sufficient to establish the reasonableness of any belief the issuer may have had as to the Marks' particular qualifications, that does not satisfy Rule 506. The documents offered no evidence from which a jury could conclude the issuer reasonably believed each purchaser was suitable. Instead, all that was proved was the sale of 28 limited partnership interests, and the circumstances under which those sales were intended to have been made. The blank subscriptions documents simply do not amount to probative evidence, when it is the answers and information received from purchasers that determine whether the conditions of Rule 506 have been met.

Having concluded that the Malaga limited-partnership offering did not meet the registration exemption requirement of Rule 506 of Regulation D, we conclude that the Marks are entitled to the remedy of rescission.

Judgment reversed in favor of the Marks; remanded to the trial court.

Small Offering Exemptions

Sections 3(b) and 4(6) of the 1933 Act permit the SEC to exempt from registration any offering by an issuer not exceeding $5 million. Several SEC rules and regulations permit an issuer to sell small amounts of securities and avoid registration. The rationale for these exemptions is that the dollar amount of the securities offered or the number of purchasers is too small for the federal government to be concerned with registration. State securities law may require registration, however.

Rule 504 SEC Rule 504 of Regulation D allows a nonpublic issuer to sell up to $1 million of securities in a 12-month period and avoid registration. Rule 504 sets no limits on the number of offerees or purchasers. The purchasers need not be sophisticated in investment matters, and the issuer need disclose information only as required by state securities law. Rule 504 permits general selling efforts, and purchasers are free to resell the securities at any time but only if the issuer either registers the securities under state securities law or sells only to accredited investors pursuant to a state securities law exemption.

Rule 505 Rule 505 of Regulation D allows any issuer to sell up to $5 million of securities in a 12-month period and avoid registration. No general selling efforts are allowed, and purchasers may not resell the securities for at least one year. The issuer may sell to no more than 35 unaccredited purchasers, but there is no limit on the number of accredited purchasers. The purchasers need not be sophisticated in investment matters. Rule 505 has the same disclosure requirements as Rule 506.

Regulation A Regulation A permits a nonpublic issuer to sell up to $5 million of securities in a one-year period. There is no limit on the number of purchasers, no purchaser sophistication requirement, and no purchaser resale restriction.

The Regulation A disclosure document is the offering circular, which must be filed with the SEC. The offering circular is required to contain a balance sheet dated within 90 days before the filing date of the offering circular. It must also contain two years' income statements, cash flow statements, and statements of shareholder equity. Ordinarily, the financial statements need not be audited unless the issuer is otherwise required to have audited financial statements.

There is a 20-day waiting period after the filing of the offering circular, during which offers may be made. Oral offers are permitted, as are brief advertisements and written offers by an offering circular. Sales are permitted after the waiting period.

Regulation A also permits issuers to determine investors' interest in a planned offering prior to undertaking the expense of preparing an offering circular.

Securities Offerings on the Internet

With the emergence of the Internet as a significant communication tool, small issuers have sought to make offerings to investors over the Internet. Such offerings can easily run afoul of Rules 505 and 506 of Regulation D, which prohibit public solicitations of investors. Spring Street Brewing Company, the first issuer to offer securities via the Web in 1995, avoided registration by using the Regulation A exemption.

Transaction Exemptions for Nonissuers

Although it is true that the registration provisions apply primarily to issuers and those who help issuers sell their securities publicly, the 1933 Act states that every person who sells a security is potentially subject to Section 5's restrictions on the timing of offers and sales. You must learn the most important rule of the 1933 Act: **Every transaction in securities must be registered with the SEC or be exempt from registration.**

This rule applies to every person, including the small investor who, through the New York Stock Exchange, sells securities that may have been registered by the issuer 15 years earlier. The small investor must either have the issuer register her sale of securities or find an exemption from registration that applies to the situation. Fortunately, most small investors who resell securities will have an exemption from the registration requirements of the 1933 Act. The transaction ordinarily used by these resellers is Section 4(1) of the 1933 Act. It provides an exemption for "transactions by any person other than an issuer, underwriter, or dealer."

For example, if you buy GM common shares on the New York Stock Exchange, you may freely resell them without a registration. You are not an issuer (GM is). You are not a dealer (because you are not in the business of selling securities). And you are not an under-

writer (because you are not helping GM distribute the shares to the public).

Application of this exemption when an investor sells shares that are already publicly traded is easy; however, it is more difficult to determine whether an investor can use this exemption when the investor sells **restricted securities.**

Sale of Restricted Securities

Restricted securities are securities issued pursuant to Rules 505 and 506 and sometimes under Rule 504. Restricted securities are supposed to be held by the purchaser for at least one year. If they are sold earlier, the investor may be deemed an underwriter who has assisted the issuer in selling the securities to the general public. Consequently, both the issuer and the investor may have violated Section 5 of the 1933 Act by selling nonexempted securities prior to a registration of the securities with the SEC. As a result, all investors who purchased securities from the issuer in the Rule 506 offering may have the remedy of rescission under Section 12(a)(1), resulting in the issuer being required to return to investors all the proceeds of the issuance.

For example, an investor buys 10,000 common shares issued by Arcom Corporation pursuant to a Rule 506 private offering exemption. One month later, the investor sells the securities to 40 other investors. The original investor has acted as an underwriter because he has helped Arcom distribute the shares to the public. The original investor may not use the issuer's private offering exemption because it exempted only the issuer's sale to him. As a result, both the original investor and Arcom have violated Section 5. The 40 investors who purchased the securities from the original investor—and all other investors who purchased common shares from the issuer in the Rule 506 offering—may rescind their purchases under Section 12(a)(1) of the 1933 Act, receiving from their seller the return of their investment.

SEC Rule 144 allows purchasers of restricted securities to resell the securities and not be deemed underwriters. The resellers must hold the securities for at least one year. Investment information concerning the issuer of the securities must be publicly available. In any three-month period, the reseller may sell only a limited number of securities—the greater of 1 percent of the outstanding securities or the average weekly volume of trading. The reseller must file a notice (Form 144) with the SEC.

If a purchaser who is not an insider of the issuer has held the restricted securities for at least two years, Rule 144 permits her to sell unlimited amounts of the securities. In addition, investment information concerning the issuer need not be publicly available.

Consequence of Obtaining a Securities or Transaction Exemption

When an issuer has obtained an exemption from the registration provisions of the 1933 Act, the Section 5 limits on when and how offers and sales may be made do not apply. Consequently, Section 12(a)(1)'s remedy of rescission is unavailable to an investor who has purchased securities in an exempt offering.

When an issuer has attempted to comply with a registration exemption and has failed to do so, any offer or sale of securities by the issuer may violate Section 5. Because the issuer has offered or sold nonexempted securities prior to filing a registration statement with the SEC, any purchaser may sue the issuer under Section 12(a)(1) of the 1933 Act.

Although the registration provisions of the 1933 Act do not apply to an exempt offering, the antifraud provisions of the 1933 Act and 1934 Act, which are discussed later, are applicable. For example, when an issuer gives false information to a purchaser in a Rule 504 offering, the issuer may have violated the antifraud provisions of the two acts. The purchaser may obtain damages from the issuer under the antifraud rules even though the transaction is exempt from registration.

Liability Provisions of the 1933 Act

To deter fraud, deception, and manipulation and to provide remedies to the victims of such practices, Congress included a number of liability provisions in the Securities Act of 1933.

Liability for Defective Registration Statements

Section 11 of the 1933 Act provides civil liabilities for damages when a 1933 Act registration statement on its effective date misstates or omits a material fact. A purchaser of securities issued pursuant to the defective

Concept Review

Comparison of 1933 Act Registration Exemptions

	Type of Issuer That May Use the Rule	Limit of Amount Sold	Limit of Number of Purchasers
Rule 504	Only an issuer that is not a public issuer	$1 million	No limit
Rule 505	All issuers	$5 million	35 unaccredited purchasers; unlimited number of accredited purchasers
Rule 506	All issuers	No limit	35 unaccredited purchasers; unlimited number of accredited purchasers
Regulation A	Only an issuer that is not a public issuer	$5 million	No limit
Rule 147	Only an issuer organized and doing business in the same state as the offerees and purchasers (80% of assets, 80% of sales, 80% of proceeds used in that state)	No limit	No limit

registration statement may sue certain classes of persons that are listed in Section 11—the issuer, its chief executive officer, its chief accounting officer, its chief financial officer, the directors, other signers of the registration statement, the underwriter, and experts who contributed to the registration statement (such as auditors who issued opinions regarding the financial statements or lawyers who issued an opinion concerning the tax aspects of a limited partnership). The purchaser's remedy under Section 11 is for damages caused by the misstatement or omission. Damages are presumed to be equal to the difference between the purchase price of the securities less the price of the securities at the time of the lawsuit.

Must Purchasers Meet any Requirements?	Is Disclosure Required?	Are General Solicitations Permitted?	Is Resale Restricted?	Is A Filing With The Sec Required?
No	No	Yes; if issuer registered the securities under state law or sold only to accredited investors pursuant to a state securities exemption	No; if issuer registered the securities under state law or sold only to accredited investors pursuant to a state securities exemption	Yes; Form D must be filed not later than 15 days after the first sale.
No	Yes; unless selling to accredited purchasers only	No	Yes; for at least one year	Yes; Form D must be filed not later than 15 days after the first sale.
Yes: each purchaser must either be acccredited or have such knowledge and experience in business and financial matters to be capable of evaluating the merits and risks of the investment.	Yes; unless selling to accredited purchasers only	No	Yes; for at least one year	Yes; Form D must be filed not later than 15 days after the first sale.
No	Yes; an offering circular must be given to investors	Yes	No	The offering circular and other offering material must be filed.
Yes: all offerees and purchasers must reside in the issuer's state.	No	Yes	Yes; for 9 months sales may not be made to persons resident outside the state of the issuance.	No

Section 11 is a radical liability section for three reasons. First, reliance is usually not required; that is, the purchaser need not show that she relied on the misstatement or omission in the registration statement. In fact, the purchaser need not have read the registration statement or have seen it. Second, privity is not required; that is, the purchaser need not prove that she purchased the securities from the defendant. All she has to prove is that the defendant is in one of the classes of persons liable under Section 11. Third, the purchaser need not prove that the defendant negligently or intentionally misstated or omitted a material fact. Instead, a defendant who otherwise would be liable under Section 11 may escape liability by proving that he exercised due diligence.

Section 11 Defenses A defendant can escape liability under Section 11 by proving that the purchaser knew of the misstatement or omission when she purchased the security. In addition, a defendant may raise the **due diligence defense.** It is the more important of the two defenses.

Any defendant except the issuer may escape liability under Section 11 by proving that he acted with due diligence in determining the accuracy of the registration statement. The due diligence defense basically requires the defendant to prove that he was not negligent. The exact defense varies, however, according to the class of defendant and the portion of the registration statement that is defective. Most defendants must prove that after a **reasonable investigation** they had **reasonable grounds to believe** and **did believe** that the registration statement was true and contained no omission of material fact.

Experts need to prove due diligence only in respect to the parts that they have contributed. For example, independent auditors must prove due diligence in ascertaining the accuracy of financial statements for which they issue opinions. Due diligence requires that an auditor at least comply with generally accepted auditing standards (GAAS).

Nonexperts meet their due diligence defense for parts contributed by experts if they had no reason to believe and did not believe that the expertised parts misstated or omitted any material fact. This defense does not require the nonexpert to investigate the accuracy of expertised portions, unless something alerted the nonexpert to problems with the expertised portions.

The *BarChris* case is the most famous case construing the due diligence defense of Section 11.

Escott v. BarChris Construction Corp. *283 F.Supp. 643 (S.D.N.Y. 1968)*

BarChris Construction Corporation was in the business of constructing bowling centers. With the introduction of automatic pinsetters in 1952, there was a rapid growth in the popularity of bowling, and BarChris's sales increased from $800,000 in 1956 to over $9 million in 1960. By 1960, it was building about 3 percent of the lanes constructed, while Brunswick Corporation and AMF were building 97 percent. BarChris contracted with its customers to construct and equip bowling alleys for them. Under the contracts, a customer was required to make a small down payment in cash. After the alleys were constructed, customers gave BarChris promissory notes for the balance of the purchase price. BarChris discounted the notes with a factor. The factor kept part of the face value of the notes as a reserve until the customer paid the notes. BarChris was obligated to repurchase the notes if the customer defaulted.

In 1960, BarChris offered its customers an alternative financing method in which BarChris sold the interior of a bowling alley to a factor, James Talcott, Inc. Talcott then leased the alley either to a BarChris customer (Type A financing) or to a BarChris subsidiary that then subleased to the customer (Type B financing). Under Type A financing, BarChris guaranteed 25 percent of the customer's obligation under the lease. With Type B financing, BarChris was liable for 100 percent of its subsidiaries' lease obligations. Under either financing method, BarChris made substantial expenditures before receiving payment from customers and, therefore, experienced a constant need of cash.

In early 1961, BarChris decided to issue debentures and to use part of the proceeds to help its cash position. In March 1961, BarChris filed with the SEC a registration statement covering the debentures. The statement became effective on May 16. The proceeds of the offering were received by BarChris on May 24, 1961. By that time, BarChris had difficulty collecting from some of its customers, and other customers were in arrears on their payments to the factors of the discounted notes. Due to overexpansion in the bowling alley industry, many BarChris customers failed. On October 29, 1962, BarChris filed a petition for bankruptcy. On November 1, it defaulted on the payment of interest on the debentures.

Escott and other purchasers of the debentures sued BarChris and its officers, directors, and auditors, among others, under Section 11 of the Securities Act of 1933. BarChris's registration statement contained material misstatements and omitted material facts. It overstated current assets by $609,689 (15.6 percent), sales by $653,900 (7.7 percent), and earnings per share by 10 cents (15.4 percent) in the 1960 balance sheet and income statement audited by Peat, Marwick, Mitchell & Co. The registration statement also understated BarChris's contingent liabilities by $618,853 (42.8 percent) as of April 30, 1961. It overstated gross profit for

the first quarter of 1961 by $230,755 (92 percent) and sales for the first quarter of 1961 by $519,810 (32.1 percent). The March 31, 1961, backlog was overstated by $4,490,000 (186 percent). The 1961 figures were not audited by Peat, Marwick.

In addition, the registration statement reported that prior loans from officers had been repaid, but failed to disclose that officers had made new loans to BarChris totaling $386,615. BarChris had used $1,160,000 of the proceeds of the debentures to pay old debts, a use not disclosed in the registration statement. BarChris's potential liability of $1,350,000 to factors due to customer delinquencies on factored notes was not disclosed. The registration statement represented BarChris's contingent liability on Type B financings as 25 percent instead of 100 percent. It misrepresented the nature of BarChris's business by failing to disclose that BarChris was already engaged and was about to become more heavily engaged in the operation of bowling alleys, including one called Capitol Lanes, as a way of minimizing its losses from customer defaults.

Trilling, BarChris's comptroller, signed the registration statement. Auslander, a director, signed the registration statement. Peat, Marwick consented to being named as an expert in the registration statement. All three would be liable to Escott unless they could meet the due diligence defense of Section 11.

McLean, District Judge The question is whether Trilling, Auslander, and Peat, Marwick have proved their due diligence defenses. The position of each defendant will be separately considered.

Trilling

Trilling was BarChris's controller. He signed the registration statement in that capacity. Trilling entered BarChris's employ in October 1960. He was Kircher's [BarChris's treasurer] subordinate. When Kircher asked him for information, he furnished it.

Trilling was not a member of the executive committee. He was a comparatively minor figure in BarChris. The description of BarChris's management in the prospectus does not mention him. He was not considered to be an executive officer.

Trilling may well have been unaware of several of the inaccuracies in the prospectus. But he must have known of some of them. As a financial officer, he was familiar with BarChris's finances and with its books of account. He knew that part of the cash on deposit on December 31, 1960, had been procured temporarily by Russo [BarChris's executive vice president] for window-dressing purposes. He knew that BarChris was operating Capitol Lanes in 1960. He should have known, although perhaps through carelessness he did not know at the time, that BarChris's contingent liability on Type B lease transactions was greater than the prospectus stated. In the light of these facts, I cannot find that Trilling believed the entire prospectus to be true.

But even if he did, he still did not establish his due diligence defenses. He did not prove that as to the parts of the prospectus expertised by Peat, Marwick he had no reasonable ground to believe that it was untrue. He also failed to prove, as to the parts of the prospectus not expertised by Peat, Marwick, that he made a reasonable investigation which afforded him a reasonable ground to believe that it was true. As far as appears, he made no investigation. He did what was asked of him and assumed that others would properly take care of supplying accurate data as to the other aspects of the company's business. This would have been well enough but for the fact that he signed the registration statement. As a signer, he could not avoid responsibility by leaving it up to others to make it accurate. Trilling did not sustain the burden of proving his due diligence defenses.

Auslander

Auslander was an outside director, i.e., one who was not an officer of BarChris. He was chairman of the board of Valley Stream National Bank in Valley Stream, Long Island. In February 1961, Vitolo [BarChris's president] asked him to become a director of BarChris. In February and early March 1961, before accepting Vitolo's invitation, Auslander made some investigation of BarChris. He obtained Dun & Bradstreet reports that contained sales and earnings figures for periods earlier than December 31, 1960. He caused inquiry to be made of certain of BarChris's banks and was advised that they regarded BarChris favorably. He was informed that inquiry of Talcott had also produced a favorable response.

On March 3, 1961, Auslander indicated his willingness to accept a place on the board. Shortly thereafter, on March 14, Kircher sent him a copy of BarChris's annual report for 1960. Auslander observed that BarChris's auditors were Peat, Marwick.

They were also the auditors for the Valley Stream National Bank. He thought well of them.

Auslander was elected a director on April 17, 1961. The registration statement in its original form had already been filed, of course without his signature. On May 10, 1961, he signed a signature page for the first amendment to the registration statement which was filed on May 11, 1961. This was a separate sheet without any document attached. Auslander did not know that it was a signature page for a registration statement. He vaguely understood that it was something "for the SEC."

At the May 15 directors' meeting, however, Auslander did realize that what he was signing was a signature sheet to a registration statement. This was the first time that he had appreciated the fact. A copy of the registration statement in its earlier form as amended on May 11, 1961, was passed around at the meeting. Auslander glanced at it briefly. He did not read it thoroughly. At the May 15 meeting, Russo and Vitolo stated that everything was in order and that the prospectus was correct. Auslander believed this statement.

In considering Auslander's due diligence defenses, a distinction must be drawn between the expertised and nonexpertised portions of the prospectus. As to the former, Auslander knew that Peat, Marwick had audited the 1960 figures. He believed them to be correct because he had confidence in Peat, Marwick. He had no reasonable ground to believe otherwise.

As to the nonexpertised portions, however, Auslander is in a different position. He seems to have been under the impression that Peat, Marwick was responsible for all the figures. This impression was not correct, as he would have realized if he had read the prospectus carefully. Auslander made no investigation of the accuracy of the prospectus. He relied on the assurance of Vitolo and Russo, and upon the information he had received in answer to his inquiries back in February and early March. These inquiries were general ones, in the nature of a credit check. The information which he received in answer to them was also general, without specific reference to the statements in the prospectus, which was not prepared until some time thereafter.

It is true that Auslander became a director on the eve of the financing. He had little opportunity to familiarize himself with the company's affairs. The question is whether, under such circumstances, Auslander did enough to establish his due diligence.

Section 11 imposes liability upon a director, no matter how new he is. He is presumed to know his responsibility when he becomes a director. He can escape liability only by using that reasonable care to investigate the facts that a prudent man would employ in the management of his own property. In my opinion, a prudent man would not act in an important matter without any knowledge of the relevant facts, in sole reliance upon general information which does not purport to cover the particular case. To say that such minimal conduct measures up to the statutory standard would, to all intents and purposes, absolve new directors from responsibility merely because they are new. This is not a sensible construction of Section 11, when one bears in mind its fundamental purpose of requiring full and truthful disclosure for the protection of investors.

Auslander has not established his due diligence defense with respect to the misstatements and omissions in those portions of the prospectus other than the audited 1960 figures.

Peat, Marwick

The part of the registration statement purporting to be made upon the authority of Peat, Marwick as an expert was the 1960 figures. But because the statute requires the court to determine Peat, Marwick's belief, and the grounds thereof, "at the time such part of the registration statement became effective," for the purposes of this affirmative defense, the matter must be viewed as of May 16, 1961, and the question is whether at that time Peat, Marwick, after reasonable investigation, had reasonable ground to believe and did believe that the 1960 figures were true and that no material fact had been omitted from the registration statement which should have been included in order to make the 1960 figures not misleading. In deciding this issue, the court must consider not only what Peat, Marwick did in its 1960 audit, but also what it did in its subsequent S–1 review. The proper scope of that review must also be determined.

The 1960 Audit

Peat, Marwick's work was in general charge of a member of the firm, Cummings, and more immediately in charge of Peat, Marwick's manager, Logan. Most of the actual work was performed by a senior accountant, Berardi, who had junior assistants, one of whom was Kennedy.

Berardi was then about 30 years old. He was not yet a CPA. He had had no previous experience with the bowling industry. This was his first job as a senior accountant. He could hardly have been given a more difficult assignment.

It is unnecessary to recount everything that Berardi did in the course of the audit. We are concerned only with the evidence relating to what Berardi did or did not do with respect to those items which I have found to have been incorrectly reported in the 1960 figures in the prospectus. More narrowly, we are directly concerned only with such of those items as I have found to be material.

First and foremost is Berardi's failure to discover that Capitol Lanes had not been sold. This error affected both the sales figure and the liability side of the balance sheet. Fundamentally, the error stemmed from the fact that Berardi never realized that Heavenly Lanes and Capitol were two different names for the same alley. Berardi assumed that Heavenly was to be treated like any other completed job.

Berardi read the minutes of the board of directors meeting of November 22, 1960, which recited that "the Chairman recommended that the Corporation operate Capitol Lanes." Berardi knew from various BarChris records that Capitol Lanes, Inc., was paying rentals to Talcott. Also, a Peat, Marwick work paper bearing Kennedy's initials recorded that Capitol Lanes, Inc., held certain insurance policies.

Berardi testified that he inquired of Russo about Capitol Lanes and that Russo told him that Capitol Lanes, Inc., was going to operate an alley someday but as yet it had no alley. Berardi testified that he understood that the alley had not been built and that he believed that the rental payments were on vacant land.

I am not satisfied with this testimony. If Berardi did hold this belief, he should not have held it. The entries as to insurance and as to "operation of alley" should have alerted him to the fact that an alley existed. He should have made further inquiry on the subject. It is apparent that Berardi did not understand this transaction.

He never identified this mysterious Capitol with the Heavenly Lanes which he had included in his sales and profit figures. The vital question is whether he failed to make a reasonable investigation which, if he had made it, would have revealed the truth.

Certain accounting records of BarChris, which Berardi testified he did not see, would have put him on inquiry. One was a job cost ledger card for job no. 6036, the job number which Berardi put on his own sheet for Heavenly Lanes. This card read "Capitol Theatre (Heavenly)." In addition, two accounts receivable cards each showed both names on the same card, Capitol and Heavenly. Berardi testified that he looked at the accounts receivable records but that he did not see these particular cards. He testified that he did not look on the job cost ledger cards because he took the costs from another record, the costs register.

The burden of proof on this issue is on Peat, Marwick. Although the question is a rather close one, I find that Peat, Marwick has not sustained that burden. Peat, Marwick has not proved that Berardi made a reasonable investigation as far as Capitol Lanes was concerned and that his ignorance of the true facts was justified.

I turn now to the errors in the current assets. As to cash, Berardi properly obtained a confirmation from the bank as to BarChris's cash balance on December 31, 1960. He did not know that part of this balance had been temporarily increased by the deposit of reserves returned by Talcott to BarChris conditionally for a limited time. I do not believe that Berardi reasonably should have known this. It would not be reasonable to require Berardi to examine all of BarChris's correspondence files [which contained correspondence indicating that BarChris was to return the cash to Talcott] when he had no reason to suspect any irregularity.

The S–1 Review

The purpose of reviewing events subsequent to the date of a certified balance sheet (referred to as an S–1 review when made with reference to a registration statement) is to ascertain whether any material change has occurred in the company's financial position which should be disclosed in order to prevent the balance sheet figures from being misleading. The scope of such a review, under generally accepted auditing standards, is limited. It does not amount to a complete audit.

Berardi made the S–1 review in May 1961. He devoted a little over two days to it, a total of 20 1/2 hours. He did not discover any of the errors or omissions pertaining to the state of affairs in 1961, all of which were material. The question is whether, despite his failure to find out anything, his investigation was reasonable within the meaning of the statute.

What Berardi did was to look at a consolidating trial balance as of March 31, 1961, which had been prepared by BarChris, compare it with the audited December 31, 1960, figures, discuss with Trilling certain unfavorable developments which the comparison disclosed, and read certain minutes. He did not examine any important financial records other than the trial balance.

In substance, Berardi asked questions, he got answers which he considered satisfactory, and he did nothing to verify them. Since he never read the prospectus, he was not even aware that there had ever been any problem about loans from officers. He made no inquiry of factors about delinquent notes in his S–1 review. Since he knew nothing about Kircher's notes of the executive committee meetings, he did not learn that the delinquency situation had grown worse. He was content with Trilling's assurance that no liability theretofore contingent had become direct. Apparently the only BarChris officer with whom Berardi communicated was Trilling. He could not recall making any inquiries of Russo, Vitolo, or Pugliese [a BarChris vice-president].

There had been a material change for the worse in BarChris's financial position. That change was sufficiently serious so that the failure to disclose it made the 1960 figures misleading. Berardi did not discover it. As far as results were concerned, his S–1 review was useless.

Accountants should not be held to a standard higher than that recognized in their profession. I do not do so here. Berardi's review did not come up to that standard. He did not take some of the steps which Peat, Marwick's written program prescribed. He did not spend an adequate amount of time on a task of this magnitude. Most important of all, he was too easily satisfied with glib answers to his inquiries.

This is not to say that he should have made a complete audit. But there were enough danger signals in the materials which he did examine to require some further investigation on his part. Generally accepted auditing standards require such further investigation under these circumstances. It is not always sufficient merely to ask questions.

Here again, the burden of proof is on Peat, Marwick. I find that burden has not been satisfied. I conclude that Peat, Marwick has not established its due diligence defense.

Judgment for Escott and the other purchasers.

Due Diligence Meeting Officers, directors, underwriters, accountants, and other experts attempt to reduce their Section 11 liability by holding a due diligence meeting just prior to the effective date of a registration statement. At the due diligence meeting, the participants obtain assurances and demand proof from each other that the registration statement contains no misstatements or omissions of material fact. If it appears from the meeting that there are inadequacies in the investigation of the information in the registration statement, the issuer will delay the effective date until an appropriate investigation is undertaken.

Statute of Limitations Under section 11, a defendant has liability for only a limited period of time, pursuant to a statute of limitations. A purchaser must sue the defendant within one year after the misstatement or omission was or should have been discovered by the purchaser. In addition, the purchaser may sue the defendant not more than three years after the securities were offered to the public. Although the word "offered" is used in the statute, the three-year period does not usually begin until after the registered securities are first delivered to a purchaser.

Other Liability Provisions

Section 12(a)(2) of the 1933 Act prohibits misstatements or omissions of material fact in any written or oral communication in connection with the general distribution of any security by an issuer (except government-issued or government-guaranteed securities). Section 17(a) prohibits the use of any device or artifice to defraud, or the use of any untrue or misleading statement, in connection with the offer or sale of any security. Two of the subsections of Section 17(a) require that the defendant merely act negligently, while the third subsection requires proof of scienter. Scienter is the intent to deceive, manipulate, or defraud the purchaser. Some courts have held that scienter also includes recklessness.

Since these liability sections are part of federal law, there must be some connection between the illegal

activity and interstate commerce for liability to exist. Section 11 merely requires the filing of a registration statement with the SEC. Sections 12(a)(1), 12(a)(2), and 17(a) require the use of the mails or other instrumentality or means of interstate communication or transportation.

Criminal Liability

Section 24 of the 1933 Act provides for criminal liability for any person who willfully violates the Act or its rules and regulations. The maximum penalty is a $10,000 fine and five years' imprisonment. Criminal actions under the 1933 Act are brought by the attorney general of the United States, not by the SEC.

Securities Exchange Act of 1934

The Securities Exchange Act of 1934 is chiefly concerned with requiring the disclosure of material information to investors. Unlike the 1933 Act, which is primarily a one-time disclosure statute, the 1934 Act requires **periodic disclosure** by issuers with publicly held equity securities. An issuer with publicly traded equity securities must report annually to its shareholders and submit annual and quarterly reports to the SEC. Also, any material information about the issuer must be disclosed as the issuer obtains it, unless the issuer has a valid business purpose for withholding disclosure.

In addition, the 1934 Act regulates insiders' transactions in securities, proxy solicitations, tender offers, brokers and dealers, and securities exchanges. The 1934 Act also has several sections prohibiting fraud and manipulation in securities transactions. The ultimate purpose of the 1934 Act is to keep investors fully informed to allow them to make intelligent investment decisions at any time.

Registration of Securities under the 1934 Act

Under the 1934 Act, issuers must **register classes of securities.** This is different from the 1933 Act, which requires issuers to register issuances of securities. Under the 1933 Act, securities are registered only for the term of an issuance. Under the 1934 Act, registered classes of securities remain registered until the issuer takes steps to deregister the securities. The chief consequence of having securities registered under the 1934 Act is that the issuer is required to disclose information about itself to its owners and the SEC.

Registration Requirement Two types of issuers must register securities with the SEC under the 1934 Act.

1. An issuer whose total assets exceed $10 million must register a class of equity securities held by at least 500 holders if the securities are traded in interstate commerce.
2. An issuer must register any security traded on a national security exchange, such as common shares traded on the American Stock Exchange.

To register the securities, the issuer must file a 1934 Act **registration statement** with the SEC. The information required in the 1934 Act registration statement is similar to that required in the 1933 Act registration statement, except that offering information is omitted.

Termination of Registration An issuer may avoid the expense and burden of complying with the periodic disclosure and other requirements of the 1934 Act if the issuer terminates its registration. A 1934 Act registration of a class of securities may be terminated if the issuer has fewer than 300 shareholders of that class. In addition, a registration may be terminated if the issuer has fewer than 500 shareholders of the registered class of equity securities and assets of no more than $10 million for each of the last three years. However, an issuer with securities listed on a national securities exchange would not be able to terminate a registration of the listed securities.

Periodic Reporting Requirement To maintain a steady flow of material information to investors, the 1934 Act requires public issuers to file periodic reports with the SEC. Three types of issuers must file such reports:

1. An issuer whose total assets exceed $10 million and who has a class of equity securities held by at least 500 holders, if the securities are traded in interstate commerce.
2. An issuer whose securities are traded on a national securities exchange.
3. An issuer who has made a registered offering of securities under the 1933 Act.

The first two types of issuers—which are issuers that must also register securities under the 1934 Act—must file several periodic reports, including an annual report

(Form 10-K) and a quarterly report (Form 10-Q). They must file a monthly report (Form 8-K) when material events occur. Comparable reports must also be sent to their shareholders. The third type of issuer—an issuer who must disclose under the 1934 Act only because it has made a registered offering under the 1933 Act—must file the same reports as the other issuers, except that it need not provide an annual report to its shareholders. 1934 Act disclosure required of the third type of issuer is in addition to the disclosure required by the 1933 Act.

The 10-K annual report must include audited financial statements plus current information about the conduct of the business, its management, and the status of its securities. It includes management's description and analysis of the issuer's financial condition (the so-called MDA section) and the names of directors and executive officers, including their compensation (such as salary and stock options). The 10-K auditing requirements are the same as for a 1933 Act registration statement—two years' audited balance sheets, three years' audited income statements, and three years' audited statements of changes in financial position.

The quarterly report, the 10-Q, requires only a summarized, unaudited operating statement and unaudited figures on capitalization and shareholders' equity. The 8-K monthly report must be filed within 15 calendar days of the occurrence of the event, such as a change in the amount of securities, an acquisition or disposition of assets, a change in control of the company, a revaluation of assets, or "any materially important event."

The SEC permits issuers to file reports electronically, transmitting them by telephone or by sending computer tapes or disks to the SEC. These electronic filings are made with the SEC's Electronic Data Gathering, Analysis, and Retrieval system (EDGAR). The SEC's Internet homepage (www.sec.gov) gives investors and securities analysts access to the EDGAR database.

Issuers have historically mailed to their shareholders written copies of their annual reports and other periodic disclosure statements. Today, issuers are able to transmit such reports over the Internet. The Internet increases investors' access to information and can reduce the issuer's costs as well.

Suspension of Duty to File Reports An issuer's duty to file periodic reports with regard to a class of securities is suspended if the issuer has fewer than 300 holders of that class. In addition, a suspension occurs if the issuer has fewer than 500 holders of that class of securities and assets of no more than $10 million. However, an issuer with securities traded on a national securities exchange would remain obligated to file periodic reports with respect to those securities.

Holdings and Trading by Insiders

Section 16 of the 1934 Act is designed to promote investor confidence in the integrity of the securities markets by limiting the ability of insiders to profit from trading in the shares of their issuers. Section 16(a) requires statutory insiders to disclose their ownership of their company's securities within 10 days of becoming owners. In addition, statutory insiders must report any subsequent transaction in such securities within 10 days.

A statutory insider is a person who falls into any of the following categories:

1. An officer of a corporation having equity securities registered under the 1934 Act.
2. A director of such a corporation.
3. An owner of more than 10 percent of a class of equity securities registered under the 1934 Act.

Section 16(b) prevents an insider from profiting from short-swing trading in his company's shares. Any profit made by a statutory insider is recoverable by the issuer if the profit resulted from the purchase and sale (or the sale and purchase) of any class of the issuer's equity securities within less than a six-month period. This provision was designed to stop speculative insider trading on the basis of information that "may have been obtained by such owner, director, or officer by reason of his relationship to the issuer." The application of the provision is without regard to intent to use or actual use of inside information. However, a few cases have held that sales made by a statutory insider without actual access to inside information do not violate Section 16(b).

Proxy Solicitation Regulation

In a public corporation, shareholders rarely attend and vote at shareholder meetings. Many shareholders are able to vote at shareholder meetings only by **proxy,** a document by which shareholders direct other persons to vote their shares. Just as investors need information to be able to make intelligent investment decisions, shareholders need information to make intelligent voting and proxy decisions.

The 1934 Act regulates the solicitation of proxies. Regulation 14A requires any person soliciting proxies from holders of securities registered under the 1934 Act to furnish each holder with a **proxy statement** containing voting information. Usually, the only party soliciting proxies is the corporation's management, which is seeking proxies from common shareholders to enable it to reelect itself to the board of directors.

If the management of the corporation does not solicit proxies, it must nevertheless inform the shareholders of material information affecting matters that are to be put to a vote of the shareholders. This **information statement,** which contains about the same information as a proxy statement, must be sent to all shareholders that are entitled to vote at the meeting.

The primary purpose of the SEC rules concerning information that must be included in the proxy or information statement is to permit shareholders to make informed decisions while voting for directors and considering any resolutions proposed by the management or shareholders. Information on each director nominee must include the candidate's principal occupation, his shareholdings in the corporation, his previous service as a director of the corporation, his material transactions with the corporation (such as goods or services provided), and his directorships in other corporations. The total remuneration of the five directors or officers who are highest paid, including bonuses, grants under stock option plans, fringe benefits, and other perquisites, must also be included in the proxy statement.

SEC rules regarding the content of proxies ensure that the shareholder understands how his proxy will be voted. The proxy form must indicate in boldface type on whose behalf it is being solicited—for example, the corporation's management. Generally, the proxy must permit the shareholder to vote for or against the proposal or to abstain from voting on any resolutions on the meeting's agenda. The proxy form may ask for discretionary voting authority if the proxy indicates in bold print how the shares will be voted. For directors' elections, the shareholders must be provided with a means for withholding approval for each nominee.

Modern technology has greatly increased the ease with which shareholders may participate in shareholder votes and meetings, as well as reducing the cost of counting shareholder votes. Shareholders can vote electronically by phone and on the Internet. Recently, the Tribune Company broadcast its shareholder meeting by satellite, and Bell & Howell used the Internet as a channel for its shareholder meeting.

SEC Rule 14a-9 prohibits misstatements or omissions of material fact in the course of a proxy solicitation. If a violation is proved, a court may enjoin the holding of the shareholders' meeting, void the proxies that were illegally obtained, or rescind the action taken at the shareholders' meeting.

Proxy Contests A shareholder may decide to solicit proxies in competition with management. Such a competition is called a proxy contest, and a solicitation of this kind is also subject to SEC rules. To facilitate proxy contests, the SEC requires the corporation either to furnish a shareholder list to shareholders who desire to wage a proxy contest or to mail the competing proxy material for them.

Shareholder Proposals In a large public corporation, it is very expensive for a shareholder to solicit proxies in support of a proposal for corporate action that she will offer at a shareholders' meeting. Therefore, she usually asks the management to include her proposal in its proxy statement. SEC Rule 14a-8 covers proposals by shareholders.

Under SEC Rule 14a-8, the corporation must include a shareholder's proposal in its proxy statement if, among other things, the shareholder owns at least 1 percent or $2,000 of the securities to be voted at the shareholders' meeting. A shareholder may submit only one proposal per meeting. The proposal and its supporting statement may not exceed 500 words.

Under Rule 14a-8, a corporation's management may exclude many types of shareholder proposals from its proxy statement. For example, a proposal is excludable if:

1. The proposal deals with the ordinary business operations of the corporation. For example, Pacific Telesis Group was permitted on this ground to omit a proposal that the board consider adding an environmentalist director and designate a vice president for environmental matters for each subsidiary. However, TRW, Inc., was required to include in its proxy statement a proposal that it establish a shareholder advisory committee that would advise the board of directors on the interests of shareholders.

2. The proposal relates to operations that account for less than 5 percent of a corporation's total assets and is not otherwise significantly related to the company's business. For example, Harsco Corp. could not omit a proposal that it sell its 50 percent interest in a South African firm even though the investment was arguably

economically insignificant—only 4.5 percent of net earnings—because the issues raised by the proposal were significantly related to Harsco's business.

3. The proposal requires the issuer to violate a state or federal law. For example, one shareholder asked North American Bank to put a lesbian on the board of directors. The proposal was excludable because it may have required the bank to violate antidiscrimination laws.

4. The proposal relates to a personal claim or grievance. A proposal that the corporation pay the shareholder $1 million for damages that she suffered from using one of the corporation's products would be excludable.

In addition, Rule 14a-8 prevents a shareholder from submitting a proposal similar to recent proposals that have been overwhelmingly rejected by shareholders in recent years.

Liability Provisions of the 1934 Act

To prevent fraud, deception, or manipulation and to provide remedies to the victims of such practices, Congress included provisions in the 1934 Act that impose liability on persons who engage in wrongful conduct.

Liability for False Statements in Filed Documents

Section 18 is the 1934 Act counterpart to Section 11 of the 1933 Act. Section 18 imposes liability on any person responsible for a false or misleading statement of material fact in any document filed with the SEC under the 1934 Act. (Filed documents include the 10-K report, 8-K report, and proxy statements, but not the 10-Q report.) Any person who relies on a false or misleading statement in such a filed document may sue for damages. The purchaser need not prove that the defendant was at fault. Instead, the defendant has a defense that he acted in good faith and had no knowledge that the statement was false or misleading. This defense requires only that the defendant prove that he did not act with scienter.

Section 10(b) and Rule 10b-5

The most important liability section in the 1934 Act is Section 10(b), an extremely broad provision prohibiting the use of any manipulative or deceptive device in contravention of any rules that the SEC prescribes as "necessary or appropriate in the public interest or for the protection of investors." Rule 10b-5 was adopted by the SEC under Section 10(b). The rule states:

> It shall be unlawful for any person, directly or indirectly, by use of any means or instrumentality of interstate commerce or of the mails, or of any facility of any national securities exchange,
>
> (a) to employ any device, scheme, or artifice to defraud,
>
> (b) to make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading, or
>
> (c) to engage in any act, practice, or course of business which operates or would operate as a fraud or deceit upon any person,
>
> in connection with the purchase or sale of any security.

Rule 10b-5 applies to all transactions in all securities, whether or not registered under the 1933 Act or the 1934 Act.

Elements of a Rule 10b-5 Violation

The most important elements of a Rule 10b-5 violation are a misstatement or omission of material fact and scienter. In addition, private persons suing under the rule must be purchasers or sellers of securities who relied on the misstatement or omission.

Misstatement or Omission of Material Fact

Rule 10b-5 prohibits only *misstatements or omissions of material fact.* A person **misstates** material facts, for example, when a manager of an unprofitable business induces shareholders to sell their stock to him by stating that the business will fail, although he knows that the business has become potentially profitable.

Liability for an **omission of a material fact** arises when a person fails to disclose material facts when he has a duty to disclose. For example, a securities broker is liable to his customer for not disclosing that he owns the shares that he recommends to the customer. As an agent of the customer, he owes a fiduciary duty to his customer to disclose his conflict of interest. In addition, a person is liable for omitting to tell all of the material facts after he has chosen to disclose some of them. His incomplete disclosure creates the duty to disclose all of the material facts.

Materiality Under Rule 10b-5, the misstated or omitted fact must be **material.** In essence, material information is any information that is likely to have an impact on the price of a security in the market. A fact is material if there is a substantial likelihood that a reasonable investor would consider it important to his decision, that the fact would have assumed actual significance in the deliberations of the reasonable investor, and that the disclosure of the fact would have been viewed by the reasonable investor as having significantly altered the total mix of information made available.

When there is doubt whether an important event will occur, the *Texas Gulf Sulphur* case holds that materiality of the doubtful event can be determined by "a balancing of both the indicated probability that the event will occur and the anticipated magnitude of the event in light of the totality of the company activity."

Scienter Under Rule 10b-5, the defendant is not liable unless he acted with **scienter.** Scienter is an intent to deceive, manipulate, or defraud. Scienter probably includes gross recklessness of the defendant in ascertaining the truth of his statements. Mere negligence is not scienter.

Other Elements Rule 10b-5 requires that private plaintiffs seeking damages be **actual purchasers or sellers** of securities. Persons who were deterred from purchasing securities by fraudulent statements may not recover lost profits under Rule 10b-5.

Under Rule 10b-5, private plaintiffs alleging damages caused by misstatements by the defendant must prove that they **relied** on the misstatement of material fact. The SEC as plaintiff need not prove reliance. For private plaintiffs, reliance is not usually required in omission cases; the investor need merely prove that the omitted fact was material. In addition, the misstatement or omission must **cause the investor's loss.**

The following *Carr* case considers whether an investor was entitled to rely on the misstatements of a securities salesman that contradicted a writing disclosing the risks of an investment.

Carr v. CIGNA Securities, Inc. *95 F.3d 544 (7th Cir. 1996)*

Kenny Carr was a professional basketball player in the National Basketball Association (NBA) when in 1984 he paid CIGNA Securities, Inc., $450,000 for limited-partner interests in two commercial real estate limited partnerships that CIGNA had created. Carr said that the CIGNA salesman told him the limited partnerships were safe, conservative investments. The CIGNA salesman gave Carr documents that disclosed the riskiness of the investment, but Carr did not read or understand them. Carr also said that the salesman "knew that I didn't understand them. He said they were boilerplate kind of stuff, and breezed through them. He just explained them in his own words. He didn't say they were contrary to what he had told me. What I understood was what he told me."

When the commercial real estate market collapsed in the late 1980s, Carr lost his entire investment. Carr sued CIGNA for fraudulently selling securities in violation of Securities Exchange Act Rule 10b-5. The district court dismissed the action, and Carr appealed.

Posner, Chief Judge We are going to come directly to the merits of the fraud claim. Carr's claim is barred by a very simple, very basic, very sensible principle of the law of fraud. If a literate, competent adult is given a document that in readable and comprehensive prose says X (X might be, "this is a risky investment"), and the person who hands it to him tells him orally, not-X ("this is a safe investment"), our literate, competent adult cannot maintain an action for fraud against the issuer of the document. This principle is necessary to provide sellers of goods and services, including investments, with a safe harbor against groundless, or at least indeterminate, claims of fraud by their customers. Without such a principle, sellers would have no protection against plausible liars and gullible jurors. The sale of risky investments would be itself a very risky enterprise. Risky investments by definition often fizzle. If the documents an investor was given, warning him in capitals and bold face that it was a **RISKY** investment, do not preclude a suit, it will simply be his word against the seller's concerning the content of an unrecorded conversation.

Carr was a fully literate, fully competent adult investing $450,000, which even to an NBA player is not such chicken feed that a busy person could not realistically be expected to take the time to read a lot of fine-print legal mumbo-jumbo. Carr points out that he was not in 1984 a sophisticated investor, knowledgeable about limited partnerships or commercial real estate. He argues that CIGNA's salesman invited him to repose trust in the salesman's advice and by doing so created a fiduciary relationship. The general rule, however, is that a broker is not the fiduciary of his customer unless the customer entrusts him with discretion to select the customer's investments, which Carr did not do. But it hardly matters. A fiduciary relationship places on the fiduciary a duty of candor, and concomitantly excuses the principal from having to take the same degree of care that is expected of a participant in an arm's-length contractual relationship. But the fiduciary relationship does not excuse the principal from taking the most elementary precautions against a salesman's pitch, such as the precaution of reading a short and plain statement of what one is buying for one's $450,000.

We do not say that a written disclaimer provides a safe harbor in every fiduciary case. Not all principals of fiduciaries are competent adults; not all disclaimers are clear; and the relationship may involve such a degree of trust as to dispel any duty of self-protection by the principal. But we are dealing here with a case in which, if there is a fiduciary duty—and probably there is not—it lies at the outer limits of the fiduciary principle. In so attenuated a fiduciary relation, and with so much money at stake, the principal has a duty to read.

Carr points out that CIGNA handed him 427 pages of documents when he bought the shares of the limited partnerships. We agree that it would be unreasonable to expect Carr to pore through 427 pages of legal and accounting mumbo-jumbo looking for nuggets of intelligible warnings. But the subscription agreements for each of the limited partnerships were only eight pages long and rich in lucid warnings, such as: "the Units are speculative investments which involve a high degree of risk of loss by the undersigned of his entire investment in the Partnership."

Professional athletes may be a common prey of financial predators. But their vulnerability does not justify a rule that would have the effect of making financial advisors the guarantors of risky investments.

Judgment for CIGNA affirmed.

Several courts have held that an investor's reliance on the availability of the securities on the market satisfies the reliance requirement of Rule 10b-5 because the securities market is defrauded as to the value of the securities. This **fraud-on-the-market theory** is based on the hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business. With the presence of a market, the market is interposed between seller and buyer and, ideally, transmits information to the investor in the processed form of a market price. Thus, the market is performing a substantial part of the valuation process performed by the investor in a face-to-face transaction. The market is acting as the unpaid agent of the investor, informing him that given all the information available to it, the value of the stock is the same as the market price. Misleading statements will therefore defraud purchasers of stock even if the purchasers do not directly rely on the misstatements and even if the defendants never communicated with the plaintiffs.

In *Basic, Inc. v. Levinson,* which follows this section, the Supreme Court held that the fraud-on-the-market theory permits a court to presume an investor's reliance merely from the public availability of material misrepresentations. That presumption, however, is rebuttable, such as by evidence that an investor knew the market price was incorrect.

For Rule 10b-5 to apply, the wrongful action must be accomplished *by the mails, with any means or instrumentality of interstate commerce,* or *on a national securities exchange.* This element satisfies the federal jurisdiction requirement. Use of the mails or a telephone within one state has been held to meet this element.

The scope of activities proscribed by Rule 10b-5 is not immediately obvious. While it is easy to understand that actual fraud and price manipulation are covered by the rule, two other areas are less easily

mastered—the corporation's continuous disclosure obligation and insider trading.

Continuous Disclosure Obligation The purpose of the 1934 Act is to ensure that investors have the information they need in order to make intelligent investment decisions at all times. The periodic reporting requirements of the 1934 Act are especially designed to accomplish this result. If important developments arise between the disclosure dates of reports, however, investors will not have all of the information they need to make intelligent decisions unless the corporation discloses the material information immediately. Rule 10b-5 requires a corporation to disclose material information immediately, unless the corporation has a valid business purpose for withholding disclosure. When a corporation chooses to disclose information or to comment on information that it has no duty to disclose, it must do so accurately.

Until 1988, courts had disagreed on whether Rule 10b-5 requires disclosure of merger and other acquisition negotiations prior to an agreement in principle. In *Basic, Inc. v. Levinson,* the Supreme Court of the United States held that materiality of merger negotiations is to be determined on a case-by-case basis. The Court held that materiality depends on the probability that the transaction will be consummated and on its significance to the issuer of the securities. In addition, the Court stated that a corporation that chooses to comment on acquisition negotiations must do so truthfully.

Basic Inc. v. Levinson *485 U.S. 224 (U.S. Sup. Ct. 1988)*

For over a decade, Combustion Engineering, Inc. (CEI), had been interested in acquiring Basic, Inc. When antitrust barriers to such an acquisition were eliminated in 1976, CEI's secret strategic plan listed the acquisition of Basic as an objective. Between September 1976 and October 1977, the managements of Basic and CEI privately discussed several times a possible acquisition of Basic by CEI. Throughout 1977 and 1978, despite the secrecy of merger negotiations, there were repeated instances of abnormal trading in Basic's shares on the New York Stock Exchange. On October 19 and 20, 1977, the trading volume in Basic's shares rose from an average of 7,000 shares per day to 29,000 shares. On October 21, 1977, Max Muller, the president of Basic, made a public announcement, reported in a major newspaper, that "the company knew no reason for the stock's activity and that no negotiations were under way with any company for a merger."

Secret contacts between Basic and CEI continued, however. On June 7, 1978, CEI offered $28 per share for Basic, which Basic rejected as too low. CEI stated it would make a better offer, but Muller told CEI to "hold off until we tell you," because Muller wanted to see an investment banker's valuation of Basic before evaluating any CEI offer. Muller and other Basic officials decided to ask CEI for its best offer. On July 10, 1978, Muller and CEI agreed that CEI would make an informal offer to Basic. CEI advised Muller to make no public disclosures about the negotiations.

On July 14, 1978, the price of Basic shares rose more than 12 percent to $27 per share on trading of 18,200 shares. The New York Stock Exchange called Basic and asked it to explain the trading in its shares. Basic denied that any undisclosed merger or acquisition plans or any other significant corporate development existed. On September 24, 1978, the price of Basic shares rose more than 2 points to $30 per share on volume of 31,900 shares. The next day, the price rose almost 3 points to $33 per share on volume of 28,500 shares, even though the Dow Jones Industrial Average fell more than 3 points. Again the Exchange asked Basic whether there were any undisclosed acquisition plans or any other significant corporate developments. Basic flatly denied that there were any corporate developments and issued a press release that stated:

> management is unaware of any present or pending corporate development that would result in the abnormally heavy trading activity and price fluctuation in company shares that have been experienced in the past few days.

Secret contacts between Basic and CEI continued. In early November, Basic sent a quarterly report to its shareholders in which it stated:

> With regard to the stock market activity in the Company's shares we remain unaware of any present or pending developments that would account for the high volume of trading and price fluctuations in recent months.

On November 27, 1978, CEI secretly offered to buy Basic's outstanding shares for $35 per share. Basic rejected the offer. On December 14, 1978, CEI offered $46 per share. The next day, Friday, December 15, the price of Basic's shares soared. Again Basic answered the Exchange's inquiry with a denial of corporate developments. On Monday, December 18, 1978, Basic asked the Exchange to suspend trading in Basic shares, because it had been "approached" concerning a possible merger. The next day, Basic accepted CEI's offer. On the following day, December 19, Basic announced its acceptance of CEI's offer to buy Basic's outstanding shares for $46 per share.

Max Levinson and several other Basic shareholders sold their Basic shares between October 21, 1977, and December 15, 1978, at a price lower than CEI's offer. They claimed that Basic's statements denying that any merger discussions were occurring violated Section 10(b) and Rule 10b-5 of the Securities Exchange Act of 1934. The district court held that the merger negotiations were not material. Levinson appealed to the Sixth Circuit Court of Appeals, which held that Basic possessed no general duty to disclose the merger negotiations. However, the court found that Basic released statements that were so incomplete as to be misleading. Basic appealed to the Supreme Court.

Blackmun, Justice Underlying the adoption of extensive disclosure requirements of the 1934 Act was a legislative philosophy: There cannot be honest markets without honest publicity. Manipulation and dishonest practices of the market place thrive upon mystery and secrecy.

The Court previously has explicitly defined a standard of materiality under the securities laws, concluding in the proxy-solicitation context that "[a]n omitted fact is material if there is a substantial likelihood that a reasonable shareholder would consider it important in deciding how to vote." *TSC Industries, Inc. v. Northway, Inc.* (1976). The Court was careful not to set too low a standard of materiality; it was concerned that a minimal standard might bring an overabundance of information within its reach, and lead management "simply to bury the shareholders in an avalanche of trivial information—a result that is hardly conducive to informed decisionmaking." To fulfill the materiality requirement "there must be a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the "total mix" of information made available." We now expressly adopt the *TSC Industries* standard of materiality for the Section 10(b) and Rule 10b-5 context.

The application of this materiality standard to preliminary merger discussions is not self-evident. Where the event is contingent or speculative in nature, it is difficult to ascertain whether the "reasonable investor" would have considered the omitted information significant at the time. Merger negotiations, because of the ever-present possibility that the contemplated transaction will not be effectuated, fall into this category.

Basic urges upon us the Third Circuit test for resolving this difficulty. Under this approach, preliminary merger discussions do not become material until "agreement-in-principle" as to the price and structure of the transaction has been reached between the would-be merger partners. See *Greenfield v. Heublein, Inc.* (3d Cir. 1984). By definition, then, information concerning any negotiations not yet at the agreement-in-principle stage could be withheld or even misrepresented without a violation of Rule 10b-5.

Three rationales have been offered in support of the "agreement-in-principle" test. The first derives from the concern that an investor not be overwhelmed by excessively detailed and trivial information and focuses on the substantial risk that preliminary merger discussions may collapse: because such discussions are inherently tentative, disclosure of their existence itself could mislead investors and foster false optimism. The other two justifications for the agreement-in-principle standard are based on management concerns: because the requirement of "agreement-in-principle" limits the scope of disclosure obligations, it helps preserve the confidentiality of merger discussions where earlier disclosure might prejudice the negotiations; and the test also provides a usable, bright-line rule for determining when disclosure must be made.

None of these policy-based rationales, however, purports to explain why drawing the line at agreement-in-principle reflects the significance of

the information upon the investor's decision. The first rationale "assumes that investors are nitwits, unable to appreciate—even when told—that mergers are risky propositions up until the closing." *Flamm v. Eberstadt* (7th Cir. 1987).

The second rationale, the importance of secrecy during the early stages of merger discussions, also seems irrelevant to an assessment whether their existence is significant to the trading decision of a reasonable investor. To avoid a "bidding war" over its target, an acquiring firm often will insist that negotiations remain confidential and at least one Court of Appeals has stated that "silence pending settlement of the price and structure of a deal is beneficial to most investors, most of the time." *Flamm v. Eberstadt.*

We need not ascertain, however, whether secrecy necessarily maximizes shareholder wealth—although we note that the proposition is at least disputed as a matter of theory and empirical research—for this case does not concern the timing of a disclosure; it concerns only its accuracy and completeness. We face here the narrow question whether information concerning the existence and status of preliminary merger discussions is significant to the reasonable investor's trading decision. Arguments based on the premise that some disclosure would be "premature" in a sense are more properly considered under the rubric of an issuer's duty to disclose. The "secrecy" rationale is simply inapposite to the definition of materiality.

The final justification offered in support of the agreement-in-principle test seems to be directed solely at the comfort of corporate managers. A bright-line rule indeed is easier to follow than a standard that requires the exercise of judgment in light of all the circumstances. But ease of application alone is not an excuse for ignoring the purposes of the securities acts and Congress's policy decisions.

We therefore find no valid justification for artificially excluding from the definition of materiality information concerning merger discussions, which would otherwise be considered significant to the trading decision of a reasonable investor, merely because agreement-in-principle as to price and structure has not yet been reached by the parties or their representatives.

Even before this Court's decision in *TSC Industries,* the Second Circuit had explained the role of the materiality requirement of Rule 10b-5, with respect to contingent or speculative information or events. Under such circumstances, materiality "will depend at any given time upon a balancing of both the indicated probability that the event will occur and the anticipated magnitude of the event in light of the totality of the company activity." *SEC v. Texas Gulf Sulphur Co.* (2d Cir. 1968).

The late Judge Friendly applied the *Texas Gulf Sulphur* probability/magnitude approach in the specific context of preliminary merger negotiations. He stated:

> Since a merger in which it is bought out is the most important event that can occur in a small corporation's life, to wit, its death, we think that inside information, as regards a merger of this sort, can become material at an earlier stage than would be the case as regards lesser transactions—and this even though the mortality rate of mergers in such formative stages is doubtless high. *SEC v. Geon Industries, Inc.* (2d Cir. 1976).

We agree with that analysis.

Whether merger discussions in any particular case are material therefore depends on the facts. Generally, in order to assess the probability that the event will occur, a factfinder will need to look to indicia of interest in the transaction at the highest corporate levels. Board resolutions, instructions to investment bankers, and actual negotiations between principals or their intermediaries may serve as indicia of interest. To assess the magnitude of the transaction to the issuer of the securities allegedly manipulated, a factfinder will need to consider such facts as the size of the two corporate entities and of the potential premiums over market value. No particular event or factor short of closing the transaction need be either necessary or sufficient by itself to render merger discussions material.

As we clarify today, materiality depends on the significance the reasonable investor would place on the withheld or misrepresented information. Because the standard of materiality we have adopted differs from that used by both courts below, we remand the case for reconsideration.

Judgment vacated and remanded to the Court of Appeals.

In response to the *Basic* decision, in 1989 the SEC released guidelines to help public companies decide whether they must disclose merger negotiations. A company is not required to disclose merger negotiations if all three of the following requirements are met:

1. The company did not make any prior disclosures about the merger negotiations,
2. Disclosure is not compelled by other SEC rules.
3. Management determines that disclosure would jeopardize completion of the merger transaction.

Trading on Inside Information One of the greatest destroyers of public confidence in the integrity of the securities market is the belief that insiders can trade securities while possessing corporate information that is not available to the general public.

Rule 10b-5 prohibits **insider trading** on nonpublic corporate information. A person with nonpublic, confidential, inside information may not use that information when trading with a person who does not possess that information. He must either disclose the information before trading or refrain from trading. The difficult task in the insider trading area is determining when a person is subject to this **disclose-or-refrain** rule.

In *United States v. Chiarella,*[5] the Supreme Court laid down the test for determining an insider's liability for trading on nonpublic, corporate information:

> The duty to disclose arises when one party has information that the other party is entitled to know because of a fiduciary or similar relation of trust and confidence between them. A relationship of trust and confidence exists between the shareholders of a corporation and those insiders who have obtained confidential information by reason of their position with that corporation. This relationship gives rise to a duty to disclose because of the necessity of preventing a corporate insider from taking unfair advantage of the uninformed stockholders.

Under this test, **insiders** include not only officers and directors of the corporation, but also anyone who is *entrusted with corporate information for a corporate purpose.* Insiders include outside consultants, lawyers, independent auditors, engineers, investment bankers, public relations advisers, news reporters, and personnel of government agencies who are given confidential corporate information for a corporate purpose.

Tippees are recipients of inside information (tips) from insiders. Tippees of insiders—such as relatives and friends of insiders, stockbrokers, and security analysts—are forbidden to trade on inside information and are subject to recovery of their profits if they do.

In *SEC v. Dirks,* the Supreme Court stated the applicability of Rule 10b-5 to tippees. The Court held that a tippee has liability if (1) an insider has breached a fiduciary duty of trust and confidence to the shareholders by disclosing to the tippee and (2) the tippee knows or should know of the insider's breach. In addition, the court held that an insider has not breached her fiduciary duty to the shareholders unless she has received a personal benefit by disclosing to the tippee.

[5]445 U.S. 222 (U.S. Sup. Ct. 1980).

SEC v. Dirks *463 U.S. 646 (U.S. Sup. Ct. 1983)*

On March 6, 1973, Raymond Dirks, a security analyst in a New York brokerage firm, received nonpublic information from Ronald Secrist, a former officer of Equity Funding of America, a seller of life insurance and mutual funds. Secrist alleged that the assets of Equity Funding were vastly overstated as the result of fraudulent corporate practices. He also stated that the SEC and state insurance departments had failed to act on similar charges of fraud made by Equity Funding employees. Secrist urged Dirks to verify the fraud and to disclose it publicly.

Dirks visited Equity Funding's headquarters in Los Angeles and interviewed several officers and employees of the corporation. The senior management denied any wrongdoing, but certain employees corroborated the charges of fraud. Dirks openly discussed the information he had obtained with a number of his clients and investors. Some of these persons sold their holdings of Equity Funding securities.

Dirks urged a Wall Street Journal *reporter to write a story on the fraud allegations. The reporter, fearing libel, declined to write the story.*

During the two-week period in which Dirks investigated the fraud and spread the word of Secrist's charges, the price of Equity Funding stock fell from $26 per share to less than $15 per share. The New York Stock Exchange

halted trading in Equity Funding stock on March 27. On that date, Dirks voluntarily presented his information on the fraud to the SEC. Only then did the SEC bring an action for fraud against Equity Funding. Shortly thereafter, California insurance authorities impounded Equity Funding's records and uncovered evidence of the fraud. On April 2, The Wall Street Journal *published a front-page story based largely on information assembled by Dirks. Equity Funding immediately went into receivership.*

The SEC brought an administrative proceeding against Dirks for violating Rule 10b-5 by passing along confidential inside information to his clients. The SEC found that he had violated Rule 10b-5, but it merely censured him, since he had played an important role in bringing the fraud to light. Dirks appealed to the Court of Appeals, which affirmed the judgment. Dirks then appealed to the Supreme Court.

Powell, Justice In *U.S. v. Chiarella* (1980), we accepted the two elements set out in *In Re Cady, Roberts* (1961) for establishing a Rule 10b-5 violation: (i) the existence of a relationship affording access to inside information intended to be available only for a corporate purpose, and (ii) the unfairness of allowing a corporate insider to take advantage of that information by trading without disclosure. The Court found that a duty to disclose under Section 10(b) does not arise from the mere possession of nonpublic market information. Such a duty arises from the existence of a fiduciary relationship.

There can be no duty to disclose when the person who has traded on inside information was not the corporation's agent, was not a fiduciary, or was not a person in whom the sellers of the securities had placed their trust and confidence.

This requirement of a specific relationship between the shareholders and the individual trading on inside information has created analytical difficulties for the SEC and courts in policing tippees who trade on inside information. Unlike insiders who have independent fiduciary duties to both the corporation and its shareholders, the typical tippee has no such relationship. In view of this absence, it has been unclear how a tippee acquires the duty to refrain from trading on inside information.

Not only are insiders forbidden by their fiduciary relationship from personally using undisclosed corporate information to their advantage, but also they may not give such information to an outsider for the same improper purpose of exploiting the information for their personal gain. The transactions of those who knowingly participate with the fiduciary in such a breach are as forbidden as transactions on behalf of the trustee himself. Thus, the tippee's duty to disclose or abstain is derivative from that of the insider's duty. The tippee's obligation has been viewed as arising from his role as a participant after the fact in the insider's breach of a fiduciary duty.

A tippee assumes a fiduciary duty to the shareholders of a corporation not to trade on material nonpublic information only when the insider has breached his fiduciary duty to the shareholders by disclosing the information to the tippee and the tippee knows or should know that there has been a breach.

In determining whether a tippee is under an obligation to disclose or abstain, it thus is necessary to determine whether the insider's tip constituted a breach of the insider's fiduciary duty. Whether disclosure is a breach of duty therefore depends in large part on the purpose of the disclosure. Thus, the test is whether the insider personally will benefit, directly or indirectly, from his disclosure. Absent some personal gain, there has been no breach of duty to stockholders. And absent a breach by the insider, there is no derivative breach.

This requires courts to focus on objective criteria, i.e., whether the insider receives a direct or indirect personal benefit from the disclosure, such as a pecuniary gain or a reputational benefit that will translate into future earnings. For example, there may be a relationship between the insider and the recipient that suggests a *quid pro quo* from the latter, or an intention to benefit the particular recipient. The elements of fiduciary duty and exploitation of nonpublic information also exist when an insider makes a gift of confidential information to a relative or friend who trades. The tip and trade resemble trading by the insider himself followed by a gift of the profits to the recipient.

Under the inside-trading and tipping rules set forth above, we find that there was no violation by Dirks. Dirks was a stranger to Equity Funding, with no preexisting fiduciary duty to its shareholders. He took no action, directly or indirectly, that induced the shareholders or officers of Equity Funding to repose trust or confidence in him. There was no expectation by Dirks's sources that he would keep their information in confidence. Nor did Dirks misappropriate or illegally obtain the information about Equity Funding.

Unless the insiders breached their *Cady, Roberts* duty to shareholders in disclosing the nonpublic information to Dirks, he breached no duty when he passed it on to investors as well as to *The Wall Street Journal.*

It is clear that neither Secrist nor the other Equity Funding employees violated their *Cady, Roberts* duty to the corporation's shareholders by providing information to Dirks. Secrist intended to convey relevant information that management was unlawfully concealing, and he believed that persuading Dirks to investigate was the best way to disclose the fraud. The tippers received no monetary or personal benefit for revealing Equity Funding's secrets, nor was their purpose to make a gift of valuable information to Dirks. The tippers were motivated by a desire to expose the fraud. In the absence of a breach of duty to shareholders by the insiders, there was no derivative breach by Dirks. Dirks therefore could not have been a participant after the fact in an insider's breach of a fiduciary duty.

Judgment reversed in favor of Dirks.

In June 1997, the Supreme Court held that Rule 10b-5 liability attaches to anyone who trades in securities for personal profit using confidential information misappropriated in a breach of fiduciary duty owed to the *source of the information.* Under the **misappropriation theory,** a person violates Rule 10b-5 not only when he steals confidential information from his company and trades in its shares, but also, for example, if he steals confidential information about his firm's intent to make a tender offer for another firm and buys securities of the second firm.

Extent of Liability for Insider Trading Section 20A of the 1934 Act allows persons who traded in the securities at about the same time as the insider or tippee to recover damages from the insider or tippee. Although there may be several persons trading at about the same time, the insider or tippee's total liability cannot exceed the profit she has made or the loss she has avoided by trading on inside information.

This limitation, which merely requires disgorgement of profits, has been assailed as not adequately deterring insider trading, because the defendant may realize an enormous profit if her trading is not discovered, but lose nothing beyond her profits if it is. In response to this issue of liability, Congress passed an amendment to the 1934 Act permitting the SEC to seek a civil penalty of three times the profit gained or the loss avoided by trading on inside information. This treble penalty is paid to the Treasury of the United States. The penalty applies only to SEC actions; it does not affect the amount of damages that may be recovered by private plaintiffs. The 1934 Act also grants the SEC power to award up to 10 percent of any triple-damage penalty as a bounty to informants who helped the SEC uncover insider trading.

Concept Review

Rule 10b-5 Liability for Trading on Inside Information

	For Trading by Insider	For Trading by Tippee
Insider/Tipper Liability	Liable if insider breached fiduciary duty of confidentiality by using corporate information that was disclosed to insider solely for corporate purposes.	Liable if tipper breached fiduciary duty of confidentiality, including receiving a personal benefit, by disclosing confidential information to the tippee.
Tippee Liability	Not liable	Liable if: 1. Insider/tipper breached fiduciary duty of confidentiality by disclosing confidential information to the tippee, and 2. The tippee knew or should have known of the insider/tipper's breach of the fiduciary duty.

Liability for Aiding and Abetting Persons who are not the primary actors that violate Rule 10b-5 but merely aid and abet another's violation of the rule nonetheless may be prosecuted by the SEC. To have aiding and abetting liability, there must be (1) a primary violation by another person, (2) the aider and abettor's knowledge of that violation, and (3) substantial assistance by the aider and abettor in the achievement of the primary violation. Although the SEC may prosecute aiders and abettors, investors harmed by a primary violation may recover their damages only from primary violators, not from aiders and abettors.

Securities Fraud and the Internet In recent years, the Internet has become a new source of securities fraud. In response, the SEC has included the investigation of Internet users in its antifraud arsenal. In March 2000, the SEC announced that it would use search engines to conduct Internet searches of phrases such as "get high returns with low investment" to detect likely fraud. Some securities professionals have objected to the SEC tactics as an invasion of privacy.

Statute of Limitations A purchaser or seller bringing an action under Rule 10b-5 must file his suit in a timely fashion or else be precluded from litigating the issue. An action under Rule 10b-5 must be commenced within one year after discovery of the facts constituting a violation of Rule 10b-5 and within three years of the violation. In the following *LaSalle* case, the court examined when investors should have discovered the violation.

LaSalle v. Medco Research, Inc. *54 F.3d 443 (7th Cir. 1995)*

Medco Research, Inc., is a pharmaceutical company that develops drugs for the diagnosis and treatment of heart disease. In 1988, it had licensed Fujisawa-USA to manufacture Medco's first product, "Adenocard." The following year the Food and Drug Administration (FDA) approved Adenocard for sale in the United States. Sales grew rapidly, but Medco was anxious because all its revenues came from the sale of this one product and the product was beginning to face competition. Medco needed to develop another successful product and do it fast. Subsequently, Medco developed a related product, "Adenoscan," designed to simulate the physiological effects of a treadmill stress test for cardiac patients who are unable to take the test or to perform adequately on it. Again Medco licensed Fujisawa-USA to do the actual manufacturing. Before Adenoscan could be sold in the United States, it had to receive approval from the FDA.

Unfortunately, because of problems with safety and quality control at Fujisawa's plant, the application for FDA approval was in serious trouble, and it appeared that the approval would be substantially delayed. On April 7, 1992, about a week after Medco had temporarily withdrawn its application for approval of the sale of Adenoscan, Medco told its shareholders that its application was on track and that Adenoscan could be expected to be approved by the end of the year. In April 1993, a year later, with Adenoscan still not approved (it was not approved until December 14, 1993), Medco announced that it was going to sue Fujisawa. The suit was filed the following month. The announcement of the impending suit was publicized in the business press, revealing to investors the problems at Fujisawa's plant that had been responsible for Medco's inability to obtain timely approval of Adenoscan from the FDA, contradicting Medco's earlier representations that FDA approval was imminent.

Anthony LaSalle and other investors purchased Medco common shares between April 7, 1992, and April 1993. On September 1, 1993, LaSalle sued Medco, alleging a fraudulent nondisclosure of material facts in violation of Rule 10b-5. Medco defended on the grounds that LaSalle failed to comply with the statute of limitations, alleging that it had been more than a year since facts were available indicating the fraud. The trial court agreed with Medco, and LaSalle appealed.

Posner, Chief Judge The one-year statute of limitations applicable to fraud suits brought under the SEC's Rule 10b-5 begins to run when the plaintiff first learned of facts that would have caused a reasonable person to suspect the possibility of a misrepresentation or misleading omission.

The question whether the suit is untimely depends therefore on whether LaSalle should have suspected before September 1, 1992, that Medco was engaged in fraud. In arguing that LaSalle should have suspected, Medco relies on two "critical" facts, in its words. The first is a precipitate decline in the

price of Medco's stock. That price had peaked at $31.75 per share on January 24, 1992. By April 24, 1992, it had plunged to $15.25, a decline of slightly more than 50 percent, and while it rose a bit afterward it was still only $15.50 at the end of August of that year. The second allegedly critical fact is that on June 9 the FDA recalled several batches of Adenocard because of "short filling": presumably as a consequence of a manufacturing problem at Fujisawa's plant, some vials did not contain as much of the drug as they were supposed to.

We have great difficulty in seeing how these two facts, even in conjunction, would cause a reasonable investor to suspect fraud. Everyone knows that the process of obtaining the FDA's approval for a new drug is fraught with uncertainty; and when a drug company's entire earnings are from one declining product and it is counting on a new product for its financial salvation, unexpected delays in obtaining an approval without which the product cannot be sold are likely to have a devastating impact on the company's stock price. Stated differently but equivalently, much of the price of Medco stock during the relevant period must have represented simply a capitalization of the expected earnings from the sale of Adenoscan, and those earnings in turn depended critically on the timing of the FDA's approval. If that approval was long delayed, then as had happened with Adenocard, the earnings from the new drug would be eroded by competition in the market for new drugs, which is dynamic. It is misleading to point to the January 24, 1992, peak of $31.75. There can be no inference that it represented a stable value of Medco's shares. Three weeks before, the price had been only $25. Two and a half months before that it had been only $16.75. And in January of 1991, only a year before it reached its peak of $31.75, it had been only $6.75. What goes up fast sometimes comes down fast—without fraud.

As for the recall of Adenocard, product recalls have become a familiar feature of the American economy. How common they are in the drug industry we do not know. There is no evidence on the question, although the well-publicized recalls of pacemakers and other medical appliances and drugs are a matter of common knowledge and lead us to suspect that recalls in the industry are not all that uncommon. No doubt the recall of Adenocard was an indication that the Fujisawa plant had problems, problems that might lap over to Adenoscan, which was being manufactured at the same plant. It was an indication, in other words, of looming difficulties with the approval of Adenoscan. It does not follow that it was an indication of fraud.

Judgment reversed in favor of LaSalle; remanded to the district court.

Criminal Liability

Like the 1933 Act, the 1934 Act provides for liability for criminal violations of the Act. Section 32 provides that individuals may be fined up to $1 million and imprisoned up to 10 years for willful violations of the 1934 Act or the related SEC rules. Businesses may be fined up to $2.5 million.

Tender Offer Regulation

Historically, the predominant procedure by which one corporation acquired another was the merger, a transaction requiring the cooperation of the acquired corporation's management. Since the early 1970s, the **tender offer** has become an often used acquisition device. A tender offer is a public offer by a **bidder** to purchase a **subject company's** equity securities directly from its shareholders at a specified price for a fixed period of time. The offering price is usually well above the market price of the shares. Such offers are often made even though there is opposition from the subject company's management. Opposed offers are called hostile tender offers. The legality of efforts opposing a tender offer is covered in Chapter 42.

The Williams Act amendments to the 1934 Act require bidders and subject companies to provide a shareholder with information on which to base his decision whether to sell his shares to a bidder. The aim of the Williams Act is to protect investors and to give the bidder and the subject company equal opportunities to present their cases to the shareholder. The intent is to encourage an auction of the shares with the highest

bidder purchasing the shares. The Williams Act applies only when the subject company's equity securities are registered under the 1934 Act.

The Williams Act does not define a tender offer, but the courts have compiled a list of factors to determine whether a person has made a tender offer. The greater the number of people solicited and the lower their investment sophistication, the more likely it is that the bidder will be held to have made a tender offer. Also, the shorter the offering period, the more rigid the price, and the greater the publicity concerning the offer, the more likely it is that the purchase efforts of the bidder will be treated as a tender offer. Given these factors, a person who offers to purchase shares directly from several shareholders at a set price for only a few days risks having a court treat the offer like a tender offer. The Williams Act does not regulate a tender offer unless the bidder intends to become a holder of at least 5 percent of the subject company's shares.

A bidder making a tender offer must file a tender offer statement (Schedule TO) with the SEC when the offer commences. The information in this schedule includes the terms of the offer (for example, the price), the background of the bidder, and the purpose of the tender offer (including whether the bidder intends to control the subject company).

The SEC requires the bidder to keep the tender offer open for at least 20 business days and prohibits any purchase of shares during that time. This rule gives shareholders adequate time to make informed decisions regarding whether to tender their shares. Tendering shareholders may withdraw their tendered shares during the entire term of the offer. This rule allows the highest bidder to buy the shares, as in an auction.

All tender offers, whether made by the issuer or by a third-party bidder, must be made to all holders of the targeted class of shares. When a bidder increases the offering price during the term of the tender offer, all of the shareholders must be paid the higher price even if they tendered their shares at a lower price. If more shares are tendered than the bidder offered to buy, the bidder must prorate its purchases among all of the shares tendered. This proration rule is designed to foster careful shareholder decisions about whether to sell shares. Shareholders might rush to tender their shares if the bidder could accept shares on a first-come, first-served basis.

After an initial offering period has expired, a bidder is permitted to include a "subsequent offering period" during which shareholders who tender will have no withdrawal rights. The SEC created the new offering period to allow shareholders a last opportunity to tender into an offer.

The management of the subject company is required to inform the shareholders of its position on the tender offer, with its reasons, within 10 days after the offer has been made. It must also provide the bidder with a list of the holders of the equity securities that the bidder seeks to acquire or mail the materials for the bidder.

SEC Rule 14e-3 prohibits persons who have knowledge of an impending tender offer from using such information prior to its public disclosure. The rule limits insider trading in the tender offer context.

Private Acquisitions of Shares

The Williams Act regulates private acquisitions of shares differently from tender offers. When the bidder privately seeks a controlling block of the subject company's shares on a stock exchange or in face-to-face negotiations with only a few shareholders, no advance notice to the SEC or disclosure to shareholders is required. However, a person making a private acquisition is required to file a Schedule 13D with the SEC and to send a copy to the subject company within 10 days after he becomes a holder of 5 percent of its shares. A Schedule 13G (which requires less disclosure than a 13D) must be filed when a 5 percent holder has purchased no more than 2 percent of the shares within the past 12 months.

The *Lerro* case considers whether a bidder violated the "best price" rule by entering into an agreement with the controlling shareholder prior to the commencement of the tender offer.

Lerro v. Quaker Oats Co. *84 F.3d 239 (7th Cir. 1996)*

On November 1, 1994, Quaker Oats Company and Snapple Beverage Corporation signed a Merger Agreement by which Quaker Oats would acquire Snapple in a two-step transaction: a tender offer for $14 per share followed by a merger in which shareholders that had not tendered their shares would receive $14 per share; shareholders who thought the merger price was too low could demand appraisal of their shares under

Delaware corporation law. However, the success of the acquisition was assured because Snapple's controlling shareholder, Thomas Lee, supported the acquisition. Lee promised to tender his shares to Quaker Oats during the tender offer and to sell his shares to Quaker Oats if the tender offer was unsuccessful.

At the same time, Quaker Oats and Snapple also entered a new Distributor Agreement granting Select Beverages, Inc., the exclusive right to distribute Snapple and Gatorade in Indiana, Illinois, and Wisconsin. Thomas Lee controlled a majority of the stock of Select.

Subsequently, Quaker Oats acquired 96.5 percent of Snapple's shares pursuant to the tender offer, and immediately effected a short-form merger under Delaware law. Snapple shareholder Joseph Lerro sued Quaker Oats and Thomas Lee for allegedly violating the Williams Act and the regulations thereunder, on the grounds that the Distributor Agreement provided Lee with extra compensation for his shares. Lerro argued that the extra compensation violated Securities Exchange Act Rule 14d-10(a)(2), which requires that all holders who tender shares during a tender offer receive the same consideration. The district court dismissed the case on the grounds that the agreement had been signed before the tender offer began and, therefore, was not consideration paid during the tender offer. Lerro appealed.

Easterbrook, Circuit Judge Rule 14d-10(a)(2) gives every investor whose shares are acquired as part of the offer "the highest consideration paid to any other security holder during such tender offer." Everyone who tenders receives the highest price paid "during the tender offer"—not the price paid at some other time. Before the offer is not "during" the offer. The difference between "during" and "before" (or "after") is not just linguistic. It is essential to permit everyone to participate in the markets near the time of a tender offer. Bidders are forbidden to buy or sell on the open market or via negotiated transactions during an offer, but they are free to transact until an offer begins, or immediately after it ends.

Purchases near in time to a tender offer, but outside it, may be essential to transactions that all investors find beneficial. Controlling shareholders often receive indirect or non-monetary benefits and are unwilling to part with their stock (and hence with control) for a price that outside investors find attractive. At the same time, potential bidders may be unable to profit by paying everyone the price essential to separate the insiders from their shares. Suppose a firm's stock is trading for $20, insiders who hold 30 percent of the firm would not sell for less than $30, and a potential bidder values the entire firm at $25 per share. An offer of $25 for all stock would not attract the insiders' shares; and as a practical matter, failure to attract the control bloc would doom the offer. The transaction would be feasible, however, if the acquiror could pay $30 to the control group before the bid commences and acquire the rest of the stock at $22 per share, for an average price of $24.40. Everyone is better off: the public investors prefer $22 to $20; the control group is happy; the bidder anticipates a profit of 60 cents per share. Treating the Williams Act as a mandate for an identical price across the board—as opposed to an identical price for all shares acquired in the offer—would make all investors worse off.

Just as those who sell for $15 today cannot complain if their trading partner pays $20 to someone else tomorrow, those who sell in the market a day before the offer starts are not entitled to the higher price paid to those who wait. The point of Rule 14d-10 is to demark clearly the periods during which the special Williams Act rules apply. Once the offer begins, professional investors and amateurs receive the same price. Persons who make tender offers do not lose their ability to participate as investors for undefined periods "near" the time of the offer. With millions or even billions of dollars at stake, precise definition of the blackout period is essential. The line is arbitrary, to be sure; but some line is essential, and it had best be a bright one.

Lerro alleges that the Distributor Agreement was integral to the transaction, in the sense that Quaker Oats would not have launched the bid unless it knew that Lee was satisfied with the terms. The Distributor Agreement was signed on November 1, but its effect depended on the merger and obviously was bound up with the tender offer too. Nonetheless, this does not establish that Quaker Oats paid Lee more than $14 per share "during" the tender offer. The agreements were signed before the offer began, and were effective with a merger that occurred later. We reject any argument that a follow-up merger should be integrated with a tender offer. They are different transactions, under different bodies of law (federal law regulates the ten-

der offer and state law the merger). Accepting Lerro's request to treat the tender offer and the merger as a single step would imperil countless ordinary transactions—from two-tier tender offer and merger sequences (with different prices, or different forms of securities, offered in the two tiers) to simple employment agreements under which the surviving entity promises to employ managers for stated terms or give severance pay. Yet none of the regulations implementing the Williams Act requires managerial salary, or Golden Parachute payments, to be imputed to stock and offered to nonmanagement as well.

Because transactions before or after a tender offer are outside the scope of Rule 14d-10, we must decide whether the transactions at issue preceded the tender offer. Rule 14d-2(a) addresses this directly:

> A tender offer shall commence at 12:01 A.M. on the date when the first of the following events occur:
>
> (1) The long form publication of the tender offer is first published by the bidder;
> (2) The summary advertisement of the tender offer is first published by the bidder;
> (4) Definitive copies of a tender offer are first published or sent or given by the bidder to the security holders;
> (5) The tender offer is first published or sent or given to security holders by the bidder by any means not otherwise referred to in paragraphs (a)(1) through (a)(4).

The Merger Agreement and Distributor Agreement were signed on November 1, 1994. News of the impending bid first reached the public, via the *Dow Jones News Wire,* on November 2, and the tender offer was formally announced on November 4, commencing it on that date.

Not so, Lerro insists. He believes that the offer commenced even before November 1 because it was given to Lee and other Snapple insiders before then. Lerro reads "security holders" in Rule 14d-2(a)(5) to mean *any* security holders, rather than investors in general; on Lerro's understanding, a tender offer "commences" as soon as a potential bidder opens negotiations with a potential target's management. Yet no case or administrative interpretation supports that understanding. Rule 14d-2 contemplates general publication or notice. "Tender offer" means the definitive announcement, not negotiations looking toward an offer.

Treating private acquisitions as the "commencement" of a tender offer would have effects far beyond requiring Quaker Oats to pay a little more than $14 per share to Snapple's public investors. For starters, it would forbid outright the kind of bargain that Quaker and Snapple's managers reached. Under Rule 10b-13(a), once a tender offer begins, the bidder cannot acquire shares in negotiated transactions. Inability to reach a modus vivendi would make bids less attractive, reduce the prices bidders are willing to pay, or both—to the detriment of the investors Congress set out to protect. If the offer commences when negotiations open, then potential bidders must get out of the public markets too. And that is not all. The Williams Act and the accompanying regulations are crammed with timetables measured from the commencement of the bid. The times for withdrawal, proration rights, and so on run from the time of commencement of the offer and would be disrupted if not nullified by a conclusion that a private negotiation marks the commencement. It would defeat the purposes of the Williams Act and the SEC's regulations to close the proration pool before the public learns of the offer. Everything depends on making the times start from a *public* announcement—and on making that time as clear as humanly possible.

Lerro reminds us that neither the Williams Act nor the SEC's regulations define "tender offer." That term has been frustratingly difficult to encapsulate. True enough, but our case is about "when" rather than "what." Quaker Oats made a traditional tender offer. The commencement date for such an offer is rigorously defined. This offer commenced at 12:01 A.M. on November 4, 1994. From this conclusion everything else follows.

Judgment for Quaker Oats affirmed.

State Regulation of Tender Offers

Statutes that apply to tender offers have been enacted by about two-thirds of the states. State statutes have become highly protective of subject companies. For example, the Indiana statute gives shareholders other than the bidder the right to determine whether the shares acquired by the bidder may be voted in directors' elections and other matters. The statute, which essentially gives a subject company the power to require

shareholder approval of a hostile tender offer, has been copied by several states.

Other states, such as Delaware, have adopted business combination moratorium statutes. These statutes delay the effectuation of a merger of the corporation with a shareholder owning a large percentage of shares (such as 15 percent) unless the board of directors' approval is obtained. Because the typical large shareholder in a public company is a bidder who has made a tender offer, these state statutes primarily affect the ability of a bidder to effectuate a merger after a tender offer and, therefore, may have the effect of deterring hostile acquisitions.

The Foreign Corrupt Practices Act

The Foreign Corrupt Practices Act (FCPA) was passed by Congress in 1977 as an amendment to the Securities Exchange Act of 1934. Its passage followed discoveries that more than 400 American corporations had given bribes or made other improper or questionable payments in connection with business abroad and within the United States. Many of these payments were bribes to high-level officials of foreign governments for the purpose of obtaining contracts for the sale of goods or services. Officers of the companies that had made the payments argued that such payments were customary and necessary in business transactions in many countries. This argument was pressed forcefully with regard to facilitating payments. Such payments were said to be essential to get lower-level government officials in a number of countries to perform their nondiscretionary or ministerial tasks, such as preparing or approving necessary import or export documents.

In a significant number of cases, bribes had been accounted for as commission payments, as normal transactions with foreign subsidiaries, or as payments for services rendered by professionals or other firms, or had in other ways been made to appear as normal business expenses. These bribes were then illegally deducted as normal business expenses in income tax returns filed with the Internal Revenue Service.

The Payments Prohibition

The FCPA makes it a crime for any American firm—whether or not it has securities registered under the 1934 Act—to offer, promise, or make payments or gifts of anything of value to foreign officials and certain others. Payments are prohibited if the person making the payment knows or should know that some or all of it will be used for the purpose of influencing a governmental decision, even if the offer is not accepted or the promise is not carried out. The FCPA prohibits offers or payments to foreign political parties and candidates for office as well as offers and payments to government officials. Payments of kickbacks to foreign businesses and their officers are not prohibited unless it is known or should be known that these payments will be passed on to government officials or other illegal recipients.

Facilitating or grease payments are not prohibited by the FCPA. For example, suppose a corporation applies for a radio license in Italy and makes a payment to the government official who issues the licenses. If the official grants licenses to every applicant and the payment merely speeds up the processing of the application, the FCPA is not violated.

Substantial penalties for violations may be imposed. A company may be fined up to $2 million. Directors, officers, employees, or agents participating in violations are liable for fines of up to $100,000 and prison terms of up to five years.

Record-Keeping and Internal Controls Requirements

The FCPA also establishes record-keeping and internal control requirements for firms subject to the periodic disclosure provisions of the Securities Exchange Act of 1934. The purpose of such controls is to prevent unauthorized payments and transactions and unauthorized access to company assets that may result in illegal payments.

The FCPA requires the making and keeping of records and accounts "which, in reasonable detail, accurately, and fairly reflect the transactions and dispositions of the assets of the issuer" of securities. It also requires the establishment and maintenance of a system of internal accounting controls that provides "reasonable assurances" that the firm's transactions are executed in accordance with management's authorization and that the firm's assets are used or disposed of only as authorized by management.

State Securities Law

State securities laws are frequently referred to as blue-sky laws, since the early state securities statutes were designed to protect investors from promoters and

security salespersons who would "sell building lots in the blue sky." The first state to enact a securities law was Kansas, in 1911. All of the states now have such legislation.

The National Conference of Commissioners on Uniform State Laws has adopted the Uniform Securities Act of 1956. The act contains antifraud provisions, requires the registration of securities, and demands broker-dealer registration. About two-thirds of the states have adopted the act, but many states have made significant changes in it.

All of the state securities statutes provide penalties for fraudulent sales and permit the issuance of injunctions to protect investors from additional or anticipated fraudulent acts. Most of the statutes grant broad power to investigate fraud to some state official—usually the attorney general or his appointee as securities administrator. All of the statutes provide criminal penalties for selling fraudulent securities and conducting fraudulent transactions.

Registration of Securities

Most of the state securities statutes adopt the philosophy of the 1933 Act that informed investors can make intelligent investment decisions. The states with such statutes have a registration scheme much like the 1933 Act, with required disclosures for public offerings and exemptions from registration for small and private offerings. Other states reject the contention that investors with full information can make intelligent investment decisions. The securities statutes in these states have a **merit registration** requirement, giving a securities administrator power to deny registration on the merits of the security and its issuer. Only securities that are not unduly risky and promise an adequate return to investors may receive administrator approval.

All state statutes have a limited number of exemptions from registration. Most statutes have private offering exemptions that are similar to Securities Act Rule 506 of Regulation D. In addition, a person may avoid the registration requirements of state securities laws by not offering or selling securities.

Registration by Coordination The Uniform Securities Act permits an issuer to register its securities by coordination. Instead of filing a registration statement under the Securities Act of 1933 and a different one as required by state law, registration by coordination allows an issuer to file the 1933 Act registration statement with the state securities administrator. Registration by coordination decreases an issuer's expense of complying with state law when making an interstate offering of its securities.

Capital Markets Efficiency Act of 1996 Congress passed the Capital Markets Efficiency Act (CMEA) to facilitate offerings of securities by small investors. The CMEA preempts state registration of offers and sales of securities to "qualified purchasers," as defined by the SEC. The SEC has taken no steps to define "qualified purchasers," but it is expected that the SEC will use its authority to enable small issuers to make securities offerings on the Internet without having to comply with the registration provisions of the state securities statutes.

In the following *Shama* case, the court considered whether a seller of securities violated the fraud and registration provisions of the Idaho Securities Act.

Idaho v. Shama Resources Limited Partnership *899 P.2d 977 (Idaho Sup. Ct. 1995)*

Shama Resources Limited Partnership was a limited partnership organized in Idaho. Lawrence McGary and Maranatha Corporation were Shama's general partners. On behalf of Shama, McGary offered and sold limited partnership interests in Shama to investors. The limited partnership interests were not registered with the Idaho Department of Finance; in addition, McGary and Shama were not registered as brokers-dealers with the Department of Finance. McGary did not inform purchasers of the limited partnership interests that the securities, McGary, and Shama were not registered with the Department of Finance.

The Department of Finance filed an action against McGary, Maranatha, and Shama seeking to enjoin them from violating the Idaho Securities Act by selling unregistered securities by an unregistered broker and defrauding investors in connection with the sale of securities. A default judgment was entered against Shama and Maranatha. McGary defended the action on the grounds that the securities were exempt from

registration under the nonpublic offer and limited offer exemptions of the Idaho Securities Act. He also argued that he had not committed fraud because he did not act with scienter. The trial found that the securities were required to be registered and that fraud had been committed and, therefore, enjoined McGary from selling the limited partnership interests. McGary appealed to the Idaho Supreme Court.

McDevitt, Chief Justice The Department alleged that McGary committed securities fraud under I.C. sections 30–1403(2) and 1403(3). To establish fraud under I.C. section 30–1403(2), the Department must show that McGary made untrue statements of material fact or omitted any material facts in connection with the sale, offer, or purchase of any security. I.C. section 30–1403(2). To establish fraud under I.C. section 30–1403(3), the Department must show that McGary engaged in an act, practice, or course of business, which operated or would operate as a fraud or deceit upon any person. I.C. section 30–1403(3).

McGary argued that the Department was also required to show intent to establish fraud under the Securities Act. This Court has not previously determined whether the intent to defraud or deceive, scienter, is a required element to establish fraud under the Idaho Securities Act. Examining the literal words of the statute and giving the statutory language its plain and literal meaning, we conclude that intent is not an element of securities fraud under I.C. section 30–1403(2) or (3).

The relevant portions of the Idaho Securities Act make it unlawful for any person "to make any untrue statement of a material fact," "To omit to state a material fact," or "to engage in any act, . . . which operates . . . as a fraud or deceit upon any person." I.C. sections 30–1403(2) and (3). There is nothing in the language of these provisions that indicates scienter is required to establish fraud. I.C. section 30–1403(2) prohibits the acts of omitting statements and making untrue statements of material fact and is not dependent upon the intent of the person committing those acts. I.C. section 30–1403(3), which prohibits any act that operates as to defraud, focuses on the effect of the act and not the intent of the actor. Under I.C. sections 30–1403(2) and (3), it is sufficient that the person engage in those enumerated activities, in connection with the offer, sale or purchase of a security, to commit securities fraud under the relevant portions of the Idaho Securities Act. We conclude that the Department was not required to make a showing of scienter under I.C. sections 30–1403(2) and (3).

The Department met its burden of establishing that McGary committed securities fraud under I.C. sections 30–1403(2) and (3) through the affidavits of investors and offerees who stated that McGary omitted material facts to them about McGary not being a registered broker-dealer and about the Shama securities being unregistered.

McGary asserted the affirmative defenses of exemption from registration under the Idaho Securities Act pursuant to the nonpublic and limited offering exemptions, I.C. section 30–1435(1) and (8). The burden of proving an exemption rests upon McGary, the person claiming the exemption. The nonpublic offering exemption applies to securities that are offered or sold in an isolated transaction or pursuant to a private, nonpublic offering. I.C. section 30–1435(1). McGary's claim for exemption from registration under I.C. section 30–1435(1) is based on the offering being private in nature, and not based on an isolated transaction. Case law has established that a nonpublic offer exists where securities are offered only to those who "possess enough intelligence, information and expertise to make a sound business judgment" or those who have access to the type of information that would be contained in a registration statement.

The purpose of securities registration is to protect investors by promoting full disclosure of information, necessary to make informed investment decisions. Thus, an offering made to persons who are in need of protections of a registration statement and who are not able to fend for themselves, is not a nonpublic offering. To establish a nonpublic offer under I.C. section 30–1435(1), McGary must make a showing that each of the offerees had access to the type of information available in a registration statement such that they did not require the protections of a registration statement.

The second exemption sought by McGary applies to limited offers where the seller reasonably believes that all buyers are purchasing for invest-

ment purposes, and that no commission or other remuneration was paid or given directly or indirectly for soliciting any prospective buyer. I.C. section 30–1435(8). A limited offer is one where the offerings are made to not more than 10 persons within 12 consecutive months. To establish that the limited offering exemption applies, McGary must make a showing that the offer was limited in nature, that McGary reasonably believed that each of the offerees and purchasers intended their purchase of Shama securities to be for investment purposes, and that McGary received no commission or remuneration for soliciting a prospective buyer.

The Department met its burden of showing that no genuine issue existed as to McGary's violation of the Idaho Securities Act when McGary offered and sold unregistered securities through an unregistered broker-dealer. The burden of establishing an exemption under the Idaho Securities Act rests with McGary. McGary did not present any evidence to the trial court in support of his claims. McGary failed to carry his burden under the nonpublic offer and limited offering exemptions.

Judgment for the Department of Finance affirmed.

Ethical and Public Policy Concerns

1. Should the federal and state governments require disclosure by issuers of securities? Are investors able to protect themselves by insisting that issuers provide relevant information prior to the investors' purchasing securities from issuers? How can current securities owners ensure that they will continue to receive relevant investment information? Could investors have contracted at the time of purchase to receive information as needed in the future? Do public companies otherwise have economic incentives to publish relevant information about themselves?

2. Who are the primary beneficiaries of the securities laws; that is, who primarily buys and sells securities? Nearly all securities are owned by persons whose wealth places them in the top 10 percent of the population. Is securities regulation merely welfare for the wealthy? Does anyone else benefit from securities regulation? Does the benefit to those persons justify the costs of securities regulation?

3. Should the SEC relax its regulation of securities offerings on the Internet? Do the Section 5 restrictions in the Securities Act interfere with the operation of the free market? Would investors be protected better by allowing issuers to disclose more information during the waiting period?

4. Should insider trading be illegal? Is insider trading unfair? To whom is it unfair? What are the social and economic costs of insider trading? What are the social and economic benefits of insider trading? Does insider trading improve the efficiency of the securities markets? Should shareholders be given the power to authorize insiders to trade on inside information? Why might shareholders want insiders to trade on inside information?

5. Should tender offers be regulated by the SEC? Why should all shareholders be entitled to tender their shares to the bidder? Why should a bidder be required to prorate its purchases of tendered shares rather than buy the shares of the first to tender? Why shouldn't shareholders that tender first—who are willing to take more risk—be allowed to benefit more than shareholders who wait to tender? Is it relevant to your analysis that after a successful tender offer, a public company that previously was not dominated by any one shareholder is now dominated by a single shareholder? Is this a normal risk of being a minority shareholder? Does a minority shareholder need the protection of securities law to protect her from this risk?

6. Should the payments prohibition part of the Foreign Corrupt Practices Act be repealed? What is unethical about an American corporation making bribes to foreign government officials and political parties? What benefits does the United States receive from the making of such payments? What detriments does the United States suffer from the making of such payments? Does the analysis change if bribery is a standard way of business life in a foreign country?

Problems and Problem Cases

1. A viatical settlement is a contract by which an investor purchases the life insurance policy of a terminally ill patient—typically an AIDS victim—who is in need of immediate cash to pay mounting medical expenses. Depending on the insured's life expectancy, the buyer pays 60 to 80 percent of the death benefit. When the insured dies, the investor receives the death benefit. The investor's profit is the difference between the death benefit collected from the insurer and the discounted purchase price paid to the insured, less insurance premiums paid by the investor. Life Partners, Inc. (LPI), acts as a middleman between the insured and investors. LPI assembles the purchasers of each insurance policy, selling fractional interests to investors for as little as $650. Individual investors may receive as little as 3 percent of the death benefits of a policy. The investors become owners of the insurance policy. After the purchase, LPI monitors the insured's health, makes sure the policy does not lapse, collects on the policy when the insured dies, and disburses the proceeds to the investors. Is LPI selling a security?

2. Jim Long, Jerome Atchley, and Jon and Linda Coleman invested in a cattle-feeding program offered by Shultz Cattle Company, Inc. (SCCI). They participated in SCCI's individual feeding program, under which investors would purchase and raise their own cattle. Each investor was required to sign a consulting agreement by which SCCI agreed to provide advice regarding the purchase, feeding, and sale of the investor's cattle. SCCI received only a flat-rate consulting fee of $20 per head of cattle for these services and received no share of the investors' profits. To receive tax benefits from the investment, the tax laws required investors to participate actively in farming. Therefore, SCCI required each investor to represent that "He will exert substantial and significant control over, and will, exercising independent judgment, make all principal and significant management decisions concerning his cattle feeding operations." However, investors relied solely on the advice of SCCI: they followed SCCI's recommendations regarding the purchase of cattle, the choice of feedyard, the decision when to sell, and the decision to whom to sell. Long's, Atchley's, and the Colemans' cattle were fed, along with those of many other SCCI clients, in a feedyard in which the cattle were commingled. The cattle were tagged by pen number and not by individual investor. Each investor therefore owned a percentage of the total pounds of cattle in the pen. If any cattle died, the loss was not attributed to a single investor but was distributed pro rata among the investors. Have Long, Atchley, and the Colemans purchased securities?

3. Arthur Vining Davis transferred all of his real estate holdings in coastal Florida to Arvida Corporation. A press release announcing the transfer stated that $30 million additional capital would be raised through an offering of stock to the public and that the public offering was scheduled to be made within 60 days through an investment group headed by two underwriting firms: Loeb, Rhoades and Dominick & Dominick. Arvida had not yet filed a registration statement with the SEC. Did Arvida make an illegal offer under Section 5 of the Securities Act?

4. Western-Realco Limited Partnership sold $800,000 of its limited partnership interests through the services of securities brokers. Western-Realco did not supervise the brokers and was unaware of whether the brokers solicited their clients in a newsletter or to the public in general. Will Western-Realco be able to use the private offering exemption or Rule 504 to avoid a 1933 Act registration?

5. Capital Sunbelt Securities, Inc. (Sunbelt), and Phoenix Financial Corp. were two brokerages that sold limited partnership interests in Capital: Maple Leaf Estates, Ltd. (Capital) and Maple Leaf Estates, Ltd. (Maple Leaf). Capital was to purchase a mobile home park that would be operated by Maple Leaf. Sunbelt and Phoenix kept logs reflecting the persons to whom they distributed copies of the limited offering circulars for Capital and Maple Leaf. Ninety-six persons received copies of the Capital offering circular and 34 received the Maple Leaf circular. The circulars contained the same information as a 1933 Act registration statement. In addition, Capital and Maple Leaf promised to make available any additional information requested by investors. All offerees had a prior relationship with Phoenix or Sunbelt, and there were no seminars or meetings attended by the general public. There was no advertising, and each offering circular was addressed to a specific person. All investors were required to state that they were acquiring the limited partnership interests for investment. Proceeds of the offerings were $2,677,000 for Capital and $950,000 for Maple Leaf. Phoenix offered to sell Capital limited

partnership interests to 228 persons and sold to 33 investors, 16 of which had a net worth in excess of $1 million. There were 187 offerees of the Maple Leaf limited partnership interests and 13 purchasers, 9 of whom had a net worth over $1 million. At the conclusion of the offerings, no Form D was filed with the SEC. Were the offerings exempt from registration under Section 4(2) or Rule 506 of the Securities Act?

6. Commonwealth Edison Co. registered 3 million common shares with the SEC and sold the shares for about $28 per share. The price of the purchasers' stock dropped to $21 when the Atomic Safety and Licensing Board denied ComEd's application to license one of its reactors. It was the first and only time the Board had denied a license application. ComEd assumed that the license would be granted; therefore, its registration statement failed to disclose the pendency of the license application. Did ComEd violate Section 11 of the Securities Act?

7. Joseph Crotty was a vice president of United Artists Communications, Inc. (UA), a corporation with equity securities registered under the Securities Exchange Act of 1934. Crotty was the head film buyer of UA's western division. He had virtually complete and autonomous control of film buying for the 351 UA theaters in the western United States, including negotiating and signing movie acquisition agreements, supervising movie distribution, and settling contracts after the movies had been shown. Crotty knew how many contracts were being negotiated at any one time and the price UA was paying for the rental of each movie. Crotty was required to consult with higher officers only if he wanted to exceed a certain limit on the amount of the cash advance paid to a distributor for a movie. This occurred no more than two or three times a year. The gross revenue from Crotty's division was about 35 percent of UA's gross revenue from movie exhibitions and around 17 percent of its total gross revenue. During a six-month period, Crotty purchased 7,500 shares of UA and sold 3,500 shares, realizing a large profit. Has Crotty violated Section 16(b) of the 1934 Act?

8. Potlatch Corporation was in the forests products industry, an industry that had experienced a wave of takeovers. The Potlatch board of directors approved a voting rights amendment to the articles of incorporation that granted four votes per share to current shareholders and other specified shareholders. New shareholders would have only one vote per share until they held the shares for four years. The effect of the amendment would be to deter and frustrate a hostile takeover of Potlatch. The board issued a proxy statement in connection with its solicitation of proxies from the shareholders. A letter issued with the proxy statement stated that the intent of the voting rights amendment was to give long-term shareholders a greater voice in the affairs of Potlatch. The voting rights amendment was approved by shareholders. Potlatch shareholders sued the company under Section 14(a) of the 1934 Act, seeking to void the shareholders' approval of the voting rights amendment. They alleged that the shareholders' votes were procured by fraud because the board failed to disclose the real purpose of the voting rights amendment—entrenchment of current management. Should the shareholders succeed?

9. J. C. Harrelson, the president and chief shareholder of Alabama Supply and Equipment Company (ASECo), and Clarence Hamilton conspired to defraud investors. They induced Frisco City, Alabama, to create the Industrial Development Board of Frisco City to issue tax-exempt bonds to investors. The Board offered and sold bonds pursuant to an offering circular, which misstated or omitted several material facts, due to misrepresentations made by Harrelson and Hamilton. The Board used the proceeds of the bond issuance to build a manufacturing plant for ASECo. After the ASECo plant was constructed, ASECo ceased all operations and defaulted on its rental payments to the Board, causing the value of the bonds to drop precipitously. The bondholders received only $373.33 for each $1,000 bond. Clarence Bishop had purchased four of the bonds for $4,096. He never saw the offering circular or knew that one existed. He bought the bonds solely on his broker's oral representations that they were a good investment and that others in the community had purchased them. Can Bishop sue Harrelson and Hamilton under Rule 10b-5 even though he failed to read or even to seek to read the offering circular?

10. In May 1983, Phil Gutter read a report in *The Wall Street Journal* that listed certain corporate bonds as trading with interest. Relying on the report, Gutter purchased $36,000 of the bonds. In reality, the bonds were trading without interest. When *The Wall Street Journal* corrected its error, the price of the bonds fell, resulting in Gutter suffering a loss of $1,692. Is *The Wall Street Journal* liable to Gutter for his loss under Rule 10b-5?

11. When he was the Oklahoma Sooner football coach, Barry Switzer attended a track meet, where he spoke with friends and acquaintances, including G. Platt, a director of Phoenix Corporation and chief executive officer of Texas International Company (TIC), a business that sponsored Switzer's coach's television show. TIC owned more than 50 percent of Phoenix's shares. Switzer moved around the bleachers at the track meet in order to talk to various people. After speaking with Platt and his wife Linda for the last of five times, Switzer lay down to sunbathe on a row of bleachers behind the Platts. G. Platt, unaware that Switzer was behind him, carelessly spoke too loud while talking with his wife about his desire to sell or liquidate Phoenix. He also talked about several companies making bids to buy Phoenix. Switzer also overheard that an announcement of a possible liquidation of Phoenix might be made within a week. Switzer used the information he obtained in deciding to purchase Phoenix shares. Did Switzer trade illegally on inside information?

12. Edper, Inc., identified Brascan, Inc., as a potential takeover target. On behalf of Edper, a securities broker contacted 40 institutional investors and 12 substantial individual holders of Brascan shares who were his clients. The broker told the investors that Edper was interested in buying 3 to 4 million shares. Eventually, Edper bought 6.3 million shares—nearly 25 percent of Brascan's outstanding shares—from these investors at a price that the broker and each individual investor agreed on. Did Edper make a tender offer for Brascan's shares that required it to file a Schedule to prior to making the offers to the investors?

13. First City Financial Corp., a Canadian company controlled by the Belzberg family, was engaged in the business of investing in publicly held American corporations. Marc Belzberg identified Ashland Oil Company as a potential target, and on February 11, 1986, he secretly purchased 61,000 shares of Ashland stock for First City. By February 26, additional secret purchases of Ashland shares pushed First City's holdings to just over 4.9 percent of Ashland's stock. These last two purchases were effected for First City by Alan "Ace" Greenberg, the chief executive officer of Bear Stearns, a large Wall Street brokerage. On March 4, Belzberg called Greenberg and told him, "It wouldn't be a bad idea if you bought Ashland Oil here." Immediately after the phone call, Greenberg purchased 20,500 Ashland shares for about $44 per share. If purchased for First City, those shares would have increased First City's Ashland holdings above 5 percent. Greenberg believed he was buying the shares for First City under a put and call agreement, under which First City had the right to buy the shares from Bear Stearns and Bear Stearns had the right to require First City to buy the shares from it. Between March 4 and 14, Greenberg purchased an additional 330,700 shares. On March 17, First City and Bear Stearns signed a formal put and call agreement covering all the shares Greenberg purchased. On March 25, First City announced publicly for the first time that it intended to make a tender offer for all of Ashland's shares. First City filed a Schedule 13D on March 26. Has First City violated the Williams Act?

14.  *Video Case.* See "Cafeteria Conversation." Steve has authority to write checks on the account of his employer, a public company under the Securities Exchange Act of 1934. Because Steve is a compulsive gambler and substance abuser, he needs a constant supply of cash to finance his habits. Steve regularly issues checks payable to actual suppliers not currently owed money, steals the checks, signs the names of the payees, and cashes the checks. Because Steve is also in charge of reconciling his employer's bank statements, his embezzlement scheme is not discovered by the employer's independent auditor during a routine audit. Is the independent auditor liable to its client for the losses resulting from Steve's embezzlement?

15. Amenity, Inc., was incorporated with 1 million authorized shares, which were issued to Capital General Corporation (CGC) for $2,000. CGC distributed 90,000 of those shares to about 900 of its clients, business associates, and other contacts to create and maintain goodwill among its clients and contacts. CGC did not receive any monetary or other direct financial consideration from those receiving the stock. Amenity had no actual business function at this time, and its sole asset was the $2,000 CGC had paid for the 1 million shares. Through CGC's efforts, Amenity was acquired by another company, which paid CGC $25,000 for its efforts. The Utah Securities Division sought to suspend the public trading of Amenity stock on the grounds that when CGC distributed the shares it had sold them in violation of the Utah Securities Act. Was CGC's distribution a sale of securities?

Chapter Forty-Five

Legal and Professional Responsibilities of Accountants

Chapter Outline

I. General Standard of Performance

II. Accountants' Liability to Clients
- *A. Contractual Liability*
- *B. Tort Liability*
  - *1. Negligence*
  - *2. Contributory and Comparative Negligence of Client*
  - *3. Fraud*
- *C. Breach of Trust*
- *D. Securities Law*

III. Accountants' Liability to Third Persons: Common Law
- *A. Negligence and Negligent Misrepresentation*
  - *1. Primary Benefit Test*
  - *2. Foreseen Users and Foreseen Class of Users Test*
  - *3. Foreseeable Users Test*
- *B. Fraud*

IV. Accountant's Liability to Third Parties: Securities Law
- *A. Securities Act of 1933*
  - *1. Section 11 Liability*
  - *2. Section 12(a)(2)*
  - *3. Section 17(a)*
- *B. Securities Exchange Act of 1934*
  - *1. Section 18*

  - *3. Aiding and Abetting*
  - *4. Extent of Liability*
- *C. State Securities Law*

V. Limiting Accountants' Liability: Professional Corporations and Limited Liability Partnerships

VI. Qualified Opinions, Disclaimers of Opinion, Adverse Opinions, and Unaudited Statements

VII. Criminal, Injunctive, and Administrative Proceedings

VIII. Criminal Liability under the Securities Laws
- *A. Other Criminal Law Violations*
  - *1. RICO*
- *B. Injunctions*
- *C. Administrative Proceedings*
- *D. Securities Exchange Act Audit Requirements*

IX. Ownership of Working Papers

X. Accountant–Client Privilege

This chapter covers the legal responsibilities of accountants. It considers the professional relationships of accountants with their clients and others who rely on their work. This chapter also covers the criminal and administrative sanctions for wrongful professional conduct by accountants.

General Standard of Performance

The general duty that accountants owe to their clients and to other persons who are affected by their actions is to exercise the skill and care of the ordinarily prudent accountant in the same circumstances. Hence, accountants must act carefully and diligently; they are *not* guarantors of the accuracy of their work. The accountant's duty to exercise reasonable care is a subset of the negligence standard of tort law. Two elements compose the general duty of performance: skill and care.

An accountant must have the **skill of the ordinarily prudent accountant.** This element focuses on the education or knowledge of the accountant, whether acquired formally at school or by self-instruction. For example, to prepare tax returns, an accountant must know the tax laws as well as the ordinarily prudent accountant does. To audit financial records, an accountant must know generally accepted auditing standards (GAAS) and generally accepted accounting principles (GAAP). GAAS and GAAP are standards and principles embodied in the rules, releases, and pronouncements of the Securities and Exchange Commission, the American Institute of Certified Public Accountants (AICPA), and the Financial Accounting Standards Board (FASB).

The care element requires an accountant to act **as carefully as the ordinarily prudent accountant.** For example, in preparing a tax return, he must discover the income exclusions, the deductions, and the tax credits that the reasonably careful accountant would find are available to the client. When auditing financial statements, he must follow the rules of GAAS and GAAP.

Courts and legislatures usually defer to the members of the accounting profession in determining what the ordinarily prudent accountant would do. Such deference recognizes the lawmakers' lack of understanding of the nuances of accounting practice. However, the accounting profession will not be permitted to establish a standard of conduct that is harmful to the interests of clients or other members of society.

Originally, accountants were held to the standard of the ordinarily prudent accountant in his locality. This local standard has given way to a national standard in recent years. Due to improved means of communication in the modern world and the widespread availability of continuing accounting education courses, few accountants today can argue that they are unaware of modern accounting techniques.

Accountants' Liability to Clients

Accountants' are frequently sued by their clients. For example, an accountant may wrongfully claim deductions on a client's tax return. When the IRS discovers the wrongful deduction, the individual will have to pay the extra tax, interest, and perhaps a penalty. The individual may sue his accountant to recover the amount of the penalty. For another example, consider an accountant who prepares an income statement that understates a client's income. The client uses the income statement to apply for a loan, but is denied the loan because her stated net income is inadequate. The client may sue her accountant for damages caused by the erroneous income statement.

There are three principal bases of liability of an accountant to his client: contract, tort, and trust.

Contractual Liability

As a party to a contract with her client, an accountant owes a duty to the client to perform as she has agreed to perform. This includes an implied duty to perform the contract as the ordinarily prudent accountant would perform it. If the accountant fails to perform as agreed, ordinarily an accountant is liable only for compensatory damages and those consequential damages that are contemplated by the client and the accountant at the time the contract was made, such as the client's cost of hiring another accountant to complete the work. For example, an auditor agrees to provide audited financial statements for inclusion in a client's bank loan application. The loan will be used to expand the client's business. When the auditor fails to complete the audit on time, the auditor will not ordinarily be liable for the client's lost profits from the unexecuted expansion, unless the auditor had agreed to be liable for such lost profits.

An accountant is not liable for breach of contract if the client obstructs the accountant's performance of the contract. For example, an accounting firm is not liable for failing to complete an audit on time when the client refuses to give the firm access to needed records and property.

An accountant may not delegate his duty to perform a contract without the consent of the client. Delegation is not permitted because the performance of a contract for accounting services depends on the skill, training, and character of the accountant. For example, PricewaterhouseCoopers, a public accounting firm, may not

delegate to Ernst & Young, another public accounting firm, the contractual duty to audit the financial statements of GM, even though both firms are nearly equally skillful and careful.

Tort Liability

Accountants' tort liability to their clients may be based on the common law concepts of negligence and fraud or on the violation of a statute, principally the federal and state securities laws.

Negligence The essence of negligence is the failure of an accountant to exercise the skill and care of the ordinarily prudent accountant. An accountant is negligent when the accountant breaches the duty to act skillfully and carefully and proximately causes damages to the client. For example, a client may recover the interest on excess taxes that he paid as a result of his accountant's lack of due care in claiming allowable deductions on a tax return.

Sometimes, an accountant will audit a company, yet fail to uncover fraud, embezzlement, or other intentional wrongdoing by an employee of the company. Ordinarily, an accountant has no specific duty to uncover employee fraud or embezzlement. Nonetheless, an accountant must uncover employee fraud or embezzlement if an ordinarily prudent accountant would have discovered it. The accountant who fails to uncover such fraud or embezzlement is negligent and liable to his client. In addition, an accountant owes a duty to investigate suspicious circumstances that tend to indicate fraud, regardless of how he became aware of those circumstances. Also, an accountant has a duty to inform a proper party of his suspicions. It is not enough to inform or confront the person suspected of fraud.

When an accountant is hired to perform a fraud audit to investigate suspected fraud or embezzlement, she has a greater duty to investigate. She must be as skillful and careful as the ordinarily prudent auditor performing a fraud audit.

When an accountant negligently fails to discover embezzlement, generally he is liable to his client only for an amount equal to the embezzlement that occurred after he should have discovered the embezzlement. The accountant is usually not liable for any part of the embezzlement that occurred prior to the time he should have uncovered the embezzlement unless his tardy discovery prevented the client from recovering embezzled funds.

In the following *Diversified Graphics* case, an accounting firm was held liable to its client for failing to meet the standard of the profession.

Diversified Graphics, Ltd. v. Groves *868 F.2d 293 (8th Cir. 1989)*

Diversified Graphics, Ltd. (D.G.), hired Ernst & Whinney (E & W) to assist it in obtaining a computer system to fit its data processing needs. D.G. had a longstanding relationship with E & W during which D.G. developed great trust and reliance on E & W's services. Because D.G. lacked computer expertise, it decided to entrust E & W with the selection and implementation of an in-house computer data processing system. E & W had promised to locate a "turnkey" system, which would be fully operational without the need for extensive employee training. D.G. instead received a system that was difficult to operate and failed to meet its needs. D.G. sued E & W and its partners, including Ray Groves, for negligence. The jury found in favor of D.G.; E & W and its partners appealed.

Lay, Chief Judge D.G.'s theory for recovery based on negligence encompasses the notion of a consultant-client relationship and therefore the existence of a professional standard of care.

The degree of skill and care that may be required of a professional is a question of fact for the jury. We find that there was substantial evidence regarding the applicable standard of a professional consultant.

E & W's Guidelines to Practice incorporates the Management Advisory Services Practice Standards which were adopted by the American Institute of Certified Public Accountants, Inc. (AICPA Standards). The AICPA Standards require that "due professional care" is to be exercised in providing management advisory services. These standards in part generally provide:

> In performing management advisory services, a practitioner must act with integrity and objectivity and be independent in mental attitude.
>
> Engagements are to be performed by practitioners having competence in the analytical approach and

process, and in the technical subject matter under consideration.

Due professional care is to be exercised in the performance of a management advisory services engagement.

Before accepting an engagement, a practitioner is to notify the client of any reservations he has regarding anticipated benefits.

Before undertaking an engagement, a practitioner is to inform his client of all significant matters related to the engagement.

Engagements are to be adequately planned, supervised, and controlled.

Sufficient relevant data is to be obtained, documented, and evaluated in developing conclusions and recommendations.

All significant matters relating to the results of the engagement are to be communicated to the client.

AICPA Standards Nos. 1–8.

D.G. had determined that it required a "turnkey" computer system that would fully perform all of its data processing in-house. The term "turnkey" is intended to describe a self-sufficient system which the purchaser need only "turn the key" to commence operation. The purchaser should not have to hire programmers, and current employees should not have to undergo extensive training to be able to operate the system. To procure this type of customized and fully operational system, great care must be taken to carefully detail a business's needs and to properly develop specifications for the computer system. Potential vendors must be carefully scrutinized to discover all of the inadequacies of their data processing systems. Once a vendor is chosen, proper implementation is imperative to ensure that the purchaser truly need only "turn the key" to commence full operation of the system. A fundamental part of implementation involves testing the system through parallel data processing operation. Finally, the existence of adequate documentation regarding the operation of the system is crucial once the system is up and running. As previously stated, employees will have had only minimal training and will depend heavily on the instructions for operation. Moreover, documentation is particularly important because this type of system is highly customized and standard instruction sources will have only limited value.

Thus, the jury could conclude that E & W's conduct fell short of adhering to the applicable professional standard of care.

Judgment for Diversified Graphics affirmed.

Contributory and Comparative Negligence of Client Courts are reluctant to permit an accountant to escape liability to a client merely because the client was **contributorily negligent.** Since the accountant has skills superior to those of the client, courts generally allow clients to rely on the accountant's duty to discover employee fraud, available tax deductions, and other matters for which the accountant is hired. The client is not required to exercise reasonable care to discover these things itself.

Nonetheless, some courts allow the defense of contributory negligence or the defense of **comparative negligence,** such as when clients negligently fail to follow an accountant's advice or when clients possess information that makes their reliance on the accountant unwarranted. The *Scioto Memorial Hospital* case considers the limits of the comparative negligence defense.

Scioto Memorial Hospital Ass'n., Inc. v. Price Waterhouse

659 N.E.2d 1268 (Ohio Sup. Ct. 1996)

Scioto Memorial Hospital Association, Inc., planned the construction of Richmond Place, a 170-unit residential retirement center in Lexington, Kentucky. Scioto hired Price Waterhouse (PW) to review the work of the architect, the financial underwriter, and the marketing consultant and to recommend whether Scioto should proceed with the Richmond Place investment. PW's engagement letter represented that PW would issue a preliminary feasibility study and review a detailed financial forecast of the project. Financial forecasts

represent management's judgment of the most likely set of conditions and management's most likely course of action. Instead of reviewing a financial forecast for Richmond Place, PW reviewed only a financial projection compiled by the underwriter. As PW explained in its letter to Scioto, a projection "represents management's estimate of its possible, but not necessarily most probable, future course of action." PW's final report issued to Scioto assumed an occupancy rate of 98 percent.

During construction, presales were lagging, but PW assured Scioto's president that Richmond Place was a good project. When construction was 70 percent complete, fire destroyed most of the retirement center. Scioto used the insurance proceeds to rebuild, yet a year later, only 15 residents occupied Richmond Place.

Scioto sued PW alleging negligence and breach of contract on the grounds that PW failed adequately to assess and disclose to Scioto the risks associated with the project. Scioto claimed it would not have undertaken the project if PW's report had accurately reflected the financial forecast. PW defended on the grounds that Scioto's comparative negligence caused Scioto's damages: PW pointed to delays in construction after the fire and Scioto's lack of business-interruption insurance covering the six-month delay in construction caused by the fire. The trial court held that PW could not raise the defense of Scioto's comparative negligence, and the jury found PW liable. PW appealed to an Ohio appeals court, which affirmed, but reduced PW's liability to $8,771,000. PW appealed to the Supreme Court of Ohio.

Sweeney, Justice The main issue before this court is whether the comparative negligence is applicable to a professional negligence claim of a client against its accountant. We find that the comparative negligence defense is applicable in accounting negligence cases.

The audit interference rule was set forth in *National Surety Corp. v. Lybrand* (1939). At that time, New York recognized contributory negligence as a complete bar to recovery. In *National Surety,* the New York Supreme Court, Appellate Division, held that contributory negligence constituted a defense for accountants only if the client's negligence contributed to the accountant's failure to perform his contract and to report the truth. While this rule was adopted by a number of jurisdictions, a review of these cases shows that none discusses its application in a state recognizing comparative negligence, with the exception of *Fullmer v. Wohlfeiler & Beck* (1990). The audit interference rule was made to soften what was then the harsh rule of negligence law which barred recovery of damages if there was any contributory negligence on the part of the plaintiff.

However, in light of Ohio's comparative negligence statute enacted in 1980, there is no need for a special rule and, thus, we reject the application of the audit interference rule in Ohio. Hence, any negligence by a client, whether or not it directly interferes with the accountant's performance of its duties, can reduce the client's recovery. In so holding, we note that virtually all courts that have expressly considered the applicability of the audit interference rule to their comparative negligence states have agreed and rejected the rule.

As to the application of the comparative negligence defense in the present case, we note that while accountants should exercise ordinary care in conducting their accounting activities, the persons who hire accountants, usually businesspersons, should also be required to conduct their business activities in a reasonable and prudent manner. Accordingly, the trial court erred in granting the motion as to PW's comparative negligence defense and failing to give an instruction on comparative negligence to the jury.

However, despite the trial court's ruling, the record demonstrates that PW was not precluded from presenting extensive evidence tending to show that Scioto's own conduct was a cause of its losses, in addition to the negligence of PW. PW primarily argues about the trial court's exclusion of evidence regarding Scioto's business-interruption insurance. However, the $4,000,000 hole in Scioto's protective coverage was clearly and repeatedly presented to the jury. Moreover, failure to obtain such insurance constitutes comparative negligence only with regard to the damages attributable to the delays caused by the fire and not the other damages which the jury found Scioto to have sustained as a result of PW's negligence and breach of contract. The court of appeals recognized that the jury award improperly included damages that resulted from the fire and cured the error. Accordingly, we find that while the trial court should have allowed the comparative negligence defense, in this case the error was cured

by the court of appeals and, therefore, did not constitute prejudicial error.

Likewise, the trial court's failure to give an instruction to the jury on comparative negligence was not prejudicial error in this case. Evidence pertaining to the negligent acts of Scioto was presented to the jury during the trial. The jury was instructed that if Scioto failed to act reasonably to avoid or reduce its losses, it could not recover any such damages. Despite these instructions, the jury still awarded Scioto all of its damages, indicating that the jury found PW the sole cause of the failure of Richmond Place. Thus, we find that even if the jury had been required to apportion the fault between the parties in this case, the outcome would have been the same. The jury found that PW was solely liable for Scioto's loss. Accordingly, since there was no prejudicial error, a new trial is not warranted.

Judgment for Scioto Memorial Hospital affirmed in part and reversed in part in favor of Price Waterhouse.

Fraud An accountant is liable to his client for fraud when he misstates or omits facts in communications with his client and acts with **scienter.** An accountant acts with scienter when he knows of the falsity of a statement or he recklessly disregards the truth. Thus, accountants are liable in fraud for their intentional or reckless disregard for accuracy in their work.

For example, an accountant chooses not to examine the current figures in a client's books of account, but relies on last year's figures because he is behind in his work for other clients. As a result, the accountant understates the client's income on an income statement that the client uses to apply for a loan. The client obtains a loan, but he has to pay a higher interest rate because his low stated income makes the loan a higher risk for the bank. Such misconduct by the accountant proves scienter and, therefore, amounts to fraud.

Scienter also includes recklessly ignoring facts, such as an auditor's finding obvious evidence of embezzlement yet failing to notify a client of the embezzlement.

The chief advantage of establishing fraud is that the client may get a higher damage award than when the accountant is merely negligent. Usually, a client may receive only compensatory damages for a breach of contract or negligence. By proving fraud, a client may be awarded punitive damages as well.

Breach of Trust

An accountant owes a duty of trust to his client. Information and assets that are entrusted to an accountant may be used only to benefit the client. The duty of trust requires the accountant to maintain the confidentiality of the client's information entrusted to the accounting firm.Therefore, an accountant may not disclose sensitive matters such as a client's income and wealth. In addition, an accountant may not use the assets of his client for his own benefit.

Securities Law

Federal and state securities law creates several rights of action for persons harmed in connection with the purchase or sale of securities. These rights of action are based in tort. Although available to clients of an accountant, they are rarely used for that purpose. Usually, only third parties (nonclients) sue under the securities law. The securities law sections that apply to accountants are discussed later in this chapter.

Accountants' Liability to Third Persons: Common Law

Other persons besides an accountant's clients may use her work product. Banks may use financial statements prepared by a loan applicant's accountant in deciding whether to make a loan to the applicant. Investors may use financial statements certified by a company's auditors in deciding whether to buy or sell the company's securities. These documents prepared by an accountant may prove incorrect, resulting in damages to the nonclients who relied on them. For example, banks may lend money to a corporation only because an income statement prepared by an accountant overstated the corporation's income. When the corporation fails to repay the loan, the bank may sue the accountant to recover the damages it suffered.

Nonclients may sue accountants for common law negligence, common law fraud, and violations of the

securities laws. In this section, common law negligence and fraud are discussed.

Negligence and Negligent Misrepresentation

When an accountant fails to perform as the ordinarily prudent accountant would perform, she risks having liability for negligence. Many courts have restricted the ability of nonclients to sue an accountant for damages proximately caused by the accountant's negligent conduct. These courts limit nonclient suits on the grounds that nonclient users of an accountant's work product have not contracted with the accountant and, therefore, are not in **privity of contract** with the accountant. Essentially, these courts hold that an accountant owes no duty to nonclients to exercise ordinary skill and care.

This judicial stance conflicts with the usual principles of negligence law under which a negligent person is liable to all persons who are reasonably foreseeably damaged by his negligence. The rationale for the restrictive judicial stance was expressed in the *Ultramares* case,[1] a decision of the highest court in New York. In that case, Judge Benjamin Cardozo refused to hold an auditor liable to third parties for mere negligence. His rationale was stated as follows:

> If liability for negligence exists, a thoughtless slip or blunder, the failure to detect a theft or forgery beneath the cover of deceptive entries, may expose accountants to a liability in an indeterminate amount for an indeterminate time to an indeterminate class.

Ultramares dominated the thinking of judges for many years, and its impact is still felt today. However, many courts understand that many nonclients use and reasonably rely on the work product of accountants. To varying degrees, these courts have relaxed the privity requirement and expanded the class of persons who may sue an accountant for negligence conduct. Today, most courts adopt one of the following three tests to determine whether a nonclient may sue an accountant for negligence.

Primary Benefit Test The *Ultramares* court adopted a primary benefit test for imposing liability for negligence. Under this test, an accountant's duty of care extends only to those persons for whose primary benefit the accountant prepares financial reports and other documents. The accountant must actually foresee the nonclient's use and prepare the document primarily for use by a specified nonclient. That is, the nonclient must be a **foreseen user** of the accountant's work product. The accountant must know two things: (1) the name of the person who will use the accountant's work product and (2) the particular purpose for which that person will use the work product.

Foreseen Users and Foreseen Class of Users Test By 1965, a draft of the *Restatement (Second) of Torts* proposed that the law of professional negligence expand the class of protected persons to **foreseen users** and **users within a foreseen class of users** of reports. Under this test, the accountant must know either the user of the work product or the use to be made of the work product. The protected persons are (1) those persons who an accountant knows will use the accountant's work product and (2) those persons who use an accountant's work product in a way the accountant knew the work product would be used.

For example, an accountant prepares an income statement that he knows his client will use to obtain a loan at Bank X. Any bank to which the client supplies the statement to obtain a loan, including Bank Y, may sue the accountant for damages caused by a negligently prepared income statement. Bank X is a foreseen user, and Bank Y is in a foreseen class of users. On the other hand, if an accountant prepares an income statement for a tax return and the client, without the accountant's knowledge, uses the income statement to apply for a loan from a bank, the bank is not among the protected class of persons—the accountant did not know that the tax return would be used for that purpose.

Foreseeable Users Test A few courts have applied traditional negligence causation principles to accountants' negligence. They have extended liability to **foreseeable users** of an accountant's reports who suffered damages that were proximately caused by the accountant's negligence. To be liable to a nonclient under this test, an accountant need merely be able to expect or foresee the nonclient's use of the accountant's work product. It is not necessary for the nonclient to prove that the accountant actually expected or foresaw the nonclient's use.

In the following *Marcus Brothers Textiles* case, the court rejected the foreseeable users test as too broad and the *Ultramares* test as too narrow. Instead, the court applied the *Restatement*'s foreseen class of users test in the negligent misrepresentation context. Note that the dissenting opinion argues that the majority misinterpreted the *Restatement* test.

[1] *Ultramares Corp. v. Touche,* 174 N.E. 441 (N.Y. Ct. App. 1931).

Marcus Brothers Textiles, Inc. v. Price Waterhouse, LLP
513 S.E.2d 320 (N.C. Sup. Ct. 1999)

Marcus Brothers Textiles, Inc., is a New York–based converter of textiles that buys unfinished woven material, has it finished by independent contractors, and sells it to apparel manufacturers or retailers of fabric for home sewing. Piece Goods Shops Company, L.P., a limited partnership, was a retailer of fabrics, patterns, sewing notions, needlecraft supplies, and sewing machines. Piece Goods was a frequent customer of Marcus Brothers.

Price Waterhouse, LLP, an independent public accounting firm, was hired by Piece Goods to perform audits of its year-end financial statements. Price Waterhouse audited Piece Goods's financial statements for the years 1989 through 1992. At the close of the fiscal year on July 31, 1992, Piece Goods prepared its year-end 1992 financial statements, and Price Waterhouse audited the 1992 financial statements. On September 22, 1992, following the audit, Price Waterhouse sent a letter to Piece Goods in which it stated:

> In our opinion, the accompanying balance sheet and the related statements of income and partners' equity and of cash flows present fairly, in all material respects, the financial position of Piece Goods at July 31, 1992, and the results of its operations and its cash flows for the year then ended in conformity with generally accepted accounting principles.

Piece Goods forwarded a copy of the audited 1992 financial statements to Marcus Brothers on October 29, 1992. Marcus Brothers contends that as a result of its review of the audited 1992 financial statements, it made several extensions of credit to Piece Goods during the period from December 1992 to April 1993.

In April 1993, Piece Goods filed a petition for reorganization under Chapter 11 of the Bankruptcy Code. At that time, Piece Goods owed Marcus Brothers nearly $290,000 as a result of the credit extensions. In August 1995, Marcus Brothers sued Price Waterhouse and five unnamed employees of Price Waterhouse, alleging gross negligence and negligent misrepresentation based on its audit of the 1992 financial statements. Marcus Brothers alleged the financial statements audited by Price Waterhouse contained several material misrepresentations and reflected numerous departures from Generally Accepted Accounting Principles (GAAP) and that Price Waterhouse's failure to alert readers of the financial statement to those departures violated Generally Accepted Auditing Standards (GAAS).

Marcus Brothers contended the audited 1992 balance sheet contained three material misrepresentations about Piece Goods's financial condition: (1) it showed a $30,332,000 receivable from a Piece Goods general partner which was uncollectible; (2) it included interest on the worthless $30,332,000 receivable; and (3) it incorrectly reflected nearly all payables for certain pattern inventories as noncurrent, long-term liabilities, but reflected the inventories for those pattern inventories as current assets. Marcus Brothers claims the result was to overstate Piece Goods's working capital and distort Piece Goods's current working capital ratio.

Price Waterhouse filed a motion for summary judgment, alleging that Marcus Brothers had failed to establish certain required elements of negligent misrepresentation, including: (1) Price Waterhouse's knowledge that Piece Goods would be supplying Marcus Brothers with the audited 1992 financial statements; and (2) Marcus Brothers' justifiable reliance upon the audited 1992 financial statements. The trial court granted Price Waterhouse's motion for summary judgment. Marcus Brothers appealed to the Court of Appeals, which reversed the trial court's decision. Price Waterhouse appealed to the North Carolina Supreme Court.

Wainwright, Justice At the outset, we note that although a company's financial statements themselves are the representations of management, not the auditor, an audit report represents the auditor's opinion of the accuracy of the client's financial statements at a given period of time. As such, the responsibility an auditor assumes in conducting an audit and preparing a report should not be taken lightly.

The issue of the scope of an accountant's liability to persons other than the client for whom an audit report was prepared is relatively new in the annals of North Carolina jurisprudence. This Court first addressed the issue in 1988 in *Raritan River Steel Co. v. Cherry, Bekaert & Holland,* 367 S.E.2d 609 (1988). In *Raritan,* this Court stated that under certain circumstances, the tort of negligent misrepre-

sentation set forth in section 552 of the *Restatement (Second) of Torts* could provide an appropriate remedy to plaintiffs who had been injured as a result of an accountant's negligence. Section 552 provides:

> Information Negligently Supplied for the Guidance of Others
>
> (1) One who, in the course of his business, profession or employment, or in any other transaction in which he has a pecuniary interest, supplies false information for the guidance of others in their business transactions, is subject to liability for pecuniary loss caused to them by their justifiable reliance upon the information, if he fails to exercise reasonable care or competence in obtaining or communicating the information.
>
> (2) . . . The liability stated in Subsection (1) is limited to loss suffered
>
> (a) by the person or one of a limited group of persons for whose benefit and guidance he intends to supply the information or knows that the recipient intends to supply it; and
>
> (b) through reliance upon it in a transaction that he intends the information to influence or knows that the recipient so intends or in a substantially similar transaction.

Restatement (Second) of Torts section 552 (1977).

The *Restatement* approach recognizes that liability should extend not only to those with whom the accountant is in privity or near privity, but also to those persons, or classes of persons, whom he knows and intends will rely on his opinion, or whom he knows his client intends will so rely. On the other hand, as the commentary to section 552 makes clear, it prevents extension of liability in situations where the accountant "merely knows of the ever-present possibility of repetition to anyone, and the possibility of action in reliance upon [the audited financial statements], on the part of anyone to whom it may be repeated." *Restatement (Second) of Torts* section 552, comment h. As such it balances the need to hold accountants to a standard that accounts for their contemporary role in the financial world with the need to protect them from liability that unreasonably exceeds the bounds of their real undertaking.

Under this approach, in order for an auditor to be held liable to a third party, that party must demonstrate: (1) the accountant either (a) knew that the third party would rely on this information, or (b) knew that the client for whom the audit report was prepared intended to supply the information to a third party who would rely on this information; and (2) the third party justifiably relied upon this information in its decision concerning the transaction involved or one substantially similar to it. In adopting this rule, in *Raritan* this Court rejected as too expansive the position that extends liability to all persons the accountant should reasonably foresee might obtain and rely on the information generated. Further, the Court held:

> We reject the . . . "privity or near-privity" approach . . . because it provides inadequately for the central role independent accountants play in the financial world. Accountants' audit opinions are increasingly relied upon by the investing and lending public in making financial decisions. *Raritan,* 367 S.E.2d at 615.

First, we must determine whether the evidence presented is sufficient to create a genuine issue of material fact that Price Waterhouse knew either that Marcus Brothers would rely on the 1992 audited financial statements in its decision to extend credit to Piece Goods, or that Piece Goods would supply the information to Marcus Brothers intending Marcus Brothers would rely on this information in its decision to extend credit to Piece Goods.

In support of its case, Marcus Brothers cites numerous circumstances which indicate genuine issues of material fact as to the knowledge element. First, there is unrefuted testimony that Piece Goods had been a client of Price Waterhouse since 1986. In addition, there is deposition testimony from James J. Quinn, Director of Corporate Credit for Marcus Brothers, indicating that Piece Goods had been sending its audited financial statements to Marcus Brothers since 1983, and that these financial statements were regularly used in determining whether to extend credit to Piece Goods. Price Waterhouse's own internal 1989 memorandum states that "Price Waterhouse has historically reported on the financial statements of Piece Goods, and . . . vendors . . . are accustomed to receiving Piece Goods' financial statements." Further, deposition testimony from Robert Allen Smith, an audit partner for Price Waterhouse who signed off on the 1989 internal memorandum, indicates that some of Price Waterhouse's clients "typically provide" their audited financial statements to trade creditors in reference to obtaining loans or extensions of credit. There is further deposition testimony from Karen C. Frazier, an audit manager for Price Waterhouse who oversaw the audit of

Piece Goods' 1992 financial statements, which indicates that audited financial statements are "used by the management of the company and possibly outsiders," and that such outsiders "could" include trade creditors such as Marcus Brothers. Marcus Brothers further cites the fact that the sixth largest check on a handwritten list of fifty "held checks" in Price Waterhouse's 1992 Piece Goods audit file is a check to Marcus Brothers in the amount of $291,337.78. Finally, Piece Goods' 1993 bankruptcy filing revealed that forty-three trade creditors had received copies of Piece Goods' audited financial statements, including Marcus Brothers.

In *Raritan,* this Court, as previously noted, adopted the *Restatement (Second) of Torts* section 552. Included in the commentary to section 552 is illustration 10 under comment h, which provides:

> A, an independent public accountant, is retained by B Company to conduct an annual audit of the customary scope for the corporation and to furnish his opinion on the corporation's financial statements. A is not informed of any intended use of the financial statements; but A knows that the financial statements, accompanied by an auditor's opinion, are customarily used in a variety of financial transactions by the corporation and that they may be relied upon by lenders, investors . . . and the like. . . In fact B Company uses the financial statements and accompanying auditor's opinion to obtain a loan from X Bank. Because of A's negligence, he issues an unqualifiedly favorable opinion upon a balance sheet that materially misstates the financial position of B Company, and through reliance upon it X Bank suffers pecuniary loss. A is not liable to X Bank.

Some confusion arises due to illustration 10 under comment h. This illustration has been read by some to mean that liability turns on whether the accountant's client specifically mentions a person or class of persons who are to receive the audited financial statements.

The *Restatement*'s text does not demand that the accountant be informed by the client himself of the audit report's intended use. The text requires only that the auditor know that his client intends to supply information to another person or limited group of persons. Whether the auditor acquires this knowledge from his client or elsewhere should make no difference. If he knows at the time he prepares his report that specific persons, or a limited group of persons, will rely on his work, and intends or knows that his client intends such reliance, his duty of care should extend to them.

The facts of the instant case are distinguishable from *Raritan* and illustration 10. In *Raritan Steel Co. v. Cherry, Bekaert & Holland,* 407 S.E.2d 178 (1991) (*Raritan II*), this Court noted that the third-party creditor did not see the audit but reviewed a summary of it published in a Dun & Bradstreet report, which apparently overstated the corporation's actual financial position. Allegedly, on the basis of the Dun & Bradstreet summary of the audit, the trade creditor extended additional open credit to the corporation, which later filed for bankruptcy. It is interesting to note that the accounting firm's engagement letter to the client provided: "If we discover that we cannot issue an unqualified opinion, we will discuss the reasons with you before submitting a different kind of report. . . . Our basic audit function is to add reliability to those financial statements." The Dun & Bradstreet report, which also contained other summarized financial information, was the only access that the third-party creditor had to the corporation financial statements. The creditor was not even aware that the audit was being performed.

As illustration 10 clearly states, A was not informed of any intended use of the financial statements. In the light most favorable to Marcus Brothers, there are genuine issues of material fact as to whether Price Waterhouse was informed of any intended use of the financial statements. Illustration 10 further states: "But A knows that the financial statements, accompanied by an auditor's opinion, are customarily used in a variety of financial transactions by the corporation and that they may be relied upon by lenders. . . ." In the instant case, the circumstances surrounding Price Waterhouse's knowledge raise issues of material fact that rise above the level of "customarily used."

At this stage of the proceedings, we conclude it can reasonably be inferred that Price Waterhouse knew Piece Goods regularly provided copies of its financial statements to a limited group of major trade creditors, of which group Marcus Brothers was a member.

Next we must determine whether the evidence presented is sufficient to create a genuine issue of material fact with regard to the second element of negligent misrepresentation, that is, Marcus Brothers' justifiable reliance upon the 1992 audited

financial statements in its decision to extend credit to Piece Goods.

The facts are not so clear as to permit only a conclusion in favor of Price Waterhouse. Price Waterhouse contends that testimony showed Marcus Brothers knew and understood that the approximately thirty million dollars receivable would have to come from Piece Goods itself. This information was disclosed in footnote 3 in the financial statements. Footnote 3 states that "liquidation of this receivable will be accomplished through future distributions to the general partner." However, further review of that testimony in context reveals conflicts that preclude summary judgment. While Marcus Brothers may have understood the receivable was to be repaid by future distributions, the same agents also testified that the audited financial statements did not lead them to believe the general partner had no assets at all and that the debt was worthless. James Quinn, Marcus Brothers' Director of Corporate Credit, testified that he understood the source of funds for repayment of the receivable would be "subsequent distributions to the general partner." However, Quinn also testified that he understood the receivable "would ultimately be collectible . . . because that's what Price Waterhouse said in their audited report." Henry Woodward, Marcus Brothers' Credit Manager, testified he understood the source of repayment to be "future distributions to the partner." However, Woodward also testified "there was nothing to indicate in the certified financial statement that this asset had no value . . ." and if it was worthless, "there would at least be a qualified statement in the form of a footnote that this is a certified statement, but qualified [to] the extent that the value of this asset cannot be determinative [sic]." Woodward further testified that footnote 3 meant to him "there was no question in the CPA's mind that prepared the statement that this receivable would be paid, because that's what it says." Finally, Woodward testified that "if there was any doubt at all . . . that this amount was, in fact, not going to be paid, it should be stipulated in here somewhere in the footnote. It should be stipulated. It's not stipulated." The conflict in Woodward's and Quinn's testimonies regarding their understanding of the receivable cannot be appropriately reconciled on a motion for summary judgment.

Marcus Brothers alleged and made a forecast of evidence that it made several extensions of credit to Piece Goods in reliance upon the audited 1992 financial statement. Whether Marcus Brothers justifiably relied on the $30,332,000 receivable from a Piece Goods general partner, the accompanying interest, and current inventory are questions of fact for a jury to determine. We conclude that Marcus Brothers presented a sufficient forecast of evidence to meet this element.

Judgment for Marcus Brothers affirmed.

Mitchell, Chief Justice, Dissenting I do not believe that plaintiff Marcus Brothers forecast substantial evidence tending to show that defendant Price Waterhouse knew that the audited 1992 financial statements of Piece Goods would be provided to Marcus Brothers or a limited group of creditors of which Marcus Brothers was a member. Accordingly, I respectfully dissent from the decision of the majority.

The "actual knowledge" standard controlling an accountant's liability to a third party non-client for negligent misrepresentation of the financial statements of the accountant's client was established by this Court in *Raritan.* In adopting the actual knowledge standard, this Court expressly rejected the "reasonably foreseeable" standard, "because it would result in liability more expansive than an accountant should be expected to bear." Therefore, we have rejected the notion that an accountant's liability may be extended in cases such as the present case to all persons that the accountant could reasonably foresee might obtain and rely on his work. Thus, the proper standard is not what the accountant reasonably should have known, but what the accountant in fact knew.

In adopting the actual knowledge standard in *Raritan,* this Court expressly relied upon the rationale of section 552 of the *Restatement (Second) of Torts.* We explained that rationale as follows:

> An accountant who audits or prepares financial information for a client owes a duty of care not only to the client but to any other person, or one of a group of persons, whom the accountant or his client intends the information to benefit; and that person reasonably relies on the information in a transaction, or one substantially similar to it, that the accountant or his client intends the information to influence. If the requisite intent is that of the client and not the accountant, then the accountant must know of his client's intent at the time the accountant audits or prepares the information.

We also explained in *Raritan* that if an accountant knows at the time he prepares his report that specific persons, or a limited group of persons, will rely on his work, and intends or knows that his client intends such reliance, his duty of care should extend to them.

Here, no evidence whatsoever was forecast tending to show that Price Waterhouse itself intended to influence plaintiff Marcus Brothers. Therefore, the issue presented by this case is whether Price Waterhouse knew of Piece Goods' intent to provide Marcus Brothers with the 1992 financial statements for the purpose of influencing Marcus Brothers, or a limited group including Marcus Brothers, in the transactions at issue in this case or in substantially similar transactions. I find nothing in the evidence to support a reasonable fact finder in finding that defendant Price Waterhouse possessed such actual knowledge at the time it performed the work in question for Piece Goods.

At most, the evidence forecast before the trial court and set forth by the majority in its opinion here might support a finding that Price Waterhouse could reasonably have foreseen that Marcus Brothers or an indeterminate group of persons including Marcus Brothers would rely on its work and that Piece Goods intended such reliance. However, the forecast of evidence relied upon by the majority does no more than raise suspicion or conjecture as to the determinative issue before this Court—whether defendant Price Waterhouse actually knew that Marcus Brothers or a limited group including Marcus Brothers would rely on its work and that its client Piece Goods intended such reliance. Even if it is assumed arguendo that defendant Price Waterhouse had knowledge from which it could reasonably have foreseen that its work would be relied on by an unlimited group of potential trade creditors of Piece Goods, this fact would not suffice to defeat defendant Price Waterhouse's motion for summary judgment.

It is instructive that Judge Cardozo, the architect of reasonable foreseeability as the touchstone for products liability, declined to adopt the same standard for accountants' liability in *Ultramares.* Judge Cardozo distinguished accountants from manufacturers because of the potential for excessive accountants' liability. He wrote that if accountants could be held liable for negligence by those who were not in privity, or nearly in privity, accountants would face "liability in an indeterminate amount for an indeterminate time to an indeterminate class." *Ultramares Corp. v. Touche, Niven & Co.,* 174 N.E. 441, 444 (1931). Because of this potential for inordinate liability Judge Cardozo concluded, as do we, that accountants should be held liable to a narrower class of plaintiffs than the class embraced by the reasonable foreseeability test.

Although I am certain beyond all doubt that the majority has attempted in good faith to apply the actual knowledge test required by *Raritan,* its decision in this case allows a forecast of evidence to suffice which at best meets the reasonably foreseeable standard expressly rejected in *Raritan.* The result is to subject accountants such as Price Waterhouse to liability to an indeterminate class, for an indeterminate time, in an indeterminate amount, despite Judge Cardozo's warning and this Court's expressly stated desire in *Raritan* to avoid any such result. Therefore, I must respectfully dissent.

Fraud

Fraud is such reprehensible conduct that all courts have extended an accountant's liability for fraud to all foreseeable users of his work product who suffered damages that were proximately caused by the accountant's fraud. Privity of contract, therefore, is not required when a person sues an accountant for fraud, even in a state that has adopted the *Ultramares* test for negligence actions. To prove fraud, a nonclient must establish that an accountant acted with scienter.

Some courts recognize a tort called constructive fraud that applies when an accountant misstates a material fact. For a misstatement to amount to constructive fraud, the accountant must have recklessly or grossly negligently failed to ascertain the truth of the statement. As with actual fraud, an accountant's liability for constructive fraud extends to all persons who justifiably rely on the misstatement.

Concept Review

Common Law Bases of Liability of Accountant to Nonclients

Privity Test Adopted by State	Basis of Liability: Negligence	Basis of Liability: Fraud
Primary Benefit Test *(Ultramares)*	Accountant liable only to foreseen users (accountant knew name of user and purpose of the user's use)	
***Restatement (Second) of Torts* Test**	Accountant liable to foreseen users and users in a foreseen class of users (accountant knew at least the purpose of the user's use)	Regardless of test adopted, accountant liable to all persons whose damages were caused by their reliance on accountant's fraud
Foreseeable Users Test	Accountant liable to all foreseeable users (accountant can expect or foresee the purpose of the user's use)	

Accountant's Liability to Third Parties: Securities Law

The slow reaction of the common law in creating a negligence remedy for third parties has led to an increased use of securities law by nonclients—that is, persons not in privity with an accountant. Many liability sections in these statutes either eliminate the privity requirement or expansively define privity.

Securities Act of 1933

There are several liability sections under the Securities Act of 1933 (1933 Act). The most important liability section of the Securities Act of 1933 is Section 11, but Sections 12(a)(2) and 17(a) are also important.

Section 11 Liability Section 11 imposes on auditors liability for misstatements or omissions of material fact in opinions regarding financial statements that they audit for Securities Act registration statements. The 1933 Act registration statement must be filed with the Securities and Exchange Commission by an issuer making a public distribution of securities. An auditor is liable to any purchaser of securities issued pursuant to a defective registration statement. The purchaser need not establish privity of contract with the auditor; he need merely prove that the auditor is a person who furnished an opinion regarding financial statements for inclusion in the registration statement. Usually, the purchaser need not prove he relied on the misstated or omitted material fact; he need not even have read or seen the defective financial statement.

For example, an auditor issues an unqualified opinion regarding a client's income statement that overstates net income by 85 percent. The defective income statement is included in the client's registration statement pursuant to which the client sells its preferred shares. Without reading the registration statement or the income statement, a person buys from the client 100 preferred shares for $105 per share. After the correct income figure is released, the price of the shares drops to $25 per share. The auditor will most likely be liable to the purchaser for $8,000.

Under Section 11, auditors may escape liability by proving that they exercised due diligence. This **due diligence defense** requires that an auditor issuing an opinion regarding financial statements prove that she made a reasonable investigation and that she reasonably believed that there were no misstatements or omissions of material fact in the financial statements at the time the registration statement became effective. Because the effective date is often several months after an

Concept Review

Liability Sections of the 1933 Act and 1934 Act

	Wrongful Conduct	Covered Communications	Who May Sue?	Must the Plaintiff Prove Reliance on the Wrongful Conduct?
Securities Act of 1933 Section 11	Misstatement or omission of material fact	1933 Act registration statement only	Any purchaser of securities issued pursuant to the registration statement	No
Securities Act of 1933 Section 12(a)(2)	Misstatement or omission of material fact	Any communication in connection with a general distribution of securities by an issuer (except government issued or guaranteed securities)	Any purchaser of the securities offered or sold	No
Securities Act of 1933 Section 17(a)	Misstatement or omission of material fact	Any communication in connection with any offer to sell or sale of any security	Any purchaser of the securities offered or sold	Yes
Securities Exchange Act of 1934 Section 10(b) and Rule 10b-5	Misstatement or omission of material fact	Any communication in connection with a purchase or sale of any security	Any purchaser or seller of the securities	Yes
Securities Exchange Act of 1934 Section 18	False or misleading statement of material fact	Any document filed with the SEC under the 1934 Act (includes the 1934 Act registration statement, 10-K, 8-K, and proxy statements)	Any purchaser or seller of a security whose price was affected by the statement	Yes

Who May Be Sued?	Must the Plaintiff and Defendant Be in Privity of Contract?	Defendant's Level of Fault	Who Has the Burden of Proving or Disproving Defendant's Level of Fault?	Amount of Defendant's Liability to Plaintiff
Issuer, underwriters, directors, selected officers, and experts who contribute to the registration statement (such as auditors of financial statements)	No	Negligence, except for the issuer. Issuer is liable without regard to fault.	Defendant, except issuer, may escape liability by proving he made a reasonable investigation and had reason to believe and did believe there were no misstatements or omissions of material fact	The price the purchaser paid for the securities less the market price of the securities at the time of the suit; may be reduced by defendant's proof that the loss was caused by factors other than the misstatement or omission
Any person who sells a security or actively solicits a sale of a security	Yes (although met by a defendant who has a financial interest in a sale of securities)	Negligence	Defendant may escape liability by proving he did not know and could not reasonably have known of the misstatement or omission of material fact	The price the purchaser paid for the securities (upon the purchaser's return of the securities)
Any person responsible for the misstatement or omission	No	Negligence for some parts of Section 17(a); scienter for one part	Plaintiff must prove the defendant acted negligently or with scienter	Plaintiff's damages caused by his reliance on the misstatement or omission
Any person primarily responsible for the misstatement or omission	No	Scienter	Plaintiff must prove the defendant acted with scienter	Plaintiff's damages caused by his reliance on the misstatement or omission
Any person who made or caused the statement to be made	No	Scienter	Defendant may escape liability by proving he acted in good faith with no knowledge that the statement was false or misleading	Plaintiff's damages caused by his reliance on the false or misleading statement

audit has been completed, an auditor must perform an additional review of the audited statements to ensure that the statements are accurate as of the effective date. In essence, due diligence means that an auditor was not negligent, which is usually proved by showing that she complied with GAAS and GAAP. The due diligence defense is explained more fully in *Escott v. BarChris Construction Corp.,* which appears in Chapter 44, Securities Regulation.

Under Section 11, an auditor has liability for only a limited period of time, pursuant to a **statute of limitations.** A purchaser must sue the auditor within one year after the misstatement or omission was or should have been discovered by the purchaser. In addition, a purchaser may sue the auditor no more than three years after the securities were offered to the public. Although the word "offered" is used in the statute, the three-year period does not usually begin until after the registered securities are first delivered to a purchaser.

Section 12(a)(2) Section 12(a)(2) imposes liability on any person who misstates or omits a material fact in connection with an offer or sale of a security that is part of a general distribution of securities by an issuer. Privity of contract between the plaintiff and the defendant apparently is required, because Section 12(a)(2) states that the defendant is liable to the person *purchasing* the security *from him.*

Until recently, Section 12(a)(2) had been interpreted broadly to impose liability on auditors of financial statements that misstate or omit material facts. Recent decisions of the Supreme Court, including the *Central Bank* case that is mentioned in the next case, suggest that auditors are unlikely to be held liable under Section 12(a)(2) in the future. An accountant must have direct contact with a buyer of a security to be liable. Merely performing professional services, such as drafting or auditing financial statements, is not enough for Section 12(a)(2) liability. The accountant must actively solicit the sale, motivated at least by a desire to serve his own financial interest. Such a financial interest is unlikely to be met by an accountant whose compensation is a fee unconnected to the proceeds of the securities sale. In addition, the *Central Bank* case makes it fairly clear that auditors who merely *aid and abet* a client's Section 12(a)(2) violation will not have liability under Section 12(a)(2).

In the event that an accountant has sufficient contact with a purchaser to incur Section 12(a)(2) liability, the accountant may escape liability by proving that she did not know and could not reasonably have known of the untruth or omission; that is, she must prove that she was not negligent.

Section 17(a) Under Section 17(a), a purchaser of a security must prove his reliance on a misstatement or omission of material fact for which an accountant is responsible. Under two of the subsections of Section 17(a), the investor need prove only negligence by the accountant. Under the third, the investor must prove the accountant acted with scienter. Whether there is a private right of action for damages under Section 17(a) is unclear. The courts of appeals are in disagreement, and the Supreme Court has not ruled on the issue.

Securities Exchange Act of 1934

Two sections of the 1934 Act—Section 18 and Section 10(b)—especially affect the liability of accountants to nonclients.

Section 18 Section 18 of the 1934 Act imposes liability on accountants who furnish misleading and false statements of material fact in any report or document filed with the Securities and Exchange Commission under the 1934 Act. Such reports or documents include the annual 10-K report—which includes auditors' opinions regarding financial statements—the monthly 8-K report, and proxy statements.

Under Section 18, a purchaser or seller of a security may sue the accountant if he relied on the defective statement in the filed document and it caused his damages. Usually, this means that a plaintiff must have *read and relied* on the defective statement in the filed document. The purchaser or seller may sue the accountant even if they are not in privity of contract.

An accountant may escape Section 18 liability by proving that she acted in *good faith* and had *no knowledge* that the information was misleading. That is, she must show that she acted *without scienter.*

Section 10(b) and Rule 10b-5 Securities Exchange Act Rule 10b-5, pursuant to Section 10(b), has been the basis for most of the recent suits investors have brought against accountants. Rule 10b-5 prohibits any person from making a misstatement or omission of material fact in connection with the purchase or sale of any security. Rule 10b-5 applies to misstatements or omissions in any communications with investors, covering any use of audited financial statements resulting in a purchase or sale of a security. The wrongful act must

have a connection with interstate commerce, the mails, or a national securities exchange.

A purchaser or seller of a security may sue an accountant who has misstated or omitted a material fact. Privity is not required. The purchaser or seller must rely on the misstatement or omission. In omission cases, reliance may be inferred from materiality.

In addition, the accountant must act with scienter. In this context, scienter is an intent to deceive, manipulate, or defraud. Negligence is not enough.

Aiding and Abetting Until recently, a common way investors held an accountant liable under Rule 10b-5 was to prove that the accountant aided and abetted a client's fraud. Most courts had recognized accountants' aiding and abetting liability under Rule 10b-5 by requiring (1) a primary violation by another person (such as a client fraudulently overstating its earnings), (2) the accountant's knowledge of the primary violation, and (3) the accountant's substantial assistance in the achievement of the primary violation (such as an accountant's failure to disclose a client's fraud known to the accountant).

In 1994 in the *Central Bank* case that is mentioned in the next case (*Anixter*), the Supreme Court of the United States held that those who merely aid and abet Rule 10b-5 violations have no liability to those injured by the fraud. The court drew a distinction between those **primarily** responsible for the fraud—who retain Rule 10b-5 liability—and those **secondarily** responsible—who no longer have liability under Rule 10b-5. The distinction between primary and secondary responsibility is unclear. Issuing unqualified opinions regarding false financial statements is primary fault and would impose Rule 10b-5 liability on the auditor. However, an independent accountant's work in connection with false unaudited statements or other financial information released by a client may be only secondary and may not impose Rule 10b-5 liability on the accountant.

Although auditors are not liable to private litigants for merely secondary activities, Congress has made it clear that the SEC may prosecute accountants for aiding and abetting a client's violation of Rule 10b-5. Even so, the risk of liability is slight, because Rule 10b-5 liability is imposed only on those who act with scienter.

Extent of Liability The Private Securities Litigation Reform Act of 1995 limits the liability of most auditors to the amount of an investor's loss for which the auditor is responsible. This means that an auditor has *proportionate liability* and need no longer fear being liable for investors' entire losses when a fraudulent client is unable to pay its share of the damages. The determination of the percentage of the loss for which an auditor is responsible is a question for the jury. Note, however, the Reform Act provides that when an auditor knowingly commits a violation of the securities laws, the auditor may be required to pay an investor's entire loss.

The following *Anixter* case explores the distinction between an auditor's primary violation of Section 10(b) and an auditor's merely aiding and abetting a client's violation of Section 10(b).

Anixter v. Home-Stake Production Co. *77 F.3d 1215 (10th Cir. 1996)*

More than 30 years ago, Home-Stake Production Company began offering securities registered with the Securities and Exchange Commission in the form of interests in oil and gas drilling programs. The securities represented units of participation in annual oil production subsidiaries Home-Stake established each year between 1964 and 1972, referred to as Program Operating Corporations (Programs). These offerings purported to present investors both the promise of return on investment and attractive tax deductions of intangible drilling costs. In fact, the Home-Stake venture resembled a classic Ponzi swindle. Instead of going to oil development, investments made in later-year Programs were paid to earlier-year investors as "income" from oil production. The scheme collapsed after investors had lost tens of millions of dollars.

From 1968 to 1971, Home-Stake's independent auditor was Norman Cross. Cross prepared documents used by Home-Stake, consented to have his name appear in registration statements filed with the SEC, and issued unqualified opinions regarding Home-Stake's financial statements. Cross prepared Home-Stake's consolidated financial statements for 1968 and 1969. He also prepared the start-up balance sheets for the 1969 and 1970 Programs, which were included in the 1969 and 1970 Program registration statements and prospectuses. The registration statements and attached prospectuses were filed with the SEC. Cross consented to the

use of his reports on the 1969 and 1970 Program balance sheets in the SEC filings.

Cross also provided Home-Stake with opinions on the 1969 and 1970 Programs' beginning balance sheet he prepared. These opinions were also contained in the registration statements and prospectuses filed with the SEC. Cross also provided opinion letters for Home-Stake's consolidated financial statements for 1968–70. The opinion letters for Home-Stake's financial statements, addressed to the Home-Stake board of directors, were included in Home-Stake's 1969 and 1970 annual reports but were not included in the Program prospectuses or registration statements.

In 1969 and 1970, Home-Stake also published and mailed to Program participants documents known as "Program Books" or "Black Books." These documents, which included descriptions of specific oil recovery programs and estimates of anticipated returns, were not filed with the SEC and contained information inconsistent with or contradicting the prospectuses. Home-Stake's financial statements, audited by Cross, also were included either with the Program Books or as part of Home-Stake's sales kit. The Program Books and sales kits were the primary methods of marketing Program units; the SEC-filed prospectuses were made available to investors only upon request.

Finally, Cross was also involved in the prospectus for a rescission offer made to investors in the 1970 program. In 1971, the SEC filed a complaint against Home-Stake in federal district court, alleging that its officers and directors failed to meet information requirements to investors and misstated the use of investments in the 1970 Program. As part of a consent decree entered into with the SEC, Home-Stake made a rescission offer to its 1970 Program investors. The offer documents included a Rescission Offer Prospectus. The Rescission Offer Prospectus itself failed to disclose material facts. Cross prepared an opinion on Home-Stake's 1970 consolidated financial statement and an opinion on the beginning balance sheet of the 1970 Program, included as part of the 1970 Rescission Offer Registration Statement.

In March 1973, purchasers of interests in the programs, including Ivan Anixter, filed lawsuits against Home-Stake, its officers, its outside lawyers, Cross, and brokers who sold the interests, alleging violations of Section 10(b) and Rule 10b-5 of the Securities Exchange Act of 1934. The case went to trial in 1988, and Anixter and the other investors won jury verdicts totaling over $40 million. Cross appealed on the grounds that the court improperly instructed the jury that it could find him liable under Rule 10b-5 as an aider and abettor; he also claimed that he had not acted with scienter.

Lucero, Circuit Judge This securities fraud case, first filed in 1973, already has been the subject of four published opinions by this court. Over the past four years it has been ordered dismissed, reinstated, remanded, and now, appealed once more.

We must resolve whether again to dismiss or remand judgments against Home-Stake's outside auditor for violating Section 10(b) of the Securities Exchange Act of 1934. The question dominating our review is whether we can let stand a general jury verdict returned on a securities fraud claim that included an instruction on aiding and abetting liability, an implied cause of action that has since been found invalid by the Supreme Court in *Central Bank of Denver* (1994). In the balance is a choice between a jury award plaintiffs won on claims filed more than 22 years ago, and maintaining judgments now totalling more than $40 million when the jury may have found liability on an invalid legal theory. We conclude the aiding and abetting instruction hopelessly taints the general verdict and that remand for a new trial is necessary.

We must first consider what acts make up a "primary" violation of Section 10(b), and how they differ from those that could be characterized only as "aiding and abetting." Unfortunately, deciding when conduct constituting aiding and abetting rises to the level of prohibited primary conduct is not well settled.

Cross argues that none of his acts constituted fraudulent misrepresentations or omissions relied on by investing plaintiffs; at most the acts only aided Home-Stake in committing the alleged fraud. Anixter points to Cross's opinion letters as evidence that Cross himself made misrepresentations or omissions sufficient to subject him to primary liability.

To establish a primary liability claim under Section 10(b), a plaintiff must prove the following facts: (1) that the defendant made an untrue statement of material fact, or failed to state a material fact; (2) that the conduct occurred in connection with the

purchase or sale of a security; (3) that the defendant made the statement or omission with scienter; and (4) that plaintiff relied on the misrepresentation, and sustained damages as a proximate result of the misrepresentation. This contrasts with aider and abettor liability, which required plaintiff to prove (1) the existence of a primary violation of the securities laws by another; (2) knowledge of the primary violation by the alleged aider and abettor; and (3) substantial assistance by the alleged aider and abettor in achieving the primary violation. The critical element separating primary from aiding and abetting violations is the existence of a representation, either by statement or omission, made by the defendant, that is relied upon by the plaintiff. Reliance only on representations made by others cannot itself form the basis of liability.

Clearly, accountants may make representations in their role as auditor to a firm selling securities. Typical representations include issuing unqualified opinions regarding financial statements and other opinion letters. An accountant's false and misleading representations in connection with the purchase or sale of any security, if made with the proper state of mind and if relied upon by those purchasing or selling a security, can constitute a primary violation. There is no requirement that the alleged violator directly communicated misrepresentations to plaintiffs for primary liability to attach. Nevertheless, for an accountant's misrepresentation to be actionable as a primary violation, there must be a showing that he knew or should have known that his representation would be communicated to investors because Section 10(b) and Rule 10b-5 focus on fraud made "in connection with the sale or purchase" of a security.

Reading the language of Section 10(b) and 10b-5 through the lens of *Central Bank of Denver,* we conclude that in order for accountants to "use or employ" a "deception" actionable under the antifraud law, they must themselves make a false or misleading statement (or omission) that they know or should know will reach potential investors. In addition to being consistent with the language of the statute, this rule, though far from a bright line, provides more guidance to litigants than a rule allowing liability to attach to an accountant or other outside professional who provided "significant" or "substantial" assistance to the representations of others.

The record in this case contains much evidence that could sustain a finding of primary liability. Most of Anixter's arguments went to representations Cross made as Home-Stake's auditor. He issued opinions on the 1969 and 1970 Program's start up balance sheets. He issued unqualified opinions regarding Home-Stake's Consolidated financial statements for those years. Cross's opinions letters were reproduced in prospectuses, annual reports, registration statements, and other Home-Stake promotional material. The jury could have concluded that any or all of these representations were false and misleading, that Cross was reckless in making the representations, and that Cross knew or should have known that his representations would reach potential investors and that they would reasonably rely on them.

Although the record supports finding Cross liable for a primary violation of Section 10(b), we still must determine whether the jury *did* find him liable as a primary violator. Cross urges us to remand for a new trial on the theory that it is not clear from the jury verdict whether his liability under Rule 10b-5 rested on finding a primary or aiding and abetting violation.

It is obvious from our discussion analyzing accountant behavior under Section 10(b) that distinctions in conduct between primary and secondary liability are elusive. The verdicts shed no light on whether the jury found Cross liable of his substantial assistance to Home-Stake's independent fraudulent acts, or whether his liability rests on actual representations he made that reached investors. The chances that the jury was confused by the aiding and abetting instructions cannot be dismissed as remote—and require us to remand.

Cross argues that remand is unnecessary, and that we should reverse the judgment because he only acted recklessly with respect to the Home-Stake fraud, and recklessness does not satisfy the scienter requirement for liability in a civil action under Section 10(b). The district court correctly rejected this argument.

In *Ernst & Ernst v. Hochfelder* (1976), the Supreme Court expressly declined to address "the question whether, in some circumstances, reckless behavior is sufficient for civil liability under Section 10(b) and Rule 10b-5." The Supreme Court has still not spoken on this question. In *Hackbart v. Holmes* (1982) this court held that "recklessness" satisfies the scienter requirement for a primary violation of Section 10(b). We defined "recklessness" as "conduct that is an extreme departure from the standards

of ordinary care, and which presents a danger of misleading buyers or sellers that is either known to the defendant or is so obvious that the actor must have been aware of it."

This circuit still maintains that recklessness as defined in *Hackbart* is sufficient scienter for finding civil Section 10(b) primary violations.

This is a very old case, and it is with a heavy heart that we act to prolong it. Our decision, however, is mandated by a supervening change in the law of securities fraud.

Judgment reversed in favor of Cross; remanded to the trial court.

State Securities Law

All states have securities statutes with liability sections. Most of the states have a liability section similar to Section 12(a)(2) of the Securities Act.

Limiting Accountants' Liability: Professional Corporations and Limited Liability Partnerships

Every state permits professionals to incorporate their business under a professional incorporation statute. Most statutes permit a professional accounting corporation to be owned only by accountants.

While there are significant taxation advantages to incorporation, the principal advantage of incorporation—*limited liability of the shareholders*—does not isolate accountants from liability for professional misconduct. For example, an accountant who injures his client by failing to act as the ordinarily prudent accountant would act has liability to his client, despite the incorporation of the accountant's business.

When two or more accountants conduct an accounting business as co-owners, incorporation may offer them limited liability. While partners in a partnership are jointly and severally liable for each other's negligence, some states permit incorporated accountants to escape liability for their associate's torts, unless the accountant actually supervised the wrongdoing associate or participated in the tort. Other states do not allow incorporated accountants to limit their liability for their associates' torts, making all the shareholder/accountants jointly and severally liable for the professional misconduct of any of its accountants.

Reacting to the large personal liability sometimes imposed on lawyers and accountants for the professional malpractice of their partners, Texas enacted in 1991 the first statute permitting the formation of limited liability partnerships (LLP). An LLP is similar to a partnership, except that a partner's liability for his partners' professional malpractice is limited to the partnership's assets, unless the partner supervised the work of the wrongdoing partner. A partner retains unlimited liability for his *own* malpractice and, in some states, for all *non*professional obligations of the partnership.

Nearly every state and the District of Columbia have passed LLP statutes. The LLP has become the preferred form of business for accountants who do not incorporate.

For more information on the limited liability partnership, see Chapters 36–38.

Qualified Opinions, Disclaimers of Opinion, Adverse Opinions, and Unaudited Statements

After performing an audit of financial statements, an independent auditor issues an opinion letter regarding the financial statements. The **opinion letter** expresses whether the audit has been performed in compliance with GAAS and whether, in the auditor's opinion, the financial statements fairly present the client's financial position and results of operations in conformity with GAAP. Usually, an auditor issues an **unqualified opinion**—that is, an opinion that there has been compliance with GAAS and GAAP. Sometimes, an auditor issues a qualified opinion, a disclaimer of opinion, or an adverse opinion. Up to this point, you have studied

the liability of an auditor who has issued unqualified opinions yet has not complied with GAAS and GAAP.

What liability should be imposed on an auditor who discloses that he has not complied with GAAS and GAAP? An auditor is relieved of responsibility only to the extent that a qualification or disclaimer is specifically expressed in the opinion letter. Therefore, letters that purport to disclaim liability totally for false and misleading financial statements are too general to excuse an accountant from exercising ordinary skill and care.

For example, an auditor qualifies his opinion of the ability of financial statements to present the financial position of a company by indicating that there is uncertainty about how an antitrust suit against the company may be decided. He would not be held liable for damages resulting from an unfavorable verdict in the antitrust suit. He would remain liable, however, for failing to make an examination in compliance with GAAS that would have revealed other serious problems.

For another example, consider an auditor who, due to the limited scope of the audit, disclaims any opinion on the ability of the financial statements to present the financial position of the company. She would nonetheless be liable for the nondiscovery of problems that the limited audit should have revealed.

Likewise, an accountant who issued an adverse opinion that depreciation had not been calculated according to GAAP would not be liable for damages resulting from the wrongful accounting treatment of depreciation, but he would be liable for damages resulting from the wrongful treatment of receivables.

Merely preparing unaudited statements does not create a disclaimer as to their accuracy. The mere fact that the statements are unaudited only permits an accountant to exercise a lower level of inquiry. Even so, an accountant must act as the ordinarily prudent accountant would act under the same circumstances in preparing unaudited financial statements.

Criminal, Injunctive, and Administrative Proceedings

In addition to being held liable for damages to clients and third parties, an accountant may be found criminally liable for his violations of securities, tax, and other laws. For criminal violations, he may be fined and imprisoned. His wrongful conduct may also result in the issuance of an injunction, which bars him from doing the same acts in the future. In addition, his wrongful conduct may be the subject of administrative proceedings by the Securities and Exchange Commission and state licensing boards. An administrative proceeding may result in the revocation of an accountant's license to practice or the suspension from practice. Finally, disciplinary proceedings may be brought against an accountant by professional societies such as the AICPA.

Criminal Liability under the Securities Laws

Both the Securities Act of 1933 and the Securities Exchange Act of 1934 have criminal provisions that can be applied to accountants. The 1933 Act imposes criminal liability for willful violations of any section of the 1933 Act, including Sections 11, 12(a)(2), and 17(a), or any 1933 Act rule or regulation. For example, willfully making an untrue statement or omitting any material fact in a 1933 Act registration statement imposes criminal liability on an accountant. The maximum penalty for a criminal violation of the 1933 Act is a $10,000 fine and five years' imprisonment.

The 1934 Act imposes criminal penalties for willful violations of any section of the 1934 Act, such as Sections 10(b) and 18, and any 1934 Act rule or regulation, such as Rule 10b-5. For example, willfully making false or misleading statements in reports that are required to be filed under the 1934 Act incurs criminal liability. Such filings include 10-Ks, 8-Ks, and proxy statements. An individual accountant may be fined up to $1 million and imprisoned for up to 10 years for a criminal violation of the 1934 Act; however, an individual accountant who proves that he had no knowledge of an SEC rule or regulation may not be imprisoned for violating that rule or regulation. An accounting firm may be fined up to $2.5 million.

Most of the states have statutes imposing criminal penalties on accountants who willfully falsify financial statements or other reports in filings under the state securities laws and who willfully violate the state securities laws or aid and abet criminal violations of these laws by others.

In *Natelli,* accountants permitting a client to book unbilled sales after the close of the fiscal period subjected the accountants to the criminal penalties of the 1934 Act.

United States v. Natelli *527 F.2d 311 (2d Cir. 1975)*

Anthony Natelli was the partner in charge of the Washington, D.C., office of Peat, Marwick, Mitchell & Co., a large CPA firm. In August 1968, Peat, Marwick became the independent public auditor of National Student Marketing Corporation. Natelli was the engagement partner for the audit of Student Marketing. Joseph Scansaroli was Peat, Marwick's audit supervisor on that engagement.

Student Marketing provided its corporate clients with a wide range of marketing services to help them reach the lucrative youth market. In its financial statements for the nine months ended May 31, 1968, Student Marketing had counted as income the entire amount of oral customer commitments to pay fees in Student Marketing's "fixed-fee marketing programs," even though those fees had not yet been paid. They were to be paid for services that Student Marketing would provide over a period of several years. Standard accounting practice required that part of the unpaid fees be considered income in the present year but that part be deferred as income until the years when Student Marketing actually performed the services for which the fees were paid. Therefore, in making the year-end audit, Natelli concluded that he would use a percentage-of-completion approach on these commitments, taking as income in the present year only those fees that were to be paid for services in that year.

The customer fee commitments were oral only, making it difficult to verify whether they really existed. Natelli directed Scansaroli to try to verify the fee commitments by telephoning the customers but not by seeking written verification. However, Scansaroli never called Student Marketing's clients. Instead, Scansaroli accepted a schedule prepared by Student Marketing showing estimates of the percentage of completion of services for each corporate client and the amount of the fee commitment from each client. This resulted in an adjustment of $1.7 million for "unbilled accounts receivable." The adjustment turned a loss for the year into a profit twice that of the year before.

By May 1969, a total of $1 million of the customer fee commitments had been written off as uncollectible. The effect of the write-off was to reduce 1968 income by $209,750. However, Scansaroli, with Natelli's approval, offset this by reversing a deferred tax item of approximately the same amount.

Student Marketing issued a proxy statement in September 1969 in connection with a shareholders' meeting to consider merging six companies into Student Marketing. The proxy statement was filed with the Securities and Exchange Commission. It contained several financial statements, some of which had been audited by Peat, Marwick. Others had not been audited, but Peat, Marwick had aided in their preparation. In the proxy statement, a footnote to the financial statements failed to show that the write-off of customer fee commitments had affected Student Marketing's fiscal 1968 income.

The proxy statement required an unaudited statement of nine months' earnings through May 31, 1969. This statement was prepared by Student Marketing with Peat, Marwick's assistance. Student Marketing produced a $1.2 million commitment from the Pontiac Division of General Motors Corporation two months after the end of May, but it was dated April 28, 1969. At 3 A.M. on the day the proxy statement was to be printed, Natelli informed Randall, the chief executive officer and founder of Student Marketing, that this commitment could not be included because it was not a legally binding contract. Randall responded at once that he had "a commitment from Eastern Airlines" for a somewhat comparable amount attributable to the same period. Such a letter was produced at the printing plant a few hours later, and the Eastern commitment was substituted for the Pontiac sale in the proxy. Shortly thereafter, another Peat, Marwick accountant, Oberlander, discovered $177,547 in "bad" commitments from 1968. These were known to Scansaroli in May 1969 as being doubtful, but they had not been written off. Oberlander suggested to the company that these commitments plus others, for a total of $320,000, be written off, but Scansaroli, after consulting with Natelli, decided against the suggested write-off.

There was no disclosure in the proxy statement that Student Marketing had written off $1 million (20 percent) of its 1968 sales and over $2 million of the $3.3 million of unbilled sales booked in 1968 and 1969. A true disclosure would have shown that Student Marketing had made no profit for the first nine months of 1969.

Subsequently, it was revealed that many of Student Marketing's fee commitments were fictitious. The attorney general of the United States brought a criminal action against Natelli and Scansaroli for violating the Securities Exchange Act of 1934 by willfully and knowingly making false and misleading statements in a proxy statement. The district court jury convicted both Natelli and Scansaroli, and they appealed.

Gurfein, Circuit Judge The original action of Natelli in permitting the booking of unbilled sales after the close of the fiscal period in an amount sufficient to convert a loss into a profit was contrary to sound accounting practice. When the uncollectibility, and indeed, the nonexistence of these large receivables was established in 1969, the revelation stood to cause Natelli severe criticism and possible liability. He had a motive, therefore, intentionally to conceal the write-offs that had to be made.

Honesty should have impelled Natelli and Scansaroli to disclose in the footnote that annotated their own audited statement for fiscal 1968 that substantial write-offs had been taken, after year-end, to reflect a loss for the year. A simple desire to right the wrong that had been perpetrated on the stockholders and others by the false audited financial statement should have dictated that course.

The accountant owes a duty to the public not to assert a privilege of silence until the next audited annual statement comes around in due time. Since companies were being acquired by Student Marketing for its shares in this period, Natelli had to know that the 1968 audited statement was being used continuously.

Natelli contends that he had no duty to verify the Eastern commitment because the earnings statement within which it was included was unaudited. This raises the issue of the duty of the CPA in relation to an unaudited financial statement contained within a proxy statement where the figures are reviewed and to some extent supplied by the auditors. The auditors were associated with the statement and were required to object to anything they actually knew to be materially false. In the ordinary case involving an unaudited statement, the auditor would not be chargeable simply because he failed to discover the invalidity of booked accounts receivable, inasmuch as he had not undertaken an audit with verification. In this case, however, Natelli knew the history of post-period bookings and the dismal consequences later discovered.

In terms of professional standards, the accountant may not shut his eyes in reckless disregard of his knowledge that highly suspicious figures, known to him to be suspicious, were being included in the unaudited earnings figures in the proxy statement with which he was associated.

There is some merit to Scansaroli's point that he was simply carrying out the judgments of his superior, Natelli. The defense of obedience to higher authority has always been troublesome. There is no sure yardstick to measure criminal responsibility except by measurement of the degree of awareness on the part of a defendant that he is participating in a criminal act, in the absence of physical coercion such as a soldier might face. Here the motivation to conceal undermines Scansaroli's argument that he was merely implementing Natelli's instructions, at least with respect to concealment of matters that were within his own ken. The jury could properly have found him guilty on the specification relating to the footnote.

With respect to the Eastern commitment, Scansaroli stands in a position different from that of Natelli. Natelli was his superior. He was the man to make the judgment whether or not to object to the last-minute inclusion of a new commitment in the nine-months statement. There is insufficient evidence that Scansaroli engaged in any conversations about the Eastern commitment or that he was a participant with Natelli in any check on its authenticity. Since in the hierarchy of the accounting firm it was not his responsibility to decide whether to book the Eastern contract, his mere adjustment of the figures to reflect it under orders was not a matter for his discretion.

Conviction of Natelli affirmed. Conviction of Scansaroli affirmed in part and reversed in part.

Other Criminal Law Violations

Federal tax law imposes on accountants a wide range of penalties for a wide variety of wrongful conduct. At one end of the penalty spectrum is a $25 fine for failing to furnish a client with a copy of his income tax return or failing to sign a client's return. At the other end is a fine of $100,000 and imprisonment of three years for tax fraud. In between is the penalty for promoting abusive tax shelters. The fine is $1,000, or 20 percent of the accountant's income from her participation in the tax shelter, whichever is greater. In addition, all of the states impose criminal penalties for specified violations of their tax laws.

Several other federal statutes also impose criminal liability on accountants. The most notable of these

statutes is the general mail fraud statute, which prohibits the use of the mails to commit fraud. To be held liable, an accountant must know or foresee that the mails will be used to transmit materials containing fraudulent statements provided by her.

In addition, the general false-statement-to-government-personnel statute prohibits fraudulent statements to government personnel. The false-statement-to-bank statute proscribes fraudulent statements on a loan application to a bank or other financial institution.

RICO The Racketeer Influenced and Corrupt Organizations Act (RICO) makes it a federal crime to engage in a pattern of racketeering activity. Although RICO was designed to attack the activities of organized crime enterprises, it applies to accountants who conduct or participate in the affairs of an enterprise in almost any pattern of business fraud. A pattern of fraud is proved by the commission of two predicate offenses within a 10-year period. Predicate offenses include securities law violations, mail fraud, and bribery. Individuals convicted of a RICO violation may be fined up to $25,000 and imprisoned up to 20 years.

A person who is injured in his business or property by reason of an accountant's conduct or participation, directly or indirectly, in an enterprise's affairs through a pattern of racketeering activity may recover treble damages (three times his actual damages) from the accountant. In *Reves v. Ernst & Young,*[2] the Supreme Court held that merely by auditing financial statements that substantially overvalued a client's assets, an accounting firm was not conducting or participating in the affairs of the client's business. The Court held that the accounting firm must participate in the "operation or management" of the enterprise itself to be liable under RICO.

Injunctions

Administrative agencies such as the SEC and the Internal Revenue Service may bring injunctive actions against an accountant in a federal district court. The purpose of such an injunction is to prevent an accountant from committing a future violation of the securities or tax laws.

After an injunction has been issued by a court, violating the injunction may result in serious sanctions. Not only may penalties be imposed for contempt, but a criminal violation may also be more easily proven.

[2]113 S. Ct. 1163 (1993).

Administrative Proceedings

The SEC has the authority to bring administrative proceedings against persons who violate the provisions of the federal securities acts. In recent years, the SEC has stepped up enforcement of SEC Rule of Practice 102(e). Rule 102(e) permits the SEC to bar temporarily or permanently from practicing before the SEC an accountant who has demonstrated a lack of the qualifications required to practice before it, such as an accountant who has prepared financial statements not complying with GAAP.

The SEC may discipline accountants who engage in a single instance of highly unreasonable conduct that leads to a violation of professional accounting standards. The SEC may also discipline an accountant who engages in repeated, unreasonable conduct that results in a violation of professional accounting standards. For example, an auditor's conduct in reviewing a client's financial statements is unreasonable when the auditor knew or should have known that heightened scrutiny is warranted yet failed to exercise the additional scrutiny while conducting an audit.

Rule 102(e) also permits the SEC to take action against an accountant who has willfully violated or aided and abetted another's violation of the securities acts. An SEC administrative law judge hears the case and makes an initial determination. The SEC commissioners then issue a final order, which may be appealed to a federal court of appeals.

Rule 102(e) administrative proceedings can impose severe penalties on an accountant. By suspending an accountant from practicing before it, the SEC may take away a substantial part of an accountant's practice. Also, the SEC may impose civil penalties up to $500,000.

In addition, state licensing boards may suspend or revoke an accountant's license to practice if she engages in illegal or unethical conduct. If such action is taken, an accountant may lose her entire ability to practice accounting.

Securities Exchange Act Audit Requirements

The Private Securities Litigation Reform Act of 1995 imposes significant public duties on independent auditors that audit the financial statements of public companies. In part added to the Securities Exchange Act as Section 10A, the Reform Act requires auditors to take

specific steps if they learn during the course of an audit that a client may have committed an illegal act (that is, a violation of any law, rule, or regulation). First, the auditor is required to determine whether an illegal act has in fact occurred. If the auditor determines that the client has committed an illegal act, the auditor must calculate the prospective impact on the client's financial statements, including fines, penalties, and liability costs such as damage awards to persons harmed by the client. As soon as practical, the auditor must inform the client's management and audit committee of the auditor's determination, unless the illegal act is clearly inconsequential.

If the client's management does not take appropriate remedial action with respect to an illegal act that has a material effect on the financial statements of the client—and if the failure to take remedial action is reasonably expected to result in the auditor's issuance of a nonstandard report or resignation from the audit engagement—the auditor must make a report to the client's board of directors. The board of directors has one business day to inform the SEC of the auditor's report; if the board does not submit a report to the SEC, the auditor has one additional business day to furnish a copy of its report to the SEC, whether or not the auditor also resigns from the audit engagement.

Section 10A imposes a significant whistle-blowing duty on independent auditors, consistent with the watchdog function that Congress and the courts have continually assigned to auditors. To encourage auditors to make such reports, Section 10A also provides that an auditor will have no liability to a private litigant for any statement in the auditor's reports given to management, the board of directors, or the SEC.

Ownership of Working Papers

The personal records that a client entrusts to an accountant remain the property of the client. An accountant must return these records to his client. Nonetheless, the working papers produced by independent auditors belong to the accountant, not the client.

Working papers are the records made during an audit. They include such items as work programs or plans for the audit, evidence of the testing of accounts, explanations of the handling of unusual matters, data reconciling the accountant's report with the client's records, and comments about the client's internal controls. The client has a right of access to the working papers. The accountant must obtain the client's permission before the working papers can be transferred to another accountant.

Accountant–Client Privilege

An accountant–client privilege of confidentiality protects many of the communications between accountants and their clients from the prying eyes of courts and other government agencies. In addition, it protects an accountant's working papers from the discovery procedures available in a lawsuit.

Although the common law does not recognize an accountant–client privilege, a large number of states have granted such a privilege by statute. The provisions of the statutes vary, but usually the privilege belongs to the client, and an accountant may not refuse to disclose the privileged material in a courtroom if the client consents to its disclosure.

Generally, the state-granted privileges are recognized in both state and federal courts deciding questions of state law. Nonetheless, federal courts do not recognize the privilege in matters involving federal questions, including antitrust and criminal matters.

In federal tax matters, for example, no privilege of confidentiality is recognized on the grounds that an accountant has a duty as a public watchdog to ensure that his client correctly reports his income tax liability. Consequently, an accountant can be required to bring his working papers into court and to testify as to matters involving the client's tax records and discussions with the client regarding tax matters. In addition, an accountant may be required by subpoena to make available his working papers involving a client who is being investigated by the IRS or who has been charged with tax irregularities. The same holds true for SEC investigations.

Although no accountant–client privilege exists in federal tax matters, an attorney–client privilege does exist. Moreover, the attorney–client privilege will protect communications between a client and its accountant when the accountant is assisting an attorney in rendering advice to the client. The *Adlman* case discusses the limits of this use of the attorney–client privilege.

United States v. Adlman *68 F.3d 1495 (2d Cir. 1995)*

In the spring of 1989, the management of Sequa Corporation considered combining two of its subsidiary corporations, Atlantic Research Corp. (ARC) and Chromalloy Gas Turbine Corp. To assess the likely tax consequences of the proposed combination, Sequa's vice president of taxes, Monroe Adlman, consulted with Paul Sheahen, an accountant and partner at Arthur Andersen & Co. (Andersen). Andersen had served as Sequa's accountant and auditor, and Sheahen specialized in evaluating the tax implications of corporate reorganizations.

After numerous discussions, Adlman, who was an attorney, directed Sheahen to prepare a draft memorandum discussing the probable tax consequences of the proposed restructuring. Sheahen presented the draft memo to Adlman in August 1989. After making several changes to address questions raised by Adlman, Sheahen sent Adlman the memorandum in final form on September 5, 1989. The final draft is 58 pages long and contains a detailed technical analysis of the tax implications of the proposed reorganization.

Two days after submitting the final memo to Adlman, Sheahen wrote to Gerald Gutterman, Sequa's executive vice president in charge of finance and administration, summarizing "our recommendations and conclusions." The letter also contained Andersen's recommendation as to the form the transaction should take—urging Sequa to sell a substantial majority interest in ARC to Chromalloy, recapitalize the remaining shares as preferred stock, and then sell the newly preferred stock to a third party. The transaction occurred in essentially the manner recommended by Andersen and was consummated by the end of 1989.

Andersen formalized its analysis of the transaction in two opinion letters dated April 20, 1990, and addressed to Adlman. In these letters, Andersen evaluated the reorganization in light of the federal tax code and concluded that the reorganization should result in a substantial capital loss for Sequa. On its 1989 tax return, Sequa claimed a tax loss of approximately $290 million from the transaction. Part of that loss was carried back to offset millions of dollars of Sequa's capital gains from 1986, thereby generating a large tax refund.

The Internal Revenue Service undertook an audit of Sequa's tax returns from 1986 to 1989. The IRS sent numerous informal information document requests for materials related to the restructuring. Sequa acknowledged the existence of the draft and final versions of the Andersen memo but claimed that they were protected from disclosure by the attorney–client privilege and the work-product doctrine. On September 23, 1993, the IRS served a summons on Adlman to compel disclosure of the Andersen memos. Adlman again refused to provide them on grounds of privilege and work product. Sequa contended that the memoranda were prepared in anticipation of litigation with the IRS over a $290 million loss claimed by Sequa in its 1989 tax return, resulting from a corporate reorganization.

The United States sued to force disclosure of the Andersen memos. The district court ruled that the memoranda were not protected by either the attorney–client privilege or the work-product rule. Sequa appealed.

Leval, Circuit Judge The attorney–client privilege forbids an attorney from disclosing confidential communications obtained from the client during the course of professional consultations. The privilege is intended to encourage clients to be forthcoming and candid with their attorneys so that the attorney is sufficiently well-informed to provide sound legal advice. The privilege applies only to communications between lawyer and client; in general, communications between accountants and their clients enjoy no privilege.

Under certain circumstances, however, the privilege for communication with attorneys can extend to shield communications to others when the purpose of the communication is to assist the attorney in rendering advice to the client. Thus in *United States v. Kovel* (1961), we recognized that the privilege would extend to communications by an attorney's client to an accountant hired by the attorney to assist the attorney in understanding the client's financial information. Recognizing that the privilege would surely apply where a client who spoke only a foreign language furnished his confidential information to an interpreter employed by the attorney to translate for the attorney's benefit, Judge Friendly observed that accounting concepts can be as incomprehensible as a foreign language to attorneys. "Hence the presence of an accountant while the client is relating a com-

plicated tax story to the lawyer, ought not destroy the privilege. What is vital to the privilege is that the communication be made *in confidence* for the purpose of obtaining *legal* advice *from the lawyer.* If what is sought is not legal advice but only accounting service or if the advice sought is the accountant's rather than the lawyer's, no privilege exists."

The party claiming the benefit of the attorney–client privilege has the burden of establishing all the essential elements. The problem with Adlman's argument is that the facts are subject to competing interpretations. In many respects, the evidence supports the conclusion that Sequa consulted an accounting firm for tax advice, rather than that Adlman, as Sequa's counsel, consulted Andersen to help him reach the understanding he needed to furnish legal advice. Adlman himself serves not only as counsel to Sequa but also as one of its officers. Andersen, furthermore, is regularly employed by Sequa to furnish auditing, accounting, and advisory services. Andersen furnished extensive advisory services to Sequa in connection with the merger, including tax advice. If the facts were that Sequa furnished information to Andersen to seek Andersen's expert advice on the tax implications of the proposed transaction, no privilege would apply.

There is virtually no contemporaneous documentation supporting the view that Andersen, in this task alone, was working under a different arrangement from that which governed the rest of its work for Sequa. Andersen's billing statements lump the work done in this consultation together with its other accounting and advisory services to Sequa. By his own admission, Adlman lacked the expertise necessary to assess the tax implications of corporate reorganizations. It was Andersen, not Adlman, that prepared all the written analyses of the tax consequences of the transaction. These included not only the memos in question, but also two formal opinion letters dated April 20, 1990. Furthermore, by its letter dated September 7, 1989, Andersen sent a summary of its recommendations and conclusions directly to Sequa's management, offering "to discuss all related matters with a view toward prompt successful implementation [of the restructuring plan]." All of these factors favored the IRS contentions as to the proper understanding of the transaction. Sequa's interpretation was suggested primarily by litigation affidavits prepared by interested persons four years after the fact and lacking any support in contemporaneous documentation. The district court did not abuse its discretion or make clearly erroneous findings.

Sequa contends the Andersen memoranda are shielded from discovery by the "work-product" rule. The work-product rule shields from disclosure materials prepared "in anticipation of litigation" by a party, or the party's representative, absent a showing of substantial need. The purpose of the doctrine is to establish a zone of privacy for strategic litigation planning and to prevent one party from piggybacking on the adversary's preparation.

Sequa contends it caused the memoranda to be written "in anticipation of litigation" with the IRS over Sequa's claimed tax loss. The district judge rejected Sequa's claim of entitlement to work-product protection for the sole reason that at the time of Andersen's creation of the memoranda, neither the litigation nor the events giving rise to it (the proposed merger) had yet occurred.

Although the non-occurrence of the events giving rise to the anticipated litigation is a factor that can argue against application of the work-product doctrine, especially when the expected litigation is merely a vague abstract possibility without precise form, there is no rule that bars application of work-product protection to documents created prior to the event giving rise to litigation. Nor do we see any reason for such a limitation. In many instances, the expected litigation is quite concrete, notwithstanding that the events giving rise to it have not yet occurred. We see no reason why work-product protection should not apply to preparatory litigation studies undertaken by a party.

We conclude that the district court barred work-product protection on the basis of an incorrect standard. We must therefore remand for a determination whether the work-product protection should apply. Our vacating the district court's ruling should not be understood to imply that work-product protection is applicable—only that the particular reason for denying it was invalid. The district court will need to consider whether, within the meaning of the rule, the Andersen memoranda were "prepared in anticipation of litigation," and if so, whether the government has shown "substantial need of the materials."

Judgment affirmed in part and reversed in part; remanded to the trial court.

Ethical and Public Policy Concerns

1. Is it enough that an accountant acts in accordance with the standards of the accounting profession? What risk arises if society entrusts the accounting profession with regulating itself? How great is the risk? Can clients collectively or individually reduce this risk? Is it fair that some clients cannot protect themselves from this risk and yet may have no legal recourse?

2. Should accountants have liability for negligence to persons who are not their clients? What are the social and economic costs of making accountants liable to all users of their work product? What are the social and economic costs of relieving accountants from liability to persons who are not their clients? Is it fair to allow an accountant to be negligent and not have liability to those who relied on the accountant's work product?

3. Should an accountant–client privilege exist? What are the social benefits and costs? In the tax context, why should an accountant be burdened with the public watchdog function when lawyers are not; that is, why must accountants ensure that their clients comply with the tax laws, when a lawyer is permitted to serve the best interests of his client? When a tax accountant is working for a client who also has a lawyer, how can the accountant's work product become privileged? Does the answer to that question suggest a logical or ethical inconsistency in the law?

Problems and Problem Cases

1. The 1136 Tenants' Corporation, a cooperative apartment house, hired Max Rothenberg & Co., a firm of certified public accountants, to perform accounting services for it. Rothenberg discovered that several invoices were missing from the financial records of the apartment house. These invoices were needed to prove that payments of $44,000 had been made to creditors of the apartment house and were not embezzled by someone with authority to make payments for the apartment house. Rothenberg noted the missing invoices on his worksheet but failed to notify the apartment house that there were missing invoices. In fact, there were no invoices. Jerome Riker, the apartment house manager, had embezzled the $44,000 from the apartment house by ordering it to make unauthorized payments to him. Riker embezzled more money after the audit was completed. Is Rothenberg liable to its client for failing to inform it of Riker's embezzlement?

2. Robert Burns hired Sheila Camenisch to prepare a life insurance trust for his daughters. Burns told Camenisch that he wanted to ensure financial security for himself and his wife, and that he did not want the proceeds of the life insurance policy to be taxable. Camenisch created the trust, telling Burns that the proceeds of the life insurance policy would not be taxed. Unfortunately, the trust did not accomplish its objective, with the result that the life insurance proceeds would be subject to a gift and estate tax of at least $25,000 and as much as $525,000 if Burns died within three years. Burns sued Camenisch for negligence. In addition to damages for payment of taxes, Burns sought damages of $1 million due to his suffering severe emotional distress. Burns claimed that the news that he would have to pay $525,000 in taxes if he died within three years caused him to suffer severe alarm, anxiety, shock, loss of sleep, and other stress. Did the court award Burns damages for emotional distress?

3. From 1983 to 1985, Baumann-Furrie & Co. provided accounting services to Halla Nursery, Inc. During this time, Halla's bookkeeper embezzled $135,000. In 1986, Halla sued Baumann-Furrie alleging it negligently failed to detect the embezzlement. Baumann-Furrie claimed that Halla negligently failed to put in place internal financial controls to protect the company from embezzlement. The jury found Halla 80 percent at fault and Baumann-Furrie 20 percent at fault. Is Baumann-Furrie nonetheless liable to Halla?

4. DVD *Video Case.* See "Cafeteria Conversation." Steve has authority to write checks on the account of his employer, a public company under the Securities Exchange Act of 1934. Because Steve is a compulsive gambler and substance abuser, he needs a constant supply of cash to finance his habits. Steve regularly issues checks payable to actual suppliers not currently owed money, steals the checks, signs the names of the payees, and cashes the checks. Because Steve is also in charge of reconciling his employer's bank statements, his embezzlement scheme is not discovered by the employer's independent auditor during a routine audit. Is the independent auditor liable to its client for damages resulting from Steve's embezzlement?

5. Founded in 1980, Osborne Computer manufactured the first personal computer for the mass market. In 1983, to obtain temporary financing prior to a pub-

lic securities offering, Osborne sold warrants entitling investors to buy Osborne shares at a favorable price. The investors were given and relied on an unqualified audit opinion regarding Osborne's 1982 financial statements, which indicated that Osborne had a net operating profit of $69,000 on sales of $68 million. The audit opinion, issued by Arthur Young & Company, stated that the audit had complied with GAAS, that the financial statements had been prepared in compliance with GAAP, and that the financial statements fairly presented Osborne's financial position. Arthur Young could foresee that the audited financial statements might be used by buyers of Osborne's warrants, but Arthur Young did not know that buyers of warrants would in fact use the financial statements. The buyers of the warrants lost their investments when Osborne's manufacturing problems and IBM's dominance in the PC market forced Osborne into bankruptcy. The investors sued Arthur Young on the grounds of negligent misrepresentation, because Osborne actually had a $3 million operating loss in 1982, a fact Arthur Young negligently failed to discover. Are the warrant investors permitted to sue Arthur Young for negligent misrepresentation?

6. A corporation sought a loan from Rusch Factors, Inc., which requested audited financial statements to judge the financial position of the company. The company hired Leonard Levin, a CPA, to prepare the financial statements. Levin was told that Rusch Factors would use the financial statements in making a loan to the company, and Rusch Factors did rely on the financial statements in making the loan to the company. The financial statements represented that the company was in good financial position. Levin had negligently failed to discover that the company was in fact insolvent. Will Levin have liability to Rusch Factors for negligence or negligent misrepresentation?

7. Seedkem, Inc., extends $700,000 credit to Agri-Products, Inc., in reliance on Agri-Products's current financial statements, which had been prepared by Paul Safranek, a CPA. The financial statements were marked "unaudited," and Safranek expressly disclaimed any opinion as to the accuracy of the financial statements. Will Safranek be liable to Seedkem if Safranek knows that the financial statements were not prepared in compliance with GAAP?

8. Louis Sternbach & Co. audited the financial statements of Solitron Corp. The financial statements treated consignments, which are sales or returns, as sales. For other sales, Solitron could produce no purchase orders from customers. Sternbach contacted Solitron's customers to obtain confirmation of the sales, but received no confirmations. Nonetheless, Sternbach issued an opinion that the financial statements complied with GAAP. Subsequently, many of the sales proved to be fictitious. Solitron shareholders who bought shares in reliance on the financial statements sued Sternbach. Has Sternbach violated Securities Exchange Act Rule 10b-5?

9. In 1986 and 1988, the Colorado Springs–Stetson Hills Public Building Authority (Authority) issued $26 million in bonds to finance public improvements at Stetson Hills, a residential and commercial development in Colorado Springs. Central Bank served as the trustee for the bondholders, undertaking a fiduciary duty to the bondholders to ensure that the Authority complied with indenture provisions protecting bondholders. The bonds were secured by liens against 522 acres of land, and the indenture required that the land be worth at least 160 percent of the bonds' outstanding principal and interest. In January 1988, AmWest Development—the developer of Stetson Hills—gave Central Bank an appraisal of the land. The appraisal showed land values almost unchanged from a 1986 appraisal, even though property values were declining in Colorado Springs. Central Bank's in-house appraiser reviewed the 1988 appraisal and decided that it was optimistic. He suggested that Central Bank use an independent outside appraiser to review the 1988 appraisal. After an exchange of letters between Central Bank and AmWest in early 1988, Central Bank agreed to delay independent review of the appraisal until the end of 1988, six months after the 1988 bonds had been issued to investors. Before the independent review was complete, the Authority defaulted on the 1988 bonds. Is Central Bank liable to the bondholders under Section 10(b) of the Securities Exchange Act of 1934?

10. Bill Thomas, a CPA, was a member of Lawhon, Thomas, Holmes & Co. (LTH), a public accounting firm. When LTH performed accounting services for Xenerex Corp., LTH received 144,000 Xenerex shares instead of cash. LTH continued to hold the Xenerex shares when the three LTH members joined the accounting firm of Oppenheim, Appel, Dixon & Co. (OAD). LTH ceased operations and sold all its assets except the Xenerex shares to OAD. The three former LTH members, including Thomas, retained ownership

of LTH. After he joined OAD, Thomas immediately solicited Xenerex as a client for OAD. Thomas, on behalf of OAD, signed a new client acceptance form for Xenerex, giving a negative response to the question, "Are there any known independence problems?" Thomas prepared and signed OAD's report on Xenerex's financial statements and annual report filed on Form 10-K with the SEC. Has Thomas violated SEC Rule of Practice 102(e)?

11. Robert Gatewood and two other limited partners entered a limited partnership agreement with United States Cellular Corporation (USCC), the sole general partner. The agreement provided that in the event the partners were unable to agree on the value of a cellular phone system in which they had an interest, each would select an appraiser, and the two appraisers would select a third. An impasse arose concerning the selection of this third appraiser, and a federal district court was asked to resolve the dispute. During litigation, USCC took the deposition of Terry Korn, a Pennsylvania certified public accountant and appraiser selected by the limited partners. USCC sought to inquire about the conduct and results of Korn's appraisal as well as any communications between Korn and the limited partners. The limited partners directed Korn not to respond to any of these questions, asserting that the communications were covered by Pennsylvania statutory accountant–client privilege. Are the limited partners correct?

12. While performing a routine audit of the tax returns of Amerada Hess Corporation, the Internal Revenue Service discovered questionable payments of $7,830. The IRS issued a summons to Arthur Young & Co., the accounting firm that had prepared the tax accrual working papers that might reveal the nature of the payments. The working papers had been prepared in the process of Arthur Young's review of Amerada Hess's financial statements, as required by federal securities law. In the summons, the IRS ordered Arthur Young to make available to the IRS all of its Amerada Hess files, including its tax accrual working papers. Amerada Hess directed Arthur Young not to comply with the summons on the grounds that they were protected by an accountant–client privilege. Is Amerada Hess correct?

- C. *Government in the Sunshine Act*

VII. Issues in Regulation
- A. *"Old" Regulation versus "New" Regulation*
- B. *"Captive" Agencies and Agencies' "Shadows"*
- C. *Deregulation versus Reregulation*

Today's businesses operate in a highly regulated environment. The *administrative agency* serves as a primary vehicle for the creation and enforcement of modern regulation. As governmental bodies that are neither courts nor legislatures, administrative agencies have the legal power to take actions affecting the rights of private individuals and organizations. Supreme Court Justice Robert H. Jackson characterized the sweeping influence of administrative agencies this way:

> The rise of administrative bodies probably has been the most significant legal trend of the last century and perhaps more values today are affected by their decisions than by those of all of the courts, review of administrative decisions apart. They also have begun to have important consequences on personal rights. . . . They have become a veritable fourth branch of the Government, which has deranged our three-branch legal theories as much as the concept of a fourth dimension unsettles our three-dimensional thinking.[1]

This chapter focuses on federal administrative agencies. It is important to remember, however, that the past century's significant growth in *federal* regulation has been accompanied by a comparable growth in *state* and *local* regulation by agencies at those levels of government.

[1] *FTC v. Ruberoid Co.,* 343 U.S. 470 (U.S. Sup. Ct. 1952).

It is difficult to think of an area of modern individual life that is not somehow touched by the actions of administrative agencies. The energy that heats and lights your home and workplace, the clothes you wear, the food you eat, the medicines you take, the design of the car you drive, the programs you watch on television, and the contents of (and label on) the pillow on which you lay your head at night are all shaped in some way by regulation. This observation is even more appropriate to corporations than to individuals. Virtually every significant aspect of contemporary corporate operations is regulated to the point that the *legal* consequences of a corporation's actions are nearly as important to its future success as the *business* consequences of its decisions.

Because administrative agencies have enormous power and novel characteristics, they have always been objects of controversy. Are they protectors of the public or impediments to business efficiency? Are they guardians of competitive market structures or a shield behind which noncompetitive firms have sought refuge from more vigorous competitors? Have they been impartial, efficient agents of the public interest or are they more often overzealous, or inept, or "captives" of the industries they supposedly regulate? At various times, and where various agencies are concerned, each of the above allegations is likely to have been true. Why, then, did we resort to such controversial entities to perform the regulatory function?

Origins of Administrative Agencies

In the 19th century's latter decades, the United States was in the midst of a dramatic transformation from an agrarian nation to a major industrial power. Improved means of transportation and communication facilitated dramatic market expansions. Large business organizations acquired unprecedented economic power, and new technologies promised additional social transformations.

The tremendous growth that resulted from these developments, however, was not attained without some cost. Large organizations sometimes abused their power at the expense of their customers, distributors, and competitors. New technologies often posed risks of harm to large numbers of citizens. Yet traditional institutions of legal control, such as courts and legislatures, were not particularly well suited to the regulatory needs of an increasingly complex, interdependent society in the throes of rapid change.

Courts, after all, are passive institutions that must await a genuine case or controversy before they can act. Courts may also lack the technical expertise necessary to address many regulatory issues intelligently. In addition, they are constrained by rules of procedure and evidence that make litigation a time-consuming and expensive process.

Legislatures, on the other hand, are theoretically able to anticipate social problems and to act in a comprehensive fashion to minimize social harm. In reality, however, legislatures rarely act until a problem has become severe enough to generate strong political support for a regulatory solution. Legislatures may also lack (as do courts) the expertise necessary to make rational policy regarding highly technical activities.

What was needed, therefore, was a new type of governmental entity: one that would be exclusively devoted to monitoring a particular area of activity; one that could, by its exclusive focus and specialized hiring practices, develop a reservoir of expertise about the object of its efforts; and one that could provide the continuous attention and constant policy development demanded by a rapidly changing environment. Such new entities, it was thought, could best perform their regulatory tasks if they were given considerable latitude in the procedures they followed and the approaches they took to achieve regulatory goals.

The modern regulatory era was born in 1887 when Congress, in response to complaints about discriminatory ratemaking practices by railroads, passed the Interstate Commerce Act. This statute created the Interstate Commerce Commission and empowered it to regulate transportation industry ratemaking practices. Since then, new administrative agencies have been added whenever *pressing social problems* (e.g., the threat to competition that led to the creation of the Federal Trade Commission) or *new technologies,* such as aviation (Federal Aviation Administration), communications (Federal Communications Commission), and nuclear power (Nuclear Regulatory Commission), have generated a political consensus in favor of regulation. More recently, developing scientific knowledge about the *dangers that modern technologies and industrial processes pose* to the environment and to industrial workers has led to the creation of new federal agencies empowered to regulate environmental pollution (Environmental Protection Agency) and promote

workplace safety (Occupational Safety and Health Administration). The following sections examine the legal dimensions of the process by which such administrative agencies are created.

Agency Creation

Enabling Legislation

Administrative agencies are created when Congress passes **enabling legislation** specifying the name, composition, and powers of the agency. For example, consider the following language from Section 1 of the Federal Trade Commission Act:

> A commission is created and established, to be known as the Federal Trade Commission [FTC], which shall be composed of five commissioners, who shall be appointed by the President, by and with the advice and consent of the Senate.

Section 5 of the FTC Act prohibits "unfair methods of competition" and "unfair or deceptive acts or practices in commerce," and empowers the FTC to prevent such practices.[2] Section 5 also describes the procedures the Commission must follow to charge persons or organizations with violations of the act, and provides for judicial review of agency orders. Subsequent portions of the statute give the FTC the power "to make rules and regulations for the purpose of carrying out the provisions of the Act," to conduct investigations of business practices, to require reports from interstate corporations concerning their practices and operations, to investigate possible violations of the antitrust laws,[3] to publish reports concerning its findings and activities, and to recommend new legislation to Congress.

Thus, Congress has given the FTC powers typically associated with the three traditional branches of government. The FTC may, for instance, act in a legislative fashion by *promulgating rules* that have binding legal effect on future behavior. It may also take the executive branch–like actions of *investigating* and *prosecuting* alleged violations. Finally, the FTC may act much as courts do and *adjudicate* disputes concerning alleged violations of the law. Most other federal administrative agencies have a similarly broad mix of governmental powers, making these agencies potentially powerful agents of social control.

But great power to do good may also be great power to do evil. Regulatory bias, zeal, insensitivity, or corruption, if left unchecked, may infringe on the basic freedoms that are the essence of our system of government. Accordingly, the fundamental problem in administrative law—a problem that will surface repeatedly in this chapter—is how to design a system of control over agency action that minimizes the potential for arbitrariness and harm yet preserves the power and flexibility that make administrative agencies uniquely valuable instruments of public policy.

Administrative Agencies and the Constitution

Because administrative agencies are governmental bodies, administrative action is *governmental action* that is subject to the basic constitutional checks discussed in Chapter 3. This "fourth branch of government" is bound by basic constitutional guarantees such as *due process, equal protection,* and *freedom of speech,* just as the three traditional branches are. The *Pearson* case, which follows, deals with First Amendment limitations on the Food and Drug Administration's regulatory authority.

[2]Section 5 of the FTC Act is discussed in detail in Chapter 47.
[3]The antitrust laws are discussed in detail in Chapters 48 and 49.

Pearson v. Shalala *164 F.3d 650 (D.C. Cir. 1999)*

A federal statute prohibits marketers of dietary supplements from including on container labels any claim characterizing the relationship of the dietary supplement to the prevention or alleviation of a disease or health-related condition, unless the claim has been submitted to the Food and Drug Administration (FDA) for preapproval. According to one of its regulations, the FDA will authorize such a "health claim" only if the FDA finds "significant scientific agreement" among experts that the claim is supported by the available evidence. Dietary supplement marketers Durk Pearson and Sandy Shaw asked the FDA to authorize four separate health claims regarding their dietary supplements' preventative effects on health conditions such as cancer or heart disease.

The FDA refused to authorize any of the four health claims, not because there was a dearth of supporting evidence but because, in the FDA's view, the evidence was inconclusive and thus failed to give rise to "significant scientific agreement." The FDA declined to consider an alternative suggested by Pearson and Shaw: permitting the making of the health claims on the appropriate labels but requiring the use of a corrective disclaimer such as "The FDA has determined that the evidence supporting this claim is inconclusive."

Pearson, Shaw, and organizations representing health care practitioners and consumers of dietary supplements sought relief in the federal district court. The court rejected their arguments and upheld the FDA's action. Pearson, Shaw, and the organizations appealed to the U.S. Court of Appeals for the District of Columbia Circuit.

Silberman, Circuit Judge Appellants raise a host of challenges to the [FDA's] action. [T]he most important are that their First Amendment rights have been impaired and that under the Administrative Procedure Act, the FDA was obliged . . . to articulate a standard a good deal more concrete than the undefined "significant scientific agreement." Normally we would discuss the non-constitutional argument first, particularly because we believe it has merit. We invert the normal order here to discuss [the argument] that the government has violated the First Amendment by declining to employ a less draconian method—the use of disclaimers—to serve the government's interests. [We do so because] even if "significant scientific agreement" were given a more concrete meaning, appellants might be entitled to make health claims that do not meet that standard—with proper disclaimers.

Disclaimers

It is undisputed that the FDA's restrictions on appellants' health claims are [to be] evaluated under the commercial speech doctrine [and] that the FDA has unequivocally rejected the notion of requiring disclaimers to cure "misleading" health claims for dietary supplements. The government makes two alternative arguments in response to appellants' claim that it is unconstitutional for the government to refuse to entertain a disclaimer requirement for the proposed health claims: first, that health claims lacking "significant scientific agreement" are *inherently* misleading and thus entirely outside the protection of the First Amendment; and second, that even if the claims are only *potentially* misleading, . . . the government is not obliged to consider requiring disclaimers in lieu of an outright ban on all claims that lack significant scientific agreement.

If such health claims could be thought inherently misleading, that would be the end of the inquiry. [Although nonmisleading commercial speech about lawful activities receives an intermediate degree of First Amendment protection, misleading commercial speech goes wholly unprotected by the First Amendment.] [The government's] first argument runs along the following lines: that health claims lacking "significant scientific agreement" are inherently misleading because they have such an awesome impact on consumers as to make it virtually impossible for them to exercise any judgment *at the point of sale.* It would be as if the consumers were asked to buy something while hypnotized, and therefore they are bound to be misled. We think this contention is almost frivolous. We reject it. But the government's alternative argument is more substantial. It is asserted that health claims on dietary supplements should be thought at least potentially misleading because the consumer would have difficulty in independently verifying these claims. We are told, in addition, that consumers might actually assume that the government has approved these claims.

Under *Central Hudson Gas & Electric Corp. v. Public Service Commission* (U.S. Sup Ct. 1980), we are obliged to evaluate a government scheme to regulate potentially misleading commercial speech by applying a . . . test [that first asks] whether the asserted government interest is substantial. The FDA advanced two general concerns: protection of public health and prevention of consumer fraud. [In view of applicable precedent,] a substantial government interest is undeniable. The more significant questions under *Central Hudson* are the next two factors: "whether the regulation directly advances the governmental interest asserted," [quoting *Central Hudson,*] and whether the fit between the government's ends and the means chosen to accomplish those ends "is not necessarily perfect, but reasonable" [quoting *Board of Trustees v. Fox* (U.S. Sup. Ct. 1989)].

[Although any advancement of the underlying public health interest may seem more indirect than

direct,] the government would appear to advance directly its interest in protecting against consumer fraud through its regulatory scheme. If it can be assumed—and we think it can—that some health claims on dietary supplements will mislead consumers, it cannot be denied that requiring FDA preapproval and setting the standard extremely, perhaps even impossibly, high will surely prevent any confusion among consumers. We also recognize that the government's interest in preventing consumer fraud/confusion may well take on added importance in the context of a product, such as dietary supplements, that can affect the public's health.

The difficulty with the government's consumer fraud justification comes at the final *Central Hudson* factor: Is there a reasonable fit between the government's goals and the means chosen to advance those goals? The government insists that it is never obliged to utilize the disclaimer approach, because the commercial speech doctrine does not embody a preference for disclosure over outright suppression. Our understanding of the doctrine is otherwise. [The Supreme Court has stated that when allegedly incomplete advertising is not inherently misleading,] "the preferred remedy is more disclosure, rather than less." *Bates v. State Bar of Arizona* (U.S. Sup. Ct. 1977). In more recent cases, the Court has reaffirmed this principle, repeatedly pointing to disclaimers as constitutionally preferable to outright suppression. [Moreover, when] government chooses a policy of suppression over disclosure—at least where there is no showing that disclosure would not suffice to [prevent or minimize] misleadingness—government disregards a far less restrictive means. [As a result, a reasonable fit between the regulatory scheme and the underlying government interest would be lacking.]

Our rejection of the government's position that there is no general First Amendment preference for disclosure over suppression . . . does not determine that any supposed weaknesses in the [health] claims at issue can be remedied by disclaimers. [We therefore examine the particular claims.] The FDA deemed the first three claims—(1) "Consumption of antioxidant vitamins may reduce the risk of certain kinds of cancers," (2) "Consumption of fiber may reduce the risk of colorectal cancer," and (3) "Consumption of omega-3 fatty acids may reduce the risk of coronary heart disease"—to lack significant scientific agreement because existing research had examined only the relationship between consumption of *foods* containing these components and the risk of these diseases. The FDA logically determined that the specific effect of the *component* of the food constituting the dietary supplement could not be determined with certainty. But certainly this concern could be accommodated, in the first claim for example, by adding a prominent disclaimer to the label along the following lines: "The evidence is inconclusive because existing studies have been performed with *foods* containing antioxidant vitamins, and the effect of those foods on reducing the risk of cancer may result from other components in those foods." A similar disclaimer would be equally effective for the latter two claims.

The FDA's concern regarding the fourth claim—".8mg of folic acid in a dietary supplement is more effective in reducing the risk of neural tube defects than a lower amount in foods in common form"—is different from its reservations regarding the first three claims: the agency simply concluded that "the scientific literature does not support the superiority of any one source over others." [W]e suspect that a clarifying disclaimer could be added to the effect that "the evidence in support of this claim is inconclusive."

The government's general concern that . . . consumers might assume that a claim on a supplement's label is approved by the government suggests an obvious answer. The agency could require the label to state that "The FDA does not approve this claim." Similarly, the government's interest in preventing the use of labels that are true but do not mention adverse effects would seem to be satisfied—at least ordinarily—by inclusion of a prominent disclaimer setting forth those adverse effects.

The government disputes that consumers would be able to comprehend appellants' proposed health claims in conjunction with the disclaimers we have suggested. [T]his mix of information would, in the government's view, create confusion among consumers. But all the government offers in support is the FDA's pronouncement that "consumers would be considerably confused by a multitude of claims with differing degrees of reliability." Although the government may have more leeway in choosing suppression over disclosure as a response to the problem of consumer confusion where the product affects health, it must still meet its burden of justifying a restriction on speech. [H]ere, the FDA's conclusory assertion falls far short.

We do not presume to draft precise disclaimers for each of appellants' four claims; we leave that task to the agency in the first instance. Nor do we rule out the possibility that where evidence in support of a claim is outweighed by evidence against the claim, the FDA could deem it incurable by a disclaimer and ban it outright. For example, if the weight of the evidence were against the hypothetical claim that "Consumption of Vitamin E reduces the risk of Alzheimer's disease," the agency might reasonably determine that adding a disclaimer such as "The FDA has determined that *no* evidence supports this claim" would not suffice to mitigate the claim's misleadingness. Finally, while we are skeptical that the government could demonstrate with empirical evidence that disclaimers similar to the ones we suggested above would bewilder consumers and fail to correct for deceptiveness, we do not rule out that possibility.

The Unarticulated Standard

Wholly apart from the question whether the FDA is obliged to consider appropriate disclaimers is appellants' claim that the agency is obliged to give some content to the phrase "significant scientific agreement." Appellants contend that the agency's failure to do so . . . violates their constitutional rights under the . . . Fifth [Amendment] because the agency's approach is so vague as to deprive the producers of liberty (and property?) without due process. Appellants do not challenge the concept of a pre-screening system *per se;* their complaint is with the FDA's lack of guidance on which health claims will survive the pre-screening process.

[B]y prevailing on their Administrative Procedure Act claim [, however,] appellants would seem to gain the same relief—invalidation of the FDA's interpretation of the general standard and a remand for more guidance—as they would through a successful Fifth Amendment claim. Consideration of this constitutional claim seems unnecessary because we agree with appellants that the APA requires the agency to explain why it rejects their proposed health claims. [T]o do so adequately necessarily implies giving some definitional content to the phrase "significant scientific agreement." We think this proposition is squarely rooted in the prohibition under the APA that an agency not engage in arbitrary and capricious action. It simply will not do for a government agency to declare—without explanation—that a proposed course of private action is not approved. To refuse to define the criteria it is applying is equivalent to simply saying no without explanation. [O]n remand, the FDA must explain what it means by significant scientific agreement or, at minimum, what it does not mean.

District court decision reversed; case remanded with instructions that FDA reconsider appellants' health claims.

One basic constitutional principle is uniquely important when the creation of administrative agencies is at issue—the principle of **separation of powers.** A fundamental attribute of our Constitution is its allocation of governmental power among the three branches of government. Lawmaking power is given to the legislative branch, law-enforcing power to the executive branch, and law-interpreting power to the judicial branch. By limiting the powers of each branch, and by giving each branch some checks on the exercise of power by the other branches, the Constitution seeks to ensure that governmental power remains accountable to the public will. (In reality, of course, this separation is never perfectly complete. As you learned in Chapter 1, for instance, courts often "make" law when developing common law doctrines or interpreting broadly worded statutes.)

Administrative agencies, which exercise powers resembling those of each of the three branches of government, create obvious concerns about separation of powers. In particular, the congressional delegation of legislative power to an agency in its enabling legislation may be challenged as violating the separation of powers principle if the legislation is so broadly worded as to indicate that Congress has abdicated its lawmaking responsibilities. Early judicial decisions exploring the manner in which Congress could delegate its power tended to require enabling legislation to contain fairly specific guidelines and standards limiting the exercise of agency discretion.

More recently, courts have often sustained quite broad delegations of power to administrative agencies. Section 5 of the FTC Act contains such a delegation of power. A great range of unspecified behavior falls

within the statute's prohibition of "unfair methods of competition" and "unfair or deceptive acts or practices." Courts tend to approve broad delegations of power when Congress has expressed an "intelligible principle" to guide the agency's actions.[4]

[4] *J. W. Hampton, Jr. & Co. v. United States,* 276 U.S. 394 (U.S. Sup. Ct. 1928).

In the *American Trucking Associations* decision, which follows, the often influential U.S. Court of Appeals for the District of Columbia Circuit surprised many observers by showing less willingness to sustain a broad delegation of power than courts have generally displayed during the past 60 years. As of the time this book went to press in early 2000, it was unclear whether *American Trucking Associations* would prompt other courts to view broad delegations of power with greater skepticism.

American Trucking Associations v. Environmental Protection Agency
175 F.3d 1027 (D.C. Cir. 1999)

Sections 108 and 109 of the Clean Air Act require the Environmental Protection Agency (EPA) to promulgate and periodically revise national ambient air quality standards (NAAQS) for each air pollutant identified by the agency as meeting certain statutory criteria. The statute calls for the EPA to set, for each pollutant, a standard reflecting a concentration level "requisite to protect the public health" with an "adequate margin of safety."

In July 1997, the EPA issued final rules revising the NAAQS for particulate matter (PM) and ozone. Various parties filed petitions for review in the U.S. Court of Appeals for the District of Columbia Circuit. The cases were consolidated for purposes of argument. Included among the petitioners' attacks on the validity of the rules was the argument that the rules were formulated pursuant to an unconstitutional delegation of power by Congress.

Williams, Circuit Judge Petitioners argue in each case that EPA has construed sections 108 and 109 of the Clean Air Act so loosely as to render them unconstitutional delegations of legislative power. See U.S. Const., art. I, section 1 ("All legislative powers herein granted shall be vested in a Congress of the United States."). We agree.

Although the factors EPA uses in determining the degree of public health concern associated with different levels of ozone and PM are reasonable, EPA appears to have articulated "no intelligible principle" [quoting *J.W. Hampton, Jr. & Co. v. United States* (U.S. Sup. Ct. 1928)] to channel its application of these factors; nor is one apparent from the statute. The nondelegation doctrine requires such a principle. Here it is as though Congress commanded EPA to select "big guys," and EPA announced it would evaluate candidates based on height and weight, but revealed no cut-off point. The announcement, though sensible in what it does say, is fatally incomplete. The reasonable person responds, "How tall? How heavy?"

EPA regards ozone . . . and PM . . . as nonthreshold pollutants, i.e., ones that have some possibility of adverse health impact (however slight) at any exposure level above zero. Thus the only concentration for ozone and PM that is utterly risk-free, in the sense of direct health impacts, is zero. Section 109(b)(1) [of the Clean Air Act] says that EPA must set each standard at the level "requisite to protect the public health" with an "adequate margin of safety." These are also the criteria by which EPA must determine whether a revision to existing NAAQS is appropriate. For EPA to pick any nonzero level, it must explain the degree of imperfection permitted. The factors that EPA has elected to examine for this purpose in themselves pose no inherent nondelegation problem. But what EPA lacks is any determinate criterion for drawing lines. It has failed to state intelligibly how much is too much.

[T]he criteria EPA has announced for assessing health effects in setting the NAAQS for nonthreshold pollutants . . . are a bit vague, [but] they do focus the inquiry on pollution's effect on public health. EPA . . . considers severity of effect, certainty of effect, and size of population affected. These criteria, long ago approved by the judiciary, do not themselves speak to the issue of degree.

Read in light of these factors, EPA's explanations for its decisions amount to assertions that a less stringent standard would allow the relevant pollutant to inflict a greater quantum of harm on public health, and that a more stringent standard would result in less harm. Such arguments only support the intuitive proposition that more pollution will not benefit the public health, not that keeping pollution at or below any particular level is "requisite" or not requisite to "protect the public health" with an "adequate margin of safety," the formula set out by [the Clean Air Act].

Consider EPA's defense of the 0.08 ppm level in the ozone NAAQS. EPA explains that its choice is superior to retaining the existing level, 0.09 ppm, because more people are exposed to more serious effects at 0.09 than at 0.08. In defending the decision not to go down to 0.07, EPA never contradicts the intuitive proposition, confirmed by data in [an EPA report], that reducing the standard to that level would bring about comparable changes. Instead, it [simply asserts that adverse health] effects are less certain and less severe at lower levels of exposure. This seems to be nothing more than a statement that lower exposure levels are associated with lower risk to public health. In addition to [this] assertion . . . , EPA cited the consensus of the Clean Air Scientific Advisory Committee (CASAC) that the standard should not be set below 0.08. [Notwithstanding] the undisputed eminence of CASAC's members, . . . the question whether EPA acted pursuant to lawfully delegated authority is not a scientific one. Nothing in what CASAC says helps us discern an intelligible principle derived by EPA from the Clean Air Act.

EPA frequently defends a decision to set a standard at a lower level on the basis that there is greater uncertainty that health effects exist at lower levels than the level of the standard. But the increasing-uncertainty argument is helpful only if some principle reveals now much uncertainty is too much. None does.

The arguments EPA offers here show only that EPA is applying the stated factors and that larger public health harms . . . are, as expected, associated with higher pollutant concentrations. The principle EPA invokes for each increment in stringency . . . could as easily, for any nonthreshold pollutant, justify a standard of zero. The same indeterminacy prevails in EPA's decision *not* to pick a still more stringent level. For example, EPA's reasons for not lowering the ozone standard from 0.08 to 0.07 ppm (that "the more serious effects . . . are less certain" at the lower levels . . .) could also be employed to justify a refusal to reduce levels below those associated with London's "Killer Fog" of 1952. In that calamity, very high PM levels . . . are believed to have led to 4,000 excess deaths in a week. Thus, the agency rightly recognizes that the question is one of degree, but offers no intelligible principle by which to identify a stopping point.

EPA cites prior decisions of this court holding that when there is uncertainty about the health effects of concentration of a particular pollutant within a particular range, EPA may use its discretion to make the "policy judgment" to set the standards at one point within the relevant range rather than another. We agree. But none of those [cases presented] the claim of undue delegation that we face here, and accordingly [there was] no occasion to ask EPA for coherence (for a "principle," to use the classic term) in making its "policy judgment." The latter phrase is not, after all, a self-sufficient justification for every refusal to define limits. Here, EPA's formulation of its policy judgment leaves it free to pick any point between zero and a hair below the concentrations yielding London's Killer Fog.

Where (as here) statutory language and an existing agency interpretation involve an unconstitutional delegation of power, but an interpretation without the constitutional weakness is or may be available, our response is not to strike down the statute but to give the agency an opportunity to extract a determinate standard on its own. If the agency develops determinate, binding standards for itself, it is less likely to exercise the delegated authority arbitrarily. And such standards enhance the likelihood that meaningful judicial review will prove feasible. [Remand to the agency] does ensure that the courts not hold unconstitutional a statute that an agency, with the application of its special expertise, could salvage.

What sorts of "intelligible principles" might EPA adopt? Cost-benefit analysis . . . is not available. Our cases read [the Clean Air Act] as barring EPA from considering any factor other than "health effects relating to pollutants in the air." In theory,

EPA could make its criterion the eradication of any hint of direct health risk. This approach is certainly determinate enough, but it appears that it would require the agency to set the permissible levels of both pollutants here at zero. No party here [advocates] this solution, and EPA [shows] no inclination to adopt it.

EPA's past behavior suggests some readiness to adopt standards that leave nonzero residual risk. For example, it has employed commonly used clinical criteria to determine what qualifies as an adverse health effect. On the issue of likelihood of adverse health effects, it might be appropriate to use standards drawn from other areas of the law, such as the familiar "more probable than not" criterion. Of course, a one-size-fits-all criterion of probability would make little sense. There is no reason why the same probability should govern assessments of a risk of thousands of deaths as against risks of a handful of people suffering momentary shortness of breath. [A]ll the relevant variables seem to range continuously from high to low; the possible effects of pollutants vary from death to trivialities, and the size of the affected population, the probability of an effect, and the associated uncertainty range from large numbers of persons with point estimates of high probability to small numbers and vague ranges of probability. This does not seem insurmountable. Everyday life compels us all to make decisions balancing remote but severe harms against a probab[le] distribution of benefits.

[Of course,] a serious effort at coherence [in the EPA's regulatory scheme under the Clean Air Act] would need to be . . . comprehensive. For example, a range of ailments short of death might need to be assigned weights. Nonetheless, an agency wielding the power over American life possessed by EPA should be capable of developing the rough equivalent of a generic unit of harm that takes into account population affected, severity, and probability. Alternatively, if EPA concludes that there is no [intelligible] principle available, it can so report to the Congress, along with such rationales as it has for the levels it chose, and seek legislation ratifying its choice.

Cases remanded to EPA for further consideration in light of court's opinion.

Tatel, Circuit Judge, dissenting The Clean Air Act has been on the books for decades, has been amended by Congress numerous times, and has been the subject of regular congressional oversight hearings. The Act has been parsed by this circuit no fewer than ten times in published opinions delineating EPA authority in the NAAQS setting process. Yet this court now threatens to strike down section 109 of the Act as an unconstitutional delegation of congressional authority unless EPA can articulate an intelligible principle cabining its discretion. In doing so, the court ignores the last half-century of Supreme Court nondelegation jurisprudence, apparently viewing these permissive precedents as mere exceptions to the rule laid down 64 years ago [in a 1935 Supreme Court decision]. Because section 109's delegation of authority is narrower and more principled than delegations the Supreme Court and this court have upheld since [the 1935 decision], . . . I respectfully dissent.

Agency Types and Organization

Agency Types

Administrative agencies may be found under a variety of labels. They may be called "administration," "agency," "authority," "board," "bureau," "commission," "department," "division," or "service." They sometimes have a governing body, which may be appointed or elected. They almost invariably have an administrative head (variously called "Chairman," "Commissioner," "Director," etc.), and a staff. Because our focus is on federal administrative agencies, it is important to distinguish between the two basic types of federal administrative agencies: executive agencies and independent agencies.

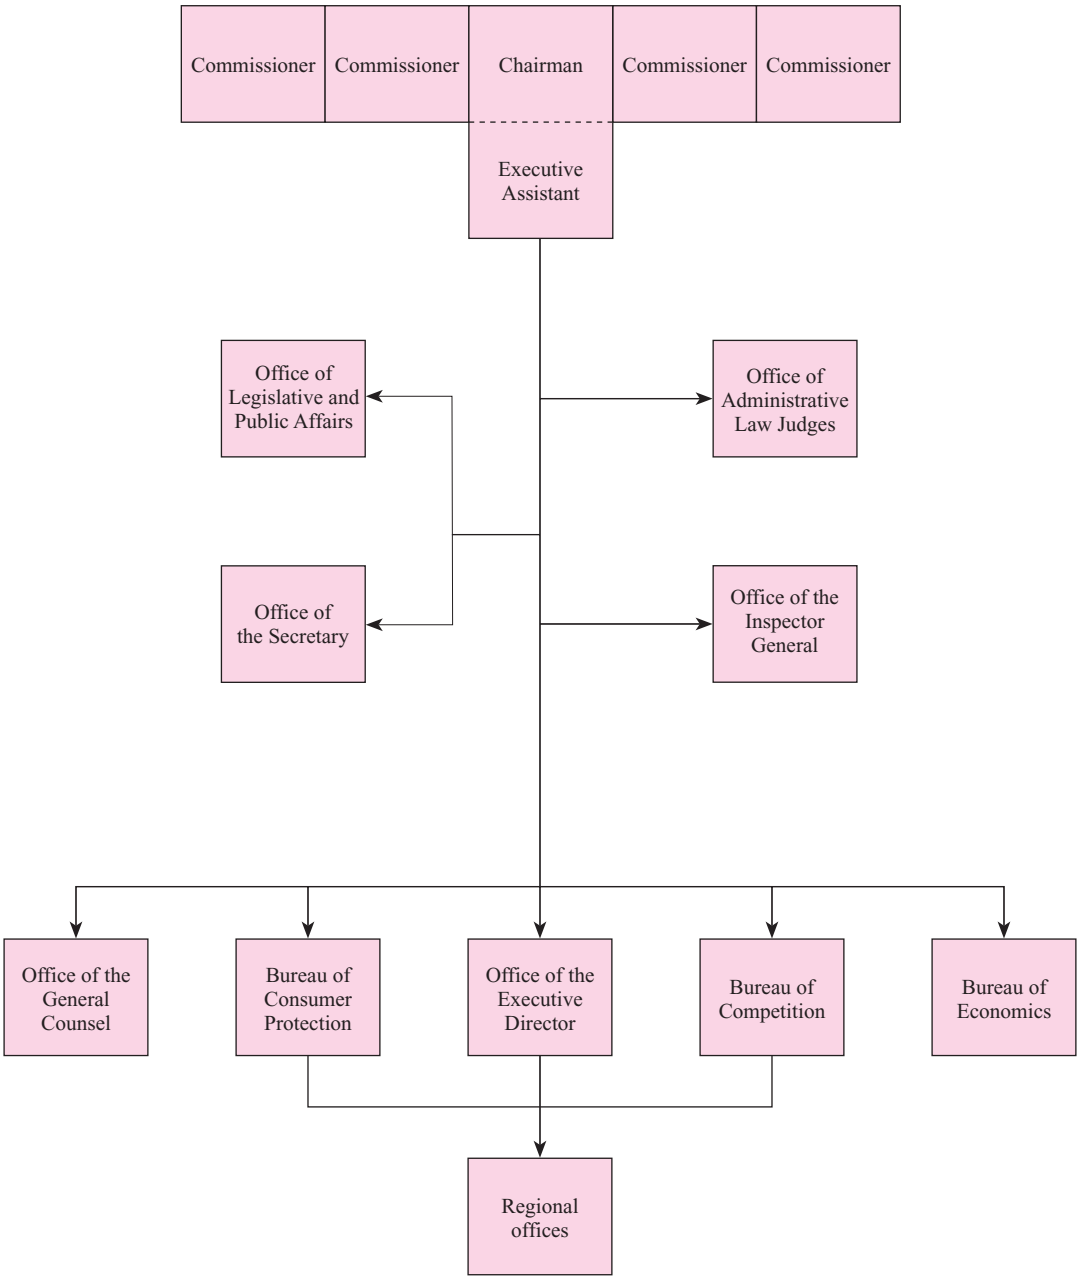
Executive Agencies Administrative agencies that reside within the Executive Office of the President or within the executive departments of the president's cabinet are called **executive agencies.** Examples of such agencies and their cabinet homes are: the Food and Drug Administration (Department of Health and Human Services); the Nuclear Regulatory Agency and the Federal Energy Regulatory Agency (Department of Energy); the Occupational Safety and Health Administration (Department of Labor); and the Internal Revenue Service (Treasury Department). In addition to their executive home, such agencies share one other important attribute. Their administrative heads serve "at the pleasure of the President," meaning that they are appointed and removable at his will.

Independent Agencies The Interstate Commerce Commission was the first independent administrative agency created by Congress. Much of the most significant regulation businesses face emanates from independent agencies such as the FTC, the National Labor Relations Board, the Consumer Product Safety Commission, the Equal Employment Opportunity Commission, the Environmental Protection Agency, and the Securities and Exchange Commission. Independent agencies are usually headed by a board or a commission (e.g., the FTC has five commissioners) whose members are appointed by the president "with the advice and consent of the Senate." Commissioners or board members are usually appointed for fixed terms (e.g., FTC commissioners serve seven-year, staggered terms) and are removable only for cause (e.g., FTC commissioners may be removed only for "inefficiency, neglect of duty, or malfeasance in office"). Enabling legislation often requires political balance in agency appointments (e.g., the FTC Act provides that "[n]ot more than three of the commissioners shall be members of the same political party").

Agency Organization

As the organizational chart of the FTC reproduced in Figure 1 indicates, an agency's organizational structure is largely a function of its regulatory mission. Thus, the FTC's operational side is divided into three bureaus: the Bureau of Competition, which enforces the antitrust laws and unfair competitive practices; the Bureau of Consumer Protection, which focuses on unfair or deceptive trade practices; and the Bureau of Economics, which gathers data, compiles statistics, and furnishes technical assistance to the other bureaus. The Commission is headquartered in Washington, D.C. It maintains regional offices in Atlanta, Boston, Chicago, Cleveland, Dallas, Denver, Los Angeles, New York, San Francisco, and Seattle. This regional office system enhances the Commission's enforcement, investigative, and educational missions by locating Commission staff closer to the public it serves.

Agency Powers and Procedures



Nature, Types, and Source of Powers

The powers administrative agencies possess may be classified in various ways. Some agencies' powers are largely *ministerial*—concerned primarily with the routine performance of duties imposed by law. The most important administrative agencies, however, have broad *discretionary* powers that necessitate the exercise of significant discretion and judgment when they are employed. The most important formal discretionary powers agencies can possess are **investigative power, rulemaking power,** and **adjudicatory power.**

The formal powers an agency possesses are those granted by its enabling legislation. Important federal agencies such as the FTC normally enjoy significant levels of each of the formal discretionary powers. As the following sections illustrate, however, even such powerful agencies face significant limitations on the exercise of their powers. In addition to explicit limits on agency proceedings contained in enabling legislation, basic constitutional provisions restrict agency action.

A federal agency's exercise of its rulemaking and adjudicatory powers is also constrained by the *Administrative Procedure Act (APA).* The APA was enacted by Congress in 1946 in an attempt to standardize federal agency procedures and to respond to critics who said that administrative power was out of control. The APA applies to all federal agencies, although it will not displace stricter procedural requirements contained in

Figure 1 *Federal Trade Commission*

Source: *U.S. Government Manual 1995–96* (Washington, D.C.: U.S. Government Printing Office, 1995), p. 575.

a particular agency's enabling legislation. In addition to specifying agency procedures, the APA plays a major role in shaping the conditions under which courts will review agency actions and the standards courts will use when conducting such a review. Most states have adopted "baby APAs" to govern the activities of state administrative agencies.

Finally, as later parts of this chapter will confirm, each of the three traditional branches of government possesses substantial powers to mold and constrain the

powers of the "fourth branch." That being said, one final point should be made before we turn to a detailed examination of formal agency powers and procedures. An agency's formal powers also confer on it significant *informal* power. Agency "advice," "suggestions," or "guidelines," which technically lack the legal force of formal agency regulations or rulings, may nonetheless play a major role in shaping the behavior of regulated industries because they carry with them the implicit or explicit threat of formal agency action if they are ignored. Such gentle persuasion can be a highly effective regulatory tool, and one that is subject to far fewer constraints than formal agency action.

Investigative Power

Effective regulation is impossible without accurate information. Administrative agencies need information about business practices and activities not only for the detection and prosecution of regulatory violations, but also to enable the agencies to identify areas in which new rules are needed or existing rules require modification. Much of the information agencies require to do their jobs is readily available. "Public interest" groups, complaints from customers or competitors, and other regulatory agencies are all important sources of information.

However, much of the information necessary to effective agency enforcement can come only from sources that may be strongly disinclined to provide it: the individuals and business organizations who are subject to regulation. This reluctance may stem from the desire to avoid or delay the regulation or regulatory action that disclosure would generate. It might also be the product, however, of more legitimate concerns, such as a desire to protect personal privacy, a desire to prevent competitors from acquiring trade secrets and other sensitive information from agency files, or a reluctance to incur the costs that may accompany compliance with substantial information demands. Agencies, therefore, need the means to compel unwilling possessors of information to comply with legitimate demands for information. The two most important (and most intrusive) investigative tools employed by administrative agencies are *subpoenas* and *searches and seizures.*

Subpoenas There are two basic types of subpoena: the subpoena *ad testificandum* and the subpoena *duces tecum.* Subpoenas *ad testificandum* may be used by an agency to compel unwilling witnesses to appear and testify at agency hearings. Subpoenas *duces tecum* may be used by an agency to compel the production of most types of documentary evidence, such as accounting records and office memoranda.

It should be obvious that unlimited agency subpoena power would sacrifice individual liberty and privacy in the name of regulatory efficiency. Accordingly, the courts have formulated a number of limitations that seek to balance an agency's legitimate need to know against an investigatory target's legitimate privacy interests.

Agency investigations must be *authorized by law* and *conducted for a legitimate purpose.* The former requirement means that the agency's enabling legislation must have granted the agency the investigatory power it seeks to assert. The latter requirement prohibits bad faith investigations pursued for improper motives (e.g., Internal Revenue Service investigations undertaken solely to harass political opponents of an incumbent administration).

Even when the investigation is legally authorized and is undertaken for a legitimate purpose, the information sought must be *relevant to that purpose.* The Fourth Amendment to the Constitution provides this limitation on agency powers. However, an agency issuing an administrative subpoena need not possess the "probable cause" that the Fourth Amendment requires in support of regular search warrants.[5] In the words of the Supreme Court, an agency "can investigate merely on the suspicion that the law is being violated, or even just because it wants assurance that it is not."[6] This lesser standard makes sense in the agency context, because the only evidence of many regulatory violations is documentary and "probable cause" might be demonstrable only after inspection of the target's records. In such cases, a probable cause requirement would effectively negate agency enforcement power.

Similarly, agency information demands must be *sufficiently specific* and *not unreasonably burdensome.* This requirement derives from the Fourth Amendment's prohibition against "unreasonable searches and seizures."[7] It means that agency subpoenas must adequately describe the information the agency seeks. It also means that the cost to the target of complying with

[5] The Fourth Amendment's warrant clause is discussed in Chapter 5.
[6] *United States v. Morton Salt,* 338 U.S. 632 (U.S. Sup. Ct. 1950).
[7] The Fourth Amendment's guarantee against unreasonable searches and seizures is discussed in Chapter 5.

the agency's demand (e.g., the cost of assembling and reproducing the data, the disruption of business operations, or the risk that proprietary information will be indirectly disclosed to competitors) must not be unreasonably disproportionate to the agency's interest in obtaining the information.

Finally, the information sought *must not be privileged.* Various statutory and common law privileges may, at times, limit an agency's power to compel the production of information. By far the most important privilege in this respect is the Fifth Amendment *privilege against compelled testimonial self-incrimination,* or "the right to silence." As you learned in Chapter 5, however, this privilege is subject to serious limitations in the business context. The right to silence in the administrative context is further limited by the fact that it is only available in *criminal* proceedings. In some regulatory contexts, the potential sanctions for violation may be labeled "civil penalties" or "forfeitures." Only when such sanctions are essentially punitive in their intent or effect will they be considered "criminal" for the purpose of allowing the invocation of the privilege.

Public policy concerns provide another subpoena power limitation that may apply even if neither the Fifth Amendment nor another privilege bars production of the documents sought by an agency. As indicated in the *Collins* case, which follows, courts may conclude that an agency subpoena should not be enforced if its enforcement would tend to compromise important operations being conducted by another agency or arm of the government.

Commodity Futures Trading Commission v. Collins *997 F.2d 1230 (7th Cir. 1993)*

The Commodity Futures Trading Commission (CFTC) was investigating Thomas Collins for possible civil violations of the Commodity Exchange Act. Among the violations of which Collins was suspected was the trading of commodities futures contracts other than on a commodities exchange. The CFTC's staff suspected that these trades were spurious trades, which (the staff theorized) were intended to enable Collins to reallocate losses to persons who would reap the maximum tax benefits from the losses. As part of this investigation, the CFTC issued a subpoena directing Collins to produce copies of his federal income tax returns for examination by the CFTC's staff. The staff's reasoning was that the presence of tax motives would be evidence of a likely violation of rules enforced by the CFTC.

Collins resisted the subpoena on the ground that it would force him to incriminate himself. Collins argued that the tax returns contained information that could be evidence—or could lead to evidence—of felony violations of federal law. The CFTC argued that the tax returns were required records and that compelling their disclosure therefore would not violate the Fifth Amendment. [See Chapter 5's discussion of the required-records doctrine, which operates to eliminate Fifth Amendment privilege claims regarding the contents of such records.] The district court agreed with the CFTC and entered an enforcement order requiring Collins to obey the subpoena. Collins appealed.

In a portion of its opinion not set forth here, the Seventh Circuit Court of Appeals concluded that the required-records doctrine was inapplicable because the subpoena sought a taxpayer's copies of his tax returns—copies that the taxpayer was not required by law to make—rather than the actual tax returns whose preparation and filing with the Internal Revenue Service were required by law. The Seventh Circuit then (as set forth below) continued its analysis of Collins's Fifth Amendment argument and addressed other policy concerns triggered by the CFTC's subpoena.

Posner, Judge [The inapplicability of the required-records doctrine] does not end our inquiry. The [required-records] doctrine only comes into play if, were it not for the doctrine, the government would be forcing a person to incriminate himself. *Garner v. United States* (1976) holds that the taxpayer who includes incriminating information on his return is like the witness who blurts out incriminating testimony rather than invoking the Fifth Amendment and keeping mum: he has not been compelled to testify against himself, so he has no Fifth Amendment claim. *Garner* . . . is consistent with the cases which hold that there is no Fifth Amendment privilege in already created documents, because the

disclosures in them were not compelled. *Garner* and [the cases dealing with already created documents] make the required-records exception to the Fifth Amendment privilege largely, perhaps entirely, superfluous, because records that are not required are by the same token not privileged. And those decisions suggest another reason for doubting that Collins has any Fifth Amendment claim: Collins created copies of his tax returns voluntarily, so any information in the copies, however incriminating, was not compelled by the government.

In light of all this it is doubtful that Collins has any constitutional leg to stand on. No matter. All constitutional concerns to one side, we think it was an abuse of discretion for the district judge to enforce this subpoena. Income tax returns are highly sensitive documents; that is why [federal law provides that agencies such as the CFTC] cannot get Collins's tax returns directly from the Internal Revenue Service. The self-reporting, self-assessing character of the income tax system would be compromised were they promiscuously disclosed to agencies enforcing regulatory programs unrelated to tax collection itself. The CFTC made no showing that it needed Collins's tax returns. All it legitimately wants to know is whether Collins traded off the exchange and if so, why. It can ask him. If it doubts his answer, it can ask for substantiation. If he refuses to furnish it on the ground that it would compel him to incriminate himself, the CFTC can draw the appropriate inference—for example, that he was trading off the exchange in order to reap tax benefits. No law forbids a regulatory agency to draw the logical inference from a regulated entity's refusing on Fifth Amendment grounds to play ball with the agency. Should the government want to prosecute Collins criminally the Fifth Amendment would be a potential bar—but a very feeble one, in light of our previous discussion.

We are not experts in the investigation of violations of the commodity laws, so we may have overlooked reasons why, despite appearances, the effectiveness of the CFTC's investigation of Collins depends on its having access to his tax returns. The CFTC has not advanced any such reasons. It asked for and obtained the enforcement of the subpoena as a matter of rote, upon its bare representation that the tax returns might contain information germane to the investigation. That is not enough, if an appropriate balance is to be struck between the privacy of income tax returns and the needs of law enforcement. [L]arger interests are at stake than those of the immediate parties—namely the interest, unrepresented by . . . the parties to this case (for the CFTC is not represented by the Department of Justice, which might be assumed to be speaking for the Internal Revenue Service as well), in the effective administration of the federal tax laws.

District court order enforcing subpoena reversed in favor of Collins.

Searches and Seizures Sometimes the evidence necessary to prove a regulatory violation can be obtained only by entering private property such as a home, an office, or a factory. When administrative agencies seek to gather information by such an entry, the Fourth Amendment's prohibition against unreasonable searches and seizures and its warrant requirement come into play. Owners of commercial property, although afforded less Fourth Amendment protection than the owners of private dwellings, do have some legitimate expectations of privacy in their business premises.

Not all agency information-gathering efforts, however, will be considered so intrusive as to amount to a prohibited search and seizure. In *Dow Chemical Co. v. United States,*[8] for instance, the Environmental Protection Agency's warrantless aerial photography of one of Dow's plants was upheld. Furthermore, in *State of New York v. Burger,*[9] the Supreme Court upheld the constitutionality of warrantless administrative inspections of the premises of "closely regulated" businesses so long as three criteria are satisfied: (1) there must be a substantial government interest in the regulatory scheme in question, (2) the warrantless inspections must be necessary to further the scheme, and (3) the inspection program must provide a constitutionally adequate

[8]476 U.S. 227 (U.S. Sup. Ct. 1986).
[9]482 U.S. 691 (U.S. Sup. Ct. 1987).

substitute for a warrant by giving owners of commercial property adequate notice that their property is subject to inspection and by limiting the discretion of inspecting officers.

Rulemaking Power

An agency's rulemaking power derives from its enabling legislation. For example, the FTC Act gives the FTC the power "to make rules and regulations for the purpose of carrying out the provisions of this Act." The Administrative Procedure Act (APA) defines a rule as "an agency statement of general or particular applicability and future effect designed to complement, interpret or prescribe law or policy." All agency rules are compiled and published in the *Code of Federal Regulations.*

Types of Rules Administrative agencies create three types of rules: procedural rules, interpretive rules, and legislative rules.

Procedural rules specify how the agency will conduct itself. For instance, agencies typically have procedural rules dealing with such matters as the manner in which advance notice of agency rulemaking proceedings will be communicated.

Interpretive rules are designed to advise regulated individuals and entities of the manner in which an agency interprets the statutes it enforces. For example, the FTC has promulgated a rule interpreting the term *consumer product,* as used in the Magnuson-Moss Warranty Act (a statute the FTC has the legal responsibility to enforce).[10] Interpretive rules technically do not have the force of law. Therefore, they are not binding on businesses and the courts. Courts interpreting regulatory statutes often give agency interpretations substantial weight, however, in deference to the agency's familiarity with the statutes it administers and its presumed expertise in the general area being regulated. Business is also likely to pay attention to agency interpretive rules because such rules indicate the circumstances in which an agency is likely to take formal enforcement action.

If consistent with an agency's enabling legislation and the Constitution, and if created in accordance with the procedures dictated by the APA, *legislative rules* have the full force and effect of law. Legislative rules thus are binding on the courts, the public, and the agency. Federal agencies have promulgated very large numbers of legislative rules, many of which address highly specific matters. For example, an FTC legislative rule states that if a party sells a quick-freeze aerosol spray product designed for the frosting of beverage glasses and the product contains an ingredient known as Fluorocarbon 12, the seller must issue a warning (on the product label) that the product should not be inhaled in concentrated form, in view of the risk that such behavior may lead to severe harm or death.[11]

Given the greater relative importance of legislative rules, you should not be surprised to learn that the process by which they are promulgated—unlike the process by which procedural and interpretive rules are created—is highly regulated by the APA and closely scrutinized by the courts. At present, there are three basic types of agency rulemaking: informal rulemaking, formal rulemaking, and hybrid rulemaking.

Informal Rulemaking *Informal rulemaking* (or "notice and comment" rulemaking) is the method most commonly employed by administrative agencies that are not forced by their enabling legislation to follow the more stringent procedures of formal rulemaking. The informal rulemaking process commences with the publication of a "*Notice of Proposed Rulemaking*" in the *Federal Register.* The APA requires that such notices contain: a statement of the time and place at which the proceedings will be held; a statement of the nature of the proceedings; a statement of the legal authority for the proceedings (usually the agency's enabling legislation); and either a statement of the terms of the proposed rule or a description of the subjects or issues to be addressed by the rule.

Publication of notice must then be followed by a *comment period* during which interested parties may submit to the agency written comments detailing their views about the proposed rule. After comments have been received and considered, the agency must publish the regulation in its final form in the *Federal Register.* As a general rule, the rule cannot become effective until at least 30 days after this final publication. The APA, however, recognizes a "good cause" exception to the 30-day waiting period requirement, and to the notice of rulemaking requirement as well, when notice would be impractical, unnecessary, or contrary to the public interest.

[10] 16 *Code of Federal Regulations* § 700.1. The Magnuson-Moss Warranty Act and FTC regulations related to it are discussed in Chapters 20 and 47.

[11] 16 *Code of Federal Regulations* § 417.6.

Agencies tend to favor the informal rulemaking process because it allows quick and efficient regulatory action. Such quickness and efficiency, however, are purchased at a significant cost—a relatively minimal opportunity for interested parties to participate in the rule-formation process. Giving interested parties the opportunity to be heard may, in some cases, ultimately further regulatory goals. For example, the vigorous debate about a proposed rule that a public hearing can provide may contribute to the creation of more effective rules. Also, providing interested parties with what they perceive to be an adequate opportunity to participate in the rulemaking process lends credibility to that process and the rules it produces, thereby enhancing the chances of voluntary compliance by the regulated industry.

Formal Rulemaking *Formal rulemaking* (or "on the record" rulemaking) is designed to give interested parties a far greater opportunity to make their views heard than that afforded by informal rulemaking. As does informal rulemaking, formal rulemaking begins with publication of a "*Notice of Proposed Rulemaking*" in the *Federal Register.* Unlike the notice employed to announce informal rulemaking procedures, however, this notice must include notice of a time and place at which a public hearing concerning the proposed rule will be held. Such hearings resemble trials in that the agency must produce evidence justifying the proposed regulation, and interested parties are allowed to present evidence in opposition to it. Both sides may examine each other's exhibits and cross-examine each other's witnesses. At the conclusion of the proceedings, the agency must prepare a formal, written document detailing its findings based on the evidence presented in the hearing.

Although the formal rulemaking process affords interested parties greatly enhanced opportunities to be heard, this greater access is purchased at significant expense and at the risk that some parties will abuse their access rights in an effort to impede the regulatory process. By tireless cross-examination of government witnesses and lengthy presentations of their own, opponents seeking to derail or delay regulation may consume months, or even years, of agency time. A classic example of such behavior would be the Food and Drug Administration's hearings on a proposed rule requiring that the minimum peanut content of peanut butter be set at 90 percent. Industry forces favored an 87 percent minimum and were able to delay regulation for almost 10 years.

Hybrid Rulemaking Frustration over the lack of access afforded by informal rulemaking and the potential for paralyzing the regulatory process that is inherent in formal rulemaking have led some courts and legislators to attempt the creation of a rulemaking process that combines some of the elements of informal and formal procedures. Although hybrid rulemaking procedures are insufficiently established and standardized at this point to permit a detailed discussion of them, some general tendencies are evident. Hybrid procedures bear some resemblance to those of formal rulemaking in that both involve some sort of hearing. Unlike formal rulemaking procedures, however, hybrid procedures tend to limit the right of interested parties to cross-examine agency witnesses.

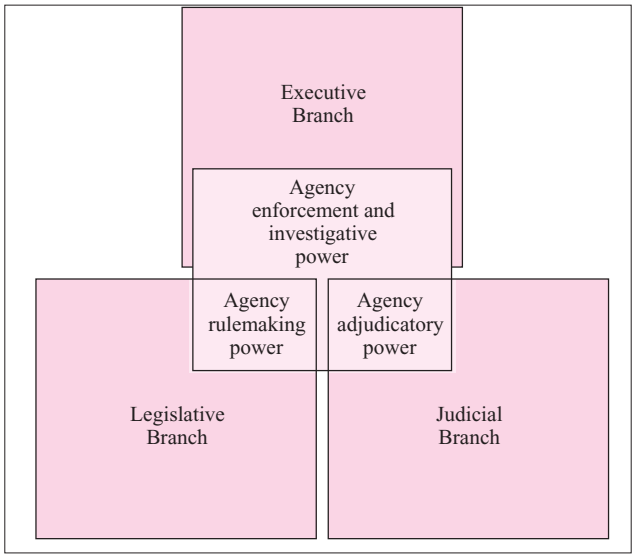
Adjudicatory Power

Most major federal agencies possess substantial adjudicatory powers. Besides having the authority to investigate alleged behaviors and to produce regulations that have legal effect, they have the power to conduct proceedings to determine whether regulatory or statutory violations have occurred. The administrative adjudication process is at once similar to, but substantially different from, the judicial process you studied in Chapter 2.

The administrative adjudication process normally begins with a complaint filed by the agency. The party charged in the complaint (called the *respondent*) files an answer. Respondents are normally entitled to a hearing before the agency. At this hearing, they may confront and cross-examine agency witnesses and present evidence of their own. Respondents may be represented by legal counsel. No juries are present in administrative adjudications, however. The cases are heard by an agency employee usually called an **administrative law judge (ALJ).** Also, unlike criminal prosecutions, the burden of proof in administrative proceedings is normally the civil *preponderance of the evidence* standard. Constitutional procedural safeguards such as the exclusionary rule do not protect the respondent.[12]

The agency, in effect, functions as police officer, prosecutor, judge, and jury. The APA attempts to deal with the obvious potential for abuse inherent in this combination in a number of ways. First, the APA attempts to

[12] *INS v. Lopez-Mendoza,* 468 U.S. 1032 (U.S. Sup. Ct. 1984). The exclusionary rule and the beyond a reasonable doubt standard employed in criminal cases are discussed in Chapter 5. The preponderance of the evidence standard is discussed in Chapter 6.



ensure that ALJs are as independent as possible by requiring internal separation between an agency's judges and its investigative and prosecutorial functions. (Note, for example, the organizational separation of the FTC's Office of Administrative Law Judges, as depicted in Figure 1.) The APA also prohibits ALJs from having private consultations with anyone who is a party to an agency proceeding and shields them from agency disciplinary action other than for "good cause." Finally, insufficient separation between an agency's adjudication function and its other functions can be contrary to basic due process requirements.

After each party to the proceeding has been heard, the ALJ renders a decision stating her findings of fact and conclusions of law, and imposing whatever penalty she deems appropriate within the parameters established by the agency's enabling legislation (e.g., a fine or a cease-and-desist order). If neither party challenges the ALJ's decision, it becomes final. The losing party, however, may appeal an ALJ's decision, which will then be subjected to a **de novo review** by the governing body of the agency (e.g., appeals from FTC ALJ decisions are heard by the five FTC commissioners). *De novo review* means that the agency's governing body may treat the proceedings as if they were occurring for the first time and may ignore the ALJ's findings. Often, however, the agency's governing body will adopt the ALJ's findings. In any event, those findings will be part of the record if a disappointed respondent seeks judicial review of an agency's decision.

Finally, it is important to note that many agency proceedings are settled by a **consent order** before completion of the adjudication process. Consent orders are similar to the nolo contendere pleas discussed in Chapter 5. Respondents who sign consent orders do not admit wrongdoing, but they waive all rights to judicial review, agree to accept a specific sanction imposed by the agency, and commonly agree to discontinue the business practice that triggered the agency action.

Figure 2 depicts the major powers of this "fourth branch" of the government.

Figure 2 *Administrative Agencies and Separation of Powers*

Controlling Administrative Agencies

By this point in our discussion of administrative agencies, we have already encountered several legal controls on agency action, such as the terms of an agency's enabling legislation, the procedural requirements imposed by the APA, and the basic constraints that the Constitution places on all governmental action. The following sections continue to focus on the important theme of agency control by examining the various devices, both formal and informal, through which the three traditional branches of government influence and control the actions of administrative agencies.

Presidential Controls

The executive branch has at its disposal a number of tools that may be employed to shape agency action. The most obvious among them is the president's power to appoint and remove agency administrators. For example, in Chapters 48 and 49, you will learn that President Reagan's appointees to the Department of Justice and the FTC made major changes in governmental antitrust enforcement policies because of their commitment to "Chicago School" antitrust ideas. This presidential power is obviously more limited in the case of independent agencies than it is where executive agencies are concerned, but the president generally has the power to appoint the heads of independent agencies and demote the prior chairpersons without cause. Skillful use of the new chair's managerial powers,

probably the most important of which is the power to influence agency hiring policies, can eventually effect substantial changes in agency policy. Also, significant and sustained policy differences between an independent agency and the executive branch often eventually trigger resignations by agency commissioners, thus providing the president with the opportunity to appoint new members whose philosophies are more congruent with his own.

The executive branch also exercises significant control over agency action through the Office of Management and Budget (OMB). The OMB plays a major role in the creation of the annual executive budget the president presents to Congress. In the process, the OMB reviews, and sometimes modifies, the budgetary requests of executive agencies. In addition, an executive order requires executive agencies to prepare cost-benefit and least-cost analyses for all major proposed rules and to submit this information to the OMB for review prior to seeking public comments. This order and a subsequent executive order requiring agencies to give the OMB early warning of possible rule changes have made the OMB a powerful player in the rulemaking process.

Finally, the president's power to *veto* legislation concerning administrative agencies represents another point of executive influence over agency operations.

Congressional Controls

The legislative branch possesses a number of devices, both formal and informal, by which it may influence agency action. Obvious avenues of congressional control include the Senate's "advice and consent" role in agency appointments, the power to amend an agency's enabling legislation (what Congress has given, Congress can take away), and the power to pass legislation that mandates changes in agency practices or procedures. Examples of the latter include the National Environmental Policy Act (NEPA), which dictated that administrative agencies file *environmental impact statements* for every agency action that could significantly affect the quality of the environment, and the Regulatory Flexibility Act, which ordered changes in agency rulemaking procedures designed to give small businesses improved notice of agency rulemaking activities that may have a substantial impact on them. Congress can also pass *sunset legislation* providing for the automatic expiration of an agency's authority unless Congress expressly extends it by a specified date. Such legislation ensures periodic congressional review of the initial decision to delegate legislative authority to an administrative agency.

Congress enjoys several other less obvious, but no less important, points of influence over agency action. For example, Congress must authorize agency budgetary appropriations. Thus, Congress may limit or deny funding for agency programs with which it disagrees. Also, the Governmental Operations Committees of both houses of Congress exercise significant oversight over agency activities. These committees review agency programs and conduct hearings concerning proposed agency appointments and appropriations. Finally, individual members of Congress may seek to influence agency action through "casework"—informal contacts with an agency on behalf of constituents who are involved with the agency.

Judicial Review

As important as the roles of the executive and legislative branches are in controlling agency action, the courts exercise the greatest control over agency behavior, perhaps because they are the branch of government most accessible to members of the public aggrieved by agency action. The APA provides for judicial review of most agency action, which takes place either in one of the U.S. courts of appeals or a U.S. district court, depending on the nature of the agency action at issue. The Supreme Court, if it chooses to grant certiorari, is the court of last resort for review of agency action.

Not all agency actions are subject to judicial review. Moreover, only certain parties may challenge those that are reviewable. An individual or organization seeking judicial review must demonstrate that the agency action being challenged is *reviewable,* that the challenging party has *standing to sue,* that *necessary administrative remedies have been exhausted,* and that the dispute is *ripe for judicial review.* These requirements are discussed below.

Reviewability Only reviewable agency actions may be challenged by dissatisfied individuals and organizations. Normally, it is not difficult for aggrieved parties to show that the agency action is reviewable because the APA creates a strong presumption in favor of reviewability. This presumption may be overcome only by a showing that "statutes preclude review" or that the decision in question is "committed to agency discretion by law." These limitations on reviewability come from Congress's power to dictate the jurisdiction of the

federal courts and from judicial deference to the proper functions of the other branches of government (e.g., a decision relating to matters of foreign policy is likely to be seen as outside the proper province of the judiciary).

Standing to Sue Once reviewability of an agency action has been established, the challenging party must demonstrate that he, she, or it has standing to sue. This means that the individual or organization seeking judicial review is "an aggrieved party" whose interests have been substantially affected by the agency action. Initially, courts took a relatively restrictive view of this basic requirement, requiring plaintiffs to show harm to a legally protected interest. More recently, however, courts have liberalized the standing requirement somewhat, requiring plaintiffs to demonstrate that they have suffered an "injury" to an interest that lies within the "zone of interests" protected by the statute or constitutional provision that serves as the basis of their challenge. Demonstrating an economic loss remains the surest way to satisfy the "injury" requirement, but emotional, aesthetic, and environmental injuries have been found sufficient on occasion.

Lujan v. Defenders of Wildlife, which follows, demonstrates that even though the standing requirement has been liberalized over the years, an asserted injury that is overly abstract, speculative, or tenuous will be insufficient to confer standing on the plaintiff.

Lujan v. Defenders of Wildlife *504 U.S. 555 (U.S. Sup. Ct. 1992)*

Section 7(a)(2) of the Endangered Species Act of 1973 divides responsibilities as to protection of endangered species between the Secretary of the Interior and the Secretary of Commerce. The statute also requires each federal agency to consult with the relevant secretary in order to ensure that any action funded by the agency would be unlikely to jeopardize the existence or habitat of an endangered or threatened species. In 1978, the secretaries referred to above promulgated a joint regulation stating that the obligations imposed by Section 7(a)(2) extend not only to actions taken in the United States but also to actions taken in foreign nations. A revised joint regulation, reinterpreting Section 7(a)(2) to require consultation only for actions taken in the United States or on the high seas, was promulgated in 1986. Defenders of Wildlife (DOW), an organization dedicated to wildlife conservation and other environmental causes, sued the Secretary of the Interior, seeking a declaratory judgment that the 1986 regulation erroneously interpreted the geographic scope of Section 7(a)(2). DOW also sought an injunction requiring the secretary to develop a new regulation restoring the interpretation set forth in the 1978 regulation. The district court denied the secretary's motion for summary judgment on the issue of whether DOW had standing to sue, granted DOW's motion for summary judgment on all issues, and ordered the secretary to develop a revised regulation. After the Eighth Circuit Court of Appeals affirmed, the Supreme Court granted certiorari.

Scalia, Justice The preliminary issue, and the only one we reach, is whether DOW has standing to seek judicial review [of the 1986 regulation]. [Article III of the U.S. Constitution] limits the jurisdiction of federal courts to "Cases" and "Controversies." Though some of its elements express merely prudential considerations that are part of judicial self-government, the core component of standing is an essential and unchanging part of the case-or-controversy requirement of Article III.

Over the years, our cases have established that the irreducible constitutional minimum of standing contains three elements: First, the plaintiff must have suffered an injury in fact—an invasion of a legally-protected interest which is (a) concrete and particularized, and (b) actual or imminent, not conjectural or hypothetical. Second, there must be a causal connection between the injury and the conduct complained of. Third, it must be likely, as opposed to merely speculative, that the injury will be redressed by a favorable decision.

The party invoking federal jurisdiction bears the burden of establishing these elements. When the suit is one challenging the legality of government action or inaction, the nature and extent of facts [necessary] to establish standing depends considerably upon whether the plaintiff is himself an object of the action (or foregone action) at issue. If he is, there is ordinarily little question that the action or inaction has caused him injury, and that a judgment preventing or requiring the action will redress it. When, however, as in this case, a plaintiff's asserted

injury arises from the government's allegedly unlawful regulation (or lack of regulation) of **someone else,** . . . standing is not precluded, but it is ordinarily substantially more difficult to establish [the necessary elements outlined above].

DOW's claim to injury is that the lack of consultation with respect to certain funded activities abroad "increases the rate of extinction of endangered and threatened species." Of course, the desire to use or observe an animal species, even for purely aesthetic purposes, is undeniably a cognizable interest for purpose of standing. "But the 'injury in fact' test requires more than an injury to a cognizable interest. It requires that the party seeking review be himself among the injured." *Sierra Club v. Morton* (1972). We shall assume for the sake of argument that [the affidavits of two DOW members, offered by DOW in opposition of the secretary's motion for summary judgment on the standing issue,] contain facts showing that certain agency-funded projects threaten listed species [a variety of crocodile in Egypt and the Asian elephant and the leopard in Sri Lanka]. [The affidavits] plainly contain no facts, however, showing how damage to the species will produce "imminent" injury to [the affiants]. That the affiants "had visited" the areas of the projects before the projects commenced proves nothing. And the affiants' profession of an "intent" to return to the places they had visited before—where they will presumably, this time, be deprived of the opportunity to observe animals of the endangered species—is simply not enough. Such "some day" intentions—without any description of concrete plans, or indeed any specification of *when* the some day will be—do not support a finding of the "actual or imminent" injury that our cases require.

[DOW also asserts theories] called, alas, the "animal nexus" approach, whereby anyone who has an interest in studying or seeing the endangered animals anywhere on the globe has standing; and the "vocational nexus" approach, under which anyone with a professional interest in such animals can sue. Under these theories, anyone who goes to see elephants in the Bronx Zoo, and anyone who is a keeper of Asian elephants in the Bronx Zoo, has standing to sue because the Director of AID did not consult with the Secretary regarding the AID-funded project in Sri Lanka. This is beyond all reason. Standing is not "an ingenious academic exercise in the conceivable." *U.S. v. Students Challenging Regulatory Agency Procedures* (1973). [Instead, standing requires] a factual showing of perceptible harm. It is clear that the person who observes or works with a particular animal threatened by a federal decision is facing perceptible harm, since the very subject of his interest will no longer exist. It is even plausible—though it goes to the outermost limit of plausibility—to think that a person who observes or works with animals of a particular species in the very area of the world where that species is threatened by a federal decision is facing such harm, since some animal that might have been the subject of his interest will no longer exist. It goes beyond the limit, however, and into pure speculation and fantasy, to say that anyone who observes or works with an endangered species, anywhere in the world, is appreciably harmed by a single project affecting some portion of that species with which he has no more specific connection.

The Court of Appeals found that DOW had standing for an additional reason: because it had suffered a "procedural injury" [by virtue of the Endangered Species Act's so-called "citizen-suit" provision stating that "any person" may bring suit to enjoin a violation of the statute]. The court held that . . . the citizen-suit provision [allows] *anyone* [to] file suit in federal court to challenge the Secretary's (or presumably any other official's) failure to follow the assertedly correct consultative procedure, notwithstanding their inability to allege any discrete injury flowing from that failure. The court held that the injury-in-fact requirement [for standing purposes] had been satisfied by congressional conferral upon *all* persons of an abstract, self-contained, noninstrumental "right" to have the Executive [branch] observe the procedures required by law. We reject this view. We have consistently held that a plaintiff raising only a generally available grievance about government—claiming only harm to his and every citizen's interest in proper application of the Constitution and laws, and seeking relief that no more directly and tangibly benefits him than it does the public at large—does not state an Article III case or controversy.

[I]t is clear that in suits against the government, at least, the concrete injury requirement must remain. We hold that DOW lacks standing to bring this action.

Decision of Eighth Circuit Court of Appeals reversed in favor of Secretary of Interior.

Exhaustion and Ripeness Once standing has been established, two further obstacles—exhaustion and ripeness—confront the party challenging an agency action. Courts do not want to allow regulated parties to short-circuit the regulatory process. They also want to give agencies the chance to correct their own mistakes and to develop fully their positions in disputed matters. Accordingly, they normally insist that aggrieved parties *exhaust necessary administrative remedies* before they will grant judicial review.[13] The requirement that a dispute be *ripe* for judicial review is a general requirement emanating from the Constitution's insistence that only "cases or controversies" are judicially resolvable. In determining ripeness, the courts weigh the hardship to the parties of withholding judicial review against the degree of refinement of the issues still possible (e.g., might further administrative action alter the nature of the issues or eliminate the need for judicial review?).

Legal Bases for Challenging Agency Actions Assuming that the above prerequisites to judicial review are met, there are various legal theories on which agency action may be attacked. It may be alleged that the agency's action was *ultra vires* (exceeded its authority as granted by its enabling legislation). For example, as this book went to press in early 2000, the Supreme Court struck down the Food and Drug Administration's highly publicized 1996 regulations dealing with cigarettes and smokeless tobacco. The Court held that in the Food, Drug, and Cosmetic Act, Congress neither gave, nor intended to give, the FDA authority to regulate tobacco products.[14]

Alternatively, it may be alleged that the agency *substantially deviated from procedural requirements* contained in the APA or in the agency's enabling legislation. Agency action may also be challenged as *unconstitutional* or as the product of an *erroneous interpretation of statutes.* The *Sweet Home* case, which follows shortly, illustrates the latter line of attack. Finally, agency action may be overturned if it is *unsubstantiated by the facts* before the agency when it acted.

Standards of Review The degree of scrutiny that courts will apply to agency action depends on the nature of issues in dispute and the type of agency proceedings that produced the challenged action. Courts are least likely to defer to agency action when *questions of law* are at issue. Although courts afford substantial consideration to an agency's interpretations of the statutes it enforces, the courts are still the ultimate arbiters of the meaning of statutes and constitutional provisions.

When *questions of fact* or *policy* are at issue, courts are more likely to defer to the agency because it presumably has superior expertise and because the agency fact finders who heard and viewed the evidence were better situated to judge its merit. When agency factual judgments are at stake, the APA provides for three standards of review, the most rigorous of which is *de novo* review.

When conducting a *de novo* review, courts make an independent finding of the facts after conducting a new hearing. Efficiency considerations plainly favor limited judicial review of the facts. Accordingly, *de novo* review is employed only when required by statute, when inadequate fact-finding proceedings were used in an agency adjudicatory proceeding, or when new factual issues that were not before the agency are raised in a proceeding to enforce a nonadjudicatory agency action.

When courts review formal agency adjudications or formal rulemaking, the APA calls for the application of a **substantial evidence** test. Only agency findings that are "unsupported by substantial evidence" will be overturned. In conducting substantial evidence reviews, courts look at the reasonableness of an agency's actions in relation to the facts before it rather than conducting an independent fact-finding hearing (such as that done in *de novo* reviews). The substantial evidence test also tends to be employed in hybrid rulemaking cases.

The judicial standard of review used in cases involving informal agency adjudications or rulemaking is the **arbitrary and capricious** test. This is the least rigorous standard of judicial review, in view of the great degree of deference it accords agency decisions. In deciding whether an agency's action was arbitrary and capricious, a reviewing court should not substitute its judgment for that of the agency. Instead, it should ask whether there was an adequate factual basis for the agency's action, and should sustain actions that do not amount to a "clear error of judgment." Although the substantial evidence and arbitrary and capricious tests are separate and distinct in theory, the distinctions often tend to blur in actual practice.

[13]Necessary administrative remedies are those a statute or regulation establishes as mandatory steps to be completed before judicial review can be sought. In *Darby v. Cisneros,* 509 U.S. 137 (U.S. Sup. Ct. 1993), the Supreme Court held that federal courts do not have the authority to require plaintiffs to exhaust available administrative remedies before seeking judicial review unless the relevant statutes or agency rules specifically mandate exhaustion as a prerequisite to judicial review.

[14]*Food and Drug Administration v. Brown & Williamson Tobacco Corp.,* 2000 U.S. LEXIS 2195 (U.S. Sup. Ct. 2000).

Babbitt v. Sweet Home Chapter of Communities for a Great Oregon
515 U.S. 687 (U.S. Sup. Ct. 1995)

Section 9 of the Endangered Species Act (ESA) makes it unlawful for any person to "take" an endangered or threatened species of fish or wildlife. A definition section in the ESA states that take *means "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct." The Secretary of the Department of the Interior (the Secretary) promulgated a regulation that defines the term* harm *for purposes of the statutory language just quoted. This regulation states that* harm *"means an act which actually kills or injures wildlife" and that "[s]uch act may include significant habitat modification or degradation where it actually kills or injures wildlife by significantly impairing essential behavioral patterns, including breeding, feeding or sheltering."*

A declaratory judgment action attacking the validity of this regulation was brought against the Secretary by a group of landowners, logging companies, and families dependent on the forest products industries, and by organizations representing those parties' interests. The plaintiffs sought a judicial ruling that the regulation defining harm *as including habitat modification or degradation was an unreasonable and erroneous interpretation of the ESA. The plaintiffs (referred to here collectively as "Sweet Home") alleged that they had been injured economically by the government's application of the* harm *regulation to the red-cockaded woodpecker, an endangered species, and the northern spotted owl, a threatened species. The federal district court upheld the regulation and granted summary judgment in favor of the Secretary. The U.S. Court of Appeals for the District of Columbia Circuit reversed, however. The U.S. Supreme Court granted the Secretary's petition for a writ of certiorari.*

Stevens, Justice The text of the [ESA] provides three reasons for concluding that the Secretary's interpretation is reasonable. First, an ordinary understanding of the word "harm" supports it. The dictionary definition of the verb form of "harm" is "to cause hurt or damage; to injure" [quoting *Webster's Third New International Dictionary*]. In the context of the ESA, that definition naturally encompasses habitat modification that results in actual injury or death to members of an endangered or threatened species.

[Sweet Home argues] that the Secretary should have limited the purview of "harm" to direct applications of force against protected species, but the dictionary definition does not include the word "directly" or suggest in any way that only direct or willful action that leads to injury constitutes "harm." Moreover, unless the statutory term "harm" encompasses indirect as well as direct injuries, the word has no meaning that does not duplicate the meaning of other words that [the statutory definition section] uses to define "take." A reluctance to treat statutory terms as surplusage supports the reasonableness of the Secretary's interpretation.

Second, the broad purpose of the ESA supports the Secretary's decision to extend protection against activities that cause the precise harms Congress enacted the statute to avoid. As stated in section 2 of the [ESA], among its central purposes is "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved." Given Congress' clear expression of the ESA's broad purpose to protect endangered and threatened wildlife, the Secretary's definition of "harm" is reasonable.

Third, . . . Congress in 1982 authorized the Secretary to issue permits for takings that [section 9] would otherwise prohibit, "if such taking is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity," [quoting section 10 of the ESA]. [This authorization] strongly suggests that Congress understood [section 9] to prohibit indirect as well as deliberate takings. The permit process requires the applicant to prepare a "conservation plan" that specifies how he intends to "minimize and mitigate" the "impact" of the activity on endangered and threatened species, making clear that Congress had in mind foreseeable rather than merely accidental effects on listed species. No one could seriously request an "incidental" take permit to avert section 9 lability for direct, deliberate action against a member of an endangered or threatened species, but [Sweet Home] would read "harm" so narrowly that the permit procedure would have little more than that absurd purpose. Congress'

addition of the section 10 permit provision supports the Secretary's conclusion that activities not intended to harm an endangered species, such as habitat modification, may constitute unlawful takings under the ESA unless the Secretary permits them.

The Court of Appeals [erred] in asserting that "harm" must refer to a direct application of force because the words around it do. [T]he court's premise was flawed. Several of the words that accompany "harm" in the [statutory] definition of "take," especially "harass," "pursue," "wound," and "kill," refer to actions or effects that do not require direct applications of force. [The Court of Appeals gave] "harm" essentially the same function as other words in the definition, thereby denying it independent meaning. The statutory context of "harm" suggests that Congress meant that term to serve a particular function in the ESA, consistent with but distinct from the functions of the other verbs used to define "take." The Secretary's interpretation of "harm" to include indirectly injuring endangered animals through habitat modification permissibly interprets "harm" to have a character of its own.

We need not decide whether the statutory definition of "take" compels the Secretary's interpretation of "harm," because our conclusions that Congress did not unambiguously manifest its intent to adopt [Sweet Home's] view and that the Secretary's interpretation is reasonable suffice to decide this case. The latitude the ESA gives the Secretary in enforcing the statute, together with the degree of regulatory expertise necessary to its enforcement, establishes that we owe some degree of deference to the Secretary's reasonable interpretation.

When it enacted the ESA, Congress delegated broad administrative and interpretive power to the Secretary. The task of defining and listing endangered and threatened species requires an expertise and attention to detail that exceeds the normal province of Congress. Fashioning appropriate standards for issuing permits under section 10 for takings that would otherwise violate section 9 necessarily requires the exercise of broad discretion. The proper interpretation of a term such as "harm" involves a complex policy choice. When Congress has entrusted the Secretary with broad discretion, we are especially reluctant to substitute our views of wise policy for his. In this case, that reluctance accords with our conclusion . . . that the Secretary reasonably construed the intent of Congress when he defined "harm" to include "significant habitat modification or degradation that actually kills or injures wildlife."

Judgment of Court of Appeals reversed.

Information Controls

Over the last four decades, Congress has enacted three major statutes aimed at controlling administrative agencies through the regulation of information. Each of these statutes represents a compromise between competing social interests of significant importance. On one hand, we have a strong democratic preference for public disclosure of governmental operations, believing that "government in the dark" is less likely to be consistent with the public interest than is "government in the sunshine." On the other hand, we recognize that some sensitive governmental activities must be shielded from the scrutiny of unfriendly parties, and that disclosure of some information may unjustifiably invade personal privacy, hinder government law enforcement efforts, or provide the competitors of a company about which information is being disclosed with proprietary information that could be used unfairly to the competitors' advantage.

Freedom of Information Act

The *Freedom of Information Act* (FOIA) has existed for nearly 35 years. Congress enacted it to enable private citizens to obtain access to documents in the government's possession. Agencies must normally respond to public requests for documents within 10 days after such a request has been received. An agency bears the burden of justifying a denial of any FOIA request. Denials are appealable to an appropriate federal district court. Successful plaintiffs may recover their costs and attorney's fees.

Not all government-held documents are obtainable under the FOIA, however. The FOIA exempts from disclosure documents that:

1. Must be kept secret in the interest of national security.
2. Concern an agency's internal personnel practices.
3. Are specifically exempted from disclosure by statute.

4. Contain trade secrets or other confidential or privileged commercial or financial information.
5. Reflect internal agency deliberations on matters of policy or proceedings.
6. Appear in individual personnel or medical files, or in similar files if disclosure would constitute a clearly unwarranted invasion of personal privacy.
7. Would threaten the integrity of a law enforcement agency's investigations or jeopardize an individual's right to a fair trial.
8. Relate to the supervision or regulation of financial institutions.
9. Contain geological or geophysical data.

Frequent users of the FOIA include the media, industry trade associations, public interest groups, and companies seeking to obtain useful information about their competitors. The *Public Citizen* case, which follows shortly, deals with the fourth exemption listed above. It is important to note that although the FOIA allows agencies to refuse to disclose exempted documents, it does not impose on them the affirmative duty to do so. The Supreme Court has held that individuals cannot compel an agency to deny an FOIA request for allegedly exempt documents that contain sensitive information about them.[15]

The FOIA has recently been the focus of considerable controversy on two points. First, budgetary cutbacks have combined with growing numbers of requests for information to produce agency delays as long as two years in responding to information requests. Courts tend to tolerate agency delays if the agency can show that it made a "due diligence" effort to respond. Second, the dramatic increase in computerized information storage that has occurred since the passage of the FOIA has created problems not specifically contemplated by the statute, which focuses on information stored in documentary form. Do interested parties have the same rights of access to data stored in agency computers that they have to government documents? May the government destroy electronic mail messages, or must it save them? Future legislative or judicial action may be necessary for definitive resolution of such questions.

[15] *Chrysler Corp. v. Brown,* 441 U.S. 281 (U.S. Sup. Ct. 1980).

Public Citizen Health Research Group v. Food & Drug Administration
185 F.3d 898 (D.C. Cir. 1999)

Relying on the Freedom of Information Act (FOIA), Public Citizen Health Research Group asked the Food and Drug Administration (FDA) for documents relating to drug applications that had been abandoned for health or safety reasons. When the FDA denied this request, Public Citizen sued in federal court. Schering Corporation, which had submitted five investigational new drug applications (INDs) of the sort requested by Public Citizen, intervened as a defendant.

The FDA and Schering contended that certain documents in the five INDs contained confidential commercial information and could therefore be withheld under Exemption 4 of the FOIA. Even though the district court concluded that some of the documents otherwise were subject to being withheld under Exemption 4, the court granted summary judgment in favor of Public Citizen and ordered that all of the disputed documents be released. In so ruling, the court relied on section 355(1) of the Food, Drug, & Cosmetic Act, which requires disclosure of safety and effectiveness data and information submitted in certain drug applications. The FDA and Schering appealed to the U.S. Court of Appeals for the District of Columbia Circuit. The Court of Appeals held that section 355(1) did not apply to the case and thus did not require disclosure of the documents sought by Public Citizen. The Court of Appeals then considered whether Exemption 4 justified the FDA's refusal to disclose the documents at issue.

Ginsburg, Circuit Judge Exemption 4 of the FOIA permits an agency to withhold "commercial or financial information [that was] obtained from a person [and is] privileged or confidential." Information that a person is required to submit to the Government is considered confidential only if its disclosure is likely either "(1) to impair the Government's ability to obtain necessary information in the future; or (2) to cause substantial harm to the competitive position of the person from whom the

information was obtained." In the present case the FDA and Schering invoke only the latter standard.

Meanwhile, Public Citizen claims disclosure would prevent other drug companies "from repeating Schering's mistakes, thereby avoiding risk to human health." [Public Citizen] relies upon dicta in several district court opinions in arguing that under Exemption 4 the court should gauge whether the competitive harm done to the sponsor of an IND by the public disclosure of confidential information is outweighed by the strong public interest in safeguarding the health of human trial participants.

We reject Public Citizen's proposal because a consequentialist approach to the public interest in disclosure is inconsistent with the balance of public and private interests [that] the Congress struck in Exemption 4. [T]he Congress has already determined the relevant public interest: if through disclosure "the public would learn something directly about the workings of the *Government,*" then the information should be disclosed unless it comes within a specific exemption. *National Association of Retired Federal Employees v. Horner* (D.C. Cir. 1989). Indeed, Public Citizen's main reason for seeking this information is to "review whether the FDA is adequately safeguarding the health of people who participate in drug trials"; the information sought, in other words, would reveal "what the government is up to." *Department of Justice v. Reporters Committee for Freedom of the Press* (U.S. Sup. Ct. 1989). It is not open to Public Citizen, however, to bolster the case for disclosure by claiming an additional public benefit in that, if the information is disclosed, . . . other drug companies will not conduct risky clinical trials of the drugs that Schering has abandoned. That is not related to "what the government is up to." [T]he [Supreme] Court has clearly stated [in *Reporters Committee*] that "whether disclosure of a . . . document . . . is warranted must turn on the nature of the requested document and its relationship to the basic purpose of the FOIA to open agency action to the light of public scrutiny . . . rather than on the particular purpose for which the document is being requested." In other words, the public interest side of the balance is not a function of the identity of the requester . . . or of any potential negative consequences disclosure may have for the public.

In litigation seeking the release of information under the FOIA, the [government] agency has the burden of showing that requested information comes within a FOIA exemption. Having already rejected Public Citizen's argument that any collateral benefit from the disclosure of information—that is, any benefit beyond learning "what the government is up to"—must be weighed against the competitive harm that would result from disclosure, we do not consider Public Citizen's assertion that disclosure would in fact prevent the exposure of human beings to a health risk. In any event, as both the FDA and Schering point out, were a competitor to submit an IND involving a risk known to the FDA because of its experiences with Schering's INDs, the agency could and presumably would refuse to permit that company to begin clinical testing.

We turn therefore to Schering's evidence of competitive harm from disclosure of . . . three [of the] INDs, all of which relate to the same antifungal drug. According to the affidavit of its Dr. George H. Miller, the company "has just commenced clinical testing on a successor [drug] which was designed based on information learned during development of [the drugs described in the INDs]. He also states that "the development and marketing of new antifungal products is . . . being actively engaged in by a number of other drug companies" which could make use of the information in the INDs in order to eliminate much of the time and effort that would otherwise be required to bring to market a product competitive with the product for which Schering filed its most recent IND. This is clearly the type of competitive harm envisioned in Exemption 4.

[A] fourth IND . . . concerned a drug designed to suppress allergic inflammations and subsequent symptoms of asthma. Public Citizen concedes that Schering is now testing compounds related to the abandoned drug. Nonetheless, Public Citizen complains that the company does not "explain with any specificity how the pre-clinical and clinical studies on the old compound would lead its competitors to the new compounds that Schering has subsequently identified." In the affidavit Schering filed to support withholding the documents in this IND, Dr. Francis Cuss recounts that the company initially believed the drug was a "leukotrine inhibitor," but that its "scientists observed certain unanticipated effects during toxicity and clinical testing . . . suggesting that the drug may have achieved its anti-inflammatory effects through a

different mechanism." Therefore, states the affiant, the "toxicity and clinical data together could direct a competitor of Schering . . . to pursue the same avenues of research and development" that Schering has pursued since abandoning this IND. We think this explanation [is] sufficiently specific to support Schering's argument that disclosure of information in this IND would cause it substantial competitive harm. Accordingly, we reverse that portion of the district court's order requiring [the FDA] to release the documents in [the] four INDs [just discussed].

We turn now to the documents in the fifth IND. We find that Schering's affidavit professing the extent of competitive injury it would suffer from disclosure of the information in this IND is not sufficient to support [its requests that the FDA be allowed to withhold the documents under Exemption 4]. We therefore affirm that portion of the district court's order requiring the agency to release [the documents] to Public Citizen.

In view of our holding that the agency may, under Exemption 4, withhold information in four of the INDs, we turn to Public Citizen's alternative request that we remand the case for the district court to determine whether any non-exempt portions of the documents that the agency may withhold can be segregated and disclosed. [T]he district court's disposition of this case [meant that the court] had no need to address the issue of segregability the first time around. Because the focus in the FOIA is information, not documents, and an agency cannot justify withholding an entire document simply by showing that it contains some exempt material, we remand this case for the district court to determine whether the documents the agency has withheld contain information that can be segregated and disclosed.

Judgment of district court affirmed in part and reversed in part; case remanded to district court for further proceedings.

Privacy Act of 1974

The **Privacy Act of 1974** allows individuals to inspect files that agencies maintain on them and to request that erroneous or incomplete records be corrected. It also attempts to prevent agencies from gathering unnecessary information about individuals and forbids the disclosure of an individual's records without his written permission, except in certain specifically exempted circumstances. For example, records may be disclosed to employees of the agency that collected the information if those employees need the records to perform their duties (the "need to know" exception), to law enforcement agencies, to other agencies' personnel for "routine use" (uses for purposes compatible with the purpose for which the record was collected), and to persons filing legitimate FOIA requests. In addition, records may be disclosed if a court order requires disclosure.

Government in the Sunshine Act

The **Government in the Sunshine Act of 1976** was designed to ensure that "[e]very portion of every meeting of an agency shall be open to public observation." However, complete public access to all agency meetings could have the same negative consequences that unrestrained public access to agency records may sometimes produce. Accordingly, the Sunshine Act exempts certain agency meetings from public scrutiny under circumstances similar to those under which documents are exempt from disclosure under the FOIA.

Issues in Regulation

"Old" Regulation versus "New" Regulation

Some interested observers of regulatory developments over roughly the past 50 years have noted significant differences between the regulations that originated during the Progressive (1902 to 1914) and New Deal (1933 to 1938) eras and many regulations promulgated more recently.[16] They argue not only that the number and scope of regulatory controls have

[16]See, for example, David Vogel, "The 'New' Social Regulation in Historical and Comparative Perspective," in *Regulation in Perspective,* ed. T. McGraw (Cambridge, MA: Harvard University Press, 1981), p. 155.

increased substantially in recent years, but also that the focus and the impact of regulation have changed significantly.

Whereas earlier regulation often focused on business practices that harmed the economic interests of specific segments of society (e.g., workers, small-business owners, investors), many modern regulations focus on the health and safety of all citizens. Furthermore, whereas earlier regulations often focused on a particular industry or group of industries (e.g., the railroads or the securities industry), many modern regulations affect large segments of industry (e.g., Title VII of the Civil Rights Act of 1964 and regulations governing environmental pollution and workplace safety). Finally, whereas earlier congressional delegations of regulatory power tended to be quite broad (e.g., the FTC Act's prohibition of "unfair methods of competition" and "unfair or deceptive acts or practices"), many more recent regulatory statutes have been extremely detailed.

What are the consequences of these changes in the nature of regulation? Far more businesses than ever before feel the impact of federal regulation, and far more areas of internal corporate decisionmaking are affected by regulation. These changes tend to erode the historic distinction between "regulated" and other industries, and to heighten the importance of business–government relations. Detailed regulatory statutes also increase Congress's role in shaping regulatory policy at the expense of administrative discretion, making regulatory policy arguably more vulnerable to legislative lobbying efforts.

"Captive" Agencies and Agencies' "Shadows"

Proponents of regulation have traditionally feared that regulatory agencies would become "captives" of the industries they were charged with regulating. Through "revolving door" appointments by which key figures move back and forth between government and the private sector, and through excessive reliance on "experts" beholden to industry, the independence of administrative agencies may be compromised and their effectiveness as regulators destroyed.

More recently, commentators sympathetic to business have argued that similar dangers to agency independence exist in the form of the nonindustry "shadow" groups that public interest organizations maintain to monitor agency actions (e.g., the Center for Auto Safety, which monitors the work of the Highway Transportation Safety Administration). Agencies may develop dependency relationships with their shadows or at least make decisions based in part on their shadows' anticipated reactions. Such informal means of shaping regulatory policy, when combined with the ability to challenge agency actions in court, have made public interest organizations important players in the contemporary regulatory process.

Deregulation versus Reregulation

A useful axiom for understanding the process of social and legal evolution is that *the cost of the status quo is easier to perceive than the cost of change.* Few things are more illustrative of the operation of this axiom than the history of regulation in the United States.

In the latter years of the 19th century, the social costs of living in an unregulated environment were readily apparent. Large business organizations often abused their power at the expense of their customers, suppliers, employees, and distributors, and sought to increase their power by acquiring their competitors or driving them out of business. Market forces, standing alone, were apparently unable to protect the public from defective, and in some cases dangerous, products. As a result of these and numerous other social and historical factors, the past century witnessed a tremendous growth in government and in government regulation of business.

Regulation, too, has its costs. Regulatory bureaucracies generate their own internal momentum and have their own interests to protect. They may become insensitive to the legitimate concerns of the industries they regulate and the public they supposedly serve. They may continue to seek higher and higher levels of safety, heedless of the fact that life necessarily involves some elements of risk and that the total elimination of risk in a modern technological society may be impossible—or if possible, obtainable at a cost that we cannot afford to pay. At a time when many Americans are legitimately concerned about economic efficiency, as well as the ability of U.S. companies to compete effectively in world markets against competitors who operate in less regulated environments, these and other costs of regulation are also readily apparent.

As a result, in the last 15 to 20 years, we have witnessed substantial deregulation in a number of industries such as the airline, banking, railroad, and trucking industries. The results of these efforts are, at best,

mixed. The case of airline regulation should suffice to make the point. Proponents of deregulation cite the generally lower fares that deregulation has produced. Opponents tend to point to increased airline overbooking practices, reduced or eliminated services to smaller communities, and increased safety problems, all of which, they argue, are products of deregulation. The costs of deregulation have generated predictable calls for reregulating the airline industry. The ultimate outcome of the deregulation versus reregulation debate will depend on which costs we as a society decide we would prefer to pay.

Ethical and Public Policy Concerns

1. Earlier in this chapter, you learned that agency formal rulemaking procedures are vulnerable to industry tactics aimed at delaying regulation (e.g., the example concerning the minimum peanut content of peanut butter). Are such industry tactics ethically justifiable?

2. Question 1 focuses on delaying tactics practiced by industry. It is important to note, however, that agencies have also been known to engage in delay and other tactics designed to frustrate citizens and organizations with whom they interact. For example, an agency may delay its response to an FOIA request, untruthfully arguing that staff shortages prevent a timely response, or it may refuse to turn over documents that it knows are not exempt from disclosure, forcing those seeking disclosure to engage in expensive and time-consuming litigation to attain their ends. Are such agency tactics ethically justifiable?

3. In our discussion of the Freedom of Information Act, you learned that companies seeking to obtain useful information about their competitors frequently seek access to documents covered by the act. Is this an ethical way to gain access to information?

Problems and Problem Cases

1. Title X of the Public Health Service Act provides federal funding for family-planning services. Section 1008 of the statute specifies that none of the federal funds provided under Title X are to be "used in programs where abortion is a method of family planning." In 1988, the Secretary of Health and Human Services issued new regulations that, among other things, prohibited family-planning services that receive Title X funds from engaging in counseling concerning the use of abortion as a method of family planning, referrals for abortion as a method of family planning, and activities amounting to encouragement or advocacy of abortion as a method of family planning. Various Title X grantees and physicians supervising Title X funds challenged the validity of the regulations and sought an injunction against their implementation. Were the regulations a permissible interpretation of Section 1008? Did the regulations violate constitutional guarantees?

2. In November 1984, the Federal Election Commission (FEC) began an investigation of the activities of the Lyndon Larouche Campaign for the Democratic Party's presidential nomination. The investigation centered on allegations that the campaign had falsified its records and obtained federal election matching funds by claiming that donations via credit cards had been made by individuals who denied making the donations. In December 1984, the FEC issued a subpoena requiring the campaign to produce records regarding the solicitation of contributions (including the names of solicitors and those solicited), contributions actually received, and all telephone records regarding the solicitation of funds. When the Larouche campaign failed to comply with the subpoena, the FEC brought an action in a federal district court to obtain enforcement. The district court ordered the campaign to comply with the subpoena. The Larouche campaign appealed on First Amendment grounds. Was the district court's compliance order proper?

3. Small lodges in remote regions of Alaska cater to hunters and fishermen. These lodges provide food and shelter, guide services, and air transportation to and from the lodge and on side trips, all for a flat fee. Hunting and fishing guides employed by the lodges often pilot light aircraft as part of their guiding service. Beginning in 1963, the Federal Aviation Administration, through its Alaskan Region office, consistently advised guide pilots that they were not governed by FAA regulations dealing with commercial pilots. This advice stemmed from a 1963 Civil Aeronautics Board decision in a case in which the FAA had attempted to sanction a guide pilot who had not complied with FAA regulations applicable to commercial pilots. The Civil Aeronautics Board concluded that the guide pilot's flight with a hunter was merely incidental to the guiding business, that the

guide pilot was not a commercial pilot, and that the FAA's commercial pilot regulations therefore did not apply. During the 1990s, officials at FAA headquarters in Washington, D.C., began expressing concern about the safety of guide pilots and their passengers. In 1998, the FAA published an announcement that was aimed at guide pilots. This announcement stated that guide pilots must abide by all FAA regulations applicable to commercial pilots. In a petition for judicial review of this FAA action, the Alaska Professional Hunters Association (APHA) attacked the validity of the announcement and the new rule it purported to adopt. APHA contended that because the FAA sought to adopt a rule that was contrary to the longstanding interpretation of the FAA's regulations and contrary to the expectations of the guide pilots and the lodges for which they worked, the FAA at a minimum needed to follow the "notice and comment" (informal rulemaking) procedure before adopting a new rule. Simply announcing the new rule, APHA argued, was improper. Was APHA's contention correct?

4. On December 10, 1986, a federal grand jury indicted James Mallen for allegedly making false statements to the Federal Deposit Insurance Corporation (FDIC) and for allegedly making false statements to a bank for the purposes of influencing the actions of the FDIC. Mallen was the president and a director of a federally insured bank at the time he was indicted. On January 20, 1987, the FDIC issued an ex parte order stating that Mallen's continued service could "pose a threat to the interests of the bank's depositors or threaten to impair public confidence in the bank." The order suspended Mallen as president and as a director of the bank and prohibited him "from further participation in any manner in the conduct of the affairs of the bank, or any other bank insured by the FDIC." In issuing the suspension order without first holding a hearing on the matter, the FDIC acted pursuant to a section of the Financial Institutions Supervisory Act. A copy of the FDIC's order was served on Mallen on January 26, 1987. Four days later, his attorney filed a written request for an "immediate administrative hearing" to commence no later than February 9. The FDIC scheduled a hearing for February 18, but on February 6, Mallen filed suit against the FDIC. Arguing that the FDIC's action denied him due process, Mallen sought a preliminary injunction against the suspension order. Was Mallen denied due process?

5. John Doe began work at the Central Intelligence Agency (CIA) in 1973 as a clerk-typist. Periodic fitness reports consistently rated him as an excellent or outstanding employee. By 1977, he had been promoted to covert electronics technician. In January 1982, Doe voluntarily told a CIA security officer that he was a homosexual. Almost immediately, the CIA placed Doe on paid administrative leave and began an investigation of his sexual orientation and conduct. Doe submitted to an extensive polygraph examination during which he denied having sexual relations with foreign nationals and maintained that he had not disclosed classified information to any of his sexual partners. The polygraph officer told Doe that the test results indicated that his responses had been truthful. Nonetheless, a month later Doe was told that the CIA's Office of Security had determined that his homosexuality posed a threat to security. CIA officials declined, however, to explain the nature of the danger. Doe was asked to resign. When he refused to do so he was dismissed by CIA Director William Webster, who "deemed it necessary and advisable in the interests of the United States to terminate [Doe's] employment with this Agency pursuant to section 102(c) of the National Security Act." The statutory section cited by the director allows termination of a CIA employee whenever the director "shall deem such termination necessary or advisable in the interests of the United States." Doe filed suit against the CIA, arguing that his termination was unlawful under section 102(c) and various constitutional guarantees. The CIA moved to dismiss Doe's complaint, arguing that the director's decision was a decision committed to agency discretion by law and thus was not subject to judicial review. Was the CIA's argument correct?

6. Scott Armstrong submitted a Freedom of Information Act (FOIA) request that, among other things, called for the federal government to reveal a list of names of lower-level FBI agents who attended certain meetings at the White House during the mid-1980s. When the government refused to reveal the agents' names, Armstrong filed suit under the FOIA. Upholding this refusal, the district court agreed with the government's contention that the names of FBI agents should always be exempt from disclosure under the FOIA exemption for "personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy." On appeal, Armstrong argued that the district court erred

in concluding that the FOIA's privacy exemption justifies a categorical rule that FBI agents' names are exempt from disclosure. Was Armstrong correct?

7. For many years, section 109 of the Federal Credit Union Act provided that "[f]ederal credit union membership shall be limited to groups having a common bond of occupation or association, or to groups within a well-defined neighborhood, community, or rural district." Until 1982, the National Credit Union Administration and its predecessor agencies consistently interpreted section 109 as requiring that the same common bond of occupation unite every member of an occupationally defined credit union. In 1982, however, the NCUA reversed its longstanding policy in order to permit credit unions to be composed of multiple unrelated employer groups. The NCUA thus began interpreting section 109's common bond requirement as applying only to each employer group in a multiple-group credit union, rather than to every member of that credit union. Several banks and the American Bankers Association sought judicial review of this action by the NCUA. They alleged that the NCUA's 1982 interpretation of section 109 was improper and impermissible. Were the banks and the Bankers Association correct?

8. The federal Clean Water Act provides for two sets of water quality measures: effluent limitations, which are promulgated by the Environmental Protection Agency (EPA), and water quality standards, which are promulgated by the states. The Clean Water Act generally prohibits the discharge of effluent into a navigable body of water unless the party making such a discharge obtains a permit to do so from a state with an EPA-approved permit program or from the EPA itself. The EPA issued a Fayetteville, Arkansas, sewage treatment plant a permit to discharge effluent into an Arkansas stream that ultimately reaches the Illinois River upstream from the Oklahoma border. The permit included conditions designed to make the Fayetteville discharge comply with Oklahoma's water quality standards. Oklahoma challenged the permit's issuance and terms. Following a hearing, an EPA administrative law judge affirmed the issuance of the permit. After the EPA's chief judicial officer did the same, Oklahoma sought judicial review in federal court. What standard of review should the court follow?

9. An agent of the Pennsylvania Department of Environmental Resources saw Disposal Service's loaded trash truck backing into a building that was used to compact waste to be loaded onto tractor-trailers for transportation and final disposal. Knowing the building's purpose and that Disposal Service did not have a permit to operate it as a transfer station, as required by the state Solid Waste Management Act (SWMA), the agent entered the property, went into the building, and observed the operation. Disposal Service was later prosecuted for operating a transfer station without a permit. Disposal Service moved to suppress the agent's evidence, arguing that his warrantless entry onto the property violated the Fourth Amendment. The state argued that the SWMA's provisions allowing such warrantless inspections were constitutional. Should the evidence be suppressed?

10. The *New York Times* (the *Times*) filed a Freedom of Information Act (FOIA) request with the National Aeronautics and Space Administration (NASA) for "transcripts of all voice and data communications recorded aboard the space shuttle *Challenger*" on the day when the shuttle self-destructed, killing all seven astronauts on board. The *Times* also requested copies of voice communication tapes. NASA provided a written transcript of the only voice recording made, but refused to turn over a copy of the tape itself, arguing that to do so would violate the privacy of the astronauts' families by exposing them to replays of their loved ones' voices. NASA argued that the tape was exempt from disclosure under Exemption 6 to the FOIA because the human voice, being unique to each individual, "clearly is information about the individual and identifiable as such." Should NASA turn over the tape?

11. Section 203(a) of the federal Communications Act required communications common carriers to file tariffs with the Federal Communications Commission (FCC). Section 203(b) of the same statute authorized the FCC to "modify any requirement made by or under" section 203. Relying on its modification authority under section 203(b), the FCC issued a series of orders during the 1980s and early 1990s. These orders made tariff filing optional for all nondominant long-distance carriers. American Telephone and Telegraph Co. (AT&T), the only long-distance carrier classified as dominant, asked the U.S. Court of Appeals for the District of Columbia Circuit to reverse these FCC orders. AT&T contended that making tariff filing optional for nondominant long-distance carriers was not a valid exercise of the FCC's modification authority under section 203(b). Was AT&T correct in this contention?

Chapter Forty-Seven

The Federal Trade Commission Act and Consumer Protection Laws

Chapter Outline

I. The Federal Trade Commission
- A. *The FTC's Powers*
- B. *FTC Enforcement Procedures*
  - 1. *Voluntary Compliance*
  - 2. *Trade Regulation Rules*
  - 3. *FTC Adjudicative Proceedings*

II. Anticompetitive Behavior

  - 3. *Enforcement*
- I. *Product Safety Regulation*
  - 1. *The Consumer Product Safety Act*
  - 2. *Other Federal Product Safety Regulation*

As Chapter 20 demonstrates, consumers' ability to recover damages for defective products increased dramatically during the 1960s and 1970s. *Direct government regulation* of consumer matters also grew tremendously during those decades. This chapter addresses federal consumer protection regulation. It begins with a general discussion of America's main consumer watchdog, the Federal Trade Commission (FTC). After describing how the FTC operates, the chapter examines its regulation of anticompetitive, deceptive, and unfair business practices. Then we discuss various federal laws that deal with consumer credit and other consumer matters.

The Federal Trade Commission

The Federal Trade Commission was formed shortly after the 1914 enactment of the Federal Trade Commission Act (FTC Act).[1] The FTC is an independent federal agency, which means that it is outside the executive branch of the federal government and is less subject to political control than agencies that are executive departments. The FTC is headed by five commissioners appointed by the president and confirmed by the Senate for staggered seven-year terms. The president designates one of the commissioners as chairman of the FTC. The FTC has a Washington headquarters and several regional offices located throughout the United States. Figure 1 in Chapter 46 sets out the Commission's internal organization.

[1]See Chapter 46 for further discussion of the FTC's creation, organization, powers, and status as an independent agency.

Figure 1 *Some of the Major Acts Enforced by the FTC*

Regulation of Economic Competition
FTC Act Section 5 (including Sherman Act standards)—discussed in this chapter and in Chapter 48
Clayton Act—discussed in Chapter 49
Robinson-Patman Act—also discussed in Chapter 49
Hart-Scott-Rodino Antitrust Improvements Act of 1976—requires that certain companies planning mergers notify and provide information to FTC and Justice Department

Consumer Protection Measures Discussed in This Chapter
FTC Act Section 5
Telemarketing and Consumer Fraud and Abuse Prevention Act
Magnuson-Moss Warranty Act
Truth in Lending Act (including 1988 Fair Credit and Charge Card Disclosure Act and Home Equity Loan Consumer Protection Act)
Consumer Leasing Act
Fair Credit Reporting Act
Equal Credit Opportunity Act
Fair Credit Billing Act
Fair Debt Collection Practices Act

Other Measures
Credit Repair Organizations Act—empowers FTC to take legal action against those who use deceptive or unfair practices in providing "credit repair" services to consumers whose credit history is not good
Export Trade Act—empowers FTC to supervise registration and operation of associations of American exporters engaged in export trade
Fair Packaging and Labeling Act—regulates packaging and labeling of consumer products to ensure accurate quality and value comparisons
Flammable Fabrics Act—regulates manufacture, sale, and importation of flammable fabrics, with FTC having some enforcement powers
Fur Products Labeling Act—regulates labeling, other identification, and advertising of fur products
Hobby Protection Act—regulates certain imitations of political campaign materials and certain imitation coins and paper money
Lanham Act—empowers FTC to petition for the cancellation of certain trademarks
Smokeless Tobacco Act—empowers FTC to approve manufacturers' plans for rotation and display of statements on smokeless tobacco packages and ads
Textile Fiber Products Identification Act—regulates labeling and other identification of textile fiber products
Wool Products Labeling Act—regulates labeling and other identification of wool products

Sources: *United States Government Manual* and various statutes.

The FTC's Powers

The FTC's principal missions are to keep the U.S. economy both *free* and *fair.* As Figure 1 suggests, Congress has given the Commission many tools for accomplishing these missions. By far the most important is section 5 of the FTC Act, which empowers the Commission to prevent *unfair methods of competition* and *unfair or deceptive acts or practices.* We examine these bases of FTC authority later in this chapter. The Commission also enforces the consumer protection and consumer credit measures discussed in the last half of the chapter. Finally, the FTC enforces various other federal acts, some of which are listed in Figure 1.

FTC Enforcement Procedures

The FTC has many legal tools for ensuring compliance with the statutes it administers. The three most important FTC enforcement devices are its procedures for facilitating voluntary compliance, its issuance of trade regulation rules, and its adjudicative proceedings.

Voluntary Compliance The FTC promotes voluntary, cooperative business behavior by issuing advisory opinions and industry guides. An **advisory opinion** is the Commission's response to a private party's query about the legality of proposed business conduct. The FTC is not obligated to furnish advisory opinions. The Commission may rescind a previously issued opinion when the public interest requires. When the FTC does so, however, it cannot proceed against the opinion's recipient for actions taken in good faith reliance on the opinion, unless it gives the recipient notice of the rescission and an opportunity to discontinue those actions.

Industry guides are FTC interpretations of the laws it administers. Their purpose is to encourage businesses to abandon certain unlawful practices. To further this end, industry guides are written in lay language. Although industry guides lack the force of law, behavior that violates an industry guide often violates one of the statutes or other rules the Commission enforces.

Trade Regulation Rules Unlike industry guides, FTC **trade regulation rules** are written in legalistic language and have the force of law. Thus, the FTC can proceed directly against those who engage in practices forbidden by a trade regulation rule. This may occur through the *adjudicative proceedings* discussed immediately below. The Commission may also obtain a federal district court *civil penalty* of up to $10,000 for each knowing violation of a rule. Furthermore, it may institute court proceedings to obtain various forms of *consumer redress,* including the payment of damages, the refund of money, the return of property, and the reformation or rescission of contracts.

FTC Adjudicative Proceedings Often, the FTC proceeds against violators of statutes or trade regulation rules by administrative action within the Commission itself. The FTC obtains evidence of possible violations from private parties, government bodies, and its own investigations. If the FTC decides to proceed against the alleged offender (the *respondent*), it enters a formal complaint. The case is heard in a public administrative hearing called an *adjudicative proceeding.* An FTC administrative law judge presides over this proceeding.[2] The judge's decision can be appealed to the FTC's five commissioners and then to the federal courts of appeals and the U.S. Supreme Court.

The usual penalty resulting from a final decision against the respondent is an FTC **cease-and-desist order.** This is a command ordering the respondent to stop its illegal behavior. As you will see later in the chapter, however, courts have upheld FTC orders going beyond the command to cease and desist. The civil penalty for noncompliance with a cease-and-desist order is up to $10,000 per violation. Where there is a continuing failure to obey a final order, each day that the violation continues is considered a separate violation.

Many alleged violations are never adjudicated by the FTC. Instead, they are settled through a **consent order.** This is an order approving a negotiated agreement in which the respondent promises to cease certain activities. Consent orders normally provide that the respondent does not admit any violation of the law. The failure to observe a consent order is punishable by civil penalties.

Anticompetitive Behavior

Section 5 of the FTC Act empowers the Commission to prevent "unfair methods of competition." This language allows the FTC to regulate anticompetitive

[2]Chapter 46 describes federal administrative proceedings.

practices made unlawful by the Sherman Act.[3] The Commission also has statutory authority to enforce the Clayton and Robinson-Patman Acts.[4]

For the most part, section 5's application to anticompetitive behavior involves the orthodox antitrust violations discussed in the following two chapters. Section 5, however, also reaches anticompetitive behavior *not covered by other antitrust statutes.* In addition, section 5 enables the FTC to proceed against *potential* or *incipient* antitrust violations.

Deception and Unfairness

Section 5 of the FTC Act also prohibits "unfair or deceptive acts or practices" in commercial settings. This language enables the FTC to regulate a wide range of activities that disadvantage consumers. In doing so, the Commission may seek to prove that the activity is *deceptive,* or that it is *unfair.* Here, we set out the general standards that the FTC uses to define each of these section 5 violations. Much of this discussion involves FTC regulation of advertising, but the standards we outline apply to many other misrepresentations, omissions, and practices. Although their details are beyond the scope of this text, the Commission also has enacted numerous trade regulation rules defining specific deceptive and unfair practices.

Deception

The FTC determines the deceptiveness of advertising and other business practices on a case-by-case basis. Courts often defer to the Commission's determinations. To be considered deceptive under the FTC's 1983 Policy Statement on Deception, an activity must: (1) involve a *material* misrepresentation, omission, or practice; (2) that is *likely to mislead* a consumer; (3) who acts *reasonably* under the circumstances.

Representation, Omission, or Practice Likely to Mislead Sometimes, sellers *expressly* make false or misleading claims in their advertisements or other representations. As revealed in the *Kraft* case, which follows shortly, an advertiser's false or misleading claims of an *implied* nature may also be challenged by the FTC. The same is true of a seller's deceptive *omissions.* Finally, certain deceptive *marketing practices* may violate section 5. In one such case, encyclopedia salespeople gained entry to the homes of potential customers by posing as surveyors engaged in advertising research.

In all of these situations, the statement, omission, or practice must be *likely to mislead* a consumer. Actual deception is not required. Determining whether an ad or practice is likely to mislead requires that the FTC evaluate the accuracy of the seller's claims. In some cases, moreover, the Commission requires that sellers *substantiate* objective claims about their products by showing that they have a reasonable basis for making such claims.

The "Reasonable Consumer" Test To be deceptive, the representation, omission, or practice must also be likely to mislead *reasonable consumers under the circumstances.* This requirement aims to protect sellers from liability for every foolish, ignorant, or outlandish misconception that some consumer might entertain. As the Commission noted some years ago, advertising an American-made pastry as "Danish Pastry" does not violate section 5 just because "a few misguided souls believe . . . that all Danish Pastry is made in Denmark."[5] Also, section 5 normally is not violated by statements of opinion, sales talk, or "puffing," statements about matters that consumers can easily evaluate for themselves, and statements regarding subjective matters such as taste or smell. Such statements are unlikely to deceive reasonable consumers.

Materiality Finally, the representation, omission, or practice must be *material.* Material information is important to reasonable consumers and is likely to affect their choice of a product or service. Examples include statements or omissions regarding a product's cost, safety, effectiveness, performance, durability, quality, or warranty protection. In addition, the Commission presumes that express statements are material.

The *Kraft* case, which follows, illustrates the application of the FTC's deception test to an advertising claim of an implied nature. *Kraft* also reveals the Commission's broad discretion in fashioning appropriate orders once deceptive advertising has been proven.

[3]Chapter 48 discusses the Sherman Act.
[4]Chapter 49 discusses the Clayton and Robinson-Patman Acts.

[5]*Heinz v. W. Kirchner,* 63 F.T.C. 1282, 1290 (1963).

Kraft, Inc. v. Federal Trade Commission *970 F.2d 311 (7th Cir. 1992)*

Individually wrapped slices of cheese and cheeselike products come in two major types: process cheese food slices, *which must contain at least 51 percent natural cheese according to a federal regulation; and* imitation slices, *which contain little or no natural cheese. Kraft, Inc.'s "Kraft Singles" are* process cheese food slices. *In the early 1980s, Kraft began losing market share to other firms' less expensive* imitation slices. *Kraft responded with its "Skimp" and "Class Picture" advertisements, which were designed to inform consumers that Kraft Singles cost more because each slice is made from 5 ounces of milk. These advertisements, which ran nationally in print and broadcast media between 1985 and 1987, also stressed the calcium content of Kraft Singles.*

In the broadcast version of the Skimp advertisements, a woman stated that she bought Kraft Singles for her daughter rather than "skimping" by purchasing imitation slices. *She noted that "*[i]mitation slices *use hardly any milk. But Kraft has 5 ounces per slice. Five ounces. So her little bones get calcium they need to grow." The commercial also showed milk being poured into a glass that bore the label "5 oz. milk slice." The glass was then transformed into part of the label on a package of Singles. In March 1987, Kraft added, as a subscript in the television commercial and as a footnote in the print media version, the disclosure that "one 3/4 ounce slice has 70% of the calcium of five ounces of milk."*

The televised version of the Class Picture advertisements cited a government study indicating that "half the school kids in America don't get all the calcium recommended for growing kids." According to the commercial, "[t]hat's why Kraft Singles are important. Kraft is made from five ounces of milk per slice. So they're concentrated with calcium. Calcium the government recommends for strong bones and healthy teeth." The commercial also included the subscript disclaimer mentioned above.

The Federal Trade Commission instituted a deceptive advertising proceeding against Kraft under section 5 of the FTC Act. According to the FTC's complaint, the Skimp and Class Picture advertisements made the false implied *claim that a Singles slice contains the same amount of calcium as 5 ounces of milk (the* milk equivalency claim*). The FTC regarded the milk equivalency claim as false even though Kraft actually uses 5 ounces of milk in making each Singles slice because roughly 30 percent of the calcium contained in the milk is lost during processing.*

The administrative law judge (ALJ) concluded that the Skimp and Class Picture advertisements made the milk equivalency claim, which was false and material. He concluded that Kraft's subscript and footnote disclosures of the calcium loss were inconspicuous and confusing and therefore insufficient to dispel the misleading impression created by the advertisements. The ALJ ordered Kraft to cease and desist making the milk equivalency claim regarding any of its individually wrapped process cheese food slices *or* imitation slices. *In addition, the ALJ ordered Kraft not to make other calcium or nutritional claims concerning its individually wrapped slices unless Kraft had reliable scientific evidence to support the claims.*

Kraft appealed to the FTC commissioners (referred to here as "the Commission"). The Commission affirmed the ALJ's decision but modified it. According to the Commission, the Skimp and Class Picture advertisements made the false and material milk equivalency claim. The Commission modified the ALJ's orders by extending their coverage from Kraft's individually wrapped slices to "any product that is a cheese, related cheese product, imitation cheese, or substitute cheese." Kraft appealed to the U.S. Court of Appeals for the Seventh Circuit. (In a portion of the opinion not set forth here, the Seventh Circuit concluded, as had the ALJ and the Commission, that some of the Kraft advertisements made a further false claim of an implied nature: that Kraft Singles slices contain more calcium than imitation slices. *The following portion of the Seventh Circuit's opinion addresses the milk equivalency claim.)*

Flaum, Circuit Judge [A]n advertisement is deceptive under [section 5 of the FTC Act] if it is likely to mislead consumers, acting reasonably under the circumstances, in a material respect. Our standard for reviewing FTC findings has been traditionally limited to the highly deferential, substantial evidence test.

In determining what claims are conveyed by a challenged advertisement, the Commission relies on two sources of information: its own viewing of

the ad and extrinsic evidence. Its practice is to view the ad first and, if it is unable on its own to determine with confidence what claims are conveyed . . . , to turn to extrinsic evidence. The most convincing extrinsic evidence is a [consumer] survey . . . , but the Commission also relies on other forms of extrinsic evidence including consumer testimony, expert opinion, and copy tests of ads.

Kraft has no quarrel with this approach when it comes to determining whether an ad conveys *express* claims, but contends that the FTC should be required . . . to rely on extrinsic evidence rather than its own subjective analysis in all cases involving allegedly *implied* claims. The Commissioners, Kraft argues, are simply incapable of determining what implicit messages consumers are likely to perceive in an ad. Making matters worse, Kraft asserts that the Commissioners are predisposed to find implied claims because the claims have [already] been identified in the complaint.

Here, the Commission found implied claims based solely on its own intuitive reading of the ads (although it did reinforce that conclusion by examining the proffered extrinsic evidence). Had the Commission fully and properly relied on available extrinsic evidence, Kraft argues it would have conclusively found that consumers do not perceive the milk equivalency . . . claim in the ads. While Kraft's arguments may have some force as a matter of policy, they are unavailing as a matter of law. Courts, including the Supreme Court, have uniformly rejected imposing such a requirement on the FTC, and we decline to do so as well. We hold that the Commission may rely on its own reasoned analysis to determine what claims, including implied ones, are conveyed in a challenged advertisement, so long as those claims are reasonably clear from the face of the advertisement.

[Kraft relies on] the faulty premise that implied claims are inescapably subjective and unpredictable. In fact, implied claims fall on a continuum, ranging from the obvious to the barely discernible. The Commission does not have license to go on a fishing expedition to pin liability on advertisers for barely imaginable claims. However, when [implied] claims [are] conspicuous, extrinsic evidence is unnecessary because common sense and administrative experience provide the Commission with adequate tools to make its findings. The implied claims Kraft made are reasonably clear from the face of the advertisements, and hence the Commission was not required to utilize consumer surveys in reaching its decision.

Alternatively, Kraft argues that substantial evidence does not support the FTC's finding that the Class Picture ads convey a milk equivalency claim. We find substantial [supporting] evidence in the record. Although Kraft downplays the nexus in the ads between milk and calcium, the ads emphasize visually and verbally that five ounces of milk go into a slice of Kraft Singles; this image is linked to calcium content, strongly implying that the consumer gets the calcium found in five ounces of milk. Furthermore, the Class Picture ads contained one other element reinforcing the milk equivalency claim, the phrase "5 oz. milk slice" inside the image of a glass superimposed on the Singles package.

Kraft asserts that the literal truth of the . . . ads—[Kraft Singles] *are* made from five ounces of milk and they *do* have a high concentration of calcium—makes it illogical to render a finding of consumer deception. The difficulty with this argument is that even literally true statements can have misleading implications. Here, the average consumer is not likely to know that much of the calcium in five ounces of milk (30%) is lost in processing, which leaves consumers with a misleading impression about calcium content.

Kraft next asserts that the milk equivalency . . . claim, even if made, [is] not material to consumers. A claim is considered material if it involves information that is important to consumers and, hence, likely to affect their choice of, or conduct regarding, a product. In determining that the milk equivalency claim was material to consumers, the FTC cited Kraft surveys showing that 71% of respondents rated calcium content an extremely or very important factor in their decision to buy Kraft Singles, [and that a substantial percentage of respondents] reported significant personal concerns about adequate calcium consumption. [The Commission] rationally concluded that a 30% exaggeration of calcium content was a nutritionally significant claim that would affect consumer purchasing decisions. This finding was supported by expert witnesses who agreed that consumers would prefer a slice of cheese with 100% of the calcium in five ounces of milk over one with only 70%. [T]he FTC [also]

found evidence in the record that Kraft designed the ads with the intent to capitalize on consumer calcium deficiency concerns.

Significantly, the FTC found further evidence of materiality in Kraft's conduct. Before the ads even ran, ABC television raised a red flag when it asked Kraft to substantiate the milk and calcium claims in the ads. Kraft's ad agency also warned Kraft in a legal memorandum to substantiate the claims before running the ads. Moreover, in October 1985, a consumer group warned Kraft that it believed the Skimp ads were potentially deceptive. Nonetheless, a high-level Kraft executive recommended that the ad copy remain unaltered because the "Singles business is growing for the first time in four years due in large part to the copy." Finally, the FTC and the California Attorney General's Office independently notified the company in early 1986 that investigations had been initiated to determine whether the ads conveyed the milk equivalency claims. Notwithstanding these warnings, Kraft continued to run the ads and even rejected proposed alternatives that would have allayed concerns over their deceptive nature. From this, the FTC inferred—we believe, reasonably—that Kraft thought the challenged milk equivalency claim induced consumers to purchase Singles and hence that the claim was material to consumers.

The Commission's cease and desist order prohibits Kraft from running the Skimp and Class Picture ads, as well as from advertising any calcium or nutritional claims not supported by reliable scientific evidence. This order extends not only to the product contained in the deceptive advertisements (Kraft Singles), but to all Kraft cheeses and cheese-related products.

First Amendment infirmities arise, according to Kraft, from the sweep of the order: by banning commercial speech that is only *potentially* misleading, the order chills some non-deceptive advertising deserving of constitutional protection. Kraft acknowledges that sweeping bans of this variety comport with traditional FTC practice, and have been repeatedly upheld against First Amendment challenges in the past. [Kraft nevertheless argues that a First Amendment problem exists because] the order is broader than reasonably necessary to prevent deception.

We reject Kraft's argument. To begin with, the Commission determined that the ads were *actually* misleading, not *potentially* misleading, thus justifying a total ban on the ads. Moreover, even if we were to assume the order bans some potentially misleading speech, it is only constitutionally defective if it is broader than reasonably necessary to prevent the deception. Kraft mischaracterized the [Commission's order] as a categorical ban on commercial speech when in fact it identifies with particularity two nutrient claims that the Commission found actually misleading and prohibits only those claims. It further places on Kraft the minor burden of supporting future nutrient claims with reliable data. This leaves Kraft free to use any advertisement it chooses, including the Skimp and Class Picture ads, so long as it either eliminates the elements specifically identified by the FTC as contributing to consumer deception or corrects this inaccurate impression by adding prominent, unambiguous disclosures. [T]he specific prohibitions imposed on Kraft in the FTC's cease and desist order are not broader than reasonably necessary to prevent deception and hence not violative of the First Amendment.

Alternatively, Kraft argues that the scope of the order is not reasonably related to Kraft's violation of the [FTC] Act because it extends to products that were not the subject of the challenged advertisements. The FTC has discretion to issue multi-product orders, so-called "fencing-in" orders, that extend beyond violations of the Act to prevent violators from engaging in similar deceptive practices in the future.

[The Commission] concluded that Kraft's violations were serious, deliberate, and easily transferable to other Kraft products, thus warranting a broad fencing-in order. We find substantial evidence to support the scope of the order. The Commission based its finding of seriousness on the size ($15 million annually) and duration (two and one-half years) of the ad campaign and on the difficulty most consumers would face in judging the truth or falsity of the calcium claims. [T]he FTC properly found that it is unreasonable to expect most consumers to perform the calculations necessary to compare the calcium content of Kraft Singles with five ounces of milk given the fact that the nutrient information given on milk cartons is not based on a five ounce serving.

As noted previously, the Commission [reasonably] found that Kraft's conduct was deliberate because it persisted in running the challenged ad copy despite repeated warnings from outside sources that

the copy might be implicitly misleading. Kraft made three modifications to the ads, but two of them were implemented at the very end of the campaign, more than two years after it had begun. This dilatory response provided a sufficient basis for the Commission's conclusion. The Commission further [made the reasonable finding] that the violations were readily transferable to other Kraft cheese products given the general similarity between Singles and other Kraft cheeses.

Commission's order upheld and enforced.

Unfairness

Section 5's prohibition of *unfair* acts or practices enables the FTC to attack behavior that, while not necessarily deceptive, is objectionable for other reasons. As the *International Harvester* case, which follows shortly, demonstrates, the FTC focuses on *consumer injury* when it attacks unfair acts or practices. To violate section 5, this injury:

1. *Must be substantial.* Monetary loss and unwarranted health and safety risks usually constitute substantial harm, but emotional distress and the perceived offensiveness of certain advertisements generally do not.

2. *Must not be outweighed by any offsetting consumer or competitive benefits produced by the challenged practice.* This element requires the Commission to balance the harm caused by the act or practice against its benefits to consumers and to competition generally. A seller's failure to give a consumer complex technical data about a product, for example, may disadvantage the consumer, but it may also reduce the product's price. Only when an act or practice is injurious in its *net effects* can it be unfair under section 5.

3. *Must be one that consumers could not reasonably have avoided.* An injury is considered reasonably unavoidable when a seller's actions significantly interfered with a consumer's ability to make informed decisions that would have prevented the injury. For example, a seller may have withheld otherwise unavailable information about important product features, or used high-pressure sales tactics on vulnerable consumers.

Remedies

Several types of orders may result from a successful FTC adjudicative proceeding attacking deceptive or unfair behavior.[6] One possibility is an order telling the respondent to *cease* engaging in the deceptive or unfair conduct. Another is the *affirmative disclosure* of information whose absence made the advertisement deceptive or unfair. Yet another is *corrective advertising.* This requires the seller's future advertisements to correct false impressions created by its past advertisements. In certain cases, moreover, the FTC may issue an *all-products order* extending beyond the product or service whose advertisements violated section 5, and including future advertisements for other products or services marketed by the seller. The *Kraft* case, which appeared above, illustrates such an order. Finally, the FTC may sometimes go to court to seek injunctive relief or the civil penalties or consumer redress noted earlier.

[6]Such orders, and FTC regulation of deceptive and unfair advertising generally, may collide with the First Amendment protection of commercial speech discussed in Chapter 3. For the most part, however, the First Amendment has not been a major obstacle to the Commission. One reason is that the constitutional protection given commercial speech does not extend to false or misleading statements and thus does not protect deceptive advertising.

In the Matter of International Harvester Company *104 F.T.C. 949 (1984)*

Since at least the early 1950s, the International Harvester Company's gasoline-powered tractors had been subject to "fuel geysering." This was a phenomenon in which hot liquid gasoline would shoot from the tractor's gas tank when the filler cap was opened. The hot gasoline could cause severe burns and could ignite and cause a fire. Over the years, at least 90 fuel geysering incidents involving International Harvester tractors occurred. At least 12 of these involved significant burn injuries, and at least one caused a death.

International Harvester first discovered the full dimensions of the fuel geysering problem in 1963. In that year, it revised its owner's manuals to warn buyers of new gas-powered tractors not to remove the gas cap from a hot or running tractor. In 1976, it produced a new fuel tank decal with a similar warning. Because of an industrywide shift to diesel-powered tractors, however, this warning had a very limited distribution to buyers of new tractors, and it rarely reached former buyers. International Harvester never specifically warned either new or old buyers about the geysering problem until 1980, when it voluntarily made a mass mailing to 630,000 customers.

In 1980, the FTC issued a complaint against International Harvester, alleging that its failure to warn buyers of the fuel geysering problem for 17 years was both deceptive and unfair under FTC Act section 5. The administrative law judge agreed with the Commission on each charge. In view of International Harvester's notification program, however, he concluded that a cease-and-desist order was unnecessary. Both International Harvester and the FTC's complaint counsel appealed to the full Commission. The Commission concluded that International Harvester's failure to disclose the fuel geysering problem was not deceptive, primarily because only 12 of the approximately 1.3 million tractors sold by International Harvester during the relevant time period had been involved in geysering incidents that resulted in injury. In the following portion of its opinion, the Commission addressed the unfairness *claim.*

Douglas, Commissioner Unfairness analysis focuses on three criteria: (1) whether the practice creates a serious consumer injury; (2) whether this injury exceeds any offsetting consumer benefits; and (3) whether the injury was one that consumers could not reasonably have avoided. We find that all three criteria are satisfied in the present case.

There clearly has been serious consumer injury. At least one person has been killed and eleven others burned. Many of the burn injuries have been major ones. It is true that [these injuries] involve only limited numbers of people, but conduct causing a very severe harm to a small number will be covered.

The second criterion states that the consumer injury must not be outweighed by any countervailing benefits to consumers or to competition that the practice also brings about. The principal trade-off to be considered in this analysis is that involving compliance costs. More information may be helpful to consumers, but such information can be produced only by incurring costs that are ultimately borne as higher prices by those same consumers. Harvester's program which finally led to an effective warning cost the company approximately $2.8 million. Here, however, Harvester's expenses were not large in relation to the injuries that could have been avoided. We therefore conclude that the costs and benefits in this case satisfy the second unfairness criterion.

Finally, the injury must be one that consumers could not reasonably have avoided. Here, tractor operators could have avoided their injuries if they had refrained from removing the cap from a hot or running tractor—something that both the owner's manuals and common knowledge suggested was a dangerous practice. However, whether some consequence is reasonably avoidable depends, not just on whether people know the steps to take to prevent it, but also on whether they understand the necessity of taking those steps. Farmers may have known that loosening the fuel cap was generally a poor practice, but they did not know the full consequences that might follow. Since fuel geysering was a risk that they were not aware of, they could not reasonably have avoided it. This is so even though they had been informed of measures to prevent it. Such information was not the same thing as an effective warning.

Having found that Harvester was engaged in unfair practices, we must now determine what corrective measures the public interest will require. Under the particular circumstances of this case, we will issue no order at all. First, Harvester's voluntary notification program has already provided all the relief that could be expected from a Commission order. Second, Harvester has not made a gasoline tractor since 1978 and does not appear likely to do so again in the future.

Decision of administrative law judge affirmed in part and reversed in part.

Consumer Protection Laws

The term *consumer protection* includes everything from Chapter 20's product liability law to the packaging and labeling regulations listed earlier in Figure 1. Here, we examine federal regulation of telemarketing practices, product warranties, consumer credit, and product safety.

Telemarketing and Consumer Fraud and Abuse Prevention Act

In the Telemarketing and Consumer Fraud and Abuse Prevention Act (Telemarketing Act), which was enacted in 1994, Congress required the FTC to promulgate regulations defining and prohibiting *deceptive* and *abusive* telemarketing acts or practices. The FTC responded to this directive with the Telemarketing Sales Rule (TSR), which was promulgated in 1995.

For purposes of the TSR and the discussion in the following paragraphs, a *seller* is a party who (or which), in connection with a telemarketing transaction, offers or arranges to provide customers with goods or services in exchange for consideration. The TSR defines *telemarketer* as "any person who, in connection with telemarketing, initiates or receives telephone calls to or from a customer." It defines *telemarketing* as "a plan, program, or campaign which is conducted to induce the purchase of goods or services by use of one or more telephones and which involves more than one interstate telephone call." Exemptions from the telemarketing definition are provided for sellers that solicit sales through the mailing of a catalog and then receive customers' orders by telephone, and for sellers that make telephone calls of solicitation to a consumer but complete the transaction in a face-to-face meeting with the consumer.

A major feature of the TSR makes it a deceptive practice for telemarketers and sellers to fail to disclose certain information to a customer before she pays for the goods or services being telemarketed. The customer is regarded as having paid for goods or services once she provides information that may be used for billing purposes. The mandatory disclosures specified in the TSR include the total cost of the goods or services, any material restrictions or conditions on the purchase or use of the goods or services, and the terms of any refund or exchange policy mentioned in the solicitation (or, if the seller has a policy of not allowing refunds or exchanges, a disclosure of that policy). Various other mandatory disclosures are necessary if the telemarketing solicitation pertains to a prize promotion. The TSR also makes it a deceptive practice for a telemarketer or seller to misrepresent information required to be disclosed in the mandatory disclosures, or to misrepresent any other information concerning the performance, nature, or characteristics of the goods or services being offered for sale.

According to the TSR, a telemarketer or seller engages in an abusive practice if he: directs threats, intimidation, or profane or obscene language toward a customer; causes the telephone to ring, or engages a person in a telephone conversation, repeatedly and with the intent to harass, abuse, or annoy a person at the called number; or initiates a call to a person who has previously stated that she does not wish to receive a call made by or on behalf of the seller whose goods or services are being offered. What would otherwise appear to transgress the last prohibition will not be considered a violation of the TSR, however, if the seller or telemarketer has implemented procedures designed to prevent further calls to a list of persons who have said they do not want to receive calls, and the making of a further call to a listed person was merely an error.

The TSR also makes it an abusive practice for a telemarketer to call a person's residence at any time other than between 8:00 A.M. and 9:00 P.M. local time at the called person's location. In addition, the telemarketer engages in an abusive practice if, in a telephone call he initiated, he does not promptly and clearly disclose the identity of the seller, the sales purpose of the call, the nature of the goods or services, and the fact that no purchase or payment is necessary in order to win a prize or participate in a prize promotion (if a prize or prize promotion is being offered). Still other abusive practices are enumerated in the TSR.

The FTC and state attorneys general may bring enforcement proceedings against violators of the Telemarketing Act and the TSR. Civil penalties of up to $10,000 per violation are among the available remedies in government-initiated proceedings. Under some circumstances, private citizens may sue violators for damages and injunctive relief.

The Magnuson-Moss Warranty Act

The Magnuson-Moss Warranty Act of 1975 mainly applies to *written warranties* for *consumer products.* Nothing in the act requires sellers to give a written warranty. Sellers who decline to provide such a warranty

generally escape coverage. A consumer product is personal property that is ordinarily used for personal, family, or household purposes. In addition, many Magnuson-Moss provisions apply only when a written warranty is given in connection with the sale of a consumer product to a *consumer.* A consumer is a buyer or transferee who does not use the product for resale or in his own business.

Chapter 20 discusses Magnuson-Moss's provisions giving consumers minimum warranty protection. Here, we examine its rules requiring that consumer warranties contain certain information and that this information be made available to buyers before the sale. Any failure to comply with these rules violates section 5 of the FTC Act and may trigger Commission action. In addition, either the FTC or the attorney general may sue to obtain injunctive relief against such violations.

Required Warranty Information The Magnuson-Moss Act and its regulations require the simple, clear, and conspicuous presentation of certain information in written warranties to consumers for consumer products costing more than $15.[7] That information includes: (1) the persons protected by the warranty when coverage is limited to the original purchaser or is otherwise limited; (2) the products, parts, characteristics, components, or properties covered by the warranty; (3) what the warrantor will do in case of a product defect or other failure to conform to the warranty; (4) the time the warranty begins (if different from the purchase date) and its duration; and (5) the procedure the consumer should follow to obtain the performance of warranty obligations. The act also requires that a warrantor disclose: (1) any limitations on the duration of implied warranties; and (2) any attempt to limit consequential damages or other consumer remedies.[8]

Presale Availability of Warranty Information The regulations accompanying Magnuson-Moss also contain detailed rules requiring that warranty terms be made available to a buyer before the sale. These rules generally govern sales to consumers of consumer products costing more than $15. They set out certain duties that must be met by sellers (usually retailers) and warrantors (usually manufacturers) of such products. For example:

1. *Sellers* must make the text of the warranty available for the prospective buyer's review before the sale, either by displaying the warranty in close proximity to the product or by furnishing the warranty upon request after posting signs informing buyers of its availability.

2. *Catalog or mail-order sellers* must clearly and conspicuously disclose in their catalog or solicitation either the full text of the warranty or the address from which a free copy can be obtained.

3. *Door-to-door sales.* To provide a concrete illustration of an FTC trade regulation rule, we include the full text of its door-to-door sales rule in Figure 2. As FTC rules go, this one is fairly short and straightforward.

4. *Warrantors* must give sellers the warranty materials necessary for them to comply with the duties stated in paragraph 1. Warrantors must also give catalog, mail-order, and door-to-door sellers copies of the warranties they need to meet their duties.

Truth in Lending Act

When Congress passed the Truth in Lending Act (TILA) in 1968, its main aims were to increase consumer knowledge and understanding of credit terms by compelling their *disclosure,* and to help consumers better shop for credit by commanding *uniform* disclosures. Now, however, the TILA protects consumers in other ways as well.

Coverage The TILA generally applies to creditors who extend consumer credit to a debtor in an amount not exceeding $25,000.[9] A *creditor* is a party who regularly extends consumer credit. Examples include banks, credit card issuers, and savings and loan associations. Extending credit need not be a creditor's primary business. For instance, auto dealers and retail stores are creditors if they regularly extend credit. To qualify as a creditor, the party in question must also either impose a finance charge or by agreement require payment in more than four installments. *Consumer credit* is credit enabling the purchase of goods, services, or real estate used primarily for personal, family,

[7] Actually, the act states a $5 figure, whereas the regulations accompanying it state a $15 figure.

[8] Chapter 20 discusses limitations on an implied warranty's duration and on a consumer's remedies.

[9] The $25,000 maximum does not apply where a creditor takes a security interest in a debtor's real property or in personal property, such as a mobile home, used as the debtor's principal dwelling. Here, the disclosure rules differ slightly from the rules for closed-end credit discussed shortly. In certain transactions of this kind, moreover, the debtor has a three-day rescission right whose details are beyond the scope of this text.

Figure 2 *The FTC's Door-to-Door Sales Rule: 16 C.F.R. Section 702.3(d)*

(d) *Door-to-door sales.*

(1) For purposes of this paragraph:

(i) "Door-to-Door sale" means a sale of consumer products in which the seller or his representative personally solicits the sale, including those in response to or following an invitation by a buyer, and the buyer's agreement to offer to purchase is made at a place other than the place of business of the seller.

(ii) "Prospective buyer" means an individual solicited by a door-to-door seller to buy a consumer product who indicates sufficient interest in that consumer product or maintains sufficient contact with the seller for the seller reasonably to conclude that the person solicited is considering purchasing the product.

(2) Any seller who offers for sale to consumers consumer products with written warranties by means of door-to-door sales shall, prior to the consummation of the sale, disclose the fact that the sales representative has copies of the warranties for the warranted products being offered for sale, which may be inspected by the prospective buyer at any time during the sales presentation. Such disclosure shall be made orally and shall be included in any written materials shown to prospective buyers.

or household purposes—not business or agricultural purposes. The TILA *debtor* must be a natural person; the act does not protect business organizations.

Disclosure Provisions The TILA's detailed disclosure provisions break down into three categories.

1. *Open-end credit.* The TILA defines an open-end credit plan as one that contemplates repeated transactions and involves a finance charge that may be computed from time to time on the unpaid balance. Examples include credit card plans and revolving charge accounts offered by retail stores. Open-end credit plans require two forms of disclosure: (1) an *initial statement* made before the first transaction under the plan; and (2) a series of *periodic statements* (usually, one for each billing cycle). In each case, the required disclosures must be made clearly, conspicuously, and in meaningful sequence.

Among the disclosures required in the initial statement are: (1) when a finance charge is imposed and how it is determined; (2) the amount of any additional charges and the method for computing them; (3) the fact that the creditor has taken or will acquire a security interest in the debtor's property; and (4) the debtor's billing rights. Periodic statements require an even lengthier set of disclosures. Much of the information contained in a monthly credit card statement, for example, is compelled by the TILA.

2. *Closed-end credit.* The TILA requires a different set of disclosures for other credit plans, which generally involve closed-end credit. Closed-end credit such as a car loan or a consumer loan from a finance company is extended for a specific time period; the total amount financed, number of payments, and due dates are all agreed on at the time of the transaction. Examples of the disclosures necessary before the completion of a closed-end credit transaction include: (1) the total finance charge; (2) the annual percentage rate (APR); (3) the amount financed; (4) the total number of payments, their due dates, and the amount of each payment; (5) the total dollar value of all payments; (6) any late charges imposed for past-due payments; and (7) any security interest taken by the creditor and the property that the security interest covers.

3. *Credit card applications and solicitations.* The TILA imposes disclosure requirements on credit card applications and solicitations. These elaborate requirements differ depending on whether the application or solicitation is made by direct mail, telephone, or other means such as catalogs and magazines. To take just one example, direct mail applications and solicitations must include information about matters such as the APR, annual fees, the grace period for paying without incurring a finance charge, and the method for computing the balance on which the finance charge is based.

Other TILA Provisions The TILA has provisions dealing with *consumer credit advertising.* For example, the act prevents a creditor from "baiting" customers by advertising loan or down payment amounts that it does

not usually make available. To help consumers put advertised terms in perspective, if ads for open-end consumer credit plans state any of the plan's specific terms, they must state various other terms as well. For instance, an advertisement using such terms as "$100 down payment," "8 percent interest," or "$99 per month" must also state other relevant terms such as the APR.

The TILA also regulates *open-end consumer credit plans involving an extension of credit secured by a consumer's principal dwelling*—basically, the popular home equity loans. The act controls *advertisements* for such plans, requiring certain information such as the APR if the ad states any specific terms and forbidding misleading terms such as "free money." It also imposes elaborate disclosure requirements on *applications* for such plans. These include matters such as interest rates, fees, repayment options, minimum payments, and repayment periods. Finally, the act also controls the *terms* of such a plan and the *actions* a creditor may take under it. For example: (1) if the plan involves a variable interest rate, the "index rate" to which changes in the APR are pegged must be based on some publicly available rate and must not be under the creditor's control; (2) a creditor cannot unilaterally terminate the plan and require immediate repayment of the outstanding balance unless a consumer has made material misrepresentations, has failed to repay the balance, or has adversely affected the creditor's security; and (3) the plan cannot allow a creditor to unilaterally alter its important terms.

Finally, the TILA includes rules concerning *credit cards*. The most important such rule limits a cardholder's liability for unauthorized use of the card to a maximum of $50. Unauthorized use is use by a person other than the cardholder, if this person lacks express, implied, or apparent authority for such use.[10]

Enforcement Various federal agencies enforce the TILA. Except in areas committed to a particular agency, overall enforcement authority rests in the FTC. In addition, those who willfully and knowingly violate the act may face criminal prosecution. Civil actions by private parties, including class actions, are also possible.

Consumer Leasing Act

The Consumer Leasing Act covers leases of personal property: (1) to natural persons (not organizations), (2) for consumer purposes, (3) for an amount not exceeding $25,000, and (4) for a period exceeding four months.

The act requires that a lessor make numerous written *disclosures* to a lessee before the consummation of the lease transaction. Examples include: a description or identification of the leased property; the number, amount, and due dates of the lease payments; their total amount; any express warranties made by the lessor; and any security interest taken by the lessor. The act also requires that lease *advertisements* include certain additional information if they already state the amount of any payment, the number of required payments, the amount of the down payment, or that no down payment is required.

The Consumer Leasing Act subjects creditors that violate its disclosure requirements to the same civil suits permitted under the TILA. The FTC also enforces the act.

Fair Credit Reporting Act

The reports credit bureaus provide to various users may significantly affect one's ability to obtain credit, insurance, employment, and many of life's other goods. Often, affected individuals are unaware of the influence that credit reports had on such decisions. The Fair Credit Reporting Act (FCRA) was enacted in 1970 to give people protection against abuses in the process of disseminating information about their creditworthiness.

Duties of Consumer Reporting Agencies The FCRA imposes certain duties on consumer reporting agencies—agencies that regularly compile credit-related information on individuals for the purpose of furnishing consumer credit reports to users. A consumer reporting agency must adopt *reasonable procedures* to:

1. Ensure that *users employ* the information only for the following purposes: consumer credit sales, employment evaluations, the underwriting of insurance, the granting of a government license or other benefit, or any other business transaction where the user has a legitimate business need for the information. The *Scott* case, which follows shortly, addresses the legitimate business need issue.

2. Avoid including in a report *obsolete information* predating the report by more than a stated period. This period usually is 7 years; for a prior bankruptcy, it is 10

[10]Express, implied, and apparent authority are discussed in Chapter 34.

years. This duty does not apply to credit reports used in connection with certain life insurance policies, large credit transactions, and applications for employment.

3. Ensure *maximum possible accuracy* regarding the personal information in credit reports. However, the act does little to limit the *types* of data included in credit reports. In fact, all kinds of information about a person's character, reputation, personal traits, and mode of living seemingly are permitted.

Disclosure Duties on Users The FCRA also imposes disclosure duties on *users* of credit reports—mainly credit sellers, lenders, employers, and insurers.[11] One of these duties applies to users who order an *investigative consumer report.* This is a credit report that includes information on a person's character, reputation, personal traits, or mode of living and is based on interviews with neighbors, friends, associates, and the like. If a user procures such a report on a person, it must inform him that the report has been requested, that the report may contain sensitive information, and that he has a right to obtain further disclosures about the user's investigation. If the person requests such disclosures within a reasonable time, the user must reveal the nature and scope of the investigation.

Another disclosure duty arises when, because of information contained in any credit report, a user: (1) rejects an applicant for consumer credit, insurance, or employment; or (2) charges a higher rate for credit or insurance. Here, the user must maintain *reasonable procedures* for advising the affected individual that it relied on the credit report in making its decision and for stating the name and address of the consumer reporting agency that supplied the report.

[11] In addition to the duties stated here, the FCRA imposes disclosure duties on users who deny consumer credit, or increase the charge for such credit, because of information obtained from *someone other than a consumer reporting agency.*

Disclosure and Correction of Credit Report Information After a request from a properly identified individual, a *consumer reporting agency* must normally disclose to that individual: (1) the nature and substance of all its information about the individual; (2) the sources of this information; and (3) the recipients of any credit reports that it has furnished within certain time periods. Then, a person disputing the completeness or accuracy of the agency's information can compel it to reinvestigate. The credit bureau must delete the information from the person's file if it finds the information to be inaccurate or unverifiable. An individual who is not satisfied with the agency's investigation may file a brief statement setting forth the nature of her dispute with the agency. If so, any subsequent credit report containing the disputed information must note that it is disputed and must provide either the individual's statement or a clear and accurate summary of it. Also, an agency may be required to notify certain prior recipients of deleted, unverifiable, or disputed information if the individual requests this. However, there is no duty to investigate or to include the consumer's version of the facts if the credit bureau has reason to believe that the individual's request is frivolous or irrelevant.

Enforcement Violations of the FCRA are violations of FTC Act section 5; the Commission may use its normal enforcement procedures in such cases. Other federal agencies may also enforce the FCRA in certain situations. The FCRA establishes criminal penalties for persons who knowingly and willfully obtain consumer information from a credit bureau under false pretenses. The *Scott* case considers the meaning of "false pretenses." Criminal liability may also be imposed on credit bureau officers or employees who knowingly or willfully provide information to unauthorized persons. In addition, violations of the FCRA may trigger private civil suits against consumer reporting agencies and users.

Scott v. Real Estate Finance Group *183 F.3d 97 (2d Cir. 1999)*

The owners of a certain house had listed it for rental with Gatewood Realty, Inc. Ira Simonoff, a Gatewood broker, showed the house to brothers Jonathan and Robert Scott, who offered to rent the house at a lesser monthly rate than the owners had specified. Simonoff then asked the Scotts for certain background information. Jonathan Scott responded to Simonoff's request for his social security number by telling Simonoff that he (Simonoff) was not authorized to make a credit check. Robert Scott added that he did not want his credit

checked. During the discovery phase of the litigation described below, Jonathan Scott testified that Simonoff assured him no credit check would be run. Both brothers testified that they understood Simonoff would not check their credit. Simonoff, however, testified that he informed the brothers of the house owners' requirement of a credit check and that one of the brothers had simply asked Simonoff not to have a credit check done "if at all possible."

When Simonoff relayed the Scotts' offer to the owners, they insisted that credit checks be conducted. Simonoff therefore asked Peter Visconti, who was affiliated with Real Estate Finance Group (REFG), to check the Scotts' credit. According to later testimony by Visconti, Simonoff represented that he had written authorizations from the Scotts. (The Scotts denied that any such authorizations existed.) Visconti obtained credit reports on the Scotts by falsely representing to a computerized credit reporting service that he needed the reports to evaluate a mortgage application. He then supplied the credit reports to Simonoff. When a real estate broker working on behalf of the Scotts learned that Simonoff had obtained their credit reports, she so informed the Scotts.

The Scotts filed suit against REFG, Gatewood, and Simonoff for alleged violations of the Fair Credit Reporting Act (FCRA). After discovery, the Scotts moved for partial summary judgment against all defendants on the theory that they had obtained the Scotts' credit reports by means of false pretenses, in violation of the FCRA. Gatewood and Simonoff moved for summary judgment in their favor. The district court granted the Scotts' summary judgment motion as to REFG but not as to Gatewood and Simonoff. Instead, the court granted summary judgment in favor of Gatewood Realty and Simonoff and ordered dismissal of the Scotts' FRCA claim against them. REFG and the Scotts later reached a settlement. The Scotts appealed the dismissal of their FCRA claim against Gatewood and Simonoff.

Pooler, Circuit Judge [The Scotts] claim that Simonoff obtained their credit reports under false pretenses because he falsely represented to Visconti that [they] had given him written authorizations. Section 1681q of the FCRA makes criminally liable "any person who knowingly and willingly obtains information on a consumer from a consumer reporting agency under false pretenses." By virtue of [another FCRA section], a consumer may also maintain a civil action against any "user of information" who "willfully" violates section 1681q. The district court [held] that Simonoff's misrepresentation did not violate section 1681q [because] the pending lease transaction between the Scotts and Simonoff's clients constituted a permissible basis for requesting a credit report pursuant to [the FCRA]. Because Simonoff had a legitimate—albeit unstated—reason for requesting the report, the district court found that he did not obtain the report under false pretenses and thus did not violate section 1681q.

[T]he Scotts argue that the district court erred both in its legal conclusion and in its finding that the Scotts had a pending business transaction with the home owners. We agree with the district court that a requester does not violate section 1681q by giving a false reason for its request if it has an independent legitimate basis for requesting the report. Section 1681q punishes a person who "obtains information . . . under false pretenses." However, a credit reporting agency can give credit information to an entity it reasonably believes has "a legitimate business need" for the information "in connection with a business transaction involving the consumer" [quoting another FCRA section]. A person [who obtains] information to which he has a right [cannot be seen as having obtained the information] under false pretenses. Therefore, if the parties had a pending business transaction for which the credit report was a legitimate business need, Simonoff did not violate section 1681q.

However, we believe that the district court overlooked issues of fact on the legitimacy of Simonoff's business need for the report at the time he requested it. A finder of fact who credited the Scotts' testimony could find that they conditioned their offer to rent on the owners' willingness to forgo a credit check. If so, Simonoff knew that there was no longer a pending transaction between his clients and the Scotts as soon as his clients insisted on the credit report. Put in slightly different terms, we find that parties to a transaction may elect to structure their negotiations in such a way that those negotiations—no matter how apparently detailed—constitute expressions of interest that are too inchoate to give the landlord a "legitimate business need for the information in connection with a busi-

ness transaction involving the consumer" within the meaning of [the FCRA]. [A]n offer to enter a lease can constitute this type of structured negotiation when it is made with the express condition that no credit check will be conducted. [T]he parties are free to contractually define whether . . . a "legitimate business need" exists "in connection with a business transaction." [W]hen a factual dispute exists as to whether the negotiations were structured in such a way, a factual dispute necessarily exists as to whether the requesting party had a legitimate need for the credit report. Because a fact finder must determine whether Simonoff had a legitimate need for the report when he requested it—and, if not, whether his noncompliance with the statute was willful—we reverse and remand.

District court's grant of summary judgment in favor of Gatewood and Simonoff reversed; case remanded for further proceedings.

Equal Credit Opportunity Act

The Equal Credit Opportunity Act (ECOA) prohibits credit discrimination on the bases of sex, marital status, age, race, color, national origin, religion, and the obtaining of income from public assistance. The ECOA covers all entities that regularly arrange, extend, renew, or continue credit. Examples include banks, savings and loan associations, credit card issuers, and many retailers, auto dealers, and realtors. The act is not limited to consumer credit; it also covers business and commercial loans.

The ECOA governs all phases of a credit transaction. As authorized by the act, the Federal Reserve Board has promulgated regulations detailing permissible and impermissible creditor behavior at each stage. Even when the regulations do not specifically prohibit certain creditor behavior, that behavior may still violate the act itself. Moreover, a credit practice that is neutral on its face may result in an ECOA violation if the practice has an adverse statistical impact on one of the ECOA's protected classes.[12]

The ECOA also requires that creditors notify applicants of the action taken on a credit application within 30 days of its receipt or any longer reasonable time stated in the regulations. If the action is unfavorable, an applicant is entitled to a statement of reasons from the creditor.

The ECOA is enforced by several federal agencies, with overall enforcement resting in the hands of the FTC. Which agency enforces the act depends on the type of creditor or credit involved. Civil actions by aggrieved private parties, including class actions, also are possible.

Fair Credit Billing Act

The Fair Credit Billing Act is primarily aimed at credit card issuers. Although the act regulates the credit card business in other ways, its most important provisions involve billing disputes.[13] To trigger these provisions, a cardholder must give the issuer written notice of an alleged error in a billing statement within 60 days of the time that the statement is sent to the cardholder. Then, within two complete billing cycles or 90 days (whichever is less), the issuer must either: (1) correct the cardholder's account; or (2) send the cardholder a written statement justifying the statement's accuracy. Until the issuer takes one of these steps, it may not: (1) restrict or close the cardholder's account because of her failure to pay the disputed amount; (2) try to collect the disputed amount; or (3) report or threaten to report the cardholder's failure to pay the disputed amount to a third party such as a consumer reporting agency.

Once an issuer has met the act's requirements, it must also give a cardholder at least 10 days to pay the disputed amount before making an unfavorable report to a third party. If the cardholder disputes the issuer's justification within the 10-day period allowed for payment, the issuer can make such a report only if it also tells the third party that the debt is disputed and gives the cardholder the third party's name and address. In addition, the issuer must report the final resolution of the dispute to the third party.

An issuer that fails to comply with any of these rules forfeits its right to collect $50 of the disputed amount from the cardholder. Because the issuer may still be able to collect the balance on large disputed

[12]This resembles the adverse impact or disparate impact method of proof used in employment discrimination cases under Title VII of the 1964 Civil Rights Act. See Chapter 50.

[13]The Federal Reserve Board has promulgated regulations regarding the resolution of billing errors. The FTC has some enforcement authority under the act as well.

debts, it is doubtful whether this provision does much to deter violations of the act.

Fair Debt Collection Practices Act

Concern over abusive, deceptive, and unfair practices by debt collectors led Congress to pass the Fair Debt Collection Practices Act (FDCPA) in 1977. The act applies to debts that involve money, property, insurance, or services obtained by a *consumer* for *consumer purposes.* Normally, the act covers only those who are in the business of collecting debts owed to *others.* However, creditors who collect their own debts are covered when, by using a name other than their own name, they indicate that a third party is collecting the debt. The *White* case, which follows shortly, addresses issues that arise in the latter type of case.

Communication Rules Except when necessary to locate a debtor, the FDCPA generally prevents debt collectors from contacting third parties such as the debtor's employer, relatives, or friends. The act also limits a collector's contacts with the debtor himself. Unless the debtor consents, for instance, a collector cannot contact him at unusual or inconvenient times or places, or at his place of employment if the employer forbids such contacts. Also, a collector cannot contact a debtor if it knows that the debtor is represented by an attorney, unless the attorney consents to such contact or fails to respond to the collector's communications. In addition, a collector must cease most communications with a debtor if the debtor gives the creditor written notification that he refuses to pay the debt or that he does not desire further communications from the collector.

The FDCPA also requires a collector to give a debtor certain information about the debt within five days of the collector's first communication with the debtor. If the debtor disputes the debt in writing within 30 days after receiving this information, the collector must cease its collection efforts until it sends verification of the debt to the debtor.

Specific Forbidden Practices The FDCPA sets out categories of forbidden collector practices and lists specific examples of each category. The listed examples, however, do not exhaust the ways that debt collectors can violate the act. The categories are:

1. *Harassment, oppression, or abuse.* Examples include threats of violence, obscene or abusive language, and repeated phone calls.

2. *False or misleading misrepresentations.* Among the FDCPA's listed examples are statements that a debtor will be imprisoned for failure to pay, that a collector will take an action it is not legally entitled to take or does not intend to take, that a collector is affiliated with the government, and that misstate the amount of the debt.

3. *Unfair practices.* These include collecting from a debtor an amount not authorized by the agreement creating the debt, inducing a debtor to accept a collect call before revealing the call's true purpose, and falsely or unjustifiably threatening to take a debtor's property.

Enforcement The FTC is the main enforcement agency for the FDCPA, although other agencies enforce it in certain cases. The FDCPA also permits individual civil actions and class actions by the affected debtor or debtors.[14]

[14]Some debt collection practices may lead to tort liability for invasion of privacy or intentional infliction of emotional distress. Chapter 6 discusses these torts.

White v. Goodman *200 F.3d 1016 (7th Cir. 2000)*

The Fair Debt Collection Practices Act (FDCPA) prohibits a creditor from giving a debtor the false impression that a third party is involved in efforts to collect the debt owed to the creditor. North Shore Agency, Inc., is a debt-collection firm. For many years, North Shore and Book-of-the-Month Club (BOMC) had an arrangement under which BOMC would send North Shore the names and addresses of any BOMC customers from whom BOMC had been unable to collect payment. North Shore would then send these customers a letter demanding payment of the sums BOMC had reported to North Shore as due. The demand letters instructed the customers to pay BOMC directly and stated that further collection efforts would be undertaken if payment was not made.

If the demand letter to a given customer failed to elicit payment, BOMC would so notify North Shore, which would send a second demand letter. The process could be repeated a third time or even more times until either the customer paid BOMC or North Shore concluded that payment would not be forthcoming unless further collection efforts were made. BOMC paid North Shore a flat fee for every demand letter North Shore sent out. If a series of demand letters did not yield payment, it was up to North Shore whether to drop the matter—something it might often be likely to do because of the relatively small dollar amounts involved—or take other collection action. When North Shore took other collection action that resulted in payment, North Shore would keep 35 percent of the amount collected and remit the remainder to BOMC.

Patricia White, a BOMC customer who had not made payment of $18.45, received a demand letter from North Shore. Alleging that BOMC and North Shore had violated the FDCPA, White brought a class action suit on behalf of herself and other similarly situated persons. The federal district court granted summary judgment in favor of the defendants and dismissed the case. White appealed to the U.S. Court of Appeals for the Seventh Circuit.

Posner, Chief Judge One of the practices that the FDCPA . . . forbids is "flat-rating," the term popularly applied to providing a form which creates the false impression that someone (usually a collection agency) besides the actual creditor is "participating" in collecting the debt. (The provider of the form presumably charges a "flat rate" for the form; hence the popular name for the practice.) The element of deception lies less in the misrepresentation that a third-party debt collector is involved than in the signal, conveyed by turning over a debt for collection, that the creditor does not intend to drop the matter. Congress's concern was that such deception might induce debtors to abandon legitimate defenses. Whether the concern was well-founded is not for us to say.

The flat-rater is thus not the creditor, but the counterpart of a contributory infringer in the law of intellectual property; he furnishes a deceptive instrumentality to the primary violator. Another provision of [the FDCPA] brings the latter within the scope of liability by forbidding a creditor, in the collection of his debts, to use a name which suggests the involvement of a third party, unless the third party is participating in the debt collection, for then there is no deception. Conceivably this provision could be read so narrowly as to reach only the case in which the creditor is using a pseudonym; but this reading, as the cases interpreting [the statute] make clear, . . . is too narrow.

The contention that North Shore is a flat-rater is not frivolous, and if it were a flat-rater, BOMC might be liable under [the FDCPA]. But it is unconvincing. North Shore did compose, either by itself or jointly with BOMC, the dunning letter that Patricia White received; and if this were all North Shore had done to help BOMC collect the money she owed it, North Shore would indeed be a flat-rater. But it is not all that North Shore did. Because the debts that it collects on behalf of BOMC are small, North Shore's collection efforts are, we may assume, usually limited to sending a series of dunning letters. If the debtors are smart, they probably know that if they tough it out, eventually the letters will cease coming and that will be the last they hear of the matter until they discover they have earned a lousy credit rating. They are, nevertheless, in the clutches of a bona fide collection agency which, if the letters fail to collect the debt, may sue. Probably North Shore *does* sue from time to time on behalf of BOMC just so that BOMC does not get a reputation as being a particularly easy mark for people who like to get their books free. The [plaintiff seems] to think that unless the creditor assigns the debt at the start to a collection agency, the agency is a flat-rater. But there is nothing in the statute to equate participation in collection with ownership of the debt.

The plaintiffs have another claim, this one under the general provisions of the FDCPA forbidding deceptive debt collection practices. On the reverse of the dunning letters that North Shore sends appears a paragraph which begins: "The State of Colorado requires that we furnish Colorado residents with the following information. . . . " A list of the rights that Colorado residents have to limit further communications from a debt collector follows. The paragraph is not claimed to be inaccurate. The argument is, rather, that it implies that nonresidents of Colorado do not have similar rights, whereas in fact the FDCPA itself confers similar rights on debtors. In other words, the reader of the paragraph is assumed

to react by saying to himself, "Since I'm not a resident of Colorado, I guess I have no right to limit further communications from this pesky debt collector." This is fantastic conjecture. Since the FDCPA does not require that a copy or summary of it be furnished with every (or any) dunning letter, it is unlikely, to say the least, that recipients of such letters, unless they happen to be class action lawyers specializing in consumer finance litigation, have any idea of what specific federal or state rights they might have, so they have no benchmark against which to compare the rights that Colorado law confers. And far from implying that Coloradans have superior rights, the paragraph by its opening sentence makes clear that Colorado merely requires that the debt collector furnish Colorado residents with the specified information. The implication is not that such residents have more rights than residents of other states, but, at most, that they are less sophisticated and therefore need more information about their rights. Realistically, the only reaction of a Colorado nonresident to the paragraph would be that it had nothing to do with him.

Any document can be misread. The FDCPA is not violated by a dunning letter that is susceptible of an ingenious misreading, for then every dunning letter would violate it. The FDCPA protects the unsophisticated debtor, but not the irrational one.

Decision of district court affirmed.

Product Safety Regulation

Yet another facet of consumer protection law is federal regulation of product safety. As discussed in Chapter 20, sellers and manufacturers of dangerously defective products may be held civilly liable to those injured by such products. Damage recoveries, however, are at best an after-the-fact remedy for injuries caused by such products. Thus, federal law also seeks to promote product safety through *direct regulation* of consumer products.

The Consumer Product Safety Act The most important federal product safety measure is the Consumer Product Safety Act (CPSA). The CPSA established the Consumer Product Safety Commission (CPSC), an independent regulatory agency that is the main federal body concerned with the safety of consumer products. Among the CPSC's activities are the following: (1) issuing *consumer product safety standards* (which normally pertain to the performance of consumer products or require product warnings or instructions); (2) issuing rules *banning* certain *hazardous products*; (3) bringing suit in federal district court to eliminate the dangers presented by *imminently hazardous* consumer products (products that pose an immediate and unreasonable risk of death, serious illness, or severe personal injury); and (4) *ordering private parties to address "substantial product hazards"* after receiving notice of such hazards. The CPSA's remedies and enforcement devices include injunctions, the seizure of products, civil penalties, criminal penalties, and private damage suits.

Other Federal Product Safety Regulation Other federal statutes besides the CPSA regulate various specific consumer products. Among the subjects so regulated are toys, cigarette labeling and advertising, eggs, meat, poultry, smokeless tobacco, flammable fabrics, drugs, cosmetics, pesticides, and motor vehicles. Some of these laws are enforced by the CPSC and some by other bodies.

Ethical and Public Policy Concerns

1. In the *International Harvester* case earlier in this chapter, the FTC weighed the consumer injury caused by fuel geysering against the costs of providing effective warnings about it. In this case, 12 people had been seriously burned by fuel geysering over a period of about 40 years, and one person had been killed. The Commission concluded that the injuries that could have been avoided by a warning outweighed the $2.8 million apparently required for an effective warning. However, its method clearly left open the possibility that in some cases a practice's benefits to consumers or to competition might outweigh the harm it causes.

Is it morally right to balance personal injury and human life against economic gain? Doesn't this amount to putting a dollar value on human life? Isn't each human life infinitely precious? How can decisionmaking processes such as the FTC's ever be justified?

On the other hand, if you think that the Commission's balancing exercise *is* justifiable, how is one to

strike the balance? How would you have decided the *International Harvester* case?

2. Over the years, some have argued that modern mass advertising for consumer products and services is much more *manipulative* than *informative.* The idea is that by playing on unconscious or semiconscious consumer impulses of all kinds, such advertising motivates consumers to buy products for reasons other than those products' innate attributes. Generally speaking, do you think that this charge is accurate or inaccurate? In answering, consider: (1) whether advertisers often try such ploys; and (2) whether they generally are effective when tried. Assuming for the sake of argument that the charge is generally accurate, does FTC Act section 5's ban on *deceptive* advertising do much to address the problem? What body of law discussed in this chapter might conceivably do so?

Again assuming that the charge is accurate, consider two other questions. First, how would manipulative advertising fare under the *utilitarian* ethical criteria discussed in Chapter 4? *Hint:* If advertising manipulates consumers, what happens to the idea that free competition maximizes consumer welfare by rewarding those who sell superior products and services and weeding out their inferior competitors? Second, how would manipulative advertising fare under the two versions of Kant's *categorical imperative* discussed in Chapter 4?

Problems and Problem Cases

1. For many years, advertisements for Listerine Antiseptic Mouthwash had impliedly claimed that Listerine was beneficial in the treatment of colds, cold symptoms, and sore throats. An FTC adjudicative proceeding concluded that these claims were false. Thus, the Commission ordered Warner-Lambert Company, the manufacturer of Listerine, to include the following statement in future Listerine advertisements: "Contrary to prior advertising, Listerine will not help prevent colds or sore throats or lessen their severity." Warner-Lambert argued that this order was invalid because it went beyond a command to simply cease and desist from illegal behavior. Was Warner-Lambert correct?

2. Pantron I Corp. sold a shampoo and conditioner known as the Helsinki Formula. Pantron promoted the Helsinki Formula as an aid in fighting male pattern baldness. According to Pantron, polysorbate was the main ingredient that made the Helsinki Formula effective in arresting hair loss and stimulating hair growth. The Federal Trade Commission filed suit against Pantron on the theory that Pantron's advertisements made deceptive representations about the effectiveness of the Helsinki Formula, as well as deceptive representations that scientific evidence supported the effectiveness claims. The FTC sought injunctive and monetary relief. The evidence showed that the Helsinki Formula was effective for some users with male pattern baldness but that this effectiveness was probably due to the "placebo effect" (i.e., the effectiveness for some users stemmed from psychological reasons rather than from the inherent merit of the product). Because there was no scientifically valid evidence indicating that polysorbate is effective in treating hair loss or in inducing hair growth, the district court concluded that Pantron's advertisements were deceptive in representing that *scientific evidence* supported a conclusion that the Helsinki Formula was effective. The district court therefore issued an injunction that barred Pantron from representing, in its advertisements, that scientific evidence supports the alleged effectiveness of the Helsinki Formula in treating baldness or hair loss. However, because the Helsinki Formula did work for some users some of the time (whatever the reason), the district court concluded that the FTC had failed to carry its burden of proving that Pantron engaged in deceptive advertising when it represented that the Helsinki Formula was effective for persons with male pattern baldness. The court therefore refused to enjoin Pantron from making such a representation of effectiveness (i.e., a representation of effectiveness that did not go on to make the false claim of supporting scientific evidence). The court also refused to order monetary relief. In its appeal to the U.S. Court of Appeals for the Ninth Circuit, the FTC argued that when a product's effectiveness is due only to the placebo effect, an advertising claim of effectiveness is false and deceptive for purposes of the FTC Act. Was this FTC argument legally correct? Which party—the FTC or Pantron—was entitled to win the appeal?

3. Besides maintaining a private law practice, Keith Gill offered credit repair services to consumers in a business that he operated with a retired attorney, Richard Murkey. In various contexts, Gill and Murkey made representations to the effect that they could remove any accurate and non-obsolete information of a negative nature from the credit reports of consumers who used their credit repair services. The Federal Trade Commission filed suit against Gill and Murkey, alleging, among

other things, that these representations violated section 5 of the Federal Trade Commission Act. Was section 5 violated?

4. Between 1966 and 1975, the Orkin Exterminating Company, the world's largest termite and pest control firm, offered its customers a "lifetime" guarantee that could be renewed each year by paying a definite amount specified in its contracts with the customers. The contracts gave no indication that the fees could be raised for any reasons other than certain narrowly specified ones. Beginning in 1980, Orkin unilaterally breached these contracts by imposing higher-than-agreed-upon annual renewal fees. Roughly 200,000 contracts were breached in this way. Orkin realized $7 million in additional revenues from customers who renewed at the higher fees. The additional fees did not purchase a higher level of service than that originally provided for in the contracts. Although some of Orkin's competitors may have been willing to assume Orkin's pre-1975 contracts at the fees stated therein, they would not have offered a fixed, locked-in "lifetime" renewal fee such as the one Orkin originally provided. Under the three-part test stated in the text, did Orkin's behavior violate FTC Act section 5's prohibition against *unfair* acts or practices?

5. Patron Aviation, Inc., an aviation company, bought an airplane engine from L&M Aircraft. The engine was assembled and shipped to L&M by Teledyne Industries, Inc. L&M installed the engine in one of Patron's airplanes. The engine turned out to be defective, so Patron sued L&M and Teledyne. One of the issues presented by the case was whether the Magnuson-Moss Act was applicable. Does the Magnuson-Moss Act apply to this transaction?

6. National Financial Services, Inc., a debt collection agency that serves magazine subscriptions clearinghouses, handled roughly 2.2 million accounts during 1986 and 1987. It sent letters to debtors whose accounts were delinquent. The average unpaid balance owed on these accounts was approximately $20. One letter sent by National Financial to a large number of debtors stated that their account "Will Be Transferred To An Attorney If It Is Unpaid After The Deadline Date!!!" Debtors who did not pay after receiving this letter received one or more letters that bore the letterhead of "N. Frank Lanocha, Attorney at Law." Lanocha prepared the text of these form letters and gave copies to National Financial's president, Smith. Smith then arranged for the letters to be prepared and mailed out. One of these letters contained the following statements: "Please Note I Am The Collection Attorney Who Represents American Family Publishers. I Have The Authority To See That Suit Is Filed Against You In This Matter." The letter also stated: "Unless This Payment Is Received In This Office Within Five Days Of The Date Of This Notice, I Will Be Compelled To Consider The Use Of The Legal Remedies That May Be Available To Effect Collection." The Federal Trade Commission sued National Financial, Smith, and Lanocha, alleging violations of the Fair Debt Collection Practices Act. How should the court rule?

7. National Credit Management Group (NCMG) offered credit monitoring and credit card services to consumers throughout the United States. NCMG used the 1-800-YES-CREDIT toll-free telephone number as the central marketing focus of its business. The company's advertisements on radio and cable television stated that persons with credit problems should call the toll-free number to receive a "confidential analysis" of their credit histories. Many of these advertisements also promised that NCMG would provide consumers with a complimentary application for a major credit card without a security deposit. In a number of the television advertisements, NCMG would flash the word "APPROVED" on the television screen or would otherwise highlight that word when the advertisement made reference to the credit card application.

NCMG received approximately 6,500 "inbound" calls per week from consumers who were responding to the radio and television advertisements. NCMG did not engage in "cold-calling" of consumers. When consumers called 1-800-YES-CREDIT, an NCMG representative offered them an initial credit analysis for an up-front fee of $95. During this phone conversation, the NCMG representative asked consumers for information—name, address, social security number, checking account number, employment information, and income information—that the representative stated was necessary to enable the credit analyst to gather information concerning the particular consumer's credit history. The NCMG representative also stated that the $95 fee was the charge associated with the accumulation and monitoring of the information contained in the credit profile of the consumer, and that the credit analyst would be telephoning the consumer in approximately two weeks to discuss the consumer's credit history. Between 5 and 9 percent of consumers

who called the toll-free number purchased either the $95 initial credit analysis offered or other services (described below) that NCMG offered.

NCMG used the checking account information obtained by its representatives to set up an arrangement under which consumers' checking accounts would be debited in the amount of $95 if they accepted the initial credit analysis offer. Consumers who initially gave verbal authorization for the debiting arrangement later encountered great difficulty in attempting to cancel it. In the initial telephone conversation described above, the NCMG representatives did not tell consumers that when they used their "complimentary" application for a credit card (the application referred to in NCMG's advertisements), they could have to pay fees ranging from $50 to $100 to sponsoring banks. Neither were consumers informed that they were not guaranteed of receiving a credit card. Although sponsoring banks approved a high percentage of consumers who used the NCMG-provided application, not all applicants were approved for a credit card.

NCMG did not actually perform a credit analysis for paying consumers, nor did NCMG check those consumers' credit reports. When the supposed credit analyst made the above-described followup telephone call to a consumer, he or she did not discuss the consumer's credit history. Instead, the credit analyst attempted to sell the consumer NCMG's two-year program designed for persons who wished to establish or reestablish their credit. The two-year program, which consisted largely of NCMG's furnishing certain educational materials, ranged in cost from several hundred dollars to well over $1000, with the NCMG caller having the discretion to set the price at what seemed an appropriate level under the circumstances. The credit analyst typically did not disclose that the earlier check-debiting arrangement would be used as the payment mechanism for persons who agreed to subscribe to the two-year program.

The Federal Trade Commission (FTC) filed suit against NCMG. Among other things, the FTC alleged that NCMG violated section 5 of the FTC Act as well as the Telemarketing Sales Rule (TSR). Did NCMG violate section 5? Did NCMG violate the TSR?

8. In 1988, Vincent Mone quit his job at Sawyer of Napa, Inc., a California corporation whose president and CEO was Milton Dranow. When Mone established a competing firm, Dranow sued him for $5 million, alleging unfair competition. Three days before filing suit, Dranow had obtained a credit report on Mone from TRW, Inc., a credit reporting agency. Under the Fair Credit Reporting Act, did TRW act properly in giving Dranow the credit report on Mone?

9. When Samuel Grant sued his landlord, the landlord filed a counterclaim. Grant later was awarded a $608 judgment against the landlord, with the landlord receiving a $476.10 judgment against Grant on the counterclaim. This left Grant with a net judgment of $131.90. Approximately one year after the above case, Texaco denied Grant's application for a credit card. Texaco did so on the basis of a credit report prepared by TRW, Inc. This credit report stated that a judgment of approximately $400 had been entered against Grant in the above-described litigation between Grant and his landlord. Grant then informed TRW that the litigation involving his landlord had resulted in a net judgment in Grant's favor. TRW eventually sent Grant an "Updated Credit Profile" showing that the $400 judgment had been deleted from his file. Several months later, Grant again applied for a Texaco credit card. Texaco again denied his application because a newly issued TRW credit report indicated that a $400 judgment had been entered against him in the case involving his landlord. Grant then sued TRW on the theory that TRW had violated the Fair Credit Reporting Act (FCRA). TRW moved to dismiss the case. Should Grant's FCRA case be dismissed?

10. Sylvia Miller, a married woman, wanted to buy a pair of loveseats from a retail furniture store. The store offered to arrange financing for her through the Public Industrial Loan Company. Public later refused to extend credit to Miller unless her husband cosigned the debt obligation. The reason was a consumer reporting agency's unfavorable credit report on Miller. Was Public's action forbidden sex discrimination under the Equal Credit Opportunity Act? In any event, what other legal remedy might Miller have?

11. John E. Koerner & Co., Inc. applied for a credit card account with the American Express Company. The application was for a company account designed for business customers. Koerner asked American Express to issue cards bearing the company's name to Louis Koerner and four other officers of the corporation. Koerner was required to sign a company account form, under which he agreed that he would be jointly and severally liable with the company for all charges incurred through use of the company card. American

Express issued the cards requested by the company. Thereafter, the cards were used almost totally for business purposes, although Koerner occasionally used his card for personal expenses. Later, a dispute regarding charges appearing on the company account arose. Does the Fair Credit Billing Act apply to this dispute?

12. Darlene Jenkins obtained a car loan from a bank. When she defaulted on the loan, the bank sued her to recover the balance due. The bank's attorney, George Heintz, wrote Jenkins a letter in an effort to settle the case. In the portion of the letter in which he stated the amount Jenkins allegedly owed, Heintz included $4,173 owed for insurance that the bank had purchased because Jenkins had not kept the car insured. Jenkins sued Heintz under the Fair Debt Collection Practices Act (FDCPA). She contended that Heintz's letter violated the FDCPA's prohibition against attempting to collect an amount not "authorized by the agreement creating the debt," as well as its prohibition against making a "false representation of . . . the . . . amount . . . of any debt." Jenkins conceded that the loan agreement required her to keep the car insured "against loss or damage" and permitted the bank to buy such insurance to protect the car if she failed to do so. She asserted, however, that the $4,173 policy purchased by the bank was not the kind of policy the loan agreement contemplated, because it insured the bank not only against "loss or damage" but also against her failure to repay the loan. According to Jenkins, Heintz's representation about the amount of her "debt" violated the FDCPA because the representation was false and part of an attempt to collect an amount not authorized by the loan agreement. Reasoning that the FDCPA does not apply to attorneys engaged in litigation, the federal district court dismissed Jenkins's lawsuit for failure to state a claim. The U.S. Court of Appeals for the Seventh Circuit reversed, holding that the FDCPA applies to attorneys involved in litigation. Was the Seventh Circuit correct?

13.  *Video Case.* See "Henry and Wanda." Henry and Wanda, a married couple, had a joint charge account. Henry left Wanda following an argument over money. He then made many purchases on the account, eventually overdrawing it. As a result, Wanda received numerous phone calls at all hours of the day and night. In one of these calls, the caller referred to Wanda as a "deadbeat" because she would not pay her husband's debts. In another, the caller threatened to contact Wanda's employer. Eventually, one of the callers located Henry by contacting his mother. The caller told her that Henry's father had been involved in a serious accident, and that it was necessary to contact Henry so that he could donate blood to his father. Assuming that all these actions were taken by a covered debt collector and that Henry and Wanda are protected debtors, explain how these various practices *may* have violated the Fair Debt Collection Practices Act.

- *B. Monopolization*
  - *1. Monopoly Power*
  - *2. Intent to Monopolize*
- *C. Attempted Monopolization*
- *D. Conspiracy to Monopolize*

The post–Civil War emergence and growth of large industrial combines and trusts significantly altered the business environment of earlier years. A major feature of this economic phenomenon was the tendency of various large business entities to acquire dominant positions in their industries by buying up smaller competitors or engaging in practices aimed at driving those competitors out of business. This behavior led to public demands for legislation to preserve competitive market structures and prevent the accumulation of great economic power in the hands of a few firms.

Although the common law had long held that contracts unreasonably restraining trade violated public policy, courts could implement this rule only by refusing to enforce such a contract if one of the parties objected to it. Legislation was therefore necessary to give courts greater power to deal with the problem of anticompetitive practices. Congress responded in 1890 with the Sherman Act. It supplemented this response

by enacting the Clayton Act in 1914 and the Robinson-Patman Act in 1936.

Preservation of Competition

In enacting the antitrust statutes, Congress adopted a public policy in favor of preserving and promoting free competition as the most efficient means of allocating social resources. The Supreme Court summarized the rationale for this faith in competition's positive effects:

> Basic to faith that a free economy best promotes the public weal is that goods must stand the cold test of competition; that the public, acting through the market's impersonal judgment, shall allocate the nation's resources and thus direct the course its economic development will take.[1]

Congress thus presumed, in enacting the antitrust statutes, that competition was more likely to exist in an industrial structure characterized by a large number of competing firms than in concentrated industries dominated by a few large competitors. As Judge Learned Hand observed:

> Many people believe that possession of an unchallenged economic power deadens initiative, discourages thrift, and depresses energy; that immunity from competition is a narcotic, and rivalry is a stimulant, to industrial progress; that the spur of constant stress is necessary to counteract an inevitable disposition to let well enough alone.[2]

Despite this longstanding policy in favor of competitive market structures, the antitrust laws have not been very successful in halting the trend toward concentration in American industry. Today's market structure in many important industries is highly *oligopolistic,* with the bulk of production accounted for by a few dominant firms. Traditional antitrust concepts are often difficult to apply to the behavior of firms in these highly concentrated markets. Recent years have witnessed the emergence of new ideas that challenge various longstanding antitrust policy assumptions.

[1] *Times-Picayune Co. v. United States,* 345 U.S. 594 (U.S. Sup. Ct. 1953).
[2] *United States v. Aluminum Co. of America, Inc.,* 148 F.2d 416 (2d Cir. 1945).

The Antitrust Policy Debate

Antitrust enforcement necessarily reflects fundamental public policy judgments about the economic activities to be allowed and the industrial structure best suited to foster desirable economic activity. Given the importance of such judgments to the future of the American economy, it is not surprising that antitrust policy spurs vigorous public debate.

Chicago School Theories

During the past quarter-century, traditional antitrust assumptions have faced a highly effective challenge from commentators and courts advocating the application of microeconomic theory to antitrust enforcement. These methods of antitrust analysis are commonly called **Chicago School theories** because many of their major premises were advanced by scholars affiliated with the University of Chicago.

Chicago School advocates tend to view *economic efficiency* as the primary, if not sole, goal of antitrust enforcement. They are far less concerned with the supposed effects of industrial concentration than are traditional antitrust thinkers. Even highly concentrated industries, they argue, may engage in significant forms of nonprice competition, such as competition in advertising, styling, and warranties. They also point out that concentration in a particular industry does not necessarily preclude *interindustry competition* among related industries. For example, a highly concentrated glass container industry may still face significant competition from the makers of metal, plastic, and fiberboard containers. Chicago School advocates are also quick to point out that many markets today are international in scope, so that highly concentrated domestic industries such as automobiles, steel, and electronics may nonetheless face effective foreign competition. Moreover, they argue that the technological developments necessary for American industry to compete more effectively in international markets may require the great capital resources that result from concentration in domestic industry.

According to the Chicago School viewpoint, the traditional antitrust focus on the structure of industry has improperly emphasized protecting *competitors* instead of protecting *competition.* Chicago School theorists argue that antitrust policy's primary thrust should feature *anticonspiracy* efforts rather than *anticoncentration* efforts. In addition, most of these theorists take a lenient view toward various vertically imposed restrictions on

price and distribution that have been traditionally seen as undesirable, because they believe that such restrictions can promote efficiencies in distribution. Thus, they tend to be relatively tolerant of attempts by manufacturers to control resale prices and establish exclusive distribution systems for their products.

Traditional Antitrust Theories

Traditional antitrust thinkers, however, contend that even though economic efficiency is *an* important goal of antitrust enforcement, antitrust policy has historically embraced *political* as well as economic values. Concentrated economic power, they argue, is undesirable for a variety of noneconomic reasons. It may lead to antidemocratic concentrations of political power. Moreover, it may stimulate greater governmental intrusions into the economy in the same way that the post–Civil War activities of the trusts led to the passage of the antitrust laws. According to the traditional view, lessening concentration enhances individual freedom by reducing the barriers to entry that confront would-be competitors and by ensuring broader input into economic decisions having important social consequences. Judge Learned Hand summed up this perspective on antitrust policy:

> Great industrial consolidations are inherently undesirable, regardless of their economic results. Throughout the history of [sections 1 and 2 of the Sherman Act] it has been constantly assumed that one of their purposes was to perpetuate and preserve, for its own sake and in spite of possible cost, an organization of industry in small units which can effectively compete with each other.[3]

Effect of Chicago School Notions

Chicago School notions, however, have had a significant impact on the course of antitrust enforcement in recent decades. The Supreme Court and many of President Reagan's appointees to the lower federal courts gave credence to Chicago School economic arguments in many cases. Some of President Reagan's appointees to the Department of Justice and the Federal Trade Commission were sympathetic to Chicago School policy views. Appointees during the Bush and Clinton administrations have been somewhat more inclined toward government enforcement of the antitrust laws than their Reagan administration predecessors were. Nevertheless, the presence on the federal bench of so many judges embracing Chicago School ideas means that those views are likely to continue to have an impact on the shape of antitrust law for the foreseeable future.

Jurisdiction, Types of Antitrust Cases, and Standing

Jurisdiction

The Sherman Act outlaws monopolization, attempted monopolization, and agreements in restraint of trade. Because the federal government's power to regulate business originates in the commerce clause of the U.S. Constitution, the federal antitrust laws apply only to behavior having some significant impact on *interstate* or *foreign* commerce.[4] Given the interdependent nature of our national economy, it is normally fairly easy to demonstrate that a challenged activity either involves interstate commerce (the "in commerce" jurisdiction test) or has a substantial effect on interstate commerce (the "effect on commerce" jurisdiction test). Various cases indicate that a business activity may have a substantial effect on interstate commerce even though the activity occurs solely within the borders of one state. Activities that are purely *intrastate* in their effects, however, are outside the scope of federal antitrust jurisdiction and must be challenged under state law.

The federal antitrust statutes have been extensively applied to activities affecting the international commerce of the United States. The conduct of American firms operating outside U.S. borders may be attacked under our antitrust laws if it has an intended effect on our foreign commerce. Likewise, foreign firms "continuously engaged" in our domestic commerce are subject to federal antitrust jurisdiction. Determining the full extent of the extraterritorial reach of our antitrust laws often involves courts in difficult questions of antitrust exemptions and immunities (to be discussed in Chapter 49). The extraterritorial reach issue also suggests the troubling political prospect that aggressive expansion of antitrust law's applicability may create tension between our antitrust policy and our foreign policy in general.

[3] *United States v. Aluminum Co. of America, Inc.,* 148 F.2d 416 (2d Cir. 1945).

[4] Chapter 3 discusses the commerce clause in detail.

Types of Cases and the Role of Pretrial Settlements

Sherman Act violations may give rise to criminal prosecutions and civil litigation instituted by the federal government (through the Department of Justice), as well as to civil suits filed by private parties. A significant percentage of the antitrust cases brought by the Department of Justice are settled without trial through *nolo contendere* pleas in criminal cases and *consent decrees* in civil cases. Although a defendant who pleads nolo contendere technically has not admitted guilt, the sentencing court is free to impose the same penalty that would be appropriate in the case of a guilty plea or a conviction at trial. Consent decrees involve a defendant's consent to remedial measures aimed at remedying the competitive harm resulting from his actions. Because neither a nolo plea nor a consent decree is admissible as proof of a violation of the Sherman Act in a later civil suit filed by a private plaintiff, these devices are often attractive to antitrust defendants.

Criminal Prosecutions

Individuals criminally convicted of Sherman Act violations may receive a fine of up to $350,000 per violation and/or a term of imprisonment of up to three years. Corporations convicted of violating the Sherman Act may be fined up to $10 million per violation. Before an individual may be found criminally responsible under the Sherman Act, however, the government must prove an *anticompetitive effect* flowing from the challenged activity, as well as *criminal intent* on the defendant's part. The level of criminal intent required for a violation is a "knowledge of [the challenged activity's] probable consequences" rather than a specific intent to violate the antitrust laws.[5] Civil violations of the antitrust laws may be proved, however, by evidence of either an unlawful purpose or an anticompetitive effect.

Civil Litigation

The federal courts have broad injunctive powers to remedy civil antitrust violations. Courts may order convicted defendants to *divest* themselves of the stock or assets of acquired companies, to *divorce* themselves from a functional level of their operations (e.g., ordering a manufacturer to sell its captive retail outlets), to refrain from particular conduct in the future, and to cancel existing contracts. In extreme cases, courts may also enter a *dissolution decree* ordering a defendant to liquidate its assets and cease business operations. Private individuals and the federal Department of Justice may seek such injunctive relief regarding antitrust violations.

Treble Damages for Private Plaintiffs Section 4 of the Clayton Act gives private parties a significant incentive to enforce the antitrust laws by providing that private plaintiffs injured by Sherman Act or Clayton Act violations are entitled to recover *treble damages* plus court costs and attorney's fees from the defendant. This means that once antitrust plaintiffs have demonstrated the amount of their actual losses (such as lost profits or increased costs) resulting from the challenged violation, this amount is tripled. The potential for treble damage liability plainly presents a significant deterrent threat to potential antitrust violators. For example, a famous antitrust case against General Electric Company and several other electrical equipment manufacturers resulted in treble damage awards in excess of $200 million. Some Chicago School critics have argued unsuccessfully that treble damages should be allowed only for *per se* antitrust violations, with plaintiffs who prove *rule of reason* violations being limited to recovering actual damages. (Per se and rule of reason violations are discussed later in this chapter.)

Standing

Private plaintiffs who seek to enforce the antitrust laws must first demonstrate that they have **standing** to sue. This means that they must show a *direct antitrust injury* as a result of the challenged behavior. An antitrust injury results from the unlawful aspects of the challenged behavior and is of the sort Congress sought to prevent by enacting the antitrust laws. For example, in *Brunswick Corp. v. Pueblo Bowl-o-Mat, Inc.,*[6] the operator of a chain of bowling centers (Pueblo) challenged a bowling equipment manufacturer's (Brunswick's) acquisition of various competing bowling centers that had defaulted on payments owed to Brunswick for equipment purchases. In essence, Pueblo asserted that if Brunswick had not acquired them, the failing bowling centers

[5] *United States v. U.S. Gypsum Co.,* 438 U.S. 422 (U.S. Sup. Ct. 1978).

[6] 429 U.S. 477 (U.S. Sup. Ct. 1977).

would have gone out of business—in which event Pueblo's profits would have increased. The Supreme Court rejected Pueblo's claim because Pueblo's supposed losses flowed from Brunswick's having *preserved* competition by acquiring the failing centers. Allowing recovery for such losses would be contrary to the antitrust purpose of *promoting* competition.

Importance of Direct Injury Proof that an antitrust injury is *direct* is critical because the Supreme Court has held that *indirect purchasers* lack standing to sue for antitrust violations. In *Illinois Brick Co. v. State of Illinois,*[7] the state of Illinois and other governmental entities sought treble damages from concrete block suppliers who, they alleged, were guilty of illegally fixing the price of block used in the construction of public buildings. The plaintiffs acknowledged that the builders hired to construct the buildings in question had actually paid the inflated prices for the blocks, but argued that these illegal costs probably had been passed on to them in the form of higher prices for building construction. The Supreme Court refused to allow recovery, however, holding that granting standing to indirect purchasers would create a risk of duplicative recoveries by purchasers at various levels in a product's chain of distribution. The Court also observed that affording standing to indirect purchasers would lead to difficult problems of tracing competitive injuries through several levels of distribution and assessing the extent of an indirect purchaser's actual losses.

A number of state legislatures responded to *Illinois Brick* by enacting statutes allowing indirect purchasers to sue under *state* antitrust statutes. The Supreme Court has held that the *Illinois Brick* holding does not preempt such statutes.[8]

Section 1—Restraints of Trade

Concerted Action

Section 1 of the Sherman Act states that "[e]very contract, combination in the form of trust or otherwise, or conspiracy, in restraint of trade or commerce among the several states, or with foreign nations is declared to be illegal." A **contract** is any agreement, express or implied, between *two or more* persons or business entities to restrain competition. A **combination** is a continuing *partnership* in restraint of trade. When *two or more* persons or business entities join for the purpose of restraining trade, a **conspiracy** occurs.

The above statutory language makes obvious the conclusion that section 1 of the Sherman Act is aimed at **concerted action** (i.e., *joint action*) in restraint of trade. *Purely unilateral action* by a competitor, on the other hand, cannot violate section 1. This statutory section reflects the public policy that businesspersons should make important competitive decisions on their own, rather than in conjunction with competitors. In his famous book *The Wealth of Nations* (1776), Adam Smith acknowledged both the danger to competition posed by concerted action and the tendencies of competitors to engage in such action. Smith observed that "[p]eople of the same trade seldom meet together, even for merriment and diversion, [without] the conversation end[ing] in a conspiracy against the public, or in some contrivance to raise prices."

Problems Posed by Concerted Action Requirement

Section 1's concerted action requirement poses two major problems. First, how separate must two business entities be before their joint activities are subject to the act's prohibitions? For example, it has long been held that a corporation cannot conspire with itself or its employees and that a corporation's employees cannot be guilty of a conspiracy in the absence of some independent party. What about conspiracies, however, among related corporate entities? In decisions roughly 50 years ago, the Supreme Court appeared to hold that a corporation could violate the Sherman Act by conspiring with a wholly owned subsidiary. More recently, however, in *Copperweld Corp. v. Independence Tube Corp.,*[9] the Court repudiated the "intra-enterprise conspiracy doctrine." The Court held that a parent company is legally incapable of conspiring with a wholly owned subsidiary for Sherman Act purposes, because an agreement between parent and subsidiary does not create the risk to competition that results when two independent entities act in concert. It remains to be seen whether this approach extends to corporate subsidiaries

[7] 431 U.S. 720 (U.S. Sup. Ct. 1977).
[8] *California v. ARC America Corp.,* 490 U.S. 93 (U.S. Sup. Ct. 1989).
[9] 467 U.S. 752 (U.S. Sup. Ct. 1984).

and affiliates that are not wholly owned. *Copperweld*'s logic would appear, however, to cover any subsidiary in which the parent firm has a controlling interest.

A second—and more difficult—problem frequently accompanies attempts to enforce section 1. This problem arises when courts are asked to *infer,* from the relevant circumstances, the existence of an agreement or conspiracy to restrain trade despite the lack of any *overt* agreement by the parties. Should parallel pricing behavior by several firms be enough, for instance, to justify the inference that a price-fixing conspiracy exists? Courts have consistently held that proof of pure *conscious parallelism,* standing alone, is **not** enough to establish a section 1 violation. Other evidence must be presented to show that the defendants' actions stemmed from an **agreement,** *express or implied,* rather than from independent business decisions. It therefore becomes quite difficult to attack *oligopolies* (a few large firms sharing one market) under section 1, because such firms may independently elect to follow the pricing policies of the industry "price leader" rather than risk their large market shares by engaging in vigorous price competition.

Per Se Analysis

Although section 1's language condemns "every" contract, combination, and conspiracy in restraint of trade, the Supreme Court has long held that the Sherman Act applies only to behavior that *unreasonably* restrains competition. In addition, the Court has developed two fundamentally different approaches to analyzing behavior challenged under section 1. According to the Court, some actions always have a negative effect on competition—an effect that cannot be excused or justified. Such actions are classified as **per se** unlawful. If a particular behavior falls under the per se heading, it is conclusively presumed to violate section 1. Per se rules are thought to provide reliable guidance to business. They also simplify otherwise lengthy antitrust litigation, because if per se unlawful behavior is proven, the defendant cannot assert any supposed justifications in an attempt to avoid liability.

Per se rules, however, are frequently criticized on the ground that they tend to oversimplify complex economic realities. Recent decisions indicate that for *some* economic activities, the Supreme Court is moving away from per se rules and instead adopting **rule of reason** analysis. This trend is consistent with the Court's increased inclination to consider new economic theories that seek to justify behavior previously held to be per se unlawful.

"Rule of Reason" Analysis

Behavior not classified as per se unlawful is judged under the **rule of reason.** This approach requires a detailed inquiry into the actual competitive effects of the defendant's actions. It includes consideration of any justifications that the defendant may advance. If the court concludes that the challenged activity had a significant anticompetitive effect that was not offset by any positive effect on competition or other social benefit such as enhanced economic efficiency, the activity will be held to violate section 1. On the other hand, if the court concludes that the justifications advanced by the defendant outweigh the harm to competition resulting from the defendant's activity, there is no section 1 violation.

The following subsections of this chapter examine some of the behaviors held to violate section 1 of the Sherman Act. The legal treatment (per se or rule of reason) given to the respective behaviors is also considered.

Horizontal Price-Fixing

An essential attribute of a free market is that the price of goods and services is determined by the free play of the impersonal forces of the marketplace. Attempts by competitors to interfere with market forces and control prices—called **horizontal price-fixing**—have long been held per se unlawful under section 1. Price-fixing may take the form of direct agreements among competitors about the price at which they sell or buy a particular product or service. It may also be accomplished by agreements on the quantity of goods to be produced, offered for sale, or bought. In one famous case, an agreement by major oil refiners to purchase and store the excess production of small independent refiners was held to amount to price-fixing because the purpose of the agreement was to affect the market price for gasoline by artificially limiting the available supply.[10]

Some commentators have suggested that agreements among competitors to fix *maximum* prices should be treated under a rule of reason approach rather than the harsher per se standard because, in some instances, such agreements may result in savings

[10] *United States v. Socony-Vacuum Oil Co.,* 310 U.S. 150 (U.S. Sup. Ct. 1940).

to consumers. In addition, lower courts have occasionally sought to craft exceptions to the rule that horizontal price-fixing triggers per se treatment. It is important to note, however, that the Supreme Court continues to adhere to the longstanding rule of per se illegality for any form of horizontal price-fixing. In the *Denny's Marina* case, which follows, a federal court of appeals overturned a district court's attempt to limit the applicability of the per se rule in the horizontal price-fixing context.

Denny's Marina, Inc. v. Renfro Productions, Inc. *8 F.3d 1217 (7th Cir. 1993)*

Denny's Marina, Inc. filed an antitrust action, described more fully below, against various defendants: the "Renfro Defendants" (Renfro Productions, Inc., Indianapolis Boat, Sport, and Travel Show, Inc., and individuals connected with those firms); "CIMDA" (the Central Indiana Marine Dealers Association); and the "Dealer Defendants" (various boat dealers who competed with Denny's in the sale of fishing boats, motors, trailers, and marine accessories in the central Indiana market). The Renfro Defendants operate two boat shows each year, one in the spring and one in the fall, at the Indiana State Fairgrounds. The spring show has occurred annually for more than 30 years and is one of the top three boat shows in the United States. It attracts between 160,000 and 191,000 consumers each year. The fall show is a smaller operation that has occurred each year since 1987. Numerous boat dealers participate in the two shows.

Denny's participated in the fall show in 1988, 1989, and 1990. It participated in the spring show in 1989 and 1990. According to allegations made by Denny's in its antitrust complaint, Denny's was quite successful at each of these shows, apparently because it urged customers to shop the other dealers and then return to Denny's for a lower price. After the 1989 spring show, some of the Dealer Defendants began to complain (according to Denny's) to the Renfro Defendants about the sales methods used by Denny's. In addition, Denny's alleged, the Dealer Defendants spent a significant part of a CIMDA meeting venting frustration about similar sales tactics used by Denny's at the 1990 spring show. Denny's also asserted that the Dealer Defendants' complaints to the Renfro Defendants escalated, and that as a result, the Renfro Defendants informed Denny's after the 1990 fall show that Denny's could no longer participate in the boat shows.

Denny's claimed that the above-described conduct of the defendants amounted to a conspiracy, prohibited by Sherman Act section 1, to exclude Denny's from participating in the boat shows because its policy was to "meet or beat" its competitors' prices at the shows. When the district court granted the defendants' motions for summary judgment, Denny's appealed to the Seventh Circuit Court of Appeals.

Cummings, Circuit Judge Because summary judgment was granted to the defendants, the facts alleged by Denny's and any inferences therefrom must be construed in its favor. Summary judgment will be denied if a reasonable jury could return a verdict for the plaintiff.

A successful claim under Section 1 of the Sherman Act requires proof of three elements: (1) a contract, combination, or conspiracy; (2) a resultant unreasonable restraint of trade in the relevant market; and (3) an accompanying injury. The district court noted that [for purposes of a ruling on their summary judgment motions] defendants do not dispute the first and third elements of proof. Hence the parties' only argument is whether Denny's has made a sufficient showing of the second element, unreasonable restraint of trade, to withstand defendants' motions for summary judgment.

There are two standards for evaluating whether an alleged restraint of trade is unreasonable: the rule of reason and the per se rule. The nature of the restraint determines which rule will be applied. Because the restraint alleged by Denny's constitutes a horizontal price-fixing conspiracy, it is per se an unreasonable restraint of trade [under a long line of Supreme Court decisions]. The conspiracy in this case was horizontal because it . . . consisted of Denny's competitors and their association. That the conspiracy was joined by the operators of the . . . boat shows does not transform it into a vertical agreement.

Likewise, the conspiracy was to fix prices. Price-fixing agreements need not include "explicit

agreement on prices to be charged or that one party have the right to be consulted about the other's prices." *Palmer v. BRG of Georgia, Inc.* (U.S. Sup. Ct. 1990). "Under the Sherman Act a combination formed for the purpose and with the effect of raising, depressing, fixing, pegging, or stabilizing the price of a commodity in interstate or foreign commerce is illegal per se." *United States v. Socony Vacuum-Oil Co.* (U.S. Sup. Ct. 1940). Concerted action by dealers to protect themselves from price competition by discounters constitutes horizontal price-fixing. Hence the actions of the Dealer Defendants and CIMDA, joined by the Renfro Defendants, to prevent Denny's from participating in the boat shows constitutes a horizontal price-fixing conspiracy notwithstanding the apparent lack of an explicit agreement to set prices.

So far, the position of this court is similar to that of the court below. Nevertheless, having essentially found that Denny's had adduced sufficient evidence of a horizontal price-fixing conspiracy to withstand a motion for summary judgment, the court below refused to apply the per se rule that would allow it to conclude that there had been an unreasonable restraint of trade in the relevant market. Instead, before it would apply the per se rule the court required Denny's to demonstrate a substantial potential for impact on competition in the central Indiana market as a whole. Such an exception to the per se rule against price-fixing is unwarranted by cited precedent . . . [and] would effectively require plaintiffs to make a rule of reason demonstration in order to invoke the per se rule! [In cases governed by the rule of reason], both parties are likely to present extensive economic analysis of the relevant market. It is in part to avoid such excessive costs of litigation that the per se rule is applied in cases where the anti-competitive effect of certain practices may be presumed.

As far back as 1940, it has been clear that horizontal price-fixing is illegal per se without requiring a showing of actual or likely impact on a market. *See Socony-Vacuum Oil.* This is because joint action by competitors to suppress price-cutting has the requisite "substantial potential for impact on competition" to warrant per se treatment. *Federal Trade Commission v. Superior Court Trial Lawyers Association* (U.S. Sup. Ct. 1990). The district court would require Denny's to demonstrate a particular potential for impact on the market, when one of the purposes of the per se rule is that in cases like this such a potential is so well-established as not to require individualized showings. The pernicious effects are conclusively presumed.

Since Denny's presented enough evidence for a court and jury to conclude that the defendants engaged in [per se behavior consisting of] a horizontal conspiracy to suppress price competition at boat shows, . . . the district court's grant of summary judgment to the defendants [was erroneous].

Summary judgment for defendants reversed in favor of Denny's; case remanded for trial.

Vertical Price-Fixing

Attempts by manufacturers to control the resale price of their products may also fall within the scope of section 1. This behavior, called **vertical price-fixing** or *resale price maintenance,* has long been held to be per se illegal. Manufacturers may lawfully state a suggested retail price for their products, because such an action is purely unilateral in nature and does not involve the concerted action necessary for a violation of section 1. Per se illegality may be present, however, when there is a manufacturer-dealer *agreement* (express or implied) obligating the dealer to resell at a price dictated by the manufacturer. The latter scenario involves prohibited *concerted action.*

Consignment Sales The section 1 emphasis on concerted action provides the basis for two indirect methods that some manufacturers may lawfully be able to use to control resale prices: *consignment sales* and *unilateral refusals to deal.* Consignments are agreements in which an owner of goods (the consignor) delivers them to another who is to act as the owner's agent in selling them (the consignee). Because the consignee is effectively the consignor's agent in selling the goods, and because the owners of goods generally have the right to determine the price at which their goods are sold, an early Supreme Court decision established that consignment sales were not covered by Section 1.[11]

[11] *United States v. General Electric Co.,* 272 U.S. 476 (U.S. Sup. Ct. 1926).

Later decisions, however, cast some doubt on the legality of resale price maintenance achieved by consignment dealing.[12] Consignment selling systems whose primary purpose is resale price maintenance may be held unlawful if they result in restraining price competition among a large number of consignees who would otherwise be in competition with one another. This is especially likely to be true in cases where the consignor has sufficient economic power over his consignees to permit him to refuse to deal with them on any basis other than a consignment. Finally, to have any hope of avoiding liability, the arrangement in question must be a true consignment. The consignor must retain title to the goods and bear the risk of loss of the goods while they are in the consignee's hands. In addition, the consignee must have the right to return unsold goods.

Unilateral Refusals to Deal In *United States v. Colgate & Co.,*[13] the Supreme Court held that a manufacturer could *unilaterally refuse to deal* with dealers who failed to follow its suggested resale prices. The rationale underlying this holding was that a single firm may deal or not deal with whomever it chooses without violating section 1, because unilateral action is not the concerted action prohibited by the statute. Subsequent cases, however, have narrowly construed the *Colgate* doctrine. Manufacturers probably will be held to have violated section 1 if they enlist the aid of dealers who are not price-cutting to help enforce their (the manufacturers') pricing policies, or if they engage in other joint action to further those policies.

Exception to Per Se Rule In recent years, it began to seem doubtful that per se illegality would remain the rule for all resale price maintenance agreements. Chicago School theorists argued that many of the same reasons that have been held to justify rule of reason analysis of vertically imposed *nonprice* restraints on distribution (discussed later in this chapter) were equally applicable to vertical price-fixing agreements. In particular, these critics argued that vertical restrictions limiting the maximum price at which a dealer can resell may prevent dealers with dominant market positions from exploiting consumers through price-gouging. After hinting in previous cases that it might be inclined to repudiate the rule that vertically imposed maximum price restraints trigger per se treatment, the Supreme Court overruled a longstanding precedent and held, in the 1997 *Khan* decision, that vertical maximum price-fixing should be analyzed under the rule of reason.

[12]See, for instance, *Simpson v. Union Oil Co. of California,* 377 U.S. 13 (U.S. Sup. Ct. 1964).
[13]250 U.S. 300 (U.S. Sup. Ct. 1919).

State Oil Co. v. Khan *522 U.S. 3 (U.S. Sup. Ct. 1997)*

Barkat Khan operated a service station in Illinois under a contract with State Oil Co. The parties' contract called for State Oil to lease the station premises to Khan and for State Oil to supply him with gasoline and related products that he would sell at the station. According to the contract, State Oil would establish a suggested retail price for the gasoline it supplied Khan for resale under the "Union 76" brand name. State Oil would then sell the gasoline to Khan for 3.25 cents less than that price. If Khan regarded the suggested retail price as too low, he could ask State Oil to increase it. If State Oil refused to raise the suggested price and Khan increased his retail price anyway, the contract required Khan to rebate to State Oil the difference between his new price and the suggested price.

When Khan fell behind on his rent, State Oil terminated the contract. Khan then sued State Oil, alleging that the above provisions of the contract amounted to vertical maximum price-fixing in violation of section 1 of the Sherman Act. The district court held that the alleged price-fixing should be evaluated under the rule of reason approach rather than under the per se approach. When the court granted summary judgment in favor of State Oil, Khan appealed to the U.S. Court of Appeals for the Seventh Circuit. The Seventh Circuit reversed, holding that a Supreme Court precedent established the per se rule as controlling. The Supreme Court granted certiorari.

O'Connor, Justice In *Albrecht v. Herald Co.* (U.S. Sup. Ct. 1968), this Court held that vertical maximum price-fixing is a per se violation of [section 1 of the Sherman Act]. [W]e are asked to

reconsider that decision in light of subsequent decisions of this Court.

The District Court found that [Khan's] allegations . . . did not establish the sort of "manifestly anticompetitive implications or pernicious effect on competition" that would justify per se prohibition of State Oil's conduct. The Court of Appeals for the Seventh Circuit reversed [the lower court's grant of summary judgment in favor of State Oil]. The [Seventh Circuit] first noted that the agreement between Khan and State Oil did indeed fix maximum gasoline prices by making it "worthless" for Khan to exceed the suggested retail prices. After reviewing legal and economic aspects of price-fixing, the court concluded that State Oil's pricing scheme was a per se antitrust violation under *Albrecht.* Although the [Seventh Circuit] characterized *Albrecht* as "unsound when decided" and "inconsistent with later decisions" of this Court, it felt constrained to follow that decision.

Although the Sherman Act, by its terms, prohibits every agreement "in restraint of trade," this Court has long recognized that Congress intended to outlaw only unreasonable restraints. [M]ost antitrust claims are analyzed under a "rule of reason," according to which the finder of fact must decide whether the questioned practice imposes an unreasonable restraint on competition, taking into account a variety of factors, including specific information about the relevant business, its condition before and after the restraint was imposed, and the restraint's history, nature, and effect. Some types of restraints, however, have such predictable and pernicious anticompetitive effect, and such limited potential for procompetitive benefits, that they are deemed unlawful per se. [W]e have expressed reluctance to adopt per se rules with regard to "restraints imposed in the context of business relationships where the economic impact of certain practices is not immediately obvious." *FTC v. Indiana Federation of Dentists* (U.S. Sup. Ct. 1986).

A review of this Court's decisions leading up to and beyond *Albrecht* is relevant to our assessment of the continuing validity of the per se rule established in *Albrecht.* Beginning with [a 1911 decision], the Court recognized the illegality of agreements under which manufacturers or suppliers set the minimum resale prices to be charged by their distributors. By 1940, the Court broadly declared all business combinations "formed for the purpose and with the effect of raising, depressing, fixing, pegging, or stabilizing the price of a commodity in interstate or foreign commerce" illegal per se. *United States v. Socony-Vacuum Oil Co.* (U.S. Sup. Ct. 1940). Accordingly, the Court condemned an agreement between two affiliated liquor distillers to limit the maximum price charged by retailers in *Kiefer-Stewart Co. v. Joseph E. Seagram & Sons, Inc.* (U.S. Sup. Ct. 1951).

In subsequent cases, the Court's attention turned to arrangements through which suppliers imposed restrictions on dealers with respect to matters other than resale price. In [a 1963 decision], the Court considered the validity of a manufacturer's assignment of exclusive territories to its distributors and dealers. The Court concluded that too little was known about the competitive impact of such vertical limitations to warrant treating them as per se unlawful. Four years later, in *United States v. Arnold, Schwinn & Co.* (U.S. Sup. Ct. 1967), the Court reconsidered the status of exclusive dealer territories and held that . . . a supplier's imposition of territorial restrictions on [a] distributor was "so obviously destructive of competition" as to constitute a per se violation of the Sherman Act.

Albrecht, decided [a year after *Schwinn*], involved a newspaper publisher who had granted exclusive territories to independent carriers subject to their adherence to a maximum price on resale of the newspapers to the public. Influenced by its decisions in *Socony-Vacuum, Kiefer-Stewart,* and *Schwinn,* the Court concluded that it was per se unlawful for the publisher to fix the maximum resale price of its newspapers. The Court acknowledged that "[m]aximum and minimum price-fixing may have different consequences in many situations," but nonetheless condemned maximum price-fixing for "substituting the perhaps erroneous judgment of a seller for the forces of the competitive market."

Nine years later, in *Continental T.V., Inc. v. GTE Sylvania, Inc.* (U.S. Sup. Ct. 1977), the Court overruled *Schwinn,* thereby rejecting application of a per se rule in the context of vertical nonprice restrictions. The Court acknowledged the principle of *stare decisis,* but . . . not[ed] that *Schwinn*'s per se rule . . . came only four years after the Court had refused to endorse a similar rule. [The Court also noted that *Schwinn*] neither explained the "sudden change in position," nor referred to the accepted requirements for per se violations set forth in [earlier

cases]. The Court . . . reviewed scholarly works supporting the economic utility of vertical nonprice restraints. [It then] concluded that, because "departure from the rule-of-reason standard must be based upon demonstrable economic effect rather than—as in *Schwinn*—upon formalistic line-drawing," the appropriate course would be "to return to the rule of reason that governed vertical restrictions prior to *Schwinn*."

Subsequent decisions of the Court . . . have hinted that the analytical underpinnings of *Albrecht* were substantially weakened by *GTE Sylvania.* We noted in [a 1982 decision] that vertical restraints are generally more defensible than horizontal restraints. [W]e explained in *324 Liquor Corp. v. Duffy* (U.S. Sup. Ct. 1987) that decisions such as *GTE Sylvania* "recognize the possibility that a vertical restraint imposed by a single manufacturer or wholesaler may stimulate interbrand competition even as it reduces intrabrand competition."

[I]n *Atlantic Richfield Co. v. USA Petroleum Co. (ARCO)* (U.S. Sup. Ct. 1990), although *Albrecht*'s continuing validity was not squarely before the Court, some disfavor with that decision was signaled by our statement that we would "assume, *arguendo,* that *Albrecht* correctly held that vertical maximum price-fixing is subject to the per se rule." More significantly, we specifically acknowledged that vertical maximum price-fixing "may have procompetitive interbrand effects," and pointed out that, in the wake of *GTE Sylvania,* "[t]he procompetitive potential of a vertical maximum price restraint is more evident . . . than it was when *Albrecht* was decided, because exclusive territorial arrangements and other nonprice restrictions were unlawful per se in 1968."

Thus, our reconsideration of *Albrecht*'s continuing validity is informed by several of our decisions, as well as a considerable body of scholarship discussing the effects of vertical restraints. Our analysis is also guided by our general view that the primary purpose of the antitrust laws is to protect interbrand competition. "Low prices," we . . . explained [in *ARCO*], "benefit consumers regardless of how those prices are set, and so long as they are above predatory levels, they do not threaten competition."

So informed, we find it difficult to maintain that vertically-imposed maximum prices could harm consumers or competition to the extent necessary to justify their per se invalidation. As Chief Judge Posner wrote for the Court of Appeals in this case:

> As for maximum resale price fixing, . . . the supplier [usually] cannot squeeze his dealers' margins below a competitive level; the attempt to do so would just drive the dealers into the arms of a competing supplier. A supplier might, however, fix a maximum resale price in order to prevent his dealers from exploiting a monopoly position. . . . [S]uppose that State Oil, perhaps to encourage . . . dealer services . . . , has spaced its dealers sufficiently far apart to limit competition among them (or even given each of them an exclusive territory); and suppose further that Union 76 is a sufficiently distinctive and popular brand to give the dealers in it at least a modicum of monopoly power. Then State Oil might want to place a ceiling on the dealers' resale prices in order to prevent them from exploiting that monopoly power fully. It would do this not out of disinterested malice, but in its commercial self-interest. The higher the price at which gasoline is resold, the smaller the volume sold, and so the lower the profit to the supplier if the higher profit per gallon at the higher price is being snared by the dealer.

We recognize that the *Albrecht* decision presented a number of theoretical justifications for a per se rule against vertical maximum price-fixing. But criticism of those premises abounds. The *Albrecht* decision was grounded in the fear that maximum price-fixing by suppliers could interfere with dealer freedom. [However, as noted by Phillip Areeda in his treatise, *Antitrust Law,*] "the ban on maximum resale price limitations declared in *Albrecht* in the name of 'dealer freedom' has actually prompted many suppliers to integrate forward into distribution, thus eliminating the very independent trader for whom *Albrecht* professed solicitude."

The *Albrecht* Court also expressed the concern that maximum prices may be set too low for dealers to offer consumers essential or desired services. But such conduct, by driving away customers, would seem likely to harm manufacturers as well as dealers and consumers, making it unlikely that a supplier would set such a price as a matter of business judgment. In addition, *Albrecht* noted that vertical maximum price-fixing could effectively channel distribution through large or specially advantaged dealers. It is unclear, however, that a supplier would profit from limiting its market by excluding potential dealers. Further, although vertical maximum price-fixing might limit the viability of inefficient

dealers, that consequence is not necessarily harmful to competition and consumers.

Finally, *Albrecht* reflected the Court's fear that maximum price-fixing could be used to disguise arrangements to fix minimum prices, which remains illegal per se. Although we have acknowledged the possibility that maximum pricing might mask minimum pricing, we believe that such conduct—as with the other concerns articulated in *Albrecht*—can be appropriately recognized and punished under the rule of reason. After reconsidering *Albrecht*'s rationale and the substantial criticisms the decision has received, . . . we conclude that there is insufficient economic justification for per se invalidation of vertical maximum price-fixing.

Despite what Chief Judge Posner aptly described as *Albrecht*'s "infirmities, [and] its increasingly wobbly, moth-eaten foundations," there remains the question whether *Albrecht* deserves continuing respect under the doctrine of *stare decisis*. The Court of Appeals was correct in applying that principle despite disagreement with *Albrecht,* for it is this Court's prerogative alone to overrule one of its precedents. We approach the reconsideration of decisions of this Court with the utmost caution. *Stare decisis* reflects "a policy judgment that in most matters it is more important that the applicable rule of law be settled than that it be settled right." *Agostini v. Felton* (U.S. Sup. Ct. 1997).

But "[*s*]*tare decisis* is not an inexorable command." *Payne v. Tennessee* (U.S. Sup Ct. 1991). In the area of antitrust law, there is a competing interest, well-represented in this Court's decisions, in recognizing and adapting to changed circumstances and the lessons of accumulated experience. Thus, the general presumption that legislative changes should be left to Congress has less force with respect to the Sherman Act in light of the accepted view that Congress "expected the courts to give shape to the statute's broad mandate by drawing on common-law tradition." *National Society of Professional Engineers v. United States* (U.S. Sup. Ct. 1978). [T]he term "restraint of trade," as used in section 1 [of the Sherman Act], also "invokes the common law itself, and not merely the static content that the common law had assigned to the term in 1890." *Business Electronics Corp. v. Sharp Electronics Corp.* (U.S. Sup. Ct. 1988).

[As noted in *Business Electronics,*] we do not "lightly assume that the economic realities underlying earlier judicial decisions have changed, or that earlier judicial perceptions of those realities were in error." [Nevertheless, as *Business Electronics* also stated, it] "would make no sense to create out of the single term 'restraint of trade' a chronologically schizoid statute, in which a 'rule of reason' evolves with new circumstances and new wisdom, but a line of per se illegality remains forever fixed where it was." With the views underlying *Albrecht* eroded by this Court's precedent, there is not much of that decision to salvage. [W]e find its conceptual foundations gravely weakened.

In overruling *Albrecht,* we of course do not hold that all vertical maximum price-fixing is per se lawful. Instead, vertical maximum price-fixing, like the majority of commercial arrangements subject to the antitrust laws, should be evaluated under the rule of reason. In our view, rule-of-reason analysis will effectively identify those situations in which vertical maximum price-fixing amounts to anticompetitive conduct.

Decision of Court of Appeals reversed; case remanded for further proceedings.

Horizontal Divisions of Markets

It has traditionally been said that **horizontal division of markets** agreements—those agreements among competing firms to divide up the available market by assigning one another certain exclusive territories or certain customers—are illegal per se. Such agreements plainly represent agreements not to compete. They result in each firm being isolated from competition in the affected market.

Approximately 30 years ago, in *United States v. Topco Associates, Inc.,*[14] the Supreme Court reaffirmed this longstanding principle by striking down a horizontal division of markets agreement among members of a cooperative association of local and regional supermarket chains. The *Topco* decision was widely criticized, however, on the ground that its per se approach ignored

[14]405 U.S. 596 (U.S. Sup. Ct. 1972).

an arguably important point: that the defendants' joint activities in promoting Topco brand products were aimed at enabling them to compete more effectively with national supermarket chains. Critics argued that when such horizontal restraints were ancillary to *procompetitive* behavior, they should be judged under the rule of reason.

Naked Restraints and Ancillary Restraints

Such criticism has had an impact. Several decisions by lower federal courts have distinguished between "naked" horizontal restraints (those having no other purpose or effect except restraining competition) and "ancillary" horizontal restraints (those constituting a necessary part of a larger joint undertaking serving procompetitive ends).[15] Although these courts continue to apply the per se rule to naked horizontal restraints, they give rule of reason treatment to ancillary restraints. In determining whether ancillary restraints are lawful under the rule of reason, courts weigh the harm to competition resulting from such restraints against the alleged offsetting benefits to competition. One factor likely to be of substantial importance in this weighing process is the market strength of the defendants. If an agreement restrains competition among firms lacking market power because they face strong competition from other firms not subject to the agreement, consumers are unlikely to be harmed. This is because the existence of competition limits the ability of the agreeing firms to exploit their agreement by raising prices.

Whether the Supreme Court ultimately will endorse such departures from *Topco* remains to be seen. However, the Court's post-*Topco* tendency to discard per se rules in favor of a rule of reason approach in other areas suggests that *Topco*'s critics may ultimately prevail with their arguments.

[15]See, for example, *Polk Bros. v. Forest City Enterprises,* 776 F.2d 185 (7th Cir. 1985). In this case, two retailers were constructing a new building that they were to share. An agreement by the retailers not to compete in the sale of certain product lines was upheld as ancillary to their agreement to develop the joint facility.

Vertical Restraints on Distribution

Vertical restraints on distribution (or *vertical nonprice restraints*) also fall within the scope of the Sherman Act. A manufacturer has always had the power to *unilaterally* assign exclusive territories to its dealers or to limit the dealerships it grants in a particular geographic area. However, manufacturers may run afoul of section 1 by causing dealers to *agree* not to sell outside their dealership territories or by placing other restrictions on their dealers' right to resell their products.

The Supreme Court once held that vertical restraints on distribution were per se illegal when applied to goods that the manufacturer had sold to its dealers (with consignment sales being treated under the rule of reason). The Court changed course, however, in *Continental T.V., Inc. v. GTE Sylvania, Inc.*[16] In *Sylvania,* the Court abandoned the per se rule in favor of a rule of reason approach to most vertical restraints on distribution. The Court accepted many Chicago School arguments concerning the potential *economic efficiencies* that could result from vertical restraints on distribution. Most notably, such restraints were alleged to offer a chance for increased *interbrand* competition among the product lines of competing manufacturers at the admitted cost of restraining *intrabrand* competition among dealers in a particular manufacturer's product. The *Orson* case, which follows, illustrates this point.

Subsequent decisions on the legality of vertical restraints on distribution have emphasized the importance of the market share of the manufacturer imposing the restraints. Restraints imposed by manufacturers with large market shares are more likely to be found unlawful under the rule of reason because the resulting harm to intrabrand competition is unlikely to be offset by significant positive effects on interbrand competition.

[16]433 U.S. 36 (U.S. Sup. Ct. 1977).

Orson, Inc. v. Miramax Film Corp. *79 F.3d 1358 (3d Cir. 1996)*

Orson, Inc., owned and operated the Roxy, a movie theater located in downtown Center City, Philadelphia, from January 1992 until the permanent closing of the theater in October 1994. The Roxy exhibited art films—as opposed to movies that may be characterized as mainstream—on two screens. The total seating capacity at the Roxy was 260. The Ritz theaters, which competed with the Roxy in the showing of art films in the Center City area, consisted of two five-screen facilities with a total seating capacity of approximately 1,800.

The ticket prices at the Roxy and at the Ritz theaters (referred to collectively as "the Ritz") were essentially the same. In addition to the Roxy and the Ritz, there were six other Center City area theaters that showed art films at least part of the time.

Miramax Film Corp., a nationwide distributor of feature-length motion pictures (including art films), distributed movies to all of the theaters in Center City and elsewhere in the greater metropolitan Philadelphia area. Miramax licensed films for exhibition for a limited period of time. Consistent with the usual practice in the motion picture industry, these licenses normally were exclusive—meaning that during the time period established in the license, the film would not be licensed to other theaters located in a specified area. Such licenses, called clearances*, contained compensation terms entitling Miramax to a portion of the exhibiting theater's box office gross.*

In the motion picture industry, a first run *is the initial exhibition of a film in a given geographic area. A* subsequent run *is an exhibition of that film in the same geographic area after the first run has expired. Between January 1992 and February 1994 (when discovery ended in the lawsuit described below), Miramax licensed 28 films on a first-run basis, as well as one on a subsequent-run basis, to the Ritz. During the same time period, Miramax granted the Roxy one first-run license and 14 subsequent-run licenses, and issued various first-run licenses to Center City area theaters other than the Roxy and the Ritz. In addition, during the same time period, 59 distributors other than Miramax granted a total of 73 first-run licenses to the Roxy.*

All of the first-run licenses Miramax granted to the Ritz were exclusive in nature. On occasion, Orson sought a first-run, nonexclusive license on a Miramax film and indicated that Orson would offer Miramax a higher percentage of the Roxy's box office receipts than the percentage the Ritz would pay. Nevertheless, Miramax did not grant Orson the licenses it had requested for the Roxy.

Orson sued Miramax in August 1993, alleging that it had violated section 1 of the Sherman Act by conspiring with the Ritz to exclude the Roxy from the art film market. According to Orson's complaint, this conspiracy involved an agreement to (1) make the Ritz Miramax's exclusive Philadelphia exhibitor for first-run art film features, and (2) grant the Ritz exclusive first-run rights to any Miramax film the Ritz wished to exhibit. The district court concluded that rule of reason analysis was appropriate because the supposed agreement between Miramax and the Ritz was "clearly a vertical agreement" between a distributor and an exhibitor. After undertaking such an analysis, the district court granted summary judgment in favor of Miramax. Orson appealed to the U.S. Court of Appeals for the Third Circuit.

Mansmann, Circuit Judge In rule of reason cases, the plaintiff bears the initial burden of showing that the alleged combination or agreement produced adverse, anticompetitive effects within the relevant product and geographic markets. The plaintiff may satisfy this burden by proving the existence of actual anticompetitive effects, such as reduction of output, increase in price, or deterioration in quality of goods and services. Due to the difficulty of isolating the market effects of the challenged conduct, however, such proof is often impossible to make. Accordingly, the courts allow proof of the defendant's "market power" instead. Market power [is] the ability to raise prices above those that would prevail in a competitive market. If a plaintiff meets his initial burden of adducing adequate evidence of market power or actual anticompetitive effects, the burden shifts to the defendant to show that the challenged conduct promotes a sufficiently pro-competitive objective.

Agreements between entities at different market levels are termed "vertical restraints." The Supreme Court has instructed that vertical restraints of trade, which do not present an express or implied agreement to set resale prices, are evaluated under the rule of reason. The Supreme Court has also repeatedly confirmed in vertical restraint cases that interbrand competition, as opposed to intrabrand competition, is the primary goal of the antitrust laws.

Miramax conceded for purposes of summary judgment that the relevant product market was art films and that the relevant geographic market was Center City, Philadelphia. The first issue we consider is the precise nature of the agreement between Miramax and the Ritz. Orson alleges that Miramax committed to make the Ritz its exclusive Philadelphia exhibitor for first-run art film features. [W]e disagree. The record is devoid of any proof of a promise [by Miramax] to grant first-run licenses . . . in Center City to the Ritz only. Moreover, the evidence is to the

contrary; the Roxy received a first-run license from Miramax, as did [other Center City area theaters]. The record shows, instead, a series of clearances granted by Miramax to the Ritz, based on an understanding between the parties' respective principals that any time the Ritz was showing a first-run Miramax film, its license would be exclusive.

Before we consider the antitrust significance of the clearances, however, we will address the alleged conspiracy that we believe lies at the heart of Orson's . . . complaint. As we understand it, Orson's antitrust theory does not primarily challenge the clearances themselves; [instead, Orson] claims that the clearances were mere vehicles that Miramax and the Ritz used to further a secret conspiracy to drive the Roxy out of business by denying that theater first-run Miramax films.

[In a previous case in which a theater owner alleged the existence of a similar conspiracy between another theater owner and a motion picture distributor, the Third Circuit required the plaintiff to prove the defendants' conscious commitment to a scheme to achieve an unlawful objective. According to the Third Circuit's decision in that precedent case, such proof must include a showing that the defendants (1) acted in a manner contrary to their economic interests, and (2) had a motive to enter into the allegedly unlawful scheme.] Orson . . . contends that given its willingness to pay a higher percentage of the Roxy's gross for first-run Miramax films than paid by the Ritz, Miramax acted contrary to its economic well-being by choosing to grant clearances to the Ritz; [Orson] further maintains that Miramax was coerced into favoring the Ritz because the Ritz had made it clear that unless it was granted an exclusive arrangement it would use its clout and refuse to play Miramax films.

We do not find sufficient evidence in the record for either assertion. To the contrary, the evidence established that the clearances were consistent with Miramax's business interests, granted by the distributor to, as between the Roxy and the Ritz, the theater it reasonably predicted would generate greater income. The record demonstrated that the Ritz had [five times as many screens as the Roxy and nearly nine times the seating capacity of the Roxy, as well as] a solid history of box office receipts; by comparison, the Roxy was not nearly as profitable. The theaters which comprised the Ritz had been in continuous operation since their inception; the Roxy, on the other hand, had ceased operation from time to time over the years. Simply put, . . . Orson's position, premised solely on the financial terms of its offer, is insufficient to call into question the wisdom of Miramax's decision. [T]he evidence in the record is insufficient to permit the factfinder to conclude that Miramax acted contrary to its self-interest by choosing to license exclusively to the Ritz rather than the Roxy. Moreover, the deposition testimony that Orson offered to support its assertion that the Ritz had unduly pressured Miramax in its licensing decisions, even when viewed in Orson's favor, shows nothing of the kind. Orson failed to show that Miramax had a motive to conspire with the Ritz to drive the Roxy out of business. Therefore, we conclude that Orson failed to sustain its burden on summary judgment regarding the essential elements of its antitrust conspiracy claim.

Our inquiry does not end here. The fact remains that clearances existed between Miramax and the Ritz, and that Orson contends that [the clearances themselves] violated section 1 of the Sherman Act. [C]learances, which involve entities at different levels of the film distribution industry, are vertical nonprice restraints of trade. As such, they are subject under section 1 to a rule of reason analysis.

Guided by applicable rules of federal antitrust law and [previous cases in which courts have considered the potential antitrust implications of clearances], we conclude that the reasonableness of a clearance under section 1 of the Sherman Act depends on the competitive stance of the theaters involved and the clearance's effect on competition. [Special attention must be paid to the effect on] interbrand competition, which, as the Supreme Court has instructed, is our primary concern in an antitrust action.

[W]e begin with the fact that the parties agreed that the Roxy and the Ritz were in competition. Thus, the clearances served their accepted purpose of assuring both Miramax and the Ritz that the return from one run of a particular Miramax film would not be diminished. Turning to the touchstone of the rule of reason, the clearances' competitive effects, the uncontroverted facts . . . reveal a market in which competition thrived at both the distributor and exhibitor levels. In Center City, the Roxy, the Ritz, and [various other theaters] vied for the films of at least 59 distributors. Indeed, it is the indisputable existence of alternative sources of supply for the Roxy which negates the existence of anticompetitive effects in

this case. Although the Miramax-Ritz clearances most certainly reduced intrabrand competition to some degree by disallowing the Roxy from showing on a first-run basis any Miramax film that the Ritz had selected, they undeniably promoted interbrand competition by requiring the Roxy to seek out and exhibit the films of other distributors, which it consistently accomplished. [T]he record conclusively establishes that the clearances did not produce the anticompetitive effects the Sherman Act was designed to prevent. On the contrary, competition in the relevant market was enhanced; art film consumers in Center City had more movies from which to choose. We thus conclude that Orson failed to present sufficient evidence to support its claim that the Miramax-Ritz clearances were unreasonable restraints of trade.

District court's grant of summary judgment for Miramax affirmed.

Group Boycotts and Concerted Refusals to Deal

Under the *Colgate* doctrine, a single firm may lawfully refuse to deal with certain firms. The same is not true, however, of *agreements* by two or more business entities to refuse to deal with others, to deal with others only on certain terms and conditions, or to coerce suppliers or customers not to deal with one of their competitors. Such agreements are *joint* restraints on trade. Historically, they have been per se unlawful under section 1. For example, when a trade association of garment manufacturers agreed not to sell to retailers that sold clothing or fabrics with designs pirated from legitimate manufacturers, the agreement was held to be a per se violation of the Sherman Act.[17]

Vertical Boycotts Recent antitrust developments, however, indicate that not all concerted refusals to deal will receive per se treatment. If a manufacturer terminated a distributor in response to complaints from other distributors that the terminated distributor was selling to customers outside its prescribed sales territory, the manufacturer will be held to have violated section 1 only if the termination resulted in a significant harm to competition. This result follows logically from the *Sylvania* decision. If vertical restraints on distribution are judged under the rule of reason, the same standard should apply to a vertical boycott designed to enforce such restraints.

Even distributors claiming to have been terminated as part of a per se illegal vertical price-fixing scheme have found recovery increasingly difficult to obtain in recent years. In *Monsanto v. Spray-Rite Service Corp.,*[18] a manufacturer had terminated a discounting distributor after receiving complaints from its other distributors. The Supreme Court held that these facts would not trigger per se liability for vertical price-fixing in the absence of additional evidence tending to exclude the possibility that the manufacturer and the nonterminated distributors acted independently. In *Business Electronics Corp. v. Sharp Electronics Corp.,*[19] the Court held that even proof of a conspiracy between a manufacturer and nonterminated distributors to terminate a price-cutter would not trigger per se liability unless it was accompanied by proof that the manufacturer and nonterminated dealers were also engaged in a vertical price-fixing conspiracy. *Monsanto* and *Sharp* generated substantial controversy, as well as calls for legislation overruling them and codifying the per se rule for vertical price-fixing. As of the time this book went to press, no such legislation had been enacted.

Horizontal Boycotts It also appears that the Supreme Court is willing to relax the per se rule for some *horizontal* boycotts. For instance, in *Northwest Wholesale Stationers, Inc. v. Pacific Stationery & Printing Co.,* members of an office supply retailers' purchasing cooperative had expelled a member retailer that engaged in some wholesale operations in addition to retail activities. The Court held that rule of reason treatment should be extended to the alleged boycott at issue, but declined to eliminate the per se rule for all horizontal boycotts. The Court has offered only general guidance for determining which horizontal boycotts trigger rule of reason analysis and which ones amount to per se violations. The appropriate legal

[17] *Fashion Originators' Guild v. FTC,* 312 U.S. 457 (U.S. Sup. Ct. 1941).

[18] 465 U.S. 752 (U.S. Sup. Ct. 1984).

[19] 485 U.S. 108 (U.S. Sup. Ct. 1988).

treatment in a given case is therefore difficult to predict. Future decisions may help resolve the uncertainty.

Tying Agreements

Tying agreements occur when a seller refuses to sell a buyer a certain product (the *tying product*) unless the buyer also agrees to purchase a different product (the *tied product*) from the seller. For example, a fertilizer manufacturer refuses to sell its dealers fertilizer (the tying product) unless they also agree to buy its line of pesticides (the tied product). The potential anticompetitive effect of a tying agreement is that the seller's competitors in the sale of the tied product may be foreclosed from competing with the seller for sales to customers that have entered into tying agreements with the seller. To the extent that tying agreements are coercively imposed, they also deprive buyers of the freedom to make independent decisions concerning their purchases of the tied product. Tying agreements may be challenged under both section 1 of the Sherman Act and section 3 of the Clayton Act.[20]

Elements of Prohibited Tying Agreements Tying agreements are often said to be per se illegal under section 1. However, because a tying agreement must meet certain criteria before it is subjected to per se analysis, and because evidence of certain justifications is sometimes considered in tying cases, the rule against tying agreements is at best a "soft" per se rule.

Before a challenged tying agreement is held to violate section 1, these elements must be demonstrated: (1) the agreement involves *two* separate and distinct items rather than integrated components of a larger product, service, or system of doing business; (2) the tying product cannot be purchased unless the tied product is also purchased; (3) the seller has sufficient economic power in the market for the tying product (such as a patent or a large market share) to appreciably restrain competition in the tied product market; and (4) a "not insubstantial" amount of commerce in the tied product is affected by the seller's tying agreements.[21] In early 2000, a federal district court held that Microsoft Corporation violated section 1 by unlawfully tying its Internet Explorer Web browser to versions of its Windows operating system. Microsoft vowed to appeal this ruling once the court's decision became final. (Portions of the court's opinion in *Microsoft* appear later in this chapter.)

The following *Eastman Kodak* case contains a discussion of the elements of prohibited tying arrangements, with a focus on the third element: *market power as to the tying product.*

[20] Section 3 of the Clayton Act applies, however, only when both the tying and the tied products are commodities. Chapter 49 discusses Clayton Act standards for tying agreement legality.

[21] *U.S. Steel Corp. v. Fortner Enterprises, Inc.,* 429 U.S. 610 (U.S. Sup. Ct. 1977).

Eastman Kodak Co. v. Image Technical Services, Inc. *504 U.S. 451 (U.S. Sup. Ct. 1992)*

Eastman Kodak Co. (Kodak) manufactures and sells photocopiers and micrographic equipment. In addition, Kodak provides customers with service and replacement parts for its equipment. Kodak produces some of the parts itself. The other parts are made to order for Kodak by independent original equipment manufacturers (OEMs). Rather than selling a complete system of original equipment, lifetime parts, and lifetime service for a single price, Kodak furnishes service after an initial warranty period either through annual service contracts or on a per-call basis. Kodak provides between 80 and 95 percent of the service for Kodak machines.

In the early 1980s, independent service organizations (ISOs) began repairing and servicing Kodak equipment, as well as selling parts for it. ISOs kept an inventory of parts, purchased either from Kodak or from other sources (primarily OEMs). In 1985, Kodak adopted policies designed to limit ISOs' access to parts and to make it more difficult for ISOs to compete with Kodak in servicing Kodak equipment. Kodak began selling replacement parts only to Kodak equipment buyers who used Kodak service or repaired their own machines (i.e., buyers who did not use ISOs for service). In addition, Kodak sought to limit ISO access to other sources of Kodak parts by working out agreements with OEMs that they would sell parts for Kodak equipment to no one other than Kodak, and by pressuring Kodak equipment owners and independent parts distributors not to sell Kodak parts to ISOs.

Eighteen ISOs sued Kodak, claiming that these policies amounted to (1) unlawful tying of the sale of service for Kodak machines to the sale of parts (in violation of Sherman Act Section 1), and (2) monopolization or attempted monopolization of the sale of service for Kodak machines (in violation of Sherman Act Section 2). The U.S. District Court granted summary judgment in favor of Kodak on each of these claims. The Ninth Circuit Court of Appeals reversed, holding that summary judgment was inappropriate because there were genuine issues of material fact regarding the ISOs' claims. The Supreme Court granted Kodak's petition for a writ of certiorari.

Blackmun, Justice Because this case comes to us on Kodak's motion for summary judgment, the evidence of the ISOs is to be believed, and all justifiable inferences are to be drawn in the ISOs' favor [for purposes of determining whether Kodak is entitled to summary judgment or whether a trial is instead necessary].

A tying arrangement is "an agreement by a party to sell one product but only on the condition that the buyer also purchases a different (or tied) product, or at least agrees that he will not purchase that product from any other supplier." *Northern Pacific Railway Co. v. United States* (U.S. Sup. Ct. 1958). Such an arrangement violates Section 1 of the Sherman Act if the seller has "appreciable economic power" in the tying product market and if the arrangement affects a substantial volume of commerce in the tied market. *Fortner Enterprises, Inc. v. U.S. Steel Corp.* (U.S. Sup. Ct. 1969). Kodak did not dispute that its arrangement affects a substantial volume of interstate commerce. It, however, did challenge whether its activities constituted a "tying arrangement" and whether Kodak exercised "appreciable economic power" in the tying market.

For the ISOs to defeat [Kodak's] motion for summary judgment, . . . a reasonable trier of fact must be able to find, first, that service and parts are two distinct products, and second, that Kodak has tied the sale of the two products. For service and parts to be considered two distinct products, there must be sufficient consumer demand so that it is efficient for a firm to provide service separately from parts. Evidence in the record indicates that service and parts have been sold separately in the past and still are sold separately to self-service equipment owners. Kodak insists that because there is no demand for parts separate from service, there cannot be separate markets for service and parts. By that logic, we would be forced to conclude that there can never be separate markets, for example, for cameras and film, computers and software, or automobiles and tires. That is an assumption we are unwilling to make.

Kodak's assertion also appears to be incorrect as a factual matter. At least some consumers would purchase service without parts, because some service does not require parts, and some consumers, those who self-service for example, would purchase parts without service. Enough doubt is cast on Kodak's claim of a unified market that it should be resolved by the trier of fact. [T]he ISOs have [also] presented sufficient evidence of a tie between service and parts. The record indicates that Kodak would sell parts to third parties only if they agreed not to buy service from ISOs.

[We now] consider the other necessary feature of an illegal tying arrangement: appreciable economic power in the tying market. Market power is the power "to force a purchaser to do something that he would not do in a competitive market." *Jefferson Parish Hospital Dist. No. 2 v. Hyde* (U.S. Sup. Ct. 1984). The existence of such power ordinarily is inferred from the seller's possession of a predominant share of the market.

The ISOs contend that Kodak has more than sufficient power in the parts market to force unwanted purchases of the tied market, service. The ISOs [assert or] provide evidence that certain parts are available exclusively through Kodak, . . . that Kodak has control over the availability of parts it does not manufacture, [and that Kodak has both] prohibited independent manufacturers from selling Kodak parts to ISOs [and] pressured Kodak equipment owners and independent parts distributors to deny ISOs the purchase of Kodak parts. The ISOs also allege that Kodak's control over the parts market has excluded service competition, boosted service prices, and forced unwilling consumption of Kodak service. [They] offer evidence that consumers have switched to Kodak service even though they

preferred ISO service, that Kodak service was of higher price and lower quality than the preferred ISO service, and that ISOs were driven out of business by Kodak's policies. Under our prior precedents, this evidence would be sufficient to entitle the ISOs to a trial on their claim of market power.

Kodak counters that even if it concedes monopoly *share* of the relevant parts market, it cannot actually exercise the necessary market *power* for a Sherman Act violation. This is so, according to Kodak, because competition exists in the equipment market. Kodak argues that it could not have the ability to raise prices of service and parts above the level that would be charged in a competitive market because any increase in profits from a higher price in the aftermarkets at least would be offset by a corresponding loss in profits from lower equipment sales as consumers began purchasing equipment with more attractive service costs. Kodak does not present any actual data on the equipment, service, or parts markets. Instead, it urges the adoption of a substantive legal rule that equipment competition precludes any finding of monopoly power in derivative aftermarkets. Legal presumptions that rest on formalistic distinctions rather than actual market realities are generally disfavored in antitrust law. This Court has preferred to resolve antitrust claims on a case-by-case basis, focusing on the particular facts disclosed by the record . . . and the economic reality of the market at issue.

Even if Kodak could not raise the price of service and parts one cent without losing equipment sales, that fact would not disprove market power in the aftermarkets. Kodak's [theory] is based on the false dichotomy that there are only two prices that can be charged [for parts and service]—a competitive price or a ruinous one. But there could easily be a middle, optimum price at which the increased revenues from the higher-priced sales of service and parts would more than compensate for the lower revenues from lost equipment sales. [Contrary to the assertion in Kodak's brief], there is no immutable physical law—no "basic economic reality"—insisting that competition in the equipment market cannot coexist with market power in the aftermarkets.

[Kodak also overlooks] the existence of significant information and switching costs. These costs could create a less responsive connection between service and parts prices and equipment sales. For the service-market price to affect equipment demand, consumers must inform themselves of the total cost of the "package"—equipment, service, and parts—at the time of purchase; that is, consumers must engage in accurate lifecycle pricing. The necessary information would include data on price, quality, and availability of parts needed to operate, upgrade, or enhance the initial equipment, as well as service and repair costs, including estimates of breakdown frequency, nature of repairs, price of service and parts, length of "down-time," and losses incurred from down-time. Much of this information is difficult—some of it impossible—to acquire at the time of purchase.

Moreover, even if consumers were capable of acquiring and processing the complex body of information, they may choose not to do so. Acquiring the information is expensive. [Consumers] may not find it cost-efficient to compile the information. [It therefore] makes little sense to assume, in the absence of any evidentiary support, that equipment-purchasing decisions are based on an accurate assessment of the total cost of equipment, service, and parts over the lifetime of the machine.

A second factor undermining Kodak's claim that supracompetitive prices in the service market lead to ruinous losses in equipment sales is the cost to current owners of switching to a different product. If the cost of switching is high, consumers who already have purchased the equipment, and are thus "locked-in," will tolerate some level of service-price increases before changing equipment brands. Under this scenario, a seller profitably could maintain supracompetitive prices in the aftermarket if the switching costs were high relative to the increase in service prices, and the number of locked-in customers were high relative to the number of new purchasers. Respondents have offered evidence that the heavy initial outlay for Kodak equipment, combined with the required support material that works only with Kodak equipment, makes switching costs very high for existing Kodak customers.

We conclude, then, that Kodak has failed to demonstrate that the ISOs' inference of market power in the service and parts markets is unreasonable.

It is clearly reasonable to infer that Kodak has market power to raise prices and drive out competition in the aftermarkets, since the ISOs offer direct evidence that Kodak did so. It is also plausible . . . to infer that Kodak chose to gain immediate profits by exerting that market power where locked-in customers [and] high information costs . . . limited and perhaps eliminated any long-term loss.

In this case, . . . the balance tips against [granting Kodak's request for] summary judgment.

Denial of Kodak's motion for summary judgment affirmed in favor of the ISOs; case remanded for further proceedings.

Note: In another portion of the opinion not set forth here, the Court held that Kodak was not entitled to summary judgment on the ISOs' Sherman Act section 2 claim.

Possible Justifications for Tying Agreements

The first two elements of a prohibited tying agreement have been particularly significant in cases involving franchisors and their franchised dealers. For example, a suit by a McDonald's franchisee alleged that McDonald's violated section 1 by requiring franchisees to lease their stores from McDonald's as a condition of acquiring a McDonald's franchise. The Eighth Circuit Court of Appeals, however, rejected the franchisee's claim and held that no tying agreement was involved. Instead, the franchise and the lease were integral components of a well-thought-out system of doing business.[22]

The lower federal courts have recognized two other possible justifications for tying agreements. First, tying arrangements that are instrumental in launching a new competitor with an otherwise uncertain future may be lawful until the new business has established itself in the marketplace. The rationale for this "new business" exception is that if a tying agreement enables a fledgling firm to become a viable competitor, the agreement's net effect on competition is positive. Second, some courts have recognized that tying agreements sometimes may be necessary to protect the reputation of the seller's product line. For example, one of the seller's products functions properly only if used in conjunction with another of its products. To qualify for this exception, however, the seller must convince the court that a tying arrangement is the only viable means to protect its goodwill.

Chicago School Views on Tying Agreements

Chicago School thinkers have long criticized the traditional judicial approach to tying agreements because they do not believe that most tie-ins result in any significant economic harm. They argue that sellers who try to impose a tie-in in competitive markets gain no increased profits as a result. This is so because instead of participating in a tying agreement, buyers may turn to substitutes for the tying product or may purchase the tying product from competing sellers. The net effect of a tie-in may therefore be that any increase in the seller's sales in the tied product is offset by a loss in sales of the tying product. Only when the seller has substantial power in the tying product market is there potential that a tie-in may be used to increase the seller's power in the tied product market. However, even when the seller has such market power in the tying product, Chicago School thinkers argue that no harm to competition is likely to result if the seller faces strong competition in the tied product market. For these and other reasons, Chicago School thinkers favor a rule of reason approach to all tying agreements. A majority of the Supreme Court has yet to accept these arguments. Some justices, however, appear willing to do so. If other members of the Court are similarly persuaded in the future, a substantial change in the legal criteria applied to tying agreements will be the likely result.

Reciprocal Dealing Agreements

Under a **reciprocal dealing agreement,** a buyer attempts to exploit its purchasing power by conditioning its purchases from suppliers on reciprocal purchases of some product or service offered for sale by the buyer. For example, an oil company with a chain of wholly owned gas stations refuses to purchase the tires it sells in those stations unless the tire manufacturer (the would-be supplier of the tires) agrees to purchase, from the oil company, the petrochemicals used in the tire manufacturing process. Reciprocal dealing agreements are quite similar in motivation and effect to tying agreements. Courts therefore tend to treat them similarly. In seeking to impose the reciprocal dealing agreement on the tire manufacturer, the oil

[22] *Principe v. McDonald's Corp.,* 631 F.2d 303 (4th Cir. 1980).

company is attempting to gain a competitive advantage over its competitors in the petrochemical market. A court judging the legality of such an agreement would examine the oil company's economic power as a purchaser of tires and the dollar amount of petrochemical sales involved.

Exclusive Dealing Agreements

Exclusive dealing agreements require buyers of a particular product or service to purchase that product or service exclusively from a particular seller. For example, Standard Lawnmower Corporation requires its retail dealers to sell only Standard brand mowers. A common variation of an exclusive dealing agreement is the *requirements contract,* under which the buyer of a particular product agrees to purchase all of its requirements for that product from a particular supplier. For example, a candy manufacturer agrees to buy all of its sugar requirements from one sugar refiner. Exclusive dealing contracts present a threat to competition similar to that involved in tying contracts—they may reduce interbrand competition by foreclosing a seller's competitors from the opportunity to compete for sales to its customers. Unlike tying contracts, however, exclusive dealing agreements may sometimes enhance efficiencies in distribution and stimulate interbrand competition. Exclusive dealing agreements reduce a manufacturer's sales costs and provide dealers with a secure source of supply. They may also encourage dealer efforts to market the manufacturer's products more effectively, because a dealer selling only one product line has a greater stake in the success of that line than does a dealer who sells the products of several competing manufacturers.

Because many exclusive dealing agreements involve commodities, they may also be challenged under section 3 of the Clayton Act. The legal tests applicable to exclusive dealing agreements under both acts are identical. Therefore, we defer discussing those tests until the next chapter.

Joint Ventures by Competitors

A **joint venture** is a combined effort by two or more business entities for a limited purpose such as research. Because joint ventures may yield enhanced efficiencies through integration of the resources of more than one firm, they are commonly judged under the rule of reason. Under this approach, courts tend to ask whether any competitive restraints that are incidental to the venture are necessary to accomplish its lawful objectives and, if so, whether those restraints are offset by the venture's positive effects. Joint ventures whose primary purpose is illegal per se, however, have been given per se treatment. An example of such a case would be two competing firms that form a joint sales agency and authorize it to fix the price of their products.

National Cooperative Research and Production Act Antitrust critics have long argued that the threat of antitrust prosecution seriously inhibits the formation of joint research and development ventures, and that American firms are placed at a competitive disadvantage in world markets as a result. Such arguments have enjoyed more acceptance during roughly the past two decades. In 1984, Congress passed the National Cooperative Research Act (NCRA). This act applies to *joint research and development ventures* (JRDVs), which are broadly defined to include basic and applied research and joint activities in the licensing of technologies developed by such research. The NCRA requires the application of a reasonableness standard, rather than a per se rule, when a JRDV's legality is determined. It also requires firms contemplating a JRDV to provide the Department of Justice and the Federal Trade Commission with advance notice of their intent to do so. The NCRA provides that only actual (not treble) damages may be recovered for losses flowing from a JRDV ultimately found to be in violation of section 1. In addition, the NCRA contains a provision allowing the parties to a challenged JRDV to recover attorney's fees from an unsuccessful challenger if the suit is shown to be "frivolous, unreasonable, without foundation, or in bad faith." Congress amended the statute in 1993 to extend its application to joint *production* ventures. In doing so, Congress renamed the statute the National Cooperative Research and Production Act.

Figure 1 summarizes the judicial treatment of potentially illegal practices under section 1 of the Sherman Act (as of early 2000, when this book went to press).

Section 2—Monopolization

Introduction

Firms that acquire **monopoly power** in a given market have defeated the antitrust laws' objective of promoting competitive market structures. Monopolists, by definition, have the power to fix prices unilaterally because they have no effective competition. Section 2

of the Sherman Act was designed to prevent the formation of monopoly power. It provides: "Every person who shall monopolize, or attempt to monopolize, or combine or conspire with any other person to monopolize any part of trade or commerce among the several states, or with foreign nations shall be deemed guilty of a felony." Section 2 does not, however, outlaw monopolies. Instead, it outlaws the act of *monopolization.* Under section 2, a *single firm* can be guilty of monopolizing or attempting to monopolize a part of trade or commerce. The proof of joint action required for violations of section 1 is required only when two or more firms are charged with a conspiracy to monopolize under section 2.

Monopolization

Monopolization is "the willful acquisition or maintenance of monopoly power in a relevant market as opposed to growth as a consequence of superior product, business acumen, or historical accident."[23] This means that to be liable for monopolization, a defendant must have possessed not only monopoly power but also an **intent to monopolize.**

Monopoly Power *Monopoly power* is usually defined for antitrust purposes as the power to *fix prices* or *exclude competitors* in a given market. Such power is generally inferred from the fact that a firm has captured a predominant share of the relevant market. Although the exact percentage share necessary to support an inference of monopoly power remains unclear and courts often look at other economic factors (such as the existence in the industry of barriers to the entry of new competitors), market shares in excess of 70 percent have historically justified an inference of monopoly power.

Before a court can determine a defendant's market share, it must first define the **relevant market.** This is a crucial issue in section 2 cases because a broad definition of the relevant market normally results in a smaller market share for the defendant and a resulting reduction in the likelihood that the defendant will be found to possess monopoly power. The two components of a relevant market determination are the relevant **geographic market** and the relevant **product market.**

Economic realities prevailing in the industry determine the relevant geographic market. In which parts of the country can the defendant effectively compete with other firms in the sale of the product in question? To whom may buyers turn for alternative sources of supply? Factors such as transportation costs may also play a critical role in relevant market determinations. Thus, the relevant market for coal may be regional in nature, but the relevant market for transistors may be national in scope.

The relevant product market is composed of those products meeting the *functional interchangeability*

[23] *United States v. Grinnell Corp.,* 384 U.S. 563 (U.S. Sup. Ct. 1966).

test, which identifies the products "reasonably interchangeable by consumers for the same purposes." This test recognizes that a firm's ability to fix the price for its products is limited by the availability of competing products that buyers view as acceptable substitutes. In a famous antitrust case, for example, Du Pont was charged with monopolizing the national market for cellophane because it had a 75 percent share. The Supreme Court concluded, however, that the relevant market was all "flexible wrapping materials," including aluminum foil, waxed paper, and polyethylene. Du Pont's 20 percent share of that product market was far too small to amount to monopoly power.[24]

In the highly publicized *Microsoft* decision, a portion of which follows shortly, the district court held in early 2000 that Microsoft Corporation possessed monopoly power in the worldwide market for Intel-compatible personal computer operating systems. The court concluded that Microsoft held a 95 percent share of the market.

May a *single brand* of a product or service ever be a relevant market for section 2 purposes? Although most section 2 cases would logically be expected to involve product markets consisting of more than one brand of a given type of product (and perhaps other products that are reasonably interchangeable for the same purposes), the Supreme Court refused to rule, in the *Eastman Kodak* case, that a single brand cannot be a relevant market. (*Eastman Kodak* involved claims under sections 1 and 2 of the Sherman Act. The case's major facts and the section 1 aspect of the Court's opinion were set forth in this chapter's discussion of tying arrangements.) Because *Eastman Kodak* dealt with allegedly anticompetitive practices regarding parts and service for Kodak equipment, the Court observed that "[t]he relevant market for antitrust purposes is determined by the choices available to Kodak equipment owners." The Court concluded that "[b]ecause service and parts for Kodak equipment are not interchangeable with other manufacturers' service and parts, the relevant market from the Kodak-equipment owner's perspective is composed of only those companies that service Kodak machines." According to the Court, "prior cases support the proposition that in some instances one brand of a product can constitute a separate market." Evidence that Kodak controlled nearly 100 percent of the parts market and 80 to 95 percent of the service market for Kodak brand equipment was held to be sufficient evidence of monopoly power for purposes of the Court's ruling that Kodak was not entitled to summary judgment on the plaintiffs' section 2 claim against it.

Intent to Monopolize Proof of monopoly power standing alone, however, is never sufficient to prove a violation of section 2. The defendant's **intent to monopolize** must also be shown. Early cases under section 2 required evidence that the defendant either acquired monopoly power by predatory or coercive means that violated antitrust rules (e.g., price-fixing or discriminatory pricing) or abused monopoly power in some way after acquiring it (such as by engaging in price-gouging). Contemporary courts focus on how the defendant acquired monopoly power. If the defendant *intentionally acquired it* or *attempted to maintain it* after acquiring it, the defendant possessed an intent to monopolize. Defendants are not in violation of section 2, however, if their monopoly power resulted from the superiority of their products or business decisions, or from historical accident (e.g., the owner of a professional sports franchise in an area too small to support a competing franchise).

Purposeful acquisition or maintenance of monopoly power may be demonstrated in various ways. A famous monopolization case involved Alcoa, which had a 90 percent market share of the American market for virgin aluminum ingot. Alcoa was found guilty of purposefully maintaining its monopoly power by acquiring every new opportunity relating to the production or marketing of aluminum, thereby excluding potential competitors.[25] As various cases indicate, firms that develop monopoly power by acquiring ownership or control of their competitors are very likely to be held to have demonstrated an intent to monopolize.

In the following portion of the *Microsoft* decision, the district court concluded that Microsoft Corporation was liable for monopolization because it possessed monopoly power in the relevant market and engaged in anticompetitive behavior in order to acquire or maintain its monopoly position. As of early 2000, when this book went to press, the court had not yet decided on the appropriate relief to be granted. Microsoft pledged to appeal the entire decision of the district court once it issued its ruling on relief.

[24] *United States v. E. I. du Pont de Nemours & Co.,* 351 U.S. 377 (U.S. Sup. Ct. 1956).

[25] *United States v. Aluminum Co. of America, Inc.,* 148 F.2d 416 (2d Cir. 1945).

United States v. Microsoft Corp. (A) *2000 U.S. Dist. LEXIS 4014 (D.D.C. 2000)*

The United States, 19 individual states, and the District of Columbia brought civil antitrust actions against Microsoft Corporation. The cases were consolidated for trial. The plaintiffs charged, in essence, that Microsoft had waged an unlawful campaign in defense of its monopoly position in the market for operating systems designed to run on Intel-compatible personal computers (PCs). More specifically, the plaintiffs claimed: (1) that Microsoft violated section 2 of the Sherman Act by engaging in monopolization through a series of exclusionary, anticompetitive, and predatory acts designed to maintain its monopoly power; (2) that Microsoft violated section 2 by engaging in attempted monopolization of the Web browser market; and (3) that Microsoft violated section 1 of the Sherman Act by unlawfully tying its browser to its operating system and by entering into exclusive dealing agreements that unreasonably restrained trade. The plaintiffs other than the United States (the 19 individual states and the District of Columbia) alleged that Microsoft's behavior also violated their respective antitrust laws.

In November 1999, following a lengthy trial, the United States District Court for the District of Columbia (Thomas Penfield Jackson, District Judge) issued Findings of Fact that are referred to in the portion of the opinion appearing below. The court's Conclusions of Law followed in April 2000. On the plaintiffs' claim that Microsoft violated section 1 of the Sherman Act, Judge Jackson ruled that Microsoft violated section 1 through an unlawful tying arrangement but that Microsoft's exclusive dealing agreements did not run afoul of section 1. In the portion of the court's Conclusions of Law set forth below, the court addressed the monopolization claim brought under section 2 of the Sherman Act. Judge Jackson's analysis of the attempted monopolization claim will appear later in the chapter.

Jackson, District Judge Section 2 of the Sherman Act declares that it is unlawful for a person or firm to "monopolize . . . any part of the trade or commerce among the several States, or with foreign nations." [A] firm violates section 2 if it attains or preserves monopoly power through anticompetitive acts. See *United States v. Grinnell Corp.* (U.S. Sup. Ct. 1966).

[According to *Grinnell,* the] threshold element of a section 2 monopolization offense [is] "the possession of monopoly power in the relevant market." [Therefore,] the Court must first ascertain the boundaries of the commercial activity that can be termed the "relevant market." Next, the Court must assess the defendant's actual power to control prices in—or to exclude competition from—that market. See *United States v. E.I. duPont de Nemours & Co.* (U.S. Sup. Ct. 1956).

Monopoly Power

In this case, the plaintiffs postulated the relevant market as being the worldwide licensing of Intel-compatible PC operating systems. Whether this zone of commercial activity actually qualifies as a market [for purposes of a monopolization claim depends, according to *duPont*] on whether it includes all products "reasonably interchangeable by consumers for the same purposes." [This] Court has already found [in its November 1999 Findings of Fact] that there are currently no products—and that there are not likely to be any in the near future—that a significant percentage of computer users worldwide could substitute for Intel-compatible PC operating systems without incurring substantial costs. The Court has further found that no firm not currently marketing Intel-compatible PC operating systems could start doing so in a way that would, within a reasonably short period of time, present a significant percentage of such consumers with a viable alternative to existing Intel-compatible PC operating systems. From these facts, the Court has inferred that if a single firm or cartel controlled the licensing of all Intel-compatible PC operating systems worldwide, it could set the price of a license substantially above that which would be charged in a competitive market—and leave the price there for a significant period of time—without losing so many customers as to make the action unprofitable. This inference, in turn, has led the Court to find that the licensing of all Intel-compatible PC operating systems worldwide does in fact constitute the relevant market in the context of the plaintiffs' monopoly maintenance claim.

The plaintiffs proved at trial that Microsoft possesses a dominant, persistent, and increasing share of the relevant market. Microsoft's share of the worldwide market for Intel-compatible PC operating

systems currently exceeds 95 percent, and the firm's share would stand well above 80 percent even if the Mac operating system were included in the market. The plaintiffs also proved that the applications barrier to entry protects Microsoft's dominant market share. This barrier ensures that no Intel-compatible PC operating system other than Windows can attract significant consumer demand, and the barrier would operate to the same effect even if Microsoft held its prices substantially above the competitive level for a protracted period of time. Together, the proof of dominant market share and the existence of a substantial barrier to effective entry create the presumption that Microsoft enjoys monopoly power.

At trial, Microsoft [unsuccessfully] attempted to rebut the presumption of monopoly power. Even if Microsoft's rebuttal [had been more convincing than it was], corroborative evidence of monopoly power abounds in this record: Neither Microsoft nor its [personal computer manufacturer] customers believe that the latter have—or will have anytime soon—even a single, commercially viable alternative to licensing Windows for pre-installation on their PCs. Moreover, over the past several years, Microsoft has comported itself in a way that could only be consistent with rational behavior for a profit-maximizing firm if the firm knew that it possessed monopoly power, and if it was motivated by a desire to preserve the barrier to entry protecting that power. In short, the proof of Microsoft's dominant, persistent market share protected by a substantial barrier to entry, together with Microsoft's failure to rebut that prima facie showing effectively and the additional indicia of monopoly power, have compelled the Court to find as fact that Microsoft enjoys monopoly power in the relevant market.

Anticompetitive Means

In a section 2 case, once it is proved that the defendant possesses monopoly power in a relevant market, liability for monopolization depends on a showing that the defendant used anticompetitive methods to achieve or maintain its position. [The Court must therefore determine] whether the defendant's conduct is "exclusionary"—that is, whether it has restricted significantly, or threatens to restrict significantly, the ability of other firms to compete in the relevant market on the merits of what they offer customers. If the evidence reveals a significant exclusionary impact in the relevant market, the defendant's conduct will be labeled "anticompetitive" . . . unless the defendant comes forward with specific procompetitive business motivations that explain the full extent of its exclusionary conduct.

As the [court] stated in *Neumann v. Reinforced Earth Co.* (D.C. Cir. 1986),

> [Predatory conduct] involves aggression against business rivals through the use of business practices that would not be considered profit maximizing except for the expectation that (1) actual rivals will be driven from the market, or the entry of potential rivals blocked or delayed, so that the predator will gain or retain a market share sufficient to command monopoly profits, or (2) rivals will be chastened sufficiently to abandon competitive behavior the predator finds threatening to its realization of monopoly profits.

Proof that a profit-maximizing firm took predatory action should suffice to demonstrate the threat of substantial exclusionary effect; to hold otherwise would be to ascribe irrational behavior to the defendant. Moreover, predatory conduct, by definition as well as by nature, lacks procompetitive business motivation [and is] patently anticompetitive. Proof that a firm with monopoly power engaged in such behavior thus necessitates a finding of liability under section 2.

Microsoft early on recognized middleware as the Trojan horse that, once having . . . infiltrated the applications barrier, could enable rival operating systems to enter the market for Intel-compatible PC operating systems unimpeded. Simply put, middleware threatened to demolish Microsoft's coveted monopoly power. Alerted to the threat, Microsoft strove over a period of approximately four years to prevent middleware technologies from fostering the development of enough full-featured, cross-platform applications to erode the applications barrier. In pursuit of this goal, Microsoft sought to convince developers to concentrate on Windows-specific applications and ignore interfaces exposed by the two incarnations of middleware that posed the greatest threat, namely, Netscape's Navigator Web browser and Sun's implementation of the Java technology. Microsoft's campaign succeeded in preventing—for several years, and perhaps permanently—Navigator and Java from fulfilling their potential to open the market for Intel-compatible PC operating systems to competition on the merits. Because Microsoft

achieved this result through exclusionary acts that lacked procompetitive justification, the Court deems Microsoft's conduct the maintenance of monopoly power by anticompetitive means.

Combating the Browser Threat

The same ambition that inspired Microsoft's efforts to induce Intel, Apple, RealNetworks, and IBM to desist from certain technological innovations and business initiatives—namely, the desire to preserve the applications barrier—motivated the firm's June 1995 proposal that Netscape abstain from releasing platform-level browsing software for 32-bit versions of Windows. When Netscape refused to abandon its efforts to develop Navigator into a substantial platform for applications development, Microsoft focused its efforts on minimizing the extent to which developers would avail themselves of interfaces exposed by that nascent platform. Microsoft realized that the extent of developers' reliance on Netscape's browser platform would depend largely on the size and trajectory of Navigator's share of browser usage. Microsoft thus set out to maximize Internet Explorer's share of browser usage at Navigator's expense. Recognizing that pre-installation by PC manufacturers (OEMs) and bundling with the proprietary software of Internet Access providers (IAPs) led more directly and efficiently to browser usage than any other practices in the industry, Microsoft devoted major efforts to usurping those two channels.

With respect to OEMs, . . . Microsoft bound Internet Explorer to Windows with contractual and . . . technological shackles in order to ensure the prominent (and ultimately permanent) presence of Internet Explorer on every Windows user's PC system, and to increase the costs attendant to installing and using Navigator on any PCs running Windows. Microsoft [also] imposed stringent limits on the freedom of OEMs to reconfigure or modify Windows 95 and Windows 98 in ways that might enable OEMs to generate usage for Navigator in spite of the contractual and technological devices Microsoft had employed to bind Internet Explorer to Windows. Finally, Microsoft used incentives and threats to induce especially important OEMs to design their distributional, promotional, and technical efforts to favor Internet Explorer to the exclusion of Navigator.

Microsoft's actions increased the likelihood that pre-installation of Navigator onto Windows would cause user confusion and system degradation, and therefore lead to higher support costs and reduced sales for the OEMs. Not willing to take actions that would jeopardize their already slender profit margins, OEMs felt compelled by Microsoft's action to reduce drastically their distribution and promotion of Navigator. The substantial inducements that Microsoft held out to the largest OEMs only further reduced the distribution and promotion of Navigator in the OEM channel. The response of OEMs to Microsoft's efforts had a dramatic negative impact on Navigator's usage share. The drop in usage share, in turn, has prevented Navigator from being the vehicle to open the relevant market to competition on the merits.

Microsoft fails to advance any legitimate business objectives that actually explain the full extent of this significant exclusionary impact. The Court has already found that no quality-related or technical justifications fully explain Microsoft's refusal to license Windows 95 to OEMs without versions 1.0 through 4.0 of Internet Explorer, or its refusal to permit them to uninstall versions 3.0 and 4.0. The same lack of justification applies to Microsoft's decision not to offer a browserless version of Windows 98 to consumers and OEMs, as well as to its claim that it could offer "best of breed" implementations of functionalities in Web browsers. Internet Explorer is not demonstrably the current "best of breed" Web browser, nor is it likely to be so at any time in the immediate future. The fact that Microsoft itself was aware of this reality only further strengthens the conclusion that Microsoft's decision to tie Internet Explorer to Windows cannot truly be explained as an attempt to benefit consumers and improve the efficiency of the software market generally, but rather as part of a larger campaign to quash innovation that threatened its monopoly position.

Microsoft adopted similarly aggressive measures to ensure that the IAP channel would generate browser usage share for Internet Explorer rather than Navigator. To begin with, Microsoft licensed Internet Explorer and the Internet Explorer Access Kit to hundreds of IAPs for no charge. Then Microsoft extended valuable promotional treatment to the ten most important IAPs in exchange for their commitment to promote and distribute Internet Explorer and to exile Navigator from the desktop. Finally, in exchange for efforts to upgrade existing subscribers to client software that came bundled

with Internet Explorer instead of Navigator, Microsoft granted rebates—and in some cases made outright payments—to those same IAPs. [I]t is fair to conclude that these inducements and restrictions contributed significantly to the drastic changes that have in fact occurred in Internet Explorers's and Navigator's respective usage shares. Microsoft's actions in the IAP channel thereby contributed significantly to preserving the applications barrier to entry. There are no valid reasons to justify the full extent of Microsoft's exclusionary behavior in the IAP channel. In sum, the efforts Microsoft directed at OEMs and IAPs successfully ostracized Navigator as a practical matter from the two channels that lead most efficiently to browser usage. [T]hese two prongs of Microsoft's campaign threatened to forestall the corrective forces of competition and thereby perpetuate Microsoft's monopoly power in the relevant market. Therefore, . . . Microsoft's anticompetitive campaign merit[s] a finding of liability under section 2.

Combating the Java Threat

As part of its grand strategy to protect the applications barrier, Microsoft employed an array of tactics designed to maximize the difficulty with which applications written in Java could be ported from Windows to other platforms, and vice versa. The first of these measures was the creation of a Java implementation for Windows that undermined portability and was incompatible with other implementations. Microsoft then induced developers to use its implementation of Java rather than Sun-compliant ones. Microsoft's tactics induced many Java developers to write their applications using Microsoft's developer tools and to refrain from distributing Sun-compliant [versions] to Windows users. This stratagem has effectively resulted in fewer applications that are easily portable. It is not clear whether, absent Microsoft's machinations, Sun's Java efforts would by now have facilitated porting between Windows and other platforms to a degree sufficient to render the applications barrier to entry vulnerable. It is clear, however, that Microsoft's actions markedly impeded Java's progress to that end. The evidence thus compels the conclusion that Microsoft's actions with respect to Java have restricted significantly the ability of other firms to compete on the merits in the market for Intel-compatible PC operating systems.

Microsoft's actions to counter the Java threat went far beyond the development of an attractive alternative to Sun's implementation of the technology. Specifically, Microsoft pressured Intel, which was dependent in many ways on Microsoft's good graces, to abstain from aiding in Sun's and Netscape's Java development work. Microsoft also deliberately designed its Java development tools so that developers who were opting for portability over performance would nevertheless unwittingly write Java applications that would run only on Windows. These actions cannot be described as competition on the merits, and they did not benefit consumers.

Microsoft's Conduct Taken as a Whole

As the foregoing discussion illustrates, Microsoft's campaign to protect the applications barrier from erosion by network-centric middleware can be broken down into discrete categories of activity, several of which on their own independently satisfy the second element of a section 2 monopoly maintenance claim. But only when the separate categories of conduct are viewed, as they should be, as a single, well-coordinated course of action does the full extent of the violence that Microsoft has done to the competitive process reveal itself. Microsoft mounted a deliberate assault upon entrepreneurial efforts that, left to rise or fall on their own merits, could well have enabled the introduction of competition into the market for Intel-compatible PC operating systems. While the evidence does not prove that they would have succeeded absent Microsoft's actions, it does reveal that Microsoft placed an oppressive thumb on the scale of competitive fortune, thereby effectively guaranteeing its continued dominance in the relevant market.

Viewing Microsoft's conduct as a whole also reinforces the conviction that it was predacious. Microsoft paid vast sums of money, and renounced many millions more in lost revenue every year, in order to induce firms to take actions that would help enhance Internet Explorer's share of browser usage at Navigator's expense. These outlays cannot be explained as subventions to maximize return from Internet Explorer. Microsoft has no intention of ever charging for licenses to use or distribute its browser. Moreover, neither the desire to bolster demand for Windows nor the prospect of ancillary revenues from Internet Explorer can explain the lengths to which Microsoft has gone. In fact, Microsoft has

expended wealth and foresworn opportunities to realize more in a manner and to an extent that can only represent a rational investment if its purpose was to perpetuate the applications barrier to entry. Because Microsoft's business practices would not be considered profit maximizing except for the expectation that the entry of potential rivals into the market for Intel-compatible PC operating systems will be blocked or delayed, . . . Microsoft's campaign must be termed predatory. Since the Court has already found that Microsoft possesses a monopoly, . . . the predatory nature of the firm's conduct compels the Court to hold Microsoft liable under section 2 of the Sherman Act.

Judgment that Microsoft is liable for monopolization; appropriate relief to be determined in later order of the court.

Note: The court also held that Microsoft violated state laws prohibiting monopolization.

Attempted Monopolization

Firms that have not yet attained monopoly power may nonetheless be liable for an **attempt to monopolize** in violation of section 2 if they are dangerously close to acquiring monopoly power and are employing methods likely to result in monopoly power if left unchecked. As part of the required proof of a dangerous probability that monopoly power will be acquired, plaintiffs in attempted monopolization cases must furnish proof of the relevant market—as in monopolization cases. Unlike monopolization cases, however, attempt cases also require proof that the defendant possessed a specific intent to acquire monopoly power through anticompetitive means.

A controversial issue that surfaces in many attempted monopolization cases concerns the role that *predatory pricing* may play in proving an intent to monopolize. The Supreme Court has defined predatory pricing as "pricing below an appropriate measure of cost for the purpose of eliminating competitors in the short run and reducing competition in the long run."[26] What constitutes "an appropriate measure of cost" in predatory pricing cases has long been a subject of debate among antitrust scholars. Although the Supreme Court has declined to resolve this debate definitively, the Court seems likely to take a skeptical view of predatory pricing claims in the future. The Court has described predatory pricing schemes as "rarely tried, and even more rarely successful."[27] As part of this characterization of predatory pricing schemes, the Court indicated that it agrees with economists who have argued that predatory pricing is often economically irrational because, to be successful, the predator must maintain monopoly power long enough after it has driven its competitors out of business to recoup the profits it lost through predatory pricing. The predator would be able to sustain monopoly power only if high barriers to entry prevented new competitors from being drawn into the market by the supracompetitive prices the predator would have to charge in order to recoup its losses.

In the following portion of the *Microsoft* decision, the district court addressed the plaintiffs' claim that Microsoft Corporation attempted to monopolize the Web browser market.

[26] *Cargill, Inc. & Excel Corp. v. Monfort of Colorado, Inc.,* 479 U.S. 484 (U.S. Sup. Ct. 1986).

[27] *Matsushita Electric Industrial Co., Ltd. v. Zenith Radio* Corp., 475 U.S. 574 (U.S. Sup. Ct. 1986).

United States v. Microsoft Corp. (B) *2000 U.S. Dist. LEXIS 4014 (D.D.C. 2000)*

The legal claims brought against Microsoft Corporation by the United States, 19 states, and the District of Columbia are described in the statement of facts that accompanies the portion of the opinion set forth earlier in the chapter. In the portion set forth here, the district court addressed the claim that Microsoft engaged in attempted monopolization, in violation of section 2 of the Sherman Act.

Jackson, District Judge In addition to condemning actual monopolization, section 2 of the Sherman Act declares that it is unlawful for a person or firm to "attempt to monopolize . . . any part of the trade or commerce among the several States, or with foreign nations." Relying on this language, the plaintiffs assert that Microsoft's anticompetitive efforts to maintain its monopoly power in the market for Intel-compatible PC operating systems warrant additional liability as an illegal attempt to amass monopoly power in the browser market. The Court agrees.

In order for liability to attach for attempted monopolization, a plaintiff generally must prove "(1) that the defendant has engaged in predatory or anticompetitive conduct with (2) a specific intent to monopolize," and (3) that there is a "dangerous probability" that the defendant will succeed in achieving monopoly power. *Spectrum Sports, Inc. v. McQuillan* (U.S. Sup. Ct. 1993). Microsoft's June 1995 proposal that Netscape abandon the field to Microsoft in the market for browsing technology for Windows, and its subsequent, well-documented efforts to overwhelm Navigator's browser usage share with a proliferation of Internet Explorer browsers inextricably attached to Windows, clearly meet the first element of the offense.

The evidence in this record also satisfies the requirement of specific intent. Microsoft's effort to convince Netscape to stop developing platform-level browsing software for the 32-bit versions of Windows was made with full knowledge that Netscape's acquiescence in this market allocation scheme would, without more, have left Internet Explorer with such a large share of browser usage as to endow Microsoft with de facto monopoly power in the browser market. When Netscape refused to abandon the development of browsing software for 32-bit versions of Windows, Microsoft's strategy for protecting the applications barrier became one of expanding Internet Explorer's share of browser usage—and simultaneously depressing Navigator's share—to an extent sufficient to demonstrate to developers that Navigator would never emerge as the standard software employed to browse the Web. Microsoft's top executives never expressly declared acquisition of monopoly power in the browser market to be the objective, [but] they knew, or should have known, that the tactics they actually employed were likely to push Internet Explorer's share to those extreme heights. Under these circumstances, it is fair to presume that the wrongdoer intended the probable consequences of its acts. Therefore, the facts of this case suffice to prove the element of specific intent.

Even if the first two elements of the offense are met, however, a defendant may not be held liable for attempted monopolization absent proof that its anticompetitive conduct created a dangerous probability of achieving the objective of monopoly power in a relevant market. At the time Microsoft presented its market allocation proposal to Netscape, Navigator's share of browser usage stood well above 70 percent, and no other browser enjoyed more than a fraction of the remainder. Had Netscape accepted Microsoft's offer, nearly all of its share would have devolved upon Microsoft, because at that point, no potential third-party competitor could either claim to rival Netscape's stature as a browser company or match Microsoft's ability to leverage monopoly power in the market for Intel-compatible PC operating systems. In short, Netscape's assent to Microsoft's market division proposal would have . . . resulted in Microsoft's attainment of monopoly power in a second market. It follows that the proposal itself created a dangerous probability of that result. Although the dangerous probability was no longer imminent with Netscape's rejection of Microsoft's proposal, the probability of success at the time the acts occur is the measure by which liability is determined.

This conclusion alone is sufficient to support a finding of liability for attempted monopolization. The court is nonetheless compelled to express its further conclusion that the predatory course of conduct Microsoft has pursued since June of 1995 has revived the dangerous probability that Microsoft will attain monopoly power in a second market. Internet Explorer's share of browser usage has already risen above 50 percent, will exceed 60 percent by January 2001, and the trend continues unabated.

Judgment that Microsoft is liable for attempted monopolization; appropriate relief to be determined in later order of the court.

Figure 2 *Elements of Section 2 Offenses*

Offense	Monopoly Power	Intent to Monopolize	Concerted Action
Monopolization	Required	Required	Not required
Attempted monopolization	"Dangerously close"	Specific intent required	Not required
Conspiracy to monopolize	Not required	Specific intent required	Required

Conspiracy to Monopolize

When two or more business entities **conspire to monopolize** a relevant market, section 2 may be violated. This portion of section 2, however, largely overlaps section 1, because it is difficult to conceive of a conspiracy to monopolize that would not also amount to a conspiracy in restraint of trade. The lower federal courts have differed on the elements necessary to prove a conspiracy to monopolize. In addition to requiring proof of the existence of a conspiracy, some courts insist on proof of the relevant market, a specific intent to acquire monopoly power, and overt action in furtherance of the conspiracy. Other courts do not require extensive proof of the relevant market. According to these courts, a violation is established through proof that the defendants conspired to exclude competitors from, or acquire control over prices in, some significant area of commerce. An approach that deemphasizes the requirement of proof of the relevant market, however, may not be consistent with Supreme Court precedent.

Figure 2 summarizes the elements of section 2 offenses.

Ethical and Public Policy Concerns

1. Early in this chapter, you read Judge Learned Hand's statement that "[g]reat industrial consolidations are inherently undesirable, regardless of their economic results." Yet you also learned that Chicago School antitrust thinkers, who have very different notions about the effects of industrial concentration, have had an important influence on antitrust policy in recent years. Identify two aspects of the current global business environment that might make today's American policymakers less willing than Judge Hand to "perpetuate and preserve, for its own sake and in spite of possible cost, an organization of industry in small units which can effectively compete with each other."

2. Some of the cases in this chapter recite the statement that antitrust was designed to protect competition, not competitors. How is this statement consistent with the ethical justification of markets as the most efficient form of economic organization? Consider the case of a competitor who is driven out of business by another competitor's ultimately unsuccessful predatory pricing efforts (unsuccessful because the predator could not maintain monopoly power long enough to recoup the profits lost through predatory pricing). Although competition may not suffer in such a case, does such a competitor have any *ethical* claim to compensation? What public policy argument could be made in favor of compensation?

3. Tying arrangements that do not satisfy the criteria for per se illegality explained earlier in this chapter are judged under the rule of reason. This means that they will be judged lawful unless evidence demonstrates that they unreasonably restrain competition. Is there an *ethical* basis for arguing a seller's imposition of a tie-in is wrong, regardless of its effect on competition?

Problems and Problem Cases

1. Atlantic Richfield (ARCO) is an integrated oil company that sells gasoline to consumers both directly through its own stations and indirectly through ARCO-brand dealers. USA is an independent retail marketer of gasoline that buys gasoline from major petroleum companies for resale under its own brand name. USA competes directly with ARCO dealers at the retail level. Its outlets typically are low-overhead, high-volume "discount" stations that charge less than stations selling equivalent quality gasoline under major brand names. ARCO adopted a new marketing strategy

in order to compete more effectively with independents such as USA. ARCO encouraged its dealers to match the retail gasoline prices offered by independents in various ways. These included making available to its dealers and distributors short-term discounts and reducing its dealers' costs by, for example, eliminating credit card sales. ARCO's strategy increased its sales and market share. When USA's sales dropped, it sued ARCO, charging that ARCO and its dealers were engaged in a per se illegal vertical price-fixing scheme. On these facts, could USA show an *antitrust injury* resulting from ARCO's actions (i.e., injury that flows from the unlawful aspects of the challenged behavior and is of a type that the antitrust laws were designed to prevent)? Does per se treatment apply to vertical price-fixing when the allegedly fixed price is of a *maximum* nature?

2. Co-Operative Theatres (Co-op), a Cleveland area movie theater booking agent, began seeking customers in southern Ohio. Shortly thereafter, Tri-State Theatre Services (Tri-State), a Cincinnati booking agent, began to solicit business in the Cleveland area. Later, however, Co-op and Tri-State allegedly entered into an agreement not to solicit each other's customers. The Justice Department prosecuted them for agreeing to restrain trade in violation of section 1 of the Sherman Act. Under a government grant of immunity, Tri-State's vice president testified that Co-op's vice president had approached him at a trade convention and threatened to start taking Tri-State's accounts if Tri-State did not stop calling on Co-op's accounts. He also testified that at a luncheon meeting he attended with officials from both firms, the presidents of both firms said that it would be in the interests of both firms to stop calling on each other's accounts. Several Co-op customers testified that Tri-State had refused to accept their business because of the agreement with Co-op. The trial court found both firms guilty of a per se violation of the Sherman Act, rejecting their argument that the rule of reason should have been applied and refusing to allow them to introduce evidence that the agreement did not have a significant anticompetitive effect. Should the rule of reason have been applied?

3. Discon, Inc., specialized in providing the service of removing obsolete telephone equipment. New York Telephone Company was a subsidiary of NYNEX Corporation. Another NYNEX subsidiary, Materiel Enterprises Company, was a purchasing entity that arranged for Discon to provide removal services for New York Telephone. After regularly doing business with Discon, Materiel switched its purchases of removal services from Discon to a Discon competitor, AT&T Technologies. According to Discon, Materiel did this as part of an attempt to defraud local telephone customers and regulatory authorities. Discon contended that Materiel would pay AT&T Technologies more than Discon would have charged for similar removal services, that Materiel would then pass those higher prices on to New York Telephone, and that New York Telephone would in turn pass those prices on to consumers in the form of higher telephone service charges that were approved by the relevant regulatory authorities. Discon further contended that at the end of the year, Materiel would receive a special rebate from AT&T Technologies, and that Materiel would share this rebate with its corporate parent, NYNEX. Discon asserted that because it refused to participate in this fraudulent scheme, Materiel would not do business with Discon, which eventually went out of business. Discon sued Materiel, New York Telephone, and NYNEX, claiming that the above facts constituted a group boycott and thus a per se violation of section 1 of the Sherman Act. If Discon's allegations are true, did a per se group boycott take place?

4. The Maricopa Foundation for Medical Care was a nonprofit organization established by the Maricopa County Medical Society to promote fee-for-service medicine. Roughly 70 percent of the physicians in Maricopa County belonged to the foundation. The foundation's trustees set maximum fees that members could charge for medical services provided to policyholders of approved medical insurance plans. To obtain the foundation's approval, insurers had to agree to pay the fees of member physicians up to the prescribed maximum. Member physicians were free to charge less than the prescribed maximum, but had to agree not to seek additional payments in excess of the maximum from insured patients. The Arizona attorney general filed suit for injunctive relief against the Maricopa County Medical Society and the foundation, arguing that the fee agreement constituted per se illegal horizontal price-fixing. The district court denied the state's motion for a partial summary judgment. The Ninth Circuit Court of Appeals affirmed on the ground that the per se rule was not applicable to the case. Was the Ninth Circuit correct?

5. In 1986, Market Force, Inc. (MFI), began operating in the Milwaukee real estate market as a buyer's broker. MFI and prospective home buyers entered into exclusive contracts providing that MFI would receive a

fee equal to 40 percent of the sales commission if it located a house that the buyer ultimately purchased. This 40 percent commission was the same commission selling brokers (those who ultimately produced a buyer, but whose duty of loyalty was to the seller) earned when they sold property placed on the local multiple listing service (MLS) by other brokers. MFI's contracts anticipated that the buyer would ask the listing broker (the one who had listed the property for sale on behalf of its owners and who received 60 percent of the commission when the property was sold) to pay MFI the commission at the time of the sale. If the listing broker agreed to do so, the buyer had no further obligation to MFI. For some time after MFI began operations, other real estate firms treated it inconsistently; some paid the full 40 percent commission but others paid nothing. In the fall of 1987, Wauwatosa Realty Co. and Coldwell Banker, the top two firms listing high-quality homes in Milwaukee, issued formal policies on splitting commissions with buyer's brokers. Wauwatosa said it would pay 20 percent of the selling agent's 40 percent commission. Coldwell Banker said it would pay 20 percent of the total sales commission. Several other real estate firms followed suit, setting their rates at 10 or 20 percent of the total sales commission, with the result that firms accounting for 31 percent of the annual listings of the MLS adopted policies and disseminated them to other MLS members. MFI filed suit against the brokers who had announced policies, arguing that they had conspired to restrain trade in violation of section 1 of the Sherman Act. At trial, the defendants introduced evidence of numerous business justifications for their policies and argued that their knowingly having adopted similar policies was not enough, standing alone, to justify a conclusion that the Sherman Act was violated. Was this argument correct?

6. When Triple-A Baseball Club Associates was in the process of building the Old Orchard Beach Ballpark, both Gemini Concerts, Inc., and Don Law Co., Inc., expressed interest in promoting concerts at the ballpark. Triple-A, however, had neither the time nor money to make the facility suitable for concerts. Gemini eventually ceased its efforts to use the facility. Law, however, persisted. After several years of discussions, Law and Triple-A signed an agreement giving Law the exclusive right to promote concerts at the ballpark for two years, with an option to renew for another five years. In return, Law paid for many of the capital improvements necessary to equip the ballpark for concerts and shared with Triple-A the cost of others. Gemini filed suit against Triple-A and Law, arguing that their exclusive dealing contract violated section 1 of the Sherman Act. Should the trial court grant the restraining order requested by Gemini?

7. Concerned that its dealers might not have sufficient spare parts to make repairs on recently purchased Subaru cars, Subaru of America (SOA) decided in 1973 to require its dealers to keep certain spare parts kits on hand. Grappone, Inc., a New Hampshire Subaru dealer, also had AMC, Pontiac, Jeep, Toyota, and Peugot franchises. Grappone acquired its cars from Subaru of New England, Inc. (SNE), a regional Subaru distributor. Grappone objected when told by SNE that it needed to purchase two "dealer's kits" containing 88 parts for 1974 cars and two "supplemental kits" containing 44 parts each (the total number of different Subaru parts being somewhere between 4,000 and 5,000). SNE refused to give Grappone its 1974 car allotment until Grappone bought the kits. Grappone went 10 months without cars; it then agreed to take the kits. Grappone later sued SNE, arguing that SNE violated section 1 of the Sherman Act by tying the sale of the parts kits to the sale of cars. The evidence introduced at trial indicated that Subaru's national market share was under 1 percent and that its share of the New Hampshire market was 3.4 percent. Was the trial court correct in granting judgment in favor of Grappone?

8. Grinnell Corporation manufactured plumbing supplies and fire sprinkler systems. It also owned 76 percent of the stock of ADT Co., 89 percent of the stock of AFA, Inc., and 100 percent of the stock of Holmes, Inc. ADT provided burglary-protection and fire-protection services. AFA provided only fire-protection services. Holmes provided only burglary-protection services. Each of the three firms offered a central station service under which hazard-detecting devices installed on the protected premises automatically transmitted an electronic signal to a central station. Other companies provided forms of protection service other than the central station variety. Subscribers to an accredited central station service (i.e., one approved by insurance underwriters) received substantially greater insurance premium reductions than the premium reductions received by users of other protection services. At the relevant time in question, ADT, AFA, and Holmes were the three largest central station service companies in terms of revenue. Together, they accounted for ap-

proximately 87 percent of the central station services provided. Contending that Grinnell, ADT, AFA, and Holmes had taken various anticompetitive actions that amounted to willful acquisition or maintenance of monopoly power, the United States government brought a monopolization action against Grinnell under section 2 of the Sherman Act. Concerning the first element of a monopolization claim—monopoly power in the relevant market—were fire-protection services and burglary-protection services too different to be part of the same market? What was the relevant market in this case? Were protection services other than those of the central station variety part of it?

9. Martindale Empowerment, a Virginia corporation, engaged in the business of providing commercial electronic-mail service to advertisers. Martindale regularly sent electronic advertising over the Internet in the form of e-mail to e-mail addresses throughout the United States. In September 1998, however, America Online, Inc., the largest commercial online service in the nation with more than 16,000,000 individual subscribers, implemented various mechanisms to block advertising messages that Martindale had been sending to AOL subscribers for nearly two years. AOL succeeded in blocking most of those transmissions by Martindale. Contending that Martindale was using deceptive practices in an effort to mask the source and quantity of its transmissions and thereby avoid AOL's blocking and filtering technologies, AOL sued Martindale on a variety of legal theories. AOL sought an injunction against Martindale's practice of sending unsolicited bulk e-mail advertisements to AOL subscribers. Martindale responded with a counterclaim in which it alleged that AOL had engaged in monopolization, in violation of section 2 of the Sherman Act. According to Martindale, AOL had established itself as the only entity that could advertise to AOL subscribers. For purposes of the first element of a monopolization claim—monopoly power in a relevant market—Martindale contended that the relevant product or service market was e-mail advertising. Was Martindale correct in this contention?

10. In July 1977, anesthesiologist Edwin G. Hyde applied for admission to the medical staff of East Jefferson Hospital in New Orleans. The credentials committee and the medical staff executive committee recommended approval, but the hospital board denied the application because the hospital was a party to a contract providing that all anesthesiological services required by the hospital's patients would be performed by Roux & Associates, a professional medical corporation. Hyde filed suit against the board, arguing that the contract violated section 1 of the Sherman Act. The district court ruled in favor of the board, finding that the anticompetitive effects of the contract were minimal and outweighed by the benefits of improved patient care. It noted that there were at least 20 hospitals in the New Orleans metropolitan area and that about 70 percent of the patients residing in Jefferson Parish went to hospitals other than East Jefferson. It therefore concluded that East Jefferson lacked any significant market power and could not use the contract for anticompetitive ends. The Fifth Circuit Court of Appeals reversed, holding that the relevant market was the East Bank Jefferson Parish rather than the New Orleans metropolitan area. The court therefore concluded that because 30 percent of the parish residents used East Jefferson and "patients tend to choose hospitals by location rather than price or quality," East Jefferson possessed sufficient market power to make the contract a per se illegal tying contract. Was the Fifth Circuit correct?

11. For approximately three years, Larry and Shirley McQuillan had served as distributors of sorbothane products for a certain firm and its successor. After they lost their distributorship and their business failed, the McQuillans sued both firms, as well as other affiliated companies and individuals. The McQuillans raised various legal claims, including a claim that the defendants engaged in attempted monoplization, in violation of section 2 of the Sherman Act. The evidence produced at trial revealed various instances of unfair or predatory conduct engaged in by the defendants and directed toward the McQuillans. The jury awarded the McQuillans a very substantial damages award on their attempted monopolization claim. The defendants appealed. Relying on one of its own precedents (a 1964 decision), the U.S. Court of Appeals for the Ninth Circuit held that the evidence of the defendants' unfair or predatory conduct served to satisfy the *specific intent to monopolize* and *dangerous probability of achieving monopoly power* elements of the McQuillans' attempted monopolization claim, even though the McQuillans presented no proof of the relevant market or the defendants' market power therein. Was the Ninth Circuit's holding correct?

Chapter Forty-Nine

The Clayton Act, The Robinson-Patman Act, and Antitrust Exemptions and Immunities

Chapter Outline

I. Clayton Act Section 3
- A. *Tying Agreements*
- B. *Exclusive Dealing Agreements*

II. Clayton Act Section 7
- A. *Introduction*
- B. *Relevant Market Determination*
  - 1. *Relevant Product Market*
  - 2. *Relevant Geographic Market*
- C. *Horizontal Mergers*
  - 1. *Market Share of Resulting Firm*
  - 2. *Recent Assessments of Merger Effects*
- D. *Vertical Mergers*
  - 1. *Foreclosing Competitors in Relevant Market*
  - 2. *Creation of Increased Market Entry Barriers*
  - 3. *Elimination of Potential Competition in Acquired Firm's Market*
- E. *Conglomerate Mergers*
  - 1. *Potential Reciprocity*
  - 2. *Elimination of Potential Competition*
  - 3. *Unfair Advantage to Acquired Firm*

III. Clayton Act Section 8

IV. The Robinson-Patman Act
- A. *Background*
- B. *Jurisdiction*
- C. *Section 2(a)*
  - 1. *Price Discrimination*
  - 2. *Commodities of Like Grade and Quality*
  - 3. *Anticompetitive Effect*
- D. *Defenses to Section 2(a) Liability*
  - 1. *Cost Justification*
  - 2. *Changing Conditions*
  - 3. *Meeting Competition*
- E. *Indirect Price Discrimination*
  - 1. *False Brokerage*
  - 2. *Discriminatory Payments and Services*
- F. *Buyer Inducement of Discrimination*

V. Antitrust Exceptions and Exemptions
- A. *Introduction*
- B. *Statutory Exemptions*
  - 1. *Labor Unions and Certain Union Activities*
  - 2. *Agricultural Cooperatives and Certain Cooperative Actions*
  - 3. *Joint Export Activities*
  - 4. *Business of Insurance*
  - 5. *Other Regulated Industries*
- C. *State Action Exemption*
- D. *The Noerr–Pennington Doctrine*
- E. *Patent Licensing*
- F. *Foreign Commerce*

Concentration in the American economy continued despite the 1890 enactment of the Sherman Act. Restrictive judicial interpretations of section 2 of the Sherman Act limited its effectiveness against many monopolists. Critics therefore sought legislation to thwart would-be monopolists before they achieved full-blown restraint of trade or monopoly power. In 1914, Congress responded by passing the Clayton Act.

Congress envisioned the Clayton Act as a vehicle for attacking certain practices that monopolists historically employed to acquire monopoly power. These practices included tying and exclusive dealing arrangements designed to squeeze competitors out of the market, mergers and acquisitions aimed at reducing competition through the elimination of competitors, interlocking corporate directorates designed to reduce competition by placing competitors under common leadership, and predatory or discriminatory pricing intended to force competitors out of business. Each of these practices will be discussed in the following pages.

In view of the congressional intent that the Clayton Act serve as a preventive measure, only a *probability* of a significant anticompetitive effect must be shown for most Clayton Act violations. Because the Clayton Act focuses on probable harms to competition, there are no criminal penalties for violating its provisions. Private plaintiffs, however, may sue for treble damages or injunctive relief if they are injured, or threatened with injury, by another party's violation of the statute. The Justice Department and the Federal Trade Commission (FTC) share responsibility for enforcing the Clayton Act. Each has the authority to seek injunctive relief to prevent or remedy violations of the statute. In addition, the FTC has the power to enforce the Clayton Act through the use of cease and desist orders, which were discussed in Chapter 47.

Clayton Act Section 3

Section 3 of the Clayton Act makes it unlawful for any person engaged in interstate commerce to *lease or sell commodities,* or to *fix a price for commodities,* on the *condition, agreement, or understanding* that the lessee or buyer of the commodities will not use or deal in the commodities of the lessor's or seller's competitors, if the effect of doing so *may be* to *substantially lessen competition* or *tend to create a monopoly* in any line of commerce. Section 3 primarily targets two potentially anticompetitive behaviors: **tying agreements** and **exclusive dealing agreements.** As you learned in the preceding chapter, these types of contracts may amount to restraints of trade in violation of Sherman Act section 1. The language of section 3, however, contains limitations on the Clayton Act's application to such agreements.

A major limitation is that section 3 applies only to tying agreements and exclusive dealing contracts involving *commodities.* Any such agreements involving services, real estate, or intangibles must therefore be attacked under the Sherman Act. In addition, section 3 applies only when there has been a *lease or sale* of commodities. It does not apply to true consignment agreements, because no sale or lease occurs in a consignment. Although section 3 speaks of sales and leases on the "condition, agreement, or understanding" that the buyer or lessee not deal in the commodities of the seller's or lessor's competitors, no formal agreement is required. Whenever a seller or lessor uses its economic power to prevent its customers from dealing with its competitors, potential Clayton Act concerns are triggered.

Tying Agreements

Many *tying agreements* plainly fall within at least the first portion of the section 3 language. Any agreement that requires a buyer to purchase one product (the *tied product*) from a seller as a condition of purchasing another product (the *tying product*) from the same seller necessarily prevents the buyer from purchasing the tied product from the seller's competitors.

Only tying agreements that may *"substantially lessen competition or tend to create a monopoly,"* however, violate section 3. The lower federal courts are not in complete agreement on the nature of the proof necessary to demonstrate this probable anticompetitive effect. Approximately 50 years ago, the Supreme Court appeared to indicate that a tying agreement would violate the Clayton Act if the seller either had monopoly power over the tying product or restrained a substantial volume of commerce in the tied product.[1]

Most lower federal courts today, however, require essentially the same elements for a Clayton Act violation that they require for a violation of the Sherman Act: the challenged agreement must involve *two separate*

[1] *Times-Picayune Publ. Co. v. United States,* 345 U.S. 594 (U.S. Sup. Ct. 1953).

products; sale of the tying product must be conditioned on an accompanying sale of the tied product; the seller must have *sufficient economic power in the market for the tying product* to appreciably restrain competition in the tied product market; and the seller's tying arrangements must restrain a *"not insubstantial" amount of commerce in the tied product market.* A few courts continue to apply a less demanding standard for Clayton Act tying liability by dispensing with proof of the seller's economic power in the market for the tying product as long as the seller's tying arrangements involve a "not insubstantial" amount of commerce in the tied product. The defenses to tying liability under the Sherman Act (discussed in chapter 48) are also applicable to tying claims brought under the Clayton Act.

Exclusive Dealing Agreements

In the preceding chapter, we discussed the nature of *exclusive dealing agreements.* Such contracts clearly fall under the initial portion of the section 3 language because buyers who agree to handle one seller's product exclusively, or to purchase all of their requirements for a particular commodity from one seller, are by definition agreeing not to purchase similar items from the seller's competitors. As with tying agreements, however, not all exclusive dealing agreements are unlawful. Section 3 outlaws only those agreements that may "substantially lessen competition or tend to create a monopoly."

Exclusive dealing agreements initially were treated in much the same way as tying agreements. Courts looked at the dollar amount of commerce involved and declared illegal those agreements involving a "not insubstantial" amount of commerce. This *quantitative substantiality* test was employed, for example, by the Supreme Court in *Standard Oil Co. v. United States.*[2] Standard Oil was the largest refiner and supplier of gasoline in several western states, holding approximately 14 percent of the retail market. Roughly half of these sales were made by retail outlets owned by Standard. The other half were made by independent dealers who had entered into exclusive dealing contracts with Standard. Standard's six major competitors had entered into similar contracts with their own independent dealers. The Court recognized that exclusive dealing contracts, unlike tying agreements, could benefit both buyers and sellers, but declared Standard's contracts illegal on the ground that nearly $58 million in commerce was involved.

The Court's decision in the *Standard Oil* case provoked considerable criticism. In *Tampa Electric Co. v. Nashville Coal Co.,* however, the Court applied a broader *qualitative substantiality* test to gauge the legality of a long-term requirements contract for the sale of coal to an electric utility.[3] In *Tampa Electric,* the Court looked at the "area of effective competition," which was the total market for coal in the geographic region from which the utility could reasonably purchase its coal needs. The Court then examined the percentage of this region's total coal sales accounted for by the challenged contract. Because that percentage share was less than 1 percent of the region's total coal sales, the Court upheld the agreement even though it represented more than $100 million in coal sales.

Tampa Electric, however, is distinguishable from *Standard Oil,* which, in any event, the Court has not overruled. Unlike *Standard Oil, Tampa Electric* involved parties with relatively equal bargaining power and an individual agreement, rather than an industry-wide practice. In addition, there were obvious reasons why an electric utility such as Tampa Electric might want to lock in its coal costs by using a long-term requirements contract. Although lower court opinions employing each test may be found, the *qualitative* approach employed in *Tampa Electric* is the one more likely to be employed by the current Court.

Clayton Act Section 7

Introduction

Section 7 of the Clayton Act was designed to attack **mergers**—a term used broadly in this chapter to refer to the acquisition of one company by another. History indicates that one way in which monopolists acquired monopoly power was by acquiring control of their competitors. Section 7 prohibits any party engaged in commerce or in any activity affecting commerce from *acquiring the stock or assets* of another such party if the effect, in *any line of commerce* or *any activity affecting commerce* in any section of the country, *may be to substantially lessen competition* or *tend to create a monopoly.* Rather than adopting the Sherman Act section 2 approach of waiting until a would-be monopolist has acquired monopoly power or is dangerously close to doing so, section 7 attempts to "nip

[2] 337 U.S. 293 (U.S. Sup. Ct. 1949).

[3] 365 U.S. 320 (1961).

monopolies in the bud" by barring mergers that *may* have an anticompetitive effect.

Although section 7 is plainly an anticoncentration device, it has also been used (as the following text indicates) to attack mergers that have had no direct effect on concentration in a particular industry. As such, its future evolution is in doubt, given the influence of Chicago School economic theories on contemporary antitrust law and the more tolerant stance those theories take toward mergers. During the 1980s, the Justice Department signaled a more permissive approach to merger activity than the government had previously adopted. During the Clinton administration, Justice Department and FTC officials undertook greater scrutiny of mergers in some industries, though not necessarily on an across-the-board basis. Regardless of the enforcement approach chosen by the federal government, it should be remembered that private enforcement of section 7 is also possible.

Predictions regarding section 7's ultimate judicial treatment are complicated considerably by the fact that many of the important merger cases in recent years have been settled out of court. This leaves interested observers of antitrust policy with few definitive expressions of the Supreme Court's current thinking on many merger issues.

Relevant Market Determination

Regardless of the treatment section 7 ultimately receives in the courts, determining the **relevant market** affected by a merger is likely to remain a crucial component of any section 7 case. Before a court can determine whether a particular merger will have the *probable* anticompetitive effect required by the Clayton Act, it must first determine the *line of commerce* (or *relevant product market*) and the *section of the country* (or *relevant geographic market*) that are likely to be affected by the merger. If the court adopts a broad relevant market definition, this will usually enhance the government's or private plaintiff's difficulty in demonstrating a probable anticompetitive effect flowing from a challenged merger.

Relevant Product Market "Line of commerce" determinations under the Clayton Act have traditionally employed *functional interchangeability* tests similar to those employed in relevant product market determinations under section 2 of the Sherman Act. Which products do the acquired and acquiring firms manufacture (assuming a merger between competitors), and which products are reasonably interchangeable by consumers to serve the same purposes? The federal government's merger guidelines indicate that the relevant market includes those products that consumers view as good substitutes at prevailing prices. The guidelines also state that the relevant market includes any products that a significant percentage of current customers would shift to in the event of a "small, but significant and non-transitory increase" in price of the products of the merged firms. The *Olin* case, which follows, discusses the making of a relevant product market determination, as does the *Staples* case, which appears later in the chapter.

Olin Corporation v. Federal Trade Commission *986 F.2d 1295 (9th Cir. 1993)*

Sanitizing agents are used to kill algae and bacteria in swimming pools. Pool owners may use any of three sanitizing agents. One of these is liquid pool bleach; the other two are chemicals sold in dry form. These dry sanitizers *are isocyanurates (ISOS) and calcium hypochlorite (CAL/HYPO). The chemical cyanuric acid (CA) is a precursor in the manufacturing process of ISOS. When CAL/HYPO is used as a sanitizer, CA is used along with it as a stabilizer.*

Olin Corporation was the market leader in CAL/HYPO production in the United States from 1980 through 1984, with a market share of 79 to 89 percent. Olin sought to increase its ability to produce and market ISOS. After technical problems doomed Olin's attempts to produce CA and ISOS during the late 1970s and early 1980s, Olin entered into a 1984 agreement with Monsanto Co. Under this agreement, Olin provided certain ISOS precursors to Monsanto, which then produced ISOS and provided them to Olin. Olin thus became a "repackager" of ISOS.

In 1985, Olin and FMC Corporation entered into an agreement under which Olin was to purchase FMC's swimming pool chemical business. The assets of that business included FMC's sanitizers manufacturing plant

at South Charleston, West Virginia. The South Charleston plant produced both CA and ISOS. The Federal Trade Commission challenged the proposed acquisition on the theory that it would likely result in a substantial lessening of competition in the relevant markets, in violation of section 7 of the Clayton Act and section 5 of the FTC Act. To avoid a possible order that would have prohibited the acquisition, Olin agreed to maintain the acquired assets in such a way that divestiture would be possible if the FTC issued a final decision holding that the acquisition violated antitrust laws. In addition, Olin agreed to a graduated withdrawal from its agreement with Monsanto. Olin and FMC were therefore allowed to consummate their transaction, pending final review by the FTC.

After a hearing, the FTC administrative law judge (ALJ) concluded that the acquisition violated the Clayton and FTC Acts because it would likely result in a substantial lessening of competition in the relevant markets. The FTC commissioners (referred to below as "the Commission") upheld the ALJ's decision as well as the ALJ's proposed remedy of divestiture. The Commission therefore ordered Olin to divest itself of the South Charleston plant it had acquired from FMC. Olin petitioned the Ninth Circuit Court of Appeals for review of the Commission's decision and order.

Tang, Circuit Judge Normally, "a delineation of proper geographic and product markets is a necessary precondition to assessment of the probabilities of a substantial effect on competition within them." *United States v. General Dynamics Corp.* (U.S. Sup. Ct. 1974). There is no dispute in this case that the geographic market relevant to this case is the entire United States. The parties have further stipulated that one relevant United States product market consists solely of ISOS (the "ISOS-only" market). The Commission also identified over Olin's objection a second relevant United States product market, one comprised of both ISOS and CAL/HYPO (the "dry sanitizers" market). Olin contends that the finding of likely anticompetitive effect is erroneous because it is premised on . . . a relevant dry sanitizers market [whose] existence is not supported by substantial evidence. In analyzing the post-acquisition dry sanitizers market [the existence of which Olin does not concede], the Commission concluded that Olin's production capacity would be 57% of a market in which the four-firm concentration ratio was 95%.

[In *California v. American Stores Co.* (9th Cir. 1989), we] described the process of product market definition as follows:

> The outer boundaries of a product market are determined by the reasonable interchangeability of use or the cross-elasticity of demand between the product itself and substitutes for it" (quoting *Brown Shoe Co. v. United States* [U.S. Sup. Ct. 1962]). Where an increase in the price of one product leads to an increase in demand for another, both products should be included in the relevant product market.

In conducting its product market analysis for swimming pool sanitizers, the Commission discussed physical composition, usage, and technical characteristics of dry sanitizers. [T]he Commission observed that similarities in these categories "predominate over the minor [physical] differences between ISOS and CAL/HYPO. The following facts are particularly important: (1) both products are used to deliver chlorine to swimming pools; (2) each product is able to deliver chlorine with about the same efficiency—although a pool chlorinated with ISOS will remain chlorinated longer; (3) by virtue of both products' stability and other characteristics, "a pool owner can purchase a year's supply of either [product] in a single trip to the store"; and (4) both products are available to consumers in the same forms. In discussing these characteristics, the Commission apparently assumed that the relevant market is defined in terms of consumers who maintain their own pools. Although Olin challenged this assumption, we conclude there is substantial evidence in support of dealing with residential consumers as a distinct market.

Despite [the above] similarities, however, ISOS are perceived as more convenient than CAL/HYPO because, once applied, ISOS last longer than CAL/HYPO, and because CAL/HYPO requires use of a separate stabilizer (i.e., CA). Recognizing that the "convenience of [ISOS] is reflected in a price premium that [ISOS] maintain over [CAL/HYPO]," the Commission then analyzed whether this premium is sufficient to prevent inclusion of ISOS and CAL/HYPO in the same market. Ultimately, the Commission

[applied a test set forth in the merger guidelines subscribed to by the Department of Justice and the FTC, and concluded that] "Olin could not profitably impose a small but significant and nontransitory increase in the price of [CAL/HYPO] because of the danger that consumers would then switch to [ISOS]." Given this indication of cross-elasticity of demand, the Commission concluded that ISOS and CAL/HYPO together compose a relevant product market (i.e., the dry sanitizers market).

Olin argues that it is inconsistent to recognize a larger, dry sanitizers market once a relevant ISOS-only market has been identified. However, relevant submarkets are common in merger analysis. Recognizing ISOS as a submarket of the dry sanitizers market is not inherently contradictory with recognizing a dry sanitizers market.

Olin charges that the Commission had no basis on which to conclude that any significant degree of elasticity existed between ISOS and CAL/HYPO. It is evident from its opinion that the Commission relied on a narrowing of the price gap between the two products in determining cross-elasticity. The opinion [stated that] "from 1977 to 1983, . . . the price of [CAL/HYPO] increased at a faster rate than that of [ISOS]." According to the opinion, this increase in the price of CAL/HYPO came about despite direct competition from Japanese CAL/HYPO, which was later the subject of an "antidumping" order. Olin argues that the narrowing of the price gap between CAL/HYPO and ISOS was artificial—and should not be used in determining cross-elasticity—because the Japanese were "dumping" ISOS on the American market. The Commission responds convincingly that, because CAL/HYPO was subject to the same pressures as the result of Japanese CAL/HYPO dumping, the narrowing in price was not artificial. Olin ignores this explanation and shifts its focus to the Commission concession that CAL/HYPO consumers would not switch to ISOS until the price of CAL/HYPO had risen at least 10%.

Olin . . . attempt[s] to emphasize the 5% factor normally used [by the Department of Justice and the FTC when they apply the merger guidelines' test that asks whether a "small but significant and nontransitory price increase" would cause consumers to switch to another product]. [However,] research has not disclosed a case that mandates [use of the 5% figure in] determining relevant product markets. Indeed, [the government's merger guidelines themselves acknowledge] that a higher percent increase in price is appropriate in determining the relevant product market in certain cases. Thus, a finding of cross-elasticity between ISOS and CAL/HYPO is not precluded by the fact that a higher price increase is necessary to induce a switch; a higher increase indicates only that the relationship between the two products is somewhat inelastic—but not necessarily so inelastic as to exclude the products from the same market, particularly under the substantial evidence standard of review.

[In making its cross-elasticity finding, the Commission also reasonably relied on] a statement Olin made to the International Trade Commission [in which Olin complained about Japanese "dumping" but appeared to acknowledge that CAL/HYPO faces competition from ISOS] and a statement made by an Olin competitor indicating a competitive relationship between CAL/HYPO and ISOS. [W]e find adequate support for the Commission's finding of cross-elasticity between ISOS and CAL/HYPO.

Finally, Olin attacks the exclusion of liquid pool bleach from a market composed of ISOS and CAL/HYPO. Olin essentially argues that the only rational basis for including CAL/HYPO and ISOS in the same market is that both products are used to sanitize swimming pools. If this is the determinative criterion, Olin continues, then liquid pool bleach must also be included in the relevant market. Olin's efforts to include liquid pool bleach in the relevant product market are intended to undermine the Commission's reliance on a dry sanitizers market in ordering divestiture [of the South Charleston plant].

The Commission cites several plausible reasons to separate liquid pool bleach from the dry sanitizers in defining a relevant market: Most pool bleach is consumed in discrete geographic regions; liquid pool bleach is inconvenient because a season's worth cannot be bought in one trip to the store, and because bleach spills can damage clothing and car interiors; liquid bleach is less expensive than dry sanitizers; and liquid pool bleach is sold [mainly] to pool service companies rather than to those who maintain their pools themselves. The Commission

also discussed cross-elasticity of demand between dry sanitizers and liquid pool bleach, concluding that "circumstantial evidence indicates a low degree of substitution between dry and liquid sanitizers." Based on the foregoing, the Commission was justified in identifying a relevant dry sanitizers market that excluded liquid pool bleach.

[The Ninth Circuit went on to hold that the divestiture remedy ordered by the Commission was an appropriate exercise of the Commission's discretion.]

Olin's petition for review denied; decision and order of Commission upheld.

Relevant Geographic Market To determine a particular merger's probable anticompetitive effect on a section of the country, courts have traditionally asked where the effects of the merger will be "direct and immediate."[4] This means that the relevant geographic market may not be as broad as the markets in which the acquiring and acquired firms actually operate or, in the case of a merger between competitors, the markets in which they actually compete. The focus of the relevant market inquiry is on those sections of the country in which competition is most likely to be injured by the merger. As a result, the relevant geographic market in a given case could be drawn as narrowly as one metropolitan area or as broadly as the entire nation. All that is necessary to satisfy this aspect of section 7 is proof that the challenged merger may have a significant negative effect on competition in any economically significant geographic market.

The federal government's merger guidelines adopt a somewhat different approach to determining the relevant geographic market. They define the relevant geographic market as the geographic area in which a sole supplier of the product in question could profitably raise its price without causing outside suppliers to begin selling in the area. The guidelines contemplate beginning with the existing markets in which the parties to a merger compete, and then adding the markets of those suppliers that would enter the market in response to a "small, but significant and non-transitory increase" in price.

Horizontal Mergers

The analytical approach employed to gauge a merger's probable effect on competition varies according to the nature of the merger in question. **Horizontal mergers**—mergers among firms competing in the same product and geographic markets—have traditionally been subjected to the most rigorous scrutiny because they clearly lead to increased concentration in the relevant market.

Market Share of Resulting Firm To determine the legality of such a merger, courts look at the *market share of the resulting firm.* In *United States v. Philadelphia National Bank,* the Supreme Court indicated that a horizontal merger producing a firm with an "undue percentage share" of the relevant market (33 percent in that case) and resulting in a "significant increase in concentration" of the firms in that market would be presumed illegal, absent convincing evidence that the merger would not have an anticompetitive effect.[5]

In the past, mergers involving firms with smaller market shares than those involved in *Philadelphia National Bank* were also enjoined if other economic or historical factors pointed toward a probable anticompetitive effect. Some of the factors that courts have traditionally considered relevant include:

1. *A trend toward concentration in the relevant market:* Has the number of competing firms decreased over time?
2. *The competitive position of the merging firms:* Are the defendants dominant firms despite their relatively small market shares?
3. *A past history of acquisitions by the acquiring firm:* Are we dealing with a would-be empire builder?
4. *The nature of the acquired firm:* Is it an aggressive, innovative competitor despite its small market share?

Recent Assessments of Merger Effects Recent developments, however, indicate that the courts and

[4]See, for instance, *United States v. Phillipsburg National Bank,* 399 U.S. 350 (U.S. Sup. Ct. 1970).

[5]374 U.S. 321 (1963).

federal antitrust enforcement agencies have become increasingly less willing to presume that anticompetitive effects will necessarily result from a merger that produces a firm with a relatively large market share. Instead, a more detailed inquiry is made into the nature of the relevant market and of the merging firms in order to ascertain the likelihood of probable harm to competition as a result of a challenged merger. The federal government's horizontal merger guidelines indicate that when regulators assess a merger's probable effect, the focus is on the existing concentration in the relevant market, the increase in concentration as a result of the proposed merger, and other nonmarket share factors. The more concentrated the existing market and the greater the increase in concentration that would result from the proposed merger, the more likely the merger is to be challenged by the government.

The nonmarket share factors considered by federal regulators are more traditional. They include: the existence (or absence) of barriers to the entry of new competitors into the relevant market, the prior conduct of the merging firms, and the probable future competitive strength of the acquired firm. The last factor is particularly important because courts have acknowledged that a firm's current market share may not reflect its ability to compete in the future. For example, courts have long recognized a "failing company" justification for some mergers. If the acquired firm is a failing company and no other purchasers are interested in acquiring it, its acquisition by a competitor may be lawful under section 7. Similarly, if an acquired firm has financial problems that reflect some underlying structural weakness, or if it lacks new technologies that are necessary to compete effectively in the future, its current market share may overstate its future competitive importance.

Finally, given the increased weight being assigned to economic arguments in antitrust cases, two other merger justifications may be granted greater credence in the future. Some lower federal courts have recognized the notion that a merger between two small companies may be justifiable, despite the resulting statistical increase in concentration, if the merger enables them to compete more effectively with larger competitors. In a similar vein, some commentators have argued that mergers resulting in cost savings or other enhanced economic efficiencies should sometimes be allowed even though they may have some anticompetitive impact. Though Courts have not been very receptive to efficiency arguments in the past, the government's horizontal merger guidelines are flexible enough to allow the Justice Department and FTC to consider efficiency claims in deciding whether to challenge a merger.

The *Staples* case, which follows, illustrates a broad range of issues that arise in horizontal merger cases.

Federal Trade Commission v. Staples, Inc. *970 F. Supp. 1066 (D.D.C. 1997)*

Office Depot, Inc., owned the nation's largest chain of retail outlets commonly known as "office supply superstores." Staples, Inc., owned the second-largest chain of this type. Each company operated more than 500 superstores, with Office Depot's outlets existing in 38 states and the District of Columbia and Staples' superstores appearing in 28 states and the District of Columbia. The only other office supply superstore firm in the United States was OfficeMax, Inc. In 1996, Staples and Office Depot entered into a merger agreement. As required by law, they filed a Premerger Notification and Report Form with the Federal Trade Commission (FTC) and the Department of Justice.

Following a lengthy investigation, the FTC initiated an adjudicative proceeding against Staples and Office Depot on the theory that the planned merger violated section 7 of the Clayton Act. (Adjudicative proceedings are discussed in Chapters 46 and 47.) In an effort to prevent the merger from taking place while its legality was being determined in the adjudicative proceeding, the FTC filed suit against Staples and Office Depot and requested a preliminary injunction against the merger. The federal district court conducted an extensive evidentiary hearing.

Hogan, District Judge Section 7 of the Clayton Act makes it illegal for two companies to merge "where in any line of commerce or in any activity affecting commerce in any section of the country,

the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly." [The FTC Act provides that if] the Commission has reason to believe that a corporation is violating, or is about to violate, section 7 . . ., the FTC may seek a preliminary injunction to prevent a merger pending the Commission's adjudication of the merger's legality. [I]n a suit for preliminary relief, the FTC is not required to prove . . . that the proposed merger would in fact violate section 7. . . . The determination of whether the acquisition actually violates the antitrust laws is reserved for the Commission. . . . The only question before this Court is whether the FTC has made a showing which justifies preliminary injunctive relief.

In order to determine whether the Commission has [made the required showing of] likelihood of success on the merits, . . . the Court must consider the likely competitive effects of the merger. [This requires the Court to determine the relevant product and geographic markets, as well as] the transaction's probable effect on competition in the product and geographic markets. [T]he parties . . . do not disagree . . . that [more than 40 different] metropolitan areas are the appropriate geographic markets for analyzing the competitive effects of the proposed merger. [However, the parties] sharply disagree with respect to the appropriate definition of the relevant product market. [T]o a great extent, this case hinges on the proper definition of the relevant product market.

The Commission defines the relevant product market as "the sale of consumable office supplies through office superstores," with "consumable" meaning products that consumers buy [on a recurring basis], i.e., items which "get used up" or discarded. [U]nder the Commission's definition, "consumable office supplies" would not include capital goods such as computers, fax machines, . . . or office furniture, but [would] include such products as paper, pens, file folders, post-it-notes, computer disks, and toner cartridges. The defendants . . . counter that the appropriate product market within which to assess the likely competitive consequences of a Staples–Office Depot combination is simply the overall sale of office products, of which a combined Staples–Office Depot accounted for 5.5% of total sales in North America in 1996.

The general rule when determining a relevant product market is that "the outer boundaries . . . are determined by the reasonable interchangeability of use [by consumers] or the cross-elasticity of demand between the product itself and substitutes for it." *Brown Shoe Co. v. United States* (U.S. Sup. Ct. 1962). Interchangeability of use and cross-elasticity of demand look to . . . whether there are other products offered to consumers which are similar in character or use to the product or products in question, as well as how far buyers will go to substitute one commodity for another. This case . . . is an example of perfect interchangeability. The consumable office products at issue here are identical whether they are sold by Staples or Office Depot or another seller of office supplies [such as Wal-Mart or another retailer that is not an office supply superstore]. [A]s the government has argued, [however, the] functional interchangeability [of office supplies] should not end the Court's analysis.

[In *United States v. E.I. Du Pont de Nemours and Co.* (U.S. Sup. Ct. 1956), the Court] did not stop after finding a high degree of functional interchangeability between cellophane and other wrapping materials. [T]he Court also found that "an element for consideration as to cross-elasticity of demand between products is the responsiveness of the sales of one product to price changes of the other." [T]he Court explained [that] "if a slight decrease in the price of cellophane causes a considerable number of customers of other flexible wrappings to switch to cellophane, it would be an indication that a high cross-elasticity of demand exists between [cellophane and other flexible wrappings, and] that the products compete in the same market." Following that reasoning . . . , the Commission has argued that a slight but significant increase in Staples–Office Depot's prices will not cause a considerable number of Staples–Office Depot's customers to purchase consumable office supplies from other non-superstore alternatives such as Wal-Mart [or] Best Buy. . . . On the other hand, the Commission has argued that an increase in price by Staples would result in consumers' turning to another office superstore, especially Office Depot, if the consumers had that option. Therefore, the Commission [contends] that the sale of consumable office supplies by office supply superstores is the . . . relevant product market in this

case, and products sold by competitors such as Wal-Mart, Best Buy, . . . and others should be excluded.

The Court acknowledges that there is . . . a broad market encompassing the sale of consumable office supplies by all sellers of such supplies, and that those sellers must, at some level, compete with one another. However, the mere fact that a firm may be termed a competitor in the overall marketplace does not necessarily require that it be included in the relevant product market for antitrust purposes. The Supreme Court . . . recognized [in *Brown Shoe*] that within a broad market, "well-defined submarkets may exist which, in themselves, constitute product markets for antitrust purposes." There is a possibility, therefore, that the sale of consumable office supplies by office superstores may qualify as a submarket within a large market of retailers of office supplies in general.

[T]he FTC presented evidence comparing Staples's prices in geographic markets where Staples is the only office superstore to markets where Staples competes with Office Depot or OfficeMax, or both. [I]n markets where Staples faces no office superstore competition . . . , something which was termed a one-firm market during the hearing, prices are 13% higher than in three-firm markets where it competes with both Office Depot and OfficeMax. Similarly, the evidence showed that Office Depot's prices are . . . well over 5% higher in Depot-only markets than they are in three-firm markets.

[The FTC's evidence] suggests that office superstore prices are affected primarily by other office superstores and not by non-superstore competitors such as . . . Wal-Mart, K-Mart, or Target, wholesale clubs . . . , computer or electronic stores . . . , mail order firms . . . , and contract stationers. Though the FTC did not present the Court with evidence regarding the precise amount of non-superstore competition in each of Staples's and Office Depot's one-, two-, and three-firm markets, it is clear . . . that these competitors, albeit in different combinations and concentrations, are present in every one of these markets. For example, . . . the mail order competitors compete in all of the geographic markets at issue in this case. Despite this mail order competition, . . . Staples and Office Depot are still able to charge higher prices in their one-firm markets than they do in the two-firm markets and the three-firm markets without losing a significant number of customers to the mail order firms.

The same appears to be true with respect to Wal-Mart. [A Wal-Mart executive testified] that price-checking by Wal-Mart of Staples' prices in areas where both Staples and Wal-Mart exist showed that, on average, Staples's prices were higher than where there was a Staples and a Wal-Mart but no other superstore than where there was a Staples, a Wal-Mart, and another superstore. The evidence with respect to the wholesale club stores is consistent. There is also consistent evidence with respect to computer and/or consumer electronics stores.[In addition, the] evidence shows that the defendants [lower their prices in a given geographic area] when faced with entry of another superstore [in that area], but do not do so for other retailers. There is no evidence that . . . prices fall when another non-superstore retailer enters a geographic market.

[The FTC made] a compelling showing that a small but significant increase in Staples's prices will not cause a significant number of consumers to turn to non-superstore alternatives for purchasing their consumable office supplies. Despite the high degree of functional interchangeability between consumable office supplies sold by the office superstores and other retailers of office supplies, the evidence . . . shows that even where Staples and Office Depot charge higher prices, certain consumers do not go elsewhere for their supplies. This further demonstrates that the sales of office supplies by non-superstore retailers are not responsive to the higher prices charged by Staples and Office Depot in the one-firm markets. This indicates a low cross-elasticity of demand between the consumer office supplies sold by the superstores and those sold by other sellers.

[In addition,] both Staples and Office Depot focus primarily on competition from other superstores. [Staples's and Office Depot's own documents] show that the merging parties evaluate their "competition" as the other office superstore firms, without reference to other retailers, mail order firms, or independent stationers. When assessing key trends and making long-range plans, Staples and Office Depot focus on the plans of other superstores. [W]hen determining whether to enter a new metropolitan area, both Staples and Office Depot

evaluate the extent of office superstore competition in the market and the number of office superstores the market can support. When selecting sites and markets for new store openings, the defendants repeatedly refer to markets without office superstores as "non-competitive," even when the new store is adjacent to or near a warehouse club, consumer electronics store, or a mass-merchandiser such as Wal-Mart.

[T]he Court finds that the sale of consumable office supplies through office supply superstores is the appropriate relevant product market for purposes of considering the possible anticompetitive effects of the proposed merger. [T]he Court next must consider the probable effect of a merger between Staples and Office Depot in the geographic markets previously identified. [The evidence shows] that a merged Staples–Office Depot would have a dominant market share in 42 geographic markets across the country. The combined shares of Staples and Office Depot in the office superstore market would be 100% in 15 metropolitan areas. In 27 other metropolitan areas, where the number of office superstore competitors would drop from three to two, the post-merger market shares would range from 45% to 94%. [T]hough the Supreme Court has established that there is no fixed threshold at which an increase in market concentration triggers the antitrust laws, this is clearly not a borderline case.

[In addition to the] market concentration evidence, [there are other] indications that a merger between Staples and Office Depot may substantially lessen competition. Much of the evidence [concerning] the relevant product market also indicates that the merger would likely have an anticompetitive effect. The evidence of the defendant's current pricing practices, for example, shows that an office superstore chain facing no competition from other superstores has the ability to profitably raise prices for consumer office supplies above competitive levels. The evidence also shows that the defendants [lower their prices] when faced with entry of another office superstore [in a particular geographic area], but do not do so for other retailers. Since prices are significantly lower in markets where Staples and Office Depot compete, eliminating this competition with one another would free the parties to charge higher prices in those markets, especially those in which the combined entity would be the sole office superstore.

In addition, allowing the defendants to merge would eliminate . . . head-to-head competition between the two . . . lowest-priced firms in the superstore market. Thus, the merger would result in the elimination of a particularly aggressive competitor in a highly concentrated market, a factor which is certainly an important consideration when analyzing possible anticompetitive effects. It is based on all of this evidence that the Court finds that the Commission has shown a likelihood of success on the merits and a reasonable probability that the proposed transaction will have an anticompetitive effect.

[In an attempt to rebut the FTC's showing of probable anticompetitive effect, the defendants argued] that the rapid growth in overall office supply sales has encouraged and will continue to encourage expansion and entry [into the market by other firms that will compete with the merged entity]. [An expert witness for the defendants] testified that there are "no barriers to entry in retailing," and the defendants pointed to the fact that all office superstore entrants have entered within the last 11 years. There are problems with the defendants' evidence, however. [W]hile it is true that all office superstore entrants have entered within the last 11 years, the recent trend for office superstores has actually been toward exiting the market rather than entering. Over the past few years, the number of office superstore chains has dramatically dropped from twenty-three to three. All but Staples, Office Depot, and OfficeMax have either closed or been acquired. A new office superstore would need to open a large number of stores nationally in order to achieve the purchasing and distribution economies of scale enjoyed by the three existing firms. Sunk costs would be extremely high. Economies of scale at the local level, such as in the costs of advertising and distribution, would also be difficult for a new superstore entrant to achieve since the three existing firms have saturated many important local markets.

[T]he Court finds it extremely unlikely that a new office superstore will enter the market and thereby avert the anticompetitive effects from Staples's acquisition of Office Depot. [Although the

defendants also argued that] expansion [by] existing companies such as U.S. Office Products and Wal-Mart [would enhance competition in the sale of office supplies, the Court] finds it unlikely that expansion by U.S. Office Products and Wal-Mart would avert the anticompetitive effects which would result from the merger. The defendants' final argument with respect to entry was that existing retailers such as Sam's Club, K-Mart, and Best Buy have the capability to reallocate their shelf space to include [greater quantities and varieties] of office supplies. While [such stores may] reallocate shelf space, there is no evidence that they will in fact do this if a combined Staples–Office Depot were to raise prices . . . following a merger. In fact, the evidence indicates that [they probably] would not.

[It is not clear] whether an efficiencies defense showing that the intended merger would create significant efficiencies in the relevant market, thereby offsetting any anticompetitive effects, may be used by a defendant to rebut the government's prima facie case. The newly revised efficiencies section of the [government's] Merger Guidelines recognizes that [some mergers may achieve efficiencies and that consideration of them may sometimes be relevant to a determination of whether an acquisition would substantially lessen competition]. [H]owever, in *FTC v. Procter & Gamble Co.* (U.S. Sup. Ct. 1967), [the Supreme Court] stated that "possible economies cannot be used as a defense to illegality in section 7 merger cases." There has been great disagreement regarding the meaning of this precedent and whether an efficiencies defense is permitted. Assuming that it is a viable defense, however, the Court cannot find in this case that the defendants' efficiencies evidence rebuts the [FTC's showing] that the merger may substantially lessen competition. . . .

The defendants submitted an "Efficiencies Analysis" which predicted that the combined company would achieve savings of between $4.9 and $6.5 billion over the next five years. In addition, the defendants argued that the merger would also generate dynamic efficiencies. For example, the defendants argued that as suppliers become more efficient due to their increased sales volume to the combined Staples–Office Depot, they would be able to lower prices to their other retailers. Moreover, the defendants argued that two-thirds of the savings realized by the combined company would be passed along to consumers.

[T]he Court credits the testimony and report of the Commission's expert over the testimony and efficiencies study of the defendants' witness, [a] Senior Vice President of Integration at Staples. [The testimony of the Commission's expert] was compelling, and the Court finds, based primarily on [that expert's] testimony, that the defendants' cost savings estimates are unreliable [and far in excess of estimates by the defendants in proxy statements and in presentations to the defendants' boards of directors]. [T]he Court also finds that the defendants' projected pass-through rate—the amount of the projected savings that the combined company expects to pass on to customers in the form of lower prices—is unrealistic. Staples and Office Depot have a proven track record of achieving cost savings through efficiencies, and then passing those savings to customers in the form of lower prices. However, in this case the defendants have projected a pass-through rate of two-thirds of the savings while the evidence shows that, historically, Staples has passed through only 15–17%.

[T]he Court cannot find that the defendants have rebutted [the FTC's showing] that the merger will subtantially lessen competition.

FTC's motion for preliminary injunction against merger granted.

Vertical Mergers

A **vertical merger** is a merger between firms that previously had, or could have had, a supplier–customer relationship. For example, a manufacturer may seek to vertically integrate its operations by acquiring a company that controls retail outlets at which the manufacturer's products could be sold. Alternatively, the manufacturer may vertically merge by acquiring a company that makes a product the manufacturer

regularly uses in its production processes. Vertical mergers, unlike horizontal mergers, do not directly result in an increase in concentration. Nonetheless, they traditionally have been thought to threaten competition in various ways.

Foreclosing Competitors in Relevant Market First, vertical mergers may *foreclose competitors* from a share of the relevant market. If a major customer for a particular product acquires a captive supplier of that product, the competitors of the acquired firm are foreclosed from competing with it for sales to the acquiring firm. Similarly, if a manufacturer acquires a captive retail outlet for its products, the manufacturer's competitors are foreclosed from competing for sales to that retail outlet. A vertical merger in the latter case may also result in reduced competition at the retail level. For instance, a shoe manufacturer acquires a retail shoe store chain that carries the brands of several competing manufacturers and has a dominant share of the retail market in certain geographic areas. If the retail chain carries only the acquiring manufacturer's brands after the merger occurs, competition among the acquiring manufacturer and its competitors is reduced in the retail market for shoes.

Creation of Increased Market Entry Barriers A second way in which vertical mergers threaten competition is that they may lead to *increased barriers to market entry* for new competitors. For example, if a major purchaser of a product acquires a captive supplier of it, the merger-related contraction of the market for the product may discourage potential producers of it from commencing production.

Elimination of Potential Competition in Acquired Firm's Market Some vertical mergers threaten competition by *eliminating potential competition* in one of two ways. First, an acquiring firm may be perceived by existing competitors in the acquired firm's market as a likely potential entrant into that market. The threat of such a potential entrant "waiting in the wings" may moderate the behavior of existing competitors because they fear that pursuing pricing policies that exploit their current market position might cause the potential entrant to react by entering the market. The acquiring firm's entry into the market by the acquisition of an existing competitor means the end of its moderating influence as a potential entrant. Second, a vertical merger may deprive the market of the potential benefits that would have resulted if the acquiring firm had entered the market in a more competitive manner, such as by creating its own entrant into the market through internal expansion or by making a toehold acquisition of a small existing competitor and subsequently building it into a more significant competitor.

Historically, courts seeking to determine the legality of vertical mergers have tended to look at the *share of the relevant market foreclosed to competition.* If a more than insignificant market share is foreclosed to competition, courts consider other economic and historical factors. Factors viewed as aggravating the anticompetitive potential of a vertical merger include: a trend toward concentration or vertical integration in the industry, a past history of vertical integration in the industry, a past history of vertical acquisitions by the acquiring company, and significant barriers to entry resulting from the merger. This approach to determining the legality of vertical mergers has been criticized by some commentators. These critics argue that vertical integration may yield certain efficiencies of distribution and that vertical integration by merger may be more economically efficient than vertical integration by internal expansion. The Justice Department generally affords greater weight to efficiency arguments in cases involving vertical mergers than in cases involving horizontal mergers. The department generally applies the same criteria to all nonhorizontal mergers. We discuss these criteria in the following section.

Conglomerate Mergers

A **conglomerate merger** is a merger between two firms that neither compete with each other (because they do business in different product or geographic markets) nor have a supplier–customer relationship with each other. Conglomerate mergers may be either *market extension* mergers or *product extension* mergers. In a market extension merger, the acquiring firm expands into a new geographic market by purchasing a firm already doing business in that market. For example, a conglomerate that owns an east coast grocery chain buys a west coast grocery chain. In a product extension merger, the acquiring firm diversifies its operations by purchasing a company in a new product market. For example, a conglomerate with interests in the

aerospace and electronics industries purchases a department store chain.

There is considerable disagreement over the economic effects of conglomerate acquisitions. As later discussion will reveal, conglomerate mergers have been attacked with some degree of success under section 7 if they involve **potential reciprocity,** serve to **eliminate potential competition,** or give an acquired firm an **unfair advantage** over its competitors. Nevertheless, there is significant sentiment that the Clayton Act is not well-suited to dealing with conglomerate mergers. This realization has produced calls for specific legislation on the subject. Such legislation is probably desirable if we ultimately conclude that conglomerate merger activity is a proper subject for regulation.

Potential Reciprocity Conglomerate mergers that involve *potential reciprocity* are among those sometimes held to be prohibited by section 7. A conglomerate merger may create a risk of potential reciprocity if the acquired firm produces a product regularly purchased by the acquiring firm's suppliers. Such suppliers, eager to continue their relationship with the acquiring firm, may thereafter purchase the acquired firm's products rather than those of its competitors.

Elimination of Potential Competition Some conglomerate mergers may result in *elimination of potential competition* in ways similar to vertical mergers, and thus may be vulnerable to attack under section 7. If existing competitors perceive the acquiring company as a potential entrant in the acquired company's market, the acquiring company's entry by means of a conglomerate acquisition may result in the loss of the moderating influence that it had while waiting in the wings. In addition, when the acquiring company actually enters the new market by acquiring a well-established competitor rather than by starting a new competitor through internal expansion (a *de novo* entry) or by making a toehold acquisition, the market is deprived of the potential for increased competition flowing from the reduction in concentration that would have accompanied either of the latter strategies.

Supreme Court decisions suggest, however, that a high degree of proof is required before either of these potential competition arguments will be accepted. Arguments that a conglomerate merger eliminated a *perceived potential entrant* must be accompanied by proof that existing competitors actually perceived the acquiring firm as a potential entrant.[6] Arguments that a conglomerate acquisition eliminated an *actual* potential entrant (and thereby deprived the market of the benefits of reduced concentration) must be accompanied by evidence that the acquiring firm had the ability to enter the market by internal expansion or a toehold acquisition and that doing so would have ultimately yielded a substantial reduction in concentration.[7]

In the *Tenneco* case, which follows shortly, the court rejects the FTC's attempt to attack a merger on the basis of the elimination of potential competition theory.

Unfair Advantage to Acquired Firm Finally, conglomerate mergers may violate section 7 in certain instances when the acquired firm obtains an *unfair advantage* over its competitors. When a large firm acquires a firm that already enjoys a significant position in its market, the acquired firm may gain an unfair advantage over its competitors through its ability to draw on the greater resources and expertise of its new owner. This advantage may entrench the acquired firm in its market by deterring existing competitors from actively competing with it for market share and by causing other potential competitors to be reluctant to enter the market after the acquisition.

Virtually all of the important recent conglomerate merger cases have been settled out of court. As a result, we do not have a clear indication of the Supreme Court's current thinking on conglomerate merger issues. In recent years, the Justice Department has taken the position that the primary theories to be used by the department in attacking all *nonhorizontal* mergers are the *elimination of perceived and actual potential competition* theories. In employing these analytical tools, the department also considers other economic factors. These include: (1) the degree of concentration in the acquired firm's market; (2) the existence of barriers to entry into the market and the presence or absence of other firms

[6] *United States v. Falstaff Brewing Corp.,* 410 U.S. 526 (U.S. Sup. Ct. 1973).

[7] *United States v. Marine Bancorporation, Inc.,* 418 U.S. 602 (U.S. Sup. Ct. 1974).

Figure 1 *Types of Mergers Covered by Section 7*

Category	Description	Example
Horizontal	Between competitors	An automobile manufacturer merges with another automobile manufacturer
Vertical	Between a supplier and its customer	An oil producer merges with an oil refiner
Conglomerate	Between two largely unrelated businesses	A candy company merges with a greeting card company

with a comparable ability to enter; and (3) the market share of the acquired firm (with challenges being unlikely if this is 5 percent or less and likely if it is 20 percent or more). It remains to be seen whether the Supreme Court will accept this more restrictive view of the scope of section 7.

Figure 1 summarizes the types of mergers covered by section 7.

Tenneco, Inc. v. FTC *689 F.2d 346 (2d Cir. 1982)*

In 1975, Tenneco, Inc., was the 15th largest industrial corporation in America. Tenneco's Walker Manufacturing Division produced and distributed a wide variety of automotive parts, the most important of which were exhaust system parts. Walker was the nation's leading seller of exhaust system parts in 1975 and 1976. Tenneco acquired control of Monroe Auto Equipment Company, a leading manufacturer of automotive shock absorbers. Monroe was the number two firm in the national market for replacement shock absorbers. Monroe and Gabriel, the industry leader, accounted for over 77 percent of replacement shock absorber sales in 1976. General Motors and Questor Corporation, the third and fourth largest firms, controlled another 15 percent of the market.

The replacement shock absorber market exhibited significant barriers to the entry of new competitors. Economies of scale in the industry dictated manufacturing plants of substantial size. Furthermore, the nature of the industry required would-be entrants to acquire significant new technologies and marketing skills unique to the industry. The Federal Trade Commission (Commission) concluded that Tenneco's acquisition of Monroe violated section 7 of the Clayton Act by eliminating both perceived and actual potential competition in the replacement shock absorber market. The Commission therefore ordered Tenneco to divest itself of Monroe. Tenneco appealed.

Meskill, Circuit Judge The Supreme Court has described the theory of perceived potential competition, which it has approved for application to cases brought under section 7 of the Clayton Act, as the principal focus of the potential competition doctrine. The Court has recognized that:

> A market extension merger may be unlawful if the target market is substantially concentrated, if the acquiring firm has the characteristics, capabilities, and economic incentive to render it a perceived potential *de novo* entrant, and if the acquiring firm's presence on the fringe of the target market in fact tempered oligopolistic behavior on the part of existing participants in that market. *United States v. Marine Bancorporation, Inc.* (1974).

The actual potential competition theory, which has yet to receive sanction from the Supreme Court, would

> proscribe a market extension merger solely on the ground that such a merger eliminates the prospect for long-term deconcentration of an oligopolistic market that in theory might result if the acquiring firm were forbidden to enter except through a *de novo* undertaking or through the acquisition of a small existing entrant.

We reject the Commission's finding that Tenneco was an actual potential entrant likely to increase competition in the market for replacement shock absorbers. Tenneco was actively considering entry into the market and was pursuing all leads to that end at least since the late 1960s or early 1970s. Moreover, Tenneco clearly possessed adequate financial resources to make the large initial investment needed to attempt to penetrate the market. The record, however, is deficient in evidence that there were viable toehold options available to Tenneco or that Tenneco would have entered the market *de novo.*

The Commission conceded that Tenneco never expressed any interest in entering the market for replacement shock absorbers "on a completely *de novo* basis." However, the Commission found that Tenneco had expressed interest in entering the market essentially *de novo,* building the required production facilities from scratch and acquiring the necessary technology via a license from an established foreign shock absorber producer. The Commission concluded that Tenneco would likely have done so absent its acquisition of Monroe.

The Commission's reasoning is flawed. It ignores Tenneco's decision not to enter the market during the 1960s and early 1970s, a period of high profitability for shock absorber manufacturers, because of anticipated inadequate earnings during early years. The record is devoid of evidentiary support for the Commission's assertion that in the period relevant to this case, when industry earnings were in decline, Tenneco would have been willing to suffer the "cost disadvantage" inherent in the building of an efficient scale plant that would remain underutilized "for a number of years."

The Commission's conclusion that Tenneco would likely have entered the replacement shock absorber market through toehold acquisition is similarly flawed. The Commission identified Armstrong Patents, Ltd. ("Armstrong"), a British shock absorber manufacturer, DeCarbon Shock Absorber Co. ("DeCarbon"), a French company, and Blackstone Manufacturing Corp. ("Blackstone"), a small United States producer of shock absorbers, as potential toeholds. However, Tenneco in fact negotiated unsuccessfully with Armstrong and DeCarbon. Armstrong management indicated that Tenneco would have to offer a 100 percent premium over the market price of its stock to generate its interest. Tenneco's negotiations with DeCarbon, which were conducted through an independent broker, were equally fruitless. DeCarbon had asked a selling price of 100 times its earnings.

As for Blackstone, the Commission itself described that company as "a small, struggling domestic firm burdened with aged equipment, a less than complete product line, declining market share and a mediocre reputation." Since 1974 Blackstone had unsuccessfully sought a buyer for its business, soliciting, among others, Midas International Corp., which operates a chain of muffler installation shops, and Questor. Nevertheless, the Commission remarkably concluded that Blackstone "would have served as a viable method of toehold entry."

We also conclude that the record contains inadequate evidence to support the Commission's conclusion that Tenneco's acquisition of Monroe violated section 7 by eliminating Tenneco as a perceived potential competitor in the market for replacement shock absorbers. There is abundant evidence that the oligopolists in the market for replacement shock absorbers perceived Tenneco as a potential entrant. Industry executives testified that they considered Tenneco one of very few manufacturers with both the incentive and the capability to enter the market. This perception was based on Tenneco's financial strength and on the compatibility of shock absorbers with exhaust system parts produced by Tenneco's Walker Division.

However, the Commission's conclusion that the perception of Tenneco as a potential entrant actually tempered the conduct of oligopolists in the market must also be supported by substantial evidence. It is not. Tenneco argued that in the years immediately preceding its acquisition of Monroe the market for replacement shock absorbers had become highly competitive. The Commission apparently agrees with this assessment. The rate of increase in advertised retail prices for shock absorbers fell significantly behind inflation, and mass merchandisers such as Sears, Roebuck replaced traditional wholesale distributors as the leading purchasers of replacement shock absorbers from manufacturers. Sears's retail prices for shock absorbers were frequently below the prices that manufacturers charged wholesale distributors, who were several levels above the retail customer in the traditional chain of distribution.

The advent of increased sales by mass merchandisers coincided with aggressive competition among shock absorber manufacturers. Manufacturers offered substantial discounts off their circulated price sheets to traditional wholesalers and implemented "stocklifting," a practice in which a manufacturer buys a wholesaler's inventory of a competing manufacturer's product and replaces it with his own product.

While agreeing that competitive activity increased dramatically in the mid-1970s, the Commission stated:

> We disagree with [Tenneco] over the cause of that new competitive vigor. In brief, we find that the source of the improved economic performance lay in industry fears that Tenneco was likely to attempt entry—an actual "edge effect"—rather than in the buyer power supposedly asserted by mass merchants against their suppliers.

The Commission's hypothesis depends almost entirely on inferences drawn from the activity of Maremont [Gabriel's owner]. We have no doubt that direct evidence of an "edge effect" is not required to support a Commission finding of a Section 7 violation. In this case, however, direct evidence concerning Tenneco's "edge effect" on Maremont was elicited by the Commission, though it does not support the Commission's conclusion. During the testimony of Byron Pond, Senior Vice-President and Director of Maremont, the following colloquy occurred:

> *Q:* [by Commission Counsel]: Did the presence of Walker, IPC or Midas and/or TRW as likely potential entrants into the shock absorber market, have any effect on Maremont's decisions, business decisions?
> *A:* [by Mr. Pond]: I don't think that we looked specifically at competitors on a periodic basis or potential competitors in developing our strategy. I think we developed our strategy and approach to the business based on how we perceive it and how we perceived the opportunities.

Mr. Pond's testimony constitutes direct evidence that Tenneco had no direct effect on Maremont's business decisions or competitive activity. In the face of this contrary and unchallenged direct evidence, the substantiality of circumstantial evidence arguably suggesting an "edge effect" vanishes. Accordingly, we hold that the Commission's finding that Maremont's actions were probably taken in response to its desire to dissuade Tenneco from entering the market is unsupported by substantial evidence in the record.

Commission order set aside in favor of Tenneco.

Clayton Act Section 8

If the same individuals control theoretically competing corporations, an obvious potential exists for collusive anticompetitive conduct such as price-fixing or division of markets. Section 8 of the Clayton Act was designed to minimize the risks posed by such interlocks. Initially, section 8 prohibited any person from serving as a *director* of two or more corporations (other than banks or common carriers) if either had "capital, surplus, and undivided profits aggregating more than $1,000,000" and the corporations were, or had been, competitors, "so that elimination of competition by agreement between them" would violate any of the antitrust laws. The Antitrust Amendments Act of 1990 amended section 8's original language to increase the amount required to trigger the statute from $1 million to $10 million (a figure to be adjusted annually by an amount equal to the percentage increase or decrease in the gross national product).

Section 8 establishes a per se standard of liability in the sense that a violation of the statute may be demonstrated without proof that the interlock harmed competition. Until a decade ago, however, the statute's prohibition against interlocks was quite limited in scope because it barred only interlocking *directorates.* Nothing in the original language of section 8 prohibited a person from serving as an *officer* of two competing corporations, or as an officer of one firm and a director of its competitor. The Antitrust Amendments Act of 1990, however, expanded the scope of the statute by including senior *"officers"* (defined as officers elected or chosen by the board of directors) within its reach.

Although government enforcement of section 8 was historically lax, the past two decades have witnessed signs of growing government interest in the statute. The Supreme Court, however, has indicated that section 8

should not be interpreted in an expansive fashion that strains the statutory language. *BankAmerica Corp. v. United States*[8] stemmed from a Justice Department attempt to police interlocking directorates between banks and insurance companies. Never before had an interlock involving a bank been challenged under section 8 because of the specific statutory language prohibiting interlocks between corporations "other than banks." Concerned about the increasing areas in which banks and a variety of other businesses were competing in rapidly changing financial markets, the Justice Department argued that the statutory exception should apply only when both of the companies at issue were banks. Had the department been successful, the consequences for the banking industry could have been significant, given the long history of interlocking directorates between banks and other business corporations. The Supreme Court, however, rejected the government's broad reading of the statute, holding that the "most natural reading" of the statute was that the interlocking corporations must all be corporations "other than banks." The Antitrust Amendments Act of 1990 retained the statutory language exempting banks.

Signs of renewed government interest in section 8 produced significant concern in an era of conglomerate merger activity. Given the wide diversification that characterizes many large corporations, it would be increasingly easy to demonstrate some degree of competitive overlap among a substantial number of large, diversified corporations. Critics alleged that section 8 has operated to discourage qualified persons from serving as directors when no potential for actual competitive harm exists. In response to such criticism, the Antitrust Amendments Act of 1990 specified that individuals may serve as officers or directors of competing corporations when the "competitive overlap" between them is an insignificant part of either company's total sales.

The Robinson-Patman Act

Background

Section 2 of the Clayton Act originally prohibited *local and territorial price discrimination* by sellers, a practice monopolists frequently used to destroy smaller competitors. A large company operating in a number of geographic markets would sell at or below cost in markets where it faced local competitors, and would then make up its losses by selling at higher prices in areas where it faced no competition. Faced with such tactics, the smaller local competitors might eventually be driven out of business. Section 2 was aimed at such **primary level** (or *first line*) price discrimination.

During the 1930s, Congress was confronted with complaints that large chain stores were using their buying power to induce manufacturers to sell to them at prices lower than those offered to their smaller, independent competitors. Chain stores were also inclined to seek and obtain other payments and services their smaller competitors did not receive. Being able to purchase at lower prices and to obtain discriminatory payments and services arguably gave large firms a competitive advantage over their smaller competitors. Such price discrimination in sales to the competing customers of a particular seller is known as **secondary level** (or *second line*) price discrimination.

In addition, the customers of a manufacturer's favored customer (such as a wholesaler receiving a functional discount) may gain a competitive advantage over *their* competitors (for example, other retailers purchasing directly from the manufacturer at a higher price) if the favored customer passes on all or a portion of its discount to its customers. This form of price discrimination is known as **tertiary level** (or *third line*) price discrimination.

Congress responded to these problems by passing the Robinson-Patman Act in 1936. The Robinson-Patman Act preserved Clayton Act section 2's ban on primary level price discrimination. It also amended section 2 to outlaw secondary and tertiary level direct price discrimination, as well as indirect price discrimination in the form of discriminatory payments and services to a seller's customers. Since its enactment, the Robinson-Patman Act has been the subject of widespread dissatisfaction and criticism. Critics have long charged that the act often protects competitors at the expense of promoting competition. Government enforcement of the act has been haphazard over the years, with prominent officials in the Justice Department and the Federal Trade Commission sometimes voicing disagreement with the act's underlying policies and assumptions. This government stance, when combined with Supreme Court decisions making private enforcement of the act difficult, raises questions about the act's future usefulness as a component of our antitrust laws.

Figure 2 summarizes the levels of price discrimination addressed by the Robinson-Patman Act.

[8] 462 U.S. 122 (U.S. Sup. Ct. 1983).

Figure 2 *Levels of Price Discrimination*

Type of Discrimination	Type of Harm	Example
First Line	Injury to the seller's competitors	A seller subsidizes its low prices in an area of high competition by raising its prices in areas where it has little competition.
Second Line	Injury to the competitors of the favored buyer	A high-volume chain store induces its suppliers to give it discriminatory low prices, enabling it to undersell its competitors.
Third Line	Injury to the competitors of the favored buyer's buyers	A wholesaler receiving discriminatorily low prices from its manufacturer passes the savings on to its retailers, enabling them to undersell their competitors.

Jurisdiction

The Robinson-Patman Act applies only to discriminatory acts that occur "in commerce." This test is narrower than the "affecting commerce" test employed under the Sherman Act. At least one of the discriminatory acts complained of must take place in interstate commerce. Thus, the act probably would not apply if a Texas manufacturer discriminated in price in sales to two Texas customers. Some lower federal courts have indicated, however, that even wholly intrastate sales may be deemed sufficiently "in commerce" if the nonfavored buyer bought the goods for resale to out-of-state customers.

Section 2(a)

Section 2(a) of the Robinson-Patman Act prohibits sellers, in certain instances, from *discriminating in price* "between different purchasers of commodities of like grade or quality." Such discrimination is prohibited when its effect may be to (1) "substantially . . . lessen competition or tend to create a monopoly in any line of commerce," or (2) "injure, destroy, or prevent competition with any person who either grants [*primary level*] or knowingly receives [*secondary level*] the benefit of such discrimination, or with the customers of either of them [*tertiary level*]."

Price Discrimination To violate section 2(a), a seller must have made two or more sales to different purchasers at different prices. Merely quoting a discriminatory price or refusing to sell except at a discriminatory price does not violate the statute, because no actual purchase is involved. For the same reason, price discrimination in lease or consignment transactions is not covered by section 2(a). Actual sales at different prices to different purchasers will not be treated as discriminatory unless the sales were fairly close in time.

For purposes of deciding whether discriminatory prices have been charged to two or more purchasers, the degree of control a parent corporation exercises over its subsidiaries sometimes assumes major importance. For example, a parent that sells a product directly to a customer at a low price may be found to have engaged in price discrimination if a wholesaler actively controlled by the parent contemporaneously sells the same product at a higher price to a competitor of the parent's customer. On the other hand, contemporaneous sales by a parent to a wholly owned subsidiary and to an independent competitor at different prices are not treated as price discrimination, because no true sale has been made to the subsidiary.

Finally, section 2(a) does not directly address the legality of *functional discounts.* Such discounts are sometimes granted to buyers at various levels in a product's chain of distribution because of differences in the functions those buyers perform in the distribution system. As indicated in the *Texaco* case, which follows, the legality of such discounts depends on their competitive effect. If a seller charges wholesale customers lower prices than it charges retail customers, the Robinson-Patman Act is not violated unless the lower wholesale prices are somehow passed on to retailers in competition with the seller's retail customers.

Texaco Inc. v. Hasbrouck *496 U.S. 543 (U.S. Sup. Ct. 1990)*

Ricky Hasbrouck and 11 other plaintiffs were Texaco retail service station dealers in the Spokane area. They purchased gasoline directly from Texaco and resold it at retail under the Texaco trademark. Throughout the relevant time period (1972–81), Texaco also supplied gasoline to two gasoline distributors, Dompier Oil Company and Gull Oil Company, at a price that was at various times between 2.5 cents and 5.75 cents per gallon lower than the price Hasbrouck paid.

Dompier and Gull sold the gasoline they purchased from Texaco to independent retail service stations. Dompier sold the gasoline to retailers under the Texaco trademark; Gull marketed it under private brand names. Gull's customers either sold their gasoline on consignment (in which case they set their own prices) or on commission (in which case Gull set their resale prices). Gull retained title until the gas was sold to a retail customer in either case. Some of the retail stations supplied by Dompier were owned and operated by Dompier's salaried employees. Both Dompier and Gull picked up gas at the Texaco bulk plant and delivered it to their retail customers, a service for which Dompier was compensated by Texaco at the common carrier rate.

Hasbrouck and the other dealers filed a price discrimination suit against Texaco under section 2(a) of the Robinson-Patman Act. At trial, Texaco argued that its lower prices to Gull and Dompier were lawful "functional discounts." The jury awarded the plaintiffs $1,349,700 in treble damages. When the Ninth Circuit Court of Appeals affirmed the jury award, Texaco appealed.

Stevens, Justice Section 2(a) contains no express reference to functional discounts. It does contain two affirmative defenses that provide protection for two categories of discounts—those that are justified by savings in the seller's cost of manufacture, delivery, or sale, and those that represent a good faith response to the equally low prices of a competitor. In order to establish a violation of the Act, plaintiffs had the burden of proving four facts: (1) that Texaco's sales to Gull and Dompier were made in interstate commerce; (2) that the gasoline sold to them was of the same grade and quality as that sold to plaintiffs; (3) that Texaco discriminated in price as between Gull and Dompier on the one hand and plaintiffs on the other; and (4) that the discrimination had a prohibited effect on competition.

The first two elements of plaintiffs' case are not disputed in this Court. Texaco does argue, however, that although it charged different prices, it did not "discriminate in price" within the meaning of the Act, and that, at least to the extent that Gull and Dompier acted as wholesalers, the price differentials did not injure competition. Texaco's first argument would create a blanket exception for all functional discounts. Indeed, carried to its logical conclusion, it would exempt all price differentials except those given to competing purchasers. The primary basis for Texaco's argument is the following comment by Congressman Utterback, an active sponsor of the Act:

> In its meaning as simple English, a discrimination is more than a mere difference. Underlying the meaning of the word is the idea that some relationship exists between the parties to the discrimination which entitles them to equal treatment, whereby the difference granted to one casts some burden or disadvantage upon the other. . . . [W]here no such relationship exists, where the goods are sold in different markets and the conditions affecting those markets set different price levels for them, the sale to different customers at . . . different prices would not constitute discrimination within the meaning of this bill.

We have previously considered this excerpt from the legislative history, and have refused to draw from it the conclusion Texaco proposes. Although the excerpt does support Texaco's argument, we remain persuaded that the argument is foreclosed by the text of the Act itself. In a statute that plainly reveals a concern with competitive consequences at different levels of distribution, and carefully defines specific affirmative defenses, it would be anomalous to assume that Congress intended the term "discriminate" to have such a limited meaning. Since we have already decided that a price discrimination within the meaning of section 2(a) "is merely a price difference," we must reject Texaco's first argument.

In *FTC v. Morton Salt Co.* (1948), we held that an injury to competition may be inferred from evidence that some purchasers had to pay their supplier "substantially more for their goods than their competitors had to pay." Texaco, supported by the United States and the Federal Trade Commission as *amici curiae,* argues that this presumption should not apply to differences between prices charged to wholesalers and those charged to retailers. Moreover, they argue that it would be inconsistent with fundamental antitrust policies to construe the Act as requiring a seller to control his customers' resale prices. The seller should not be held liable for the independent pricing decisions of his customers. As the Government correctly notes, this argument endorses the position advocated 35 years ago in the Report of the Attorney General's Nation Committee to Study the Antitrust Laws (1955).

After observing that suppliers ought not to be held liable for the independent pricing decisions of their buyers, and that without functional discounts distributors might go uncompensated for the services they performed, the Committee wrote:

> On the other hand, the law should tolerate no subterfuge. For instance, where a wholesaler-retailer *buys* only part of his goods as a wholesaler, he must not claim a functional discount on all. Only to the extent that a buyer *actually* performs certain functions, assuming all the risk, investment, and costs involved, should he legally qualify for a functional discount.

We generally agree with this description of the legal status of functional discounts. A supplier need not satisfy the rigorous requirements of the cost justification defense in order to prove that a particular functional discount is reasonable and accordingly did not cause any substantial lessening of competition between a wholesaler's customers and the supplier's direct customers. The record in this case, however, adequately supports the finding that Texaco violated the Act.

The hypothetical predicate for the Committee's entire discussion of functional discounts is a price differential "that merely accords due recognition and reimbursement for actual marketing functions." Such a discount is not illegal. In this case, however, both the District Court and the Court of Appeals concluded that there was no substantial evidence indicating that the discounts to Gull and Dompier constituted a reasonable reimbursement for the value to Texaco of their actual marketing functions. Indeed, Dompier was separately compensated for its hauling function, and neither Gull nor Dompier maintained any significant storage facilities.

Both Gull and Dompier received the full discount on all their purchases even though most of their volume was resold directly to consumers. The extra margin on those sales obviously enabled them to price aggressively in both their retail and their wholesale marketing. To the extent that Dompier and Gull competed with plaintiffs in the retail market, the presumption of adverse effect on competition recognized in the *Morton Salt* case becomes all the more appropriate. The evidence indicates, moreover, that Texaco affirmatively encouraged Dompier to expand its retail business and was fully informed about the persistent and marketwide consequences of its own pricing policies. Indeed, its own executives recognized that the dramatic impact on the market was almost entirely attributable to the magnitude of the distributor discount and the hauling allowance. The special facts of this case thus make it peculiarly difficult for Texaco to claim that it is being held liable for the independent pricing decisions of Gull or Dompier.

The competitive injury component of a Robinson-Patman Act violation is not limited to the injury to competition between the favored and disfavored purchaser; it also encompasses the injury to competition between their customers. This conclusion is compelled by the statutory language, which specifically encompasses not only the adverse effect of price discrimination on persons who either grant or knowingly receive the benefit of such discrimination, but also to the "customers of either of them." Such indirect competitive effects surely may not be presumed automatically in every functional discount setting, and, indeed, one would expect that most functional discounts will be legitimate discounts that do not harm competition. At the least, a functional discount that constitutes a reasonable reimbursement for the purchasers' actual marketing functions will not violate the Act. Yet it is also true that not every functional discount is entitled to a judgment of legitimacy, and that it will sometimes be possible to produce evidence showing that a particular discount caused a price discrimination of the sort that the Act prohibits. When such anticompetitive effects are proved—as we believe they were in this case—they are covered by the Act.

Judgment for Hasbrouck affirmed.

Commodities of Like Grade and Quality Section 2(a) applies only to price discrimination in the sale of *commodities.* Price discrimination involving intangibles, real estate, or services must be challenged under the Sherman Act as a restraint of trade or an attempt to monopolize or under the FTC Act as an unfair method of competition.[9] The essence of price discrimination is that two or more buyers are charged differing prices for the *same* commodity. Sales of commodities of varying grades or quality at varying prices, therefore, do not violate section 2(a) so long as uniform prices are charged for commodities of equal quality. Some *physical difference* in the grade or quality of two products must be shown to justify a price differential between them. Differences solely in the brand name or label under which a product is sold—such as the seller's standard brand and a "house" brand sold to a large customer for resale under the customer's label—do not justify discriminatory pricing.

Anticompetitive Effect Only price discrimination having a *probable* anticompetitive effect is prohibited by section 2(a). Traditionally, courts have required a higher degree of proof of likely competitive injury in cases involving primary level price discrimination (which may damage the seller's competitors) than in cases involving secondary or tertiary level discrimination (which threatens competition among the seller's customers or its customers' customers). To prove a primary level violation, a market analysis must show that competitive harm has occurred as a result of the seller's engaging in significant and sustained price discrimination with the intent of punishing or disciplining a competitor. Proof of predatory pricing is often offered as evidence of a seller's anticompetitive intent. The *Brown & Williamson case,* which follows shortly, addresses predatory pricing claims under the Robinson-Patman Act and emphasizes that likely harm to competition—not merely to a competitor—remains the critical focus.

In secondary or tertiary level cases, courts tend to infer the existence of competitive injury from evidence of substantial price discrimination between competing purchasers over time. Some qualifications on this point are in order, however. Price discrimination for a short period of time ordinarily does not support an inference of competitive injury. Likewise, if the evidence indicates that nonfavored buyers could have purchased the same goods from other sellers at prices identical to those the defendant seller charged its favored customers, no competitive injury is inferred. Finally, buyers seeking treble damages for secondary or tertiary level harm must still prove that they suffered actual damages as a result of a violation of the act.

[9]The FTC Act was discussed in Chapter 47.

Brooke Group Ltd. v. Brown & Williamson Tobacco Corp.
509 U.S. 209 (U.S. Sup. Ct. 1993)

Brown & Williamson Tobacco Corp. (BW) and Brooke Group Ltd. (referred to here by its former corporate name, Liggett Corp.) are two of only six firms of significant consequence in the oligopolistic cigarette manufacturing industry. In 1980, BW's share of the national cigarette market was roughly 12 percent. This share placed BW a distant third behind market leaders Philip Morris and R.J. Reynolds. Liggett's share was less than half of BW's. Liggett pioneered the development of the economy segment of the national cigarette market in 1980 by introducing a popular line of "black and white" generic cigarettes (low-priced cigarettes sold in plain white packages with simple black lettering). As Liggett's sales of generic cigarettes became substantial, other cigarette manufacturers started introducing economy-priced cigarettes. In 1984, BW introduced a black and white cigarette whose net price was lower than Liggett's. BW achieved this lower price by offering volume rebates to wholesalers.

Liggett sued BW, claiming that BW's volume rebates amounted to price discrimination having a reasonable probability of injuring competition, in violation of section 2(a) of the Robinson-Patman Act. Specifically, Liggett alleged that BW's rebates were integral to a scheme of predatory pricing, under which BW reduced its net prices for generic cigarettes below average variable costs. Liggett further alleged that this pricing by BW was designed to pressure Liggett to raise its list prices on generic cigarettes, so that the percentage price difference between generic and branded cigarettes would narrow. As a result, according to Liggett, the growth

of the economy segment would be restrained and BW would thereby be able to preserve its supracompetitive profits on branded cigarettes. Liggett further asserted that it could not afford to reduce its wholesale rebates without losing market share to BW. Therefore, Liggett claimed that its only choice, if it wished to avoid prolonged losses on the generic line that had become its principal product, was to raise retail prices.

After a 115-day trial, the jury returned a verdict in Liggett's favor for $49.6 million in damages. The district court trebled this amount. After reviewing the trial record, however, the district court concluded that BW was entitled to prevail as a matter of law. The court therefore set aside the jury's verdict and entered judgment in BW's favor. Liggett appealed. The Fourth Circuit Court of Appeals affirmed, holding (apparently) that there cannot be liability for predatory price discrimination that allegedly takes place in the context of an oligopoly such as the cigarette industry. The Supreme Court granted Liggett's petition for a writ of certiorari.

Kennedy, Justice Liggett contends that BW's discriminatory volume rebates to wholesalers threatened substantial competitive injury by furthering a predatory pricing scheme designed to purge competition from the economy segment of the cigarette market. This type of injury, which harms direct competitors of the discriminating seller, is known as primary-line injury. [P]rimary-line competitive injury under the Robinson-Patman Act is of the same general character as the injury inflicted by predatory pricing schemes actionable under section 2 of the Sherman Act. [T]he essence of the claim under either statute is the same.

Accordingly, whether the claim alleges predatory pricing under section 2 of the Sherman Act or primary-line price discrimination under the Robinson-Patman Act, two prerequisites to recovery [exist]. First, a plaintiff seeking to establish competitive injury resulting from a rival's low prices must prove that the prices complained of are below an appropriate measure of its rival's costs. [Second, the plaintiff must demonstrate] that the competitor had a reasonable prospect [if the claim is brought under the Robinson-Patman Act], or . . . a dangerous probability [if the claim is brought under section 2 of the Sherman Act], of recouping its investment in below-cost prices. Recoupment is the ultimate object of an unlawful predatory-pricing scheme; it is the means by which a predator profits from predation. Without it, predatory pricing produces lower aggregate prices in the market, and consumer welfare is enhanced. That below-cost pricing may impose painful losses on its target is of no moment to the antitrust laws if competition is not injured.

For recoupment to occur, below-cost pricing must be capable . . . of producing the intended effects on the firm's rivals, whether driving them from the market, or, as was alleged to be the goal here, causing them to raise their prices to supracompetitive levels within a disciplined oligopoly. If circumstances indicate that below-cost pricing could likely produce its intended effect on the target, there is still the further question whether it would be likely to injure competition in the relevant market. The plaintiff must demonstrate that there is a likelihood that the predatory scheme alleged would cause a rise in prices above a competitive level that would be sufficient to compensate for the amounts expended on the predation. These prerequisites to recovery are not easy to establish, but . . . they are essential components of real market injury.

Liggett . . . allege[s] . . . that BW sought to preserve supracompetitive profits on branded cigarettes by pressuring Liggett to raise its generic cigarette prices through a process of tacit collusion with the other cigarette companies. Tacit collusion, sometimes called oligopolistic price coordination or conscious parallelism, describes the process, not in itself unlawful, by which firms in a concentrated market might in effect share monopoly power, setting their prices at a profit-maximizing, supracompetitive level by recognizing their shared economic interests and their interdependence with respect to price and output decisions.

In *Matsushita Electric Industrial Co. v. Zenith Radio Corp.* (U.S. Sup. Ct. 1986), we remarked upon the general implausibility of predatory pricing. *Matsushita* observed that such schemes are even more improbable when they require coordinated action among several firms. However unlikely predatory pricing by multiple firms may be when they conspire, it is even less likely when, as here, there is no express coordination. Firms that seek to recoup predatory losses through the conscious parallelism of oligopoly must rely on uncertain and ambiguous signals to achieve concerted action. The signals are subject to misinterpretation and are a blunt and

imprecise means of ensuring smooth cooperation, especially in the context of changing or unprecedented market circumstances. This anticompetitive minuet is most difficult to compose and to perform, even for a disciplined oligopoly.

[O]n the whole, tacit cooperation among oligopolists must be considered the least likely means of recouping predatory losses. In addition to the difficulty of achieving effective tacit coordination and the high likelihood that any attempt to discipline will produce an outbreak of competition, the predator's present losses in a case like this fall on it alone, while the later supracompetitive profits must be shared with every other oligopolist in proportion to its market share, including the intended victim. In this case, for example, BW, with its 11–12% share of the cigarette market, would have had to generate around $9 in supracompetitive profits for each $1 invested in predation; the remaining $8 would belong to its competitors, who had taken no risk.

[However,] [t]o the extent that the Court of Appeals may have held that the interdependent pricing of an oligopoly may never provide a means for achieving recoupment and so may not form the basis of a primary-line injury claim, we disagree. A predatory pricing scheme designed to preserve or create a stable oligopoly, if successful, can injure consumers in the same way, and to the same extent, as one designed to bring about a monopoly. However unlikely that possibility may be as a general matter, when the realities of the market and the record facts indicate that it has occurred and was likely to have succeeded, theory will not stand in the way of liability. The Robinson-Patman Act . . . suggests no exclusion from coverage when primary-line injury occurs in an oligopoly setting. We decline to create a per se rule of nonliability [under the Robinson-Patman Act] for predatory price discrimination when recoupment is alleged to take place through supracompetitive oligopoly pricing.

Although Liggett's theory of liability, as an abstract matter, is within the reach of the statute, we agree with the [lower courts] that Liggett was not entitled to submit its case to the jury. Liggett . . . failed to demonstrate competitive injury as a matter of law. The evidence is inadequate to show that in pursuing [an alleged below-cost pricing] scheme, BW had a reasonable prospect of recovering its losses from below-cost pricing through slowing the growth of generics.

The only means by which BW is alleged to have established oligopoly pricing . . . is through tacit price coordination with the other cigarette firms. Yet the situation facing the cigarette companies in the 1980s would have made such tacit coordination unmanageable. Tacit coordination is facilitated by a stable market environment, fungible products, and a small number of variables upon which the firms seeking to coordinate their pricing may focus. By 1984, however, the cigarette market was in an obvious state of flux. The introduction of generic cigarettes in 1980 represented the first serious price competition in the cigarette market since the 1930s. This development was bound to unsettle previous expectations and patterns of market conduct and to reduce the cigarette firms' ability to predict each other's behavior. The larger number of product types and pricing variables also decreased the probability of effective parallel pricing.

Even if all the cigarette companies were willing to participate in a scheme to restrain the growth of the generic segment, they would not have been able to coordinate their actions and raise prices above a competitive level unless they understood that BW's entry into the [economy] segment was not a genuine effort to compete with Liggett. If even one other firm misinterpreted BW's entry as an effort to expand share, a chain reaction of competitive responses would almost certainly have resulted, and oligopoly discipline would have broken down, perhaps irretrievably. Liggett argues that [BW's] maintaining existing list prices while offering substantial rebates to wholesalers was a signal to the other cigarette firms that BW did not intend to attract additional smokers to the generic segment by its entry. But a reasonable jury could not conclude that this pricing structure eliminated or rendered insignificant the risk that the other firms might misunderstand BW's entry as a competitive move.

We hold that the evidence cannot support a finding that BW's alleged scheme was likely to result in oligopolistic price coordination and sustained supracompetitive pricing in the generic segment of the national cigarette market. Without this, BW had no reasonable prospect of recouping its predatory losses and could not inflict the injury to competition the antitrust laws prohibit.

Judgment for BW affirmed.

Defenses to Section 2(a) Liability

There are three major statutory defenses to liability under section 2(a): *cost justification, changing conditions,* and *meeting competition in good faith.*

Cost Justification Section 2(a) legalizes price differentials that do no more than make an appropriate allowance for differences in the "cost of manufacture, sale, or delivery resulting from the differing methods or quantities" in which goods are sold or delivered to buyers. This defense recognizes the reality that it may be less costly for a seller to service some buyers than others. Sales to buyers purchasing large quantities may in some cases be more cost-effective than small-quantity sales to their competitors. Sellers are allowed to pass on such cost savings to their customers.

Utilizing this *cost justification* defense is difficult and expensive for sellers, however, because quantity discounts must be supported by *actual evidence of cost savings.* Sellers are allowed to average their costs and classify their customers into categories based on their average sales costs. The customers included in any particular classification, however, must be sufficiently similar to justify similar treatment.

Changing Conditions Section 2(a) specifically exempts price discriminations that reflect "changing conditions in the market for or the marketability of the goods." The *changing conditions* defense has been narrowly confined to temporary situations caused by the physical nature of the goods. Examples include the deterioration of perishable goods and a declining market for seasonal goods. This defense also applies to forced judicial sales of the goods (such as during bankruptcy proceedings involving the seller) and to good faith sales by sellers that have decided to cease selling the goods in question.

Meeting Competition Section 2(b) of the Robinson-Patman Act states that price discrimination may be lawful if the discriminatory lower price was charged "in good faith to meet an equally low price of a competitor." This *meeting competition* defense is necessary to prevent the act from stifling the very competition it was designed to preserve. For example, suppose Sony Corporation has been selling a particular model of video recorder to its customers for $350 per unit. Sony then learns that Sharp Electronics is offering a comparable recorder to Acme Appliance Stores for $300 per unit. Acme, however, competes with Best Buy Video Stores, a Sony customer that has recently been charged the $350 price. Should Sony be forced to refrain from offering the lower competitive price to Acme for fear that Best Buy will charge Sony with price discrimination if it does so? If Sony cannot offer the lower competitive price to Acme, competition between Sony and Sharp will plainly suffer.

Section 2(b) avoids this undesirable result by allowing a seller to charge a lower price to certain customers if the seller has reasonable grounds for believing that the lower price is necessary to meet an equally low price offered by a competitor. Sellers may meet competition *offensively* (to gain a new customer) or *defensively* (to keep an existing customer). The meeting competition defense is subject to significant qualifications, however. First, the lower price must be necessary to meet a lower price charged by a competitor of the *seller,* not to enable a customer of the seller to compete more effectively with that customer's competitors. Second, the seller may lawfully seek only to *meet,* not *beat,* its competitor's price. A seller cannot, however, be held in violation of the act for beating a competitor's price if it did so unknowingly in a good faith attempt to meet competition. Third, the seller may reduce its price only to meet competitors' prices for products of *similar quality.*

Courts also have held that the discriminatory price must be a response to an individual competitive situation rather than the product of a seller's wholesale adoption of a competitor's discriminatory pricing system. However, a seller's competitive response need not be on a customer-by-customer basis, so long as the lower price is offered only to those customers that the seller reasonably believes are being offered a lower price by the seller's competitors.

The *Hoover* case, which follows, deals with a seller's unsuccessful attempt to employ the meeting competition defense.

Hoover Color Corp. v. Bayer Corp. *199 F.3d 160 (4th Cir. 1999)*

Bayer Corporation produced Bayferrox, a synthetic iron oxide pigment used to color paint, plastics, and building and concrete products. Hoover Color Corporation was one of several primary distributors of this pigment. Hoover therefore purchased Bayferrox from Bayer on a regular basis. For a number of years,

Bayer had employed a volume-based incentive discount pricing system. Under this system, the price a distributor paid depended on the total amount of Bayferrox purchased by that distributor during the previous year. The quantities of Bayferrox purchased by Hoover were significantly smaller than those purchased by Hoover's competitors, Rockwood Industries and Landers-Segal Co. (Lansco). As a result, Hoover received smaller price discounts from Bayer than Rockwood and Lansco received. In 1992, for instance, Hoover received a 1 percent discount off Bayer's distributor market price for Bayferrox, whereas Lansco and Rockwood were given 6 percent and 10 percent discounts, respectively.

Hoover sued Bayer on the theory that Bayer's volume-based incentive discount pricing system involved price discrimination, in violation of section 2(a) of the Robinson-Patman Act. Bayer contended that it set its prices in a good-faith attempt to meet competition in the marketplace, and that it was thus entitled to the protection of the affirmative defense set out in section 2(b) of the statute. Holding that Bayer was entitled to the protection of the "meeting competition" defense, the district court granted summary judgment in favor of Bayer. Hoover appealed to the U.S. Court of Appeals for the Fourth Circuit.

Motz, Circuit Judge Congress enacted the Robinson-Patman Act to prevent a large buyer from "securing a competitive advantage over a small buyer solely because of the large buyer's quantity purchasing ability." *FTC v. Morton Salt Co.* (U.S. Sup. Ct. 1948). The Robinson-Patman Act thus seeks to increase competition by regulating large buyers' economic power. When one or a few large buyers dominate a market in which many suppliers compete for sales, these buyers can, if unrestrained, force the suppliers to sell at such low prices as to prevent new buyers from entering the market. Section 2(a) of the Act prohibits this. But because section 2(a) does not confine its ban on price discrimination to those situations in which the desire for increased competition would justify legal constraints, Congress provided sellers with the section 2(b) "meeting competition" affirmative defense.

This scheme has not enjoyed wide approval. Indeed, professional and academic opinion has almost uniformly condemned the Robinson-Patman Act. Criticism has ranged from its drafting to its underlying rationale. We must nonetheless attempt to interpret and apply the Robinson-Patman Act, whatever its faults, as written and intended by Congress.

The Supreme Court has provided us with substantial guidance in this pursuit. The Court has explained that to establish a prima facie case of price discrimination under section 2(a), a plaintiff must prove: (1) a seller sold the same product at different prices to different purchasers, and (2) such differences in price reasonably may cause an injury to competition. A plaintiff may demonstrate the first element—the price difference—through evidence of volume-based discounts that are theoretically, but not functionally, available to all buyers. The second element—possible injury to competition—so obviously flows from the first that it "is established prima facie by proof of a substantial price discrimination between competing purchasers over time." *Falls City Industries, Inc. v. Vanco Beverage, Inc.* (U.S. Sup. Ct. 1983).

If a buyer makes out a prima facie case of price discrimination under section 2(a), a seller can nonetheless avoid liability under section 2(b) if it can demonstrate that it set its prices in a good-faith attempt to meet "an equally low price of a competitor." [According to *Falls City*], this affirmative defense "requires more than a showing of facts that would have led a reasonable person to believe that a lower price was available to the favored purchaser from a competitor." Good faith [in charging the lower price] is at the heart of the defense. . . . Because of this emphasis on intent and good faith and because the seller has the burden of proving the affirmative defense, courts have rarely granted a seller judgment as a matter of law on the basis of the defense. [When sellers have succeeded with the defense, it has generally been at trial rather than at the summary judgment stage.]

Notwithstanding the heavy burden imposed on a seller attempting to obtain summary judgment on the basis of the meeting competition defense, the district court found that Bayer had met that burden here. [T]he district court's opinion [noted that] "where the seller can document competition in the market and the threat of reduced sales as a result of that competition," [the seller's lowering of prices should be protected by the meeting competition defense].

If the seller could prove the meeting competition defense . . . by "document[ing] competition in the

market and the threat of reduced sales as a result of that competition," as the district court believed, we would agree that indisputably Bayer has established the defense in this case. Such a standard, however, would enable nearly all sellers to demonstrate that they priced their goods or services in response to competition in the market. Most markets are competitive and pricing is therefore almost always driven by considerations of competitive pressures. Therefore, if section 2(b) . . . provided a defense to every seller who could document a good-faith attempt to meet general competition in the marketplace, then the defense would . . . virtually obliterate the protection Congress sought to provide buyers in section 2(a). [A]lthough Congress provided a generous defense in section 2(b), that defense is considerably more limited than the district court acknowledged.

In section 2(b), . . . Congress provided sellers a defense when [section 2(a)'s ban on discriminatory pricing] would have a direct anticompetitive effect. Section 2(b) provides a seller no defense from section 2(a)'s ban on discriminatory pricing when that pricing is based on general competition in the market, but affords a seller an absolute affirmative defense when its prices are set "in good faith to met an equally low price of a competitor. . . . " Moreover, the Supreme Court has made it plain that section 2(b) must be applied in accordance with its literal language and is not to be interpreted more expansively. The Court has repeatedly emphasized the necessity of proof of a good-faith attempt to match an individual competitor's price. Hence the Court . . . has recognized that section 2(b) "places emphasis on individual competitive situations, rather than upon a general system of competition." *FTC v. A.E. Staley Manufacturing Co.* (U.S. Sup. Ct. 1945).

Bayer claims [in its brief] that undisputed evidence does establish that the volume discounts "were a good faith response to competitive offers that were available to [its] distributors." Bayer relies on evidence that the market for iron oxides was apparently very competitive. For example, in 1992 Rockwood's parent company purchased a potential competing supplier of synthetic iron oxides, thereby decreasing Rockwood's demand for Bayferrox and increasing its market power against Bayer. Moreover, imported goods from China, Mexico, India, Austria, and elsewhere provided distributors with lower-cost alternatives to Bayferrox. Given these available alternatives and the competitive market for iron oxides, Bayer argues that Rockwood and other distributors would purchase more iron oxide pigments from Bayer if the price were lower, and less if the price were higher. This evidence undoubtedly demonstrates the generally competitive nature of the iron oxide market, but it says nothing about actual or imminent lower price offers made by Bayer's competitors and matched by Bayer with its volume discount pricing structure. The fact that a market [is very competitive] in no way precludes a determination that the seller may have violated the Robinson-Patman Act.

Bayer also relies on two specific instances in which Rockwood and Lansco presented it with lower prices from a competitor and asked Bayer to meet those prices. Although [this evidence] may well establish that Bayer's distributors twice received lower price offers from other suppliers and sought to have Bayer match such offers, this evidence cannot establish that Bayer set its prices "to meet" a competitor's lower price because Bayer expressly refused to meet the competitor's lower prices on both occasions. Because Bayer did not match either offer, Bayer cannot rely on these threats to establish incontestably that its volume discounts [satisfied section 2(b)'s requirement of] a "good faith" attempt "to meet an equally low price of a competitor."

Hoover has proffered significant and direct evidence [that] could rebut Bayer's assertion of the section 2(b) defense. Hoover . . . points to evidence related to a possible alternative motive for Bayer's volume-based discount pricing system. Hoover offered undisputed evidence that Bayer wanted to maintain a high volume of business in Bayferrox to make cost-effective its large plant in New Martinsville, West Virginia. [Bayer had built this plant just before it implemented the volume-based discount pricing program.] Indeed, several of Bayer's own executives so testified. Bayer asserts . . . that there is no inconsistency between its need to increase volume for the New Martinsville plant and its claim that volume discount pricing was simply a response to competitive offers [made to its distributors]. [T]his assertion is true [but] it lends little support to Bayer's section 2(b) defense. Although increasing volume and responding to competitive

offers are potentially consistent, they are not necessarily consistent. A seller's attempt to set prices in order to satisfy the high volume necessary to operate its plant successfully certainly does not establish that it also set prices in a good-faith effort to meet a competitor's prices, and Bayer must prove the latter. [I]n view of the evidence as to the New Martinsville plant and its impact on Bayer's business, a factfinder could reasonably conclude that Bayer engaged in volume discount pricing not to match a competitor's prices but simply to [increase] its business with the kinds of "aggressive price reductions condemned by the Robinson-Patman Act." *William Inglis & Sons Baking Co. v. ITT Continental Baking Co.* (9th Cir. 1981).

Furthermore, provisions in . . . 1985 and 1990 Rockwood–Bayer agreements lend additional support for the possible conclusion that Bayer did not create the volume-based discount pricing system to match the offers of a competitor. These agreements contain, in addition to the provision for volume discounts, a separate express requirement that Rockwood provide Bayer the opportunity to match any lower price offer before Rockwood accepted such an offer. Thus, wholly apart from the volume-based discounts, the contracts provide an explicit mechanism for Bayer to receive and match competing offers. Given this evidence, a factfinder could reasonably determine that Bayer did not need or intend the volume discounts to match competing offers.

[W]e must conclude that at this juncture Bayer has not demonstrated its entitlement as a matter of law to the "meeting competition" defense.

District court's grant of summary judgment to Bayer reversed; case remanded for further proceedings.

Indirect Price Discrimination

When Congress passed the Robinson-Patman Act, it also addressed **indirect price discrimination,** which takes the form of a seller's discriminating among competing buyers by making discriminatory payments to selected buyers or by furnishing certain buyers with services not made available to their competitors. Three sections of the act are designed to prevent such practices.

False Brokerage Section 2(c) prohibits sellers from granting, and buyers from receiving, any "commission, brokerage, or other compensation, or any allowance or discount in lieu thereof, except for services rendered in connection with the sale or purchase of goods." This provision prevents large buyers, either directly or through subsidiary brokerage agents, from receiving phony commissions or brokerage payments from their suppliers. The courts and the FTC originally interpreted section 2(c) as prohibiting any brokerage payments to a buyer or its agent, regardless of whether the buyer or agent had in fact provided sale-related services that would otherwise have been performed by the seller or an independent broker. This narrow interpretation drew heavy criticism, however, because it operated to create a closed shop for independent brokers by denying large buyers any incentive to create their own brokerage services. This interpretation also made it difficult for small, independent retailers to create cooperative buying organizations and thereby match more closely the buying power of their large competitors. More recent decisions have responded to these criticisms by allowing payments that are for services actually performed by buyers and represent actual cost savings to sellers.

Section 2(c), unlike section 2(a), establishes a per se standard of liability. No demonstration of probable anticompetitive effect is required for a violation. Neither the cost justification nor meeting competition defense is available in 2(c) cases. Individual plaintiffs still must prove that they have suffered some injury as a result of a 2(c) violation, however, before they are entitled to recover damages.

Discriminatory Payments and Services Sellers and their customers benefit from merchandising activities that customers employ to promote the sellers' products. Section 2(d) prohibits sellers from making *discriminatory payments* to competing customers for such customer-performed services as advertising and promotional activities or such customer-provided facilities as shelf space. Section 2(e) prohibits sellers from discriminating in the *services* they provide to competing customers, such as by

providing favored customers with a display case or a demonstration kit.

A seller may lawfully make payments or provide services to customers only if the payments or services are made available to all competing customers on *proportionately equal terms.* This means that the seller must inform all customers of the availability of the payments or services and must distribute them on some rational basis, such as the quantity of goods bought by the customer. The seller must also devise a flexible plan that enables its various classes of customers to participate in the payment or services program in an appropriate way.

As does section 2(c), sections 2(d) and 2(e) create a per se liability standard. No proof of probable harm to competition is required for a violation; no cost justification defense is available. The meeting competition defense provided by section 2(b) is applicable, however, to actions under sections 2(d) and 2(e).

Buyer Inducement of Discrimination

Section 2(f) of the Robinson-Patman Act makes it illegal for a buyer *knowingly to induce or receive* a discriminatory price in violation of section 2(a). The logic of the section is that buyers who are successful in demanding discriminatory prices should face liability along with the sellers charging discriminatory prices. To violate section 2(f), the buyer must know that the price the buyer received was unjustifiably discriminatory. This means that the price probably was neither cost-justified nor made in response to changing conditions. Section 2(f) does not apply to buyer inducements of discriminatory payments or services prohibited by sections 2(d) and 2(e). Such buyer actions may, however, be attacked as unfair methods of competition under section 5 of the FTC Act.

In *Great Atlantic and Pacific Tea Co. v. FTC,*[10] the Supreme Court further narrowed the effective reach of section 2(f) by holding that buyers who knowingly received a discriminatory price did not violate the act if their seller had a valid defense to the charge of violating section 2(a). The seller in *Great Atlantic* had a "meeting competition in good faith" defense under section 2(b). This fact was held to insulate the buyer from liability even though the buyer knew that the seller had beaten, rather than merely met, its competitor's price.

Antitrust Exceptions and Exemptions

Introduction

A wide variety of economic activities occur outside the reach of the antitrust laws. This is so either because these activities have been specifically exempted by statute or because courts have carved out nonstatutory exceptions designed to balance our antitrust policy in favor of competition against other social policies. With critics charging that certain existing exemptions are no longer justifiable, recent years have witnessed a judicial tendency to narrow the scope of many exemptions.

Statutory Exemptions

Labor Unions and Certain Union Activities Sections 6 and 20 of the Clayton Act and the Norris-LaGuardia Act of 1932 provide that *labor unions* are not combinations or conspiracies in restraint of trade and exempt certain union activities, including boycotts and secondary picketing, from antitrust scrutiny. This statutory exemption does not, however, exempt union combinations with nonlabor groups aimed at restraining trade or creating a monopoly. An example of such nonexempted activity would be a labor union's agreement with Employer A to call a strike at Employer B's plants. In an attempt to accommodate the strong public policy in favor of collective bargaining, courts have also created a limited nonstatutory exemption for legitimate union–employer agreements arising from the collective bargaining context.

Agricultural Cooperatives and Certain Cooperative Actions Section 6 of the Clayton Act and the Capper-Volstead Act exempt the formation and collective marketing activities of *agricultural cooperatives* from antitrust liability. Courts have narrowly construed this exemption, however. Cooperatives including members not engaged in the production of agricultural commodities have been denied exempt status. One such example would be a cooperative including retailers or wholesalers who do not also produce the commodity in question. The agricultural cooperatives exemption extends only to legitimate collective marketing activities. It does not legitimize coercive or predatory practices that are unnecessary to accomplish lawful cooperative

goals. For example, this exemption would not prevent the antitrust laws from being applied to a boycott designed to force nonmembers of the cooperative to adopt a pricing policy established by the cooperative.

Joint Export Activities The Webb-Pomerene Act exempts the *joint export activities* of American companies, so long as those activities do not "artificially or intentionally enhance or depress prices within the United States." The purpose of the act is to encourage export activity by allowing the formation of combinations to enable domestic firms to compete more effectively with foreign cartels. Some critics assert that this exemption is no longer needed because there are fewer foreign cartels today and American firms often play a dominant role in foreign trade. Others question whether any group of American firms enjoying significant domestic market shares in the sale of a particular product could agree on an international marketing strategy, such as the amounts that they will export, without indirectly affecting domestic supplies and prices.

Business of Insurance The McCarran-Ferguson Act exempts from federal antitrust scrutiny those aspects of the *business of insurance* that are subject to state regulation. The act provides, however, that state law cannot legitimize any agreement to boycott, coerce, or intimidate others. Because the insurance industry is extensively regulated by the states, many practices in the industry are outside the reach of the federal antitrust laws.

In recent years, however, courts have tended to decrease the scope of this exemption by narrowly construing the meaning of "business of insurance." For example, in *Union Labor Life Insurance Co. v. Pireno,*[11] the Supreme Court held that the exemption did not insulate from antitrust scrutiny a peer review system in which an insurance company used a committee established by a state chiropractic association to review the reasonableness of particular chiropractors' charges. The Court stated that to qualify for the business of insurance exemption, a challenged practice must have the effect of transferring or spreading policyholders' risk and must be an integral part of the policy relationship between the insured and the insurer. Therefore, only practices related to traditional functions of the insurance business, such as underwriting and risk-spreading, are likely to be exempt.

Calls from some quarters for repeal of the McCarran-Ferguson Act have led to the introduction of bills in Congress to that effect in recent years. These proposals for legislation typically contemplate, however, that insurers could continue to participate in certain joint activities, such as collecting and exchanging information on fraudulent claims, pooling historical loss data, and developing standardized policy forms. As of the time this book went to press, no such bill had been passed.

Other Regulated Industries Many other *regulated industries* enjoy various degrees of antitrust immunity. The airline, banking, utility, railroad, shipping, and securities industries traditionally have been regulated in the public interest. The regulatory agencies supervising such industries have frequently been given the power to approve industry practices such as rate-setting and mergers that would otherwise violate antitrust laws. In recent years, there has been a distinct tendency to deregulate many regulated industries. If this trend continues, a greater portion of the economic activity in these industries could be subjected to antitrust scrutiny.

State Action Exemption

In *Parker v. Brown,*[12] the Supreme Court held that a California state agency's regulation of the production and price of raisins was a state action exempt from the federal antitrust laws. The **state action exemption** developed in *Parker v. Brown* recognizes states' rights to regulate economic activity in the interest of their citizens. It also, however, may tempt business entities to seek "friendly" state regulation as a way of shielding anticompetitive activity from antitrust supervision. Recognizing this possibility, courts have placed important limitations on the scope of the state action exemption.

First, the exemption extends only to governmental actions by a state or to actions compelled by a state acting in its sovereign capacity. Second, various decisions indicate that challenged activity cannot qualify for immunity under this exemption unless the activity is affirmatively expressed as state policy and actively supervised by the state. In other words, the price of antitrust immunity is real regulation by the state. The Supreme Court placed a further limitation on the state action exemption by holding that it does

[11]458 U.S. 119 (U.S. Sup. Ct. 1982).

[12]317 U.S. 341 (U.S. Sup. Ct. 1943).

not automatically confer immunity on the actions of municipalities.[13] Municipal conduct is immune only if it was authorized by the state legislature and its anticompetitive effects were a foreseeable result of the authorization. The Court's decision caused concern that the threat of treble damage liability might inhibit legitimate regulatory action by municipal authorities. As a result, Congress passed the Local Government Antitrust Act of 1984. This statute eliminates damage actions against municipalities and their officers, agents, and employees for antitrust violations and makes injunctive relief the sole remedy in such cases.

The *Armstrong* case, which appears shortly, discusses the state action exemption and another key exemption, the *Noerr–Pennington* doctrine.

The Noerr–Pennington Doctrine

In the *Noerr* and *Pennington* cases, the Supreme Court held that "the Sherman Act does not prohibit two or more persons from associating together in an attempt to persuade the legislature or the executive to take particular action with respect to a law that would produce a restraint or a monopoly."[14] This exemption recognizes that the right to petition government provided by the Bill of Rights takes precedence over the antitrust policy favoring competition. In a later case, the Court made the *Noerr–Pennington* exemption applicable to a party's filing of a lawsuit. The exemption does not, however, extend to sham activities that are attempts to interfere with the business activities of competitors rather than legitimate attempts to influence governmental action.[15] The *Armstrong* case, which follows, discusses the *Noerr–Pennington* doctrine and the relationship it may sometimes have to the state action exemption.

Armstrong Surgical Center, Inc. v. Armstrong County Memorial Hospital
185 F.3d 154 (3d Cir. 1999)

Armstrong Surgical Center, Inc. (the "Surgical Center"), wished to establish an ambulatory surgery center in Armstrong County, Pennsylvania. At the time, Armstrong County Memorial Hospital (the "Hospital") was the only facility with operating rooms in Armstrong County. The Hospital's 19 staff physicians performed the vast majority of surgeries in the county. The Surgical Center's proposed facility, if it had been constructed, would have provided a variety of outpatient surgical services and would have competed with the Hospital.

Pennsylvania law provides that any party wishing to establish a new health care facility must first obtain a Certificate of Need ("CON") from Pennsylvania's Department of Health. The Department reviews CON applications in an extensive proceeding consisting of an investigation, an evaluation of submitted materials, and a public hearing. Interested parties, including health care providers that supply similar services in the area, may submit information to the Department regarding any CON application.

The Surgical Center filed an application for a CON. According to the Surgical Center, the Hospital and its staff physicians then conspired to subvert establishment of the new facility. The alleged conspiracy involved an announcement by the physicians that they would not use the facility, as well as the submission of false and misleading information by the Hospital and the staff physicians to the Department of Health. The false and misleading information, according to the Surgical Center, was to the effect that the Hospital intended to open its own outpatient center. Although construction had begun on such a center, the Hospital had stopped construction at a very early stage. The Surgical Center contended that even though the Hospital had made no commitment to resume construction, the Hospital and the staff physicians falsely represented to the Department that the Hospital's center was either in use or very near completion.

The Department of Health denied the Surgical Center's CON application. The Surgical Center appealed to the Pennsylvania State Health Facility Hearing Board, which conducted its own hearing and received

additional evidence. The Board affirmed the Department's denial of the CON after finding that: (1) the Surgical Center's proposed facility would result in needless duplication of existing facilities and services; and (2) the Surgical Center would not be economically viable because the Hospital's staff physicians, who performed more than 90 percent of the surgeries in Armstrong County, would not use the Surgical Center's facility. The Surgical Center appealed to a Pennsylvania court, which affirmed the Board's decision.

The Surgical Center then filed an antitrust action against the Hospital and its staff physicians (the "Hospital Defendants"). According to the Surgical Center's complaint, the Hospital Defendants' conspiracy to prevent the Surgical Center from establishing its surgery center restrained and monopolized trade, in violation of sections 1 and 2 of the Sherman Act. The federal district court dismissed the complaint after concluding that the Hospital Defendants' alleged conduct was immune from antitrust scrutiny. The Surgical Center appealed to the U.S. Court of Appeals for the Third Circuit.

Stapleton, Circuit Judge The Hospital Defendants do not deny that [the Surgical Center's] complaint alleges a threat of a boycott that might under other circumstances constitute an antitrust violation. [T]hey contend, [however,] that their activities are insulated from antitrust scrutiny because their allegedly wrongful conduct occurred in the context of supplying information to the Pennsylvania Department of Health during the Surgical Center's CON application process and because the injuries alleged resulted solely from the Department's denial of the CON.

In *Parker v. Brown* (U.S. Sup. Ct. 1943), an agricultural producer challenged a marketing program adopted by California's Director of Agriculture as invalid under the Sherman Act. The program served to restrict competition among growers and maintain prices in commodity distribution. "Relying on principles of federalism and state sovereignty, [the Supreme Court] held [in *Parker*] that the Sherman Act did not apply to anticompetitive restraints imposed by the States 'as an act of government.' " *City of Columbia v. Omni Outdoor Advertising, Inc.* (U.S. Sup. Ct. 1991) (quoting *Parker*).

In *Eastern R.R. Presidents Conference v. Noerr Motor Freight, Inc.* (U.S. Sup. Ct. 1961) and *United Mine Workers v. Pennington* (U.S. Sup. Ct. 1965), the Supreme Court held that antitrust liability cannot be predicated solely on petitioning to secure government action even where those efforts are intended to eliminate competition. As the Court . . . observed [in *Omni*], "*Parker* and *Noerr* are complementary expressions of the principle that the antitrust laws regulate business, not politics; the former decision protects the States' acts of governing, and the latter the citizens' participation in government."

As the Surgical Center emphasizes, however, the immunity afforded to a private party under *Noerr* is not unlimited. Where the challenged private conduct is only "sham" petitioning—where it "is not genuinely aimed at procuring favorable government action as opposed to a valid effort to influence government action"—the *Noerr* immunity is not available. *Professional Read Estate Investors, Inc. v. Columbia Pictures, Inc.* (U.S. Sup. Ct. 1993). In essence, sham petitioning entails, [as noted in *Professional Real Estate Investors*], "the use of the governmental process—as opposed to the outcome of that process—as an anticompetitive weapon." Accordingly, the sham petitioning exception does not apply in a case like the one before us, where the plaintiff has not alleged that the petitioning conduct was for any purpose other than obtaining favorable government action. [In this case,] the plaintiff affirmatively alleges that [the Hospital Defendants'] purpose was to secure the outcome of the process—denial of the CON. Thus, . . . the sham exception to *Noerr* immunity [is] inapplicable here.

It is also true that a private party can be held liable even for bona fide petitioning conduct where that conduct has caused direct antitrust injury in the marketplace. *FTC v. Superior Court Trial Lawyers Association* (U.S. Sup. Ct. 1990). In *Trial Lawyers,* for example, the public defenders of the District of Columbia engaged in a concerted refusal to represent indigent defendants in order to pressure the District into raising the hourly rate paid. The Court held that the defendants could be held liable under the Sherman Act for injuries that resulted directly from the boycott, even though the boycott was intended to secure government action. The limitation on *Noerr* immunity recognized in *Trial Lawyers* is inapplicable, however, to a case where the sole antitrust injury is caused directly by the government action that the private defendant has helped to se-

cure. Thus, even where the same petitioning conduct might give rise to antitrust liability for injury directly caused to a competitor in the marketplace, if relief is sought solely for injury as to which the state would enjoy immunity under *Parker,* the private petitioner also enjoys immunity.

Here, looking to the source of the complained-of injuries, we find that all of the Surgical Center's alleged injuries arise solely from the denial of the CON: the denial of the ability to operate the proposed facility; the losses of the CON's value, the value of the facility, and the value of the operation's proceeds; the delay in securing the CON; and other related losses. [W]here, as here, all of the plaintiff's alleged injuries result from state action, antitrust liability cannot be imposed on a private party who induced the state action by means of concerted anticompetitive activity. It follows that the complaint fails to state a boycott claim upon which relief can be granted.

The Surgical Center's second claim is that the Hospital Defendants, as part of their conspiracy, misled the Department [and] the Board . . . into believing that the Hospital's partially constructed facility would soon open and meet the needs of the relevant market, when the Hospital Defendants knew that the facility would not be completed. The Surgical Center would have us deny antitrust immunity to the Hospital Defendants on the [ground] that they successfully opposed the issuance of a CON using information known to be false.

Although the Supreme Court suggested in *California Motor Transport Co. v. Trucking Unlimited* (U.S. Sup. Ct. 1972) that petitioning activity involving knowingly false information submitted to an adjudicative tribunal might not enjoy antitrust immunity, the Court has never so held. Moreover, since *California Motor,* the Supreme Court decided [*City of Columbia v. Omni Outdoor Advertising, Inc.* (U.S. Sup Ct. 1991), which] casts doubt on whether such an exception exists under any circumstances and dictates that . . . we honor the Hospital Defendants' claim to immunity.

In *Omni,* [a relative newcomer to the outdoor sign business alleged that a competitor and a city council] conspired to restrain competition [through the adoption of] a zoning ordinance limiting the size, spacing, and location of billboards in the city. The Supreme Court . . . concluded that [the plaintiff's] alleged injury was the result of state action, [that *Parker* immunity would therefore protect the city against liability, and that the existence of a conspiracy between city officials and a private firm did not strip the city of its immunity]. It then observed that if "conspiracy" was taken to mean "nothing more than an agreement to impose the regulation in question," the purpose of *Parker* immunity would be defeated because "it is both inevitable and desirable that public officials often agree to do what one or another group of private citizens urges upon them."

The [*Omni*] Court next considered whether *Parker* immunity is lost when it is shown that an agreement between the defendants involved governmental corruption, bribery, or other violations of state or federal law. It held that *Parker* immunity remains in such circumstances. The Court found "impractical" the contention that *Parker* immunity is forfeited by governmental corruption. Such a rule would call upon antitrust courts to speculate as to whether state action purportedly taken in the public interest was the product of an honest judgment or desire for private gain. The Court stressed that *Parker* "was not meant to shift [judgments about the public interest] from elected officials to judges and juries." With respect to the contention that *Parker* immunity should be forfeited at least where bribery or other illegal activity may have subverted the state decision making process, the Court observed that this approach had "the virtue of practicality but the vice of being unrelated to" the purposes of the Sherman Act and *Parker.* [It noted that existing statutes] other than the Sherman Act [may be utilized] to discourage such behavior.

Turning to [whether the private firm that conspired with the city council could be held liable], the *Omni* Court addressed whether *Noerr*'s immunity for private parties was subject to any of the exceptions that had been urged in the context of *Parker* immunity. It declined to restrict *Noerr* immunity in this way for the same reason it had declined to so restrict *Parker* immunity. [In so concluding, the Court noted that] "[i]n *Noerr* . . . , where the private party 'deliberately deceived the public and public officials' in its successful lobbying campaign, we said that 'deception, reprehensible as it is, can be of no consequence so far as the Sherman Act is concerned.' "

The teachings of *Omni* are pertinent here. Considerations of federalism require an interpretation of the Sherman Act that forecloses liability predicated on anticompetitive injuries that are inflicted by states acting as regulators. Liability for injuries caused by such state action is precluded even where it is alleged that a private party urging the action did so by bribery, deceit, or other wrongful conduct that may have affected the decision making process. The remedy for such conduct rests with laws addressed to it and not with courts looking behind sovereign state action at the behest of antitrust plaintiffs. Federalism requires this result both with respect to state actors and with respect to private parties who have urged the state action.

On the facts alleged in the complaint, it is . . . clear that the state decision makers were disinterested, conducted their own investigation, and afforded all interested parties an opportunity to set the record straight. The initial decision was then twice reviewed. Finally, anyone who believed that a fraud was committed on the Department or Board could have moved to reopen the proceeding and attempted to persuade them that they were materially misled.

In these circumstances, *Omni* compels us to affirm the district court. Indeed, such a result seems to follow, a fortiori, from *Omni* given the conceded presence here of disinterested decision makers, an independent investigation, an open process, and extensive opportunities for error correction. The risk that the plaintiff's injury is not the result of a bona fide execution of state policy is far less substantial here than in *Omni* and there is, accordingly, far less justification for federal court review of the state's policy judgment. We acknowledge that the result we reach is in conflict with the holding of the court in *St. Joseph's Hospital v. Hospital Corp. of America* (11th Cir. 1986), and with the analysis of the courts in *Kottle v. Northwest Kidney Centers* (9th Cir. 1998), and *Potters Medical Center v. City Hospital Association* (6th Cir. 1986). To the extent of that conflict, we respectfully disagree with the views there expressed. We note that the courts in *St. Joseph's Hospital* and *Potters Medical Center* did not have the benefit of the Supreme Court's 1991 decision in *Omni* and that *Kottle*'s brief analysis does not reference that decision.

District court's dismissal of complaint affirmed.

Patent Licensing

There is a basic tension between the antitrust objective of promoting competition and the purpose of the patent law, which seeks to promote innovation by granting a limited monopoly to those who develop new products or processes.[16] In the early case of *United States v. General Electric Company,*[17] the Supreme Court allowed General Electric to control the price at which other manufacturers sold light bulbs they had manufactured under patent licensing agreements with General Electric. The Court recognized that an important part of holding a patent was the right to license others to manufacture the patented item. This right effectively would be negated if licensees were allowed to undercut the prices that patent holders charged for their own sales of patented products.

Patent holders cannot, however, lawfully control the price at which patented items are resold by distributors purchasing them from the patent holder. Nor can patent holders use their patents to impose tying agreements on their customers by conditioning the sale of patented items on the purchase of unpatented items, unless such agreements are otherwise lawful under the Sherman and Clayton Acts. Finally, firms that seek to monopolize by acquiring most or all of the patents related to an area of commerce may face liability for violating Sherman Act section 2 or Clayton Act section 7, because a patent has been held to be an asset within the meaning of section 7.

Foreign Commerce

When foreign governments are involved in commercial activities affecting the domestic or international commerce of the United States, our antitrust policy may be at odds with our foreign policy. Congress and the courts have created a variety of antitrust exemptions aimed at reconciling this potential conflict. The

[16]Chapter 8 discusses patent law.
[17]272 U.S. 476 (U.S. Sup. Ct. 1926).

Foreign Sovereign Immunities Act of 1976 (FSIA) provides that the governmental actions of foreign sovereigns and their agents are exempt from antitrust liability. The commercial activities of foreign sovereigns, however, are not included within this **sovereign immunity** exemption. Significant international controversy exists concerning the proper criteria for determining whether a particular governmental act is commercial in nature. Under the FSIA, the courts employ a *nature of the act* test, holding that a commercial activity is one that an individual might customarily carry on for a profit.

The **act of state doctrine** provides that an American court cannot adjudicate a politically sensitive dispute whose resolution would require the court to judge the legality of a foreign government's sovereign act. This doctrine reflects judicial deference to the primary role of the executive and legislative branches in the adoption and execution of our foreign policy. The act of state doctrine recognizes (as does the doctrine of sovereign immunity) the importance of respecting the sovereignty of other nations. Unlike the doctrine of sovereign immunity, however, the act of state doctrine also reflects a fundamental attribute of our system of government: the principle of separation of powers.

Finally, the **sovereign compulsion doctrine** provides private parties a defense if they have been compelled by a foreign sovereign to commit, within that sovereign's territory, acts that would otherwise violate the antitrust laws because of their negative impact on our international commerce. To employ this defense successfully, a defendant must show that the challenged actions were the product of actual compulsion—as opposed to mere encouragement or approval—by a foreign sovereign.

Figure 3 summarizes the various antitrust exceptions and exemptions.

Figure 3 *Antitrust Exceptions and Exemptions*

Exception/Exemption	Activities Covered	Source
Statutory Labor	Legitimate union activities	Clayton Act, Norris-LaGuardia Act
Nonstatutory Labor	Collective bargaining agreements	Judicial decision (policy favoring collective bargaining)
Agricultural Cooperatives	Legitimate cooperative activities	Clayton Act, Capper-Volstead Act
Export Trade Associations	Joint export activities	Webb-Pomerene Act
Insurance	Business of insurance	McCarran-Ferguson Act
Regulated Industries	Anticompetitive activities shielded by federal regulation	Regulatory statutes
State Action	State authorized and supervised anticompetitive activities	Judicial decision (federalism)
***Noerr–Pennington* Doctrine**	Attempts to induce anticompetitive governmental action	Judicial decision (First Amendment)
Patent Licensing	Legitimate activities of patent holders	Judicial decision (patent laws)
Sovereign Immunity	Governmental acts of foreign sovereigns	Foreign Sovereign Immunities Act
Act of State Doctrine	Sovereign acts of foreign sovereigns	Judicial decision (separation of powers)
Sovereign Compulsion Doctrine	Private acts compelled by foreign sovereigns	Judicial decision

Ethical and Public Policy Concerns

1. In the *Armstrong* case, which appeared in this chapter, the court concluded that even if the defendants made false statements to state authorities, certain exemptions would protect them against antitrust liability. Assuming that the defendants made the false statements, how would deontologists view their behavior? How would utilitarians view their behavior? (Refer to our discussion in Chapter 4, if necessary.)

2. Refer to the facts of problem case 9 at the end of this chapter. Is paying a disguised bribe to win a contract ethically justifiable under such circumstances? Would your answer change if such bribes were a customary means of doing business in Nigeria rather than a violation of Nigerian law?

Problems and Problem Cases

1. Mercedes-Benz of North America (MBNA), the exclusive U.S. distributor of Mercedes-Benz (Mercedes) automobiles, was a wholly owned subsidiary of Daimler-Benz Aktiengesellschaft (DBAG), the manufacturer of Mercedes automobiles. MBNA required its approximately 400 franchised Mercedes dealers to agree not to sell or use (in the repair or servicing of Mercedes automobiles) any parts other than genuine Mercedes parts. Mozart, a wholesale automotive parts distributor, filed an antitrust suit against MBNA. Mozart alleged, among other things, that MBNA had violated both section 1 of the Sherman Act and Section 3 of the Clayton Act by tying the sale of Mercedes parts to the sale of Mercedes automobiles. The trial court ruled in favor of MBNA. Was the trial court's ruling correct?

2. Waste Management, Inc. (WMI), a company in the solid waste disposal business, acquired the stock of EMW Ventures, Inc. EMW was a diversified holding company, one of whose subsidiaries was Waste Resources. WMI and Waste Resources each had subsidiaries operating in or near Dallas, Texas. The government challenged the merger on the theory that it violated section 7 of the Clayton Act. The trial court agreed. In finding a section 7 violation, the trial court defined the relevant market as including all forms of trash collection (except at single-family or multiple-family residences or small apartment complexes) in Dallas County plus a small fringe area. The combined WMI and Waste Resources subsidiaries had a 48.8 percent share of the relevant market. The trial court held that this market share raised a presumption of illegality and that WMI had not rebutted the presumption. WMI appealed, arguing that new firms could easily enter the trash collection business in the relevant geographic area and that the trial court should have regarded this ease of entry as a sufficient rebuttal of the presumption of illegality. Was WMI correct?

3. In 1961, Ford Motor Company acquired Autolite, a manufacturer of spark plugs, in order to enter the profitable aftermarket for spark plugs sold as replacement parts. Ford and the other major automobile manufacturers had previously purchased original equipment spark plugs (those installed in new cars when they leave the factory) from independent producers such as Autolite and Champion, either at or below the producer's cost. The independents were willing to sell original equipment plugs so cheaply because aftermarket mechanics often replace original equipment plugs with the same brand of spark plug. GM had already moved into the spark plug market by developing its own division. Ford decided to do so by means of a vertical merger under which it acquired Autolite. Prior to the Autolite acquisition, Ford bought 10 percent of the total spark plug output. The merger left Champion as the only major independent spark plug producer. Champion's market share thereafter declined because Chrysler was the only major original equipment spark plug purchaser remaining in the market. The government filed a divestiture suit against Ford, arguing that Ford's acquisition of Autolite violated section 7 of the Clayton Act. Should Ford have been ordered to divest itself of Autolite?

4. Siemens, a diversified firm with interests in the medical equipment field, notified the Justice Department in 1979 that it intended to acquire control of Searle Diagnostics (SD), a manufacturer of nuclear medical equipment. Ten years earlier, Siemens had failed in an attempt to start its own nuclear medical equipment division. In 1972, it had considered trying to reenter the field but concluded that it would not be able to recoup the investment reentry required. The top four firms in the nuclear medical equipment market accounted for 77 percent of total sales in 1979. This figure, however, was down from 1975, when they accounted for 92 percent of total sales. Although SD was still first in 1979, it had seen its market share fall from

50 percent to 22 percent during the same five-year period. These facts, together with the fact that SD had lost money in 1978 and 1979, led SD's parent firm to agree to the sale to Siemens. The Justice Department sought a preliminary injunction against the merger, arguing that it would violate section 7 by eliminating both perceived and actual potential competition. The department, however, presented no evidence that any attractive toehold purchase was available to Siemens or that Siemens, as an acknowledged likely entrant, had had any actual impact on the conduct of existing firms in the market. Was a preliminary injunction appropriate?

5. The Federal Trade Commission filed an administrative complaint against six of the nation's title insurance companies. The complaint alleged that the title insurers engaged in horizontal price-fixing in their setting of uniform rates for title searches and title examinations. The challenged uniform ratesetting for title searches and title examinations occurred in various states through rating bureaus organized by the title insurers. These rating bureaus allegedly would set standard rates for search and examination services notwithstanding possible differences in efficiencies and costs as between individual title insurance companies. Though privately organized, these rating bureaus and the rates they set were potentially subject to oversight by the various states in which they operated. In Wisconsin and Montana, two of the states in which price-fixing was alleged to have occurred, the rating bureaus filed rates with state agencies that operated under the so-called negative option rule. This rule provided that the rates became effective unless they were rejected by the appropriate Wisconsin or Montana agency within a set time. At most the state agencies checked the rate filings for mathematical accuracy. Some rates were unchecked altogether. Reviewing the administrative law judge's decision in the administrative proceeding, the FTC commissioners concluded that price-fixing occurred and that the state action exemption argued for by the title insurers did not apply. On appeal, the Third Circuit Court of Appeals held that the state action exemption shielded the title insurers' from antitrust liability for the price-fixing that occurred in Wisconsin and Montana. Was the Third Circuit correct?

6. First Comics, Inc., wanted to enter the comic book publishing business. First hired World Color Press to print its comics because World used a less expensive method of printing than other comic book printers did. World allegedly promised to charge First the same price it charged its larger customers such as Marvel Comics Group and DC Comics. When First discovered it was being charged 4.3 cents per copy more than Marvel, First demanded reimbursement or a future credit. When World refused, First filed a price discrimination suit against World under the Robinson-Patman Act. Does the Robinson-Patman Act apply to this case?

7. Indian Coffee Company, a coffee roaster in Pittsburgh, Pennsylvania, sold its Breakfast Cheer coffee in the Pittsburgh area, where it had an 18 percent market share, and in Cleveland, Ohio, where it had a significant, but smaller, market share. Late in 1971, Folger Coffee Company, then the leading seller of branded coffee west of the Mississippi, entered the Pittsburgh market for the first time. In its effort to gain market share in Pittsburgh, Folger granted retailers high promotional allowances in the form of coupons. Retail customers could use these coupons to obtain price cuts. Redeeming retailers could use the coupons as credits against invoices from Folger. For a time, Indian tried to retain its market share by matching Folger's price concessions, but because Indian only operated in two areas, it could not subsidize such sales with profits from other areas. Indian, which finally was forced out of business in 1974, later filed a Robinson-Patman suit against Folger. At trial, Indian introduced evidence that Folger's Pittsburgh promotional allowances were far higher than its allowances in other geographic areas, and that Folger's Pittsburgh prices were below green (unroasted) coffee cost, below material and manufacturing costs, below total cost, and below marginal cost or average variable cost. Was the trial court's directed verdict in favor of Folger proper?

8. Peugeot Motors of America, Inc. (PMA), the exclusive domestic importer of Peugeot products, controlled all U.S. Peugeot distributors except EAD, the exclusive distributor for Peugeot cars in the southeastern United States. EAD filed suit against PMA, arguing that PMA had violated sections 2(d) and 2(e) of the Robinson-Patman Act by providing cash incentives, training facilities, and parts repurchase programs (allowing dealers to return for credit a part of their obsolete parts inventory) to PMA's dealers without making such incentives, facilities, and programs available to EAD's dealers. The evidence at trial indicated that Memphis, Tennessee, was the only place in the United States where an EAD dealer was within 50 miles of a

PMA dealer, and that less than 1 percent of national Peugeot sales were cross-border sales between PMA and EAD territories. EAD's president testified that he did not know the reason for any of the cross-border sales. He also admitted that some such sales occurred for reasons other than competition between the two sets of dealers. The trial court directed a verdict in favor of PMA. Was the trial court correct in doing so?

9. In 1982, a subsidiary of W. S. Kirkpatrick & Co. won a Nigerian Defense Ministry contract for the construction and equipment of an aeromedical center at a Nigerian Air Force base. Environmental Tectonics Corporation (Environmental), an unsuccessful bidder for the same contract, filed RICO and Robinson-Patman Act claims against Kirkpatrick. Environmental alleged that Kirkpatrick had won the contract by paying a 20 percent "commission" to bribe certain Nigerian officials. The parties agreed that the bribes, if paid, would violate Nigerian law. Was the trial court correct in holding that the act of state doctrine barred Environmental's claim?

10. Pocahontas Coal Company filed suit against a number of other companies engaged in the mining and production of coal in West Virginia. Pocahontas alleged that the defendants were involved in a conspiracy to control the production and pricing of coal. One of Pocahontas's specific claims was that the defendants had violated section 8 of the Clayton Act by "deputizing" various persons to sit on the boards of competing subsidiaries. The defendants moved for summary judgment on the section 8 claim, noting that Pocahontas's complaint contained no factual allegations that any of the defendants were competitors, failed to name any of the alleged "deputies," and was ambiguous because it alleged that certain persons were "officers and/or directors" of competing companies. The trial court offered Pocahontas the opportunity to clarify the complaint by bringing forth additional information on these points. Did the court properly grant the defendants summary judgment when Pocahontas declined to do so?

11. Professional Real Estate Investors, Inc. (PRE), operated a resort hotel in Palm Springs, California. Having installed videodisc players in the hotel's rooms and assembled a library of more than 200 motion picture titles, PRE rented videodiscs to guests for in-room viewing. PRE also sought to develop a market for the sale of videodisc players to other hotels that wished to offer in-room viewing of prerecorded material. Columbia Pictures Industries, Inc., and seven other major motion picture studios (referred to collectively as "Columbia") owned the copyrights on the motion pictures that appeared on the videodiscs PRE had purchased. Columbia also licensed the transmission of copyrighted motion pictures to hotel rooms through a wired cable system called Spectradyne. PRE therefore competed with Columbia not only for the viewing market at PRE's hotel but also for the broader market for in-room entertainment services in hotels. Columbia sued PRE for copyright infringement on the basis of PRE's rental of videodiscs for viewing in hotel rooms. PRE counterclaimed, charging Columbia with violations of sections 1 and 2 of the Sherman Act. PRE alleged that Columbia's copyright action was a mere sham that cloaked underlying acts of monopolization and conspiracy to restrain trade. The district court granted summary judgment in favor of PRE on Columbia's copyright infringement claim. Columbia sought summary judgment on PRE's antitrust counterclaims. Columbia asserted that its copyright infringement claim had not been a sham and that the *Noerr–Pennington* doctrine therefore protected Columbia against antitrust attack. PRE opposed Columbia's motion for summary judgment on PRE's antitrust counterclaims by arguing that Columbia's copyright infringement claim was a sham because Columbia did not honestly believe that the claim was meritorious. If Columbia did not subjectively believe that the claim was meritorious but there was probable cause to bring the claim, was Columbia's claim a sham for purposes of the sham exception to the *Noerr–Pennington* doctrine's protection against liability?

Years ago, it was unusual to see a separate employment law chapter in a business law text. At that time, the rights, duties, and liabilities accompanying employment usually were determined by basic legal institutions such as contract, tort, and agency. Today, these common law principles still control employer–employee relations unless displaced by government regulations or by new judge-made rules applying specifically to employment. By now, however, such rules and regulations are so numerous that they touch almost every facet of employment. This chapter discusses the most important of these modern legal controls on the employer–employee relation.

Figure 1 *The Ends and Means of Modern Employment Law*

Some Basic Employment Statutes

Modern American employment law is so vast and complex a subject that texts designed for lawyers seldom address it in its entirety. Indeed, specialized subjects like labor law and employment discrimination often get book-length treatment in their own right. This chapter's overview of employment law emphasizes three topics that have attracted much recent attention—employment discrimination, employee privacy, and common law claims for wrongful discharge. But no discussion of employment law is complete without outlining certain basic regulations that significantly affect the conditions of employment for most Americans. Figure 1 notes these regulations and briefly states the functions they perform.

Workers' Compensation

Nineteenth-century law made it difficult for employees to recover when they sued their employer in negligence for on-the-job injuries.[1] At that time, employers had an implied assumption of risk defense under which an employee assumed all the normal and customary risks of his employment simply by taking the job. If an employee's

[1]Chapter 7 discusses negligence law and most of the negligence defenses noted below.

own carelessness played some role in his injury, employers often could avoid negligence liability under the traditional rule that even a slight degree of contributory negligence is a complete defense. Another employer defense, the fellow-servant rule, said that where an employee's injury resulted from the negligence of a coemployee (or fellow servant), the employer was not liable. Finally, employees sometimes had problems proving the employer's negligence. State workers' compensation statutes, which first appeared early in the 20th century, were a response to all these problems. Today all 50 states have such systems.[2]

Basic Features Workers' compensation protects only employees, and not independent contractors.[3] However, many states exempt casual, agricultural, and domestic employees, among others. State and local government employees may be covered by workers' compensation or by some alternative state system. Also, states usually exempt certain employers—for example, firms employing fewer than a stated number of employees (often three).

Where they apply, however, all workers' compensation systems share certain basic features. They allow injured employees to recover under *strict liability,* thus removing any need to prove employer negligence. They also eliminate the employer's three traditional defenses: contributory negligence, assumption of risk, and the fellow-servant rule. In addition, they make workers' compensation an employee's *exclusive remedy* against her employer for covered injuries. Usually, however, employees injured by their employer's intentional torts sue the employer outside workers' compensation.

Workers' compensation basically is a social compromise. Because it involves strict liability and eliminates the three traditional employer defenses, workers' compensation greatly increases the probability that an injured employee will recover. Such recoveries usually include: (1) hospital and medical expenses (including vocational rehabilitation), (2) disability benefits, (3) specified recoveries for the loss of certain body parts, and (4) death benefits to survivors and/or dependents. But the amount recoverable under each category of damages frequently is less than would be obtained in a negligence suit. Thus, injured employees sometimes deny that they are covered by workers' compensation so that they can pursue a tort suit against their employer instead.

Although workers' compensation is an injured employee's sole remedy against her employer, she may be able to sue other parties whose behavior helped cause her injury. One example is a product liability suit against a manufacturer who supplies an employer with defective machinery or raw materials that cause an on-the-job injury. However, many states immunize coemployees from ordinary tort liability for injuries they inflict on other employees. Complicated questions of contribution, indemnity, and subrogation can arise where an injured employee is able to recover against both an employer and a third party.

The Work-Related Injury Requirement Another basic feature of workers' compensation is that employees recover only for *work-related* injuries. To be work-related, the injury must: (1) arise out of the employment, and (2) happen in the course of the employment. These tests have been variously interpreted.

The arising-out-of-the-employment test usually requires a sufficiently close relationship between the injury and the *nature* of the employment. Different states use different tests to define this relationship. Examples include:

1. *Increased risk.* Here, the employee recovers only if the nature of her job increases her risk of injury above the risk to which the general public is exposed. Under this test, a factory worker assaulted by a trespasser probably would not recover, while a security guard assaulted by the same trespasser probably would.
2. *Positional risk.* Under this more liberal test, an injured employee recovers if her employment caused her to be at the place and time where her injury occurred. Here, the factory worker probably would recover The *Dulen* case on the next page seems to adopt this test.

The in-the-course-of-the-employment requirement inquires whether the injury occurred within the *time, place,* and *circumstances* of the employment. Employees injured off the employer's premises generally are outside the course of the employment. For example, injuries suffered while traveling to or from work usually are not compensable. But an employee may be covered where the off-the-premises injury occurred

[2]In addition, various federal statutes regulate on-the-job injuries suffered by employees of the federal government and other employees such as railroad workers, seamen, longshoremen, and harbor workers.

[3]Chapter 34 defines the terms *employee* and *independent contractor.*

while she was performing employment-related duties such as going on a business trip or running an employment-related errand.

Other work-related injury problems on which courts have disagreed include mental injuries allegedly arising from the employment and injuries resulting from employee horseplay. Virtually all states, however, regard intentionally self-inflicted injuries as outside workers' compensation. Recovery for occupational diseases, on the other hand, usually is allowed today. An employee whose preexisting diseased condition is aggravated by her employment sometimes recovers as well.

Administration and Funding Workers' compensation systems usually are administered by a state agency that adjudicates workers' claims and administers the system. Its decisions on such claims normally are appealable to the state courts. The states fund workers' compensation by compelling covered employers to: (1) purchase private insurance, (2) self-insure (e.g., by maintaining a contingency fund), or (3) make payments into a state insurance fund. Because employers generally pass on the costs of insurance to their customers, workers' compensation tends to spread the economic risk of workplace injuries throughout society.

Darco Transportation v. Dulen *922 P.2d 591 (Okla. Sup. Ct. 1996)*

Elmer Dulen was injured and his codriver Polly Freeman was killed when a tractor-trailer rig driven by Dulen entered a railroad crossing and was struck by an oncoming train. Both Dulen and Freeman had been hired by Darco Transportation to transport goods cross-country to San Francisco. On the night of the accident, Dulen stopped his rig behind another truck when the signal arms at a railroad crossing lowered. The arms malfunctioned and came up before an oncoming train reached the intersection. The first truck proceeded across the tracks and Dulen followed. While the first truck avoided being hit, Dulen's rig was rammed by the train. The protective arms did not relower until Dulen's semi was on the tracks.

At the scene of the collision a female traffic investigator noticed that Freeman was clad only in a T-shirt. She also observed that Dulen's pants were unbuttoned, unzipped and resting at mid-hip. After Dulen was admitted to the hospital, the investigator questioned Dulen about how the accident had happened. Dulen said, "I was f—ing her and now, oh, my God, I have killed her." According to the investigator, Dulen also told her that when the accident occurred, Freeman was sitting in his lap facing him. However, in later testimony Dulen explained that by his statement at the hospital he meant that he had been living in an intimate relationship with Freeman for five months before the accident and felt responsible for her death because she was driving with him. He also denied telling the officer that Freeman was sitting in his lap and that they were having sex when the accident occurred. Other evidence revealed that there was not enough room between the steering wheel and the seat for two people of Dulen's and Freeman's size physically to fit into that space together.

Dulen sought workers' compensation benefits for what he maintained were on-the-job injuries. After various Oklahoma courts ruled in Dulen's favor, Darco appealed to the Supreme Court of Oklahoma.

Opala, Judge When examining the compensation tribunal's factual resolutions, this court applies the any-competent-evidence standard. The trial judge's findings may not be disturbed on review if supported by competent proof.

Oklahoma's jurisprudence has long recognized that a compensable work-related injury must both: (1) occur in the course of, and (2) arise out of the worker's employment. These two distinct elements are not to be understood as synonymous. The term "in the course of employment" relates to the time, place, or circumstances under which the injury is sustained. The term "arise out of employment" contemplates the causal connection between the injury and the risks incident to employment. We must be mindful that in this case we are applying workers' compensation law. The concept of a worker's contributory fault, which the compensation statute discarded, must not be resurrected obliquely as a defense against the employer's liability.

The Workers' Compensation Court was faced with the task of determining if Dulen, when injured, was performing work in furtherance of his master's business—i.e., whether he was then "in the course of employment." If the trial tribunal tended to believe that Dulen and Freeman were having sex at

the critical time, the question to be decided was whether the claimant's conduct is to be deemed horseplay—a complete departure from or abandonment of his employment. This issue concerns itself solely with the "course of employment" bounds—not with the risk incident to employment, i.e., the "arising out of" element.

Assuming as a fact that when the collision occurred, Dulen was having sex while also driving the rig, the trial judge could still find that this servant's acts constituted no more than a careless, negligent, or forbidden genre of performance, but did not amount to pure frolic which was tantamount to total abandonment of the master's business. On this record, such a finding would not be legally or factually incorrect. The record contains ample evidence reasonably supporting the notion that Dulen's injury was work-related, and occurred while he was en route to his assigned destination. Above all, uncontroverted is the stubborn fact that Dulen, when injured, occupied his assigned work station—the driver's seat behind the steering wheel of Darco's truck. The record offers no proof that Dulen had deviated from or abandoned his master's mission, transporting goods to San Francisco.

An injury is compensable if it arises out of the claimant's employment—i.e., was caused by a risk to which the employee was subjected by his work. Any other notion would impermissibly interject into this State's compensation regime concepts of common-law cause and foreseeability: the legal underpinnings of negligence. The only criterion for compensability is the statute's test of a connection-in-fact to the employment. The record is devoid of any proof that the protective arms were in good working order. The trial tribunal found the equipment's failure was the direct cause of the claimant's injuries. At the time of Dulen's injuries, he was employed as a Darco truck driver with an assigned task—transporting goods to the West Coast. This required his presence on the highways. A causal connection between the act in which Dulen was engaged, when injured, and his job description is clear. Because the perils of this servant's travel for his master are coextensive with the risks of employment, Dulen's injuries undeniably arose out of his work.

Two insuperable hurdles absolutely militate against overturning the trial tribunal's findings and exonerating the employer as a matter of law. Assuming Dulen and Freeman were engaged in sexual intercourse, (1) there is undisputed proof that, when the collision occurred, Dulen remained at the steering wheel and hence cannot be deemed to have then "abandoned" his assigned work station; and (2) there is competent evidence to support the trial judge's finding which ascribes the accident's cause, not to copulation-related inattention, but to defective railroad-crossing warning equipment.

Trial court order sustained; Dulen recovers.

The Occupational Safety and Health Act

Although it may stimulate employers to remedy hazardous working conditions, workers' compensation does not directly forbid such conditions. The most important measure directly regulating workplace safety is the federal Occupational Safety and Health Act of 1970. The Occupational Safety and Health Act applies to all employers engaged in a business affecting interstate commerce. Exempted, however, are the U.S. government, the states and their political subdivisions, and certain industries regulated by other federal safety legislation. The Occupational Safety and Health Act mainly is administered by the Occupational Safety and Health Administration (OSHA) of the Labor Department. It does not preempt state workplace safety regulation, but OSHA must approve any state regulatory plan.

The Occupational Safety and Health Act requires employers to provide their employees with employment and a place of employment free from recognized hazards that are likely to cause death or serious physical harm. It also requires employers to comply with the many detailed regulations promulgated by OSHA. OSHA can inspect places of employment for violations of the act and its regulations. If an employer is found to violate the act's general duty provision or any specific standard, OSHA issues a written citation. It must do so with reasonable promptness, and in no event more than six months after the violation. The citation becomes final after 15 workdays following its

service on the employer, unless it is contested. Contested citations are reviewed by the Occupational Safety and Health Review Commission, a three-member body composed of presidential appointees. Further review by the federal courts of appeals is possible.

The main sanctions for violations of the act and the regulations are various civil penalties. In addition, any employer who commits a willful violation resulting in death to an employee may suffer a fine, imprisonment, or both. Also, the secretary of labor may seek injunctive relief when an employment hazard presents an imminent danger of death or physical harm that cannot be promptly eliminated by normal citation procedures.

Social Security

Today, the law requires that employers help ensure their employees' financial security after the employment ends. One example is the federal social security system. Social security mainly is financed by the Federal Insurance Contributions Act (FICA). FICA imposes a flat percentage tax on all employee income below a certain base figure and requires employers to pay a matching amount. Self-employed people pay a different rate on a different wage base. FICA revenues finance various forms of financial assistance besides the old-age benefits that people usually call social security. These include survivors' benefits to family members of deceased workers, disability benefits, and medical and hospitalization benefits for the elderly (the medicare system).

Unemployment Compensation

Another way that the law protects employees after their employment ends is by providing unemployment compensation for discharged workers. Since 1935, federal law has authorized joint federal–state efforts in this area. Today, each state administers its own unemployment compensation system under federal guidelines. The system's costs are met by subjecting employers to federal and state unemployment compensation taxes.

Unemployment insurance plans vary from state to state but usually share certain features. States often condition the receipt of benefits on the recipient's having worked for a covered employer for a specified time period, and/or having earned a certain minimum income over such a period. Generally, those who voluntarily quit work without good cause, are fired for bad conduct, fail to actively seek suitable new work, or refuse such work are ineligible for benefits. Benefit levels vary from state to state, as do the time periods during which benefits can be received.

ERISA

Many employers voluntarily contribute to their employees' postemployment income by maintaining pension plans. For years, pension plan abuses such as arbitrary termination of participation in the plan, arbitrary benefit reduction, and mismanagement of fund assets were not uncommon. The Employee Retirement Income Security Act of 1974 (ERISA) was a response to these problems. ERISA does not require employers to establish or fund pension plans and does not set benefit levels. Instead, it tries to check abuses and to protect employees' expectations that promised pension benefits will be paid.

ERISA imposes *fiduciary duties* on pension fund managers. For example, it requires that managers diversify the plan's investments to minimize the risk of large losses, unless this is clearly imprudent. ERISA also imposes *record-keeping, reporting,* and *disclosure* requirements. For instance, it requires that covered plans provide annual reports to their participants and specifies the contents of those reports. In addition, the act has a provision *guaranteeing employee participation* in the plan. For example, certain employees who complete one year of service with an employer cannot be denied plan participation. Furthermore, ERISA contains *funding* requirements for protecting plan participants against loss of pension income. Finally, ERISA contains complex *vesting* requirements that determine when an employee's right to receive pension benefits becomes nonforfeitable. These requirements help prevent employers from using a late vesting date to avoid pension obligations to employees who change jobs or are fired before that date. ERISA's remedies include civil suits by plan participants and beneficiaries, equitable relief, and criminal penalties.

Labor Law

Entire legal treatises are devoted to labor law, and the subject can occupy a chapter in a business law text. What follows is only a brief historical outline of the subject. Early in the 19th century, some courts treated labor unions as illegal criminal conspiracies. After this restriction disappeared around mid-century, organized labor began its lengthy—and sometimes violent—rise to power. During the late 19th and early 20th centuries, unions' growing influence and wage

earners' increasing presence in the electorate spurred the passage of many laws benefiting labor. These included statutes outlawing "yellow dog" contracts (under which employees agreed not to join or remain a union member), minimum wage and maximum hours legislation, laws regulating the employment of women and children, factory safety measures, and workers' compensation. But during this period, some say, the courts tended to represent business interests. Perhaps for this reason, some prolabor measures were struck down on constitutional grounds. Also, some courts were quick to issue temporary and permanent injunctions to restrain union picketing and boycotts and help quell strikes.

Organized labor's political power continued to grow during the first part of the 20th century. In 1926, Congress passed the Railway Labor Act, which regulates labor relations in the railroad industry, and which later included airlines. This was followed by the Norris-LaGuardia Act of 1932, which limited the circumstances in which federal courts could enjoin strikes and picketing in labor disputes, and also prohibited federal court enforcement of yellow-dog contracts.

The most important 20th-century American labor statute, however, was the National Labor Relations Act of 1935 (the NLRA or Wagner Act). The NLRA gave employees the *right to organize* by enabling them to form, join, and assist labor organizations. It also allowed them to *bargain collectively* through their own representatives. In addition, the Wagner Act prohibited certain *unfair labor practices* that were believed to discourage collective bargaining. These practices include: (1) interfering with employees' rights to form, join, and assist labor unions; (2) dominating or interfering with the formation or administration of a labor union, or giving a union financial or other support; (3) discriminating against employees in hiring, tenure, or any term of employment due to their union membership; (4) discriminating against employees because they have filed charges or given testimony under the NLRA; and (5) refusing to bargain collectively with any duly designated employee representative. The NLRA also established the National Labor Relations Board (NLRB). The NLRB's main functions are: (1) handling representation cases (which involve the process by which a union becomes the certified employee representative within a bargaining unit), and (2) deciding whether challenged employer or union activity is an unfair labor practice.

In 1947, Congress amended the NLRA by passing the Labor Management Relations Act (LMRA or Taft-Hartley Act). The act declared that certain acts by *unions* are unfair labor practices. These include: (1) restraining or coercing employees in the exercise of their guaranteed bargaining rights (e.g., their right to refrain from joining a union); (2) causing an employer to discriminate against an employee who is not a union member; (3) refusing to bargain collectively with an employer; (4) conducting a secondary strike or a secondary boycott for a specified illegal purpose;[4] (5) requiring employees covered by union-shop contracts to pay excessive or discriminatory initiation fees or dues; and (6) featherbedding (forcing an employer to pay for work not actually performed). The LMRA also established an 80-day cooling-off period for strikes that the president finds likely to endanger national safety or health. In addition, it created a Federal Mediation and Conciliation Service to assist employers and unions in settling labor disputes.

Congressional investigations during the 1950s uncovered corruption in internal union affairs and also revealed that the internal procedures of many unions were undemocratic. In response, Congress enacted the Labor Management Reporting and Disclosure Act (or Landrum-Griffin Act) in 1959. The act established a "bill of rights" for union members and attempted to make internal union affairs more democratic. It also amended the NLRA by adding to the LMRA's list of unfair union labor practices.

The Fair Labor Standards Act

Although federal labor law regulates several aspects of labor–management relations, it still permits many terms of employment to be determined by private bargaining. Nonetheless, sometimes the law directly regulates such key terms of employment as wages and hours worked. The most important example is the Fair Labor Standards Act (FLSA) of 1938.

The FLSA regulates *wages and hours* by entitling covered employees to: (1) a specified minimum wage whose amount changes over time, and (2) a time-and-a-half rate for work exceeding 40 hours per week. The

[4]These are strikes or boycotts aimed at a third party with which the union has no real dispute. Their purpose is to coerce that party not to deal with an employer with which the union does have a dispute, and thus to gain some leverage over the employer.

FLSA's complicated coverage provisions basically enable its wages-and-hours standards to reach most significantly sized businesses that are engaged in interstate commerce or produce goods for such commerce. Also covered are the federal, state, and local governments. The many exemptions from the FLSA's wages-and-hours provisions include executive, administrative, and professional personnel.

The FLSA also forbids oppressive *child labor* by any employer engaged in interstate commerce or in the production of goods for such commerce, and also forbids the interstate shipment of goods produced in an establishment where oppressive child labor occurs. Oppressive child labor includes: (1) most employment of children below the age of 14; (2) employment of children aged 14–15, unless they work in an occupation specifically approved by the Department of Labor; and (3) employment of children aged 16–17 who work in occupations declared particularly hazardous by the Labor Department.

Both affected employees and the Labor Department can recover any unpaid minimum wages or overtime, plus an additional equal amount as liquidated damages, from an employer that has violated the FLSA's wages-and-hours provisions. A suit by the Labor Department terminates an employee's right to sue, but the department pays the amounts it recovers to the employee. Violations of the act's child labor provisions may result in civil penalties. Other FLSA remedies include injunctive relief and criminal liability for willful violations.

The Family and Medical Leave Act

After concluding that proper child-raising, family stability, and job security require that employees get reasonable work leave for family and medical reasons, Congress passed the Family and Medical Leave Act (FMLA) in 1993. In general, the act covers those employed for at least 12 months, and for 1,250 hours during those 12 months, by an employer employing 50 or more employees. Covered employers include federal, state, and local government agencies.

Under the FMLA, covered employees are entitled to a total of 12 workweeks of leave during any 12-month period for one or more of the following reasons: (1) the birth of a child and the need to care for that child; (2) the adoption of a child; (3) the need to care for a spouse, child, or parent with a serious health condition; and (4) the employee's own serious health condition. Usually, the leave may be without pay. Upon the employee's return from leave, the employer ordinarily must restore her to the position she held when the leave began, or to an equivalent position, and not deny her any benefits accrued before the leave began.

Employers who deny any of an employee's FMLA rights are civilly liable to the affected employee for resulting lost wages or, if no wages were lost, for any other resulting monetary losses not exceeding 12 weeks' wages. Employees may also recover an additional equal amount as liquidated damages, unless the employer acted in good faith and had reasonable grounds for believing that it was not violating the act. Like the FLSA, the FMLA permits civil actions by the secretary of labor, with any sums recovered distributed to affected employees. In such actions, employees may also obtain equitable relief, including reinstatement and promotion.

The Equal Pay Act

The Equal Pay Act (EPA), which forbids *sex* discrimination regarding *pay,* was a 1963 amendment to the FLSA. Its coverage resembles the coverage of the FLSA's minimum wage provisions. Unlike the FLSA, however, the EPA covers executive, administrative, and professional employees.

The Equal Pay Act forbids gender-based pay discrimination against men. But the typical EPA case involves a woman who claims that she has received lower pay than a male employee performing substantially equal work for the same employer. The substantially-equal-work requirement is met if the plaintiff's job and the higher-paid male employee's job involve *each* of the following: (1) equal effort, (2) equal skill, (3) equal responsibility, and (4) similar working conditions.

Effort basically means physical or mental exertion. *Skill* refers to the experience, training, education, and ability required for the positions being compared. Here, the question is not whether the employees being compared have equal skills but whether their jobs require or utilize substantially the same skills. *Responsibility* (or accountability) involves such factors as the degree of supervision each job requires and the importance of each job to the employer. For instance, a retail sales position in which an employee may not approve customer checks probably is not equal to a sales position in which an employee has this authority. *Working conditions* refers to such factors as temperature, weather, fumes, ventilation, toxic conditions, and risk of injury. These need only be *similar,* not equal.

If the two jobs are substantially equal and they are paid unequally, an employer must prove one of the EPA's four defenses or it will lose the case. The employer has a defense if it shows that the pay disparity is based on: (1) seniority, (2) merit, (3) quality or quantity of production (e.g., a piecework system), or (4) any factor other than sex. The first three defenses require an employer to show some organized, systematic, structured, and communicated rating system with predetermined criteria that apply equally to employees of each sex. The any-factor-other-than-sex defense is a catchall category that includes shift differentials, bonuses paid because the job is part of a training program, and differences in the profitability of the products or services on which employees work. The following *Dey* case reads this defense broadly.

The EPA's remedial scheme resembles the FLSA's scheme. Under the EPA, however, employee suits are for the amount of back pay lost because of an employer's discrimination, not for unpaid minimum wages or overtime. An employee may also recover an equal sum as liquidated damages. The EPA is enforced by the Equal Employment Opportunity Commission (EEOC) rather than the Labor Department.[5] Unlike some of the employment discrimination statutes described later, however, the EPA does not require that private plaintiffs submit their complaints to the EEOC or a state agency before mounting suit.

[5]The EEOC is an independent federal agency with a sizable staff and many regional offices. Its functions include: (1) enforcing most of the employment discrimination laws discussed in this chapter through lawsuits that it initiates or in which it intervenes, (2) conciliating employment discrimination charges (e.g., by encouraging their negotiated settlement), (3) investigating discrimination-related matters, and (4) interpreting the statutes it enforces through regulations and guidelines.

Dey v. Colt Construction & Development Co. *28 F.3d 1446 (7th Cir. 1994)*

Anne Dey worked as a controller for the Colt Construction and Development Corporation. Her duties included: maintaining Colt's payroll, payables, and receivables; making disbursements to various parties; paying office expenses; documenting project costs; and preparing various forms and reports. However, while Dey provided the data for Colt's income tax returns and its year-end financial statements, each was prepared by an outside accountant. Dey was fired from her job for reasons that are not completely clear. At that time, she was making $27,820 a year.

Unlike Dey, her successor with Colt, Larry Gagnon, was a CPA with an MBA degree. Gagnon's duties included the tasks performed by Dey, plus preparation of Colt's tax returns, computerization of its financial records, and analysis of real estate investments. Gagnon was hired at a salary of $50,000.

After Gagnon left Colt's employ, he was replaced by Steven Maloney. Maloney had an MBA but had failed to pass the CPA exam. Also, he was about to be laid off by his employer. Maloney had responsibilities similar to Dey's responsibilities. Unlike Dey, however, he could execute certain documents without getting a company officer to sign them, and he supposedly continued the computerization of Colt's financial records. Colt originally offered Maloney $30,000, but upped that figure to $32,400, the amount Maloney had been making with his then-employer.

Dey sued Colt, alleging that these pay disparities violated the Equal Pay Act. After Colt successfully moved for summary judgment on this claim, Dey appealed.

Rovner, Circuit Judge To establish a prima facie case under [the Equal Pay Act], Dey must show: (1) that different wages are paid to employees of the opposite sex; (2) that the employees do equal work which requires equal skill, effort, and responsibility; and (3) that the employees have similar working conditions. In assessing whether two jobs require equal skill, effort, and responsibility, we look to the duties actually performed by each employee, and not to his or her job description or title. If two employees have a common core of tasks, the second element of the test is satisfied unless the employer can show that the higher-paid employee was assigned additional tasks that made his job substantially different.

[The] difference between Dey's salary and that of her successors is sufficient to support an action under the EPA. Dey has conceded, however, that Gagnon's responsibilities were substantially different from her own, so that his higher salary was justified. She focuses only on Maloney, and we agree

with the district court that there are factual questions whether the responsibilities of Maloney and Dey were substantially different. We therefore assume that Dey could establish a prima facie case and proceed to Colt's defenses.

Once the plaintiff makes out a prima facie case, the defendant bears the burden of showing that the pay disparity is due to: (1) a seniority system; (2) a merit system; (3) a system which measures earnings by quality or quantity of production; or (4) a differential based on any factor other than sex. The district court concluded that Colt had satisfied its burden by showing that Maloney had more advanced business degrees, and that Maloney had negotiated a salary comparable to what he had earned at [his previous employer]. The court found that both were based on factors other than sex.

The EPA's fourth affirmative defense is a broad catch-all exception that embraces an almost limitless number of factors, so long as they do not involve sex. The factor need not be related to the requirements of the particular position in question, nor must it even be business-related. We ask only whether the factor is bona fide, whether it has been discriminatorily applied, and in some circumstances whether it may have a discriminatory effect.

Dey has been unable to dispute Colt's assertion that the pay disparity was based on a factor other than sex. Although Maloney was not a CPA, he did have [an MBA], which would justify Colt's paying him a higher salary to perform a controller's duties. Although Dey had no doubt garnered invaluable experience during her tenure with Colt, we may not second-guess the company's decision to pay more for an advanced business degree where there is no evidence that it paid women with similar degrees a lesser amount or that Maloney's degree was unrelated to the tasks assigned him.

It is not surprising that Maloney would be unwilling to become Colt's controller unless he was compensated at or near his previous rate. When we consider [this] in conjunction with Maloney's superior educational background and the fact that Colt hired Maloney almost a full year after Dey's last pay raise, we are convinced that Maloney's higher salary is unrelated to his sex.

District court summary judgment in Colt's favor affirmed on Dey's Equal Pay Act claim.

Title VII

Unlike the other laws discussed in the previous section, the Equal Pay Act is an employment discrimination provision. Employment discrimination might be defined as employer behavior that penalizes certain individuals because of personal traits that they cannot control and that bear no relation to effective job performance. Such discrimination was common before the law began to attack it during the 1960s and 1970s. Today, however, employers confront a maze of legal rules forbidding various kinds of employment discrimination.

Of the many employment discrimination laws in force today, the most important is Title VII of the 1964 Civil Rights Act. Unlike the Equal Pay Act, which merely forbids sex discrimination regarding pay, Title VII is a wide-ranging employment discrimination provision. It prohibits discrimination based on *race, color, religion, sex,* and *national origin* in hiring, firing, job assignments, pay, access to training and apprenticeship programs, and most other employment decisions.

Basic Features of Title VII

In discussing Title VII, we first examine some general rules that govern all the kinds of discrimination it forbids. Then we examine each forbidden basis of discrimination in detail.

Covered Entities Title VII covers all employers employing 15 or more employees and engaging in an industry affecting interstate commerce. Employers include individuals, partnerships, corporations, colleges and universities, labor unions and employment agencies (with respect to their own employees), and state and local governments.[6] Also, *referrals* by employment agencies are covered no matter what the size of the agency, if an employer serviced by the agency has 15 or more employees. In addition, Title VII covers certain unions—mainly those with 15 or more members—in their capacity as *employee representative.*

[6]Employment discrimination within the federal government is beyond the scope of this text.

Procedures Although the EEOC sometimes sues to enforce Title VII, the usual Title VII suit is a private claim. The complicated procedures governing private Title VII suits are beyond the scope of this text, but a few points should be kept in mind. Private parties with a Title VII claim have no automatic right to sue. Instead, they first must file a *charge* with the EEOC, or with a state agency in states having suitable fair employment laws and enforcement schemes. This allows the EEOC or the state agency to investigate the claim, attempt conciliation if the claim has substance, or sue the employer itself. If a plaintiff files with a state agency and the state fails to act, the plaintiff still can file a charge with the EEOC. Even if the EEOC fails to act on the claim, a plaintiff still may mount her own suit. Here, the EEOC issues a "right-to-sue letter" enabling the plaintiff to sue.

Proving Discrimination The permissible methods for proving a Title VII violation are critical to its effectiveness against employment discrimination. Proof of discrimination is easy in cases, such as the *Johnson Controls* decision later in the chapter, where the employer had an **express policy** disfavoring one of Title VII's protected classes. **Direct evidence** of a discriminatory motive such as testimony or written evidence obviously is useful to plaintiffs as well. However, because employers can discriminate without leaving such obvious tracks, the courts have devised other methods of proving a Title VII violation. As of late 1999, two such methods predominated. Because each method's many details are beyond the scope of this text, we merely outline them here.

Title VII **disparate treatment** suits usually involve an individual plaintiff who alleges some specific instance or instances of discrimination. In such suits, the plaintiff first must show a *prima facie case:* a case strong enough to create a presumption of discrimination and to require a counterargument from the defendant. The proof needed for a prima facie case varies with the nature of the challenged employment decision (e.g., hiring or promotion), but ordinarily it gives plaintiffs few difficulties. Once the plaintiff establishes a prima facie case, the employer must produce evidence that the challenged employment decision was taken for *legitimate, nondiscriminatory reasons* or it will lose the lawsuit. In a hiring case, for example, an employer might produce evidence that it rejected the plaintiff because she did not meet its criteria for the position in question. If the employer produces satisfactory reasons, the plaintiff then must *show that discrimination actually occurred.* She might do so by showing that the employer's alleged nondiscriminatory reasons were a *pretext* for a decision that really involved discrimination. For example, she might show that the employer's alleged hiring criteria were not applied to similarly situated male job applicants.

Title VII's **disparate impact** (or adverse impact) method is most often used when the alleged discrimination affects many employees. Here, the plaintiffs ordinarily maintain that the employer uses a particular employment practice that causes a *disparate impact* on the basis of race, color, religion, sex, or national origin. Often, the practice is an employer rule that is neutral on its face but has a disproportionate adverse effect on one of Title VII's protected groups—for example, a height, weight, or high school diploma requirement for hiring, or a written test for hiring or promotion. If the plaintiffs show a disparate impact, the employer loses unless it demonstrates that the challenged practice is *job-related for the position in question and consistent with business necessity.* For example, the employer might show that its promotion test really predicts effective job performance, and that effective performance in the relevant job is necessary for its operations. Even if the employer makes this demonstration, the plaintiffs have another option: to show that the employer's legitimate business needs can be advanced by an *alternative employment practice* that is *less discriminatory than the challenged practice.* For example, the plaintiffs might show that the employer's legitimate needs can be met by a different promotion test that has less adverse impact on the protected group. If the employer refuses to adopt this practice, the plaintiffs win.

Defenses Even if a plaintiff proves a Title VII violation, the employer still prevails if it can establish one of Title VII's defenses. The most important such defenses are:

1. *Seniority.* Title VII is not violated if the employer treats employees differently pursuant to a *bona fide seniority system.* To be bona fide, such a system at least must treat all employees equally on its face, not have been created for discriminatory reasons, and not operate in a discriminatory fashion.

2. *The various "merit" defenses.* An employer also escapes Title VII liability if it acts pursuant to: a *bona fide merit system,* a system basing earnings on *quantity or quality of production,* or the results of a *professionally developed ability test.* Presumably, such systems and tests at least must meet the general standards for seniority systems stated above. Also, the EEOC has

promulgated lengthy *Uniform Guidelines on Employee Selection Procedures* that speak to these and other matters.

3. *The BFOQ Defense.* Finally, Title VII allows employers to discriminate on the bases of sex, religion, or national origin where one of those traits is a *bona fide occupational qualification (BFOQ) that is reasonably necessary to the business in question.* This BFOQ defense does not protect race or color discrimination. As the following *Johnson Controls* case makes clear, moreover, the defense is a narrow one even where it applies. Generally, it is available only where a certain gender, religion, or national origin is necessary for effective job performance. For example, a BFOQ probably would exist where a female is employed to model women's clothing or to fit women's undergarments, or a French restaurant hires a French chef. But the BFOQ defense usually is unavailable where the discrimination is based on stereotypes (e.g., that women are less aggressive than men) or on the preferences of co-workers or customers (e.g., the preference of airline travelers for female rather than male flight attendants). As *Johnson Controls* suggests, the defense also is unavailable where the employer's discriminatory practice promotes goals, such as fetal protection, that do not concern effective job performance.

Auto Workers v. Johnson Controls, Inc. *499 U.S. 187 (U.S. Sup. Ct. 1991)*

Johnson Controls, Inc., manufactures batteries. Lead is a primary ingredient in that manufacturing process. A female employee's occupational exposure to lead involves a risk of harm to any fetus she carries. For this reason, Johnson Controls excluded women who are pregnant or who are capable of bearing children from jobs that involve exposure to lead. Numerous plaintiffs, including a woman who had chosen to be sterilized to avoid losing her job, entered a federal district court class action alleging that Johnson Controls' policy constituted illegal sex discrimination under Title VII. The district court entered a summary judgment for Johnson Controls and the court of appeals affirmed. The plaintiffs appealed to the U.S. Supreme Court.

Blackmun, Justice Johnson Controls' fetal-protection policy explicitly discriminates against women on the basis of their sex. The policy excludes women with childbearing capacity from lead-exposed jobs and so creates a facial classification based on gender. [But] an employer may discriminate on the basis of "religion, sex, or national origin in those certain instances where religion, sex, or national origin is a bona fide occupational qualification reasonably necessary to the normal operation of that particular business or enterprise." The BFOQ defense is written narrowly, and this Court has read it narrowly.

Johnson Controls argues that its fetal-protection policy falls within the so-called safety exception [of] the BFOQ. Discrimination on the basis of sex because of safety concerns is allowed only in narrow circumstances. In *Dothard v. Rawlinson* (1977), we allowed the employer to hire only male guards in contact areas of maximum-security male penitentiaries only because more was at stake than the individual woman's decision to weigh and accept the risks of employment. We found sex to be a BFOQ inasmuch as the employment of a female guard would create real risks of safety to others if [rape-related] violence broke out because the guard was a woman. Sex discrimination was tolerated because sex was related to the guard's ability to do the job—maintaining prison security. Similarly, some courts have approved airlines' layoffs of pregnant flight attendants on the ground that the employer's policy was necessary to ensure the safety of passengers. In two of these cases, the courts pointedly indicated that fetal, as opposed to passenger, safety was best left to the mother.

Therefore, the safety exception is limited to instances in which sex or pregnancy actually interferes with the employee's ability to perform the job . . . [Thus,] Johnson Controls cannot establish a BFOQ. Fertile women, as far as appears in the record, manufacture batteries as efficiently as anyone else. Johnson Controls' professed moral and ethical concerns about the next generation do not suffice to establish a BFOQ of female sterility. Decisions about the welfare of future children must be left to the parents who conceive, bear, support, and raise them rather than to the employers who hire those parents.

Judgment in favor of Johnson Controls reversed; case returned to the lower courts for further proceedings consistent with the Supreme Court's opinion.

Remedies Various remedies are possible once private plaintiffs or the EEOC wins a Title VII suit. If intentional discrimination has caused lost wages, employees can obtain **back pay** accruing from a date two years before the filing of the charge. At the court's discretion, successful private plaintiffs also may recover reasonable **attorney's fees.** In addition, victims of intentional discrimination can recover **compensatory damages** for harms such as emotional distress, sickness, loss of reputation, or denial of credit. Victims of intentional discrimination also can recover **punitive damages** where the defendant discriminated with malice or with reckless indifference to the plaintiff's rights. However, the sum of the plaintiff's compensatory and punitive damages cannot exceed certain amounts that vary with the size of the employer. For example, they cannot total more than $300,000 for an employer with more than 500 employees.

Intentional discrimination may also entitle successful plaintiffs to **equitable relief.** Examples include orders compelling hiring, reinstatement, or retroactive seniority. On occasion, moreover, the courts have ordered quotalike preferences in Title VII cases involving race and (occasionally) gender discrimination. For example, a court might order that whites and minorities be hired on a 50–50 basis until minority representation in the employer's work force reaches some specified percentage. Generally speaking, such orders are permissible if: (1) an employer has engaged in severe, widespread, or long-standing discrimination; (2) the order does not unduly restrict the employment interests of white people; and (3) it does not force an employer to hire unqualified workers. Minority preferences also may appear in the **consent decrees** courts issue when approving the terms on which the parties have settled a Title VII case.[7]

Race or Color Discrimination

At this point, we consider each of Title VII's prohibited bases of discrimination in more detail. *Race or color* discrimination includes discrimination against blacks, other racial minorities, Eskimos, and American Indians, among others. Title VII also prohibits racial discrimination against whites. Nonetheless, voluntary racial preferences that favor minorities survive a Title VII attack if they: (1) are intended to correct a racial imbalance involving underrepresentation of minorities in traditionally segregated job categories, (2) do not "unnecessarily trammel" the rights of white employees or create an absolute bar to their advancement, and (3) are only temporary.[8] Note that here our concern is not the use of minority preferences as a *remedy* for a Title VII violation, but whether such preferences *themselves* violate Title VII when voluntarily established by an employer.

National Origin Discrimination

National origin discrimination includes discrimination based on: (1) the country of one's or one's ancestors' origin; or (2) one's possession of physical, cultural, or linguistic characteristics identified with people of a particular nation. Thus, plaintiffs in national origin discrimination cases need not have been born in the country at issue. In fact, if the discrimination is based on physical, cultural, or linguistic traits identified with a particular nation, even the plaintiff's ancestors need not have been born there. Thus, a person of pure French ancestry may have a Title VII case if she suffers discrimination because she looks like, acts like, or talks like a German.

Certain formally neutral employment practices can also constitute national origin discrimination. Employers who hire only U.S. citizens may violate Title VII if their policy has the purpose or effect of discriminating against one or more national origin groups. This could happen where the employer is located in an area where aliens of a particular nationality are heavily concentrated. Also, employment criteria such as height, weight, and fluency in English may violate Title VII if they have a disparate impact on a national origin group and are not job-related.

Religious Discrimination

For Title VII purposes, the term *religion* is broadly defined. Although all courts may not agree, the EEOC says that it includes any set of moral beliefs that are sincerely held with the same strength as traditional religious

[7] As discussed in Chapter 3, the Supreme Court has held that federal government racial discrimination against whites gets the same full strict scrutiny as racial discrimination against blacks and other racial minorities. It remains to be seen whether this change will affect the courts' ability to order remedial minority preferences or to approve such preferences when they appear in consent decrees.

[8] *United Steelworkers v. Weber,* 443 U.S. 193 (1979), a portion of which is excerpted in Chapter 1. As of late 1999, it appeared that this test would block employers from pursuing racial diversity or racial balance for its own sake, if this requires discrimination against white people.

views. In fact, Title VII forbids religious discrimination against atheists. It also forbids discrimination based on religious *observances or practices*—for example, grooming, clothing, or the refusal to work on the Sabbath. But such discrimination is permissible if an employer cannot reasonably accommodate the religious practice without suffering undue hardship. Undue hardship exists when the accommodation imposes more than a minimal cost on an employer.

Sex Discrimination

Title VII's ban on sex discrimination aims at *gender-based* discrimination and does not forbid discrimination on the basis of homosexuality or transsexuality. Just as clearly, it applies to gender discrimination against both men and women. Still, voluntary employer programs favoring women in hiring or promotion survive a Title VII attack if they meet the previous tests for voluntary racial preferences (reformulated in terms of gender). Title VII also forbids discrimination on the bases of pregnancy and childbirth, and requires employers to treat these conditions like any other condition similarly affecting working ability in their sick leave programs, medical benefit and disability plans, and so forth. Finally, sexual stereotyping violates Title VII. This is employer behavior that either: (1) denies a woman employment opportunities by assuming that she must have traditionally "female" traits (e.g., unaggressiveness), or (2) penalizes her for lacking such traits (e.g., for acting aggressively).

Sexual Harassment Unwelcome sexual advances, requests for sexual favors, and other verbal or physical conduct of a sexual nature can violate Title VII under two different theories. The first, called *quid pro quo* sexual harassment, involves some express or implied linkage between an employee's submission to sexually oriented behavior and tangible job consequences. Quid pro quo cases usually arise when, due to an employee's refusal to submit, she suffers a *tangible job detriment* of an economic nature; indeed, courts usually require such a detriment for recovery. For example, suppose that a supervisor fires a secretary because she refuses to have sexual relations with him or refuses to submit to other sex-related behavior. Such conduct would violate Title VII whether or not the supervisor expressly told the secretary that she would be fired for refusing to submit. Title VII is also violated if a supervisor denies a subordinate a deserved promotion or other job benefit for refusing to submit.

However, no quid pro quo and no tangible job detriment are required when an employee is subjected to *work environment* sexual harassment. This is unwelcome sex-related behavior that is sufficiently severe or pervasive to change the conditions of the victim's employment and create an abusive working environment. Work environment sexual harassment can be inflicted by both supervisors and co-workers. Because such behavior must be *unwelcome,* however, an employee may have trouble recovering if she instigated or contributed to the sex-related behavior. Also, the offending behavior must be sufficiently *severe or pervasive* to create an environment that a *reasonable person* would find hostile or abusive.

The reach of Title VII sexual harassment law continues to expand. Courts have long held that men can recover for sexual harassment by women. The following case, *Oncale v. Sundowner,* confirms that Title VII allows recovery when the harasser(s) and the harassee are of the same gender. Finally, a few courts have granted Title VII recoveries for "sexual favoritism"—discrimination in favor of employees who submit to sexual harassment, benefit from a sexual relationship with a superior, or trade sex for personal advancement. However, some courts have refused to allow recovery for sexual favoritism. Finally, Title VII also forbids workplace harassment based on race, color, national origin, and religion.

Oncale v. Sundowner Offshore Services, Inc. *523 U.S. 75 (U.S. Sup. Ct. 1998)*

Joseph Oncale was employed by Sundowner Offshore Services on a Chevron oil platform in the Gulf of Mexico. He worked as a roustabout on an eight-man crew. On several occasions, Oncale was forcibly subjected to sex-related, humiliating conduct by certain crew members in the presence of the rest of the crew. Also, two of the crew members physically assaulted Oncale in a sexual manner, and one threatened him with rape. Oncale's complaints to supervisory personnel produced no remedial action. Eventually Oncale quit his job with Sundowner, asking that his pink slip reflect that he "voluntarily left due to sexual harassment and

verbal abuse." When later asked why he left Sundowner, Oncale stated, "I felt that if I didn't leave my job, that I would be raped or forced to have sex."

Oncale then sued Sundowner in federal district court, alleging sex discrimination in employment. The district court held that, as a male, Oncale had no Title VII claim for harassment by male co-workers. The Fifth Circuit Court of Appeals affirmed, and Oncale then appealed to the U.S. Supreme Court.

Scalia, Justice This case presents the question whether workplace harassment can violate Title VII's prohibition against "discrimination . . . because of . . . sex," when the harasser and the harassed employee are of the same sex. Title VII provides that "it shall be an unlawful employment practice for an employer . . . to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin." We have held that this not only covers "terms" and "conditions" in the narrow contractual sense, but evinces a congressional intent to strike at the entire spectrum of disparate treatment of men and women in employment. When the workplace is permeated with discriminatory intimidation, ridicule, and insult that is sufficiently severe or pervasive to alter the conditions of the victim's employment and create an abusive working environment, Title VII is violated.

Title VII's prohibition of discrimination "because of . . . sex" protects men as well as women. . . . In *Johnson v. Transportation Agency, Santa Clara County* (1987), [furthermore], a male employee claimed that his employer discriminated against him because of his sex when it preferred a female employee for promotion. Although we ultimately rejected the claim on other grounds, we did not consider it significant that the supervisor who made that decision was also a man. We hold today that nothing in Title VII necessarily bars a claim of discrimination "because of . . . sex" merely because the plaintiff and the defendant (or the person acting on behalf of the defendant) are of the same sex.

Courts have had little trouble with that principle in cases like *Johnson,* where an employee claims to have been passed over for a job or promotion. But when the issue arises in the context of a hostile environment sexual harassment claim, the state and federal courts have taken a bewildering variety of stances. Some have held that same-sex sexual harassment claims are never cognizable under Title VII. Other decisions say that such claims are actionable only if the plaintiff can prove that the harasser is homosexual (and thus presumably motivated by sexual desire). Still others suggest that workplace harassment that is sexual in content is always actionable, regardless of the harasser's sex, sexual orientation, or motivations. We see no justification for a categorical rule excluding same-sex harassment claims from Title VII. Male-on-male sexual harassment in the workplace was assuredly not the principal evil Congress was concerned with when it enacted Title VII. But statutory prohibitions often go beyond the principal evil to cover reasonably comparable evils.

[The defendant claims] that recognizing liability for same-sex harassment will transform Title VII into a general civility code for the American workplace. But that risk is no greater for same-sex than for opposite-sex harassment, and is adequately met by careful attention to the requirements of the statute. Title VII does not prohibit all verbal or physical harassment in the workplace; it is directed only at "discrimination . . . because of . . . sex." We have never held that workplace harassment, even harassment between men and women, is automatically discrimination because of sex merely because the words used have sexual content or connotations. The critical issue is whether members of one sex are exposed to disadvantageous terms or conditions of employment to which members of the other sex are not exposed. Courts and juries have found the inference of discrimination easy to draw in most male-female sexual harassment situations, because the challenged conduct typically involves explicit or implicit proposals of sexual activity; it is reasonable to assume those proposals would not have been made to someone of the same sex. The same chain of inference would be available to a plaintiff alleging same-sex harassment, if there were credible evidence that the harasser was homosexual. But harassing conduct need not be motivated by sexual desire to support an inference of discrimination on the basis of sex. A trier of fact might reasonably find such discrimination, for example, if a female victim

is harassed in such sex-specific and derogatory terms by another woman as to make it clear that the harasser is motivated by general hostility to the presence of women in the workplace. A same-sex harassment plaintiff may also, of course, offer direct comparative evidence about how the alleged harasser treated members of both sexes in a mixed-sex workplace.

There is another requirement that prevents Title VII from expanding into a general civility code: the statute does not reach genuine but innocuous differences in the ways men and women routinely interact with members of the same sex and of the opposite sex. The prohibition of harassment on the basis of sex requires neither asexuality nor androgyny in the workplace; it forbids only behavior so objectively offensive as to alter the "conditions" of the victim's employment. Conduct that is not severe or pervasive enough to create an objectively hostile or abusive work environment—an environment that a reasonable person would find hostile or abusive—is beyond Title VII's purview. We have always regarded that requirement as crucial, and as sufficient to ensure that courts and juries do not mistake ordinary socializing in the workplace—such as male-on-male horseplay or intersexual flirtation—for discriminatory "conditions of employment."

We have emphasized, moreover, that the objective severity of harassment should be judged from the perspective of a reasonable person in the plaintiff's position, considering all the circumstances. In same-sex (as in all) harassment cases, that inquiry requires careful consideration of the social context in which particular behavior occurs and is experienced by its target. A professional football player's working environment is not severely or pervasively abusive, for example, if the coach smacks him on the buttocks as he heads onto the field—even if the same behavior would reasonably be experienced as abusive by the coach's secretary (male or female) back at the office. Common sense, and an appropriate sensitivity to social context, will enable courts and juries to distinguish between simple teasing or roughhousing among members of the same sex, and conduct which a reasonable person in the plaintiff's position would find severely hostile or abusive.

Fifth Circuit decision in favor of Sundowner reversed; case remanded for proceedings consistent with the Supreme Court's opinion.

Other Important Employment Discrimination Provisions

Section 1981

Where it applies, a post–Civil War civil rights statute called section 1981 sets employment discrimination standards resembling those of Title VII. Section 1981 forbids public and private employment discrimination against blacks, people of certain racially characterized national origins such as Mexicans, and ethnic groups such as gypsies and Jews. Included within such discrimination are most of the ways that an employer might disadvantage an employee.

Section 1981 is important because it gives covered plaintiffs certain advantages that Title VII does not provide. Although courts often use Title VII's methods of proof in section 1981 cases, Title VII's limitations on covered employers and its complex procedural requirements do not apply. Also, damages are apt to be greater under section 1981; in particular, Title VII's limits on compensatory and punitive damages are inapplicable. For these reasons, covered plaintiffs often include a section 1981 claim along with a Title VII claim in their complaint.

The Age Discrimination in Employment Act

The 1967 Age Discrimination in Employment Act (ADEA) prohibits age-based employment discrimination against employees who are *at least 40 years of age.* The favored employee may be either inside or outside the protected age group. In addition, the ADEA probably forbids age discrimination in favor of both younger and older employees.

Coverage The ADEA covers individuals, partnerships, labor organizations and employment agencies

(as to their employees), and corporations that: (1) engage in an industry affecting interstate commerce, and (2) employ at least 20 persons. The act no longer regulates state and local governments.[9] *Referrals* by an employment agency to a covered employer are within the ADEA's scope regardless of the agency's size. In addition, the ADEA reaches labor union practices affecting *union members*; usually, unions with 25 or more members are covered. The ADEA protects against age discrimination in many employment contexts, including hiring, firing, pay, job assignment, and fringe benefits.

Procedural Requirements The complex procedural requirements for an ADEA suit are beyond the scope of this text. Before she can sue in her own right, a private plaintiff must file a charge with the EEOC or with an appropriate state agency. The EEOC also may sue to enforce the ADEA; such a suit precludes private suits arising from the same alleged violation. For both government and private suits, the statute of limitations is three years from the date of an alleged *willful* violation and two years from the date of an alleged *nonwillful* violation.

Proof Proving age discrimination is no problem where an employer uses an express age criterion, and may be easy where there is direct evidence of discrimination such as testimony or incriminating documents. However, many ADEA cases, like the following *Biggins* decision, are brought under the Title VII disparate treatment theory discussed earlier. A few courts have used Title VII's disparate impact theory in ADEA cases. As this book went to press in 2000, the Supreme Court was expected to rule on the proof of ADEA claims.

Defenses The ADEA allows employers to discharge or otherwise discipline an employee for *good cause,* and to use *reasonable factors other than age* in their employment decisions. It also allows employers to observe the terms of a *bona fide seniority system.* In addition, the ADEA has a *bona fide occupational qualification* (BFOQ) defense. Speaking very generally, an employer seeking to use this defense must show that its age classification is reasonably necessary to the proper performance—usually the safe performance—of the job in question. For example, an employer that refuses to hire anyone over 60 as a helicopter pilot should have a BFOQ defense if it has a reasonable basis for concluding that 60-and-over helicopter pilots pose significant safety risks, or that it is not feasible to test older pilots individually.

Remedies Remedies available after a successful ADEA suit include unpaid back wages and overtime pay resulting from the discrimination; an additional equal award of liquidated damages where the employer acted willfully; attorney's fees; and equitable relief, including hiring, reinstatement, and promotion. Most courts do not allow punitive damages and recoveries for pain, suffering, mental distress, and so forth.

[9] Age discrimination in the federal government is beyond the scope of this text.

Hazen Paper Co. v. Biggins *507 U.S. 604 (U.S. Sup. Ct. 1993)*

Walter F. Biggins worked as a technical director for the Hazen Paper Company. In 1986, when Biggins was 62, Hazen fired him. Its justification was that Biggins had been doing business with Hazen's competitors. At the time of the firing, Biggins was within a few weeks of completing the 10-year vesting period for his employer-provided pension. There was also evidence that Hazen offered to retain Biggins as a consultant to the company, in which case he would not have been entitled to pension benefits.

After Biggins sued Hazen under the ADEA, a federal district court jury found in his favor. The court of appeals affirmed, and Hazen appealed to the U.S. Supreme Court.

O'Connor, Justice The courts of appeals repeatedly have faced the question whether an employer violates the ADEA by acting on the basis of a factor, such as an employee's pension status or seniority, that is empirically correlated with age. We now clarify that there is no disparate treatment under the ADEA when the factor motivating the employer is some feature other than the employee's age.

We have long distinguished between disparate treatment and disparate impact theories of employment discrimination. The disparate treatment theory is available under the ADEA. By contrast, we have never decided whether a disparate impact

theory of liability is available under the ADEA, and we need not do so here. Biggins claims only that he received disparate treatment.

In a disparate treatment case, liability depends on whether the protected trait (under the ADEA, age) actually motivated the employer's decision& It is the very essence of age discrimination for an older employee to be fired because the employer believes that productivity and competence decline with old age. The employer cannot rely on age as a proxy for an employee's remaining characteristics, such as productivity, but must instead focus on those factors directly.

When the employer's decision *is* wholly motivated by factors other than age, the problem of inaccurate and stigmatizing stereotypes disappears. This is true even if the motivating factor is correlated with age, as pension status typically is. Pension plans typically provide that an employee's accrued benefits will become nonforfeitable, or "vested," once the employee completes a certain number of years of service with the employer. On average, an older employee has had more years in the work force than a younger employee, and thus may well have accumulated more years of service with a particular employer. Yet an employee's age is analytically distinct from his years of service. An employee who is younger than 40, and therefore outside the class of older workers as defined by the ADEA, may have worked for a particular employer his entire career, while an older worker may have been newly hired. Because age and years of service are analytically distinct, an employer can take account of one while ignoring the other, and thus it is incorrect to say that a decision based on years of service is necessarily age-based.

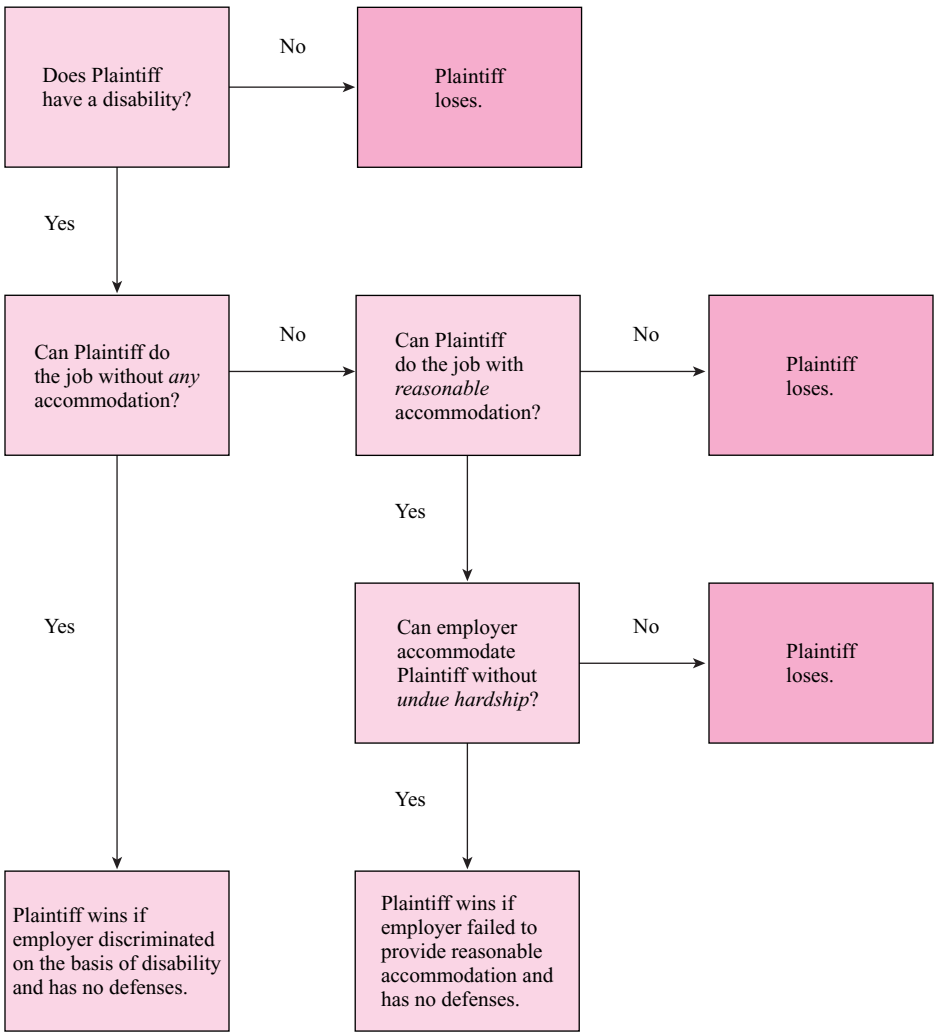
We do not mean to suggest that an employer *lawfully* could fire an employee in order to prevent his pension benefits from vesting. Such conduct is actionable under [ERISA]. But it would not, without more, violate the ADEA.

Besides the evidence of pension interference, the court of appeals cited some additional evidentiary support for ADEA liability. Biggins was asked to sign a confidentiality agreement, even though no other employee had been required to do so, and his replacement was a younger man who was given a less onerous agreement. In the ordinary ADEA case, indirect evidence of this kind may well suffice to support liability if the plaintiff also shows that the employer's explanation for its decision—here, that Biggins had been disloyal to Hazen by doing business with its competitors—is unworthy of credence. But inferring age-motivation from the implausibility of the employer's explanation may be problematic in cases where other unsavory motives, such as pension interference, were present. We therefore remand the case for the court of appeals to reconsider whether the jury had sufficient evidence to find an ADEA violation.

Judgment reversed. Case returned to the court of appeals to consider whether, under the standards outlined in its opinion, there was sufficient evidence to find Hazen liable for age discrimination.

The Americans with Disabilities Act

Before the 1990s, federal regulation of employment discrimination against handicapped people mainly was limited to certain federal contractors and recipients of federal financial assistance. By passing Title I of the Americans with Disabilities Act of 1990 (ADA), however, Congress addressed this problem comprehensively. This portion of the ADA is primarily enforced by the EEOC, and its procedures and remedies are the same as for Title VII.



Covered Entities Title I covers employers who have 15 or more employees and who are engaged in an industry affecting interstate commerce. Employers include individuals, partnerships, corporations, colleges and universities, labor unions and employment agencies (regarding their own employees), and state and local governments. The act also covers certain labor unions in their capacity as employee representative, as well as employment agencies' discrimination against their clients.

Substantive Protections The ADA forbids covered entities from discriminating against *qualified individuals with a disability* because of that disability. It covers disability-related discrimination regarding hiring, firing, promotion, pay, and innumerable other employment decisions. The act defines a *disability* as: (1) a physical or mental impairment that substantially limits one or more of an individual's major life activities, (2) a record of such an impairment, or (3) one's

being regarded as having such an impairment. (The last two categories protect those who have previously been misdiagnosed or who have recovered from earlier impairments.) Not protected, however, are those who suffer discrimination for currently engaging in the illegal use of drugs. Furthermore, homosexuality, bisexuality, transvestism, transsexualism, and various other sex-related traits or conditions are not considered disabilities. As the following *Sutton* case makes clear, finally, *correctable* disabilities are not within the ADA's definition.

A *qualified individual with a disability* is a person who can perform the essential functions of the relevant job either: (1) without reasonable accommodation, or (2) with such accommodation. Thus, the ADA protects both individuals who can perform their job despite their handicap, and individuals who could perform their job if reasonable accommodation is provided. In the latter case, employers illegally discriminate if they do not provide such accommodation. *Reasonable accommodation* includes: making existing facilities readily accessible and usable, acquiring new equipment, restructuring jobs, modifying work schedules, and reassigning workers to vacant positions, among other options.

Figure 2 *A Map through the ADA*

However, employers need not make reasonable accommodation where such accommodation would cause them to suffer *undue hardship.* Undue hardship is an act requiring significant difficulty or expense. Among the factors used to determine its existence are the cost of the accommodation, the covered entity's overall financial resources, and the accommodation's effect on the covered entity's activities. The ADA also protects employers whose allegedly discriminatory decisions are based on *job-related criteria and business necessity,* so long as proper job performance cannot be accomplished by reasonable accommodation.

Sutton v. United Airlines *527 U.S. 471 (U.S. Sup. Ct. 1999)*

Karen Sutton and Kimberly Hinton, who are twin sisters, both have severe myopia. Each woman's uncorrected vision is 20/200 or worse in her right eye and 20/400 or worse in her left eye. But with the use of corrective lenses both women have vision that is 20/20 or better. In 1992, Karen and Kimberly applied to United Airlines for employment as commercial airline pilots. However, they were rejected because they did not meet United's minimum vision requirement, which was uncorrected visual acuity of 20/100 or better.

The two women then sued United in federal district court, alleging disability discrimination under the ADEA. The district court dismissed their complaint for failure to state a claim upon which relief could be granted. After the court of appeals affirmed, the two women appealed to the United States Supreme Court.

O'Connor, Justice The ADA prohibits discrimination by covered entities against qualified individuals with a disability. A qualified individual with a disability is identified as "an individual with a disability who, with or without reasonable accommodation, can perform the essential functions of the employment position that such individual holds or desires." In turn, a "disability" is defined as: (A) a physical or mental impairment that substantially limits one or more of the major life activities of such individual; (B) a record of such an impairment; or (C) being regarded as having such an impairment.

We turn to the question whether petitioners have stated a claim under subsection (A) of the disability definition, that is, whether they have alleged that they possess a physical impairment that substantially limits them in one or more major life activities. Because with corrective measures [their] vision is 20/20 or better, they are not actually disabled within the meaning of the act if the disability determination is made with reference to these measures. Consequently, our decision turns on whether disability is to be determined with or without reference to corrective measures.

We conclude that the approach that persons are to be evaluated in their hypothetical uncorrected state is an impermissible interpretation of the ADA. Looking at the Act as a whole, it is apparent that if a person is taking measures to correct for, or mitigate, a physical or mental impairment, the effects of those measures—both positive and negative—must be taken into account when judging whether that person is "substantially limited" in a major life activity and thus "disabled" under the act. Three separate provisions of the ADA, read in concert, lead us to this conclusion.

The act defines a disability as "a physical or mental impairment that substantially limits one or more of the major life activities of an individual." Because the phrase "substantially limits" appears in the Act in the present indicative verb form, we think the language is properly read as requiring that a person be presently—not potentially or hypothetically—substantially limited in order to demonstrate a disability. A disability exists only where an impairment "substantially limits" a major life activity, not where it "might," "could," or "would" be substantially limiting if mitigating measures were not taken. A person whose physical or mental impairment is corrected by medication or other measures does not have an impairment that presently "substantially limits" a major life activity.

The definition of disability also requires that disabilities be evaluated "with respect to an individual" and be determined based on whether an impairment substantially limits the "major life activities of such individual." Thus, whether a person has a disability under the ADA is an individualized inquiry. The [other] approach would often require courts and employers to speculate about a

person's condition and would, in many cases, force them to make a disability determination based on general information about how an uncorrected impairment usually affects individuals, rather than on the individual's actual condition. For instance, under this view, courts would almost certainly find all diabetics to be disabled, because if they failed to monitor their blood sugar levels and administer insulin, they would almost certainly be substantially limited in one or more major life activities. A diabetic whose illness does not impair his or her daily activities would therefore be considered disabled simply because he or she has diabetes.

Finally, and critically, findings enacted as part of the ADA require the conclusion that Congress did not intend to bring under the statute's protection all those whose uncorrected conditions amount to disabilities. Congress found that "some 43,000,000 Americans have one or more physical or mental disabilities, and this number is increasing as the population as a whole is growing older." The 43 million figure reflects an understanding that those whose impairments are largely corrected by medication or other devices are not "disabled" within the meaning of the ADA. By contrast, nonfunctional approaches to defining disability produce significantly larger numbers. The 1986 National Council on Disability report estimated that there were over 160 million disabled under the "health conditions approach." Indeed, the number of people with vision impairments alone is 100 million. And there were approximately 50 million people with high blood pressure. Had Congress intended to include all persons with corrected physical limitations among those covered by the Act, it undoubtedly would have cited a much higher number of disabled persons in the findings. That it did not is evidence that the ADA's coverage is restricted to only those whose impairments are not mitigated by corrective measures.

Applying this reading of the Act to the case at hand, we conclude that the court of appeals correctly resolved the issue of disability in United's favor.

Court of appeals decision affirmed; Sutton and Hinton lose.

Executive Order 11246

Executive Order 11246, issued in 1965 and later amended, forbids race, color, national origin, religion, and sex discrimination by certain federal contractors. The order is enforced by the Labor Department's Office of Federal Contract Compliance Programs (OFCCP). In the past, OFCCP enforcement has included affirmative action requirements and occasionally quotalike preferences benefiting racial minorities.

State Antidiscrimination Laws

Most states have statutes that parallel Title VII, the EPA, the ADEA, and the ADA. These statutes sometimes provide more extensive protection than their federal counterparts. In addition, some states prohibit forms of discrimination not barred by federal law. Examples include discrimination on the bases of one's marital status, physical appearance, sexual orientation, political affiliation, and off-the-job smoking.

Finally, some states and localities have adopted laws that adopt the employment discrimination theory called **comparable worth.** These laws, which typically apply only to public employees, often say that state governments should not discriminate in pay between female-dominated jobs and male-dominated jobs of comparable overall worth to the employer. The worth of different jobs may be determined by giving each job a point rating under factors such as skill, responsibility, effort, and working conditions; adding the ratings; and comparing the totals. It was once believed that comparable worth claims might find favor under Title VII, but that possibility has receded over the years.

Employee Privacy

The term employee privacy describes several employment issues that have assumed increasing importance recently. Uniting these issues is a concern with protecting employees' personal dignity and increasing their freedom from intrusions, surveillance, and the revelation of personal matters.

Concept Review

The Employment Discrimination Laws Compared

	Protected Traits	Covered Employer Decisions	Need to File Charge in Private Suit?
Equal Pay Act	Sex only	Pay only	No
Title VII	Race, color, national origin, religion, sex	Wide range	Yes
Section 1981	Race, racially characterized national origin, perhaps alienage	Wide range	No
Age Discrimination in Employment Act	Age, if victim 40 or over	Wide range	Yes
Americans with Disabilities Act	Existence of disability, if person qualified to perform job with or without reasonable accommodation	Wide range	Yes
Executive Order 11246	Race, color, religion, national origin, sex	Wide range	Not applicable; enforced by OFCCP

Polygraph Testing

Over the years, employers have made increasing use of polygraph and other lie detector tests—most often, to screen job applicants and to investigate employee thefts. This has led to concerns about the accuracy of such tests; the personal questions examiners sometimes ask; and the tests' impact on workers' job prospects, job security, and personal privacy. Besides provoking state restrictions on polygraph testing, such worries led Congress to pass the Employee Polygraph Protection Act in 1988.

The Employee Polygraph Protection Act mainly regulates lie detector tests, which include polygraph tests and certain other devices for assessing a person's honesty. Under the act, employers may not: (1) require, suggest, request, or cause employees or prospective employees to take any lie detector test; (2) use, accept, refer to, or inquire about the results of any lie detector test administered to employees or prospective employees; and (3) discriminate or threaten to discriminate against employees or prospective employees because of the results of any lie detector test, or because such parties failed or refused to take such a test. The act also has an antiretaliation provision.

However, certain employers and tests are exempt from these provisions. They include: (1) federal, state, and local government employers; (2) certain national defense and security-related tests by the federal government; (3) certain tests by security service firms; and (4) certain tests by firms manufacturing and distributing controlled substances. The act also contains a limited exemption for private employers that use polygraph tests when investigating economic losses caused by theft, embezzlement, industrial espionage, and so forth. Finally, the act restricts the disclosure of test results by examiners and by most employers.

The Polygraph Protection Act is enforced by the Labor Department, which has issued regulations in furtherance of that mission. It does not preempt state laws that prohibit lie detector tests or that set standards stricter than those imposed by federal law. Violations of the act or its regulations can result in civil penalties, suits for equitable relief by the Labor Department, and private suits for damages and equitable relief. Workers and job applicants who succeed in a private suit can

obtain employment, reinstatement, promotion, and payment of lost wages and benefits.

Drug and Alcohol Testing

Due to their impact on employees' safe and effective job performance, employers have become increasingly concerned about both on-the-job and off-the-job drug and alcohol use. Thus, employers increasingly require employees and job applicants to undergo urine tests for drugs and/or alcohol. Because those who test positive may be either disciplined or induced to undergo treatment, and because the tests themselves can raise privacy concerns, some legal checks on their use have emerged.

Drug and alcohol testing by *public* employers can be attacked under the Fourth Amendment's search-and-seizure provisions. However, such tests generally are constitutional where there is a reasonable basis for suspecting that an employee is using drugs or alcohol, or drug use in a particular job could threaten the public interest or public safety. Due to the government action requirement discussed in Chapter 3, *private-sector* employees generally have no federal constitutional protection against drug and alcohol testing. Some state constitutions, however, lack a government action requirement. In addition, several states now regulate private drug and/or alcohol testing by statute. Tort suits for invasion of privacy or infliction of emotional distress may also be possible in some cases.[10]

Despite these protections, however, federal law *requires* private-sector drug testing in certain situations. Under a Defense Department rule, for example, employers who contract with the department must agree to establish a drug-testing program requiring, for instance, that employees who work in sensitive positions sometimes be tested. Also, Transportation Department regulations require random testing of public and private employees occupying safety-sensitive or security-related positions in industries such as aviation, trucking, railroads, mass transit, and others.

Employer Searches

Employers concerned about theft, drug use, and other misbehavior by their employees sometimes conduct searches of those employees' offices, desks, lockers, files, briefcases, packages, vehicles, and even bodies to confirm their suspicions. The Supreme Court has held that public employees sometimes have a reasonable expectation of privacy in areas such as their offices, desks, or files. But it also held that searches of those areas are constitutional under the Fourth Amendment when they are reasonable under the circumstances. Determining reasonableness generally means balancing the employee's legitimate privacy expectations against the government's need for supervision and control of the workplace, with more intrusive searches demanding a higher degree of justification. Finally, the Court also said that neither probable cause nor a warrant is necessary for such searches to proceed.

As noted above, the U.S. Constitution ordinarily does not apply to private employment. Nonetheless, both private and public employees can mount common law invasion of privacy suits against employers who conduct searches. In such cases, courts usually try to weigh the intrusiveness of the search against the purposes justifying it and consider the availability of less intrusive alternatives that still would satisfy the employer's legitimate needs.

Employer Monitoring

Although employers have always monitored their employees' work, recent technological advances enable such monitoring to occur without those employees' knowledge. Examples include closed-circuit television, video monitoring, telephone monitoring, the monitoring of computer workstations (e.g., by counting keystrokes), and metal detectors at plant entrances. Such monitoring has encountered objections because employees often are unaware that it exists or may suffer stress when they do know or suspect its existence. Employers counter these objections by stressing that monitoring is highly useful in evaluating employee performance, improving efficiency, and reducing theft.

Monitoring or surveillance by public employers seems to pose few constitutional problems. In the private sphere, telephone monitoring occasionally has been found illegal under federal wiretapping law. Although such claims have been uncommon, invasion of privacy suits may succeed in situations where an employer's need for surveillance is slight and it is conducted in areas, such as restrooms and lounges, in which employees have a reasonable expectation of privacy.

[10]Invasion of privacy and intentional infliction of emotional distress are discussed in Chapter 6, and negligent infliction of emotional distress is discussed in Chapter 7.

Records and References

Many states allow both public and private employees at least some access to personnel files maintained by their employers. Also, some states limit third-party access to such records. In addition, employers who transmit such data to third parties—for example, in letters of reference—may be civilly liable for defamation or invasion of privacy.[11] However, truth is a defense in defamation cases. In both defamation and invasion of privacy suits, moreover, the employer's actions may be conditionally privileged. This defense and these privileges can protect employers who are sued for truthful, accurate, relevant, good faith statements made in references concerning former employees. Finally, a few states have allowed defamation suits for so-called compelled self-disclosure by job-seeking discharged employees who have been required to tell potential employers their former employer's alleged reasons for firing them.

[11] Defamation and invasion of privacy are discussed in Chapter 6.

Wrongful Discharge

The Doctrine of Employment at Will

The traditional employment-at-will rule first appeared around 1870, and by the early 20th century most state courts had adopted it. The rule says that *either party can terminate an employment contract of indefinite duration.* The termination can occur at any time; and can be for good cause, bad cause, or no cause. (However, discharged employees can recover for work actually done.) What is an employment contract of indefinite duration? The *Rooney* case addresses this question.

Rooney v. Tyson *697 N.E.2d 571 (N.Y. Ct. App. 1998)*

In the early 1980s, Cus D'Amato, acting as agent for the young Mike Tyson, agreed with Kevin Rooney that Rooney would be Tyson's trainer "for as long as [Tyson fights] professionally." The parties also agreed that Rooney would receive 10 percent of Tyson's boxing earnings. In 1986, Tyson orally reaffirmed the agreement, stating that Rooney "will be Mike Tyson's trainer as long as Mike Tyson is a professional fighter." In 1988, apparently in connection with Rooney's alleged comments about Tyson's divorce and other business litigation, Tyson formally terminated his boxer-trainer relationship with Rooney.

In 1989, Rooney sued Tyson for breach of contract in federal district court. The jury rendered a $4,415,615 verdict for Rooney, but after that the court granted Tyson's motion for judgment notwithstanding the verdict. After Rooney appealed, the Second Circuit Court of Appeals certified a question of state law to the New York Court of Appeals, that state's highest court. The question was whether an oral personal services contract between a trainer and a boxer "for as long as the boxer fights professionally" is a definite-term agreement to which employment at will does not apply.

Bellacosa, Judge In New York, absent an agreement establishing a fixed duration, an employment relationship is presumed to be a hiring at will, terminable at any time by either party. Our previous precedents have not categorically delineated what may differentiate a "definite," "indefinite," or "fixed" employment term or duration.

This Court [has] found indefinite such temporally amorphous terms as "permanent," to "continue indefinitely and will follow [the employee] in each succeeding year," [and] to "devote [the employee's] whole time and attention" to the employer's business. This Court also adopted the at-will presumption doctrine in [a case where] a general hiring was found to result from an employment agreement that was "yearly" or "by the year." The court stated:

> In England it is held that a general hiring, or a hiring by the terms of which no time is fixed, is a hiring by the year. . . . With us, the rule is inflexible, that a general or indefinite hiring is prima facie a hiring at will; and if the servant seeks to make it out yearly hiring, the burden is upon him to establish it by proof. A hiring at so much a day, week, month or year, no time being specified, is an indefinite hiring, and no presumption

> attaches that it was for a day even, but only at the rate fixed for whatever time the party may serve. . . . A contract to pay one $2,500 a year for services is not a contract for a year, but a contract to pay at the rate of $2,500 a year for services actually rendered, and is determinable at will by either party. . . . In all such cases the contract may be put an end to by either party at any time, unless the time is fixed.

New York's jurisprudence is supple and realistic, and surely not so rigid as to require that a definite duration can be found only in a determinable calendar date. Thus, although the exact end-date of Tyson's professional boxing career was not precisely calculable, the boundaries of beginning and end of the employment period are sufficiently ascertainable. That is enough to defeat a matter-of-law decision by a judge. Under the employment agreement, the durational term was understandable to the parties and reasonably determinable by the fact finders. The range of the employment relationship is established by the definable commencement and conclusion of Tyson's professional boxing career. Though the times are not precisely predictable and calculable to dates certain, they are legally and experientially limited and ascertainable by objective benchmarks.

The Court of Appeals held that a contract between a trainer and a boxer to train the boxer "for as long as the boxer fights professionally" is a contract for a definite duration and is not terminable at will.

Smith, Judge, dissenting By its ruling, the majority heralds a new era in interpreting oral promises of potentially long-term employment. Because I believe the majority's conclusion is contrary to precedent, I dissent.

Our precedents indicate that a hiring for an "indefinite" duration includes one that may have some definable ending point, but the actual length of employment is not fixed with precision. For example, in [one case] plaintiff sought to prove that he was employed for life or at least for as long a time as the defendant remained in business based upon an oral promise of "permanent employment." We characterized the promise as "nothing more than that the employment [was] to continue indefinitely." [Also,] a contract for life is a contract for an indefinite time. Similarly, an employment contract which provides that an employee may only be terminated for "just cause" represents a hiring for an indefinite duration.

Such circumstances may be contrasted with an employment relationship where its duration is either definite or capable of being determined. In every example addressed by this Court, a "definite" duration was only determinable by reference to a precise calendar date. It would also appear that parties might specify that employment is to continue indefinitely until the happening of a particular event. However, it is only when the event precisely defines the length of employment that it will be considered of "definite" duration. Thus, a fixed duration may be precisely measured when employment lasts through summer (from the June solstice to the September equinox) or until the next election (first Tuesday in November), but not by the level of a company's stock, a lifetime, or subjective performance evaluations.

A period of time measured by an individual employer's continued professional career is indistinguishable from a [period measured by] a corporate employer's remaining in business. Similarly, career-long employment is akin to a " 'permanent' position" allegedly measured by an employee's lifetime, which we have held is employment of an indefinite duration. The majority concludes that the ending of a professional boxing career is somehow more definite than death. The distinction seen by the majority is elusive, to say the least.

The Common Law Exceptions

Because it allows employers to discharge indefinite-term employees with virtual impunity, employment at will has long been regarded as a force for economic efficiency but also as a threat to workers' job security. Although the doctrine remains important today, it has been eroded by many of the developments described in this chapter. For example, the NLRA forbids dismissal for union affiliation, and labor contracts frequently bar termination without just cause. Also, Title VII prohibits firings based on certain personal traits, the ADEA blocks discharges on the basis of age, and the ADA forbids terminations for covered personal disabilities.

Over the past 20 to 25 years, moreover, courts have been carving out common law exceptions to employ-

ment at will. Here we discuss the three most important such exceptions. Although a few states do not recognize any of these exceptions, most states have adopted one or more of them. In such states, a terminated employee sometimes can recover against her employer for **wrongful discharge** or **unjust dismissal.** The remedies in successful wrongful discharge suits depend heavily on whether the plaintiff's claim sounds in contract or in tort, with tort remedies being more advantageous for plaintiffs.

The Public Policy Exception The public policy exception to employment at will, which has been recognized by over four-fifths of the states, is the most common basis for a wrongful discharge suit. It usually is a tort claim. In public policy cases, the terminated employee argues that his discharge was unlawful because it violated the state's public policy. How do courts determine the content of this public policy? Although there is some disagreement on the subject, most courts limit "public policy" to the policies furthered by existing laws such as constitutional provisions, statutes, and perhaps administrative regulations and common law rules. For this reason, employees often fail to recover where they are fired for ethical objections to job assignments or employer practices.

Successful suits under the public policy exception usually involve firings caused by an employee's: (1) refusal to commit an unlawful act (e.g., committing perjury or violating the antitrust laws), (2) performance of an important public obligation (e.g., jury duty or whistle-blowing),[12] or (3) exercise of a legal right or privilege (e.g., making a workers' compensation claim or refusing to take an illegal polygraph test). In each case, the act (or refusal to act) that caused the firing is consistent with some public policy; for this reason, the firing frustrates the policy. For example, firing an employee for filing a workers' compensation claim undermines the public policies underlying state workers' compensation statutes.

Although it involves privacy concerns, the following *Pillsbury* case is a fairly straightforward public-policy decision. This court included common law rules among the permissible sources of public policy; the specific rule it adopted is discussed in Chapter 6. Apparently Pennsylvania did not recognize the exception involving employer promises, which is discussed later.

[12]Whistle-blowers are employees who publicly disclose dangerous, illegal, or improper employer behavior. A few states have passed statutes protecting the employment rights of certain whistle-blowers.

Smyth v. The Pillsbury Co. *914 F. Supp. 97 (E.D. Pa. 1996)*

The Pillsbury Company maintained an electronic mail communication system. The company repeatedly assured its employees that all e-mail communications on the system would remain confidential. Pillsbury further assured its employees that it would not intercept e-mail communications and use them as grounds for terminating or reprimanding employees. Michael Smyth, a Pillsbury employee, received e-mail communications from his supervisor over Pillsbury's e-mail system on his home computer. Relying on Pillsbury's assurances, Smyth exchanged some blunt e-mails with has supervisor. One of them apparently contained a threat to "kill the backstabbing bastards," and another seemingly referred to a firm holiday party as the "Jim Jones kool-aid affair." Later, Pillsbury retrieved or intercepted these messages. In January of 1995, the company fired Smyth for what it deemed inappropriate and unprofessional comments over the e-mail system.

Smyth sued Pillsbury for wrongful discharge, and Pillsbury moved to dismiss for failure to state a claim upon which relief could be granted.

Weiner, Judge As a general rule, Pennsylvania law does not provide a common law cause of action for the wrongful discharge of an at-will employee such as plaintiff. Pennsylvania is an employment at-will jurisdiction and an employer may discharge an employee with or without cause, at pleasure, unless restrained by some contract. However, in the most limited of circumstances, exceptions have been recognized where discharge of an at-will employee threatens or violates a clear mandate of public policy. A clear mandate of public policy must be of a type that strikes at the heart of a citizen's social rights, duties, and responsibilities. This recognized public policy exception is an especially

narrow one. To date, the Pennsylvania Superior Court has only recognized three such exceptions. First, an employee may not be fired for serving on jury duty. Second, an employer may not deny employment to a person with a prior conviction. Finally, an employee may not be fired for reporting violations of federal regulations to the Nuclear Regulatory Commission.

A public policy exception must be clearly defined. The sources of public policy can be found in legislation, administrative rules, regulations, or decisions; and judicial decisions. Smyth claims that his termination was in violation of a public policy which precludes an employer from terminating an employee in violation of the employee's right to privacy as embodied in Pennsylvania common law. In support for this proposition, plaintiff directs our attention to a decision by our Court of Appeals. In that case, the plaintiff sued her employer, alleging wrongful discharge as a result of her refusal to submit to urinalysis screening and personal property searches at her workplace. After rejecting plaintiff's argument that the employer's drug and alcohol program violated public policy encompassed in the United States and Pennsylvania Constitutions, our Court of Appeals stated that "our review of Pennsylvania law reveals other evidence of a public policy that may, under certain circumstances, give rise to a wrongful discharge action related to urinalysis or to personal property searches. Specifically, we refer to the Pennsylvania common law regarding tortious invasion of privacy." One of the torts which Pennsylvania recognizes as encompassing an action for invasion of privacy is the tort of "intrusion upon seclusion." The *Restatement (Second) of Torts* defines the tort as follows: "One who intentionally intrudes, physically or otherwise, upon the solitude or seclusion of another or his private affairs or concerns, is subject to liability to the other for invasion of his privacy, if the intrusion would be highly offensive to a reasonable person."

Applying the *Restatement* to the facts here, we find that plaintiff has failed to state a claim upon which relief can be granted. First, unlike urinalysis and personal property searches, we do not find a reasonable expectation of privacy in e-mail communications voluntarily made by an employee to his supervisor over the company e-mail system, notwithstanding any assurances that such communications would not be intercepted by management. Once plaintiff communicated the alleged unprofessional comments to a second person over an e-mail system which was apparently utilized by the entire company, any reasonable expectation of privacy was lost. Significantly, the defendant did not require plaintiff, as in the case of a urinalysis or personal property search, to disclose any personal information about himself. Rather, plaintiff voluntarily communicated the alleged unprofessional comments over the company e-mail system. We find no privacy interests in such communications.

Second, even if we found that an employee had a reasonable expectation of privacy in the contents of his e-mail communications over the company e-mail system, we do not find that a reasonable person would consider the defendant's interception of these communications to be a substantial and highly offensive invasion of his privacy. Again, we note that by intercepting such communications, the company is not requiring the employee to disclose any personal information about himself or invading the employee's person or personal effects. Moreover, the company's interest in preventing inappropriate and unprofessional comments or even illegal activity over its e-mail system outweighs any privacy interest the employee may have in those comments.

Pillsbury's motion to dismiss granted; case dismissed with prejudice.

The Implied Covenant of Good Faith and Fair Dealing A wrongful discharge suit based on the implied covenant of good faith and fair dealing usually is a contract claim. Here, the employee argues that her discharge was unlawful because it was not made in good faith or did not amount to fair dealing, thus breaching the implied contract term. Only about 25 percent of the states have recognized this exception to employment at will, and most of these give it a narrow scope.

Promises by Employers Using various legal theories, courts have increasingly made employers liable for breaking promises to their employees regarding termination policy. Such promises typically

are express statements made by employers during hiring or employee orientation, or in their employee manuals, handbooks, personnel policies, and benefit plans. Occasionally such promises are implied from business custom and usage as well. Here, our concern is with express or implied employer promises involving matters such as discharge policies and discharge procedures. If the employer fails to follow those promises when it fires an employee, it is liable for breach of contract. At least two-thirds of the states recognize this exception to employment at will. As the following *Progress Printing* case suggests, however, employers often succeed in disclaiming liability for their own promises.

Progress Printing Co. v. Nichols *421 S.E.2d 428 (Va. Sup. Ct. 1992)*

On January 20, 1987, William H. Nichols began work as a pressman for the Progress Printing Company. At that time, Nichols was provided with a copy of the company's Employees' Handbook. The handbook stated that Progress would not discharge or suspend an employee "without just cause" and that the company "shall give at least one warning notice in writing" before termination, except under certain circumstances not relevant here.

On February 2, 1987, however, the firm's personnel director gave Nichols a form which stated in part:

> I have received a copy of the Progress Printing Employee Handbook. I recognize that an understanding of this information is important to a successful relationship between Progress Printing and myself. I agree to follow the procedures and guidelines it contains. Any questions concerning Progress Printing's polices will be directed to the Personnel Director.
>
> The employment relationship between Progress Printing and the employee is *at will and may be terminated by either party at any time*. [Emphasis in original.]

Nichols and the personnel director both signed the form.

On March 8, 1989, Nichols became upset over Progress's failure to correct a recurring defect in a print job, and he refused to complete that job assignment as a result. Nichols was fired on the following day, without the prior written notice promised by the Employee Handbook.

Nichols then sued for wrongful discharge in a Virginia trial court. After that court ruled in his favor and awarded him $9,000 in damages, Progress appealed.

Lacy, Justice In Virginia, as in a majority of jurisdictions, the employment relationship is presumed to be "at will," which means that the employment term extends for an indefinite period and may be terminated for any reason. This presumption may be rebutted if sufficient evidence is produced to show that the employment is for a definite, rather than an indefinite, term. Progress argues that Nichols failed to rebut the presumption because the handbook did not constitute an enforceable employment contract and, even if it did, the subsequent execution of the acknowledgment form created an at-will employment relationship.

A number of jurisdictions have held that the employer can be bound by termination-for-cause provisions contained in employee handbooks where those provisions are communicated to the employee in a sufficiently specific manner. We have held that an employment condition which allows termination only for cause sets a definite term for the duration of the employment. We nevertheless agree with Progress that the acknowledgment form specifically superseded and replaced that [just cause] provision with the agreement that the employment relationship was at will. We base this holding on a number of grounds.

The termination-for-cause language of the handbook and the employment-at-will relationship agreed to in the subsequent acknowledgment form are in direct conflict and cannot be reconciled in any reasonable way. If the documents are considered a single contract, this conflict fails to provide sufficient evidence to rebut the presumption of employment at will.

[In any event,] the acknowledgment form was not a part of the handbook and was executed 13 days after Nichols began work. Under these circumstances, the form reflects an understanding

between the parties separate from that contained in the handbook. Execution of the form memorialized reciprocal commitments that satisfy the requisites of a contract—there was an offer of employment at will; the employee continued service, which constituted the consideration; and the employee accepted by performance.

We conclude that the employment relationship between Nichols and Progress was at-will employment which either party could terminate at any time. Therefore, Progress did not breach the employment contract when it terminated Nichols.

Trial court decision on Nichols's employment-at-will claim reversed in favor of Progress.

Ethical and Public Policy Concerns

1. Do you think that the employer in the *Progress Printing* case behaved ethically? Why or why not?

2. Over the past 150 years, a moral theory known as *utilitarianism* has been very influential. Utilitarianism basically asserts that the test for determining the rightness or wrongness of actions (including laws) is their ability to produce the greatest net balance of satisfactions over dissatisfactions throughout society as a whole. Give a utilitarian justification for the traditional employment-at-will rule. You can assume that economic well-being counts as a "satisfaction" for utilitarian purposes. You also can assume that the people fired under the traditional employment-at-will rule suffer from their firing.

Problems and Problem Cases

1. Deborah Tolbert, a secretary employed by the Martin-Marietta Corporation, was raped by a Martin-Marietta janitor while on her way to lunch within the secured defense facility where she worked. She sued Martin-Marietta, alleging that it had negligently hired the janitor and had negligently failed to make its premises safe for employees. Martin-Marietta argued that Tolbert could not sue in negligence because workers' compensation was her sole remedy. Is the company correct under the positional-risk test? Under the increased risk test?

2. Sheila Grove sued the Frostburg National Bank under the Equal Pay Act. She claimed that she was paid less than another employee named David Klink, who performed the same work she did. The bank claimed that it had a merit defense because Klink was a better worker than Grove. This determination was made by the bank's vice president, who based his judgments primarily on his own observations of employees and his "gut feeling" about them. Did the bank have a merit defense here?

3. Dianne Rawlinson, a female applicant who was rejected for employment as a prison guard in the Alabama prison system, challenged certain state rules restricting her employment prospects under Title VII. They were: (1) requirements that all prison employees be at least 5 feet 2 inches tall and weigh at least 120 pounds, and (2) a rule expressly prohibiting women from assuming close-contact prison guard positions in maximum-security prisons (most of which were all-male). What method of proving a Title VII case should Rawlinson use in attacking the height and weight requirements? Does she need to use one of these methods to attack the second rule? What argument should the state use if Rawlinson establishes that the height and weight requirements have an adverse impact? What Title VII defense might the state have for the second rule? With regard to the second rule, assume that at this time Alabama's maximum security prisons housed their male prisoners barracks-style rather than putting them in cells, and that they did not separate sex offenders from other prisoners.

4. Wally White, the owner of the Progressive Printing Company, had always been a civil rights pioneer. Back in the 1950s and 1960s, when such behavior was not always popular or fashionable, Wally had refused to discriminate against blacks and other racial minorities, instead hiring on a strictly color-blind basis. Now, Wally decides that the new millennium demands new, even more progressive, hiring policies for his company. Wally decides that at least 75 percent of his workforce will consist of African-Americans and other racial minorities, and these people will get first crack

at all promotions. White employees and job-seekers, says Wally, will just have to wait their turn. This new plan, moreover, will be permanent. Wally's plan is challenged as race-based employment discrimination under Title VII. Will it survive a Title VII attack? Why or why not?

5. In April of 1985, Theresa Harris started work as a manager for Forklift Systems, Inc. (Forklift). During Harris's two and one-half years with Forklift, she was subjected to gender-based insults and unwanted sexual innuendos from Charles Hardy, the firm's president. Several times, for example, Hardy told Harris: "You're a woman, what do you know?" and "We need a man as the rental manager." Once, he suggested that he and Harris negotiate her raise at the Holiday Inn. Hardy also would ask Harris and other female employees to get coins from his front pants pocket, and to pick up objects that he threw on the ground. After Harris complained to Hardy in August of 1987, he apologized and promised to stop his offensive behavior. In early September, however, he inquired whether Harris had promised sex to a customer with whom she had concluded a deal on Forklift's behalf. Is Hardy's behavior sufficiently severe or pervasive to raise a *possible* work environment sexual harassment claim? Is the test here whether Harris subjectively thought that Hardy's behavior was severe or pervasive, or whether a reasonable person would think so? Whether a *reasonable woman* would think so? Does Harris have to show actual psychological harm to recover for work environment harassment?

6. Linda Twinkle, a receptionist for the XYZ Corporation, was stationed at the gateway to the image-conscious firm's plush offices. Linda joined a small religious cult whose members believed that it is unnatural and immoral for people to bathe. Linda followed this practice 100 percent. Soon enough, XYZ employees, potential customers, and other visitors to the firm began to be grossed out by Linda's appearance and her odor. Eventually, XYZ switched Linda to its janitorial staff. Linda sues under Title VII, alleging discrimination on the basis of her religion. Will XYZ succeed if it argues that it was not discriminating against Linda's *religion,* but rather against her appearance and her aroma? Will it succeed if it argues that Linda's small cult does not count as a "religion" under Title VII? What else can the firm argue? Will this argument work?

7. Ann Hopkins, a senior manager at the accounting firm of Price Waterhouse, was denied partnership in the firm. A persistent theme in existing partners' written comments on Hopkins's candidacy was the belief that Hopkins acted in ways inappropriate for a woman to act. Thus, one partner described her as "macho," another wrote that she "overcompensated for being a woman," yet another advised that she take "a course at charm school," and still others objected to her use of profanity. Also, a partner who tried to help Hopkins through the process told her that to improve her chances, she should walk more femininely, dress more femininely, wear makeup, have her hair styled, and wear jewelry. Assuming that these opinions were the only reason for Hopkins's failure to make partner, was that denial illegal sex discrimination under Title VII?

8. Mechelle Vinson alleged that during her four years with the Meritor Savings Bank, her supervisor, Sidney Taylor, repeatedly demanded sexual favors from her and that she had sexual intercourse with him on 40 to 50 separate occasions. She also contended that Taylor fondled her in front of other employees, followed her into the women's restroom, exposed himself to her, and forcibly raped her on several occasions. Despite these allegations, however, Vinson apparently was well treated by her employer in other respects. She received three promotions during her time with the bank, and it was undisputed that her advancement was based solely on merit. Assuming that Vinson's allegations are true and that Taylor's behavior was unwelcome to her, can she recover against the bank for quid pro quo sexual harassment? Can she recover for work environment sexual harassment? Assume that the bank would be liable for Taylor's behavior.

9. At the age of 56, James O'Connor was fired by his employer. O'Connor's replacement was 40 years old. Was the replacement within the ADEA's protected age group? If so, does this prevent O'Connor from successfully suing for age discrimination under the ADEA?

10. William Guthrie managed a JC Penney Company store in Meridian, Mississippi. JC Penney originally had a policy requiring all store managers to retire at age 60, but this policy was changed after passage of the ADEA. In 1979, just before Guthrie's 60th birthday, various Penney employees made "friendly" inquiries about his retirement plans. Guthrie, however, continued to manage the Meridian store, receiving satisfactory performance ratings and making decent profits for

JC Penney. In 1982, however, Guthrie's new Penney supervisor reprimanded Guthrie before other store employees, overrode several decisions ordinarily made by Guthrie, lowered Guthrie's performance ratings, and gave him some difficult new performance objectives. Feeling that his discharge was inevitable, Guthrie resigned. Under the younger store manager who succeeded him, the Meridian store did less well in sales and profits, but the new manager received satisfactory performance ratings and was allowed to run the store without interference. Guthrie sued Penney for constructive discharge under the ADEA. What method of proof would his suit involve? Can that method be used under the ADEA?

11. Vern Peterson, a customs officer with a Utah corporation, was fired for refusing to falsify tax and customs documents in violation of federal and state law. What theory of wrongful discharge offers Peterson his best bet for recovery and why?

12.  *Video Case.* See "How Safe Is Too Safe?" Mike, a factory worker at XYZ Manufacturing, suffers injury to his fingers while working for XYZ. The injury occurs while Mike is operating a table saw built by ABCO Assembly. The saw was designed with a detachable blade guard assembly. The blade guard assembly would have prevented Mike's injury had it been in place while he was using the saw, but it was detached at that time. Assuming for the sake of argument that Mike was contributorily negligent or that he assumed the risk of the injury he suffered, can XYZ use either of these defenses to prevent Mike from recovering under workers' compensation for his injuries? Suppose that Mike wants to mount a product liability suit against ABCO. Would workers' compensation block such a suit?

13. Sandra Walton was fired from her job with the Mental Health Association of Southeastern Pennsylvania ("MHASP"). She sued MHSAP under the Americans with Disabilities Act, alleging that she suffered discrimination because her employer regarded her as obese and thus as disabled. Assuming that it is a disability, did Walton's obesity substantially limit one or more of her major life activities?

Chapter Fifty-One

Environmental Regulation

Chapter Outline

I. Historical Perspective
- *A. The Environmental Protection Agency*
- *B. The National Environmental Policy Act*

V. Regulation of Chemicals
- *A. Background*
- *B. Regulation of Agricultural Chemicals*
- *C. Toxic Substances Control Act*
- *D. Biotechnology*

Today's businessperson must be concerned not only with competing effectively against competitors but also with complying with a myriad of regulatory requirements. For many businesses, particularly those that manufacture goods or that generate wastes, the environmental laws and regulations loom large in terms of the requirements and costs they impose. They can have a significant effect on the way businesses have to be conducted as well as on their profitability. This area of the law has expanded dramatically over the last three decades, and environmental issues are a major concern of people and governments around the world. This chapter will briefly discuss the development of environmental law and will outline the major federal statutes that have been enacted to control pollution of air, water, and land.

Historical Perspective

Historically, people assumed that the air, water, and land around them would absorb their waste products. In recent times, however, it has become clear that nature's capacity to assimilate people's wastes is not infinite. Burgeoning population, economic growth, and the products of our industrial society can pose risks to

human health and the environment. The societal challenge is to accommodate economic activity and growth and at the same time provide reasonable protection of human health and the environment.

Concern about the environment is not a recent phenomenon. In medieval England, Parliament passed smoke control acts making it illegal to burn soft coal at certain times of the year. Where the owner or operator of a piece of property is using it in such a manner as to unreasonably interfere with another owner's (or the public's) health or enjoyment of his property, the courts have long entertained suits to abate the nuisance. Nuisance actions, which are discussed in Chapter 24, Real Property, are frequently not ideal vehicles for dealing with widespread pollution problems. Rather than a hit-or-miss approach, a comprehensive across-the-board approach may be required.

Realizing this, the federal government, as well as many state and local governments, had passed laws to abate air and water pollution by the late 1950s and 1960s. As the 1970s began, concern over the quality and future of the environment produced new laws and fresh public demands for action. During the 1980s, these laws were refined and, in some cases, their coverage was extended. Environmental concerns continue to be prominent around the globe, and many countries, both individually and collectively, have programs in place to address them. Accordingly, it is increasingly important that the businessperson be cognizant of the legal requirements and the public's environmental concerns in operating a business. These requirements and concerns not only may pose challenges to businesses but can provide opportunities for them as well.

The Environmental Protection Agency

In 1970, the Environmental Protection Agency was created to consolidate the federal government's environmental responsibilities. This was an explicit recognition that the problems of air and water pollution, solid waste disposal, water supply, and pesticide and radiation control were interrelated and required a consolidated approach. Congress subsequently passed comprehensive new legislation covering, among other things, air and water pollution, pesticides, ocean dumping, and waste disposal. Among the considerations prompting these laws were protection of human health, aesthetics, economic costs of continued pollution, and protection of natural systems.

The initial efforts were aimed at problems that, by and large, could be seen, smelled, or tasted. As control requirements have been put in place and implemented by industry and government, and as significant progress has been noted in the form of cleaner air and water, attention has focused increasingly on problems that are somewhat less visible but potentially more threatening—the dangers posed by toxic substances. These dangers have come into more prominence as scientific research indicates the risks posed by some substances, as new detection technology has enabled the detection of suspect substances in ever more minute quantities in the world around us, and as increased monitoring and testing is conducted. Determination of the degree of risk posed by any particular substance or proposed action—and deciding the most appropriate control strategy—frequently triggers strong disagreements within society because of what is at stake in terms of economic costs and protection of health and the environment.

The National Environmental Policy Act

The National Environmental Policy Act (NEPA) was signed into law on January 1, 1970. The act required that an environmental impact statement be prepared for every recommendation or report on legislation and for every major federal action significantly affecting the quality of the environment. The environmental impact statement must: (1) describe the environmental impact of the proposed action, (2) discuss impacts that cannot be avoided, (3) discuss the alternatives to the proposed action, (4) indicate differences between short- and long-term impacts, and (5) detail any irreversible commitments of resources.

NEPA requires a federal agency to consider the environmental impact of a project before the project is undertaken. Other federal, state, and local agencies, as well as interested citizens, have an opportunity to comment on the environmental impact of a project before the agency can proceed. Where the process is not followed, citizens can and have gone to court to force compliance with NEPA. A number of states and local governments have passed their own environmental impact laws requiring NEPA-type statements for major public and private developments.

While the federal and state laws requiring the preparation of environmental impact statements appear directed at government actions, it is important to note that

the government actions covered often include the granting of permits to private parties. Thus, businesspeople may readily find themselves involved in the preparation of an environmental impact statement—for example, in connection with a marina to be built in a navigable waterway or a resort development that will impact wetlands, both of which require permits from the U.S. Army Corps of Engineers. Similarly, a developer seeking a local zoning change so she can build a major commercial or residential development may find that she is asked to finance a study of the potential environmental impact of her proposed project.

Air Pollution

Background

Fuel combustion, industrial processes, and solid waste disposal are the major contributors to air pollution. People's initial concern with air pollution related to what they could see—visible or smoke pollution. For instance, in the 1880s, Chicago and Cincinnati enacted smoke control ordinances. As the technology became available to deal with smoke and particulate emissions, attention focused on other, less visible gases that could adversely affect human health and vegetation or that could increase the acidity of lakes, thus making them unsuitable for fish.

Clean Air Act

The comprehensive legislation enacted in 1970 and known as the **Clean Air Act** provides the basis for the present approach to air pollution control. In 1977, Congress modified the 1970 act and enacted provisions designed to prevent deterioration of the air in areas where its quality currently exceeds that required by federal law. Thirteen years then passed before Congress, in 1990, enacted a major revision to the act to deal with acid rain, toxic air pollutants, and urban smog problems that were not satisfactorily dealt with under the existing legislation.

Ambient Air Control Standards

The Clean Air Act established a comprehensive approach for dealing with air pollution. EPA is required to set **national ambient air quality standards** for the major pollutants that have an adverse impact on human health—that is, to regulate the amount of a given pollutant that may be present in the air around us. The ambient air quality standards are set at two levels: (1) **primary standards** are designed to protect the public's health from harm; and (2) **secondary standards** are designed to protect vegetation, materials, climate, visibility, and economic values. Pursuant to this statutory mandate, EPA has set national ambient air quality standards for carbon monoxide, nitrogen oxide, sulfur oxide, ozone, lead, and particulate matter.

Each state is required to develop a **state implementation plan** for meeting national ambient air quality standards. This necessitates an inventory of the various sources of air pollution and their contribution to the total air pollution in the air quality region. The major emitters of pollutants are then required to reduce their emissions to a level that ensures that overall air quality meets the national standards. For example, a factory may be required to limit its emissions of volatile organic compounds (a contributor to ozone or smog) to a certain amount per unit of production or hour of operation; similarly, a power plant might have its emissions of sulfur oxides and nitrogen oxides limited to so many pounds per Btu of energy produced. The states have the responsibility for selecting which activities must be regulated or curtailed so that overall emissions at any point in the state or area do not exceed the national standards.

Because by the late 1980s many of the nation's major urban areas were still not in compliance with the health-based standards for ozone and carbon monoxide, Congress, in its 1990 amendments, imposed an additional set of requirements on the areas that were not in compliance. Thus, citizens living in the areas and existing businesses, as well as prospective businesses seeking to locate in the designated areas, face increasingly stringent control measures designed to bring the areas into attainment with the national standards. These new requirements will mean that businesses such as bakeries that are generally not thought of as major polluters of the air will have to further control their emissions, and that paints and other products that contain solvents may have to be reformulated.

Acid Rain Controls

Responding to the 1970 Clean Air Act, which sought to protect the air in the area near sources of air pollution, many electric generating facilities built tall smokestacks so that the emissions were dispersed over

a broader area. Unwittingly, this contributed to long-range transport of some of the pollutants, which changed chemically enroute and fell to earth many miles away in the form of acid rain, snow, fog, or dry deposition. For a number of years, a considerable debate ensued over acid rain, in particular as to whether it was a problem, what kind of damage it caused, whether anything should be done about it, and who should pay for the cost of limiting it. The 1990 amendments addressed acid deposition by among other things placing a cap on the overall emissions of the contributors to it (the oxides of sulfur and nitrogen) and requiring electric utilities to reduce their emissions to specified levels in two steps over the next decade. This required most electric generating facilities in the country to install large control devices known as scrubbers, to switch to lower sulfur coal, or to install so-called clean coal technologies. The 1990 amendments also provide an innovative system whereby companies whose emissions are cleaner than required by law can sell their rights to emit more sulfur oxide—known as *allowances*—to other companies that may be finding it more difficult to meet the standards.

Control of Toxic Air Pollutants

The 1970 Clean Air Act also required EPA to regulate the emission of toxic air pollutants. Under this authority, EPA set standards only for asbestos, beryllium, mercury, vinyl chloride, benzene, and radio nuclides. Unhappy with the slow pace of regulation of toxic air pollutants, Congress in 1990 specified a list of 189 chemicals for which EPA is required to issue regulations requiring the installation of the maximum available control technology. The regulations are to be developed and the control technology installed by industry in phases over the next decade. Thus, while many toxic emissions have largely gone unregulated, that situation will change in the next few years. In addition, a number of chemical companies have announced they are voluntarily reducing their emissions of toxic chemicals to levels below those they are required to meet by law.

The case that follows, *United States v. Midwest Suspension and Brake,* involves the enforcement of an EPA regulation that controls the management and disposal of asbestos and asbestos-containing materials.

United States v. Midwest Suspension and Brake *49 F. 3d 1197 (6th Cir. 1995)*

Midwest Suspension and Brake is in the business of supplying parts for heavy-duty truck suspensions, steering systems, and brakes. One of the operations it performs concerning brake systems involves the collection and rehabilitation of used brake shoes for resale. During the rehabilitation process, brake shoes are disassembled and parts that may contain asbestos are discarded. Some brake shoes are delined, a procedure performed by removing rivets that hold the brake lining to the brake table and then cleaning, sandblasting, painting, and relining the table with a new brake block. Old brake blocks and brake linings, which contain asbestos, are discarded.

During an EPA inspection of the Midwest facility, numerous emissions of asbestos were documented and the shop floor yielded detectable amounts of asbestos. As a result, EPA issued a "finding of violation" of the "no visible emission" requirement of the National Emission Standard for Hazardous Air Pollutants (NESHAP) for asbestos. To resolve the matter, Midwest agreed to the issuance of an Administrative Order (AO) that required that Midwest comply with the Clean Air Act and the asbestos NESHAP, including the no visible emission requirement.

As a preventative measure, the AO specified waste management requirements for Midwest operations including the following: (1) that delining wastes fall into a sturdy cardboard box, instead of falling to the ground; (2) that the box be securely closed and wrapped so that it would not leak when discarded; and (3) that the box bear a warning label. The AO also required that the floor of the delining area be vacuumed, not swept, and that the vacuum residue be tightly sealed before disposal. Finally, the AO required that asbestos waste be segregated and separately disposed of, without compacting, at a landfill.

Subsequent EPA inspections of the Midwest facility found numerous violations of the AO—as did inspections by the Wayne County (Michigan) Health Department. Asbestos wastes were being compacted, resulting

in visible emissions. Vacuum residue was not tightly sealed, and boxes of delining wastes were improperly taped, resulting in visible emissions during landfill disposal. Asbestos-containing materials were being dropped on the shop floor, and the floor was being broom cleaned rather than vacuumed.

When efforts to have Midwest comply with the AO were unsuccessful, EPA filed suit against it in federal court. EPA sought injunctive relief as well as civil penalties of up to $25,000 per day for each violation. The federal district court found that Midwest had violated the Clean Air Act and ordered it to pay a $50,000 civil penalty. Midwest appealed, contending, among other things, that it did not fall under the Clean Air Act or the asbestos NESHAP because it did not fabricate friction products containing asbestos within the meaning of the Act.

Contie, Circuit Judge According to the NESHAP definition of "fabrication," it includes *any* processing of a manufactured product. A plain reading of this definition is that "fabricating" is not limited to specific types of processes, such as preparing chemical substances, but entails *any* processing of a manufactured product containing asbestos. Moreover, the EPA has explained that the definition of "processing" includes operations which "cut, shape, assemble, mix, or otherwise alter" a manufactured product that contains commercial asbestos.

The district court found that Midwest's brake refurbishing operation clearly falls within this definition of processing, and therefore Midwest is considered a business that "fabricates" friction products containing commercial asbestos within the meaning of the Act. The court found that Midwest's business involves among other things, the production and sale of rebuilt brake shoes for medium and heavy duty trucks. As described by Robert Cuipak, Midwest's general manager, Midwest's process of making rebuilt brake shoes includes the following:

> We take used brake shoes, deline them, inspect them to make sure that they are still to the manufacturer's specifications, clean them, paint them and then reline them with brake lining. And those are made available as second-hand shoes.

The district court found that Midwest "fabricated" brake shoes by "cutting" and "altering" used brake shoes by removing their linings, which contain asbestos, and by assembling refurbished brake cores with new linings, which may contain asbestos, for sale as rebuilt shoes. The court found that the entire rebuilding operation is a "process," and that Midwest's production of rebuilt brake shoes which includes a delining process, a sandblasting process, an assembly of the cores and linings, and, in some cases, the cutting, grinding, and drilling of strip stock, constitutes "fabrication" within the meaning of the Act.

We agree with the district court that these operations come within the definition of "fabrication"—the processing of friction materials containing asbestos—as contemplated by the Act. Substantial evidence in the record indicates that during Midwest's operations, particularly during the delining phase where the plow on the machines breaks and shatters the used brake linings containing asbestos, and during sandblasting, where asbestos fibers encapsulated in rust on the brake cores are pulverized into trillions of fibers, asbestos-containing material is plainly being "cut" and "otherwise altered."

Furthermore, there is evidence in the record to support the government's contention that the Asbestos NESHAP was amended specifically so that the regulations would apply to brake relining operations, such as Midwest's operation. In 1973, the EPA conducted an extensive investigation of fabricating facilities and concluded that facilities that process brake shoe linings generated significant amounts of asbestos dust. For that reason, in 1975, the EPA amended the Asbestos NESHAP to include the fabricating standard, which regulates facilities that "fabricate" friction products.

The friction product fabricating standards were promulgated in 1975 and published to provide a full opportunity for notice and comment by the public. Therefore, Midwest's allegation that the terms of the regulation were too broad to give it notice that its operations would be covered has no merit. Midwest, as a business dealing with asbestos, was under a duty to be aware of the published regulations and their interpretation.

Judgment against Midwest affirmed.

New Source Controls

The Clean Air Act requires that new stationary sources such as factories and power plants install the best available technology for reducing air pollution. EPA is required to establish the standards to be met by new stationary sources and has done so for the major stationary sources of air pollution. This means that a new facility covered by the regulations must install state of the art control technology, even if it is locating in an area where the air quality is much better than that required by law. Two major policy objectives underlie this requirement: (1) to provide a level playing field for new industry irrespective of where it locates and (2) to gradually improve air quality by requiring state of the art controls whenever a new facility is built.

Enforcement

The primary responsibility for enforcing air quality standards lies with the states, but the federal government has the right to enforce the standards where the states fail to do so. The Clean Air Act also provides for suits by citizens to force industry or the government to fully comply with the act's provisions.

Automobile Pollution

The Clean Air Act provides specifically for air pollution controls on transportation sources such as automobiles. The major pollutants from automobiles are carbon monoxide, hydrocarbons, and nitrogen oxides. Carbon monoxide is a colorless, odorless gas that can dull mental performance and even cause death when inhaled in large quantities. Hydrocarbons, in the form of unburned fuel, are part of a category of air pollutants known as volatile organic compounds (VOCs). VOCs combine with nitrogen oxides under the influence of sunlight to become ozone—we know it as smog.

The 1970 Clean Air Act required a reduction of 90 percent of the carbon monoxide and hydrocarbons emitted by automobiles by 1975 and a 90 percent reduction in the nitrogen oxides emitted by 1976. At the time, these requirements were "technology forcing"; that is, the manufacturers could not rely on already existing technology to meet the standards but rather had to develop new technology. Ultimately, most manufacturers had to go beyond simply making changes in engine design and utilize pollution control devices known as catalytic converters.

Subsequently, Congress addressed the question of setting even more stringent limits on automobile emissions while at the same time requiring that the new automobiles get better gas mileage. The 1990 amendments require further limitations on emissions from tailpipes, the development of so-called clean-fueled vehicles (such as electric and natural gas fueled vehicles) for use in cities with dirty air, and the availability of oxygenated fuels (which are cleaner burning) in specified areas of the country that are having difficulty meeting the air quality limits at least part of the year. These new requirements have significant ramifications for the oil and automobile industries.

Under the Clean Air Act, no manufacturer may sell vehicles subject to emission standards without prior certification from EPA that the vehicles meet the required standards. The tests are performed on prototype vehicles and if they pass, a certificate of conformity covering that type of engine and vehicle is issued. EPA subsequently can test vehicles on the assembly line to make sure that the production vehicles covered by the certificate are meeting the standards. The manufacturers are required to warrant that the vehicle, if properly maintained, will comply with the emission standards for its useful life. If EPA discovers that vehicles in actual use exceed the emission standards, it may order the manufacturer to recall and repair the defective models; this is a power that EPA has exercised on a number of occasions.

The act also provides for the regulation and registration of fuel additives such as lead. In the 1980s, lead was largely phased out of use as an octane enhancer in gasoline. As indicated previously, the 1990 amendments provide for the availability of alternative fuels based on ethanol and methanol.

International Air Problems

During the late 1970s and 1980s, concern developed that the release of chlorine-containing substances such as chlorofluorocarbons (CFCs) used in air conditioning, refrigeration, and certain foam products was depleting the stratospheric ozone layer. This could lead to more ultraviolet radiation reaching the earth and, in turn, more skin cancer. Subsequently, a number of nations, acting under the aegis of the United Nations, signed a treaty agreeing first to limit any increases in production of chlorine-containing substances and ultimately to significantly phase out their use. The 1990 amendments to the Clean Air Act implement the obligations of the United

States under the treaty and provide for the phasedown and phaseout of a number of chlorofluorocarbons; accordingly, many businesses are trying to develop or to locate substitutes for those chemicals that will be available only in reduced quantities, if at all.

Other air pollution issues with international dimensions that may result in multinational control efforts are acid rain and global warming/climate change resulting, in part, from increased emissions of carbon dioxide to the atmosphere.

Indoor Air Pollution

As we increased the insulation and made our buildings airtight to conserve energy, we generally reduced the air exchange and increased the concentrations of pollutants in our homes and workplaces. In recent years, attention has focused on a range of indoor air problems, sometimes known under the term *sick building syndrome,* including radon gas, asbestos, the products of combustion from fireplaces and stoves, molds and pollens, formaldehyde, cigarette smoke, pesticides, and cleaning products. Some of these problems are being dealt with on a problem-by-problem, or product-by-product, basis under various laws. Others are being addressed by providing information to consumers so that they can take appropriate actions to protect themselves. In some cases, Congress and other legislative bodies have required that steps be taken to minimize the risks, such as the federal requirement for schools to inspect for asbestos and to remove it where certain conditions are found.

Radiation Control

In recent years, people have been concerned about radioactivity, particularly radioactivity from nuclear-fueled power plants. Some of these concerns were accentuated by the accident at Chernobyl in the former USSR and the one at Three Mile Island in the United States. Citizens are specifically concerned about the release of radioactivity into the environment during normal operation of the nuclear reactors, accidents through human error or mechanical failure, and disposal of the radioactive wastes generated by the reactors. They are also concerned that the discharge of heated water used to cool the reactor—thermal pollution—may cause damage to the environment. These issues are of particular concern to businesses such as utilities that operate nuclear-powered generating facilities and also to segments of the health industry—such as hospitals and other medical facilities—that may utilize low-level radioactive materials in their diagnostic and treatment activities.

Currently, the problems of reactor safety are under the jurisdiction of the Nuclear Regulatory Commission, which exercises licensing authority over nuclear power plants. EPA is responsible for setting standards for radioactivity in the overall environment and for dealing with the problem of disposal of some radioactive waste. EPA also handles the thermal pollution problem pursuant to its water pollution control authority. In addition, EPA is responsible for regulating emissions from a variety of other sources, such as uranium mill tailing piles and uranium mines.

Water Pollution

Background

History is replete with plagues and epidemics brought on by poor sanitation and polluted water. Indeed, preventing waterborne disease has always been the major reason for combating water pollution. In the early 1970s, fishing and swimming were prohibited in many bodies of water, and game fish could no longer survive in some waters where they had formerly thrived. Lake Erie was becoming choked with algae and considered to be dying. The nation recognized that water pollution could affect public health, recreation, commercial fishing, agriculture, water supplies, and aesthetics. During the 1970s, Congress enacted three major statutes to protect our water resources: the Clean Water Act; the Marine Protection, Research, and Sanctuaries Act; and the Safe Drinking Water Act.

Early Federal Legislation

Federal water pollution legislation dates back to the 19th century when Congress enacted the River and Harbor Act of 1886. In fact, this statute, recodified in the River and Harbor Act of 1899, furnished the legal basis for EPA's initial enforcement actions against polluters. The act provided that people had to obtain a discharge permit from the Army Corps of Engineers to deposit or discharge refuse into a navigable waterway. Under some contemporary court decisions, even hot water discharged from nuclear power plants was considered refuse. The permit system established pursuant to the "Refuse Act" was replaced in 1972 by

a more comprehensive permit system now administered by EPA.

Congress passed the initial Federal Water Pollution Control Act (FWPCA) in 1948. Amendments to the FWPCA in 1956, 1965, 1966, and 1970 increased the federal government's role in water pollution abatement and strengthened its enforcement powers.

Clean Water Act

The 1972 amendments to the FWPCA—known as the Clean Water Act—were as comprehensive in the water pollution field as the 1970 Clean Air Act was in the air pollution field. They proclaimed two general goals for this country: (1) to achieve wherever possible by July 1, 1983, water clean enough for swimming and other recreational uses and clean enough for the protection and propagation of fish, shellfish, and wildlife; and (2) to have no discharges of pollutants into the nation's waters by 1985. These goals reflected a national frustration with the lack of progress in dealing with water pollution and a commitment to end such pollution. The new law set out a series of specific actions that federal, state, and local governments and industry were to take by certain dates and also provided strong enforcement provisions to back up the deadlines. In 1977 and again in 1987, Congress modified the 1972 act by adjusting some of the deadlines and otherwise fine-tuning the act.

State Role

Under the Clean Water Act, the states have the primary responsibility for preventing, reducing, and eliminating water pollution. The states have to do this within a national framework, and EPA is empowered to move in if the states do not fulfill their responsibilities.

Controls on Industrial Wastes

The act set a number of deadlines to control water pollution from industrial sources. It required industries discharging wastes into the nation's waterways to install the *best available water pollution control technology;* new sources of industrial pollution must use the best available demonstrated control technology. In each instance, EPA is responsible for issuing guidelines as to the best available technologies. Industries that discharge their wastes into municipal wastewater treatment systems are required to *pretreat* the wastes so that they do not interfere with the biological operation of the plant or pass through the plant without treatment.

Water Quality Standards

The act continued and expanded the previously established system of setting *water quality standards* by designating the uses of specific bodies of water for recreation, public water supply, propagation of fish and wildlife, and agricultural and industrial water supply. Then, the maximum daily loads of various pollutants are set so that the water is suitable for the designated use.

Discharge Permits

The act requires all municipal and industrial discharges to obtain permits—known as an *NPDES permit* or National Pollution Discharge Elimination System permit—that spell out the amounts and specific pollutants that permit holders are allowed to discharge and any steps that they must take to reduce their present or anticipated discharge. These permits are the vehicles for applying and enforcing the technology-based standards and the water quality–based limitations discussed above. Dischargers are also required to keep records, install and maintain monitoring equipment, and sample their discharges.

Enforcement

Both civil and criminal sanctions are included in the act. Criminal penalties for violating the law range from a minimum of $2,500 for a first offense up to $50,000 per day and two years in prison for subsequent violations. The act is enforced by federal and state governments. In addition, any citizen or group of citizens whose interests are adversely affected has the right to bring a court action against anyone violating an effluent standard, limitation, or order issued by EPA or a state. A significant number of cases have been brought by citizen-action groups against firms whose wastewater discharges exceeded the limits of their discharge permits. Citizens also have the right to take court action against EPA if it fails to carry out mandatory provisions of the law.

In the case that follows, *United States v. Hopkins,* a corporate officer was held criminally liable for falsifying reports to the government concerning the discharge of pollutants.

United States v. Hopkins *53 F.3d 533 (2ND Cir. 1995)*

Spirol International Corporation is a manufacturer of metal shims and fasteners located in northeastern Connecticut. Spirol's manufacturing operation involves a zinc-based plating process that generates substantial amounts of wastewater containing zinc and other toxic materials; this wastewater is discharged into the nearby Five Mile River. The U.S. Environmental Protection Agency (EPA) has delegated to the State of Connecticut's Department of Environmental Protection (DEP) the authority to administer the Clean Water Act provisions applicable to Spirol's discharges into the river. In 1987, Spirol entered into a consent order with DEP requiring Spirol to pay a $30,000 fine for past violations and to comply in the future with discharge limitations specified in the order. In February 1989, DEP issued a modified "wastewater discharge permit" imposing more restrictive limits on the quantity of zinc and other substances that Spirol was permitted to release into the river.

From 1987 through September 6, 1990, Robert Hopkins was Spirol's vice president for manufacturing. Hopkins signed the 1987 consent decree on behalf of Spirol and had the corporate responsibility for ensuring compliance with the order and the DEP permit. The DEP permit required Spirol each week to collect a sample of its wastewater and send it to an independent laboratory by Friday morning of that week. Spirol was required to report the laboratory results to DEP in a discharge monitoring report once a month. Under the DEP permit, the concentrations of zinc in Spirol's wastewater were not to exceed 2.0 milligrams per liter in any weekly sample, nor to average more than one milligram per liter in any month.

During the period March 1989 to September 1990, Spirol began its weekly sampling process on Monday. A composite sample was taken and analyzed in house. If it contained less than one milligram of zinc, it was sent to the independent laboratory with a "chain of custody" record signed by Hopkins. However, if it exceeded one milligram of zinc, it was discarded and another sample taken and tested the following day. In 54 of the 78 weeks, the samples were sent to the laboratory later than Tuesday. If the Wednesday sample also failed the in-house test, Hopkins would sometimes order that it be discarded and another taken on Thursday, but more often he instructed his subordinates doing the testing to dilute the sample with tap water or to reduce the zinc concentration using an ordinary coffee filter. Any Friday sample that failed the in-house test was always diluted or filtered so that a good sample could be sent to the laboratory by the Friday deadline. In some samples sent to the laboratory there was more tap water than wastewater.

During this period Hopkins filed with DEP monthly discharge monitoring reports consolidating the weekly tests from the independent laboratory. The reports showed no zinc concentrations above one milligram per liter. On each report, Hopkins signed the following certification.

> I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who administer the system, or those persons directly responsible for gathering the information, the information is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Contrary to Hopkins's certifications, his subordinates testified that he had caused the samples to be tampered with about 40 percent of the time. On some 25–30 occasions when he had been told that a satisfactory sample had finally been obtained by means of dilution or filtration, Hopkins responded, "I know nothing, I hear nothing." Hopkins was told that the testing procedures were improper, yet he continued to sign the certifications and Spirol continued its discharges into the river.

In December 1993, Hopkins was charged in a three-count indictment alleging (1) that he had knowingly falsified or tampered with Spirol's discharge sampling methods, (2) that he had knowingly violated the conditions of the permit, and (3) that he had conspired to commit those offenses. Hopkins was convicted following a jury trial and sentenced to 21 months in prison, with two years probation following that, and a $7,500 fine. Hopkins appealed, arguing that the government should have been required to prove that he intended to violate the law and that he had specific knowledge of the particular statutory, regulatory or permit requirements

imposed under the Clean Water Act. The government contended that it was enough to prove that he had acted voluntarily or intentionally to falsify, tamper with, or render inaccurate a monitoring method—or to violate the permit—and that he did not do so by mistake, accident or other innocent reason.

Kearse, Circuit Judge. Subsection (2) of section 1319(c), whose violation was alleged in count two of the indictment, establishes criminal penalties, including fines of up to $50,000 per day and imprisonment for up to three years, for "any person" who, inter alia, knowingly violates section 1311, 1312, 1316, 1317, 1318, 1321(b)(3), 1328, or 1345 of [Title 33], or any permit condition or limitation implementing any of such sections in a permit issued under [the Clean Water Act] by the Administrator or by a State.

Hopkins contends that the district court should have instructed the jury that it could not find him guilty of violating this section unless it found that he knew he was acting in violation of the CWA or the DEP permit. We disagree.

Section 1319(c)(2)(A) itself does not expressly state whether the adverb "knowingly" is intended to require proof that the defendant had actual knowledge that his conduct violated any of the statutory provisions that follow the phrase "knowingly violates" or had actual knowledge that his conduct violated a permit condition. As a matter of abstract logic, it would seem that a statute making it unlawful to "knowingly violate" a given statutory or permit provision would require proof that the defendant both violated and knew that he violated that provision. In defining the mental state required for conviction under a given statute, however, the courts must seek the proper "inference of the intent of Congress."

In *United States v. International Minerals & Chemical Corp.* ("International Minerals"), the Court construed a statute that authorized the Interstate Commerce Commission ("ICC") to promulgate regulations governing the transport of corrosive liquids and imposed criminal penalties on those who "knowingly violated any such regulation." The Court held that the quoted phrase required the government to prove only that the defendant knew the nature of his acts, not that he knew his acts violated an ICC regulation. The Court stated that "where . . . dangerous or deleterious devices or products or obnoxious waste materials are involved, the probability of regulation is so great that anyone who is aware that he is in possession of them or dealing with them must be presumed to be aware of the regulation." Applying this presumption of awareness, the Court concluded that the phrase "knowingly violated any [ICC] regulation" was meant to be a "shorthand" method of referring to the acts or omissions contemplated by the statute.

Noting the general rule that ignorance of the law is no excuse, the court declined to attribute to Congress the inaccurate view that use of the word "knowingly" would require proof of knowledge of the law, as well as the facts. The mens rea presumption requires knowledge only of the facts that make the defendant's conduct illegal, lest it conflict with the related presumption, deeply rooted in the American legal system, that ordinarily ignorance of the law or a mistake of law is no defense to criminal prosecution

This court in *United States v. Laughlin* applied the *International Minerals* "presumption of awareness of regulation" in construing provisions of the Resource Conservation and Recovery Act ("RCRA") and the Comprehensive Environmental Response, Compensation and Liability Act ("CERCLA"). RCRA provides for the imposition of criminal penalties against any person who "knowingly treats, stores, or disposes of any hazardous waste identified or listed under [RCRA]" without a permit. We held that this provision did not require the government to prove that the defendant knew that the waste he dealt with was identified or listed under RCRA or that he lacked a disposal permit. Rather, we held that the government need prove only that the defendant knew the nature of the hazardous waste matter with which he dealt.

For several reasons, we view the presumption of awareness of regulation, applied to the ground-pollution offenses in *Laughlin,* to be equally applicable to the phrase "knowingly violates [the specified sections or permit]" in section 1319(c)(2)(A). Congress considered discharges of hazardous waste onto the ground, which are regulated in RCRA, as no less serious than such discharges into water. Further, the CWA sections to which section 1319(c)(2)(A) refers regulate a broad range of pollutant discharges, including "water quality related effluents," "toxic

pollutants" listed in accordance with section 1317(a), "oil and hazardous substances," and "sewage sludge." The vast majority of these substances are of the type that would alert any ordinary user to the likelihood of stringent regulation. Moreover, the very fact that a governmental permit has been issued enhances the user's awareness of the existence of regulation.

Thus, we conclude that the purpose and legislative history of section 1319(c)(2)(A) indicate that Congress meant that that section would be violated if the defendant's acts were proscribed, even if the defendant was not aware of the proscription.

Judgment of conviction affirmed.

Wetlands

Another aspect of the Clean Water Act having the potential to affect businesses as well as individual property owners is the wetlands provision. Commonly, wetlands are transition zones between land and open water. Under Section 404 of the act, any *dredging or filling* activity in a wetland that is connected to the waters of the United States—as well as in any water of the United States—requires a permit before any activity begins. The permit program is administered by the Army Corps of Engineers, with the involvement of the Environmental Protection Agency.

As can be seen in the *Bersani* case, which follows, the permit requirement can significantly limit a landowner's use of his property where the fill activity is viewed as injurious to the values protected by the act.

Bersani v. U.S. Environmental Protection Agency
674 F.Supp. 405 (N.D.N.Y. 1987) aff'd 395 F.2d 36 (2d Cir. 1988)

Pyramid Companies was an association of partnerships in the business of developing, constructing, and operating shopping centers; John Bersani was a principal in one of the partnerships. In 1983, Pyramid became interested in developing a shopping mall in the Attleboro, Massachusetts, area and focused its attention on an 82-acre site known as Sweden's Swamp along an interstate highway in South Attleboro. The project contemplated altering or filling some 32 acres of the 49.6 acres of wetlands on the property. At the same time, Pyramid planned to excavate 9 acres of uplands (nonwetlands) to create new wetlands and to alter some 13 acres of existing wetlands to enhance their value for fish and wildlife.

In 1984, Pyramid applied to the U.S. Army Corps of Engineers for a permit under Section 404 of the Clean Water Act to do the dredge and fill work in the wetlands. As part of its application, it was required to submit information on practicable alternative sites for its shopping mall. One site subsequently focused on by the Corps and the Environmental Protection Agency was about three miles north in North Attleboro. Pyramid relied on several factors in claiming that the site was not a practicable alternative to its proposed site: namely, the site lacked sufficient traffic volume and access from local roads, potential department store tenants had expressed doubts about the feasibility of the site, and previous attempts to develop the site had met with strong resistance from the surrounding community. However, after Pyramid examined the site, another major developer of shopping centers had taken an option to acquire the property.

The New England Division Engineer of the Corps recommended that the permit be denied because a practicable alternative with a less adverse effect on the environment existed. The Chief of Engineers directed that the permit be issued, noting that the alternative site was not available to Pyramid because it was owned by a competitor. He also believed that even if it was considered available, Pyramid had made a convincing case that the site would not fulfill its objectives for a successful project. EPA then exercised its prerogative under the Clean Water Act to veto the permit on the grounds that filling Sweden's Swamp to build the shopping mall would have an unacceptable adverse effect on the environment. In its view, another less environmentally damaging site had been available to Pyramid at the time it made its site selection; thus, any adverse effects on Sweden's Swamp were avoidable. Bersani and Pyramid then brought suit challenging the denial of its permit application.

McAvo, Judge Section 404(a) authorizes the Secretary of the Army, acting through the Corps, to issue permits for the discharge of dredged or fill material at specified disposal sites. Criteria developed by the EPA in conjunction with the Corps govern these permitting decisions. Generally, the Corps must employ a "practicable alternative" analysis in determining whether to allow a proposed discharge. Section 230.10 of the regulations provides:

> (a) . . . no discharge of dredged or fill material shall be permitted if there is a practicable alternative to the proposed discharge which would have less adverse impact on the aquatic ecosystem, so long as the alternative does not have other significant adverse environmental consequences. (2) An alternative is practicable if it is available and capable of being done, after taking into account cost, existing technology, and logistics in light of overall project purposes. If it is otherwise a practicable alternative, an area not presently owned by the applicant which could reasonably be obtained, utilized, expanded or managed in order to fulfill the basic purpose of the proposed activity may be considered. (3) Where the activity associated with a discharge which is proposed for a special aquatic site (including a wetland) does not require access or proximity to or siting within the special aquatic site in question to fulfill its basic purpose (i.e., is not "water dependent"), practicable alternatives that do not involve special aquatic sites are presumed to be available unless clearly demonstrated otherwise. In addition, where a discharge is proposed for a special aquatic site, all practicable alternatives to the proposed discharge which do not involve a discharge into a special aquatic site are presumed to have less adverse impact on the aquatic ecosystem, unless clearly demonstrated otherwise.

Where the proposed discharge involves a special aquatic site such as wetlands, a more stringent standard is imposed. Indeed Section 230.10(a)(3) creates a presumption that a practicable alternative exists when the discharge involves wetlands and the activity, here a shopping mall, is not "water dependent." Then the applicant must "clearly demonstrate" that no such alternative does in fact exist.

Pyramid argues that EPA's determination of feasibility was based on its erroneous conclusion that the marketplace considered the North Attleboro site suitable for a virtually identical regional shopping mall. Pyramid notes that six other shopping center developers over the past 15 years have tried and failed to develop the North Attleboro site as a shopping center. It contends that EPA has substituted its own judgment for that of the marketplace in an area in which it cannot claim expertise. The EPA, however, contends that it did not simply substitute its judgment for that of the developer. Instead, the EPA argues that the evidence on the record demonstrates that the North Attleboro site is suitable in fact for a regional shopping center mall virtually identical to that proposed by Pyramid. In this respect, the fact that a competing developer, the New England Development Company, had found the site suitable for a similar shopping mall and its own marketing analysis weighed in reaching this decision. The EPA also engaged in a review of the specific features that Pyramid found objectionable; namely, the distance from the primary trade area, lack of visibility from nearby highways, zoning, past failures of prior attempts to develop a shopping mall at the site, and various considerations. Consequently, the court finds that EPA's feasibility determination was not arbitrary.

Summary judgment granted for EPA.

Ocean Dumping

The Marine Protection, Research, and Sanctuaries Act of 1972 set up a permit system regulating the dumping of all types of materials into ocean waters. EPA has the responsibility for designating disposal sites and for establishing the rules governing ocean disposal. The Ocean Dumping Ban Act of 1987 required that all ocean dumping of municipal sewage sludge and industrial wastes be terminated by December 31, 1991. Thus, the major remaining questions of ocean dumping concern the disposal of dredge spoils from dredging to keep harbors open.

Drinking Water

In 1974, Congress passed, and in 1986 and in 1996 amended, the Safe Drinking Water Act that is designed to protect and enhance the quality of our drinking water. Under the act, EPA sets *primary*

drinking water standards, minimum levels of quality for water consumed by humans. The act also establishes a program governing the injection of wastes into wells. The primary responsibility for complying with the federally established standards lies with the states. Where the states fail to enforce the drinking water standards, the federal government has the right to enforce them.

A significant number of suppliers of drinking water are privately owned—and they, as well as the publicly owned systems, have to be concerned with meeting the federal standards. In addition, factories, trailer parks, schools, and other entities that draw drinking water from wells and provide it within their facility can find that they are also subject to the drinking water regulations.

Waste Disposal

Background

Historically, concern about the environment focused on decreasing air and water pollution as well as protecting natural resources and wildlife. People paid relatively little attention to the disposal of wastes on land. Until the early 1970s, much of the solid and hazardous waste generated was disposed of in open dumps and landfills. Although some of the waste we produce can be disposed of without presenting significant health or environmental problems, some industrial, agricultural, and mining wastes—and even some household wastes—are hazardous and can present serious problems. Unless wastes are properly disposed of, they can cause air, water, and land pollution as well as contamination of the underground aquifers from which much of our drinking water is drawn. Once aquifers have been contaminated, they can take a very long time to cleanse themselves of pollutants.

In the 1970s, the discovery of abandoned dump sites such as Love Canal in New York and the Valley of the Drums in Kentucky heightened public concern about the disposal of toxic and hazardous wastes. Congress has enacted several laws regulating the generation and disposal of hazardous waste: the Resource Conservation and Recovery Act mandates proper management and disposal of wastes currently generated; and the Comprehensive Environmental Response, Compensation, and Liability Act focuses on cleaning up past disposal sites threatening public health and the environment.

The Resource Conservation and Recovery Act

Congress originally enacted the Resource Conservation and Recovery Act (RCRA) in 1976 and significantly amended it in 1984. RCRA provides the federal government and the states with the authority to regulate facilities that generate, treat, store, and dispose of hazardous waste. Most of the wastes defined as hazardous are subject to a cradle-to-the-grave tracking system and must be handled and disposed of in defined ways. RCRA requires persons who generate, treat, store, or transport specified quantities of hazardous waste to obtain permits, to meet certain standards and follow specified procedures in the handling of the wastes, and to keep records. Figure 1 illustrates the form that must accompany all shipments of hazardous waste from the point of generation until its final treatment or disposal.

In addition, operators of land waste disposal facilities must meet financial responsibility requirements and monitor groundwater quality. EPA determines whether certain wastes should be banned entirely from land disposal; a significant number of wastes must be treated before they can be disposed of in land disposal units.

Underground Storage Tanks

In 1984, Congress directed that EPA also regulate underground product storage tanks such as gasoline tanks to prevent and respond to leaks that might contaminate underground water. The regulations that EPA issued to implement these requirements impose significant costs on many businesses such as gasoline stations that utilize such storage tanks.

State Responsibilities

EPA sets minimum requirements for state RCRA programs and then delegates the responsibility for conducting programs to the states when they have the legal ability and interest to administer them. Until a state assumes partial or complete responsibility for a RCRA program, the federal government administers the program.

Enforcement

Failure to comply with the hazardous waste regulations promulgated under RCRA can subject violators to civil and criminal penalties. In the *United States v. Dean* case, which follows, an employee of a company that disposed of hazardous waste without a RCRA permit was held criminally liable.

United States v. Dean *969 F.2d 187 (6th Cir. 1992)*

General Metal Fabricators, Inc. (GMF), owned and operated a facility in Erwin, Tennessee, which was engaged in metal stamping, plating, and painting. The facility utilized hazardous chemicals and generated hazardous waste but did not have a RCRA permit nor did it maintain the required records of the treatment, storage, and disposal of hazardous substances. The hazardous waste disposal practices at GMF were discovered by chance by state waste-management authorities whose attention was caught, while driving to an appointment at another facility, by two 55-gallon drums abandoned among weeds on GMF's property.

The owners of GMF, Joseph and Jean Sanchez, as well as Clyde Griffith, the plant manager, and Gale Dean, the production manager, were indicted for conspiracy to violate RCRA, and, individually, for violations of various sections of RCRA. At his request, Dean's trial was severed from that of the other defendants.

As production manager, Dean had day-to-day supervision of GMF's production process and employees. Among his duties was the instruction of employees on hazardous waste handling and disposal. Numerous practices at GMF violated RCRA. GMF's plating operations utilized rinse baths, contaminated with hazardous chemicals, which were drained through a pipe into an earthen lagoon outside the facility. In addition, Dean instructed employees to shovel various kinds of solid wastes from the tanks into 55-gallon drums. Dean ordered the construction of a pit, concealed behind the facility, into which 38 drums of such hazardous waste were tossed. The contents spilled onto the soil from open or corroded drums. Chemical analyses of soil and solid wastes revealed that the pit and the lagoon were contaminated with chromium. In addition, the pit was contaminated with toluene and xylene solvents. All of these substances are considered hazardous under RCRA. Drums of spent chromic acid solution were also illegally stored on the premises.

Dean was familiar with the chemicals used in each of the tanks on the production line and with the manner in which the contents of the rinse tanks were deposited in the lagoon. Material Safety Data Sheets (MSDS) provided to GMF by the chemical manufacturer clearly stated that the various chemicals in use at GMF were hazardous and were subject to federal pollution control laws. Dean was familiar with the MSDS and knowledgeable about their contents. The MSDS delivered with the chromic acid made specific reference to RCRA and to related EPA regulations. Dean told investigators that he "had read this RCRA waste code but thought it was a bunch of bull—."

Dean was convicted of conspiracy to violate RCRA as well as of (1) failure to file documentation of hazardous waste generation, storage, and disposal, (2) storage of spent chromic acid without a permit, (3) disposal of chromic acid rinse water and sludges in a lagoon without a permit, and (4) disposal of paint sludge and solvent wastes in a pit without a permit, all in violation of RCRA. Dean appealed his conviction.

Joiner, Senior District Judge The first of the issues raised by Dean is that the trial court erred in denying his motion for acquittal on the permit-related counts because there was no evidence that Dean knew of RCRA's permit requirement. Dean's characterization of the evidence is inaccurate, but moreover, we see no basis on the face of the statute for concluding that knowledge of the permit requirement is an element of the crime. The statute penalizes:

> Any person who— . . . (2) knowingly treats, stores or disposes of any hazardous waste identified or listed under this subchapter—(A) without a permit under this subchapter . . . ; or (B) in knowing violation of any material condition or requirement of such permit; or (C) in knowing violation of any applicable interim status or regulations. 42 U.S.C. section 6928(d)(2).

Dean was convicted of violating subsection 6928(d)(2)(A).

The question of interpretation presented by this provision is the familiar one of how far the initial "knowingly" travels. Other courts of appeals have divided on this question. We agree with the reasoning of the Court of Appeals for the Ninth Circuit in *United States v. Hoflin*. The "knowingly" which begins section 6928(d)(2) cannot be read as extending to the subsections without rendering nugatory the word "knowing" contained in subsections 6928(d)(2)(B) and (C). Subsection 6928(d)(2)(A) requires knowing treatment (or knowing storage, or knowing disposal) of hazardous waste. It also requires proof that the treatment, storage or disposal was done without a permit. It does not require that

the person charged must have known that a permit was required, and that knowledge is not relevant.

Dean also contends that the district court should have granted his motion for acquittal because subsection 6928(d)(2)(A) was not intended to reach employees who are not "owners" or "operators" of facilities. By its terms, the provision applies to "any person." "Person" is a defined term meaning "an individual . . . " Dean would be hard pressed to convince the court that he is not an "individual." He argues, however, that because only owners and operators of facilities are required to obtain permits, the penalty imposed for hazardous waste handling without a permit must apply only to owners and operators.

This contention is unpersuasive for numerous reasons. Of primary importance is the fact that it is contrary to the unambiguous language of the statute.

Affirmed.

Solid Waste

Mining, commercial, and household activities generate a large volume of waste material that can present problems if not properly disposed of. As population density has increased, causing a corresponding increase in the total volume of waste, it has become more difficult to find land or incinerators where the waste material can be disposed of properly. RCRA authorizes EPA to set minimum standards for such disposal, but states and local governments bear the primary responsibility for the siting and regulation of such activity.

As the cost and difficulty of disposing of waste increases, public attention focuses on reducing the waste to be disposed of, on looking for opportunities to recycle some of the waste material, and on changing the characteristics of the material that must ultimately be disposed of so that it poses fewer environmental problems. One of the significant challenges faced by tomorrow's businessperson will be in designing products, packaging, and production processes so as to minimize the waste products that result. A significant problem for both government and industry is the difficulty in trying to site new waste facilities. The NIMBY, or not-in-my-backyard syndrome, is pervasive as people almost universally desire to have the wastes from their everyday lives and from the economic activity in their community disposed of in someone else's neighborhood—any place but their own. As governments try to cope with the reality of finding places to dispose of wastes in an environmentally safe manner and at the same time cope with public opposition to siting new facilities, the temptation is strong to try to bar wastes from other areas from being disposed of in local facilities.

In the landmark case *City of Philadelphia v. New Jersey,* the U.S. Supreme Court struck down an attempt by the state of New Jersey to prohibit the importation of most solid waste originating outside the state. An ironic twist is that several decades later, we find a number of other eastern and midwestern states trying to find ways to block the importation of wastes from New Jersey into their states. In recent years, the Supreme Court has had occasion to reiterate its holding in *City of Philadelphia v. New Jersey* in a series of new cases involving efforts by states to block or limit the flow of solid and hazardous waste from outside their state to disposal sites within the state. One of the most recent cases in this series of cases, *Fort Gratiot Sanitary Landfill, Inc.,* follows.

Fort Gratiot Sanitary Landfill, Inc. v. Michigan Department of Natural Resources *112 S.Ct. 2019 (1992)*

In 1978, Michigan enacted its Solid Waste Management Act (SWMA), which required every Michigan county to estimate the amount of solid waste that would be generated in the county in the next 20 years and to adopt a plan providing for its disposal at facilities that comply with state health standards. After holding public hearings, the St. Clair County Board of Commissioners adopted a solid waste plan for the St. Clair County. In 1987, the Michigan Department of Natural Resources issued a permit to Fort Gratiot Sanitary

Landfill, Inc., to operate a sanitary landfill as a solid waste disposal area in the county. In December 1988, the Michigan Legislature amended the SWMA by adopting two provisions concerning the "acceptance of waste or ash generated outside the county of disposal area." The new provisions, which were effective immediately, prohibited the acceptance of out-of-county wastes unless the acceptance of such waste was explicitly authorized in the approved county solid waste management plan.

In February 1989, Fort Gratiot submitted an application to the St. Clair County Solid Waste Planning Committee for authority to accept up to 1,750 tons per day of out-of-state waste at its landfill. In the application Fort Gratiot promised to reserve sufficient capacity to dispose of all solid waste generated in the county in the next 20 years. The planning committee denied the application. Because the county's management plan did not authorize the acceptance of any out-of-county waste, Fort Gratiot was effectively prevented from receiving any solid waste that did not originate in St. Clair County.

Fort Gratiot then brought a lawsuit seeking a judgment declaring that the waste import restrictions violated the Commerce Clause of the U.S. Constitution and thus were unconstitutional and enjoining their enforcement. Fort Gratiot contended that requiring a private landfill operator to limit its business to the acceptance of local waste constituted impermissible discrimination against interstate commerce. The District Court dismissed the lawsuit. It concluded, first, that the statute did not discriminate against interstate commerce because the limitation applied equally to Michigan counties outside the county as well as to out-of-state waste. It also noted that each county had discretion to accept out-of-state waste and that any incidental burden on interstate commerce was not excessive in relation to the public health and environmental benefits derived by Michigan from the statute. The Court of Appeals affirmed the ruling, and Fort Gratiot appealed to the U.S. Supreme Court.

Stevens, Justice In *Philadelphia v. New Jersey* (1978) we held that a New Jersey law prohibiting the importation of most "solid or liquid waste which originated or was collected outside the territorial limits of the State" violated the commerce clause of the United States Constitution. In this case petitioner challenges a Michigan law that prohibits private landfill operators from accepting solid waste that originates outside the county in which their facilities are located. Adhering to our holding in the *New Jersey* case we conclude that this Michigan statute is also unconstitutional.

Philadelphia v. New Jersey provides the framework for our analysis of this case. Solid waste, even if it has no value, is an article of commerce. Whether the business arrangements between out-of-state generators of waste and the Michigan operator of a waste disposal site are viewed as "sales" of garbage or "purchases" of transportation and disposal services, the commercial transactions unquestionably have an interstate character. The commerce clause thus imposes some constraints on Michigan's ability to regulate these transactions.

As we have long recognized, the "negative" or "dormant" aspect of the commerce clause prohibits States from advancing their own commercial interests by curtailing the movement of articles or commerce, either into or out of the state. A state statute that clearly discriminates against interstate commerce is therefore unconstitutional unless the discrimination is demonstrably justified by a valid factor unrelated to economic protectionism.

The Waste Import Restrictions enacted by Michigan authorize each of its 83 counties to isolate itself from the national economy. Indeed, unless a county acts affirmatively to permit other waste to enter its jurisdiction, the statute affords local waste producers complete protection from competition from out-of-state waste producers who seek to use local waste disposal areas. In view of the fact that Michigan has not identified any reason, apart from its origin, why solid waste coming from outside the county should be treated differently from solid waste within the county, the foregoing reasoning would appear to control the disposition of this case.

Michigan and St. Clair County assert that the Waste Import Restrictions are necessary because they enable individual counties to make adequate plans for the safe disposal of future waste. Although accurate forecasts about the volume and composition of future waste flows may be an indispensable part of a comprehensive waste disposal plan, Michigan could attain that objective without discriminating between in- and out-of-state waste.

Michigan could, for example, limit the amount of waste that landfill operators may accept each year. There is, however, no valid health and safety reason for limiting the amount of waste that a landfill operator may accept from outside the State, but not the amount that the operator may accept from inside the State. Of course our conclusion would be different if the imported waste raised health or other concerns not presented by Michigan waste.

For the foregoing reasons, the Waste Import Restrictions unambiguously discriminate against interstate commerce and are appropriately characterized as protectionist measures that cannot withstand scrutiny under the commerce clause.

Judgment of the Court of Appeals is reversed.

Rehnquist, Chief Justice, dissenting When confronted with a dormant commerce clause challenge, "the crucial inquiry must be directed to determining whether the challenged statute is basically a protectionist measure, or whether it can fairly be viewed as a law directed to legitimate local concerns with effects on interstate commerce that are only incidental. Because I think the Michigan statute is at least arguably directed to legitimate local concerns, rather than improper economic protectionism, I would remand this case for further proceedings.

The substantial environmental, aesthetic, health, and safety problems flowing from this country's waste piles were already apparent at the time we decided *Philadelphia.* Those problems have only risen in the intervening years. In part, this is due to increased waste volumes, volumes that are expected to continue to rise in the foreseeable future. It is no secret why capacity is not expanding sufficiently to meet the demand—the substantial risks attendant to waste sites make them extraordinarily unattractive neighbors. The result, of course, is that while many are willing to generate waste—indeed it is a practical impossibility to solve the waste problem by banning waste production—few are willing to help dispose of it. Those locales that do provide disposal capacity to serve foreign waste effectively are affording reduced environmental and safety risks to the States that will not take charge of their own waste.

The State of Michigan has stepped into this quagmire in order to address waste problems generated by its own populace. It has done so by adopting a comprehensive approach to the disposal of solid wastes generated within its borders. The legislation challenged today is simply one part of a broad package that includes a number of features: a state-mandated statewide effort to control and plan for waste disposal; requirements that local units of government participate in the planning process; restrictions to assure safe transport; a ban on the operation of a waste disposal facility unless various design and technical requirements are satisfied and appropriate permits obtained; and commitments to promote source separation, composting, and recycling. The Michigan legislation is thus quite unlike the simple outright ban that we confronted in *Philadelphia.*

In adopting this legislation, the Michigan Legislature also appears to have concluded that, like the State, counties should reap as they have sown—hardly a novel proposition. It has accomplished this by prohibiting waste facilities from accepting waste generated from outside the county, unless special permits are obtained. In the process, of course, this facially neutral restriction (i.e. it applies equally to interstate and intrastate waste) also works to ban disposal from out-of-state sources unless appropriate permits are procured. But I cannot agree that such a requirement, when imposed as one part of a comprehensive approach to regulating in this difficult field, is the stuff of which economic protectionism is made.

Michigan has limited the ability of its own population to despoil the environment and to create health and safety risks by excessive and uncontrolled waste disposal. It does not thereby violate the commerce clause when it seeks to prevent this resource from being exported—the result if Michigan is forced to accept foreign waste in its disposal facilities.

The Court today penalizes the State of Michigan for what to all appearances is its good-faith effort, in turn encouraging each State to ignore the waste problem in the hope that another will pick up the slack. The Court's approach fails to recognize that the latter option is quite real and quite attractive for many States—and becomes even more so when the intermediate option of solving its own problems, but only its own problems, is eliminated.

Superfund

In 1980, Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), commonly known as Superfund, to deal with the problem of uncontrolled or abandoned hazardous waste sites. In 1986, it strengthened and expanded the law. Under the Superfund law, EPA identified and assessed the sites in the United States where hazardous wastes had been spilled, stored, or abandoned.

Eventually, EPA expects to identify 30,000 such sites. The sites are ranked on the basis of the type, quantity, and toxicity of the wastes; the number of people potentially exposed to the wastes; the different ways (e.g., in the air or drinking water) in which they might be exposed; the risks to contamination of aquifers; and other factors. The sites with the highest ranking are put on the National Priority List to receive priority federal and/or state attention for cleanup. At these sites, EPA makes careful scientific and engineering studies to determine the most appropriate cleanup plans. Once a site has been cleaned up, the state is responsible for managing it to prevent future environmental problems. EPA also has the authority to quickly initiate actions at hazardous waste sites—whether or not the site is on the priority list—to address imminent hazards such as the risk of fire, explosion, or contamination of drinking water.

The cleanup activity is financed by a tax on chemicals and feedstocks. However, EPA is authorized to require that a site be cleaned up by those persons responsible for contaminating it, either as the owner or operator of the site, a transporter of wastes to the site, or the owner of wastes deposited at the site. Where EPA expends money to clean up a site, it has the legal authority to recover its costs from those who were responsible for the problem. The courts have held that such persons are "jointly and severally responsible for the cost of cleanup." Chapter 7, Negligence and Strict Liability, discusses the concept of joint liability. Of concern to many businesspeople is the fact that this stringent and potentially very expensive liability can in some instances be imposed on a current owner of a site who had nothing to do with the contamination, such as a subsequent purchaser of the land.

Community Right to Know and Emergency Cleanup

As part of its 1986 amendments to Superfund, Congress enacted a series of requirements for emergency planning, notification of spills and accidents involving hazardous materials, disclosure by industry to the community of the presence of certain listed chemicals, and notification of the amounts of various chemicals being routinely released into the environment in the area of a facility. This legislation was in response to the industrial accident at Bhopal, India, in 1984 and to several similar incidents in the United States. Firms subject to the requirements have to carefully plan how they will communicate with the surrounding community what chemicals are being regularly released and what precautions the facility has taken to protect the community from regular or accidental releases. Mindful of the difficulty of explaining to a community why large emissions of hazardous substances are taking place, a significant number of companies have undertaken to reduce those emissions below levels they are currently required to meet by law.

Regulation of Chemicals

Background

More than 60,000 chemical substances are manufactured in the United States and used in a variety of products. Although these chemicals contribute much to the standard of living we enjoy, some of them are toxic or have the potential to cause cancer, birth defects, reproductive failures, and other health-related problems. These risks may be posed in the manufacturing process, during the use of a product, or as a result of the manner of disposal of the chemical or product. EPA has two statutory authorities that give it the ability to prevent or restrict the manufacture and use of new and existing chemicals to remove unreasonable risks to human health or the environment. These authorities are the Federal Insecticide, Fungicide, and Rodenticide Act and the Toxic Substances Control Act.

Regulation of Agricultural Chemicals

The vast increase in the American farmer's productivity over the past few decades has been in large measure attributable to the farmer's use of chemicals to kill the insects, pests, and weeds that have historically competed with the farmer for crops. Some of these chemicals, such as pesticides and herbicides, were a mixed blessing. They enabled people to dramatically increase productivity and to conquer disease. On the

other hand, dead fish and birds provided evidence that chemicals were not only building up in the food chain but also proving fatal to some species. Unless such chemicals are carefully used and disposed of, they can present a danger to the applier and to the consumer of food and water. Gradually, people realized the need to focus on the effects of using such chemicals.

EPA enforces the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). This act gives EPA the authority to register pesticides before they can be sold, to provide for the certification of appliers of pesticides designated for restrictive use, to set limits on the pesticide residue permitted on crops that provide food for people or animals, and to register and inspect pesticide manufacturing establishments. As noted in *King v. E. I. DuPont de Nemours & Co.,* which follows, the FIFRA provides for a relatively small state role in the regulation of pesticides.

King v. E. I. Du Pont de Nemours & Co. *35 E.R.C. 1925 (U.S.D.C. Me. 1993)*

Ernest King and Edward Higgins were employed by the Maine Department of Transportation (MDOT). As part of their employment duties, King and Higgins seasonally sprayed one or more herbicides manufactured by E. I. Du Pont de Nemours and Company (Du Pont), the Dow Chemical Company (Dow), Velsicol Chemical Company (Velsicol), and Sandoz Corporation (Sandoz). As a result of their exposure to the herbicides they claimed to have experienced nausea, headaches, loss of appetite, irritability, loss of concentration, muscle pains, joint pain, memory loss, and continued deterioration of vision; in addition, Higgins claimed to suffer from numbness in his extremities.

King and Higgins brought suit against Du Pont, Dow, Velsicol, and Sandoz seeking to impose liability for damages under state tort law theories of negligence and strict liability. They claimed that the chemical companies had failed to warn them about the safe and proper use of the herbicides as well as about the harm and danger of exposure to these products. The chemical companies moved for summary judgment in their favor. One of the key questions was whether the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) preempted state tort claims based on failure to warn or inadequate warnings relating to products subject to the Act's labeling requirements. The parties stipulated that all of the product labels in question were submitted to and approved by the EPA in accordance with FIFRA.

Brody, District Judge Under FIFRA, the EPA cannot approve an herbicide unless it complies with the requirements established in FIFRA, and the EPA labeling regulations promulgated to implement the Act. The EPA regulations detail how warning labels are to be presented and provide specific requirements for the content, placement, type, size and promotion of the warnings. "Label" is defined under FIFRA to include "the written, printed or graphic matter on, or attached to the pesticide or device or any of its containers or wrappers. Required warnings are specified according to the degree to which ingestion or contact with an herbicide is toxic, and these warnings must include precautionary statements about risks posed to humans. The regulations also specify necessary directions on how to use each chemical.

The procedure for registration under FIFRA requires that each applicant file a statement with the Administrator of the EPA which includes the name of the chemical, a statement of all claims to be made for the product, any directions for the product's use and a full description of the tests made and the results thereof upon which the claims are based.

The data required to be submitted to EPA varies with the nature of the chemical and its intended use. On the basis of the information provided by the registrant, the EPA must register the product if it determines that:

> (A) Its composition is such as to warrant the proposed claims for it;
> (B) Its labeling and other material required to be submitted comply with the requirements of the [Act];
> (C) It will perform its intended function without unreasonable adverse effects on the environment; and
> (D) When used in accordance with widespread and commonly recognized practice it will not generally cause unreasonable adverse affects on the environment.

An unreasonable adverse effect on the environment is defined under the Act as "any unreasonable risk

to man or the environment, taking into account the economic, social, and environmental costs and benefits of the use of any pesticide."

The 1972 Amendments to FIFRA added a section expressly setting forth the states' authority to regulate pesticides. This section states in relevant part:

> (a) In general. A state may regulate the sale or use of any federally registered pesticide or device in the State, but only if and to the extent the regulation does not permit any sale or use prohibited by this [Act].
>
> (b) Uniformity. Such State shall not impose or continue in effect any requirements for labeling or packaging different from those required under this [Act].

The statute's language, by itself, is a powerful limit on state power over labeling. A report accompanying the bill, as originally reported out of the House Committee, also indicates the limits on state power due to the division of authority between the federal and state governments: "In dividing the responsibility between the States and the Federal Government for the management of an effective pesticide program, the Committee had adopted language which is intended to completely preempt State authority in regard to packaging and labeling." Congress recognized that while the intent of the provision was to leave to the states the authority to impose stricter regulation on pesticide use than that required under the Act, subsection (b) preempted any State labeling or packaging requirements differing from such requirements under the Act.

Although King and Higgins have stipulated that all of the product labels underlying this controversy were submitted to and approved by EPA under FIFRA, they contend that the defendant chemical companies failed to adequately warn them of the dangers inherent in their products. The chemical companies argue that these claims are expressly preempted under subsection (b) because, if successful, such claims would constitute state-imposed "requirements for labeling or packaging in addition to or different from those required [under FIFRA]." Alternatively, they claim that FIFRA immediately preempts such claims.

There is a split among the circuit and district courts on the issue of whether FIFRA preempts state failure to warn claims. Prior to the Supreme Court's ruling in *Cippolone v. Liggett Group, Inc.,* courts examining the preemptive scope of FIFRA failed to apply express preemption analysis exclusively. Because *Cippolone* rested on express preemption under a statute containing language almost identical to the relevant statutory language in FIFRA, we are satisfied that under *Cippolone's* standards, the language of FIFRA presents a case of express preemption.

Chemical companies' motion for summary judgment in their favor was granted.

When the EPA administrator has reason to believe that continued use of a particular pesticide poses an "imminent hazard," he may suspend its registration and remove the product from the market. When the administrator believes that there is a less than imminent hazard but that the environmental risks of continuing to use a pesticide outweigh its benefits, the administrator may initiate a cancellation of registration proceeding. This proceeding affords all interested persons—manufacturers, distributors, users, environmentalists, and scientists—an opportunity to present evidence on the proposed cancellation. Cancellation of the registration occurs when the administrator finds that the product causes unreasonable adverse effects on the environment.

Companion regulations promulgated by EPA and enforced by the Food and Drug Administration control the amount of pesticide residue that can remain on raw and processed food intended for human or animal consumption. These regulations establish what are known as "tolerances."

Those involved in the food production and distribution process must keep a close watch on regulatory developments at EPA concerning the registration, cancellation, and suspension of products as well as actions it takes concerning permissible residues of pesticides on food products. During the 1980s, the agency took highly publicized actions concerning the use of ethylene dibromide (EDB), a fumigant, on citrus and grain products, sulfites on table grapes, alar on apples, and chlordane as a treatment against termite infestation. In each instance, the economic well-being of many businesses was at risk if they did not adequately anticipate and/or deal with the EPA's actions and the publicity that resulted from these actions.

Concept Review

Major Environmental Laws

Act	Focus
Clean Air Act	Protects quality of ambient (outdoor) air through national ambient air quality standards, state implementation plans, control of toxic air pollutants, new source performance standards, and controls on automobiles and fuels
Clean Water Act	Protects and enhances quality of surface waters by setting water quality standards and limiting discharges by industry and municipalities to those waters through permit system; also regulates dredging and filling of wetlands
Marine Protection, Research, and Sanctuaries Act	Regulates dumping of all types of material into ocean waters
Safe Drinking Water Act	Protects and enhances quality of our drinking water. Also regulates disposal of wastes in wells
Resource Conservation and Recovery Act (RCRA)	Establishes a cradle-to-the-grave regulatory system for handling and disposal of hazardous wastes; also deals with solid waste
Comprehensive Environmental Response Compensation and Liability Act (Superfund)	Provides a program to deal with hazardous waste that was inadequately disposed of in the past; financed in part by tax on chemicals and feedstocks
Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)	Regulates the sale and use of chemicals to be used as pesticides and herbicides; companion legislation regulates residues permitted on crops intended for use as food
Toxic Substances Control Act (TSCA)	Requires preclearance of new chemicals and provides for regulation of existing chemicals that pose an unreasonable risk to health or the environment

Toxic Substances Control Act

The other major statute regulating chemical use focuses on toxic substances—such as asbestos and PCBs—and on the new chemical compounds that are developed each year. The Toxic Substances Control Act, enacted in 1976, requires that chemicals be tested by manufacturers or processors to determine their effect on human health or the environment before the chemicals are introduced into commerce. The act also gives EPA the authority to regulate chemical substances or mixtures that present an unreasonable risk of injury to health or the environment and to take action against any such substances or mixtures that pose an imminent hazard.

This legislation was enacted in response to the concern that thousands of new substances were being released into the environment each year, sometimes without adequate consideration of their potential for harm, and that it was not until damage from a substance occurs that its manufacture or use was properly regulated. At the same time, a goal of the act is not to unduly impede, or create unnecessary economic barriers to, technological innovation.

Biotechnology

The development of techniques to genetically manipulate organisms—often referred to generally as biotechnology—offers considerable promise to aid our ability to provide food and health care and to generate a range of new products and production processes. At the same time, the new techniques raise concerns about

their potential to adversely affect human health or the environment. Responsibility for regulating research and use of biotechnology is shared in the federal government between the Food and Drug Administration, the Department of Agriculture, the Environmental Protection Agency, and the National Institutes of Health. Generally, a review is required of such activity before it takes place. This process is of considerable import to companies that are developing genetically engineered organisms for commercial purposes; it can affect both the speed at which they are able to get the products to market and the public's confidence that release of the organisms does not pose an unreasonable risk.

Ethical and Public Policy Concerns

1. Suppose that a multinational chemical company with its primary manufacturing facilities in the United States plans to build a manufacturing facility in a developing country where there are few, if any, real state-imposed environmental regulations. Is it sufficient for the company to simply meet the environmental requirements of the host country? Is there any ethical obligation to do more—for example, to build the facility to meet the requirements it would have to meet in this country?

2. Suppose a manufacturing facility emits a chemical into the air that it has reason to believe is inadequately regulated by EPA and that poses a significant threat to nearby residents even at levels lower than permitted by EPA. As manager of the facility, would you be satisfied to meet the EPA required level or would you install the additional controls you believe necessary to achieve a reasonably safe level?

3. Suppose that you own some valuable seashore property that contains some marshland and wetlands that are critical to the local ecology. In evaluating whether or not to develop your property, what weight would you give to the value that the marshland and wetlands have as a part of the local ecological system?

Problems and Problem Cases

1. The Interstate Commerce Commission (ICC) had the power to approve or set the tariff rates that railroads charge shippers. As a result of past ICC approvals, the railroad tariffs called for higher shipping charges to carry scrap metals and paper than to carry virgin materials. This disparity operated as an economic discrimination against recycled goods. A group of law students formed an organization known as SCRAP (Students Challenging Regulatory Agency Procedures). SCRAP was concerned that the ICC-approved rate structure discourages the environmentally desirable use of recycled goods. The ICC approved a 2.5 percent across-the-board surcharge in railroad shipping rates and indicated that no environmental impact statement was necessary because there was no environmental impact. SCRAP was concerned that the increase would further the discrimination against used materials and filed suit against the ICC to require that an environmental impact statement be prepared. Should the court decide that an environmental impact statement is required?

2. In July 1984, Vanguard Corporation began operating a metal furniture manufacturing plant in Brooklyn, New York. The plant is located in an area that has not attained the national ambient air quality standards for ozone. The plant is a major stationary source (i.e., has the potential to emit more than 100 tons a year) of volatile organic compounds that contribute to the production of ozone in the atmosphere. The New York state implementation plan (SIP) requires that metal-coating facilities use paint that contains less than three pounds of organic solvent (minus water) per gallon at the time of coating. On August 24, 1984, EPA notified Vanguard that it was not in compliance with the SIP provision concerning coatings and issued it a notice of violation. Vanguard sought to defend against the notice of violation on the grounds that it had used its best faith efforts to comply but that full compliance was technologically and economically infeasible. It indicated that it wanted 18 more months to come into compliance. Should Vanguard be held to be in violation of the Clean Air Act?

3. In August, Tzavah Urban Renewal Corporation purchased from the city of Newark a building formerly known as the Old Military Park Hotel. While the buyer was given an opportunity to inspect the building, it was not informed by the city that the building was permeated with asbestos-containing material. At the time of the purchase, the building was in great disrepair and had been uninhabited for many years. Its proposed renovation was to be a major urban renewal project. In the following June, Tzavah contracted with Greer Industrial Corporation to "gut" the building. While the work was going on, an EPA inspector visited the site and concluded that the hotel was contaminated with asbestos. He observed Greer employees throwing asbestos-laced

objects out of the windows of the building and noted an uncovered refuse pile next to the hotel that contained asbestos. The workers were not wetting the debris before heaving it out the windows and the refuse pile was also dry. As a result, asbestos dust was being released into the air. Although the hotel was located in a commercial district, there were private homes nearby. Renovation of buildings contaminated with asbestos is regulated under the Clean Air Act. The EPA regulations require building owners or operators to notify EPA before commencing renovation or demolition and prescribe various procedures for storage and removal of the asbestos. Tzavah failed to provide the required notice or to comply with procedures required. After being notified by EPA of the violation of the law, Tzavah stopped the demolition work, left the building unsecured, and left the waste piles dry and uncovered. EPA tried informally to get Tzavah to complete the work in accordance with the asbestos regulations; when Tzavah did not take action, EPA brought a lawsuit against Tzavah to do so. Should the court issue an injunction requiring Tzavah to abate the hazard posed by the dry asbestos remaining in the hotel?

4. Mall Properties, Inc., was an organization that for many years sought to develop a shopping mall in the Town of North Haven, Connecticut, a suburb of New Haven. Because the proposed development would require the filling of some wetlands, Mall Properties was required to obtain a permit from the Corps of Engineers pursuant to section 404 of the Clean Water Act. The City of New Haven opposed development of the mall—and the granting of the permit—on the grounds it would jeopardize the fragile economy of New Haven. The Corps of Engineers found the net loss of wetlands would be substantially compensated for by a proposed on-site wetland creation. Relying primarily on the socioeconomic concerns of the City of New Haven, the District Engineer rejected the proposed permit. Mall Properties then brought suit against the Corps of Engineers, claiming that the decision was arbitrary and capricious. Should the District Engineer have relied on socioeconomic factors unrelated to the project's environmental impacts in making a decision on the permit?

5. Charles Hanson owned land abutting Keith Lake, a freshwater lake that was subject to some tidal flooding as a result of its connection with tidal waters. In order to minimize the detrimental effects from the tidal activities and consequent flooding, Hanson deposited a large quantity of dirt, rock, bricks, sheet metal, and other debris along the shoreline of his property. He did so without obtaining a permit from the U.S. Army Corps of Engineers under section 404 of the Clean Water Act, which controls dumping and filling activities in navigable waters of the United States. Under the law, discharges of pollutants into navigable waters without a permit are forbidden. The term *pollutant* is defined to include "dredged spoil, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand, cellar dirt, and industrial, municipal and agricultural waste discharged into water." EPA brought an enforcement action against Hanson claiming he had violated the Clean Water Act. Should the court find that Hanson violated the act?

6. Johnson & Towers, Inc., is in the business of overhauling large motor vehicles. It uses degreasers and other industrial chemicals that contain chemicals classified as "hazardous wastes" under the Resource Conservation and Recovery Act (RCRA)—for example, methylene chloride and trichloroethylene. For some period of time, waste chemicals from cleaning operations were drained into a holding tank and, when the tank was full, pumped into a trench. The trench flowed from the plant property into Parker's Creek, a tributary of the Delaware River. Under RCRA, generators of such wastes must obtain a permit for disposal from the Environmental Protection Agency (EPA). EPA had neither issued, nor received an application for, a permit for the Johnson & Towers operations. Over a three-day period, federal agents saw workers pump waste from the tank into the trench, and on the third day toxic chemicals flowed into the creek. The company and two of its employees, Jack Hopkins, a foreman, and Peter Angel, the service manager, were indicted for unlawfully disposing of hazardous wastes. The company pled guilty. The federal district court dismissed the criminal charges against the two individuals, holding that RCRA's criminal penalty provisions imposing fines and imprisonment did not apply to employees. The government appealed. Can employees of a corporation be held criminally liable if their actions on behalf of the corporation violate the federal hazardous waste law?

7. Anne Arundel County, Maryland, enacted two related ordinances. One absolutely prohibited the disposal in and the transportation through Anne Arundel County of various hazardous wastes not originating in

that county. Another ordinance required a license to dispose of hazardous waste in Anne Arundel County; it also required a license to transport hazardous wastes through the county. Browning-Ferris, Inc. (BFI), is the owner and operator of a landfill located in Anne Arundel County that is licensed by the state of Maryland to receive hazardous wastes. BFI is also a hauler of hazardous wastes within the county. The county notified BFI that it expected BFI to comply with the new regulations, and BFI filed a lawsuit challenging the ordinances and seeking to have them enjoined. How should the court rule?

8. The Royal McBee Corporation manufactured typewriters at a factory in Springfield, Missouri. As a part of the manufacturing process, Royal McBee generated cyanide-based electroplating wastes, sludge from the bottom of electroplating tanks, and spent plating bath solution. As part of their duties, Royal McBee employees dumped the wastes onto the surface of the soil on a vacant lot adjoining the factory. This took place between 1959 and 1962. Over time, the waste materials migrated outward and downward from the original dumping site, contaminating a large area. In 1970, the manufacturing facility and lot were sold to General Electric, which operated the plant but did not engage in the dumping of wastes on the vacant lot. In the mid-1980s, General Electric was required by EPA and the state of Missouri, under the authority of the federal Superfund law, to clean up the contamination at the site. General Electric then brought a lawsuit against the successor corporation of Royal McBee's typewriter business, Litton Business Systems, to recover for the costs incurred in cleaning up the site. Under the Superfund law, "any person who at the time of disposal of any hazardous substance owned or operated any facilities at which such hazardous substances were disposed of, shall be liable for any other necessary costs of response incurred by any other person" consistent with the Superfund law and regulations. Is General Electric entitled to recover its cleanup costs from Litton?

9. Chemlawn sells pesticide products for use on residential lawns. The active ingredients in Chemlawn's products are registered with the Environmental Protection Agency pursuant to the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). Deborah Ryan brought a lawsuit against Chemlawn seeking damages in tort for injuries she claimed that she and her son Kevin sustained from the use of Chemlawn products. Ryan claims that the products are unsafe for commercial use and that they have been inadequately tested by the EPA. Chemlawn contends that Ryan should take her complaints to EPA, which has the responsibility for determining whether the products are safe to be sold. How should the court decide?

VII. The Foreign Corrupt Practices Act

Since 1945, American businesses have steadily increased the number and size of transactions with people in foreign markets. American businesses export their goods to other countries, import foreign goods into the United States, establish manufacturing, drilling, and other operations on foreign soil, and license their patents and other technology to foreign businesses. With the economic changes that have swept eastern Europe since the December 1989 revolutions, foreign trade by American firms has accelerated.

The Challenge of International Business

Each international business transaction faces dozens of legal and practical problems. The answers to the legal problems come from a mix of the laws of our own country, those of the other country or countries involved, and doctrines of international law. For example, American

exporters must comply with American laws concerning the export of goods and foreign laws that restrict the importation of goods. While many nations have signed agreements designed to remove importation restrictions, such international law is not binding on a signatory nation unless its legislature has passed a statute to implement the agreement.

When an American business enters a contract to sell goods to a foreign buyer, the buyer and seller may choose to follow American contract law, foreign contract law, or international law embodied in the United Nations Convention on Contracts for the International Sale of Goods (CISG).

When an American firm makes a direct foreign investment by establishing a manufacturing plant abroad, the firm must comply with all of the foreign nation's laws applicable to its operations, such as employee safety and dismissal laws, antitrust laws, and toxic waste disposal regulations. In addition, American firms doing business abroad must comply with other domestic laws of the host country. For example, many Arabic countries prohibit alcohol consumption and forbid women to operate motor vehicles. Many foreign nations require that any firm doing business within their boundaries be owned by their government or by their citizens. In addition, the foreign nation's laws may restrict the American firm's ability to take its profits back to the United States—reinvestment of profits in the foreign nation may be required. Also, several socialist countries have confiscated or expropriated the business assets of U.S. firms doing business in those countries.

Practical problems abound as well. There are language and cultural differences. Contract negotiations may be either more or less formal than in America. In addition, the parties to international transactions are much less likely to know each other well because they are separated by great distances, thereby increasing a seller's risk of nonpayment by the buyer and a buyer's risk of nondelivery by the seller. There are different currencies, some of which may be nearly worthless on the world market. Other currencies' values may quickly depreciate, increasing the risk that a buyer of goods will underpay for goods, unless the parties designate a stable currency in their sales contract.

The resolution of disputes is troublesome, as each party may seek to have a dispute resolved in his home court, applying law favorable to his side. Disputes between an American seller and a foreign buyer may be resolved in the courts of either nation or in an international arbitration tribunal. The court or tribunal may apply American law, foreign law, or international law.

Only some of the complexities of the law of international business transactions can be explored within the limited scope of this chapter. The intent of this chapter, therefore, is to give you a sense of the legal environment of international business by examining the most important legal questions that arise in connection with international sales, licensing, and investment. Because most international business transactions entered into by an American business must comply with trade restrictions imposed by the United States and other governments, this chapter begins with a consideration of trade limitations.

Limitations on Trade

Many governmentally imposed barriers to trade affect international business transactions. The most important are export and import controls, including tariffs.

Export Controls

For political or economic purposes, most nations place export controls on certain goods and technology leaving their countries. For example, in 1990, most nations placed an embargo on exports to Iraq in response to Iraq's invasion of Kuwait. Another example is the restriction on the sale of militarily sensitive technology by Western nations so that it is not obtained by countries whose governments are considered unfriendly. The restrictions are agreed on unanimously by Western countries who are members of the Paris-based Coordinating Committee for Multilateral Export Controls (COCOM). The restrictions are then enforced through laws passed in each country. Failure to abide by the restrictions can lead to imprisonment of the sellers of the restricted goods.

The Export Administration Act of 1979 The Export Administration Act of 1979 (as amended in 1985 and 1988) is the main law controlling **exports** from the United States. The act is enforced by the Bureau of Export Administration (BXA) of the Department of Commerce. The act is designed to accomplish three purposes:

1. To enhance national security.
2. To aid in the accomplishment of the objectives of American foreign policy.

3. To preserve commodities and technology essential to the protection of the American economy.

The BXA implements the act by administering a licensing procedure and maintaining a **commodity control list** of goods and technical data subject to the act. The BXA generally requires an exporter to obtain a **license** prior to exportation of the good or technology.

Before applying for a license, an exporter must consult the commodity control list to determine whether exports to the country of destination are restricted. For example, exports to Cuba, Cambodia, and North Korea are almost totally prohibited. Libya's role in international terrorism has resulted in heavy restrictions on exports to Libya. Exports to communist countries are restricted as well. Only recently have exports to Vietnam been permitted. Exports to most western hemisphere nations are not restricted.

Recently, the United States government has eased restrictions on exports to communist China, largely in response to demands by American businesses that they be permitted to sell in China, the largest market in the world. For example, in 1999, then President Clinton relaxed a restriction on the export of computers to China. The restriction, which had been imposed to stop the flow of computer technology to China, was so limiting in light of computer chip advances, that even exportation of the Sony PlayStation would have been banned.

When the commodity control list indicates that exportation of the good or technology to the destination country is prohibited, the exporter must abandon its attempt to export. When the exportation is legal, the exporter must consult the commodity control list to determine whether it needs a general or a validated license issued by the BXA.

A **general license** is a blanket authorization to export the covered goods or technology without obtaining permission for a specific export. A general license appears in the form of an administrative regulation and authorizes every exporter to export the covered goods or technology. Thus, for example, an exporter need not obtain specific BXA approval when the BXA has issued a general license to export beer to Canada.

A **validated license** authorizes a specific exporter to export a specific good or technology to a specific country. A validated license may validate one export or a series of exports. The BXA's refusal to grant a validated license may be appealed to the assistant secretary of commerce for trade administration. However, his decision is final; there is no judicial review of his administrative decision.

The commodity control list applies not merely to the exportation by an American firm to a foreign country. It also controls the **reexportation** of American goods and technology by the foreign buyer to a second foreign nation. As a result, when American goods are exported to Germany and reexported to Iraq, the BXA would regulate both the America-to-Germany and Germany-to-Iraq transactions.

The BXA does not have authority to issue licenses for all goods and technology. For example, weapons export is usually controlled by the State Department; the export of nuclear materials is licensed by the Nuclear Regulatory Commission.

The BXA has set up a web page to assist American exporters, at www.bxa.doc.gov.

Import Controls

Countries control the importation of goods and technology primarily to protect domestic industry. These restrictions commonly take the form of quotas, licensing requirements, import restrictions, or tariffs.

Quotas A quota is a limit on the number or poundage of an item that may be imported into a country. By setting a quota on the importation of Japanese automobiles, the United States has forced Japan to limit the number of automobiles it sells in the United States as a way of opening up the American market for American-made automobiles.

Licensing A license is a government-granted privilege to conduct a specific business. By requiring the licensing of foreign technology, Japan has improved the ability of its manufacturers to obtain more favorable bargaining terms. Instead of having different Japanese manufacturers compete with one another to get a desirable piece of technology from an American licensor, the Japanese licensing agency in effect tells the licensor that it will be excluded from the Japanese market unless it agrees to accept considerably less favorable terms than would have resulted without the regulation. In developing nations, licensing regulations may ensure that a country's scarce resources are not being used unless the imported technology fits into the country's basic development plans. To protect domestic employees, some nations require technical training of local personnel in return for license approval.

Prohibited Imports Most countries also maintain a list of prohibited imports. There are a large number of goods that may not be imported into the United States. For example, the American fur industry is protected by a prohibition on the import of furs from Russia. Public morals are protected by the exclusion of obscene materials and lottery tickets. The domestic fishing industry is served by prohibiting the importation of fish from nations that seize American fishing boats. In the following case, *B-West Imports,* the court considered the president's prohibition of the importation into the United States of weapons from China, a response to China's domestic human rights violations.

B-West Imports, Inc. v. United States *75 F.3d 633 (Fed. Cir. 1996)*

B-West Imports, Inc., was involved in the business of importing weapons manufactured in the People's Republic of China. On May 26, 1994, President Bill Clinton announced the renewal of most favored nation trading status for the People's Republic of China. At the same time, however, in light of "continuing human rights abuses" in China, he announced certain trading sanctions against that country. One of the sanctions was a ban on the importation of weapons from China. China is one of the countries on the State Department's "proscribed list," a list of countries as to which it is "the policy of the United States to deny licenses and other approvals" for the importation of munitions. Arms may not be imported from any country on the proscribed list without a special exception or suspension of the regulation by the Office of Defense Trade Controls in the Department of State.

Prior to 1994, China was exempted from the effects of its inclusion on the proscribed list, meaning that arms could be imported from China by licensed importers who obtained import permits. On May 28, 1994, however, two days after the president announced the arms embargo against China, the Secretary of State advised the Secretary of the Treasury that China's exemption from the proscribed list was terminated "effective immediately on the basis of U.S. foreign policy." In light of the decision to revoke China's exemption from the proscribed list, the Secretary of State requested the Secretary of the Treasury to "take all necessary steps to prohibit the import of all defense articles enumerated in the U.S. Munitions List."

The two Treasury Department agencies responsible for enforcing arms import limits are the Bureau of Alcohol, Tobacco, and Firearms (ATF) and the Customs Service. On June 27, 1994, the ATF advised companies holding permits to import munitions from China—including B-West Imports—that their permits were revoked as of May 28. On August 5, 1994, the Customs Service directed that all shipments of weapons from China that entered the United States on or after May 28 be detained.

B-West Imports challenged the government's actions in the Court of International Trade. It argued three points: that the Arms Export Control Act (AECA) does not authorize the president or his delegates to impose an arms embargo; that the Customs Service exceeded its authority in detaining goods for which B-West held validly issued import permits and in declaring the permits null and void; and that the ATF exceeded its authority when it purported to revoke B-West's permit. The court rejected B-West's arguments, upholding the authority of the president, the ATF, and the Custom's Service. B-West appealed to the court of appeals.

Bryson, Circuit Judge B-West argues that the AECA does not authorize an arms embargo. Although section 38 of the Act grants to the President the authority to "control" arms imports, B-West argues that the term "control" limits the President to creating and operating a licensing system for arms importation, and does not allow the President to ban the importation of arms for which import permits have been granted. B-West's argument is unconvincing. B-West concedes that the term "control" is broad enough to allow the President to ban imports by denying licenses or permits for future imports. Their contention is thus limited to the assertion that "control" does not include the right to revoke licenses and permits after they are granted. But if the term "control" includes the power to prohibit, we are unable to discern any basis of construing the statute to convey the power to deny permits and

licenses in advance, but to withhold the power to revoke them once they have been issued.

Presidents acting under broad statutory grants of authority have imposed and lifted embargoes, prohibited and allowed exports, suspended and resumed commercial intercourse with foreign countries. Thus, the broad statutory delegation in the AECA incorporates the historical authority of the President in the fields of foreign commerce and importation into the country. We therefore agree with the Court of International Trade that the AECA authorizes the President not only to regulate arms importation through a licensing system, but also to prohibit particular importations altogether when the circumstances warrant.

B-West contends that the Customs Service and the ATF did not act lawfully in this case. Once again, we agree with the Court of International Trade, which held that the agencies did not exceed their lawful authority in putting the embargo into effect. The actions taken by the Secretary of State and the Secretary of the Treasury under the AECA were authorized by Executive Order 11958, which delegates the President's "control" authority under the AECA to the Secretary of the Treasury, guided by the views of the Secretary of State on matters affecting the foreign policy of the United States. State Department regulations further provide that "any license or other approval or exemption granted [for arms transaction invoking countries on the proscribed list] may be revoked, suspended, or amended without notice whenever the Department of State deems such action to be in furtherance of the foreign policy of the United States, or is otherwise advisable."

B-West is therefore incorrect in contending that they were entitled to continue importing munitions from China, pursuant to its previously issued permits, after the embargo became effective. The revocation of its permits was authorized not only by the broad authority granted under the AECA and delegated to the Treasury Department, but also by the regulation that specifically authorizes the revocation, without notice, of permits for importing goods from "proscribed list" countries.

B-West contends that the Customs Service had no lawful right to detain arms shipments from China that were supported by import permits, even after the declaration of the import ban. But a Treasury Department regulation notes that it is "the policy of the United States to deny licenses and other approvals" to import munitions from countries on the proscribed list, including countries "with respect to which the United States maintains an arms embargo." Following the declaration of the Chinese arms embargo and the cancellation of China's exemption from the proscribed list, Customs was therefore authorized to take steps to ensure that goods falling within the scope of the embargo were not admitted into the United States, regardless of whether the goods were supported by an import permit.

B-West next challenges the ATF's June 27 announcement revoking the importers' outstanding permits for importing arms from China. B-West contends that the ATF's own regulations prohibited it from revoking the importers' permits once they were granted. The ATF regulation that applies generally to permits to import munitions provides that import permits may be revoked without notice at any time. While the particular kinds of munitions that B-West was seeking to import are governed by a separate regulation, the regulation does not state or imply that the authorization, once granted, becomes irrevocable. Nor is there any reason to believe that the drafters of the ATF regulations intended to create irrevocable permits for the particular class of munitions B-West seeks to import, while providing that permits for the general class of munitions could be freely revoked at any time. Moreover, denying the ATF the right to revoke permits after their issuance would be perverse, as it would be contrary to other regulations governing arms imports, which make clear that munitions may be excluded whenever a ban on arms imports is declared for foreign policy reasons, even after the importer has obtained a permit. We therefore conclude that after China's exemption from the proscribed list was canceled, the ATF was authorized to withdraw its prior approval for the importation of arms from China and to announce to the importers that their permits had been revoked.

Judgment for United States affirmed.

Tariffs A tariff is a tax or duty assessed on goods, generally when they are imported into a country. The duty is **ad valorem**—that is, a percentage of the value of the goods, such as 10 percent. Through the use of tariffs, governments can discourage imports and protect domestic industry from foreign competition. A sufficiently high ad valorem duty makes the product so expensive that most consumers will refuse to buy it; consequently, consumers do without the good or buy a domestically produced equivalent.

In the United States, import duties are assessed and collected by the U.S. Customs Service. Imported goods are unloaded under the supervision of the Customs Service and taken to a warehouse, where they are kept until a formal entry into the United States is made. **Entry** is the presentation of documentation necessary to classify the goods and assess the duty. After a bond is posted to ensure payment of the duty, the goods are examined. If importation of the goods is prohibited or the goods are not listed on the invoices, the goods may be seized and criminal charges brought against the importer. If the goods pass examination, a tentative duty is assessed and the goods are released to the importer. The Customs Service has the right to charge an additional duty at a later time. The importer may protest or ask for review of the duty before an appraisal specialist at the Customs headquarters. Further reviews are heard by the Court of International Trade and the Court of Appeals for the Federal Circuit in Washington, D.C.

You can find more information on United States import controls at the Customs Service's web site: www.customs.ustreas.gov/.

In the next case, *Marubeni,* the court was faced with the question whether the Nissan Pathfinder sport-utility vehicle should be categorized as a passenger vehicle dutiable at 2.5 percent or as a truck dutiable at 25 percent.

Marubeni American Corp. v. United States *35 F.3d 530 (Fed. Cir. 1994)*

Marubeni American Corp. and Nissan Motor Corporation USA import into the United States motor vehicles manufactured in Japan by Nissan. Vehicles imported have included the 1989 and 1990 Nissan Pathfinder. The Pathfinder is a two door, two-wheel- or four-wheel-drive, dual-purpose or multipurpose passenger vehicle, generally referred to as a compact sport-utility vehicle. The Pathfinder does not have a cargo box or bed like a truck. Instead, its body is one unit that is configured much like an ordinary station wagon in that it has rear seats that fold forward, but not flat, for extra cargo space. These seats, however, are not removable. The spare tire is housed within the cargo space or alternatively, it may be attached outside the vehicle on the rear hatch. The rear hatch operates like those on a station wagon; it has a window that may be opened to place small packages in the cargo area without opening the tailgate. The Pathfinder is mechanically designed for both on- and off-road use.

The Pathfinder was classified by the U.S. Customs Service under 8704.30.00 of the Harmonized Tariff Schedule of the United States (HTSUS) as a "motor vehicle for the transport of goods," and a 25 percent ad valorem duty was assessed to Nissan. Nissan administratively protested the decision, claiming that the Pathfinder should be classified under 8703.23.00 of the HTSUS as a motor vehicle principally designed for the transport of persons, and thus should be assessed a duty of only 2.5 percent. This protest was denied, and Nissan then brought an action in the Court of International Trade (CIT). The CIT conducted a three-week trial that included test-driving the Pathfinder and comparison vehicles and videotape viewing. The CIT concluded that Customs' classification of the Pathfinder under 8704 HTSUS, "motor vehicle for the transport of goods," was incorrect, and that the correct classification was under 8703 HTSUS, "motor vehicle principally designed for the transport of persons." The United States appealed to the court of appeals.

Rich, Circuit Judge The two competing provisions of the HTSUS are set forth below.

8703	Motor cars and other motor vehicles principally designed for the transport of persons (other than those of heading 8702), including station wagons and racing cars.
8704	Motor vehicles for the transport of goods.

There are no legally binding notes to these headings that are relevant to the classification of dual-purpose vehicles such as the Pathfinder; therefore, we need only look to the common meaning of the terms as they appear above.

By the express language of 8703, "motor vehicle principally designed for the transport of persons,"

it is clear that the vehicle must be designed "more" for the transport of persons than goods. *Webster's Third New International Dictionary of the English Language,* Unabridged (1986), defines "principally" as "in the chief place, chiefly;" and defines "designed" as "done by design or purposefully opposed to accidental or inadvertent; intended, planned." Thus, if the vehicle is equally designed for the transport of goods and persons, it would not be properly classified under 8703 HTSUS. There is nothing in the legislative history that indicates a different meaning.

The government argues that "the correct standard to be utilized in determining the principal design of any vehicle must be its construction—its basic structure, body, components, and vehicle layout—and the proper question to be asked is whether that construction is uniquely for passenger transportation." This standard is clearly at odds with Customs' interpretation in its March 1, 1989, memorandum providing guidance in applying these headings to sports utility vehicles. Customs stated:

> *Design features,* whether they accommodate passenger transport or cargo transport, or both, *are of two types both of which are relevant in determining the proper classification of a sports-utility vehicle.* First are what may be regarded as *structures,* or *integral design features* such as basic body, chassis, and suspension design, . . . style and structure of the body [control access to rear]. The second type of design features, *auxiliary design features* are also relevant when determining whether, on the whole, the transport of persons was the principal design consideration. *Neither type by itself can be considered determinative on the issue of the purpose for which the vehicle was principally designed.* [Emphasis added.]

Thus, requiring that the resulting product be uniquely constructed for the purpose of transporting persons, to the exclusion of any other use, is a constrictive interpretation of the terms with which we cannot agree.

To answer the question whether a vehicle is principally designed for a particular purpose, not uniquely designed for the particular purpose, one must look at both the structural and auxiliary design features, as neither by itself is determinative.

Heading 8703 HTSUS specifically includes "station wagons," which are not uniquely designed for transport of persons, rather, they are designed as dual-purpose vehicles for the transport of goods and persons. The Pathfinder, like the station wagon, is a vehicle designed with a dual-purpose—to transport goods and persons.

The specific mention of "including station wagons" in 8703 can affect proper classification when dual-purpose vehicles are at issue. The Explanatory Notes define "station wagon" as "vehicles with a maximum seating capacity of nine persons (including the driver), the interior of which may be used, without structural alteration, for the transport of both persons and goods."

Notwithstanding the fact that a vehicle may fit the definition of a station wagon and that the term is expressly included in 8703 HTSUS, that vehicle is not automatically included in or excluded from 8703 HTSUS classification. It necessarily follows that correct interpretation of 8703 HTSUS requires a determination of whether or not the vehicle was "principally designed for the transport of persons," and not merely a finding that it is within the definition of a "station wagon," unless of course it is unquestionably a station wagon. The Pathfinder is not the latter.

It is evident that the CIT carefully applied the proper standards in making its decision. In reaching its conclusion, the CIT evaluated the marketing and engineering design goals (consumer demands, off the line parts availability), the structural design necessary to meet both cargo and passenger carrying requirements for both on- and off-road use, as well as interior passenger amenities.

The CIT also recognized that the Pathfinder was basically derived from Nissan's Hardbody truck line, yet the Pathfinder was based on totally different design concepts than a truck. Specifically, the designers decided to adopt the Hardbody's frame side rails and the cab portion from the front bumper to the frame just behind the driver's seats so that they could quickly and economically reach the market. The front suspension system was also adopted from Nissan's truck line but the rear suspension was not. The fact that a vehicle is derived in part from a truck or from a sedan is not, without more, determinative of its intended principal design objectives which were passenger transport and off-road capability.

Substantial structural changes were necessary to meet the design criterion of transporting passengers. The addition of the rear passenger seat required that the gas tank be moved to the rear and the spare tire relocated. This effectively reduces the cargo carrying capacity. Of particular importance was the design of a new rear suspension that was developed

specifically to provide a smooth ride for passengers. New and different cross beams, not present on the Hardbody frame, were added to the Pathfinder's frame to accommodate the above changes.

Other design aspects that point to a principal design for passengers include: the spare tire and the rear seat when folded down intrude upon the cargo space; the cargo area is carpeted; a separate window opening in the pop-up tailgate accommodates passengers loading and unloading small packages without having to lower the tailgate. The CIT also found that the cargo volume is greatly reduced when the rear seat is up to accommodate passengers. Moreover, the axle and wheel differences are minor and consistent with the Pathfinder's off-road mission, particularly in the loaded condition. The Pathfinder has the same engine size as the Maxima passenger car.

Auxiliary design aspects, in addition to those merely relating to the structural derivation of the Pathfinder, that indicate passenger use over cargo use include: vehicle height was lowered 50 millimeters; the seat sides were improved yet similar to those on two door passenger sedans. Other auxiliary design features that point to transport of passengers include: rear seats that recline, are comfortable, and fold to make a fairly flat cargo bed but are not removable; rear seat stereo outlets, ashtrays, cubbyholes, arm rests, handholds, footwells, seat belts, child seat tie down hooks, and operable windows. The CIT noted that there is not much more that can be done to accommodate passengers in the rear seat. Moreover, the testimony of the three primary design engineers as well as the contemporaneous design development documents support the finding that the Pathfinder was principally designed for the transport of persons.

In its March 1, 1989, memorandum referred to above, Customs has drawn what appears to be a line between two door and four door versions of sports utility vehicles. Customs' conclusion, however, that vehicles that lack rear side passenger access doors are to be classified under 8704, is *de facto* affording determinative weight to this feature. This line, classifying two door dual-purpose vehicles for the transport of goods while classifying the four door version as principally designed for transport of persons, appears to be arbitrary.

Passenger cars with two doors also have restricted entry into the rear seat but this fact does not take these vehicles out of 8703 classification. Two-door passenger cars are equipped with a seat slide mechanism that effectively slides the front seat forward to provide easier access to the rear seat. The doors of two-door passenger cars are generally wider as well. The CIT found that the Pathfinder has both of these features so that passengers can be easily accommodated. Therefore, the two door Pathfinder accommodates passengers in the rear seat as well as two door passenger cars, if not as easily as four door sports utility vehicles. Consequently, the number of doors on a vehicle should not be determinative.

We hold that the court applied the correct legal standards, and that the evidence of record supports the CIT's decision that the Pathfinder is principally designed for the transport of persons.

Judgment for Nissan affirmed.

WTO Tariffs have been the most common barrier to free trade, and as a result, many governments are cooperating to control or eliminate tariffs. The most comprehensive effort at cooperation has been the **World Trade Organization (WTO),** which was created in 1995 and today has over 100 member nations. The WTO enforces the **General Agreement on Tariffs and Trade (GATT),** which has been continually negotiated and revised since its inception over 50 years ago, and the **General Agreement on Trade in Services (GATS),** which was agreed to in 1995.

While the efforts of the WTO member nations have resulted in significant tariff reductions, the focus of the WTO is much broader; its purpose is to reduce all trade barriers and promote a stable world trade environment. Among other ways, it attempts to do this through a **most favored nation** clause, which requires a WTO nation (such as the United States) to offer all other WTO nations treatment as favorable as that granted to any other country. Thus, with some exceptions, this eliminates discrimination among countries on the basis of tariffs and duties.

Occasionally, a WTO member nation will accuse another member nation of violating WTO rules by, for example, having tariffs that are too high or imposing restrictive quotas on imports. The WTO system envisions

that most trade disputes among its member nations will be resolved through consultations. However, the WTO also has established a permanent dispute settlement body (DSB) to coordinate a formal dispute resolution process when informal consultations are unsuccessful. A DSB hearing panel will make findings of fact and issue a decision, which may be appealed to the DSB appellate body. A losing member nation is given a reasonable time to comply with its trade obligations or to compensate the winning nation. If the losing nation fails to comply or to compensate the winning nation, the winning nation may petition the DSB for permission to retaliate, such as by imposing tariffs against imports from the losing nation.

You can read more about the WTO at its web page: www.wto/org/.

Regional Trade Associations Another way that tariffs and trade barriers have been reduced is through the formation of regional associations. Regional trade associations are formed in compliance with treaties signed by participating countries to foster free trade within the association. The **North American Free Trade Agreement (NAFTA)** is a regional trade association of the United States, Canada, and Mexico. The United States approved NAFTA in 1993. The purpose of NAFTA is to eliminate most trade barriers between the United States, Canada, and Mexico over a 15-year period.

Detailed information on NAFTA may be found at the U.S. Customs Service web page: www.customs.ustreas.gov/.

One of the best known economic unions is the **European Union (EU).** Formed in 1957, the EU comprises most of the western European countries. The purpose of the EU is to establish a "Single Europe" by promoting free trade within its boundaries. It does this by eliminating tariffs among its members and establishing common tariffs for outside countries, promoting the free movement of workers, goods, and capital among its members, creating a single monetary unit (the **euro**), and generally promoting the welfare of individuals within the union through economic development. Through this union, the member countries have created an economic force that is far greater than any individual member could have generated on its own.

The EU has supranational powers, requiring its member nations to bring their internal laws in compliance with EU law. This has caused squabbling between EU members concerning national interests, such as France's interest in protecting its citizens from English beef tainted with "Mad Cow" disease, threatening the achievement of the EU's goal to remove trade barriers between EU countries.

The EU maintains a web site at www.europa.eu.int/.

Dumping and Subsidized Goods One of the most common reasons the United States and other countries impose tariffs today is to counteract dumping and subsidizing goods. **Dumping** is the selling of goods at unfairly low prices. The selling of imported goods at these low prices means that domestic manufacturers cannot effectively compete with them. Thus, duties are imposed on the goods to offset the difference between the import price and the fair price as determined by the nation of import. In the United States, dumping is regulated by an **antidumping** law, the Trade Agreement Act of 1979. When dumping is alleged, the allegation is investigated by the International Trade Association (ITA) of the Department of Commerce to determine if the goods are being sold at less than fair value. If such a violation is proved, the International Trade Commission (ITC) determines whether the dumping has injured a domestic industry. If both a violation and injury are proved, an antidumping duty can be assessed by the ITA.

Subsidized goods are goods that in some way have been economically supported by the government of their country of origin. For example, Spain has subsidized goods by rebating domestic taxes to its manufacturers. Because of this support, subsidized goods can then be sold for less than goods not receiving subsidies. Governments impose **countervailing duties** against subsidized imported goods to protect competing domestic goods. Both the United States and the EU have imposed duties against Japanese goods because of government subsidies. The Trade Agreement Act of 1979 applies to subsidized goods imported into the United States.

Counterfeit and Gray Market Goods Piracy and other unauthorized uses of American goods or technology protected by U.S. patent, copyright, and trademark law have become a major problem of American businesses. For example, foreign jeans manufacturers may without authorization place the Levi's label on their jeans, thereby damaging the business of Levi Strauss & Co. by depriving it of some of the jeans' market and damaging the value of the Levi trademark,

especially if the imported jeans are of inferior quality. This is an example of **counterfeit goods,** goods unlawfully bearing a trademark. Counterfeit goods may also unlawfully appropriate patented technology or copyrighted material. For example, a foreign musical recording company may pirate the latest Madonna album and import thousands of copies of it into the United States without copyright permission.

American firms harmed by the importation of counterfeit goods may obtain injunctions and damages under the Tariff Act of 1930, the Lanham Trademark Act of 1946, the Copyright Act, and federal patent law. In addition, the Trademark Counterfeiting Act of 1984 establishes criminal penalties for counterfeiting goods. It also allows an American firm to recover from a counterfeiter three times its damages or three times the counterfeiter's profits (whichever is greater).

Patent, copyright, and trademark piracy is increasing in many parts of the world, especially in developing nations. Some developing nations believe that technology should be transferred freely to foster their economic growth. Consequently, they either encourage piracy or choose not to oppose it.

Gray market goods are goods lawfully bearing trademarks or using patents and copyrighted material but entering the American market without authorization. For example, Parker Pen Co. may authorize a Japanese manufacturer to make and sell Parker pens only in Japan. When an American firm imports the Japanese-made Parker pens into the United States, the goods become gray market goods.

While importing gray market goods may violate the contract between the American firm and its foreign licensee, it is not clear in what contexts it violates U.S. importation, trademark, patent, or copyright law. Some courts find a Lanham Act or Tariff Act violation, but other courts do not. The Trademark Counterfeiting Act of 1984 specifically excludes gray market goods from its coverage.The Copyright Act covers gray market goods. As the *Disenos* case below illustrates, the Copyright Act prohibits importation only when it is not authorized by the copyright owner.

Disenos Artisticos E Industriales, S.A. v. Costco Wholesale Corp.

97 F.3d 377 (9th Cir. 1996)

Lladro figurines are decorative figurines designed for collection and display. They are copyrighted by Disenos Artisticos E Industriales, S.A. (DAISA), a Spanish Corporation. DAISA is part of a group of related corporations. Lladro Comercial, S.A., is the parent corporation, and through intermediaries, wholly owns DAISA.

DAISA, the copyright owner, does not manufacture the figurines itself, and the parent corporation, Lladro Comercial does not. Instead, DAISA licenses the copyright to four Spanish corporations, all affiliated with the Lladro group, and contracts with them to manufacture the figurines. The manufacturers are licensed not only to produce but also to sell the figurines "to all countries of the world, without the existence of any limitations or exclusions of territory." DAISA does not restrict its licensees at all with respect to distribution.

The licensed manufacturers do not, however, take advantage of their license from DAISA to sell to all countries of the world. Instead, each has a contract with the parent corporation, Lladro Comercial, to sell the entire output of the figurines to the parent corporation. The parent corporation then distributes the figures throughout the world. The manufacturers' contracts with the parent corporation provide that the parent corporation controls the means of sale, "selecting the appropriate category of the places to sell as well as the distributors and representatives."

The parent corporation then sells the figurines directly to retailers in some countries and to distributors in others. Lladro Comercial has granted Lladro USA, Inc., the exclusive right to sell Lladro figurines in the United States. Lladro USA's business strategy in the United States is to market the figurines only to select upscale retailers. It spends considerable money on marketing to promote the reputation of the brand as high-quality collectors' items and supports auctions establishing a secondary market for the figurines. In its contract with Lladro USA, Inc., the parent corporation, Lladro Comercial, promises not to export the figurines to anyone but Lladro USA within the 50 states of the United States. The parent corporation further covenants that it "shall not knowingly cause any third party to sell the Product in the Territory, nor shall authorize any other party to distribute the Product within the Territory."

Lladro Comercial has at least three arrangements regarding reexport of Lladro figures. It has contracts with some distributors prohibiting commercial reexport and even sales of large quantities to other retailers who might themselves export. Other distributors are prohibited only from "carrying out an active marketing policy of the product outside the territory." In a third agreement, Lladro Comercial directly or through distributors sells to retailers without any contractual restrictions at all.

Costco Wholesale Corporation operates a chain of retail stores throughout the United States. From 1990 through 1994, Costco sold Lladro figurines in its stores. None of the figurines were pirated copies or fakes. All were genuine and were manufactured pursuant to the manufacturing license granted by DAISA. Lladro USA, however, has not sold figurines to Costco, or authorized Costco to sell them. Costco did not import any of the figurines. Some came from countries where they were sold directly to retailers without contractual restrictions. For example, some were imported by an American company from a store in Mexico that went out of business. The Mexican store had no contractual agreement with any Lladro affiliate restricting its right to market inventory in the United States or anywhere else.

DAISA and Lladro USA sued Costco in federal district court alleging that Costco's sale of Lladro figurines was unauthorized and in violation of section 602(a) of the Copyright Act of the United States. The district court granted summary judgment in favor of Lladro USA and DAISA, on the theory that the sale to Costco was not authorized; Costco appealed.

Kleinfeld, Circuit Judge We begin with the statute upon which DAISA and Lladro rely, which prohibits importation of copyrighted goods into the United States "without the authority of the owner of copyright":

> Importation into the United States, without the authority of the owner of the copyright under this title, of copies or phonorecords of a work that has been acquired outside the United States is an infringement of the exclusive right to distribute copies. 17 U.S.C. section 602(a).

This statute is part of the legislative scheme for dealing with pirated and "gray market" goods. In the trademark context, "a gray market good is a foreign-manufactured good, bearing a valid United States trademark, that is imported without the consent of the United States trademark holder." Copyright and trademark owners fought a lengthy and intense legislative battle over the degree to which they would be able to use the customs service and federal law to control the flow of gray market goods. Copyright and trademark law are not the only means of protecting the integrity of a distributorship network, of course. To the extent that the copyright owner has enough market power to obtain and enforce them, it can use contractual restrictions on resale. It can also buy back unsold inventory, as chewing gum and magazine distributors typically do. Wholesalers and retailers may bargain for the right to sell back unsold inventory, or the freedom to liquidate it however they can. We should not put our thumb on the legislative scale. A court construing a statute should avoid adding to or detracting from the benefits Congress accorded to any of the competing interests.

Under section 602(a), the only authorization that counts is authorization by "the owner of the copyright." DAISA owns the copyright, not Lladro Comercial or Lladro USA. It is true that DAISA is a subsidiary of Lladro Comercial, but that does not mean that the parent owns the copyright. Lladro Comercial would have us pierce its own corporate veil. But a corporation is not entitled to establish and use its affiliates' separate legal existence for some purposes, yet have their own separate corporate existence disregarded for its own benefit against third parties.

Because DAISA owned the copyright, we determine whether importation was "without the authority of the owner" by examining the conduct of DAISA. DAISA's arrangements were with its licensees only. DAISA authorized its licensee manufacturers to sell the figurines to "all countries of the world." It did not require its licensees to restrict the sales in any way. So far as DAISA's contracts provided, any of the manufacturers could distribute any of the figurines directly or indirectly into the United States.

The authority to export to the United States must necessarily imply the authority to import into the United States, commercially as well as logically. Lladro USA's evidence shows how a secondary market supports a higher price.

> Lladro USA manages the Lladro Collectors Society and publishes *Expressions Magazine*, both of which

are dedicated to serving the needs of collectors of Lladro figurines. Lladro USA has also published two high quality "art" books devoted to the study of Lladro figurines.

Lladro USA promotes two annual auctions in the United States at which investors in Lladro figurines may buy and sell their figurines. Because of Lladro's high quality, high prestige reputation, many people are able to realize a return several times their investment at these auctions.

Likewise, the existence of a liquidation market could be expected to support a higher wholesale price. When a purchaser of Lladro figurines from Lladro Comercial bargains for the right to export them outside its territory, it can afford to pay more for them, because of the larger market for liquidation of excess inventory. Some of the Costco figurines were derived from a Mexican store which had closed. That store had purchased its figurines with no restriction upon its right to resell them. Had Lladro Comercial bargained with that store owner for a prohibition upon his right to sell them into the United States, then the store owner would have had to consider the smaller market available for liquidation when she considered how much money she could afford to commit to Lladro inventory. The right to export would be valueless if it did not imply a right to import.

Authorization by a copyright owner to export goods to anywhere in the world necessarily implies authority to import the goods into the United States. So do sales without restriction on export into the United States. Accordingly, in this case, the copyright owner, DAISA, and Lladro USA failed to establish that the importation into the United States was "without the authority of the owner of the copyright."

Judgment reversed in favor of Costco.

Foreign Sales of Domestically Manufactured Products

Once an American exporter has determined that the sale of its product to a buyer in a foreign nation is permitted by American export law and the foreign nation's import law, the exporter may enter a contract with the foreign buyer. In addition to the logistical problems of negotiation at long distance perhaps in two languages, the primary legal questions are what contract law applies to the transaction and what terms the contract should include.

Regulation of International Sales Contracts

Countries have attempted to address some of the problems raised by international transactions through their agreement to codes that apply across national boundaries. Typically, countries agree to be bound by international codes, then adjust their internal laws in compliance with the laws laid out in the code.

An example of such an agreement is the United Nations Convention on Contracts for the International Sale of Goods (CISG), which has been adopted by many nations, including the United States and Canada. The CISG is designed to provide a uniform code for international contracts much the same way that the Uniform Commercial Code (UCC) provides uniformity and certainty for transactions among contracting parties from different states in the United States. The Convention provides rules governing the formation of international contracts and regulates the transfer of goods under those contracts.

There are substantial differences between the CISG and the UCC. The CISG does not require any sales contract to be written. The CISG also generally does not recognize the parol evidence rule. Instead, it allows a court to consider subjective evidence of the parties' intent that contradicts the parties' written contract. Offers easily become irrevocable—the offeree need only reasonably believe that it is irrevocable. An attempted acceptance that changes the terms of the offer is not an acceptance. Acceptance is effective upon receipt, not dispatch. An offeree who accepts by performance is not required to notify the offeror. A contract must include not only the quantity of the goods sold but also the price.

In the next case, *Delchi Carrier,* the court applied the CISG to determine whether the seller delivered nonconforming goods and breached the contract and what damages the seller owed the buyer.

Delchi Carrier SpA v. Rotorex Corp. *71 F.3d 1024 (2d Cir. 1995)*

In January 1988, Rotorex Corporation, a New York corporation, agreed to sell 10,800 compressors to Delchi Carrier SpA, an Italian manufacturer, for use in Delchi's "Ariele" line of portable room air conditioners. The air conditioners were scheduled to go on sale in the spring and summer of 1988. Prior to executing the contract, Rotorex sent Delchi a sample compressor and accompanying written performance specifications.

Rotorex sent the first shipment by sea on March 26. The shipment arrived at Delchi's Italian factory on April 20. Rotorex sent a second shipment of compressors on or about May 9. While the second shipment was en route, Delchi discovered that the first lot of compressors did not conform to the sample model and accompanying specifications: 93 percent of the compressors were rejected in quality control checks because they had lower cooling capacity and consumed more power than the sample model and specifications. After several unsuccessful attempts to cure the defects in the compressors, Delchi asked Rotorex to supply new compressors conforming to the original sample and specifications. Rotorex refused, claiming that the performance specifications were not part of the contract because they were inadvertently communicated to Delchi.

Delchi was unable to obtain in a timely fashion substitute compressors from other sources and thus suffered a loss in its sales volume of Ariele air conditioners during the 1988 selling season. Delchi sued Rotorex for breach of contract and failure to deliver conforming goods under the United Nations Convention on Contracts for the International Sale of Goods (CISG). The district court judge issued a summary judgment holding Rotorex liable to Delchi for $1,248,331.87. This amount included consequential damages for lost profits resulting from a diminished sales level of Ariele air conditioners. Rotorex appealed to the court of appeals, arguing that it did not breach the agreement, that Delchi was not entitled to lost profits because it maintained inventory levels in excess of the maximum number of possible lost sales, that the calculation of the number of lost sales was improper, and that the district court improperly excluded fixed costs and depreciation from the manufacturing cost in calculating lost profits.

Winter, Circuit Judge The instant matter is governed by the CISG, a self-executing agreement between the United States and other signatories, including Italy. Because there is virtually no case law under the CISG, we look to its language and to the general principles upon which it is based. The CISG directs that its interpretation be informed by its "international character and the need to promote uniformity in its application and the observance of good faith in international trade." Case law interpreting analogous provisions of Article 2 of the Uniform Commercial Code (UCC) may also inform a court where the language of the relevant CISG provisions tracks that of the UCC.

We first address the liability issue. Under the CISG, "the seller must deliver goods which are of the quantity, quality and description required by the contract," and "the goods do not conform with the contract unless they possess the qualities of goods which the seller has held out to the buyer as a sample or model." CISG art. 35. The CISG further states that "the seller is liable in accordance with the contract and this Convention for any lack of conformity." CISG art. 36.

The district court judge held that "there is no question that Rotorex's compressors did not conform to the terms of the contract between the parties" and noted that "there are ample admissions by Rotorex to that effect." We agree. The agreement between Delchi and Rotorex was based upon a sample compressor supplied by Rotorex and upon written specifications regarding cooling capacity and power consumption. Rotorex's engineering representative, Ernest Gamache, admitted in a May 13, 1988 letter to Delchi that the compressors would actually generate less cooling power and consume more energy than the specifications indicated. The president of Rotorex, John McFee, conceded in a May 17, 1988 letter to Delchi that the compressors supplied were less efficient than the sample and did not meet the specifications provided by Rotorex. Finally, in its answer to Delchi's

complaint, Rotorex admitted "that some of the compressors did not conform to the nominal performance information." There was thus no genuine issue of material fact regarding liability, and summary judgment was proper.

Under the CISG, if the breach is "fundamental" the buyer may either require delivery of substitute goods (CISG art. 46) or seek damages. With regard to what kind of breach is fundamental, Article 25 provides:

> A breach of contract committed by one of the parties is fundamental if it results in such detriment to the other party as substantially to deprive him of what he is entitled to expect under the contract, unless the party in breach did not foresee and a reasonable person of the same kind in the same circumstances would not have foreseen such a result.

Because the cooling power and energy consumption of an air conditioner compressor are important determinants of the product's value, the district court's conclusion that Rotorex was liable for a fundamental breach of contract under the CISG was proper.

We turn now to the district court's award of damages. The CISG provides:

> Damages for breach of contract by one party consist of a sum equal to the loss, including loss of profit, suffered by the other party as a consequence of the breach. Such damages may not exceed the loss which the party in breach foresaw or ought to have foreseen at the time of the conclusion of the contract, in the light of the facts and matters of which he then knew or ought to have known, as a possible consequence of the breach of contract. CISG art. 74.

This provision is "designed to place the aggrieved party in as good a position as if the other party had properly performed by contract."

Rotorex argues that Delchi is not entitled to lost profits because it was able to maintain inventory levels of Ariele air conditioning units in excess of the maximum number of possible lost sales. In Rotorex's view, therefore, there was no actual shortfall of Ariele units available for sale because of Rotorex's delivery of nonconforming compressors. Rotorex's argument goes as follows. The end of the air conditioner selling season is August 1. If one totals the number of units available to Delchi from March to August 1, the sum is enough to fill all sales. We may assume that the evidence in the record supports the factual premise. Nevertheless, the argument is fallacious. Because of Rotorex's breach, Delchi had to shut down its manufacturing operation for a few days in May, and the date on which particular units were available for sale was substantially delayed. For example, units available in late July could not be used to meet orders in the spring. As a result, Delchi lost sales in the spring and early summer. We therefore conclude that the district court's findings regarding lost sales are not clearly erroneous.

Rotorex contends, in the alternative, that the district court improperly awarded lost profits for unfilled orders from Delchi affiliates in Europe and from sales agents within Italy. We disagree. The CISG requires that damages be limited by the familiar principle of foreseeability. However, it was objectively foreseeable that Delchi would take orders for Ariele sales based on the number of compressors it had ordered and expected to have ready for the season. The district court was entitled to rely upon the documents and testimony regarding these lost sales and was well within its authority in deciding which orders were proven with sufficient certainty.

Rotorex also challenges the district court's exclusion of fixed costs and depreciation from the manufacturing cost used to calculate lost profits. The trial judge calculated lost profits by subtracting the 478,783 lire "manufacturing cost"—the total variable cost—of an Ariele unit from the 654,644 lire average sale price. The CISG does not explicitly state whether only variable expenses, or both fixed and variable expenses, should be subtracted from sales revenue in calculating lost profits. However, courts generally do not include fixed costs in the calculation of lost profits. This is, of course, because the fixed costs would have been encountered whether or not the breach occurred. In the absence of a specific provision in the CISG for calculating lost profits, the district court was correct to use the standard formula employed by most American courts and to deduct only variable costs from sales revenue to arrive at a figure for lost profits.

Judgment for Delchi affirmed.

Need for Written Sales Contracts Even when the CISG applies to an international sales contract, the parties should not rely exclusively on its protections. Instead, they should draft a comprehensive contract that carefully addresses the major legal and practical problems that may arise in the performance of the contract. The content of the contract varies according to the manner of relationship between the buyer and the seller: (1) A firm may make direct sales to customers abroad, or (2) It may appoint one or more distributors for a particular country or region, which distributors purchase the product from the American firm and resell it to customers in their territories. These two methods of exploiting the world market can involve different legal problems. The following discussion is based on the typical way these transactions are structured to deal with the international climate.

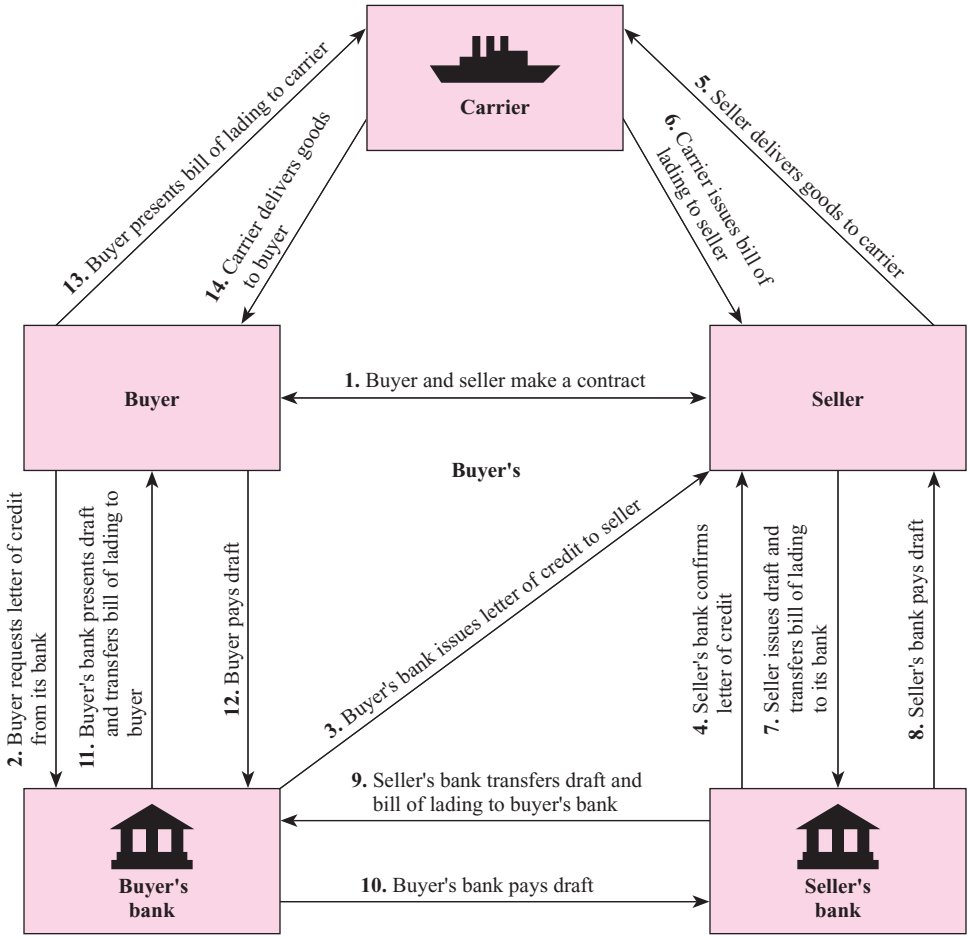
Direct Sale to a Foreign Buyer

When an American firm contracts to sell its goods to a foreign buyer, the buyer and the seller should execute a written contract to ensure their complete understanding of the basic terms and conditions of the contract. The interpretation and enforcement of most of these terms and conditions—such as price, method of payment, currency of payment, and product warranties—primarily involve contract law. To the extent that the CISG does not apply and there is a difference between the contract law of the seller's jurisdiction and that of the buyer, courts typically respect the choice of the parties as to which law applies if the parties, as is usual, have included a **choice of law clause** in the agreement.

In addition, international sales contracts should include a ***force majeure clause,*** which excuses performance due to conditions beyond the parties' control. For example, a *force majeure* clause may excuse a seller of oil from performing when the outbreak of war threatens shipping lanes in the Persian Gulf. *Force majeure* clauses reflect the risks known to have occurred in the past.

As an alternative or in addition to a *force majeure* clause, the CISG has a frustration defense that is similar to the commercial impracticability defense of the UCC. The CISG excuses nonperformance caused by an impediment beyond a party's control that the party could not reasonably have been expected to take into account at the time the contract was made or to avoid or overcome at the time of performance.

An international sales contract should also specify the **currency** in which payment is to be made. American dollars are usually selected because their value is relatively stable, while the currencies of some nations—for example, Brazil—continually fall in value due to high inflation. To illustrate, suppose an American firm contracts to sell five trucks worth $100,000 to a Brazilian firm for 180,000 reals. If payment is delayed for three months, Brazilian inflation may cause the payment to be worth only $90,000.



Assurance of Payment Perhaps the most important provisions in the international sales contract cover the manner by which the buyer pays the seller. Frequently, a foreign buyer's contractual promise to pay when the goods arrive does not provide the seller with sufficient assurance of payment. The seller may not know the overseas buyer well enough to determine the buyer's financial condition or inclination to refuse payment if the buyer no longer wants the goods when they arrive. When the buyer fails to make payment, the seller will find it difficult and expensive to pursue its legal rights under the contract. Even if the seller is assured that the buyer will pay for the goods on arrival, the time required for shipping the goods often means that payment is not received until months after shipment.

To solve these problems, the seller often insists on receiving an **irrevocable letter of credit.** The buyer obtains a letter of credit from a bank in the buyer's country. The letter of credit obligates the buyer's bank to pay the amount of the sales contract to the seller. To obtain payment, the seller must produce a **negotiable bill of lading** and other documents proving that it shipped the goods required by the sales contract in conformity with the terms of the letter of credit.[1] A letter of credit is irrevocable when the buyer's bank cannot withdraw its obligation to pay without the consent of the seller and the buyer.

Letters of credit may be confirmed or advised. Under a **confirmed** letter of credit, the seller's bank agrees to assume liability on the letter of credit. Typically, under a confirmed letter of credit, the buyer's bank issues a letter of credit to the seller; the seller's bank confirms the letter of credit; the seller delivers the goods to a carrier; the carrier issues a negotiable bill of

[1] A bill of lading is a document issued by a carrier acknowledging that the seller has delivered particular goods to it and entitling the holder of the bill of lading to receive these goods at the place of destination. Bills of lading are discussed in Chapter 33.

Figure 1 *Confirmed Letter of Credit Transaction*

lading to the seller; the seller delivers the bill of lading to the seller's bank and presents a draft[2] drawn on the buyer demanding payment for the goods; the seller's bank pays the seller for the goods; the buyer's bank reimburses the seller's bank; and the buyer reimburses its bank. Figure 1 summarizes the confirmed letter of credit transaction.

With an **advised** letter of credit, the seller's bank merely acts as an agent for collection of the amount owed to the seller. The seller's bank acts as agent for the seller by collecting from the buyer's bank and giving the payment to the seller. The buyer's bank is reimbursed by the buyer.

The confirmed letter of credit is the least risky payment method for sellers. The confirmation is needed because the seller, unlike the confirming bank, may not know any more about the financial integrity of the issuing bank than it knows about that of the buyer. The seller has a promise of immediate payment from an entity it knows to be financially solvent—the confirming bank. If the draft drawn pursuant to the letter of credit is not paid, the seller may sue the confirming bank, which is a bank in his home country.

Under the confirmed letter of credit, payment is made to the seller well before the goods arrive. Thus,

[2]A draft is a negotiable instrument by which the drawer (in this case, the seller) orders the drawee (the buyer) to pay the payee (the seller). Drafts are discussed in Chapter 30.

the buyer cannot claim that the goods are defective and refuse to pay for them. When the goods are truly defective on arrival, however, the customer can commence an action for damages against the seller based on their original sales contract.

Conforming and Nonconforming Documents

In a letter of credit transaction, the promises made by the buyer's and seller's banks are independent of the underlying sales contract between the seller and the buyer. Therefore, when the seller presents a bill of lading and other documents that *conform* to the terms of the letter of credit, the issuing bank and the confirming bank are required to pay, even if the buyer refuses to pay its bank or even, generally, if the buyer claims to know that the goods are defective. However, if the bill of lading or other required documents do not conform to the terms of the letter of credit, a bank may properly refuse to pay. A bill of lading is *nonconforming* when, for example, it indicates the wrong goods were shipped, states the wrong person to receive the goods, or states a buyer's address differently than the letter of credit.

In the next case, *Regent v. Azmat,* the court found that the seller fraudulently sent nonconforming goods to the buyer.

Regent Corp. v. Azmat Bangladesh, Ltd. *686 N.Y.S.2d 24 (N.Y. App. Div. 1999)*

Regent Corporation is a New York corporation that imports finished textile products for resale in the United States. In March and April 1994, Regent contracted with Azmat Bangladesh, Ltd., a textile company located in Bangladesh, to purchase bedsheets and pillow cases for import and resale into the United States. A necessary condition of the sale was that the goods be manufactured in Bangladesh, because goods from Bangladesh were not subject to quota restrictions.

The contract between Regent and Azmat required payment by Regent by "100% confirmed irrevocable letter of credit, 90 days from bill of lading date," to be drawn upon by Azmat after it presented documents, including the bill of lading, and an export visa stamp showing the goods originated in Bangladesh. Regent obtained the necessary letters of credit from the Bank of New York and Citibank. International Finance, Investment, and Commerce Bank Limited (International Bank) acted as Azmat's bank, and between April and June 1994, it presented drafts and relevant documents to Citibank and The Bank of New York for payment. Each draft indicated that payment was to be made "at 90 days deferred from bill of lading date" and was accompanied by a dated bill of lading. The Bank of New York made partial payment and Citibank notified International Bank that the requirements for partial payment under its letter of credit were met and indicated it would pay International Bank the amounts requested when due.

When the bed linen was delivered to New Jersey, United States Customs refused entry because the goods were not manufactured in Bangladesh, but in Pakistan. Consequently, Regent sought to enjoin The Bank of New York and Citibank from further payments on the letters of credit, claiming fraud in the transaction by Azmat. Regent also sued Azmat and International Bank for fraud in regard to the payments that had been made to International bank on the letters of credit.

Regent moved for summary judgment against International Bank, submitting as evidence an affidavit by Hafeez Azmat, the owner of Azmat Bangladesh. Hafeez Azmat's affidavit stated that the goods sold to Regent were not manufactured entirely in Bangladesh and did not satisfy Customs regulations. As of June 1994, Azmat's looms had not been fully operational for several months and could not weave fabric for yarn. As a result, to fill the order from Regent, Azmat was required to use "griege goods," i.e., unfinished goods, which were woven in Pakistan and shipped to Azmat for processing. Azmat printed, cut, hemmed and packaged the griege goods in Bangladesh, but the goods were not dyed in either Bangladesh or Pakistan.

Robert Dorsett, an import specialist with the Office of Field Operations for the United States Customs Service, indicated that he had visited the Azmat facilities in Bangladesh in the beginning of June 1994 to determine whether the textiles were manufactured or processed there. Dorsett told Azmat that to be a Bangladesh product, the Pakistani fabric would have to be substantially transformed in Bangladesh by either (a) weaving or cutting on four sides plus additional work such as adding elastic, piping, and ruffles or (b) by dyeing

and printing. After learning that Dorsett had obtained the records of fabric shipments from Pakistan, Azmat admitted the fabric for the sheet shipment to the United States was woven in Pakistan.

The trial court granted Regent's motion for summary judgment against International Bank on the issue of liability on the grounds that Hafeez Azmat knew the requirements for goods to qualify as being made in Bangladesh but shipped goods which did not meet those requirements with the intent to deceive Regent, which constituted fraud in the transaction. The court found that each draft declared on its face that it was payable a specified number of days subsequent to the bill of lading date on another writing, and that, therefore, the drafts were nonnegotiable instruments. Since it found these drafts to be nonnegotiable instruments, the court concluded that International Bank could not be a holder in due course and that therefore Regent's fraud claim against Azmat was also effective against International Bank. International Bank appealed to the New York Appellate Division.

Nardelli, Justice Regent demonstrated, and the trial court properly determined, that there was fraud in the transaction at issue. Regent showed that a material term of the contract was that the goods be manufactured in Bangladesh; that Hafeez Azmat knew what the regulations required for "substantial transformation" of the goods; that due to its economic situation, Azmat's factory was incapable of dyeing the goods; that Hafeez Azmat knowingly failed to fulfill Customs requirements due to the economic pressures on his factory; that Hafeez Azmat knew that the goods he shipped to Regent would not qualify as being manufactured in Bangladesh; and that, nonetheless, Hafeez Azmat sent Regent documents attesting that the goods were made in Bangladesh in order to be paid on the shipment.

However, we find that the trial court erred in determining that the drafts presented by International Bank did not constitute negotiable instruments. The drafts herein were payable at fixed periods after sight. Thus, they were payable within 90 days of the dated bills of lading which accompanied them. The notes, which are by their terms to be paid a certain number of days after the date of the bill of lading, are, therefore, negotiable and the mere reference to the bill of lading date does not impair the note's negotiability. Accordingly, since the drafts at issue constituted negotiable instruments, the issue that must then be determined is whether International Bank was a holder in due course of the drafts.

A holder in due course is (1) a holder, (2) who takes a negotiable instrument (3) for value, (4) in good faith, and (5) without notice that the instrument is overdue or has been dishonored, or of any defense or claim against it on the part of another. Here, International Bank demonstrated possession of the bill of lading and of the sight draft payable to it, which we have held constitutes a "negotiable" instrument. In addition, the parties do not contest the fact that the Bank gave value for the drafts. As a result, only the fourth and fifth elements concerning the Bank's good faith and knowledge are in dispute.

The inquiry into "good faith" is what, in fact, the holder actually knew. If the Bank did not have actual knowledge of some fact which would prevent a commercially honest individual from taking the drafts, then its good faith would be sufficiently shown. Constructive knowledge is insufficient and it is irrelevant what a reasonable banker in International Bank's position should have known or should have inquired about. With respect to the element of notice of Regent's claims and defenses, a subjective test also applies and also requires a showing of the Bank's actual knowledge.

In this case, Regent relied on evidence consisting of International Bank's knowledge in 1992 that Azmat had misused the Bank's credit facility; the Bank's involvement in separate litigation where Azmat allegedly committed a similar fraud and International Bank's efforts to insure repayment, which included documents indicating that the Bank intended to post people at the Azmat facility to monitor Azmat's export and stock; the Bank's instructions to Hafeez Azmat to expedite the shipment of all outstanding orders in order to collect on the letters of credit; and evidence that Hafeez Azmat and an International Bank manager were in daily or almost daily contact.

However, this evidence, although impressive, does not demonstrate clearly that the International Bank had actual knowledge of Azmat's fraud. Thus, they do not actually indicate that in fact the Bank did

post someone at Azmat's facility. They also did not indicate the content of the daily communication between the Bank's branch manager and Hafeez Azmat. The most that can be said of the testimony offered to controvert the Bank's position is that it indicated suspicious circumstances which might well have induced a prudent banker to investigate more thoroughly than did the Bank before taking the notes. However, this is not enough. The Bank was not bound to be alert for circumstances which might possibly excite the suspicions of wary vigilance.

Thus, the evidence submitted by Regent creates an issue of fact concerning the Bank's holder in due course status.

Summary judgment in part affirmed in favor of Regent and in part reversed in favor of International Bank; remanded to the trial court.

Standby Letters of Credit Although an ordinary letter of credit protects the seller, it leaves a buyer at risk if the seller ships defective goods. Therefore, the buyer may insist that the seller obtain a letter of credit from the seller's bank under which the seller's bank promises to pay the buyer if the seller defaults on the sales contract. Such a **standby letter of credit** operates as a guaranty or insurance for the buyer. The buyer pays the seller, expecting the seller to perform; if the seller defaults on the contract, such as by shipping defective goods, the buyer exercises its rights under the standby letter of credit and obtains payment from the seller's bank. (If the standby letter of credit is confirmed, the buyer would collect from the buyer's confirming bank, which would then collect from the seller's bank.) The seller's bank collects the amount of the payment from the seller, if it has not done so already. Because the seller's bank is in the same city as the seller, it can more easily than the buyer obtain collection from the seller.

Dispute Resolution Disputes between an American seller and a foreign buyer may be resolved in the courts of either nation or in an international arbitration tribunal. The court or tribunal may apply American law, foreign law, or international law.

The international sales contract should include a **choice of forum clause,** which designates which court or arbitration tribunal will resolve disputes between the parties. Of course, each party wants to have the dispute resolved in its national courts applying national or local law. As a compromise, an arbitration panel is often the forum of choice.

Arbitration, the settlement of disputes by a nonjudicial third party, may be cheaper, quicker, and more private than resolving disputes through litigation. Equally important, it can take place in a neutral location. The growing attractiveness of arbitration has resulted in the establishment of arbitration centers in London, Paris, Cairo, Hong Kong, Geneva, and New York.

After an American firm successfully litigates or obtains arbitration against a foreign firm, another problem may arise: enforcement of the judgment or decision. For example, an American firm may obtain a judgment in a U.S. court awarding it $50,000 against an Iranian firm. However, the firm may not have any assets in the United States. Moreover, when the American firm seeks enforcement of the judgment in Iran, an Iranian court may refuse to recognize the judgment or to enforce it. Thus, the firm may find it necessary to relitigate in Iran the issues decided by the American court.

Sales to Nonmarket Economies The international sales transaction is complicated when an American buyer sells to a buyer in a nation that has a **nonmarket economy (NME).** NMEs exist in socialist nations, in which a central government owns and controls all significant means of production. This means that a sale by an American seller to an NME will usually be to a buyer that is authorized by its government to enter international sales contracts. Cuba is among the nations having NMEs.

The typical NME buyer is a **foreign trade corporation.** A socialist economy usually has several foreign trade corporations, each empowered to conduct the whole business of exporting or importing a particular good. Contract negotiations with a foreign trade corporation may be slow and costly, due to the unusually high but necessary precision with which the contract is written. Once agreement has been reached, however, foreign trade corporations have an excellent performance record.

Most foreign trade corporations insist that all disputes be resolved by arbitration in their country. This is normally not a great risk for an American seller because most socialist arbitration tribunals have a good record for efficiency and impartiality. When a foreign trade corporation is sued in a court outside its boundaries, it may raise the **doctrine of sovereign immunity.** The doctrine of sovereign immunity is international law; it holds that a nation may not be sued for causing harm. It is founded in the ancient principle that "The King Can Do No Wrong" and, therefore, a king could not be sued by his subjects. Nonetheless, the United States has rejected the doctrine of sovereign immunity in limited circumstances, by allowing actions against foreign governments under the Foreign Sovereign Immunity Act. The United States and other nations deny immunity to the commercial activities of governments, including the international business transactions of foreign trade corporations.

Countertrade Often, a socialist nation will condition its agreement to buy goods from an American seller on the seller's agreement to purchase NME goods. This is known as a countertrade, of which two kinds are most common: the counterpurchase and the compensation transaction. In a **counterpurchase,** an American firm sells its goods to an NME nation and purchases from the NME nation goods unrelated to the goods it sells. For example, in a counterpurchase agreement with the former Soviet Union, PepsiCo sold bottling rights to Pepsi-Cola and purchased Stolychnaya vodka produced by the former Soviet Union.

In a **compensation or buy-back transaction,** an American firm sells equipment or technology to the NME nation and agrees to purchase some of the goods produced with the equipment or technology. For example, Occidental Petroleum sold to the former Soviet Union technology for the construction and operation of ammonia plants and purchased ammonia produced by the plants.

Countertrade is not to be confused with a **barter** transaction, which is a nonmoney transaction in which goods are exchanged. Countertrade involves two reciprocal sales in which each party is paid in money, usually the currency of the NME.

Accepting countertrade may benefit an American seller. It may be the only way an American firm can obtain access to an NME, and it does provide a greater assurance of payment. However, payment is in the NME currency, which either cannot be taken out of the NME nation or has little value on world monetary markets. Also, the goods obtained from the NME nation may not fit into an American firm's normal distribution network and may be of inferior quality. Therefore, an American firm may have difficulty disposing of countertraded goods.

Sales Abroad through a Distributor

If a U.S. firm believes that there is a substantial market for its product in some area abroad, it may find that appointing a distributor located in that area is a more effective and efficient way to exploit the market than selling directly to buyers. If so, it signs a distribution agreement, a contract between the seller and the distributor that sets forth a wide range of terms and conditions of the distributorship. This contract should be written and should contain provisions similar to those in a direct sales contract. However, a distributorship agreement may have additional provisions that cause violations of American and foreign antitrust laws.

Two possible provisions in an international distribution agreement can raise antitrust problems. The first is an exclusive dealing or requirements contract provision whereby the distributor promises not to distribute competing products of any other manufacturer. A seller often wants such a provision because it encourages the distributor to devote its full efforts to sales of the seller's product and not to sales of a competing product. Such an agreement may be illegal under American antitrust laws because it limits the ability of competing firms to export into that territory. The second provision, an exclusive distributorship whereby the seller promises that it will not appoint another distributor in the same territory, is more likely to be challenged under foreign antitrust laws. Distributors frequently want such a provision in order to protect their efforts to build up a base of customers.

The EU's antitrust laws apply to American firms operating in western Europe. Article 85 of the Treaty of Rome states: "all agreements which . . . may affect trade between member states and which have as their object or effect the prevention, restriction or distortion of competition within the common market" are void, and fines may be imposed on parties entering into such agreements. Article 86 prohibits entities with a dominant market position in a substantial portion of the EU

from taking improper advantage of that position. Exclusive distributorship agreements have been especially susceptible to challenge under Article 85.

Liability of Carriers of Goods

When an American firm ships goods to a foreign buyer, the goods may be shipped by ground, air, or water carrier. The duties and extent of liability of these various carriers is largely determined by domestic statutes and international law.

Ground Carriers American trucking and railroad companies are regulated by the Interstate Commerce Commission pursuant to the Interstate Commerce Act. American carriers are liable for any loss or damage to the goods with few exceptions—for example, damage caused by acts of God and acts of the shipper (usually the seller of the goods), such as poorly packaging the goods. An American carrier may limit its liability by contract, provided it allows the shipper to obtain full liability by paying a higher shipping charge.

Most European trucking companies and railroads are covered by EU rules, which place liability on carriers for damages to goods they carry with few exceptions—for example, defective packaging by the shipper and circumstances beyond the carrier's control. EU rules also limit a carrier's liability unless the shipper agrees to pay for greater liability.

Air Carriers The Warsaw Convention governs the liability of international air carriers. Most nations have ratified the Warsaw Convention in its original or amended form. Under the Convention, an air carrier is liable to the shipper for damages to goods with few exceptions, including that it was impossible for the carrier to prevent the loss or that the damage was caused by the negligence of the shipper. The Warsaw Convention limits a carrier's liability to a stated amount per pound, unless the shipper pays for greater liability.

Water Carriers The Hague Rules govern the liability of international water carriers. The Hague Rules were amended in Visby, Sweden, in 1968. The United States codified the Hague Rules in the Carriage of Goods by Sea Act (COGSA), but has not ratified the Visby amendments, which do not substantially change the liability of international water carriers.

The Hague–Visby Rules and the COGSA impose on international water carriers the duties to (1) furnish a seaworthy ship and (2) stow the cargo carefully to prevent it from breaking loose during storms at sea. When these duties are met, a water carrier will not usually be liable for damages to cargo. Water carriers have no liability for damages caused by circumstances beyond their control—such as poor packaging, piracy, or acts of war. Under COGSA, liability is limited to $500 per package, unless the shipper agrees to pay a higher shipping fee. Under the Hague–Visby Rules, liability will be the value of the goods declared by the shipper. Sometimes a carrier will attempt to reduce or eliminate its liability in the shipping contract. However, COGSA does not permit a carrier to eliminate its liability for loss or damages to goods resulting from the carrier's negligence or other fault.

Under COGSA or the Hague–Visby Rules, the owner of cargo will be liable for damage his cargo does to other cargo. Also, under the ancient maritime **doctrine of general average,** when a carrier sacrifices an owner's cargo, such as throwing it overboard in order to save the ship and the other cargo, the other owners have liability to the owner whose cargo was sacrificed; liability is pro rated to each owner according to the value of each owner's goods in relation to the value of the voyage (the value of the ship plus the value of the other owners' goods plus the carrier's total shipping fees).

The doctrine of general average is commonly expanded by the contract between the carrier and cargo owners in **New Jason clauses.**[3] Typically, a New Jason clause provides that in *all* cases when goods are damaged and the carrier is not liable under COGSA, the goods owner is entitled to general average contributions from all other cargo owners. The doctrine of general average, bolstered by a New Jason clause, also requires cargo owners to pay for damages to the ship when not the result of the carrier's fault.

Licensing Foreign Manufacturers

An American firm can also enter the world market by licensing its product or service to a foreign manufacturer. In exchange for granting a license to the foreign licensee, the American licensor will receive royalties

[3] *The Jason,* 225 U.S. 32 (U.S. Sup. Ct. 1912) (upheld the validity of general average clauses in bills of lading).

from the sale of the licensed product or service. Usually, the licensed product or service or the name under which it is sold will be protected by American intellectual property law, such as patent, trade secret, copyright, or trademark law. Because American intellectual property law does not protect the property outside the boundaries of the United States, a licensor needs to take steps to ensure that its intellectual property will acquire protection in the foreign nation. Otherwise, the licensor risks that a competitor may appropriate the intellectual property without penalty.

TRIPS Agreement

The WTO has attempted to increase the protection of intellectual property by passage of the Agreement on Trade-Related Aspects of Intellectual Property Rights **(TRIPS Agreement).** Effective in 1995, TRIPS covers patents, trade secrets, copyrights, and trademarks. The TRIPS Agreement sets out the minimum standards of intellectual property protection to be provided by each member nation. Some nations, like the United States, provide greater protection of intellectual property.

Patents and Trade Secrets

A patent filing must be made in each nation in which protection is desired. It is not difficult for a firm to acquire parallel patents in each of the major countries maintaining a patent system, because many countries are parties to the Paris Convention for the Protection of Industrial Property. This convention recognizes the date of the first filing in any nation as the filing date for all, but only if subsequent filings are in fact made within a year of the first filing.

When technology is not patented, either because it is not patentable or because a firm makes a business decision not to patent it, a licensor may control its use abroad under **trade secret** law. For example, an American firm can license its manufacturing know-how to a foreign manufacturer for use in a defined territory in return for promises to pay royalties and to keep the trade secret confidential.

Copyright

An American firm may license a foreign manufacturer to produce literary, artistic, or musical materials for which the firm holds an American copyright. For example, a computer software development firm may grant a license to a foreign manufacturer of software. Also, the American owner of copyrights protecting the South Park cartoon characters may license a Chinese firm to manufacture Cartman and Kenny dolls.

International copyright protection is governed by the Berne Convention, which states that a copyright registration in one signatory nation grants the copyright owner rights in all signatory nations. The United States is a signatory of the Berne Convention.

The following case, *Subafilms,* involving the Beatles film *Yellow Submarine,* illustrates the importance of obtaining the protection of foreign intellectual property law, holding that American copyright law does not apply to an act of infringement that occurs exclusively outside the United States. The court left open the issue whether foreign copyright laws may have been violated.

Subafilms, Ltd. v. MGM-Pathe Communications Co. *24 F.3d 1088 (9th Cir. 1994)*

In 1966, the musical group The Beatles, through Subafilms, Ltd., entered into a joint venture with the Hearst Corporation to produce the animated motion picture Yellow Submarine. *In 1967, Hearst negotiated agreements with United Artists Corporation (UA) to distribute and finance the film. Pursuant to these agreements, UA distributed* Yellow Submarine *in theaters beginning in 1968 and later on television.*

In the early 1980s, with the advent of the home video market, UA entered into several licensing agreements to distribute a number of its films on videocassette. Although one company expressed interest in Yellow Submarine, *UA refused to license* Yellow Submarine *because of uncertainty over whether home video rights had been granted by the 1967 agreements. Nonetheless, in 1987, UA's successor company, MGM/UA Communications Co., authorized its subsidiary, MGM/UA Home Video, Inc., to distribute* Yellow Submarine *for the domestic home video market and notified Warner Bros., Inc., that* Yellow Submarine *had been cleared for international videocassette distribution. Warner, through its wholly owned subsidiary, Warner Home Video, Inc., in turn entered into agreements with third parties for distribution of* Yellow Submarine *on videocassette around the world.*

In 1988, Subafilms and Hearst brought suit against MGM/UA, Warner, and their subsidiaries (collectively the Distributors), contending that the videocassette distribution of Yellow Submarine, *both foreign and domestic, constituted copyright infringement under the U.S. Copyright Act and a breach of the 1967 agreements. The district court found the Distributors liable and awarded $2,228,000 in compensatory damages to Subafilms and Hearst, evenly split between foreign and domestic distribution. On appeal, a panel of the court of appeals affirmed that both the domestic and foreign distribution of* Yellow Submarine *constituted infringement under the Copyright Act. With respect to the foreign distribution of* Yellow Submarine, *the court of appeals concluded that although infringing actions that take place entirely outside the United States are not violations of the Copyright Act, infringement within the United States occurs—and is a violation of the Copyright Act—when the illegal* authorization *of international infringement* takes place in the United States. *The Distributors asked the court of appeals for an en banc rehearing on the grounds that the copyright law had been misapplied.*

Nelson, Circuit Judge Accepting that wholly extraterritorial acts of infringement cannot support a claim under the Copyright Act, we believe that the panel in this case erred in concluding that the mere authorization of such acts supports a claim for infringement under the Act.

The "undisputed axiom" that the United States' copyright laws have no application to extraterritorial infringement predates the 1909 Act. There is no clear expression of congressional intent in either the 1976 Act or other relevant enactments to alter the preexisting extraterritoriality doctrine. Furthermore, we note that Congress chose in 1976 to expand one specific "extraterritorial" application of the Act by declaring that the authorized importation of copyrighted works constitutes infringement even when the copies lawfully were made abroad. Had Congress been inclined to overturn the preexisting doctrine that infringing acts that take place wholly outside the United States are not actionable under the Copyright Act, it knew how to do so.

Subafilms and Hearst, however, propose that the presumption against extraterritorial application of U.S. laws may be "overcome" when denying such application would "result in adverse effects within the United States." More importantly, application of the presumption is particularly appropriate when "it serves to protect against unintended clashes between our laws and those of other nations which could result in international discord." Subafilms and Hearst contend that, if liability for "authorizing" acts of infringement depends on finding that the authorized acts themselves are cognizable under the Copyright Act, this court should find that the United States copyright laws *do extend* to extraterritorial acts of infringement when such acts "result in adverse effects within the United States." They buttress this argument with the contention that failure to apply the copyright laws extraterritorially in this case will have a disastrous effect on the American film industry, and that other remedies, such as suits in foreign jurisdictions or the application of foreign copyright laws by American courts, are not realistic alternatives.

We are not persuaded by Subafilms and Hearst's parade of horribles. The Supreme Court recently reminded us that "it is a long-standing principle of American law that legislation of Congress, unless a contrary intent appears, is meant to apply only within the territorial jurisdiction of the United States."

At the time that the international distribution of the videocassettes in this case took place, the United States was a member of the Universal Copyright Convention ("UCC"), and, in 1988, the United States acceded to the Berne Convention for the Protection of Literary and Artistic Works. The central thrust of these multilateral treaties is the principle of "national treatment." A work of an American national first generated in America will receive the same protection in a foreign nation as that country accords to the works of its own nationals.

It is commonly acknowledged that the national treatment principle implicates a rule of territoriality. Indeed, a recognition of this principle appears implicit in Congress's statements in acceding to the Berne Convention that "the primary mechanism for discouraging discriminatory treatment of foreign copyright claimants is the principle of national treatment," and that adherence to the Berne Convention will require "careful due regard for the values" of other nations.

In light of the concern with preventing international discord, we think it inappropriate for the courts to act in a manner that might disrupt Congress's efforts to secure a more stable international intellectual property regime unless Congress otherwise clearly has expressed its intent. The application of American copyright law to acts of infringement that occur entirely overseas clearly could have this effect. Extraterritorial application of American law would be contrary to the spirit of the Berne Convention, and might offend other member nations by effectively displacing their law in circumstances in which previously it was assumed to govern. Consequently, an extension of extraterritoriality might undermine Congress's objective of achieving "effective and harmonious copyright laws among all nations." Indeed, it might well send the signal that the United States does not believe that the protection accorded by the laws of other member nations is adequate, which would undermine two other objectives of Congress in joining the convention: "strengthening the credibility of the U.S. position in trade negotiations with countries where piracy is not uncommon" and "raising the likelihood that other nations will enter the Convention."

Accordingly, because an extension of the extraterritorial reach of the Copyright Act by the courts would in all likelihood disrupt the international regime for protecting intellectual property that Congress so recently described as essential to furthering the goal of protecting the works of American authors abroad, we reaffirm that the United States copyright laws do not reach acts of infringement that take place entirely abroad. It is for Congress, and not the courts, to take the initiative in this field.

Subafilms and Hearst raise a number of additional arguments. They maintain that they may recover damages for international distribution of *Yellow Submarine* based on the theory that direct infringement—reproduction of the negatives for *Yellow Submarine*—took place in the United States. In addition, they maintain that the Distributors are liable for the international distribution under foreign copyright law.

We resolve none of these questions, but leave them for the panel, in its best judgment to consider.

Judgment reversed in favor of the Distributors; remanded to the panel of the court of appeals.

Trademarks

The holder of an American trademark may license the use of its trademark in a foreign nation. For example, McDonald's may license a French firm to use the McDonald's name and golden arches at a restaurant on the Champs-Elysees. Or the holder of the Calvin Klein trademark may license a South Korean firm to manufacture Calvin Klein jeans. In addition to the gray market goods problem discussed earlier in this chapter, the holder of an American trademark that licenses its product or services abroad runs the risk of losing trademark protection in the foreign market.

Trademark registrations must be made in each nation in which protection is desired. Parallel trademark registrations may be made in compliance with the Paris Convention for the Protection of Industrial Property. Under the Paris Convention, the date of the first filing in any nation is the filing date for all nations, if the subsequent filings are made within six months of the first filing.

The EU allows a single filing to be effective in all EU nations. The Madrid Agreement also permits a firm to register a trademark in all its signatory nations simultaneously by filing an application for registration with the World Intellectual Property Organization (WIPO) in Geneva. The United States is not a signatory of the Madrid Agreement; therefore, an American trademark holder must register its trademark in a signatory nation to take advantage of the Madrid Agreement. You can check the status of Madrid Agreement adoptions at the WIPO web page: www.wipo.org.

Antitrust Problems

International licensing of intellectual property, if done on an exclusive basis, can give rise to the same kinds of antitrust questions as do exclusive distributorships. An exclusive license of a product innovation means that no one other than the licensee, not even the licensor, can manufacture or sell the product or service in

the designated territory. Competition among products using the same technology is limited and, therefore, may be illegal.

Direct Foreign Investment

An American firm may directly invest in a foreign economy, such as building a manufacturing plant and making its goods near foreign customers. Foreign production may give access to lower-priced labor and raw materials as well as avoid the tariff and other trade barriers erected by foreign nations.

Before an American firm decides to establish a manufacturing operation abroad, its officers must examine a wide variety of legal issues. Some of the issues are ones we have already discussed, such as protection of patents and trademarks. Foreign labor laws may be very different from American law and may impose long-term obligations on the employer. For example, Japanese custom is to hire an employee for life, and in the Netherlands, an employer must obtain governmental approval to dismiss an employee.

Import license requirements and high tariffs may force the firm to use local sources of supplies and raw materials and to manufacture locally a certain percentage of the parts used in assembling the final product. Some countries—for example, India—prohibit foreigners from having a majority equity interest in any operation within their borders. In socialist nations, direct foreign investment is usually prohibited, although some NME nations—for example, China—allow an American firm to co-own a business with a government-owned entity.

When these legal problems are surmounted and the American firm establishes a successful operation in a foreign nation, two additional problems may arise: (1) restrictions on investment repatriation and (2) expropriation.

Repatriation of Earnings and Investment

Repatriation is bringing back to the United States earnings from a direct foreign investment. Many countries, particularly those in the developing world, have regulations concerning the conversion of their currency into a foreign currency such as dollars, and the removal of the converted currency to another country such as the United States. When an American firm wishes to repatriate some of the earnings from an operation in a country with such regulations, it must obtain permission from the host nation's currency exchange authorities. These authorities operate under rules intended to encourage foreign firms to reinvest their earnings in the country rather than send them home. Some countries place an absolute limit, stated in terms of a set percentage of the amount that a firm has invested, on the amount of earnings that may be repatriated each year. Other countries place a substantial income withholding tax on repatriated earnings, which increases in percentage with the amount repatriated.

When an American firm wants to sell or liquidate its operations, all proceeds in excess of the original investment are usually considered dividends, and their repatriation may be either prohibited or taxed at a very high rate. The existence of such regulations in a country means that an American firm should normally not consider a major investment in that country unless it is prepared to make a long-term commitment.

Expropriation

One of the biggest fears of an American firm investing in a politically unstable country is expropriation, the taking of its facilities by the host government without adequate compensation. Since 1945, expropriations have been common, including the expropriation of hotels and banks in Cuba and oil fields and refineries in Iran, Saudi Arabia, and Libya.

American political leaders take the position that international law requires adequate, effective, and prompt compensation whenever a foreign government takes property belonging to someone who is not a citizen of that country. Although this position, which is consistent with our Constitution, is shared by most Western nations, it is rejected by many developing countries and communist countries. Some of these countries contend that international law requires only nondiscriminatory treatment of their citizens and noncitizens. Others recognize the principle that compensation is required, but assert that it may be delayed if immediate payment would frustrate what they view as vital state programs, as would almost always be the case where there is a social revolution that includes a program of massive expropriation of private property.

Regardless, there is difficulty persuading a court to take and listen to such a compensation case. American courts will usually not interfere on the grounds that a foreign government's expropriation action is entitled

to deference as an act of state. The **act of state doctrine,** while not international law, is a matter of comity or courtesy between nations. It holds that a nation is not permitted to question the act of another nation committed within its own boundaries. In addition, a court may refuse to allow a foreign government to be sued by an American firm under the doctrine of sovereign immunity. A neutral foreign court is an even less likely forum because it is not anxious to put itself in the middle of a dispute between a citizen of one foreign country and the government of another.

As the *Kalamazoo Spice* case shows, however, some courts are willing to find a duty to compensate fairly an American firm for the expropriation of its property when a treaty between the United States and the expropriating nation provides for such a remedy. Note, also, that the American court had jurisdiction over funds of the expropriating nation.

Kalamazoo Spice Extraction Co. v. Provisional Military Government of Socialist Ethiopia *729 F.2d 422 (6th Cir. 1984)*

In 1966, Kalamazoo Spice Extraction Co. (Kal-Spice), an American corporation, entered a joint venture with Ethiopian citizens. They created the Ethiopian Spice Extraction Co. (ESESCO), an Ethiopian-based corporation that was to engage in the production of spices. Kal-Spice owned approximately 80 percent of the shares of ESESCO, contributed capital, built a production facility, and trained ESESCO's staff, which consisted of Ethiopian citizens. After four years of preparation, construction, and training, production began in 1970.

In 1974, the Provisional Military Government of Socialist Ethiopia (PMGSE) came to power. In February 1975, as part of its program to ensure that Ethiopian industries would "be operated according to the philosophy of Ethiopian socialism," the PMGSE announced the seizure of several businesses, including ESESCO. As a result of the expropriation, Kal-Spice's ownership interest in ESESCO was reduced to 39 percent. In December 1975, the PMGSE established a Compensation Commission, which in October 1981 offered Kal-Spice the equivalent of $450,000 in Ethiopian currency. Believing it was entitled to compensation of $11 million, Kal-Spice rejected the offer and, in retaliation, refused to pay for $1.9 million of spices that ESESCO had shipped to Kal-Spice in Michigan. When ESESCO (controlled by the PMGSE) sued Kal-Spice for payment, Kal-Spice counterclaimed against the PMGSE for damages for expropriating part of its interest in ESESCO. The trial court decided that the act of state doctrine precluded adjudication of the claims against the PMGSE. Kal-Spice appealed.

Keith, Judge The Act of State doctrine is an exception to the general rule that a court of the United States will decide cases by choosing the rules from among various sources of law, including international law. The roots of the doctrine can be traced to *Underhill v. Hernandez* (1897), where the Supreme Court held:

> Every sovereign state is bound to respect the independence of every other sovereign state, and the courts of one country will not sit in judgment on the acts of the government of another done within its own territory.

Kal-Spice requests that this Court recognize a "treaty exception" to the Act of State doctrine. *Banco Nacional de Cuba v. Sabbatino* (1964) provides the basis for a treaty exception:

> [T]he Judicial Branch will not examine the validity of a taking of property within its own territory by a foreign sovereign government, extant and recognized by this country at the time of suit, *in the absence of a treaty or other unambiguous agreement regarding controlling legal principles,* even if the complaint alleges that the taking violates customary international law. [Emphasis added.]

This language and the existence of a treaty between the United States and Ethiopia, asserts Kal-Spice, requires a "treaty" exception to the rule that a United States court will not exercise jurisdiction over a foreign sovereign for an act done by that sovereign within its borders. The treaty in existence between the United States and Ethiopia is the 1953 Treaty of Amity and Economic Relations. That treaty provides:

> Property of nationals and companies of either High Contracting Party, including interests in property, shall receive the most constant protection and security within the territories of the other High Contracting

Party. *Such property shall not be taken except for a public purpose, nor shall it be taken without prompt payment of just and effective compensation.* [Emphasis added.]

The standard of compensation provided for in the Treaty of Amity between Ethiopia and the United States can provide a basis for determining the extent of compensation to which Kal-Spice may be entitled. Numerous treaties employ the standard of compensation used in the 1953 Treaty of Amity between Ethiopia and the United States. Undoubtedly, the widespread use of this compensation standard is evidence that it is an agreed upon principle in international law.

There is a great national interest to be served in this case, i.e., the recognition and execution of treaties that we enter into with foreign nations. The failure of this court to recognize a properly executed treaty would indeed be an egregious error because of the position that treaties occupy in our body of law.

Judgment reversed in favor of Kal-Spice; remanded to the trial court.

The best protection against the risk of expropriation is insurance. To encourage American investment in developing countries, the U.S. government established the Overseas Private Investment Corporation (OPIC). OPIC offers low-cost expropriation insurance for certain investment projects in designated countries.

Off-Shore Banking and Other Uses of Tax Havens

Because differences in the business taxation rates of developed nations are minimal, tax shopping among developed nations provides little benefit to an international business. However, small countries in North America and Europe provide significant tax advantages to American firms. These **tax havens,** including the Bahamas, the Cayman Islands, and Bermuda, have no income tax. In addition, some tax havens, such as Switzerland, the Bahamas, and the Cayman Islands, not only have low or no income taxes but also protect the secrecy of banking accounts. Consequently, many American firms have established insurance, banking, and investment company subsidiaries in these tax havens.

Not surprisingly, many persons use tax havens to mask illegal activities, especially drug dealing. During the 1980s, the U.S. government pressured the Swiss government to remove its bank secrecy protections to help the United States prosecute drug dealers and tax defrauders. The United States has not, however, exerted similar pressure against other tax havens that have strong bank secrecy laws.

The *Goulding* case demonstrated how an off-shore tax haven is used to launder money from illegal activities—and how the American government apprehends criminals who launder money using tax havens.

United States v. Goulding *26 F. 3d 656 (7th Cir. 1994)*

Randall Goulding and Michael Ushijima were Illinois lawyers. In late 1984 or early 1985, Goulding told government informant James Evegelatos that he knew how to move money around the world to hide it from the government in order to avoid paying taxes. Goulding claimed to have bankers in Hong Kong, Switzerland, and the Cayman Islands, all of whom were acquainted with his system.

From December 1986 until August 1987, International Revenue Service Special Agent Gregory Myre, using the name T. J. Ryder, posed as a businessman who during the past four years had acquired $400,000 in illegal income from bookmaking in Florida. Ryder was introduced to Goulding by Evegelatos in December 1986. Ryder informed Goulding that he wished to have use of his income without reporting it to the Internal Revenue Service. Goulding told Ryder that if Ryder declared his unreported income, the taxes, penalties, and interest might eat up the entire unreported amount. Goulding explained, however, that for $10,000 he could arrange for Ryder's money to be moved through a corporate account in the Cayman Islands and brought back

to the United States as a nontaxable corporate loan. Goulding drew a flowchart to depict the system. He acknowledged that Ryder would be in a lot of trouble if anyone found out about the system but reassured Ryder that the system could be set up so that the Internal Revenue Service would not detect it. Goulding claimed his system "cleaned the money."

Later in February 1987, Ryder met with Goulding at the O'Hare Hilton Hotel in Chicago and was introduced to Ushijima. Ryder told Ushijima that he had cash income that had not been reported on his tax returns. Ushijima described his system of trusts and corporations to be set up in the United States and Cayman Islands to move the money. He said that a management company in the Caymans would provide an existing, dormant "shell" company. The company would be owned by a trust administered by a bank, which would take instructions from Ryder through "wish letters." He added that a domestic corporation would be set up in Minnesota to receive funds from the Cayman corporation and convey Ryder's money back to him as a "loan."

Ushijima indicated that his fee would be $5,000 and that the best way to send the money to the Caymans was in cash by courier rather than international wire transfers or mails. Ushijima warned Ryder that the courier would not declare the cash taken to the Caymans even though it was illegal to take more than $10,000 out of the United States without declaring it. Ushijima also warned Ryder that the cash could be seized if the courier were caught.

At this same meeting, Ushijima said that the fee for Goulding, himself and courier would be $15,000. Thereupon Ryder gave Goulding a $5,000 cashier's check in part payment and made arrangements to deliver $30,000 to Goulding and Ushijima to be sent through the Caymans, with $7,000 additional cash to go to Goulding and Ushijima as their fee and for expenses.

In March 1987, Ryder again met with Goulding at the O'Hare Hilton and gave Goulding $37,000 in $100 bills. Goulding recommended that Ryder report the income but added that the taxes, interest, and penalties would total close to 100 percent of Ryder's money. Ryder's $30,000 was transported by courier to the Caymans about March 7, 1987. No Customs Service report was filed. Ushijima also traveled to the Caymans on March 7 and Goulding followed on March 9. The two arranged there for the formation of a trust, a corporation known as Tarbet Investments, Ltd. C.I., and a corporate bank account in Tarbet's name. Ownership of Tarbet was put in the name of local Cayman nominees. Goulding later formed a domestic corporation (Tarbet Investments, Ltd. U.S.) in Minnesota and opened a corporate bank account there for that corporation.

On May 13, 1987, Trevor Lloyd, a Cayman resident acting on instructions of Ushijima, caused $28,000 of Ryder's money to be wire-transferred from the corporate account of Tarbet C.I. in the Caymans to the Minnesota bank account of Tarbet U.S. Goulding provided Ryder with fictitious documents showing a $15,000 loan from Tarbet U.S. Goulding also provided Ryder with a bank promissory note to be used to create fictitious loan documents for subsequent money transfers pursuant to the scheme.

On May 18, 1987, Ryder met with Ushijima in his law office in Des Plaines, Illinois, to arrange for the transfer of an additional $120,000 to the Caymans. Ushijima said he would deposit the money into his corporate escrow account in Chicago and convert $100,000 of the $120,000 into bearer bonds through his Chicago broker. He told Ryder that the bonds would be taken to the Caymans by the same courier who had transported the initial $30,000 and that once the bonds were in the Caymans, he would open an account in the name of Tarbet C.I. to sell the securities. The balance of Ryder's $120,000 was wire-transferred to Ushijima's corporate escrow account in the Caymans. When Ryder expressed concern about possible questioning of Ushijima about where the money came from, Ushijima replied that he would say it came from clients but would not identify them under the attorney–client privilege. Ryder and Ushijima made arrangements for the two of them and Goulding to meet the next day for Ryder to deliver the additional $120,000.

The next day Ryder met with Goulding at an Elk Grove, Illinois, motor lodge. Ryder thereupon gave Goulding $120,000 in cash. Goulding counted the cash and then left to meet Ushijima at his law office. $100,000 in bearer bonds were purchased as Ushijima had described and were transported by courier to the Caymans on June 6, 1987, and sold. Although required, no Customs report was filed when the bearer bonds were transported out of the United States. The additional $20,000 was wire-transferred to the Caymans and deposited, along with the proceeds of the sale of the bearer bonds, into the Tarbet C.I. bank account in the

Caymans. On June 29, $118,000 was wire-transferred by Trevor Lloyd from the Tarbet C.I. account in the Caymans to the Tarbet U.S. Minnesota account.

Based on information provided by Ryder, the United States prosecuted Goulding and Ushijima for conspiracy to defraud the United States and illegal transportation of currency and monetary instruments. The jury found them guilty, and they were sentenced to six months in prison and five years' probation and ordered to perform 500 hours of community service. Goulding and Ushijima appealed their convictions to the court of appeals.

Cummings, Circuit Judge There was overwhelming evidence that from December 1986 until August 1987 defendants engaged in a conspiracy to defraud the federal government of taxes by laundering money from the United States through the Cayman Islands. They aided Ryder in his efforts to evade the payment of income taxes on $400,000, money they knew was from illegal bookmaking activity. They arranged for the formation of fictitious corporations and for corporate bank accounts here and in the Cayman Islands to launder money and to show that actual taxable income was only nontaxable corporate loans. The defendants warned Ryder to avoid using the international mails and telephones as to the Caymans while suggesting to him how to make the newly formed corporations appear legitimate, although they had no purpose except to "clean" Ryder's money. They violated currency laws about transportation of cash and monetary instruments out of the country; they admitted they were "cleaning" and "laundering" Ryder's illegal unreported income and that the attorney–client privilege was inapplicable to their conduct but nevertheless would be used by them to avoid investigation. Taken together, this evidence is clearly sufficient to establish that the defendants conspired to defraud the government.

The evidence also showed that defendants believed that Ryder owed taxes and that they conspired to deprive the government of information needed to collect the taxes and to deprive the government of those taxes. Goulding recognized that taxes, penalties and interest due on Ryder's $400,000 might total $400,000 and stated that his fee for laundering the money was cheaper than paying Ryder's taxes, penalties and interest. The defendants did not report the monetary transfer out of the United States and concealed the ownership of Ryder's money by creating bank accounts, corporations, nominee stockholders and false loan documents. They also coached Ryder to prevent the government from learning of his untaxed hoard of illegally obtained money. This was all done to keep the government from assessing and collecting taxes on Ryder's $400,000 of illegal income. There was clearly adequate evidence to support defendants' convictions under the conspiracy to defraud clause.

Defendants submit that their convictions for illegally transporting currency and monetary instruments out of the United States were unwarranted. Despite the defendants' arguments to the contrary, there was sufficient evidence to convict. The evidence shows that they caused $30,000 in cash and $100,000 in bearer bonds to be transported from the United States to the Cayman Islands in March and June 1987. The evidence established that they knew that in such instances reports of the transportation had to be made to the government. Moreover, they made clear in advance that they were not planning to comply with the reporting requirement. Their convictions were therefore justified.

Goulding states that there was no evidence he had knowledge of the general reporting requirement, but this is untrue. The evidence showed that Goulding knew it was illegal to transport more than $100,000 out of the country without reporting it to the government. Ushijima told Ryder that in Goulding's presence on February 24, 1987. Goulding also knew that bearer bonds were negotiable instruments and had to be reported because on February 24 he and Ushijima discussed that very subject. Goulding's knowledge also was shown by his refusal to take the bearer bonds to the Caymans on behalf of Ryder, saying that an attorney should know it was illegal to do so.

Moreover, when one defendant is a member of the conspiracy and his co-defendant commits an offense in furtherance or as a consequence of the conspiracy, the defendant can be found guilty of the offense. Consequently, Ushijima's knowledge of the reporting requirement and his culpability were attributable to Goulding and vice versa.

Conviction of Goulding and Ushijima affirmed.

The Foreign Corrupt Practices Act

In 1977, the Congress of the United States passed the Foreign Corrupt Practices Act (FCPA) in response to discoveries that over 400 American firms had made bribes to foreign businesses and government officials in connection with international business transactions. The FCPA makes it a crime for any American firm to offer, promise, or make payments or gifts of anything of value to a foreign official or any other person if the firm knows or should know that it will be used to influence a discretionary governmental decision. An American firm may be fined up to $2 million. Any officer or director who violates the payments prohibition may be fined up to $100,000 and imprisoned up to five years. The FCPA is covered in more detail in Chapter 44.

Ethical and Public Policy Concerns

1. Do you think it is right for nations to use export controls for political ends? Consider the 1990 and 1991 world embargo of Iraqi exports in response to its invasion of Kuwait. Did the benefits of such an embargo outweigh its costs? Does it matter that Iraqi citizens were harmed by an embargo that was aimed at Iraq's political leaders?

2. Do you think that foreign governments should restrict the repatriation of earnings and investment? Why do foreign governments restrict repatriation? What are the long-term costs and benefits of restricting repatriation? Would you make a direct foreign investment in a country that has a history of expropriating American investments without adequate compensation? Do you think American firms have given as much to the economies of developing nations as they have taken out of the economies?

3. Do you think it is right for an American firm to establish a banking or other subsidiary in the Cayman Islands? Who benefits from such a decision? Who suffers by such a decision? Would you invest in an American firm that has a banking subsidiary in a tax haven?

Problems and Problem Cases

1. Roger Geissler was an exporter of military arms and parts. He exported tires for F-14 fighter jets to Iran for use by the Iranian Air Force. Geissler did not obtain a validated license to export the F-14 tires, even though the Commodity Control List required a validated license for the export of "Other aircraft parts and components, n.e.s. [not elsewhere specified]." The only other federal agency that could regulate the export of F-14 tires—the State Department—explicitly excluded F-14 aircraft tires from its jurisdiction. Has Geissler violated the Export Administration Act?

2. Hasbro Industries, Inc., imported G.I. Joe Action Figures from Hong Kong. G.I. Joe figures are plastic, 3½ inches tall, and appear like humans dressed and equipped for war. They are lifelike; the head turns, and the arms are jointed at the shoulder and elbow. They can turn and bend at the waist. The legs have a wide range of movement. Each figure is packaged singly in a large plastic blister mounted on a large card that contains specific biographical information for each figure. For example, First Sergeant, Code Name: Duke, has the following personnel card:

> File Name: Hauser, Conrad S.
> Primary Military Specialty: Airborne Infantryman
> Birthplace: St. Louis, MO Grade: E-8 (Master Sergeant)
>
> Duke was fluent in French, German, and English when he enlisted in 1967. Graduated top of his class at airborne school, Fort Benning. Went Special Forces in 1979. Ran four different Special Forces schools. Turned down a commission in 1971. Statement after declining commission: "They tell me that an officer's job is to impel others to take the risks—so that the officer survives to take the blame in the event of total catastrophe. With all due respect, sir, if that's what an officer does, I don't want any part of it."

In addition, each figure comes with its own specialized accessories. For example, First Sergeant comes with plastic pieces representing a binocular, a helmet, an assault pack, and an M-32 submarine gun. In 1982 and 1983, the U.S. Customs Service classified G.I. Joe figures as "other dolls" under the Tariff Schedule of the United States and assessed a duty on the figures. Hasbro claimed that G.I. Joe was not a doll and should be importable free of duty. Is G.I. Joe a doll?

3. To encourage investment and development, the governments of Canada, Alberta, Ontario, and Saskatchewan gave investment tax credits and monetary grants to Canadian producers of tubular steel, including Ipsco Steel, Inc. Ipsco exported tubular steel to the United States. American producers claimed to be harmed by Ipsco's exports. What remedy is available to the American producers?

4. Manufacture des Montres Rolex S.A. Bienne (Bienne), a Swiss company, is the manufacturer of Rolex watches. Bienne is the owner of the ROLEX trademark in Switzerland. Bienne sold the American rights to the ROLEX trademark to Rolex Watch USA Inc., a New York corporation. The importation of Rolex watches into the United States was forbidden unless imported for the account of Rolex USA. The distributor of Rolex watches is Montres Rolex S.A. (Rolex Geneva), located in Geneva, Switzerland. Bienne manufactures the watch movements and sells them to Rolex Geneva, which places them in casings and then distributes the watches worldwide. Rolex USA is wholly owned by the Wilsdorf Foundation, which also owns 86 percent of Rolex Geneva. Wilsdorf owns no shares of Bienne. Bienne has a five-member board of directors and seven officers, none of whom are officers or directors of Rolex Geneva, Rolex USA, or Wilsdorf.

Sam's Wholesale Club had 83 Rolex watches in its inventory. The watches, bearing the ROLEX trademark, were imported by Rolex Geneva and sold to Sam's without Rolex USA's permission. The Customs Service attempted to seize the 83 Rolex watches, but Sam's argued that the watches were not gray market goods illegally imported into the United States because Rolex USA is under common ownership or control of a foreign company owning the trademark abroad, an exception to trademark infringement. May the Customs Service seize the 83 Rolex watches?

5. MCC-Marble Ceramic Center (MCC) was a retailer of ceramic tile in Florida. MCC agreed to purchase ceramic tile from Ceramica Nuova D'Agostino S.P.A., an Italian manufacturer. Later, MCC alleged that D'Agostino breached the contract by not making some deliveries and delivering lower quality tile than was contracted for. D'Agostino defended on the grounds that the back of the contract required MCC to make complaints by certified letter within 10 days, which MCC had failed to do. The contract was written in Italian on one of D'Agostino's preprinted forms. MCC tried to present evidence that the parties had agreed that the terms on the back did not apply to their agreement. Was D'Agostino correct to argue that the parol evidence rule prevented the court from considering any evidence contradicting the written contract?

6. Asturquimica, S.A., a Spanish company, exported potassium permanganate to the United States in 1985 and 1986. During 1986, the value of the Spanish peso appreciated 13 percent in relation to the American dollar. Asturquimica increased its export price by 6 percent, except to American buyers to whom it was contractually committed to sell at the 1985 price. The result was that Asturquimica sold potassium permanganate in the United States at prices from 7 to 13 percent below the price in Spain. Carus, an American competitor of Asturquimica, asked the International Trade Administration to impose a countervailing duty against Asturquimica. Did the ITA assess the duty?

7. Bacchus Associates, a New York partnership, purchased fruit from Morocco. Bacchus shipped the fruit on a ship owned by M. H. Martima, S.A., a Panamanian company. The shipment contract provided that any dispute between the shipper (Bacchus) and the carrier (Martima) would be governed by Japanese law and arbitrated in Tokyo by the Tokyo Maritime Arbitration Commission. During shipment, the fruit shifted in the cargo holds, resulting in over $1 million damages. Bacchus sued Martima for damages and asked the court to invalidate the arbitration and choice-of-law clauses on the grounds that they increased the transaction costs of obtaining damages from the carrier and put a hurdle in the way of enforcing liability, thereby violating the COGSA prohibition against attempts by carriers to reduce their liability for negligence. Was Bacchus correct?

8. Benetton Service Corp., an Italian clothing manufacturer, contracted to sell clothing to Benedot, Inc., a retailer in Alabama. Over a period of three years, all of Benetton's deliveries to Benedot were delivered late and contained nonconforming goods. Benetton promised that future deliveries would be conforming and on time. Relying on this promise, Benedot ordered $81,000 of clothing. In partial payment for the clothing, Benedot arranged for Southland Bank to issue a $61,000 irrevocable letter of credit to Benetton. After receiving the letter of credit, Benetton shipped the goods to Benedot. The goods arrived late and were nonconforming. Will Benedot be successful in suing to enjoin Southland Bank from paying Benetton on the letter of credit?

9. Deutsche Shell contracted to deliver crude oil to Placid Refining Co's. refinery in Port Allen, Louisiana. The oil tanker left Scotland, crossing the Atlantic with no difficulty. On reaching the Mississippi River, a compulsory river pilot guided the tanker upstream. On June 5, the ship passed through shallow water and experienced a vibration, after which its 10-cm radar failed. The captain requested service for the 10-cm radar and also the 3-cm radar, which had a weak picture. Further upstream, the tanker encountered a storm and the 3-cm radar failed, leaving the tanker without any operational radar. The captain was able to make the 3-cm radar operate intermittently, but the pilot, fearing that the 3-cm radar might fail completely, leaving the tanker in shipping lanes without radar, refused to proceed and directed the ship to anchor. Because the Mississippi was at flood stage, before the anchors could hold, the current swept the ship downstream, where it went aground. After a week of salvage efforts, the tanker was refloated and delivered the oil to Placid's refinery. Deutsche Shell sued Placid under the doctrine of general average and a New Jason clause in the shipping contract. Placid defended on grounds that Deutsche Shell negligently maintained the 3-cm radar, resulting in its failure: for example, a service report three years before the accident indicated that the upper antenna's array ball bearing needed to be replaced, yet there was no evidence that the recommendation was followed; also, the radar manufacturer's instructions advised that the antenna array should be overhauled every second year, yet there was no evidence that this was done during the 10 years after the 3-cm radar was installed. The 3-cm radar failed because of water intrusion into its antenna/wavelength components. Did the court find Placid liable to Deutsche Shell?

10. Soon after the Fidel Castro regime came to power in Cuba, the Cuban socialist government expropriated four Cuban branches of the Chase Manhattan Bank. The value of the branches was $6.9 million. The Cuban government made no payment to Chase. At the same time, Chase sold for $17 million collateral it held securing $10 million of loans Chase made to two government-owned Cuban banks. Chase kept the $7 million excess proceeds. In addition, Chase refused to repay $2.5 million that the government-owned Cuban Banks had on deposit at Chase. Banco Nacional de Cuba, a government-owned Cuban bank and the successor of the two government-owned Cuban banks, sued Chase in a U.S. court to recover the $9.5 million. Will the recovery of Banco Nacional be reduced by the value of the Chase bank branches expropriated by the government?

Chapter Fifty-Three

Insurance

Chapter Outline

I. Nature and Benefits of Insurance Relationships

II. Insurance Policies as Contracts
- *A. Interested Parties*
- *B. Offer, Acceptance, and Consideration*
  - *1. Insurer's Delay in Acting on Application*
- *C. Effect of Insured's Misrepresentation*
  - *1. Warranty/Representation Distinction*
- *D. Capacity of Parties*
- *E. Legality*
- *F. Form and Content of Insurance Contracts*
  - *1. Writing*
  - *2. Reformation of Written Policy*
  - *3. Interpretation of Insurance Contracts*
  - *4. Clauses Required by Law*
  - *5. Notice and Proof of Loss-Causing Event*
  - *6. Time Limits*
  - *7. Cancellation and Lapse*
  - *8. Third Parties and Insurance Contracts*
- *G. Performance and Breach by Insurer*

III. Property Insurance
- *A. The Insurable Interest Requirement*
  - *1. Examples of Insurable Interest*
  - *2. Timing and Extent of Insurable Interest*
- *B. Covered and Excluded Perils*
  - *1. Typical Covered Perils*
  - *2. Fire as a Covered Peril*
  - *3. Typical Excluded Perils*
  - *4. Additional Coverages*
  - *5. Personal Property Insurance*
- *C. Nature and Extent of Insurer's Payment Obligation*
  - *1. Valid and Open Policies*
  - *2. Coinsurance Clause*
  - *3. Pro Rata Clause*
- *D. Right of Subrogation*
- *E. Duration and Cancellation of Policy*

IV. Liability Insurance
- *A. Types of Liability Insurance Policies*
- *B. Liabilities Insured Against*
  - *1. Personal Liability and Homeowners' Policies*
  - *2. Business Liability Policies*
  - *3. Other Liability Policies*
- *C. Insurer's Obligations*
  - *1. Duty to Defend*
  - *2. Duty to Pay Sums Owed by Insured*
- *D. Is There a Liability Insurance Crisis?*

V. Life Insurance
- *A. Parties Other than Insurer*
- *B. Insurable Interest*
- *C. Types of Life Insurance Policies*
  - *1. Whole Life Policies*
  - *2. Term Policies*
- *D. Other Special Issues and Policy Provisions*
  - *1. Misrepresentation Issues*
  - *2. Misstatement of Age Clauses*
  - *3. Incontestability Clauses*
  - *4. Special Cancellation and Lapse Issues*

VI. Health Insurance
- *A. Nature of Coverage*
- *B. Insurer's Payment Obligation*
- *C. Group Policies*
- *D. The Health Insurance Debate*

VII. Bad Faith Breach of Insurance Contract

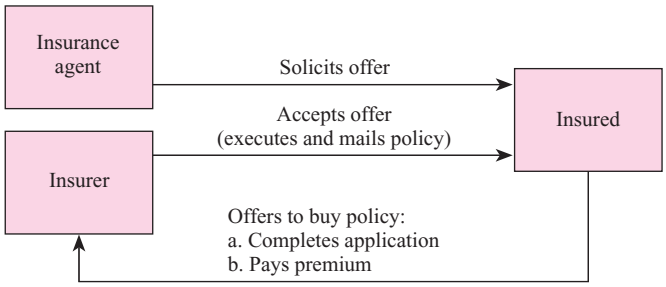
Insurance serves as a frequent topic of discussion in various contexts in today's society. Advertisements for companies offering life, automobile, and property insurance appear daily on television and in the print media. Journalists report on issues of health insurance coverage and movements for reform. Persons engaged in business lament the excessive (from their perspective) costs of obtaining liability insurance. Insurance companies and insurance industry critics offer differing explanations for why those costs have reached their present levels.

Despite the frequency with which insurance matters receive public discussion and the perceived importance of insurance coverage, major legal aspects of insurance relationships remain unfamiliar to many persons. This chapter, therefore, examines important components of insurance law. We begin by discussing the nature of insurance relationships and exploring contract law's application to insurance policies in general. We then discuss other legal concepts and issues associated with specific types of insurance, most notably property insurance, liability insurance, and life insurance.[1] The chapter concludes with an examination of an important judicial trend: allowing insurers to be held liable for compensatory and punitive damages if they refuse in bad faith to perform their policy obligations.

Nature and Benefits of Insurance Relationships

Insurance relationships arise from an agreement under which a risk of loss that one party (normally the **insured**) otherwise would have to bear is shifted to another party (the **insurer**). The ability to obtain insurance enables the insured to lessen or avoid the adverse financial effects that would be likely if certain happenings were to take place. In return for the insured's payment of necessary consideration (the **premium**), the insurer agrees to shoulder the financial consequences stemming from particular risks if those risks materialize in the form of actual events.

Each party benefits from the insurance relationship. The insured obtains a promise of coverage for losses that, if they occur, could easily exceed the amounts of the premiums paid. Along with this promise, the insured acquires the "peace of mind" that insurance companies and agents like to emphasize. By collecting premiums from many insureds over a substantial period of time, the insurer stands to profit despite its obligation to make payments covering financial losses that stem from insured-against risks. The insured-against risks, after all, are just that—risks. In some instances, events triggering the insurer's payment obligation to a particular insured may never occur (e.g., the insured's property never sustains damage from a cause contemplated by the property insurance policy). The insurer nonetheless remains entitled to the premiums collected during the policy period. Other times, events that call the insurer's payment obligation into play in a given situation may occur infrequently (e.g., a particular insured under an automobile insurance policy has an accident only every few years) or only after many years of premium collection (e.g., an insured paid premiums on his life insurance policy for 35 years prior to his death).



Insurance Policies as Contracts

Interested Parties

Regardless of the type of insurance involved, the insurance relationship is contractual. This relationship involves at least two—and frequently more than two—interested parties. As noted earlier, the insurer, in exchange for the payment of consideration (the premium), agrees to pay for losses caused by specific events (sometimes called *perils*). The insured is the person who acquires insurance on real or personal property or insurance against liability, or, in the case of life or health insurance, the person whose life or health is the focus of the policy. The person to whom the insurance proceeds are payable is the **beneficiary.** Except in the case of life insurance, the insured and the beneficiary will often be the same person. In most but not all instances, the insured will also be the policy's **owner** (the person entitled to exercise the contract rights set out in the insurance policy and in applicable law). In view of the contractual nature of the insurance relationship, insurance policies must satisfy all of the elements required for a binding contract.

[1]The chapter also contains a brief discussion of health insurance. Another frequently encountered type of insurance, title insurance, was discussed in Chapter 24.

Figure 1 *Creation of an Insurance Contract*

Offer, Acceptance, and Consideration

The insurance industry's standard practice is to have the potential insured make an offer for an insurance contract by completing and submitting an application (provided by the insurer's agent), along with the appropriate premium, to the insurer. The insurer may then either accept or reject this offer. If the insurer accepts, the parties have an insurance contract under which the insured's initial premium payment and future premium payments furnish consideration for the insurer's promises of coverage for designated risks, and vice versa.

What constitutes acceptance of the offer set forth in the application may vary somewhat, depending on the type of insurance requested and the language of the application. As a general rule, however, acceptance occurs when the insurer (or agent, if authorized to do so) indicates to the insured an intent to accept the application. It is important to know the precise time when acceptance occurs, because the insurer's contractual obligations to the insured do not commence until acceptance has taken place. If the insured sustains losses after the submission of the application (the making of the offer) but prior to acceptance by the insurer, those losses normally must be borne by the insured rather than the insurer.

With property insurance and sometimes other types of insurance, the application may be worded so that insurance coverage begins when the insured signs the application. This arrangement provides temporary coverage until the insurer either accepts or rejects the offer contained in the application. The same result may also be achieved by the use of a *binder,* an agreement for temporary insurance pending the insurer's decision to accept or reject the risk.

Figure 1 depicts the formation of an insurance contract.

Insurer's Delay in Acting on Application A common insurance law problem is the effect of the insurer's delay in acting on the application. If the applicant suffers a loss after applying but before a delaying insurer formally accepts, who must bear the loss? As a general rule, the insurer's delay does not constitute acceptance. Some states, however, have held that an insurer's retention of the premium for an unreasonable time constitutes acceptance and hence obligates the insurer to cover the insured's loss.

Other states have allowed negligence suits against insurers for delaying unreasonably in acting on an application. The theory of these cases is that insurance companies have a public duty to insure qualified applicants and that an unreasonable delay prevents applicants from obtaining insurance protection from another source. A few states have enacted statutes establishing that insurers are bound to the insurance contract unless they reject the prospective insured's application within a specified period of time.

Effect of Insured's Misrepresentation

Applicants for insurance have a duty to reveal to insurers all the material (significant) facts about the nature of the risk so that the insurer may make an intelligent decision about whether to accept the risk. When an insurance application includes an insured's false statement regarding a material matter, the insured's misrep-

resentation, if relied on by the insurer, has the same effect produced by misrepresentation in connection with other contracts—the contract becomes voidable at the election of the insurer. This means that the insurer may avoid its obligations under the policy. The same result is possible if the insured failed, in the application, to disclose known material facts to the insurer, which issued a policy it would not have issued if the disclosures had been made. (As will be seen later in the chapter, however, certain clauses frequently appearing in life insurance policies may limit the ability of issuers of such policies to use the insured's misrepresentation as a way of avoiding all obligations under the policy.)

Warranty/Representation Distinction It sometimes becomes important to distinguish between **warranties** and representations that the insured makes (usually in the application) to induce the insurer to issue an insurance policy. Warranties are *express terms in the insurance policy.* They are intended to operate as conditions on which the insurer's liability is based. The insured's breach of warranty terminates the insurer's duty to perform under the policy. For example, a property insurance policy on a commercial office building specifies that the insured must install and maintain a working sprinkler system in the building, but the insured never installs the sprinkler system. The sprinkler system requirement is a warranty, which the insured breached by failing to install the system. This means that the insurer may not be obligated to perform its obligations under the policy.

Traditionally, an insured's breach of warranty has been seen as terminating the insurer's duty to perform *regardless of whether the condition set forth in the breached warranty was actually material to the insurer's risk* (unlike the treatment given to the insured's misrepresentations, which do not make the insurance policy voidable unless they pertained to a material matter). In view of the potential harshness of the traditional rule concerning the effect of a breach of warranty, some states have refused to allow insurers to escape liability on breach of warranty grounds unless the condition contemplated by the breached warranty was indeed material.

Capacity of Parties

Generally speaking, a contract is not enforceable unless both parties to it had the legal capacity to bind themselves to an agreement. This is seldom a problem in the insurance context, whose typical contracting parties—a corporation and an adult—clearly would have capacity in nearly all instances. An insurance policy taken out by a minor may sometimes be treated differently, because of the usual rule that a minor's lack of capacity makes the minor's contract voidable at the election of the minor.[2] For purposes of the insurance setting, however, many states have departed from the usual rule by enacting statutes that make the insurance contracts of minors enforceable against them.

Legality

The law distinguishes between unlawful wagering contracts and valid insurance contracts. A wagering contract creates a new risk that did not previously exist. Such a contract is contrary to public policy and therefore illegal. An insurance contract, however, *transfers existing risks*—a permissible, even desirable, economic activity. A major means by which insurance law separates insurance contracts from wagering contracts is the typical requirement that the party who purchases a policy of property or life insurance must possess an **insurable interest** in the property or life being insured. Specific discussion of the insurable interest requirement appears in this chapter's later sections on property and life insurance.

Form and Content of Insurance Contracts

Writing State law governs whether insurance contracts are within the statute of frauds and must be evidenced by a writing. Some states require specific types of insurance contracts to be in writing. Contracts for property insurance are not usually within the statute of frauds, meaning that they may be either written or oral unless they come within some general provision of the statute of frauds—for example, the "one-year" provision.[3] Even when a writing is not legally required, however, wisdom dictates that the parties reduce their agreement to written form whenever possible.

---

[2] An insurance contract taken out on the life of a minor (the insured) *by an adult* (the owner) is not voidable, however. Only when the minor is the owner of the policy does the usual concern over the minor's lack of capacity come into play.

[3] The usual provisions of the statute of frauds are discussed in detail in Chapter 16.

Reformation of Written Policy As one would expect, insurance companies' customary practice is to issue written policies of insurance regardless of whether the applicable statute of frauds requires a writing. An argument sometimes raised by insureds is that the written policy issued by the insurer did not accurately reflect the content of the parties' actual agreement. For instance, after the occurrence of a loss for which the insured thought there was coverage under the insurance contract, the insured learns that the loss-causing event was excluded from coverage by the terms expressly stated in the written policy. In such a situation, the insured may be inclined to argue that the written policy should be judicially **reformed,** so as to make it conform to the parties' supposed actual agreement.

Although reformation is available in appropriate cases, courts normally presume that the written policy of insurance should be treated as the embodiment of the parties' actual agreement. Courts consider reformation an extreme remedy. Hence, they usually refuse to grant reformation unless either of two circumstances is present. The first reformation-triggering circumstance exists when the insured and the insurer, through its agent or agents, were *mutually mistaken* about a supposedly covered event or other supposed contract term (i.e., both parties believed an event was covered by, or some other term was part of, the parties' insurance agreement but the written policy indicated otherwise). The alternative route to reformation calls for proof that the insurer committed fraud as to the terms contained in the policy or otherwise engaged in inequitable conduct. *Ridenour v. Farm Bureau Insurance Co.,* which follows, illustrates the judicial presumption that the written policy sets forth the parties' true agreement. The case also confirms that the insured's unilateral mistake—as opposed to the parties' mutual mistake—about policy terms will not warrant reformation.

Ridenour v. Farm Bureau Insurance Company *377 N.W.2d 101 (Neb. Sup. Ct. 1985)*

In August 1982, a hog confinement building owned by Charles Ridenour collapsed and was rendered a total loss. Some of Ridenour's hogs were killed as a further result of the collapse. Ridenour made a claim for these losses with his property insurer, Farm Bureau Insurance Company, whose Country Squire policy had been issued on Ridenour's property in July 1977 and had been renewed on a yearly basis after that. Farm Bureau denied the claim because the policy did not provide coverage for the collapse of farm buildings such as the hog confinement structure. Moreover, though the policy provided coverage for hog deaths resulting from certain designated causes, collapse of a building was not among the causes listed. Asserting that the parties' insurance contract was to have covered the peril of building collapse notwithstanding the terms of the written policy, Ridenour sued Farm Bureau. He asked the court to order reformation of the written policy so that it would conform to the parties' supposed agreement regarding coverage.

At trial, Ridenour testified about a February 1982 meeting in which he, his wife, and their son discussed insurance coverage with Farm Bureau agent Tim Moomey. Ridenour testified that he wanted to be certain there was insurance coverage if the hog confinement building collapsed because he had heard about the collapse of a similar structure owned by someone else. Therefore, he asked Moomey whether the Country Squire policy then in force provided such coverage. According to Ridenour, Moomey said that it did. Ridenour's wife, Thelma, testified that she asked Moomey (during the same meeting) whether there would be coverage if the floor slats of the hog confinement building collapsed and caused hogs to fall into the pit below the building. According to her testimony, Moomey responded affirmatively. The Ridenours' son, Tom, testified to the same effect. Mr. and Mrs. Ridenour both testified that they had not completely read the Country Squire policy and that because they did not understand the wording, they relied on Moomey to interpret the policy for them.

Moomey, who had ended his relationship with Farm Bureau by the time the case came to trial, testified that at no time did the Ridenours request that the hogs and the confinement building be insured so as to provide coverage for losses resulting from collapse of the building. Moomey knew that collapse coverage was not available from Farm Bureau for hog confinement buildings. In addition, Moomey testified that he met with Ridenour in April 1982 and conducted a "farm review" in which he discussed a coverage

checklist and the Country Squire policy's declarations pages (which set forth the policy limits). This checklist, which Ridenour signed after Moomey reviewed it with him, made no reference to coverage for collapse losses. (Ridenour admitted in his testimony that he had signed the checklist after Moomey read off the listed items to him.) When Moomey was contacted by the Ridenours on the day the building collapsed, he had his secretary prepare a notice of loss report for submission to Farm Bureau. He also assigned an adjuster to inspect the property. Moomey and the adjuster discussed the fact that the Country Squire policy did not provide coverage for Ridenour's losses. Ridenour further testified that the day after the collapse occurred, Moomey told him he was sorry but that Farm Bureau's home office had said there was no coverage.

The trial court granted reformation, as Ridenour had requested. Farm Bureau appealed.

Caporale, Judge The principle upon which Ridenour relies is that reformation is decreed in order to effectuate the real agreement of the parties when a written instrument does not represent their true intent. In this jurisdiction reformation may be decreed where there has been a mutual mistake or where there has been a unilateral mistake caused by the fraud or inequitable conduct of the other party. To obtain reformation the evidence must be clear, convincing, and satisfactory. Such evidence is present when there has been produced in the trier of fact a firm belief or conviction that a fact to be proved exists. Moreover, there is a strong presumption that a written instrument correctly expresses the intention of the parties to it.

The record does not produce in us a firm belief or conviction that there was a mutual mistake of fact. Moomey was a trained and experienced insurance agent who, after he had no relationship with Farm Bureau, testified he knew the coverage claimed by Ridenour was not available from Farm Bureau and who denied representing that such coverage existed under the policy. Ridenour argues that Moomey's expression of sorrow over the fact that Farm Bureau's home office said there was no coverage, coupled with the facts that he caused a notice of loss report to be prepared and arranged for an adjuster to inspect the property, establishes that Moomey did think collapse coverage for the hog building existed. We conclude otherwise. Prudence dictated that Ridenour's claim be noted and investigated. Investigation of this claim to determine the facts does not imply a thought that coverage exists. Neither does an expression of regret that the home office said coverage does not exist necessarily imply an earlier belief by Moomey that there was coverage. It may as easily imply regret at the confirmation of what Moomey already knew.

Any mistake which may have existed was therefore one made only by Ridenour. Under such a circumstance he must, in order to recover, clearly, convincingly, and satisfactorily establish that the mistake was either the result of fraud on the part of Farm Bureau or due to Farm Bureau's inequitable conduct. Ridenour concedes in his brief that there was no fraud, but argues that Farm Bureau engaged in inequitable conduct by not delivering the declarations pages until after the loss. The late delivery of the declarations pages is more than adequately explained, however, by the fact that Ridenour was tardy in paying his premium. Moreover, since Ridenour admits that he did not read the policy, he cannot be heard to complain that not having the declarations pages deprived him of an opportunity to discover that he had no collapse coverage on his hog confinement building.

The nature of the conflict in the evidence in this case is not unlike that present in . . . earlier cases which resulted in a denial of reformation. [In addition,] the principal cases relied upon by Ridenour in which reformation was decreed are distinguishable from the case presently before us [because in each of the cases cited by Ridenour, the insured and the insurer's agent both testified that the agent made coverage assumptions and representations that were inconsistent with the terms of the written policy]. Indeed, in [those cases] there was no evidentiary conflict as to what the agent represented; consequently, the only conclusion which could have been reached was that there had been a mutual mistake. In the case before us, however, the evidence falls short of overcoming the presumption that the policy as written correctly expresses the intention of the parties at the time it was renewed.

Judgment and decree of reformation reversed in favor of Farm Bureau.

Interpretation of Insurance Contracts Modern courts realize that many persons who buy insurance do not have the training or background to fully understand the technical language often contained in insurance policies. As a result, courts interpret insurance policy provisions as they would be understood by an average person. In addition, courts construe ambiguities in an insurance contract against the insurer, the drafter of the contract (and hence the user of the ambiguous language). This rule of construction means that if a word or phrase used in an insurance policy is equally subject to two possible interpretations, one of which favors the insurer and the other of which favors the insured, the court will adopt the interpretation that favors the insured. The *Cope* case, which follows shortly, illustrates the application of this rule of construction to an ambiguous provision in a liability insurance policy.

A number of states purport to follow the *reasonable expectations of the insured* approach to interpretation of insurance policies. Analysis of judicial decisions reveals, however, that this approach's content and effect vary among the states ostensibly subscribing to it. Some states do little more than attach the reasonable expectations label to the familiar principles of interpretation set forth in the preceding paragraph. A few states give the reasonable expectations approach a much more significant effect by allowing courts to effectively read clauses into or out of an insurance policy, depending on whether reasonable persons in the position of the insured would have expected such clauses to be in a policy of the sort at issue. When applied in the latter manner, the reasonable expectations approach tends to resemble reformation in its effect.

Property Owners Insurance Co. v. Cope *722 F. Supp. 1096 (N.D. Ind. 1991)*

Property Owners Insurance Co. (POI) was the insurer and Thomas Cope was the insured under a liability policy that excluded coverage except in instances of liability "with respect to the conduct of a business" owned by Cope. Cope owned a roofing business. While the policy was in force, Cope traveled to Montana with Edward Urbanski, a person with whom Cope did significant business. While on this trip, Cope snowmobiled with a group of persons that included Gregory Johnson, who died in a snowmobiling accident. Johnson's estate brought a wrongful death suit against Cope in a Montana court. POI then filed a declaratory judgment action against Cope and Johnson's estate in the U.S. District Court for the Northern District of Indiana. In this suit, POI sought a judicial determination that it had no obligations to Cope and Johnson's estate under the liability insurance policy. The parties agreed that Indiana law would control the case, which came before the court on POI's motion for summary judgment.

Moody, District Judge POI maintains that the Montana snowmobiling trip was a recreational event rather than "the conduct of a business" owned by Cope. Thus, argues POI, the Montana trip was not covered by the insurance contract. Cope, however, maintains that he intended the Montana trip to advance both business and pleasure, thus bringing it under the policy.

The parties have not briefed, nor has the court found, any Indiana law interpreting the words "conduct of a business" in the context of an exclusion in a contract to provide liability insurance to a business owner. The closest reported case is apparently *Unigard Mutual Insurance Co. v. Martin* (1982), [an Arizona Court of Appeals case] cited by POI. The evidence before the *Martin* court showed that the object of a large annual fishing trip was both recreation and the advancement of business. The *Martin* court . . . focused on the express terms of the [liability] insurance contract. [Noting that the fishing trip was heavily recreational but only incidentally business-connected, and stressing the policy's exclusion for "personal" activities that were not in "direct conduct of a business," the *Martin* court held that the policy at issue did not afford coverage.]

Applying *Martin* to this case, the court readily distinguishes the Arizona precedent on its facts. The *Martin* court relied heavily on [the] particular wording [of the policy involved there] in making its most important analytical point—namely, that the insurance contract was not ambiguous, but

plainly excluded the fishing trip by its express terms. The *Martin* court focused especially on the words "direct conduct" in the exclusion before it, defining each word at length, and with particular emphasis on the word "direct." In the case at bar, the contract language is different, the limitation on coverage arising by negative implication from the words "only with respect to the conduct of a business." The word "direct" does not modify "conduct" in this case, nor does the contract expressly contrast personal and business activities. Accordingly, the *Martin* case does not present a perfect template for dealing with this action.

Whether or not the *Martin* court properly read the contract before it as unambiguous, the policy issue before this court is not resolved by the familiar Indiana rule that where an insurance contract is clear and unambiguous, the language therein must be given its plain meaning. [T]his court holds that the words "with respect to the conduct of a business" are, in this context, not sufficiently self-defining in their plain meaning. Rather, those words are ambiguous and require construction because reasonable persons might well differ on the question of whether they exclude coverage for activities furthering dual purposes of recreation and profit.

[U]nder settled principles for the interpretation of ambiguous insurance contracts . . . , this court construes the policy in favor of the insured. Thus, the court holds that the language of the contract before it does not exclude, as a matter of law, coverage for activities that serve dual purposes of recreation and profit. If insurance companies operating in Indiana desire the benefit of such an exclusion, it is a simple enough matter for them to draft their policies to unambiguously exclude coverage for recreational activities furthering business objectives.

In this case, the record on summary judgment reveals a genuine dispute over the factual nature of the Montana snowmobiling trip. This dispute is certainly material, for the factual nature of the trip will, under the express terms of the contract at issue, determine the applicability of the policy's limit on liability. It remains, however, for the court to further explore the materiality of that dispute by detailing the applicable legal standard for assessing the facts. The *Martin* court, in this regard, paints an alarming picture of insurer liability leaping up in extreme situations, perhaps even with chance meetings at Little League games. On the other hand, if hypotheticals are brought to bear, this court can readily imagine a far different situation at the other extreme, one in which a business executive who enjoys his solitude, loathes the boors to whom he must sell his product, and hopes to retire at the earliest possible moment, must nevertheless occasionally invite customers to cocktails or sporting events for the purely fictional purpose of having fun. The *Martin* court, apparently concerned with the dubious horrors of the slippery slope, seems inclined to create a bright line rule denying coverage in both situations. Given the ambiguity in the contract at issue here, however, this court is prepared to seek out a test in the law capable of discriminating among situations of mixed profit and recreation motives.

Cope advances the workmen's compensation test applied in Indiana law for many years: [whether] the activity at issue was "required by or incidental to" the insured's business. The *Martin* court rejected this type of test because the liberal coverage policy motivating workmen's compensation statutes is not at play in a private insurance contract. In this case, however, the contract is ambiguous, which brings to bear Indiana's policy of construing insurance exclusions against insurers. Thus, a significant policy of Indiana insurance law—already employed in construing the contract to cover mixed motive activities—parallels the expansive coverage policy motivating workmen's compensation, and justifies application of the same test. Accordingly, this court holds that the test for coverage under the "conduct of a business" policy at issue is whether Cope's Montana snowmobiling trip was necessary or incidental to the pursuit of profit through his business.

Of course, nothing in this opinion should be read as establishing that the Montana snowmobiling trip was sufficiently related to the insured's business to support a jury verdict of liability under the policy. Rather, this opinion merely establishes Cope's right to present evidence against exclusion at trial.

POI's motion for summary judgment denied.

Clauses Required by Law The insurance business is highly regulated by the states, which recognize the importance of the interests protected by insurance and the difference in bargaining power that often exists between insurers and their insureds. In an attempt to remedy this imbalance, many states' statutes and insurance regulations require the inclusion of certain standard clauses in insurance policies. Many states also regulate such matters as the size and style of the print used in insurance policies. Laws in a growing number of states encourage or require the use of plain, straightforward language—rather than insurance jargon and legal terms of art—whenever such language is possible to use.

Notice and Proof of Loss-Causing Event The insured (or, in the case of life insurance, the beneficiary) who seeks to obtain the benefits or protection provided by an insurance policy must notify the insurer that an event covered by the policy has occurred. In addition, the insured (or the beneficiary) must furnish reasonable proof of the loss-causing event. Property insurance policies, for instance, ordinarily require the insured to furnish a sworn statement (called a *proof of loss*) in which the covered event and the resulting damage to the insured's property are described. Under life insurance policies, the beneficiary is usually expected to provide suitable documentation of the fact that the insured person has died. Liability insurance policies call for the insured to give the insurer copies of liability claims made against the insured.

Time Limits Insurance policies commonly specify that notice and proof of loss must be given within a specified time. Policies sometimes state that compliance with these requirements is a condition of the insured's recovery and that failure to comply terminates the insurer's obligation. Other times, policies merely provide that failure to comply suspends the insurer's duty to pay until compliance occurs. Some courts require the insurer to prove it was harmed by the insured's failure to give notice before allowing the insurer to avoid liability on the ground of tardy notice.

Cancellation and Lapse When a party with the power to terminate an insurance policy (extinguish all rights under the policy) exercises that power, **cancellation** has occurred. **Lapse** occurs at the end of the term specified in a policy written for a stated duration, unless the parties take action to renew the policy for an additional period of time. Alternatively, lapse may occur as a result of the insured's failure to pay premiums or some other significant default on the part of the insured. Special issues regarding cancellation and lapse of property and life insurance will be discussed later in the chapter.

Third Parties and Insurance Contracts As a general rule, contracts are assignable only when the assignment will not materially alter the promisor's burden of performance. The insured's identity, character, and traits are important elements of the risk in property, life, health, and liability insurance policies. Therefore, such policies are generally nonassignable. It is also common for insurance policies to contain express restrictions on assignability. After a loss covered by an insurance policy has occurred, however, the insured may normally assign to another party the right to receive benefits under the policy. Such an assignment is permissible because it involves no change in the insurer's risk.

Performance and Breach by Insurer

The insurer performs its obligations by paying out the sums (and taking other related actions) contemplated by the policy's terms within a reasonable time after the occurrence of an event that triggers the duty to perform. If the insurer fails or refuses to pay despite the occurrence of such an event, the insured may sue the insurer for breach of contract. By proving that the insurer's denial of the insured's claim for payment constituted a breach, the insured becomes entitled to recover compensatory damages in at least the amount that the insurer would have had to pay under the policy if the insurer had not breached.

What if the insurer's breach caused the insured to incur consequential damages that, when added to the amount due under the policy, would lead to a damages claim exceeding the dollar limits set forth in the policy? Assume that XYZ Computer Sales, Inc.'s store building is covered by a property insurance policy with Secure Insurance Co., that the building is destroyed by an accidental fire (a covered peril), and that the extent of the destruction makes the full $500,000 policy limit due from Secure to XYZ. Secure, however, denies payment because it believes—erroneously—that XYZ officials committed arson (a cause, if it had been the actual one, that would have relieved Secure from any duty to pay). Because it needs to rebuild and take other related steps to stay in business but is short on available funds as a result of Secure's denial of its claim, XYZ borrows the necessary funds from a bank. XYZ thereby incurs substantial interest costs, which are consequential damages XYZ would not have incurred

if Secure had performed its obligation under the policy. Assuming that XYZ's consequential damages would have been foreseeable to Secure, most states would allow XYZ to recover the consequential damages in addition to the amount due from Secure under the policy.[4] This is so even though the addition of the consequential damages would cause XYZ's damages recovery to exceed the dollar limit set forth in the parties' insurance policy. The breaching insurer's liability may exceed the policy limits despite the insurer's good faith (though incorrect) basis for denying the claim, because a good faith but erroneous refusal to pay is nonetheless a breach of contract. If the insurer could point to the policy limits as a maximum recovery in this type of situation, it would have an all-too-convenient means of avoiding responsibility for harms that logically flowed from its breach of contract.

Many states' laws provide that if an insured successfully sues her insurer for amounts due under the policy, the insured may recover interest on those amounts (amounts that, after all, should have been paid by the insurer much sooner and without litigation). Some states also have statutes providing that insureds who successfully sue insurers are entitled to awards of attorney's fees. Punitive damages are *not* allowed, however, when the insurer's breach of contract consisted of a *good faith (though erroneous) denial* of the insured's claim. Later in this chapter, we will explore the recent judicial trend toward allowing punitive damages when the insurer's breach was in *bad faith* and thus amounted to the tort of bad faith breach of contract.

Property Insurance

Owners of residential and commercial property always face the possibility that their property might be damaged or destroyed by causes beyond their control. These causes include, to name a few notable ones, fire, lightning, hail, and wind. Although property owners may not be able to prevent harm to their property, they can secure some protection against resulting financial loss by contracting for property insurance and thereby transferring certain risks of loss to the insurer. Persons holding property interests that fall short of ownership may likewise seek to benefit, as will be seen, from the risk-shifting feature of property insurance.

The Insurable Interest Requirement

As noted earlier in this chapter, in order for a property insurance contract not to be considered an illegal wagering contract, the person who purchases the policy (the policy owner) must have an **insurable interest** in the property being insured. One has an insurable interest if he, she, or it possesses a legal or equitable interest in the property and that interest translates into an economic stake in the continued existence of the property and the preservation of its condition. In other words, a person has an insurable interest if he would suffer a financial loss in the event of harm to the subject property. If no insurable interest is present, the policy is void.

Examples of Insurable Interest The legal owner of the insured property would obviously have an insurable interest. So might other parties whose legal or equitable interests in the property do not rise to the level of an ownership interest. For example, mortgagees and other lienholders would have insurable interests in the property on which they hold liens.[5] A nonexhaustive list of other examples would also include holders of life estates in real property, buyers under as-yet unperformed contracts for the sale of real property, and lessees of real estate.[6] In the types of situations just noted, the interested party stands to lose financially if the property is damaged or destroyed. The *Harber* case, which follows shortly, provides a further example of an insurable interest.

Timing and Extent of Insurable Interest A sensible and important corollary of the insurable interest

[4] Even though the terms of the insurance policy almost certainly would state that Secure's payment obligation is limited to costs of repair or replacement or to the property's actual cash value—that is, without any coverage for consequential harms experienced by the insured—Secure cannot invoke this policy language as a defense. If Secure had performed its contract obligation, its payment obligation would have been restricted to what the policy provided in that regard. Having breached the insurance contract, however, Secure stands potentially liable for consequential damages to the full extent provided for by general contract law. For additional discussion of damages for breach of contract, see Chapter 18.

[5] Chapter 27 contains a detailed discussion of security interests in real property. Chapter 28 addresses security interests in personal property.

[6] Chapter 24 contains a discussion of life estates and an examination of contracts for the sale of real property. Leases of real estate are explored in Chapter 25.

principle is that the requisite insurable interest must exist *at the time of the loss* (i.e., at the time the subject property was damaged). If an insurable interest existed when the holder thereof purchased the property insurance but the interest was no longer present when the loss occurred, the policy owner is not entitled to payment for the loss. This would mean, for example, that a property owner who purchased property insurance would not be entitled to collect from the insurer for property damage that occurred after she had transferred ownership to someone else. Similarly, a lienholder who purchased property insurance could not collect under the policy if the loss took place after his lien had been extinguished by payment of the underlying debt or by another means.

The extent of a person's insurable interest in property is limited to the value of that interest. For example, Fidelity Savings & Loan extends Williams a $95,000 loan to purchase a home and takes a mortgage on the home as security. In order to protect this investment, Fidelity obtains a $95,000 insurance policy on the property. Several years later, the house is destroyed by fire, a cause triggering the insurer's payment obligation. At the time of the fire, the balance due on the loan is $84,000. Fidelity's recovery under the insurance policy is limited to $84,000, because that amount is the full extent of its insurable interest. (An alternative way by which mortgagees protect their interest is to insist that the property owner list the mortgagee as the *loss payee* under the property owner's policy. This means that if the property is destroyed, the insurer will pay the policy proceeds to the mortgagee. Once again, however, the mortgagee's entitlement to payment under this approach would be limited to the dollar value of its insurable interest, with surplus proceeds going to the insured property owner.)

Harber v. Underwriters at Lloyd's of London *2000 U.S. App. LEXIS 305 (2d Cir. 2000)*

Don Davis owned a lumber mill that was subject to a $248,000 mortgage held by Diversified Financial Systems, Inc. Early in 1995, Aaron Harber became interested in forming a partnership with Davis for ownership and operation of the mill. Harber and Davis orally agreed upon the terms of a partnership. Harber contended that these terms included a purchase by Harber of Diversified's interest in the mortgage on the mill. Davis later informed Harber that he (Davis) would not proceed with the partnership. Nevertheless, Harber purchased Diversified's mortgage interest in April 1995. Harber did this in reliance on the oral partnership agreement with Davis—an agreement Harber intended to enforce despite Davis's refusal to proceed.

During Harber's negotiations with Davis concerning their supposed partnership and with Diversified for purchase of its mortgage interest, Harber discovered that the mill was not covered by property insurance. Harber therefore purchased a policy from Underwriters at Lloyd's of London (Lloyd's). The policy, whose one-year term began in late May 1995, named Harber and U.S.A. Properties, Inc., a corporation set up and wholly owned by Harber, as insureds.

In mid-June 1995, one of the buildings at the mill was destroyed by fire. Approximately two weeks later, in an effort to prompt negotiations in the dispute with Davis over whether a partnership existed or would be pursued, Harber filed suit to foreclose the Diversified mortgage. The mortgage was in default at that time. Harber and Davis soon entered into a settlement agreement that provided in part for the transfer of the mill property to Harber, in exchange for Harber's giving up all of his claims against Davis. The agreement also conveyed, to Harber, whatever interest Davis had in insurance proceeds related to the building that had been destroyed by fire.

Harber and U.S.A. Properties submitted a claim to Lloyd's concerning the destroyed building. After Lloyd's denied the claim, Harber and U.S.A. Properties sued Lloyd's for payment according to the terms of the policy. The district court held that the plaintiffs lacked an insurable interest and that Lloyd's was therefore entitled to summary judgment. Harber and U.S.A. Properties appealed to the U.S. Court of Appeals for the Second Circuit.

Van Graafeiland, Circuit Judge The [insurance] policy at issue was somewhat unusual in nature. The policy was not in the form of mortgage insurance [under which the remaining amount due on a

mortgage would be paid if the mortgaged property was destroyed by a covered peril]. It named Harber and U.S.A. Properties, Inc., as insureds and made no mention of any mortgage or mortgage interest. The policy declarations had a space for "Mortgage Holder(s)," but this was left blank. It appears that Harber was attempting to protect the interest that accrued to him from the partnership agreement [with Davis].

Lloyd's . . . rejected the named insureds' claim under the policy . . . initially on the ground that the building was not part of the insured property, and later on the ground that [Harber and U.S.A. Properties] have no insurable interest in the property that was destroyed. The district court agreed, holding that the record did not support a conclusion that a partnership interest existed. We believe that the question of insurable interest should not have been so summarily disposed of. The question of the existence of a partnership is generally one of fact. A partnership agreement may exist without being in writing.

Moreover, regardless of whether Harber's interest in the mill property qualified him as a partner, he appears to qualify as vendee of an interest in the mill property, and to that extent, he may be considered the equitable owner thereof. In short, Harber's interest in the insured property does not derive solely from his status as assignee of Diversified's mortgage interest. It derives also from his alleged status as purchaser and equitable owner of a portion of Davis's title. Furthermore, whether the district court properly granted summary judgment on Harber's mortgage interest is a matter that will require further inquiry by the district court in the event Harber is ultimately found to have no other insurable interest.

We conclude that there are factual issues here that should be resolved by a jury.

Summary judgment in favor of Lloyd's vacated; case remanded for further proceedings.

Covered and Excluded Perils

Property insurers usually do not undertake to provide coverage for losses stemming from any and all causes of harm to property. Instead, property insurers tend to either specify certain causes (**covered perils**) as to which the insured *will* receive payment for resulting losses—meaning that there is no coverage regarding a peril not specified—or set forth a seemingly broad statement of coverage but then specify certain perils concerning which there will be *no* payment for losses (**excluded perils**). Sometimes, property insurers employ a combination of these two approaches by specifying certain covered perils and certain excluded perils.

Typical Covered Perils The effects of these approaches are essentially the same, as most property insurers tend to provide coverage for the same sorts of causes of harm to property. The perils concerning which property insurance policies typically provide benefits include fire, lightning, hail, and wind. In addition, property insurance policies often cover harms to property resulting from causes such as the impact of an automobile or aircraft (e.g., an automobile or aircraft crashes into an insured building), vandalism, certain collapses of buildings, and certain accidental discharges or overflows from pipes or heating and air-conditioning systems.

Fire as a Covered Peril Historically, the importance of coverage against the peril of fire made *fire insurance* a commonly used term. Various insurance companies incorporated the term into their official firm name; the policies these companies issued came to be called *fire insurance policies* even when they covered perils in addition to fire (as policies increasingly have done in this century). As a result, judges, commentators, and persons affiliated with the insurance industry will sometimes refer to today's policies as fire insurance policies despite the usual property insurer's tendency to cover not only fire but also some combination of the other perils mentioned in the preceding paragraph. Whether the term used is *property insurance* (generally employed in this chapter) or *fire insurance,* reference is being made to the same type of policy.

Fire-related losses covered by property insurance policies are those resulting from accidental fires. An accidental fire is one other than a fire deliberately set by, or at the direction of, the insured for the purpose of damaging the property. In other words, the insured

obtains no coverage for losses stemming from the insured's act of arson. This commonsense restriction on an insurer's duty to pay for losses also applies to other harms the insured deliberately caused to his property.

For purposes of fire coverage, insurance contracts often distinguish between *friendly fires,* which are those contained in a place intended for a fire (such as fires in a woodstove or fireplace), and *hostile fires,* which burn where no fire is intended to be (such as fires caused by lightning, outside sources, or electrical shorts, or those that began as friendly fires but escaped their boundaries). Losses caused by hostile fires are covered; those stemming from friendly fires tend not to be. As a general rule, covered fire losses may extend beyond direct damage caused by the fire. Indirect damage caused by smoke and heat is usually covered, as is damage caused by firefighters in their attempts to put out the fire.

Typical Excluded Perils Although flood-related harm to property may seem similar to harm stemming from some of the weather-related causes listed earlier among the typical covered perils, it does not usually receive the same treatment. Property insurance policies frequently exclude coverage for flood damage. On this point, however, as with other questions regarding perils covered or excluded, the actual language of the policy at issue must always be consulted before a coverage issue is resolved in any given case.[7] Other typical exclusions include earthquake damage and harm to property stemming from war or nuclear reaction, radiation, or contamination. As previously indicated, property insurance policies exclude coverage for losses caused by the insured's deliberate actions that were intended to cause harm to the property.

Additional Coverages Even as to perils for which there may not be coverage in the typical property insurance policy, the property owner may sometimes be able to purchase a specialized policy (e.g., a flood insurance policy) that does afford coverage for such perils. Other times, even if coverage for a given peril is not provided by the terms of most standard property insurance policies, it may nonetheless be possible for the property owner to have coverage for that peril added to the policy by paying an additional premium. This is sometimes done, for example, by policy owners who desire earthquake coverage.

Personal Property Insurance Although the broad term *property insurance* is what has been employed, the discussion so far in this section has centered around policies providing coverage for harm to *real* property. Items of *personal* property are, of course, insurable as well. Property insurance policies commonly known as homeowners' policies—because the real property serving as the policy's primary subject is the insured's dwelling—cover not only harm to the dwelling but also to personal property located inside the dwelling or otherwise on the subject real property. (Sometimes, depending on the policy language, there may be coverage even when the item of personal property was not located at the designated real property when the item was damaged.) Property insurance policies covering office buildings and other commercial real estate often provide some level of personal property coverage as well. When personal property coverage is included in a policy primarily concerned with real property coverage, the perils insured against in the personal property coverage tend to be largely the same as, though not necessarily identical to, those applicable to the real property coverage.

Lessees of residential or commercial real estate may obtain insurance policies to cover their items of personal property that are on the leased premises. Such policies are highly advisable, because the apartment or office building owner's insurance policy on the real property is likely to furnish little or no coverage for the tenant's personal property.

Automobile insurance policies are in part personal property insurance policies because they provide coverage (under what are usually called the *comprehensive* and *collision* sections) for car damage resulting from such causes as fire, wind, hail, vandalism, or collision with an animal or tree. As will be seen, automobile insurance policies also contain significant features of another major type of insurance policy to be discussed later—liability insurance. Other specialized types of personal property insurance are also available. For example, some farmers purchase crop insurance in order to guard against the adverse financial effects that would result if a hailstorm or other covered peril severely damaged a season's crop.

[7]It may be that a type of peril frequently excluded in property insurance policies is in fact a covered peril under the language of the policy at issue. Alternatively, losses that at first glance appear to have resulted from an excluded peril may sometimes be characterized as having resulted, at least in part, from a covered peril. In the latter event, there may be some coverage for the losses.

Nature and Extent of Insurer's Payment Obligation

Property insurance policies are **indemnity** contracts. This means that the insurer is obligated to reimburse the insured for his actual losses associated with a covered harm to the insured property. The insured's recovery under the policy thus cannot exceed the extent of the loss sustained. Neither may it exceed the extent of the insured's insurable interest (as discussed earlier in this chapter) or the amount of coverage that the insured purchased (the **policy limits**).[8]

Policy provisions other than the policy limits also help define the extent of the insurer's obligation to pay. When covered real property is damaged but not destroyed, the **cost of repair** is normally the relevant measure. Many policies provide that when covered real property is destroyed, the insurer must pay the **actual cash value** (or *fair market value*) of the property. Some policies, however, establish **cost of replacement** as the payment obligation in this situation. The policies that call for payment of the actual cash value frequently give the insurer the option to pay the cost of replacement, however, if that amount would be less than the actual cash value. As to covered personal property, the controlling standard is typically the least of the following: cost of repair, cost of replacement, or actual cash value.[9]

Many property insurance policies supplement the above provisions by obligating the insurer to pay the insured's reasonable costs of temporarily living elsewhere if the insured property was her residence and the damage to the residence made it uninhabitable pending completion of repairs or replacement. Comparable benefits may sometimes be provided in policies covering business property. Lost profits and similar consequential losses resulting from harm to or destruction of one's insured property, however, do not normally fall within the insurer's payment obligation unless a specific provision obligates the insurer along those lines.[10] Regardless of whether the damaged or destroyed property is real or personal in nature, the particular language of the policy at issue must always be consulted before a definite determination can be made concerning what is and is not within the insurer's duty to pay.

Valued and Open Policies When insured real property is destroyed as a result of fire or another covered peril, the amount to be paid by the insurer may be further influenced by the type of policy involved. Some property insurance contracts are **valued policies.** If real property insured under a valued policy is destroyed, the insured is entitled to recover the face amount of the policy regardless of the property's fair market value. For example, in 1985, Douglas purchased a home with a fair market value of $90,000. Douglas also purchased a valued policy with a face amount of $90,000 to insure the house against various risks, including fire. The home's fair market value decreased in later years because of deterioration in the surrounding neighborhood. In 2000, when the home had a fair market value of only $75,000, it was destroyed by fire. Douglas is entitled to $90,000 (the face amount of the valued policy) despite the reduction in the home's fair market value.

Most property insurance policies, however, are open policies. Open policies allow the insured to recover the fair market value (actual cash value) of the property at the time it was destroyed, up to the limits stated in the policy. Thus, if Douglas had had an open policy in the example presented in the previous paragraph, he would have been entitled to only $75,000 when the home was destroyed by fire. Suppose instead that Douglas's home had increased in value, so that at the time of the fire its fair market value was $105,000. In that event, it would not matter what type of policy (valued or open) Douglas had. Under either type of policy, his recovery would be limited to the $90,000 face amount of the policy.

Coinsurance Clause Some property insurance policies contain a **coinsurance clause,** which may operate as a further limit on the insurer's payment obligation

[8] Some insurers, however, provide, in exchange for a more substantial premium than would be charged for a policy without this feature, a homeowner's policy under which the insurer could become obligated to pay *more* than the policy limits if the insured's home was destroyed and the cost to replace it would actually exceed the policy limits.

[9] Concerning certain designated items of personal property such as furs or jewelry, policies often set forth a maximum insurer payout (such as $1,000) that is less than the general policy limits applicable to personal property. Such a payout limitation would operate as a further restriction on the extent of the insurer's obligation.

[10] Recall, however, that if the insurer violates its payment obligation by wrongfully failing or refusing to pay what the policy contemplates, the insurer has committed a breach of contract. As noted in this chapter's earlier discussion of insurance policies as contracts, fundamental breach of contract principles dictate that the breaching insurer is potentially liable for consequential damages.

Figure 2 *Operation of Coinsurance Clause*

Fair Market Value at Time of Loss	Face Value of Policy	Amount of Insurance Required	Actual Loss	Recovery
$100,000	$60,000	$80,000	$ 40,000	$30,000
100,000	60,000	80,000	100,000	60,000

and the insured's right to recovery. A coinsurance clause provides that in order for the insured to be able to recover the full cost of partial losses, the insured must obtain insurance on the property in an amount equal to a specified percentage (often 80 percent) of the property's fair market value.

For example, PDQ Corporation has a fire insurance policy on its warehouse with Cooperative Mutual Insurance Group. The policy has an 80 percent coinsurance clause. The warehouse had a fair market value of $100,000, meaning that PDQ was required to carry at least $80,000 of insurance on the building. PDQ, however, purchased a policy with a face amount of only $60,000. A fire partially destroyed the warehouse, causing $40,000 worth of damage to the structure. Because of the coinsurance clause, PDQ will recover only $30,000 from Cooperative. This figure was arrived at by taking the amount of insurance carried ($60,000) divided by the amount of insurance required ($80,000) times the loss ($40,000).

The coinsurance formula for recovery for partial losses is stated as follows:

$$\frac{\text{Amount of insurance carried}}{\text{Coinsurance percent} \times \text{Fair market value}} \times \text{Loss} = \text{Recovery}$$

Remember that the coinsurance formula applies only to *partial* losses (i.e., damage to, but not complete destruction of, property). If PDQ's warehouse had been totally destroyed by the fire, the formula would not have been used. PDQ would have recovered $60,000—the face amount of the policy—for the total loss. If the formula had been used, it would have indicated that Cooperative owed PDQ $75,000—more than the face amount of the policy. This result would be neither logical nor in keeping with the parties' insurance contract. Whether the loss is total or partial, the insured is not entitled to recover more than the face amount of the policy. The examples just discussed are depicted in Figure 2.

Pro Rata Clause With the limited exception of the valued policy (discussed above), the insured cannot recover more than the amount of the actual loss. A rule allowing the insured to recover more than the actual loss could encourage unscrupulous persons to purchase policies from more than one insurer on the same property —thus substantially overinsuring it—and then intentionally to destroy the property in a way that appeared to be a covered peril (e.g., committing arson but making the fire look accidental). In order to make certain that the insured does not obtain a recovery that exceeds the actual loss, property insurance policies commonly contain a *pro rata clause,* which applies when the insured has purchased insurance policies from more than one insurer. The effect of the pro rata clause is to apportion the loss amongthe insurance companies. (Applicable state law sometimes contains a rule having this same effect.)

Under the pro rata clause, the amount any particular insurer must pay the insured depends on the percentage of total insurance coverage represented by that insurer's policy. For example, Mumford purchases two insurance policies to cover his home against fire and other risks. His policy from Security Mutual Insurance Corp. has a face amount of $50,000; his policy from Reliable Insurance Co. is for $100,000. Mumford's home is partially destroyed by an accidental fire, with a resulting loss of $30,000. As illustrated in Figure 3, Security Mutual must pay Mumford $10,000, with Reliable having to pay the remaining $20,000 of the loss.

The formula for determining each insurer's liability under a pro rata clause is stated as follows:

$$\frac{\text{Amount of insurer's policy}}{\text{Total coverage by all insurers}} \times \text{Loss} = \text{Liability of insurer}$$

Figure 3 *Operation of Pro Rata Clause*

Policy A	Policy B	Total Insurance (Policy A Plus Policy B)	Actual Loss	Liability of Insurer A	Liability of Insurer B
$50,000	$100,000	$150,000	$30,000	$10,000	$20,000

Thus, Security Mutual's payment amount was calculated as follows:

$$\frac{\$50{,}000\ (\text{Security Mutual's policy})}{\$150{,}000\ (\text{Total of both policies})} \times \$30{,}000\ (\text{Loss}) = \$10{,}000$$

Reliable's payment amount could be similarly calculated by substituting $100,000 (Reliable's policy amount) for the $50,000 (Security Mutual's policy amount) in the numerator of the equation. This formula may be used for both partial and total losses. However, each company's payment obligation is limited by the face amount of its policy. Thus, Security Mutual could never be liable for more than $50,000. Similarly, Reliable's liability is limited to a maximum of $100,000.

Right of Subrogation

The insurer may be able in some instances to exercise a **right of subrogation** if it is required to pay for a loss under a property insurance contract. Under the right of subrogation, the insurer obtains all of the insured's rights to pursue legal remedies against anyone who negligently or intentionally caused the harm to the property. For example, Arnett purchased a property insurance policy on her home from Benevolent Insurance Company. Arnett's home was completely destroyed by a fire that spread to her property when her neighbor, Clifton, was burning leaves and negligently failed to control the fire. After Benevolent pays Arnett for her loss, Benevolent's right of subrogation entitles it to sue Clifton to recover the amount Benevolent paid Arnett. Arnett will be obligated to cooperate with Benevolent and furnish assistance to it in connection with the subrogation claim.

If the insured provides the liable third party a general release from liability, the insurer will be released from his payment obligation to the insured. Suppose that in the above scenario, Clifton persuaded Arnett to sign an agreement releasing him from liability for the fire. Because this action by Arnett would interfere with Benevolent's right of subrogation, Benevolent would not have to pay Arnett for the loss. A partial release of Clifton by Arnett would relieve Benevolent of responsibility to Arnett to the extent of her release.

Duration and Cancellation of Policy

Property insurance policies are usually effective for a designated period such as six months or a year. They are then extended for consecutive periods of like duration if the insured continues to pay the necessary premium and neither the insured nor the insurer elects to cancel the policy. The insured is normally entitled to cancel the policy at any time by providing the insurer written notice to that effect or by surrendering the policy to the insurer. Although property insurers usually have some right to cancel policies, terms of the policies themselves and/or governing law typically limit the grounds on which property insurers may do so. Permitted grounds for cancellation include the insured's nonpayment of the premium and, as a general rule, the insured's misrepresentation or fraud (see this chapter's discussion of contract law's applicability to insurance policies). Policy provisions and/or applicable law typically provide that if the property insurer intends to cancel the policy, the insured must be given meaningful advance written notice (often 30 days) of this intent before cancellation takes effect.

Another cancellation basis exists by virtue of the **increase of hazard** clauses that appear in many property insurance policies. An increase of hazard clause provides that the insurer's liability will be terminated if the insured takes any action materially increasing the insurer's risk. Some increase of hazard provisions also specify certain types of behavior that will cause

termination. Common examples of such behavior include keeping highly explosive material on the property and allowing the premises to remain vacant for a lengthy period of time.

Liability Insurance

As its name suggests, liability insurance provides the insured the ability to transfer liability risks to the insurer. Under policies of liability insurance, the insurer agrees, among other things, to pay sums the insured becomes legally obligated to pay to another party. This enables the insured to minimize the troublesome or even devastating financial effects that he could experience in the event of his liability to someone else.

Types of Liability Insurance Policies

Liability insurance policies come in various types. These include, but are not limited to: **personal liability policies** designed to cover a range of liabilities an individual person could face; **business liability policies** (sometimes called *comprehensive general liability policies*) meant to apply to various liabilities that sole proprietors, partnerships, and corporations might encounter in their business operations; **professional liability policies** (sometimes called *malpractice insurance policies*) that cover physicians, attorneys, accountants, and members of other professions against liabilities to clients and sometimes other persons; and **workers' compensation policies** under which insurers agree to cover employers' statutorily required obligation to pay benefits to injured workers.

Some policies combine property insurance features with liability insurance components. Automobile insurance policies, for instance, afford property insurance when they cover designated automobiles owned by the insured against perils such as vandalism, hail, and collisions with animals, telephone poles, and the like. Other sections of automobile insurance policies provide liability insurance to the insured (the policy owner), members of her household, and sometimes other authorized drivers when their use of a covered automobile leads to an accident in which they face liability to another party. Typical homeowners' policies also combine property and liability insurance features. Besides covering the insured's home and contents against perils of the types discussed earlier in this chapter, these policies normally provide the insured coverage for a range of liabilities he may face as an individual.

Liabilities Insured Against

Although the different types of liability insurance policies discussed above contain different terms setting forth the liabilities covered and not covered, liability policies commonly afford coverage against the insured's liability for negligence but not against the insured's liability stemming from deliberate wrongful acts (most intentional torts and most behavior constituting a crime).[11] Liability policies tend to reach this common ground in the same sorts of ways property insurance policies define the scope of coverage—by listing particular liabilities that are covered and stating that an unlisted liability is not covered, by setting forth a seemingly broad statement of coverage and then specifying exclusions from coverage, or by employing a combination of the previous approaches (e.g., specifying certain covered liabilities and certain excluded liabilities).

Personal Liability and Homeowners' Policies

Personal liability policies and the liability sections of homeowners' policies often state that coverage is restricted to instances of "bodily injury" and "property damage" experienced by a third party as a result of an "occurrence" for which the insured faces liability. These sorts of policies normally define *occurrence* as an "accident" resulting in bodily injury or property damage. The provisions just noted lead to the conclusion that intentional torts and most criminal behavior, if committed or engaged in by the insured, would fall outside the coverage of the policy at issue because they are not accidents (whereas instances of the insured's negligence would be). This conclusion is underscored by typical clauses purporting to exclude coverage for bodily injury or property damage the insured intended to cause. The occurrence, bodily injury, and property damage references in these policies also indicate that liabilities stemming from, for example, breach of contract would not be covered either (no accident, no bodily injury, no property damage). In addition, personal liability policies and liability sections of homeowners' policies also tend to specify that if bodily injury or property damage results from the insured's business or professional pursuits, it is not covered.

[11] Workers' compensation liability policies are somewhat different, as later discussion in this chapter will reveal.

Business Liability Policies Business liability policies also feature coverage for bodily injury and property damage stemming from the insured's actions. The relevant range of actions, of course, is broadened to include the insured's business pursuits or "conduct of business." A major focus remains on unintentional wrongful conduct (usually negligence) of the insured, with the insured's deliberate wrongful acts normally being specifically excluded from coverage. Another typical exclusion is the pollution exclusion, which deprives the insured of coverage for actions that lead to pollution of other parties' property, unless the pollution occurs suddenly and accidentally.

Business liability policies also tend to provide the insured coverage in instances where the insured would be liable for certain torts of his employees (normally under the *respondeat superior* doctrine).[12] In addition, business liability policies sometimes afford coverage broader than instances of tortious conduct producing physical injury or property damage. Some policies, for instance, contain a clause that contemplates coverage for the insured's defamation of another person or invasion of that person's privacy (though other policies specifically exclude coverage for those same torts). Furthermore, the broad "conduct of business" language in certain policies, as well as specialized clauses (in some policies) referring to liability stemming from advertising or unfair competition, may contemplate coverage for the insured's legal wrongs that cause others to experience economic harm. In the end, the particular liabilities covered by a business liability policy cannot be determined without a close examination of the provisions in the policy at issue. It may become necessary for a court to interpret a policy provision whose meaning is unclear or scope is uncertain. In the *Granite State Insurance* case, which follows, the court addressed the scope of an advertising injury clause that afforded coverage for acts of unfair competition.

[12]The *respondeat superior* doctrine is discussed in Chapter 35. Although the insured's own intentional torts would not normally be covered, business liability policies sometimes provide that if the insured is liable on *respondeat superior* grounds for an employee's intentional tort such as battery, the insured will be covered unless the insured directed the employee to commit the intentional tort.

Granite State Insurance Co. v. Aamco Transmissions, Inc. *57 F.3d 316 (3d Cir. 1995)*

In a class-action suit against Aamco Transmissions, Inc., consumers Joseph R. Tracy and Joseph P. Tracy claimed that Aamco and its network of franchisees used deceptive advertising that inaccurately described Aamco's services and lured many consumer purchasers of transmission services into paying excessively and for unnecessary repairs. The Tracys asserted that Aamco was liable under the Pennsylvania Unfair Trade Practices and Consumer Protection Law. Aamco was the insured under a comprehensive general liability insurance policy issued by Granite State Insurance Co. This policy provided liability coverage to Aamco "for personal injury or advertising injury . . . arising out of the conduct of" Aamco's business. The policy defined "advertising injury" as "injury arising . . . in the course of [Aamco's] advertising activities, if such injury arises out of libel, slander, defamation, violation of right of privacy, piracy, unfair competition, or infringement of copyright, title or slogan."

Contending that it had coverage under the "unfair competition" category of the advertising injury coverage, Aamco demanded that Granite defend and indemnify it in connection with the consumer class action case described above. When Granite declined to do so, Aamco settled the case on its own. Granite then brought a declaratory judgment action against Aamco in federal district court. Granite sought a ruling that it was not obligated to provide coverage for Aamco in the class action case brought by the Tracys. The district court concluded that the unfair competition *term in the policy contemplated coverage only for common law–based claims against Aamco, not for any claims based on a state or federal statute. Because the Tracys' class action case was based on a supposed violation of a Pennsylvania statute, the district court held that Granite's policy did not furnish coverage to Aamco. In addition, the court held that the term* unfair competition *was not ambiguous and that Aamco could not have had a reasonable expectation that consumers' claims against it would be covered. Aamco appealed to the Third Circuit Court of Appeals.*

Greenberg, Circuit Judge We will affirm, though we do not ground our result on the district court's reasoning as we do not agree with its conclusion that the phrase "unfair competition" unambiguously refers only to the traditional common law tort of that name. For one thing, the courts are not uniform in describing the tort of unfair competition. [Because *unfair competition* is a term used by courts to refer to various types of conduct,] it is not so easy to conclude that there is one narrow and clear category of the common law tort.

Furthermore, regardless of the scope of the common law tort of unfair competition, a person reading the term "unfair competition" as a category of "advertising injury" within an insurance policy would not necessarily understand the term to be limited to a common law definition. A broader interpretation of the term . . . would be particularly reasonable in Pennsylvania as that state's legislature has defined "[u]nfair methods of competition" to include a host of [different] activities. In short, we see no valid reason to exclude conduct described in the statute simply because it might not be regarded as unfair competition in a common law sense.

Yet even if the term "unfair competition" within an insurance policy is construed broadly with respect to the character of an insured's conduct, that construction does not determine the class of persons who can present claims against the insured which will be regarded as being claims for unfair competition within the policy. Thus, in order for Aamco to succeed, it must show that claims by its customers injured by its own practices reasonably can be described as unfair competition claims within the context of the insurance coverage. In this endeavor it fails for, regardless of the nature of the insured's conduct, a claim by a consumer of its products or services arising from that conduct hardly can be characterized as a claim for unfair competition. After all, "competition" connotes an insured's relationship with other persons or entities supplying similar goods or services.

In fact, the Pennsylvania legislature itself recognized this point. The statute involved in the [consumer class-action case against Aamco] is not called the "Pennsylvania Unfair Competition Statute." Rather, it is the "Pennsylvania Unfair Trade Practices *and Consumer Protection Law*." It is a broad business fraud statute that by its very title demonstrates that it encompasses more than acts of unfair competition. The fact that the legislature deemed it expedient to combine the remedies for unfair competition and consumer fraud in one statute does not magically transform acts of "consumer fraud" into acts of "unfair competition." Accordingly, we think that the Supreme Court of Pennsylvania would hold that a competitor of the insured, but not its customer, can assert a claim which may be covered under the "unfair competition" category of the "advertising injury" coverage. While we acknowledge, as did the district court, that ambiguities in insurance policies should be resolved in an insured's favor, the Granite policy is not ambiguous with respect to the relationship required between a plaintiff in an underlying action and an insured for that plaintiff's claim to be considered unfair competition within the Granite policy.

We have not overlooked Aamco's argument that the proper focus regarding issues of coverage under insurance contracts is the reasonable expectation of the insured. Rather, we conclude that Aamco could not have expected to have insurance coverage for the Tracys' claims under the portion of a policy protecting it against claims of "unfair competition." [I]t would be expected that a claim arising from "competition" would be forwarded by a competitor of an insured. The Tracys and the class they represented were not competitors of Aamco.

District court's decision denying coverage to Aamco affirmed.

Other Liability Policies Professional liability policies also afford coverage for the insured's tortious conduct, this time in the practice of his or her profession. Negligent professional conduct producing harm to a third party (normally bodily injury in the medical malpractice setting but usually economic harm in the legal or other professional malpractice context) would be a covered liability. Wrongful professional conduct of an intentional nature typically would not be covered.

Automobile liability policies cover liability for physical injury and property damage stemming from the insured's (and certain other drivers') negligent

driving. Once again, however, there is no coverage for liability arising from the insured's (or another driver's) deliberate vehicle operation acts of a wrongful nature.

Workers' compensation policies tend to approach coverage questions somewhat differently, primarily because injured employees need not prove negligence on the part of their employer in order to be entitled to benefits. Therefore, the insurer's obligation under a workers' compensation policy is phrased in terms of the liability the insured employer would face under state law.

Insurer's Obligations

Duty to Defend When another party makes a legal claim against the insured and the nature and allegations of the claim are such that the insurer would be obligated to cover the insured's liability if the claim were proven, the insurer has a **duty to defend** the insured. A commonsense precondition of this duty's being triggered is that the insured must notify the insurer that the claim has been made against her. The duty to defend means that the insurer must furnish, at its expense, an attorney to represent the insured in litigation resulting from the claim against her. If the insurer fails to perform its duty to defend in an instance where the duty arose, the insurer has breached the insurance contract. Depending on the facts, the breaching insurer would at least be liable for compensatory damages (as indicated in this chapter's earlier discussion of insurance policies as contracts)[13] and potentially for punitive damages as well under the *bad faith* doctrine examined later in this chapter.

Sometimes it is quite clear that the insurer's duty to defend applies or does not apply, given the nature of the claim made against the insured. Other times, however, there may be uncertainty as to whether the claim alleged against the insured would fall within the scope of the liability insurance policy. Such uncertainty, of course, means that it is not clear whether the insurer has a duty to defend. Insurers tend to take one of two approaches in an effort to resolve this uncertainty. Under the first approach, the insurer files a declaratory judgment suit against the insured. In this suit, the insurer asks the court to determine whether the insurer owes obligations to the insured under the policy in connection with the particular liability claim made against the insured by the injured third party. The other option insurers often pursue when it is unclear whether the liability policy applies is to retain an attorney to represent the insured in the litigation filed by the third party—thus fulfilling any duty to defend that may be owed—but to do so under a *reservation of rights* notice. By providing the reservation of rights notice to the insured, the insurer indicates that it reserves the right, upon acquisition of additional information, to conclude (or seek a later judicial determination) that it does not have the obligation to pay any damages that may be assessed against the insured as a result of the third party's claim. The insurer's reservation of rights also serves to eliminate an argument that by proceeding to defend the insured, the insurer waived the ability to argue that any actual liability would not be covered.

Duty to Pay Sums Owed by Insured If a third party's claim against the insured falls within the liabilities covered by the policy, the insurer is obligated to pay the compensatory damages held by a judge or jury to be due and owing from the insured to the third party. In addition, the insured's obligation to pay such expenses as court costs would also be covered. These payment obligations are subject, of course, to the policy limits of the insurance contract involved. For example, if the insured is held liable for compensatory damages and court costs totaling $150,000 but the policy limits of the relevant liability policy are $100,000, the insurer's contractual obligation to pay sums owed by the insured is restricted to $100,000.

Is the insurer also obligated to pay any *punitive damages* assessed against the insured as a result of a covered claim? As a general rule, the insurer will have no such obligation, either because of an insurance contract provision to that effect or because of judicial decisions holding that notions of public policy forbid arrangements by which one could transfer his punitive damages liability to an insurer. Not all courts facing this issue have so held, however, meaning that in occasional instances the insured's punitive damages liability may also be covered if the insurance policy's terms specifically contemplate such a result.

The liability insurer need not wait until litigation has been concluded to attempt to dispose of a liability claim made against the insured. Insurance policy provisions,

[13] The compensatory damages in such an instance would normally be the reasonable costs incurred by the insured in retaining an attorney and paying him to represent her. Of course, if the insured ended up being held liable in the third party's suit and the insurer wrongfully refused to pay the damages assessed against the insured in that case, the insured's compensatory damages claim against the breaching insurer would be increased substantially.

consistent with our legal system's tendency to encourage voluntary settlements of claims, allow insurers to negotiate settlements with third parties who have made liability claims against the insured. These settlements involve payment of an agreed sum of money to the third party, in exchange for the third party's giving up her legal right to proceed with litigation against the insured. Settlements may occur regardless of whether litigation has been formally instituted by the third party or whether the claim against the insured consists of the third party's prelitigation demand for payment by the insured. If settlements are reached—and they are reached much more often than not—the substantial costs involved in taking a case all the way to trial may be avoided. The same is also true, from the insurer's perspective, of the damages that might have been assessed against the insured if the case had been tried. Note, however, that even if the defendant (the insured) wins a suit that does proceed to trial, the costs to the insurer are still substantial even though there is no award of damages to pay. Those costs include a considerable amount for attorney's fees for the insured (the insurer's obligation regardless of the outcome of the case) as well as other substantial expenses associated with protracted litigation. Accordingly, even when the insurer thinks that the insured probably would prevail if the case went to trial, the insurer may be interested in pursuing a settlement with the third party claimant if a reasonable amount—an amount less than what it would cost the insurer to defend the case—can be agreed upon.

Is There a Liability Insurance Crisis?

Since the mid-1980s, the necessary premiums for liability insurance policies of various types (particularly business and professional liability policies) have risen considerably. Sometimes, the premiums charged by liability insurers have become so substantial that would-be insureds have concluded that they cannot afford liability insurance and therefore must go without it despite its importance. In addition, some insurers have ceased offering certain types of liability policies and/or have become much more restrictive in their decisions about which persons or firms to insure.

Insurance companies tend to blame the above state of affairs on what they see as a tort law regime under which plaintiffs win lawsuits too frequently and recover very large damage awards too often. As a result, insurers have been among the most outspoken parties calling for tort reform, a subject discussed in earlier chapters in this book. Plaintiffs' attorneys and critics of the insurance industry blame rising liability insurance premiums on, primarily, another alleged cause: questionable investment practices and other unsound business practices supposedly engaged in by insurance companies. The parties making these assertions thus oppose tort reform efforts as being unnecessary and unwise.

Liability insurance premiums in general may not be increasing as rapidly today as they did a decade ago, but they remain substantial in amount. So long as liability insurance remains unaffordable or otherwise difficult to obtain, there is a "crisis," given the adverse financial consequences that could beset an uninsured person. This is so regardless of which of the competing explanations set forth above bears greater legitimacy.

Life Insurance

Life insurance provides a means of lessening the financial hardships that result from the death of a given person. A few basic life insurance concepts were alluded to in this chapter's section on insurance policies as contracts. This section builds on the earlier discussion by examining specialized legal topics and issues that arise in connection with life insurance.

Parties other than Insurer

Earlier in the chapter, we noted that in the property and liability insurance contexts, the same person will often be the insured (the purchaser of the insurance), the policy owner (the party entitled to enforce the contract rights set forth in the policy), and the beneficiary (the party entitled to payment under the policy). Life insurance, however, departs from this typical property and liability insurance model. In the life insurance setting, the insured is *the person whose life is insured* under the policy. That person may or may not have been the purchaser of the policy. Although the insured may also be the party entitled to enforce the policy's contract rights (the policy owner), it is not unusual for the policy owner to be someone other than the insured. The policy owner is typically the party who purchased the policy, but this is not always true.

Life insurance also departs from the property and liability model with regard to the identity of the beneficiary (the person entitled to payment when the insured

dies). The beneficiary, who is designated by the policy owner, will often be one or more family members or friends of the insured, or sometimes business partners of the insured. Of course, the policy owner may double as the designated beneficiary. It is also possible that the insured's estate could be specified as the beneficiary instead of a particular individual or individuals being so designated. Life insurance policies often allow the policy owner to change the designated beneficiary prior to the insured's death. Some policies, however, contain terms under which the designation of a beneficiary is irrevocable, meaning that a different beneficiary cannot be substituted for the one already specified.

Insurable Interest

As discussed earlier in this chapter, an insurable interest is required in order to keep an insurance contract from being an illegal wagering contract. In the life insurance context, the requisite insurable interest *must exist at the time the policy was issued* but need not exist at the time of the insured's death. Persons who stand to suffer a financial loss in the event of the insured's death have the insurable interest necessary to support the purchase of a life insurance policy on the insured. The insured and his or her spouse, parents, children, and other dependents thus possess an insurable interest in the insured's life.

In addition, the business associates of the insured may also have an insurable interest in his or her life. Such persons would include the insured's employer, business partners, or shareholders in a closely held corporation with which the insured is connected. Creditors of the insured also have an insurable interest, but only to the extent of the debt owed by the insured.

Types of Life Insurance Policies

A life insurance contract is a valued policy because, upon the insured's death, the insurer must pay the beneficiary a set amount that equals the **face value** of the policy (the amount of insurance coverage purchased). The policy's face value helps determine the amount of the premiums that must be paid to keep the policy in force. A policy with a large face value will, of course, cost the purchaser of the policy more in premiums than will a policy with a smaller face value.

Two basic types of life insurance, **whole life policies** and **term policies,** merit discussion. Although both types are valued policies, they differ in important respects.

Whole Life Policies *Whole life policies*—sometimes called *ordinary life* or *straight life* policies—contemplate that the insured (or the owner, if a person other than the insured) will pay a set premium for the remainder of his life or until a specified time when the obligation to pay further premiums will cease. The whole life policy does more than impose on the insurer the obligation to pay the policy's face value upon the insured's death. Such a policy possesses a savings feature, in that it develops a **cash surrender value** as premiums are paid. The insured policy owner may recover this value if the policy is terminated. In addition, whole life policies develop a loan value as premiums are paid. This sometimes enables the policy owner to borrow money from the insurer at favorable interest rates. Because of the investment feature and the potential for obtaining loans, premiums that the policy owner must pay for whole life policies usually tend to be higher than the premiums required for term insurance—at least when the insured is in his 30s and perhaps his 40s.

Term Policies *Term policies* are so named because they are designed to be in effect for a designated term or duration, such as one year. These policies provide insurance coverage only, without the cash surrender value and loan value features present in whole life insurance. In return for the payment of premiums during the term of the policy, the insurer agrees to pay the face amount of the policy if the insured dies during the term.

For many persons, having a suitable amount of insurance coverage in the event of the insured's death may be much more important than an added investment feature or the prospect of borrowing funds in the future. Term policies may be an economical way of obtaining coverage, because premiums for a term policy of a given face value often start lower than for a whole life policy of the same face value. This tends to be true if the term policy is purchased while the insured is in her 30s or early 40s. Although term policies are typically written for a one-year period, they frequently have a *guaranteed renewability* provision. This provision enables the insured (or the owner, if insured and owner are not one and the same) to renew the policy for successive additional terms up to a specified age, without having to undergo medical examinations designed to show that the insured is still in good health. Those desiring insurance coverage may thus keep the term policy in force.

In keeping a term policy in force year after year, however, they face the downside of term policies—annual premium increases. As the insured gets another year older, the premium necessary to keep the term policy in force rises. Although term insurance premiums typically begin lower than whole life premiums, term insurance premiums eventually will equal or exceed those for a whole life policy of the same face value. Therefore, owners of term policies may eventually face the need to decide whether to convert their term policies to whole life policies and thereby avoid the ever-increasing term premiums. Term policies often contain a *guaranteed conversion option,* under which the insured may choose to convert the term policy to a whole life policy.

Other Special Issues and Policy Provisions

Misrepresentation Issues As explained earlier in this chapter, an insurance applicant's misrepresentations concerning material matters may cause a resulting insurance contract to become voidable at the option of the insurer. In the life insurance setting, misrepresentations regarding the proposed insured's health condition become the focus of considerable attention. Whether the insurer is able to avoid its policy obligations on the basis of the insurance applicant's health-related misstatements or failures to disclose will depend on the seriousness of the matter misstated or not disclosed by the applicant, and on the degree to which knowledge of the truth would have influenced the insurer's decision on whether to issue a policy. If the insurer would not have issued the policy had it known the truth, the insurer is likely to be allowed to avoid its policy obligation.

Misstatement of Age Clauses Two common provisions in life insurance policies help to offset the potentially harsh effect that might otherwise result from certain false representations by the insurance applicant. These provisions are *misstatement of age clauses* and *incontestability clauses.* Under a misstatement of age clause, the insurer is allowed to reduce the amount it must pay upon the insured's death if the insured's age listed in the application for insurance was lower than the insured's actual age at that time. The amount of the insurer's payment obligation will be lowered to reflect the amount of coverage that the premiums paid would have bought at the correct age's premium rates.

For example, having stated his age as 39, Wingfield purchases a $100,000 face-value policy on himself from Invincible Insurance Co. When Wingfield dies, Invincible learns he was actually 43 when he took out the policy. Because the premium rate for a 43-year-old would have been higher, the total amount of premiums actually paid by Wingfield would have purchased only $85,000 in coverage at the correct premium rate. Therefore, under the misstatement of age clause, Invincible would be obligated to pay Wingfield's beneficiary $85,000 rather than $100,000.

Incontestability Clauses Under the incontestability clauses commonly seen in life insurance policies, insurers are barred from contesting their liability under the policy on the basis of certain misrepresentations by the insured if the policy has been in force for a specified period of time (frequently, two years). Incontestability clauses do not, however, prevent the insurer from contesting liability on the grounds that the requisite insurable interest was lacking, that an impostor filled in for the insured at the required medical exam, or that the policy purchaser took out the policy with the intent to kill the insured and collect the policy proceeds.

Special Cancellation and Lapse Issues Insurers generally cannot cancel life insurance contracts as long as the necessary premiums are being paid. A contrary rule could tempt insurers to terminate policies covering seriously ill insureds and would thus poorly serve insureds, policy owners, and beneficiaries.

The policy owner may cancel a life insurance policy by surrendering it to the insurer. The owner of a whole life policy is usually allowed to recover the accumulated cash surrender value or to purchase a paid-up or extended policy. Under a paid-up policy, the owner acquires a fully paid-for policy on the insured. The policy's face value is the amount of coverage that the cash surrender value would purchase, in light of the insured's age. An extended policy is a term policy having the same face value as the original policy that was surrendered.

Lapse of a term insurance policy occurs upon the expiration of the stated duration, unless the policy is renewed. Any life insurance policy, whether term or whole life, lapses if the necessary premiums are not paid. When a whole life policy lapses due to nonpayment of premiums, the owner normally has the same rights to cash surrender value and a paid-up or extended policy as are made available to the owner who

surrenders a whole life policy. The owner whose term insurance lapses because of nonpayment of premiums, however, has no such remedies.

In order to guard against the potentially harsh consequences stemming from lapsed life insurance policies (particularly lapsed term policies), many states have enacted statutes allowing policy owners a grace period within which they may pay past-due premiums and thereby avoid policy lapse or cancellation. A typical statutory grace period is 30 days. Life insurance policies themselves sometimes contain similarly motivated provisions, under which the owner whose life insurance policy has lapsed is given a limited time within which to pay past-due premiums and furnish proof of insurability (the insured's good health). By doing these things within the specified time, the owner obtains reinstatement of the policy.

Health Insurance

With the costs of medical treatment, hospitalization, and medications having increased dramatically in recent years, health insurance has become a critical means by which insureds minimize the adverse financial consequences associated with illness and injury. The costs of serious illness or injury may be financially crippling unless insurance coverage exists.[14] Health insurance has thus become a virtual necessity in today's society, as demonstrated by the fact that a very large percentage of the U.S. population does have some form of health coverage.

Nature of Coverage

Health insurance policies typically provide coverage for medical expenses resulting from a broad range of illnesses and injuries experienced by the insured (or by the insured's family member, if family coverage was procured by the insured). In setting forth the illnesses or injuries covered under the policy, health insurers take approaches similar to the previously discussed methods used by property insurers when they stake out the scope of those policies' coverage. This means that health insurance policies tend to specify an exclusive list of covered illnesses and injuries, set forth a broad general statement of coverage but then specify certain excluded causes, or combine the two approaches by specifying certain covered illnesses and injuries and designating other causes as excluded.

Whichever approach is used, most illnesses and injuries tend to be covered in some fashion. The resulting expenses that stem from medically necessary treatment then become subject to the terms of the insurer's payment obligation, as discussed below. Excluded causes often include preexisting health conditions—illnesses or injuries that befell the insured (or family member) before the effective date of the policy.

Insurer's Payment Obligation

As a general rule, health insurance policies require the insured to pay up to a certain amount in medical expenses per year before the insurer's payment obligation is triggered. This amount is known as the **deductible.** The specific amount varies from policy to policy. Once the insured has met his or her deductible, the insurer becomes obligated to pay all or part of the insured's medically necessary expenses that result from a covered illness or injury. If the policy establishes a payment obligation that is a percentage of the medical expenses, 80 percent is fairly typical, though once again this differs from policy to policy. When the health insurer makes payment, it may either pay the insured if the insured has already paid the medical bill or pay the health care provider directly if the insured has not yet paid the bill.

Increasingly, policies tie the insurer's payment obligation to what the insurer establishes as the usual and customary cost of a particular medical procedure or treatment. If the health care provider's charge for a particular procedure or treatment exceeds this usual and customary cost, the excess is not covered. The insurer's payment obligation is then to pay all or the specified percentage (depending on the policy's provisions) of the usual and customary cost.

Health policies tend to make special provisions for covered conditions requiring long-term medical care or hospitalization. These special provisions establish somewhat different payment obligations for the insurer. Often, these provisions specify that the insurer will pay a designated percentage of hospital expenses up to a certain amount, and then all of the hospital expenses once that amount has been reached. The exact

[14]Disability insurance, under which insureds obtain coverage against loss of income resulting from long-term disabilities that interfere with one's ability to perform one's job, addresses the same sorts of financial concerns. Disability insurance will not be discussed further in this chapter.

percentages and amounts in a given situation are determined by checking the terms of the particular policy at issue.

Special provisions defining the extent of the insurer's obligation to pay for prescription medication costs are not uncommon. In addition, health policies sometimes contain specifications of maximum dollar amounts that the insurer will pay for certain surgical procedures or other medical treatments. Often, policy provisions state that there is no payment obligation regarding experimental medical treatments (treatments that are not yet classifiable as generally accepted medical treatments).

Group Policies

Most persons' health insurance coverage comes through group policies, under which an employer or an organization contracts with a health insurer for coverage to be made available to employees of that employer or members of that organization. From the perspective of insured employees or insured members of organizations, the chief advantage of group policies is that the necessary premiums are significantly lower than the premiums one would have to pay in order to obtain a nongroup policy. The cessation of one's employee or group membership status may lead to a loss of her group insurance benefits and therefore significantly higher costs to her if she is forced to seek nongroup coverage. Sometimes these added costs will simply be prohibitively high. Other times, the typical policy exclusion for preexisting conditions will prove to be a problem when the insured must seek new health insurance coverage because she has lost her group insurance. Congress has attempted to deal with these sorts of problems by establishing limited rights to continued coverage in certain instances where the insured's employee status or organization membership has ended. Nevertheless, the problems persist.

The Health Insurance Debate

Although most U.S. residents have health insurance coverage of some sort, millions do not. Access to affordable coverage has become a major concern in today's society. There has been ongoing debate in the federal and state political arenas concerning how to control spiraling health care costs and increase access to affordable health insurance. In recent years, differing proposals for potentially sweeping federal legislation governing health insurance availability and coverage were proposed and considered in Congress. These competing proposals advocated different approaches on such issues as whether there should be "universal" coverage (for all U.S. residents), whether employers should be required to make health insurance available to their employees, and whether large health insurance purchasing cooperatives should be instituted as a means of attempting to reduce premium costs. Another area of disagreement was the extent to which membership in health maintenance organizations (HMOs) should be encouraged by any federal legislation concerning the health insurance business. HMOs offer insurance plans under which member patients are treated by HMO-affiliated physicians under arrangements designed to control medical costs and presumably lessen the premiums or fees that HMO members must pay for health care coverage.

Congress ultimately decided, during the mid-1990s, not to enact legislation that would make sweeping changes in the health insurance status quo. Instead, Congress enacted reforms of a more limited, incremental nature, such as the Health Insurance Portability and Accountability Act of 1996. This statute includes provisions designed to allow most employees who had health insurance coverage in connection with their employment to change jobs without fear of losing health insurance coverage. Regardless of whether Congress continues the present course of modest tinkering or changes direction and enacts more extensive reforms in the health insurance realm, difficult public policy questions will complicate the process. As this book went to press in early 2000, health insurance issues and proposals were among the matters being debated by candidates for national elective office.

Bad Faith Breach of Insurance Contract

Earlier in this chapter, we discussed the liability that an insurer will face if it breaches its policy obligations by means of a good faith but erroneous denial of coverage. That liability is for compensatory damages—damages designed to compensate the insured for the losses stemming from the insurer's breach—just as in breach of contract cases outside the insurance setting. Punitive damages are not available, however, when the insurer's wrongful failure or refusal to perform stemmed from a good faith (though erroneous) coverage denial. What if

the insurer's failure or refusal to perform exhibited a lack of good faith? In this section, we examine the recent judicial tendency to go beyond the conventional remedy of compensatory damages and to assess punitive damages against the insurer when the insurer's refusal to perform its policy obligations amounted to the tort of **bad faith breach of contract.**

The special nature of the insurer–insured relationship tends to involve a "we'll take care of you" message that insurers communicate to insureds—at least at the outset of the relationship. Recognizing this, courts have displayed little tolerance in recent years for insurers' unjustifiable refusals to take care of insureds when taking care of them is clearly called for by the relevant policy's terms. When an insurer refuses to perform obvious policy obligations without a plausible, legitimate explanation for the refusal, the insurer risks more than being held liable for compensatory damages. If the facts and circumstances indicate that the insurer's refusal to perform stemmed not from a reasonable argument over coverage but from an intent to "stonewall," deny or unreasonably delay paying a meritorious claim, or otherwise create hardship for the insured, the insurer's breach may be of the bad faith variety. Because bad faith breach is considered an independent tort of a flagrantly wrongful nature, punitive damages—in addition to compensatory damages—have been held to be appropriate. The purposes of punitive damages in this context are the same as in other types of cases that call for punitive damages: to punish the flagrant wrongdoer and to deter the wrongdoer (as well as other potential wrongdoers) from repeating such an action.

The past decade has witnessed bad faith cases in which many millions of dollars in punitive damages have been assessed against insurers. The types of situations in which bad faith liability has been found have included a liability insurer's unjustifiable refusal to defend its insured and/or pay damages awarded against the insured in litigation that clearly triggered the policy obligations. Various cases involving very large punitive damages assessments for bad faith liability have stemmed from property insurers' refusals to pay for the insured's destroyed property when the cause was clearly a covered peril and the insurer had no plausible rationale for denying coverage. Still other bad faith cases in which liability was held to exist have included malpractice or other liability insurers' refusals to settle certain meritorious claims against the insured within the policy limits. Bad faith liability in these cases tends to involve a situation in which the insured is held legally liable to a plaintiff for an amount well in excess of the dollar limits of the liability policy (meaning that the insured would be personally responsible for the amount of the judgment in excess of the policy limits), after the liability insurer, without reasonable justification, refused the plaintiff's offer to settle the case for an amount less than or equal to the policy limits. The *Vining* case, which follows, furnishes another example of behavior that triggers bad faith liability.

Whether bad faith liability exists in a given case depends, of course, on all of the relevant facts and circumstances. Although bad faith liability is not established in every case in which insureds allege it, cases raising a bad faith claim are of particular concern to insurers.

Vining v. Enterprise Financial Group, Inc. *148 F.3d 1206 (10th Cir. 1998)*

Enterprise Financial Group, Inc., provided financing and credit life insurance to consumers who bought automobiles at Crown Auto World in Tulsa, Oklahoma. If purchased by a car buyer, the credit life insurance would pay off the customer's car loan in the event of his death. In March 1992, Milford Vining (Milford) purchased a jeep at Crown Auto World. Nancy Sidler, an Enterprise employee whose office was at the dealership, sold a credit life insurance policy to Milford when he purchased the jeep.

In late May 1993, Milford suffered a heart attack and died. His surviving spouse, Billie Vining (Vining), filed a claim with Enterprise for death benefits of approximately $10,000 under Milford's credit life policy. Enterprise refused to pay the claim and rescinded the policy on the supposed ground that Milford had misrepresented his health history in his application for the credit life policy. After unsuccessfully contesting the rescission, Vining sued Enterprise for breach of contract and for rescinding the policy in bad faith. In defense, Enterprise maintained that it had a legitimate basis for contesting the claim and that Milford had made material misrepresentations in his application for the credit life policy.

The evidence adduced at trial showed that in 1983, Milford suffered from coronary artery disease and underwent a triple bypass operation. After the surgery and followup tests, Milford began taking heart maintenance medication to prevent the occurrence of angina. From the time immediately following the 1983 surgery until the time of his death, Milford led an active life. He did not complain of chest pain or related symptoms.

In February 1992, Milford visited Dr. Michael Sullivan. This visit took place because Milford, who had recently moved, wanted to find a doctor closer to home. Milford's visit to Dr. Sullivan was not brought on by illness or physical symptoms. At the general time of this visit, Milford suffered from little, if any, angina. Dr. Sullivan continued Milford on his heart maintenance medications as a preventive measure. When Milford applied for the credit life policy in March 1992, he signed an application that contained the following statement:

> I HEREBY CERTIFY THAT I AM IN GOOD HEALTH AS OF THE EFFECTIVE DATE ABOVE. I FURTHER CERTIFY THAT I DO NOT PRESENTLY HAVE, NOR HAVE I EVER HAD, NOR HAVE I BEEN TOLD I HAVE, NOR HAVE I BEEN TREATED WITHIN THE PRECEDING 12 MONTHS FOR ANY OF THE FOLLOWING: ANY HEART DISEASE, OR OTHER CARDIOVASCULAR DISEASES.

Vining presented evidence designed to show that Enterprise routinely rescinded credit life policies after insureds' deaths and that the rescission of Milford's policy fit into this pattern. The jury returned a verdict in Vining's favor, awarding her $400,000 in compensatory damages for financial losses, emotional distress, and related harms. In addition, the jury assessed $400,000 in punitive damages against Enterprise, which appealed to the U.S. Court of Appeals for the Tenth Circuit.

Ebel, Circuit Judge Both parties agree that Milford did not intentionally attempt to mislead Enterprise [when he signed the insurance application containing the statement about his health], that Milford's appointment with Dr. Sullivan was his only medical visit in the 12 months preceding the policy purchase date, and that under Oklahoma Insurance Regulations, an insurance company may consider only the last 12 months of an applicant's medical history [when evaluating] an insurance application.

After Milford's death, Enterprise sought all of Milford's medical records, including Dr. Sullivan's notes. On the same day it received Dr. Sullivan's notes, Enterprise rescinded the policy. Enterprise routinely contests all claims on life insurance policies made within two years of a policy's effective date and investigates to find misrepresentations in the insurance application. [U]nder Oklahoma law, a claim made more than two years after the effective date of a life insurance policy is generally incontestable by the insurer. Debbie Cluck, Enterprise's claims examiner, denies four out of every ten claims that she reviews. Enterprise does not have a claims manual or any written guidelines specifying when a claim is payable or not, and it never informed Cluck of any applicable Oklahoma law or regulation pertaining to when a policy may be rescinded.

Cluck felt it appropriate to rescind a policy even if the agent issued the policy with full knowledge of an applicant's medical history. Cluck's beliefs comport with Enterprise company philosophy. Cluck never paid a claim if she had any reason to doubt whether a person's medical history was inconsistent with the health [statement] included on the insurance application. Cluck rescinded Milford's policy because she considered the office visit with Dr. Sullivan and the continuation of his angina medication by Dr. Sullivan [as] constitut[ing] treatment for triple bypass surgery. Cluck did not investigate whether Sidler [the Enterprise employee who dealt with Milford] was informed of Milford's medical history, did not contact either Sidler or Vining, and did not contact Dr. Sullivan to discuss his notes before rescinding the policy.

Enterprise's training manual for its agents emphasizes that applicants only need to be between the ages of 18 and 65 to purchase insurance. The manual does not discuss the health [statement on the application] or in any way suggest that the agent is supposed to ask the customer about his health. [It does not suggest] that health is relevant [to a decision to issue] the policy. The manual also encourages agents to maximize profit by overstating the actual monthly premium that should be charged and by secretly increasing the actual

amount of monthly payments the customer agrees to pay—for example, raising a payment from $78.22 to $78.99 because customers look more closely at dollars than cents. The manual informs agents that the life insurance policies they sell are guaranteed issue policies, which means that the coverage is in force immediately as compared to ordinary life insurance [policies, applicants for which] must be approved by the insurer before coverage takes effect.

John Myerson was Enterprise's representative to agents at automobile dealerships that sell Enterprise life insurance policies. [These agents included Sidler.] Myerson testified that he did not know what the terms used in the health [statement on the application] meant and that he did not know how Enterprise processed claims. Myerson also testified that he does not train agents to ask about doctor visits or medication. Sidler [was] never . . . trained . . . by Enterprise . . . on what constituted "good health" [for purposes of the application's health statement].

In response to numerous complaints against Enterprise for improper rescission of life insurance policies, the Oklahoma Insurance Department conducted an investigation of Enterprise's business practices. The Department [issued a 1992 report that] criticized Enterprise for requiring applicants to sign a disclaimer stating that they had never had any health problems. The report sharply criticized Enterprises's loss ratio, the ratio of benefits paid to premiums received, as being unreasonably below accepted levels due to a large number of policy rescissions. Enterprise paid out in benefits only about 16 percent of premiums received. Oklahoma Insurance Department regulations require a 50 percent loss ratio for credit life insurance companies. Based on the report, the Oklahoma Insurance Commissioner issued an order levying a $15,000 fine against Enterprise for various violations and mandating that Enterprise lower its premiums to produce an acceptable loss ratio level. Enterprise made no changes in light of the report's criticism. In fact, loss ratios for the two years following the report continued to remain below 18 percent. Enterprise's rescission conduct and loss ratios bear some resemblance to those of the fictional insurance company portrayed in John Grisham's novel *The Rainmaker* and in the motion picture of the same name.

Numerous witnesses testified that their decedent spouses had bought life insurance from Enterprise in circumstances similar to [those of] the Vinings. Enterprise summarily rescinded those life insurance policies after the survivors made claims on the policies. In each case, Enterprise cited evidence of an insured's health problems that existed at the time the insured signed a health disclaimer statement in the insurance application as the grounds for rescission.

Finally, John Hammond testified as an expert on the handling and management of insurance claims. Hammond expressed his opinion that Enterprise's conduct was "completely inappropriate." He stated that Enterprise investigated Vining's claim by looking for a reason to rescind the policy. Hammond added that Enterprise erred by not contacting either Sidler, the agent who sold the policy, or Vining before rescinding the policy. Hammond also criticized Enterprise for not providing claims manuals detailing credit life insurance policy eligibility requirements to its claims examiners who were charged with investigating claims on those policies.

Under Oklahoma law, an insurer has a legal duty to "deal fairly and act in good faith with its insured." *Christian v. American Home Assurance Co.* (Okla. Sup. Ct. 1977). An insured may bring a cause of action in tort for bad faith if the insurer breaches this duty. The essence of a bad faith claim centers on the unreasonableness of the insurer's conduct. An insurer does not breach the duty of good faith to pay a claim "by litigating a dispute with its insured if there is a legitimate dispute as to coverage or amount of the claim, and the insurer's position is reasonable and legitimate." *Oulds v. Principal Mutual Life Insurance Co.* (10th Cir. 1993).

Enterprise argues on appeal that because it in fact had a legitimate reason for rescinding Milford's policy based on his medical history and heart condition, Enterprise is entitled as a matter of law to a verdict in its favor on the claim of bad faith. An insurer does not act in bad faith if it had a "good faith belief, at the time its performance was requested, that it had justifiable reason for withholding payment under the policy." *Buzzard v. Farmers Insurance Co.* (Okla Sup. Ct. 1991). An insurer

may legitimately and in good faith dispute a claim based on material misrepresentations in the insured's application for insurance.

Vining does not dispute that her husband had a heart condition and that the insurance application he signed included a disclaimer . . . certifying that he was in good health and had not been treated within the preceding 12 months for heart disease or any other cardiovascular disease. As a result, Enterprise could contest liability on the basis of a misrepresentation if it had a good faith belief that the misrepresentation was intentional. Here, Enterprise reasonably could have determined that by signing the disclaimer, Milford materially misrepresented the condition of his health. However, even a "legitimate dispute as to coverage will not act as an impenetrable shield against a valid claim of bad faith" where the insured presents "sufficient evidence reasonably tending to show bad faith" or unreasonable conduct. *Timberlake Construction Co. v. U.S. Fidelity & Guaranty Co.* (10th Cir. 1995). That is, a plaintiff may bring a bad faith cause of action even though a legitimate defense to a breach of contract claim exists if the defendant did not actually rely on that defense to deny payment under the policy.

Vining demonstrated at trial a deliberate, willful pattern of abusive conduct by Enterprise in handling claims under its life insurance policies. Vining offered evidence that as a matter of course Enterprise would rescind life insurance policies issued on a guaranteed basis as soon as claims were made. Enterprise based these rescissions on the grounds that the insured had made material misrepresentations on the insurance application regardless of whether Enterprise in fact would have declined to write the policy had it known of that information at the time the policy was written. Vining presented evidence that Enterprise engaged in a systematic, bad faith scheme of canceling policies without determining whether it had good cause to do so. Such conduct constitutes bad faith regardless of whether Enterprise legitimately might have been able to contest Vining's claim based on Milford's heart condition, because the evidence showed that Enterprise, in fact, did not dispute coverage in good faith based on Milford's heart condition.

Enterprise also raises the affirmative defense of rescission. Under [an Oklahoma statute], an insurer properly may rescind an insurance policy when the application contains a misrepresentation that (1) is fraudulent; (2) is material to the insurance company's acceptance of the risk; or (3) induced the insurer to issue the policy where it would not have done so had it known the true facts. However, Enterprise concedes that [the statute does not allow an insurer to rescind unless the insured had an intent to deceive]. Because Enterprise . . . admits that Milford did not willfully or intentionally misrepresent his health history on the application, Enterprise cannot rely on the affirmative defense of rescission.

Enterprise complains that [the district court erred in] the jury instruction [concerning what Vining needed to prove in order to establish bad faith]. Bad faith may be established by showing an unreasonable refusal to pay a claim, and the instruction set forth three alternative scenarios which are deemed to be unreasonable: (1) the insurance company "had no basis for the refusal," (2) the insurance company did not perform a proper investigation, or (3) the insurance company did not evaluate the results of the investigation properly. As we pointed out earlier, merely because there is a reasonable basis that an insurance company could invoke to deny a claim does not necessarily immunize the insurer from a bad faith claim if, in fact, it did not actually rely on that supposed reasonable basis and instead took action in bad faith. [T]he jury instruction correctly stated the applicable law.

Enterprise challenges the damages awarded to Vining as excessive and as lacking sufficient evidentiary support. Vining testified at trial regarding the distress she experienced as a result of Enterprise's conduct toward her during the three years she spent fighting the insurance company over the claim. Such evidence is sufficient in a bad faith claim to support an award for emotional distress. In addition, $400,000 for mental pain and suffering, financial losses, embarrassment, and loss of reputation in the context of bad faith insurance claims is not excessive on this record. [The award of] $400,000 in punitive damages [was also appropriate] and need not be adjusted.

Judgment in favor of Vining affirmed.

Ethical and Public Policy Concerns

1. The law requires that the purchaser of property insurance must have an insurable interest in the property being insured. Why? Does this requirement encourage ethical conduct?

2. Provisions in liability insurance policies often state that the insurer will have no obligation to pay any *punitive* damages assessed against the insured. In addition, controlling legal rules sometimes provide that any agreement to provide insurance coverage for punitive damages liability is unenforceable. Should one be able to insure himself or herself against punitive damages liability? Why or why not?

3. A young parent of two children contacts an insurance agent and indicates that she wishes to purchase a life insurance policy. This parent has a modest income. Her main concern, as stated to the agent, is that her children will be provided for financially if she should die before they reach adulthood. The agent knows that he will make more money if he sells her a *whole life* policy than if he sells her a *term* policy, because his commission is a percentage of the premium (which will be higher with a whole life policy than with a term policy). What ethical issues does the agent face under these circumstances?

Problems and Problem Cases

1. Eighteen-year-old Arthur Smith became intoxicated at a New Year's Eve party. At 11:00 P.M., Smith left the party and began walking home. Police officer Don Czopek saw Smith walking down the center of a road and weaving from side to side. Because Smith was interfering with traffic and placing himself at risk of physical harm, Czopek pulled his patrol car alongside Smith and attempted to talk him into getting off the road. Smith refused, became argumentative, and started shouting. Czopek parked his patrol car, got out, and approached Smith in an effort to calm him down. Smith became increasingly hostile and grabbed Czopek by the lapels of his coat. Officer Herdis Petty then arrived on the scene to assist Czopek. A struggle occurred as the two officers attempted to handcuff Smith and put him into a patrol car. Smith kicked, hit, and bit the officers during this struggle, which continued for a substantial length of time. Czopek suffered frostbite on one of his hands. Petty sustained broken ribs as a result of being kicked by Smith (plus other less serious injuries). Smith was later convicted of assault and battery. He admitted that he intentionally resisted arrest but said that he did not recall hitting or kicking anyone. Officers Czopek and Petty filed a civil suit against Smith's parents, whose homeowners' policy with Group Insurance Company of Michigan (GICOM) provided liability coverage to the insureds—a status that, under the policy's terms, included Arthur Smith—for third parties' personal injury claims resulting from an "occurrence." The policy defined "occurrence" as "an accident, including injurious exposure to conditions, which results . . . in bodily injury or property damage." The policy contained an exclusion from coverage for "bodily injury or property damage which is either expected or intended from the standpoint of the insured." GICOM filed a declaratory judgment suit in which it asked the court to declare that it had no duty to defend or indemnify Arthur Smith and his parents in connection with the litigation brought by Czopek and Petty. Was GICOM entitled to such a ruling by the court?

2. Herbert Prashker was a partner in a law firm. Pursuant to their partnership agreement, the firm's partners purchased two life insurance policies on Prashker's life. The partners were named as beneficiaries. These policies, whose face amounts totaled $1,350,000, were obtained because Prashker was the most significant partner in terms of business generation and size of capital account. Prashker later fell ill with cancer and could no longer practice law. The partners agreed to terminate the partnership business. Five months after the partnership ceased doing business, Prashker died. Prashker's former partners sought to recover the life insurance proceeds. So did Prashker's daughter. She argued that the former partners were not entitled to the insurance proceeds because their insurable interest ended when the partnership was terminated. Were Prashker's former partners entitled to the life insurance proceeds?

3. In a class action suit, the plaintiffs alleged that an automobile loan program instituted by Bank of the West (BOW) violated California's Unfair Business Practices Act. No common law unfair competition claim was made in the suit. The Unfair Business Practices Act did not allow courts to award compensatory or punitive damages, but did authorize courts to order "the disgorgement of money" wrongfully obtained. BOW settled the class action suit by paying $500,000

and agreeing to make changes in the operation of the loan program. BOW contended that the $500,000 payment was covered by the terms of a liability policy issued to BOW by Industrial Indemnity Co. The policy provided coverage for "all sums which the insured shall become legally obligated to pay as damages because of advertising injury to which this insurance applies." The policy went on to define "advertising injury" as "injury arising out of . . . libel, slander, defamation, violation of right of privacy, unfair competition, or infringement of copyright, title or slogan." Industrial filed a declaratory judgment action in which it asked the court to determine that the policy did not cover the $500,000 payment made by BOW to settle the class action suit. The trial court ruled in Industrial's favor, but the intermediate appellate court reversed. It concluded that the policy afforded coverage because the term "unfair competition" was ambiguous and thus could refer to either the common law of unfair competition or statutory claims such as those under the Unfair Business Practices Act. Was the intermediate appellate court correct?

4. Benjamin Born applied for a life insurance policy from Medico Life Insurance Company. The application form called for a health history, which Born provided. In addition, the application form asked specific questions about preexisting medical conditions. Born's wife, Adeline, answered these questions by stating that Born had no preexisting medical problems and was in good health. After issuing the policy, Medico discovered that Born had a history of heart disease, degenerative arthritis, and urinary system disorders. Medico then rescinded the policy and provided Born a check representing a refund of the premiums he had paid. Taking the position that he was still insured, Born refused the refund check. On these facts, was Medico entitled to rescind the policy?

5. Sims and Dorothy Good purchased a property insurance policy on their home from Continental Insurance Co. Fire was among the covered perils. The policy contained an "increase of hazard" clause stating that Continental would not be obligated under the policy if the risk of fire was increased "by any means within the control or knowledge of the insured." After the policy took effect, a fire destroyed much of the Goods' home. While putting out the fire, firefighters discovered an illegal liquor still concealed in a false closet under the eaves of the roof. The still, encased by bricks and mortar, consisted of a 90-gallon copper vat over a butane gas burner. Firefighters also discovered 22 half-gallons of "moonshine" and many 55-gallon drums full or partially full of mash. A police detective who dismantled and examined the still's burner after the fire concluded that the still was in operation when the fire occurred. The Goods denied this, though Sims Good admitted having installed the still two years earlier, after the Continental insurance policy became effective. Continental refused to pay the Goods' claim, so the Goods sued Continental to recover proceeds under the policy. After the trial court awarded damages to the Goods, Continental appealed. Were the Goods entitled to recover damages from Continental?

6. The Plummers owned a commercial building in which they operated two businesses. The building and its contents were insured by Indiana Insurance Company (IIC). After an explosion and fire destroyed the building, the Plummers filed a claim and proof of loss with IIC. After an investigation, IIC denied the claim due to its conclusion that the Plummers had intentionally set the fire. IIC then filed a declaratory judgment action in which it asked for a determination that it had no obligation to cover losses stemming from the fire. The Plummers counterclaimed, seeking damages for breach of contract as well as punitive damages. The jury returned a verdict in favor of the Plummers on all issues. The jury awarded the Plummers approximately $700,000 in compensatory damages (an amount that exceeded the policy limits set forth in the insurance policy at issue), plus $3.5 million in punitive damages. The $700,000 compensatory damages award included not only the value of the destroyed building and its contents (what would have been due under the policy) but also $200,000 in consequential damages allegedly incurred by the Plummers as a result of IIC's lengthy investigation of the fire and ultimate denial of the Plummers' claim. For the most part, the consequential damages represented interest costs and similar expenses incurred by the Plummers—costs and expenses they would not have incurred if IIC had paid their claim. Although the evidence IIC adduced at trial included experts' testimony that the fire had been intentionally set, the jury rejected that testimony and accepted the Plummers' contrary evidence. IIC appealed, arguing that its denial of the Plummers' claim was in good faith, that it therefore should have no liability for consequential damages and punitive damages, and that

the damages awarded for breach of an insurance contract cannot exceed the policy limits set forth in the contract. Was IIC correct in these arguments?

7. In 1972, Betty DeWitt and her husband, Joseph, purchased a house. Title was taken in Betty's name. Seven years later, the DeWitts were divorced. Under the 1979 divorce decree, Joseph was given possession of the house and Betty was ordered to sign the deed over to him. Joseph died in January 1980. Soon thereafter, Betty moved into the house and purchased a fire insurance policy from American Family Mutual Insurance Company. The policy had a face value of $38,500. In August 1980, the house was completely destroyed by fire. At that time, American Family learned of her divorce and the decree ordering her to convey title to Joseph. American Family refused to pay on the policy, arguing that Betty did not have an insurable interest. Was American Family correct?

8. Robert Baer and Dareen Dahlstrom had been close friends for more than 20 years. Dahlstrom, who was in the process of separating from her husband, went to visit Baer in July 1988. On various occasions, Baer had used a recreational drug known as Ecstacy. For several years after its discovery, Ecstasy was not an illegal drug. It was, however, designated by federal law as a prohibited controlled substance beginning in March 1988. Baer believed that the use of Ecstasy had certain psychological and emotional benefits, and that using it might help Dahlstrom cope with the personal problems she was experiencing at the time of her July 1988 visit. After she and Baer discussed his beliefs regarding Ecstasy, Dahlstrom told him that she wanted to use the drug. Baer and Dahlstrom went through various rituals in preparation for use of the drug and recited a prayer that "this [may] bring harm to no one and blessing to all." Baer then removed some Ecstasy from his personal supply, which he had purchased prior to March 1988. Baer dissolved approximately one-half of his usual dose in a glass of water and gave it to Dahlstrom. She drank the mixture. Within approximately 30 minutes, she was dead. Dahlstrom's survivors filed a wrongful death suit against Baer, who asserted that the claim fell within the liability coverage provided to him by State Farm Insurance Company as part of his homeowner's policy. The policy afforded coverage for third parties' claims for physical injury resulting from an "occurrence," which was defined in terms of an "accident" that caused injury. The policy also contained an exclusion from coverage for injury that was either intended or expected by the insured. State Farm filed a declaratory judgment action in which it asked for a judicial determination that in light of the above provisions in the parties' insurance contract as well as public policy considerations, it owed Baer no coverage duties regarding the suit that stemmed from Dahlstrom's death. Was State Farm entitled to the relief it sought?

9. Jeffrey Lane was employed by Memtek, Inc., at its Arby's Restaurant. He was being trained as a cook. After 11:00 one evening, Lane finished work and clocked out. He remained in the restaurant's lobby, however, because he was waiting for the manager to complete her duties. As Lane waited, friends of other restaurant employees came to a door of the restaurant. Lane and the other employees became involved in a conversation with these persons, who included John Taylor. Lane told Taylor that he could not enter the restaurant because it was closed. Taylor did not attempt to force his way into the restaurant. Instead, he "dared" Lane to come outside. Lane left the restaurant "of [his] own will" (according to Lane's deposition) for what he assumed would be a fight with Taylor. In the fight that transpired, Lane broke Taylor's nose and knocked out three of his teeth. Lane later pleaded guilty to a criminal battery charge. Taylor filed a civil suit against Lane and Memtek in an effort to collect damages stemming from the altercation with Lane. American Family Mutual Insurance Company provided liability insurance for Memtek in connection with its restaurant. The policy stated that for purposes of American Family's duties to defend and indemnify, "the insured" included not only Memtek but also Memtek's "employees, . . . but only for acts within the scope of their employment." American Family filed a declaratory judgment action in which it asked the court to determine that it owed Lane neither a duty to defend nor a duty to indemnify in connection with the incident giving rise to Taylor's lawsuit. American Family's theory was that for purposes of that incident, Lane was not an insured within the above-quoted policy provision. Was American Family correct?

10. Earl and Vonette Crowell owned a farm in Minnesota. In 1980, they mortgaged the farm to Farm Credit Services and purchased a property insurance policy on the farm (including the farmhouse) from Delafield Farmers Mutual Insurance Co. Fire was among

the perils covered by this policy, which ran from October 1985 to October 1988. When the Crowells fell behind on their mortgage payments, Farm Credit began foreclosure proceedings. Upon foreclosure, mortgagors such as the Crowells have a right of redemption for a specified time. The right of redemption allows the defaulting mortgagors to buy back their property after it has been sold to someone else in the foreclosure proceedings. In November 1987, the Crowells' right of redemption expired. Minnesota law provides, however, that farmers who lose their farms to corporate lenders are given an additional opportunity to repurchase their farms under a "right of first refusal." This right meant that Farm Credit was forbidden to sell the farm to anyone else before offering it to the Crowells at a price no higher than the highest price offered by a third party. Farm Credit allowed the Crowells to remain on the farm while they attempted to secure financing to buy the property under their right of first refusal. In November 1987, a fire substantially damaged the farmhouse. The Crowells filed a claim for the loss with Delafield. Although Delafield paid the claim concerning the Crowells' personal effects that were located inside the farmhouse and were destroyed in the fire, it denied the claim on the farmhouse itself. Delafield took the position that because the time period for the Crowells' right of redemption had expired, they no longer had an insurable interest in the farmhouse. The Crowells therefore sued Delafield. Concluding that the Crowells had an insurable interest in the farmhouse, the trial court granted summary judgment in their favor. Was the trial court correct?

Glossary

abandonment To intentionally give up possession or claim to property with the intent of relinquishment of any ownership or claim.

abatement An action of stopping or removing.

ab initio From the beginning.

abstract of title A summary of the conveyances, transfers, and other facts relied on as evidence of title, together with all such facts appearing of record that may impair its validity.

abuse of process An intentional tort designed to protect against the initiation of legal proceedings for a primary purpose other than the one for which such proceedings were designed.

acceleration The shortening of the time for the performance of a contract or the payment of a note by the operation of some provision in the contract or note itself.

acceptance The actual or implied receipt and retention of that which is tendered or offered.

accession The acquisition of property by its incorporation or union with other property.

accommodation paper A negotiable instrument signed without consideration by a party as acceptor, drawer, or indorser for the purpose of enabling the payee to obtain credit.

accommodation party A person who signs a negotiable instrument for the purpose of adding his name and liability to another party to the instrument.

accord and satisfaction A legally binding agreement to settle a disputed claim for a definite amount.

account stated An account that has been rendered by one to another and which purports to state the true balance due and that balance is either expressly or impliedly admitted to be due by the debtor.

acquit To set free or judicially to discharge from an accusation; to release from a debt, duty, obligation, charge, or suspicion of guilt.

actionable Capable of being remedied by a legal action or claim.

act of God An occurrence resulting exclusively from natural forces that could not have been prevented or whose effect could not have been avoided by care or foresight.

act of state doctrine A doctrine of international law that no nation is permitted to judge the act of another nation committed within its own boundaries.

adjudge To give judgment; to decide.

adjudicate To adjudge; to settle by judicial decree.

ad litem During the pendency of the action or proceeding.

administrator The personal representative appointed by a probate court to settle the estate of a deceased person who died intestate (without leaving a valid will).

adoption In corporation law, a corporation's acceptance of a preincorporation contract by action of its board of directors, by which the corporation becomes liable on the contract.

advance directive A written document such as a living will or durable power of attorney that directs others how future health care decisions should be made in the event that the individual becomes incapacitated.

adverse possession Open and notorious possession of real property over a given length of time that denies ownership in any other claimant.

advised letter of credit See *letter of credit, advised.*

affidavit A signed writing containing statements of fact to whose accuracy the signing party has sworn. Used in a variety of judicial proceedings, including the motion for summary judgment.

affirm To confirm or uphold a former judgment or order of a court. Appellate courts, for instance, may affirm the decisions of lower courts.

after-acquired property Property of the debtor that is obtained after a security interest in the debtor's property has been created.

agency A legal relationship in which an agent acts under the direction of a principal for the principal's benefit. Also used to refer to government regulatory bodies of all kinds.

agent One who acts under the direction of a principal for the principal's benefit in a legal relationship known as agency. See *principal.*

aggregate theory In partnership law, the view that there is no distinction between a partnership and the partners who own it. See *entity theory.*

aggrieved One whose legal rights have been invaded by the act of another. Also, one whose pecuniary interest is directly affected by a judgment, or whose right of property may be divested by an action.

alienation The voluntary act or acts by which one person transfers his or her own property to another.

alien corporation A corporation incorporated in one country that is doing business in another country. See *foreign corporation.*

allegation A statement of a party to an action in a declaration or pleading of what the party intends to prove.

allege To assert a statement of fact.

alteration An addition or change in a document.

alter ego Other self. In corporation law, a doctrine that permits a court to pierce a corporation's veil and to hold a shareholder liable for the actions of a corporation dominated by the shareholder.

alternative dispute resolution (ADR) A general name applied to the many nonjudicial means of settling private disputes.

amortize To provide for the payment of a debt by creating a sinking fund or paying in installments.

ancillary Auxiliary to. An ancillary receiver is a receiver who has been appointed in aid of, and in subordination to, the primary receiver.

ancillary covenant not to compete A promise that is ancillary to (part of) a valid contract whereby one party to a contract agrees not to compete with the other party for a specified time and within a specified location. Also called *non-competition clause.*

answer The pleading of a defendant in which he or she may deny any or all the facts set out in the plaintiff's declaration or complaint.

anticipatory breach A contracting party's indication before the time for performance that he cannot or will not perform the contract.

appearance The first act of the defendant in court.

appellant The party making an appeal.

appellate jurisdiction Jurisdiction to revise or correct the work of a subordinate court.

appellee A party against whom a favorable court decision is appealed. May be called the *respondent* in some jurisdictions.

applicant A petitioner; one who files a petition or application.

appurtenance An accessory; something that belongs to another thing.

arbitrate To submit some disputed matter to selected persons and to accept their decision or award as a substitute for the decision of a judicial tribunal.

argument The discussion by counsel for the respective parties of their contentions on the law and the facts of the case being tried in order to aid the jury in arriving at a correct and just conclusion.

articles of incorporation A document that must be filed with a secretary of state to create a corporation. Usually, it includes the basic rights and responsibilities of the corporation and the shareholders.

artisan's lien A common law possessory security interest arising out of the improvement of property by one skilled in some mechanical art or craft; the lien entitles the improver of the property to retain possession in order to secure the agreed-on price or the value of the work performed.

assault An intentional tort that prohibits any attempt or offer to cause harmful or offensive contact with another if it results in a well-grounded apprehension of imminent battery in the mind of the threatened person.

assent To give or express one's concurrence or approval of something done.

assignable Capable of being lawfully assigned or transferred; transferable; negotiable. Also, capable of being specified or pointed out as an assignable error.

assignee A person to whom an assignment is made.

assignment A transfer of property or some right or interest.

assignor The maker of an assignment.

assumption of risk A traditional defense to negligence liability based on the argument that the plaintiff voluntarily exposed himself to a known danger created by the defendant's negligence.

assurance To provide confidence or to inform positively.

attachment In general, the process of taking a person's property under an appropriate judicial order by an appropriate officer of the court. Used for a variety of purposes, including the acquisition of jurisdiction over the property seized and the securing of property that may be used to satisfy a debt.

attest To bear witness to; to affirm; to be true or genuine.

attorney-in-fact An agent who is given express, written authorization by his principal to do a particular act or series of acts on behalf of the principal.

at will See *employment at will* or *partnership at will.*

audit committee In corporation law, a committee of the board that recommends and supervises the public accountant who audits the corporation's financial records.

authentication Such official attestation of a written instrument as will render it legally admissible in evidence.

authority In agency law, an agent's ability to affect his principal's legal relations with third parties. Also used to refer to an actor's legal power or ability to do something. In addition, sometimes used to refer to a statute, case, or other legal source that justifies a particular result.

authorized shares Shares that a corporation is empowered to issue by its articles of incorporation.

automatic stay Under the Bankruptcy Act, the suspension of all litigation against the debtor and his property, which is triggered by the filing of a bankruptcy petition.

averment A statement of fact made in a pleading.

avoid To nullify a contractual obligation.

bad faith A person's actual intent to mislead or deceive another; an intent to take an unfair and unethical advantage of another.

bailee The person to whom a bailment is made.

bailment The transfer of personal property by its owner to another person with the understanding that the property will be returned to the owner in the future.

bailor The owner of bailed property; the one who delivers personal property to another to be held in bailment.

bankruptcy The state of a person who is unable to pay his or her debts without respect to time; one whose liabilities exceed his or her assets.

bar As a collective noun, those persons who are admitted to practice law, members of the bar. The court itself. A plea or defense asserted by a defendant that is sufficient to destroy a plaintiff's action.

battery An intentional tort that prohibits the harmful or offensive touching of another without his consent.

bearer A person in possession of a negotiable instrument that is payable to him, his order, or to whoever is in possession of the instrument.

bench Generally used as a synonym for the term *court* or the judges of a court.

beneficiary The person for whose benefit an insurance policy, trust, will, or contract is established. In the case of a contract, the beneficiary is called a *third-party beneficiary.*

bequest In a will, a gift of personal property or money. Also called a *legacy.*

bid To make an offer at an auction or at a judicial sale. As a noun, an offer.

bilateral contract A contract in which the promise of one of the parties forms the consideration for the promise of the other.

bill of exchange An unconditional order in writing by one person to another, signed by the person giving it, requiring the person to whom it is addressed to pay on demand or at a fixed or determinable future time a sum certain in money to order or to bearer.

bill of lading A written acknowledgment of the receipt of goods to be transported to a designated place and delivery to a named person or to his or her order.

bill of sale A written agreement by which one person assigns or transfers interests or rights in personal property to another.

binder Also called a *binding slip.* A brief memorandum or agreement issued by an insurer as a temporary policy for the convenience of all the parties, constituting a present insurance in the amount specified, to continue in force until the execution of a formal policy.

blue sky laws The popular name for state statutes that regulate securities transactions.

bona fide Made honestly and in good faith; genuine.

bona fide purchaser An innocent buyer for valuable consideration who purchases goods without notice of any defects in the title of the goods acquired.

bond A long-term debt security that is secured by collateral.

bonus shares Also called *bonus stock.* Shares issued for no lawful consideration. See *discount shares* and *watered shares.*

breaking bulk The division or separation of the contents of a package or container.

brief A statement of a party's case or legal arguments, usually prepared by an attorney. Often used to support some of the motions described in Chapter 2, and also used to make legal arguments before appellate courts. Also, an abridgement of a reported case.

broker An agent who bargains or carries on negotiations in behalf of the principal as an intermediary between the latter and third persons in transacting business relative to the acquisition of contractual rights, or to the sale or purchase of property the custody of which is not entrusted to him or her for the purpose of discharging the agency.

bulk transfer The sale or transfer of a major part of the stock of goods of a merchant at one time and not in the ordinary course of business.

burden of proof Used to refer both to the necessity or obligation of proving the facts needed to support a party's claim, and the persuasiveness of the evidence used to do so. Regarding the second sense of the term, the usual burden of proof in a civil case is a preponderance of the evidence; in a criminal case, it is proof beyond a reasonable doubt.

business judgment rule A rule protecting business managers from liability for making bad decisions when they have acted prudently and in good faith.

buy-and-sell agreement A share transfer restriction compelling a shareholder to sell his shares to the other shareholders or the corporation and obligating the other shareholders or the corporation to buy the shareholder's shares.

buyer in ordinary course of business A person who, in good faith and without knowledge that the sale to him is in violation of a third party's ownership rights or security interest in the goods, buys in ordinary course from a person who is in the business of selling goods of that kind.

bylaws In corporation law, a document that supplements the articles of incorporation and contains less important rights, powers, and responsibilities of a corporation and its shareholders, officers, and directors.

call See *redemption.* Also, a type of option permitting a person to buy a fixed number of securities at a fixed price at a specified time. Compare *put.*

canceled shares Previously outstanding shares repurchased by a corporation and canceled by it; such shares no longer exist.

cancellation The act of crossing out a writing. The operation of destroying a written instrument.

C&F The price of the goods includes the cost of the goods plus the freight to the named destination.

capacity The ability to incur legal obligations and acquire legal rights.

capital Contributions of money and other property to a business made by the owners of the business.

capital stock See *stated capital.*

capital surplus Also called *additional paid in capital.* A balance sheet account; the portion of shareholders' contributions exceeding the par or stated value of shares.

case law The law extracted from decided cases.

cashier's check A draft (including a check) drawn by a bank on itself and accepted by the act of issuance.

causa mortis In contemplation of approaching death.

cause of action A legal rule giving the plaintiff the right to obtain some legal relief once certain factual elements are proven. Often used synonymously with the terms *claim* or *theory of recovery.*

caveat emptor Let the buyer beware.

caveat venditor Let the seller beware.

certificate of deposit An acknowledgment by a bank of the receipt of money with an engagement to pay it back.

certificate of limited partnership A document that must be filed with a secretary of state to create a limited partnership.

certification The return of a writ; a formal attestation of a matter of fact; the appropriate marking of a certified check.

certified check A check that has been accepted by the drawee bank and has been so marked or certified that it indicates such acceptance.

chancellor A judge of a court of chancery.

chancery Equity or a court of equity.

charge The legal instructions that a judge gives a jury before the jury begins its deliberations. In the prosecution of a crime, to formally accuse the offender or charge him with the crime.

charging order A court's order granting rights in a partner's transferable interest to a personal creditor of the partner; a creditor with a charging order is entitled to the partner's share of partnership distributions.

charter An instrument or authority from the sovereign power bestowing the right or power to do business under the corporate form of organization. Also, the organic law of a city or town, and representing a portion of the statute law of the state.

chattel An article of tangible property other than land.

chattel mortgage An instrument whereby the owner of chattels transfers the title to such property to another as security for the performance of an obligation subject to be defeated on the performance of the obligation. Under the UCC, called merely a *security interest.*

chattel paper Written documents that evidence both an obligation to pay money and a security interest in particular goods.

check A written order on a bank or banker payable on demand to the person named or his order or bearer and drawn by virtue of credits due the drawer from the bank created by money deposited with the bank.

chose in action A personal right not reduced to possession but recoverable by a suit at law.

CIF An abbreviation for cost, freight, and insurance, used in mercantile transactions, especially in import transactions.

citation of authorities The reference to legal authorities such as reported cases or treatises to support propositions advanced.

civil action An action brought to enforce a civil right; in contrast to a criminal action.

civil law The body of law applicable to lawsuits involving two private parties.

class action An action brought on behalf of the plaintiff and others similarly situated.

close corporation A corporation with few shareholders generally having a close personal relationship to each other and participating in the management of the business.

COD Cash on delivery. When goods are delivered to a carrier for a cash on delivery shipment, the carrier must not deliver without receiving payment of the amount due.

code A system of law; a systematic and complete body of law.

codicil Some addition to or qualification of one's last will and testament.

collateral Property put up to secure the performance of a promise, so that if the promisor fails to perform as promised, the creditor may look to the property to make him whole.

collateral attack An attempt to impeach a decree, a judgment, or other official act in a proceeding that has not been instituted for the express purpose of correcting or annulling or modifying the decree, judgment, or official act.

collateral contract A contract in which one person agrees to pay the debt of another if the principal debtor fails to pay. See *guaranty.*

comaker A person who with another or others signs a negotiable instrument on its face and thereby becomes primarily liable for its payment.

commercial impracticability The standards used by the UCC, replacing the common law doctrine of impossibility, to define when a party is relieved of his or her contract obligations because of the occurrence of unforeseeable, external events beyond his or her control.

commercial law The law that relates to the rights of property and persons engaged in trade or commerce.

commercial paper Negotiable paper such as promissory notes, drafts, and checks that provides for the payment of money and can readily be transferred to other parties.

commercial unit Under the UCC, any unit of goods that is treated by commercial usage as a single whole. It may, for example, be a single article or a set of articles such as a dozen, bale, gross, or carload.

common area In landlord–tenant law, an area over which the landlord retains control but which is often used by or for the benefit of tenants. For example, hallways in an apartment building.

common carrier One who undertakes, for hire or reward, to transport the goods of such of the public as choose to employ him.

common law The law that is made and applied by judges.

common shareholders Shareholders who claim the residual profits and assets of a corporation, and usually have the exclusive power and right to elect the directors of the corporation.

comparative fault Often used synonymously with *comparative negligence.* But also sometimes used to refer to a defense that operates like comparative negligence but considers the plaintiff's and the defendant's overall fault rather than either's negligence alone.

comparative negligence The contemporary replacement for the traditional doctrine of contributory negligence. The basic idea is that damages are apportioned between the parties to a negligence action in proportion to their relative fault. The details vary from state to state.

compensatory damages See *damages, compensatory.*

complaint The pleading in a civil case in which the plaintiff states his claim and requests relief.

composition with creditors An agreement between creditors and their common debtor and between themselves whereby the creditors agree to accept the sum or security stipulated in full payment of their claims.

concealment In contract law, taking active steps to prevent another from learning the truth.

concurrent Running with; simultaneously with.

condemn To appropriate land for public use. To adjudge a person guilty; to pass sentence on a person convicted of a crime.

condition In contract law, a future, uncertain event that creates or extinguishes a duty of performance; a provision or clause in a contract that operates to suspend or rescind a party's duty to perform.

conditional acceptance An acceptance of a bill of exchange containing some qualification limiting or altering the acceptor's liability on the bill.

conditional gift A gift that does not become absolute or complete until the occurrence of some express or implied condition.

conditional sale The term is most frequently applied to a sale in which the seller reserves the title to the goods, although the possession is delivered to the buyer, until the purchase price is paid in full.

condition precedent A condition that operates to give rise to a contracting party's duty to perform.

condition subsequent A condition that operates to relieve or discharge one from his obligation under a contract.

confession of judgment An entry of judgment on the admission or confession of the debtor without the formality, time, or expense involved in an ordinary proceeding.

confirmed letter of credit See *letter of credit, confirmed.*

confusion The inseparable intermixture of property belonging to different owners.

consent decree or **consent order** Used to refer to the order courts or administrative agencies issue when approving the settlement of a lawsuit or administrative action against some party.

consent restraint A security transfer restriction requiring a shareholder to obtain the consent of the corporation or its shareholders prior to the shareholder's sale of her shares.

consequential damages See *damages, consequential.*

conservator (of an incompetent person) A person appointed by a court to take care of and oversee the person and estate of an incompetent person.

consideration In contract law, a basic requirement for an enforceable agreement under traditional contract principles, defined in this text as legal value, bargained for and given in exchange for an act or promise. In corporation law, cash or property contributed to a corporation in exchange for shares, or a promise to contribute such cash or property.

consignee A person to whom goods are consigned, shipped, or otherwise transmitted, either for sale or for safekeeping.

consignment A bailment for sale. The consignee does not undertake the absolute obligation to sell or pay for the goods.

consignor One who sends goods to another on consignment. A shipper or transmitter of goods.

conspicuous Noticeable by a reasonable person, such as a term or clause in a contract that is in bold print, in capitals, or a contrasting color or type style.

constructive eviction In landlord–tenant law, a breach of duty by the landlord that makes the premises uninhabitable or otherwise deprives the tenant of the benefit of the lease and gives rise to the tenant's right to vacate the property and terminate the lease.

construe To read a statute or document for the purpose of ascertaining its meaning and effect, but in doing so the law must be regarded.

contempt Conduct in the presence of a legislative or judicial body tending to disturb its proceedings or impair the respect due to its authority, or a disobedience to the rules or orders of such a body, which interferes with the due administration of law.

continuation statement A document, usually a multicopy form, filed in a public office to indicate the continuing viability of a financing statement. See *financing statement.*

contra Otherwise; disagreeing with; contrary to.

contract A legally enforceable promise or set of promises.

contract of adhesion A contract in which a stronger party is able to dictate terms to a weaker party, leaving the weaker party no practical choice but to adhere to the terms. If the stronger party has exploited its bargaining power to achieve unfair terms, the contract is against public policy.

contribution In business organization law, the cash or property contributed to a business by its owners.

contributory negligence A traditional defense to negligence liability based on the plaintiff's failure to exercise reasonable care for his own safety.

conversion Any distinct act of dominion wrongfully exerted over another's personal property in denial of or inconsistent with his rights therein. That tort committed by a person who deals with chattels not belonging to him in a manner that is inconsistent with the ownership of the lawful owner.

convertible securities Securities giving their holders the power to exchange those securities for other securities without paying any additional consideration.

conveyance A written instrument transferring the title to land or some interest therein from one person to another.

copartnership A partnership.

copyright A set of exclusive rights, protected by federal law, pertaining to certain creative works such as books, musical compositions, computer programs, works of art, and so forth. The rights are: (1) to reproduce the work in question, (2) to prepare derivative works based on it, (3) to sell or otherwise distribute it, and (4) to perform or display it publicly.

corporation A form of business organization that is owned by owners, called shareholders, who have no inherent right to manage the business, and is managed by a board of directors that is elected by the shareholders.

corporation by estoppel A doctrine that prevents persons from denying that a corporation exists when the persons hold themselves out as representing a corporation or believe themselves to be dealing with a corporation.

corporeal Possessing physical substance; tangible; perceptible to the senses.

counterclaim A legal claim made in response to the plaintiff's initial claim in a civil suit. Unlike a defense, the counterclaim is the defendant's affirmative attempt to obtain legal relief; in effect, it states a cause of action entitling the defendant to such relief. Often, the counterclaim must arise out of the occurrence that forms the basis for the plaintiff's claim.

counteroffer A cross-offer made by the offeree to the offeror.

countertrade A buyer's purchase of the seller's goods in exchange for the seller's agreement to purchase goods of the buyer or other person; usually required as a condition to selling goods to a foreign trade corporation.

course of dealing A sequence of previous conduct between the parties to a transaction that is fairly to be regarded as establishing a common basis for interpreting their contract.

covenant A contract; a promise.

cover To obtain substitute or equivalent goods.

credible As applied to a witness, competent.

creditor A person to whom a debt or legal obligation is owed, and who has the right to enforce payment of that debt or obligation.

crime An act prohibited by the state; a public wrong.

criminal law The body of law setting out public wrongs that the government attempts to correct by prosecuting wrongdoers.

culpable Blameworthy; denotes breach of legal duty but not necessarily criminal conduct.

cumulative voting A procedure for voting for a corporation's directors that permits a shareholder to multiply the number of shares she owns by the number of directors to be elected and to cast the resulting total of votes for one or more directors. See *straight voting.*

curtesy At common law, a husband's right in property owned by his wife during her life.

custody The bare control or care of a thing as distinguished from the possession of it.

cy pres As near as possible. In the law of trusts, a doctrine applied to prevent a charitable trust from failing when the application of trust property to the charitable beneficiary designated by the settlor becomes illegal or impossible to carry out; in such a case, cy pres allows the court to redirect the distribution of trust property for some purpose that is as near as possible to the settlor's general charitable intent.

damages The sum of money recoverable by a plaintiff who has received a judgment in a civil case.

- **compensatory** Damages that will compensate a part for direct losses due to an injury suffered.
- **consequential** Damages that do not flow directly and immediately from an act but rather flow from the results of the act; damages that are indirect consequences of a breach of contract or certain other legal wrongs. Examples include personal injury, damage to property, and lost profits.
- **incidental** Collateral damages that result from a breach of contract, including all reasonable expenses that are incurred because of the breach; damages that compensate a person injured by a breach of contract for reasonable costs he incurs in an attempt to avoid further loss.
- **liquidated** Damages made certain by the prior agreement of the parties.
- **nominal** Damages that are recoverable when a legal right is to be vindicated against an invasion that has produced no actual present loss.
- **punitive** Damages designed to punish flagrant wrongdoers and to deter them and others from engaging in similar conduct in the future.
- **special** Actual damages that would not necessarily but because of special circumstances do in fact flow from an injury.

treble Three times provable damages, as may be granted to private parties bringing an action under the antitrust laws.

date of issue As applied to notes, bonds, and so on of a series, the arbitrary date fixed as the beginning of the term for which they run, without reference to the precise time when convenience or the state of the market may permit their sale or delivery.

D/B/A Doing business as; indicates the use of a trade name.

deal To engage in transactions of any kind, to do business with.

debenture A long-term, unsecured debt security.

debtor A person who is under a legal obligation to pay a sum of money to another (the creditor).

decedent A person who has died.

deceit A tort involving intentional misrepresentation or cheating by means of some device.

decision The judgment of a court; the opinion merely represents the reasons for that judgment.

declaratory judgment One that expresses the opinion of a court on a question of law without ordering anything to be done.

decree An order or sentence of a court of equity determining some right or adjudicating some matter affecting the merits of the cause.

deed A writing, sealed and delivered by the parties; an instrument conveying real property.

deed of trust A three-party instrument used to create a security interest in real property in which the legal title to the real property is placed in one or more trustees to secure the repayment of a sum of money or the performance of other conditions.

de facto In fact, actual. Often used in contrast to *de jure* to refer to a real state of affairs.

de facto corporation A corporation that has complied substantially with the mandatory conditions precedent to incorporation, taken as a whole.

defalcation The word includes both embezzlement and misappropriation and is a broader term than either.

defamation An intentional tort that prohibits the publication of false and defamatory statements concerning another.

default Fault; neglect; omission; the failure of a party to an action to appear when properly served with process; the failure to perform a duty or obligation; the failure of a person to pay money when due or when lawfully demanded.

defeasible Regarding title to property, capable of being defeated. A title to property that is open to attack or that may be defeated by the performance of some act.

defend To oppose a claim or action; to plead in defense of an action; to contest an action suit or proceeding.

defendant The party who is sued in a civil case, or the party who is prosecuted in a criminal case.

defendant in error Any of the parties in whose favor a judgment was rendered that the losing party seeks to have reversed or modified by writ of error and whom he names as adverse parties.

defense A rule of law entitling the defendant to a judgment in his favor even if the plaintiff proves all elements of his claim or cause of action.

deficiency That part of a debt that a mortgage was made to secure, not realized by the liquidation of the mortgaged property. Something that is lacking.

defraud To deprive another of a right by deception or artifice.

de jure According to the law; legitimate; by legal right.

de jure corporation A corporation that has complied substantially with each of the mandatory conditions precedent to incorporation.

delegation In constitutional law and administrative law, a process whereby a legislature effectively hands over some of its legislative power to an administrative agency that it has created, thus giving the agency power to make law within the limits set by the legislature. In contract law, a transaction whereby a person who owes a legal duty to perform under a contract appoints someone else to carry out his performance.

deliver To surrender property to another person.

demand A claim; a legal obligation; a request to perform an alleged obligation; a written statement of a claim. In corporation law, a request that the board of directors sue a person who has harmed the corporation; a prerequisite to a shareholder derivative suit.

demurrer A civil motion that attacks the plaintiff's complaint by assuming the truth of the facts stated in the complaint for purposes of the motion, and by arguing that even if these facts are true, there is no rule of law entitling the plaintiff to recovery. Roughly similar to the motion to dismiss for failure to state a claim on which relief can be granted.

de novo Anew; over again; a second time. A trial de novo, for example, is a new trial in which the entire case is retried.

deposition A form of discovery consisting of the oral examination of a party or a party's witness by the other party's attorney.

deputy A person subordinate to a public officer whose business and object is to perform the duties of the principal.

derivative suit Also called *derivative action.* A suit to enforce a corporate right of action brought on behalf of a corporation by one or more of its shareholders.

descent Hereditary succession. It is the title whereby, upon the death of an ancestor, the heir acquires the ancestor's estate under state law.

detriment Any act or forbearance by a promisee. A loss or harm suffered in person or property.

devise In a will, a gift of real property.

dictum Language in a judicial opinion that is not necessary for the decision of the case and that, while perhaps persuasive, does not bind subsequent courts. Distinguished from *holding.*

directed verdict A verdict issued by a judge who has, in effect, taken the case away from the jury by directing a verdict for one party. Usually, the motion for a directed verdict is made at trial by one party after the other party has finished presenting his evidence.

disaffirm In contract law, a party's exercise of his power to avoid a contract entered before the party reached the age of majority; a minor's cancellation of his contract.

discharge Release from liability.

discharge in bankruptcy An order or decree rendered by a court in bankruptcy proceedings, the effect of which is to satisfy all debts provable against the estate of the bankrupt as of the time when the bankruptcy proceedings were initiated.

disclaimer A term in a contract whereby a party attempts to relieve itself of some potential liability associated with the contract. The most common example is the seller's attempt to disclaim liability for defects in goods that it sells.

discount A loan on an evidence of debt, where the compensation for the use of the money until the maturity of the debt is deducted from the principal and retained by the lender at the time of making the loan.

discount shares Also called *discount stock.* Shares issued for less than their par value or stated value. See *bonus shares* and *watered shares.*

discovery A process of information gathering that takes place before a civil trial. See *deposition* and *interrogatory.*

dishonor The failure to pay or accept a negotiable instrument that has been properly presented.

dismiss To order a cause, motion, or prosecution to be discontinued or quashed.

dissenter's rights A shareholder's right to receive the fair value of her shares from her corporation when she objects to a corporate transaction that significantly alters her rights in the corporation.

dissociation In partnership law, the change in the relation of the partners caused by any partner ceasing to be associated with the carrying on of the business.

dissolution In partnership law, the commencement of the winding up process.

distribution In business organization law, a business's gratuitous transfer of its assets to the owners of the business. Includes cash and property dividends and redemptions.

divided court A court is so described when there has been a division of opinion between its members on a matter that has been submitted to it for decision.

dividends, cash or property A corporation's distribution of a portion of its assets to its shareholders, usually corresponding to current or historical corporate profits; unlike a redemption, it is not accompanied by a repurchase of shares.

dividends, share Also called *stock dividends.* A corporation's pro rata issuance of shares to existing shareholders for no consideration.

documents of title A classification of personal property that includes bills of lading, warehouse receipts, dock warrants, and dock receipts.

domain The ownership of land; immediate or absolute ownership. The public lands of a state are frequently termed the *public domain.*

domicile A place where a person lives or has his home; in a strict legal sense, the place where he has his true, fixed, permanent home and principal establishment, and to which place he has, whenever he is absent, the intention of returning.

donee A person to whom a gift is made.

donor A person who makes a gift.

double jeopardy clause A constitutional provision designed to protect criminal defendants from multiple prosecutions for the same offense.

dower The legal right or interest that a wife has in her husband's real estate by virtue of their marriage.

draft A written order drawn on one person by another, requesting him to pay money to a designated third person.

drawee A person on whom a draft is drawn by the drawer.

drawer The maker of a draft.

due bill An acknowledgment of a debt in writing, not made payable to order.

dummy One posing or represented as acting for himself, but in reality acting for another. A tool or "straw man" for the real parties in interest.

dumping The selling of goods by a seller in a foreign nation at unfairly low prices.

durable power of attorney A power of attorney that is not affected by the principal's incapacity. See *power of attorney* and *attorney-in-fact.*

durable power of attorney for health care A durable power of attorney in which the principal specifically gives the attorney-in-fact the authority to make health care decisions for her in the event that the principal should become incompetent. Also called *health care representative.*

duress Overpowering of the will of a person by force or fear.

earned surplus Also called *retained earnings.* A balance sheet account; a corporation's profits that have not been distributed to shareholders.

earnest money Something given as part of the purchase price to bind the bargain.

easement The right to make certain uses of another person's property or to prevent another person from making certain uses of his own property.

edict A command or prohibition promulgated by a sovereign and having the effect of law.

e.g. For example.

ejectment By statute in some states, an action to recover the immediate possession of real property.

eleemosynary corporation A corporation created for a charitable purpose or for charitable purposes.

emancipate To release; to set free. In contract law, a parent's waiver of his rights to control and receive the services of his minor child.

embezzlement A statutory offense consisting of the fraudulent conversion of another's personal property by one to whom it has been entrusted, with the intention of depriving the owner thereof, the gist of the offense being usually the violation of relations of a fiduciary character.

eminent domain A governmental power whereby the government can take or condemn private property for a public purpose on the payment of just compensation.

employment at will A rule stating that if an employment is not for a definite time period, either party may terminate the employment without liability at any time and for any reason.

enabling legislation The statute by which a legislative body creates an administrative agency.

en banc (in banc) By all the judges of a court, with all the judges of a court sitting.

encumbrance A right in a third person that diminishes the value of the land but is consistent with the passing of ownership of the land by deed.

endorsement See *indorsement.*

entity theory In partnership law, the view that a partnership is a legal entity distinct from the partners who own it. See *aggregate theory.*

entry Recordation; noting in a record; going on land; taking actual possession of land.

environmental impact statement A document that the National Environmental Policy Act requires federal agencies to prepare in connection with any legislative proposals or proposed actions that will significantly affect the environment.

equity A system of justice that developed in England separate from the common law courts. Few states in the United States still maintain separate equity courts, though most apply equity principles and procedures when remedies derived from the equity courts are sought. A broader meaning denotes fairness and justice. In business organization law, the capital contributions of owners plus profits that have not been distributed to the owners; stated capital plus capital surplus plus earned surplus.

equity of redemption The right of a mortgagee to discharge the mortgage when due and to have title to the mortgaged property free and clear of the mortgage debt.

error A mistake of law or fact; a mistake of the court in the trial of an action.

escheat The reversion of land to the state in the event that a decedent dies leaving no heirs.

estate An interest in land. Property owned by a decedent at the time of his death.

estop To bar or stop.

estoppel That state of affairs that arises when one is forbidden by law from alleging or denying a fact because of his previous action or inaction.

et al. And another or and others. An abbreviation for the Latin *et alius,* meaning "and another"; also of *et alii,* meaning "and others."

eviction Depriving the tenant of the possession of leased premises.

evidence That which makes clear or ascertains the truth of the fact or point in issue either on the one side or the other; those rules of law whereby we determine what testimony is to be admitted and what rejected in each case and what is the weight to be given to the testimony admitted.

exception An objection; a reservation; a contradiction.

exclusionary rule The rule that bars the admissibility in criminal proceedings of evidence seized in violation of the Fourth Amendment's prohibition against unreasonable searches and seizures.

exculpatory clause A clause in a contract or trust instrument that excuses a party from some duty.

executed When applied to written instruments, synonymous with the word *signed*; more frequently, it means everything has been done to complete the transaction; that is, the instrument has been signed, sealed, and delivered. An executed contract is one in which the object of the contract is performed.

execution A process of enforcing a judgment, usually by having an appropriate officer seize property of the defendant and sell it at a judicial sale. The final consummation of a contract or other instrument, including completion of all the formalities needed to make it binding.

executive order A legal rule issued by a chief executive (e.g., the president or a state governor), usually pursuant to a delegation of power from the legislature.

executor The personal representative appointed to administer the estate of a person who died leaving a valid will.

executory Not yet executed; not yet fully performed, completed, fulfilled, or carried out; to be performed wholly or in part.

exemption A release from some burden, duty, or obligation; a grace; a favor; an immunity; taken out from under the general rule, not to be like others who are not exempt.

exhibit A copy of a written instrument on which a pleading is founded, annexed to the pleading and by reference made a part of it. Any paper or thing offered in evidence and marked for identification.

ex post facto After the fact. The U.S. Constitution prohibits ex post facto criminal laws, meaning those that criminalize behavior that was legal when committed.

express warranty A warranty made in words, either oral or written.

expropriation A government's taking of a business's assets, such as a manufacturing facility, usually without just compensation.

ex ship A shipping term that does not specify a particular ship for transportation of goods but does not place the expense and risk of transportation on the seller until the goods are unloaded from whatever ship is used.

face value The nominal or par value of an instrument as expressed on its face; in the case of a bond, this is the amount really due, including interest.

factor An agent who is employed to sell goods for a principal, usually in his own name, and who is given possession of the goods.

false imprisonment An intentional tort that prohibits the unlawful confinement of another for an appreciable time without his consent.

FAS An abbreviation for the expression free alongside ship.

federal supremacy The ability of federal laws to defeat inconsistent state laws in case they conflict.

fee simple absolute The highest form of land ownership, which gives the owner the right to possess and use the land for an unlimited period of time, subject only to governmental or private restrictions, and unconditional power to dispose of the property during his lifetime or upon his death.

felony As a general rule, all crimes punishable by death or by imprisonment in a state prison.

fiction An assumption made by the law that something is true that is or may be false.

fiduciary One who holds goods in trust for another or one who holds a position of trust and confidence.

field warehousing A method of protecting a security interest in the inventory of a debtor whereby the creditor or his agent retains the physical custody of the debtor's inventory, which is released to the debtor as he complies with the underlying security agreement.

financing statement A document, usually a multicopy form, filed in a public office serving as constructive notice to the world that a creditor claims a security interest in collateral that belongs to a certain named debtor.

firm offer Under the Uniform Commercial Code, a signed, written offer by a merchant containing assurances that it will be held open, and which is not revocable for the time stated in the offer, or for a reasonable time if no such time is stated.

fixture A thing that was originally personal property and that has been actually or constructively affixed to the soil itself or to some structure legally a part of the land.

FOB An abbreviation of free on board.

force majeure clause A contract provision, commonly encountered in international agreements for the sale of goods, that excuses nonperformance that results from conditions beyond the parties' control.

foreclosure To terminate the rights of the mortgagor/owner of property.

foreign corporation A corporation incorporated in one state doing business in another state. See *alien corporation.*

foreign trade corporation A corporation in a NME nation that is empowered by the government to conduct the whole business of exporting or importing a particular product.

forwarder A person who, having no interest in goods and no ownership or interest in the means of their carriage, undertakes, for hire, to forward them by a safe carrier to their destination.

franchise A special privilege conferred by government on individuals, and which does not belong to the citizens of a country generally, of common right. Also a contractual relationship establishing a means of marketing goods or services giving certain elements of control to the supplier (franchisor) in return for the right of the franchisee to use the supplier's tradename or trademark, usually in a specific marketing area.

fraud Misrepresentation made with knowledge of its falsity and intent to deceive. See *misrepresentation.*

freeze-out In corporation law, a type of oppression by which only minority shareholders are forced to sell their shares.

fungible goods Goods, any unit of which is from its nature or by mercantile custom treated as the equivalent of any other unit.

future advances Money or other value provided to a debtor by a creditor subsequent to the time a security interest in the debtor's collateral is taken by that creditor.

futures Contracts for the sale and future delivery of stocks or commodities, wherein either party may waive delivery, and receive or pay, as the case may be, the difference in market price at the time set for delivery.

garnishee Used as a noun, the third party who is subjected to the process of garnishment. Used as a verb, to institute garnishment proceedings; to cause a garnishment to be levied on the garnishee.

garnishment A statutory proceeding whereby money, property, wages, or credits of the defendant that are in the hands of a third party are seized to satisfy a judgment or legally valid claim that the plaintiff has against the defendant.

general partnership See *partnership.*

gift A voluntary transfer of property for which the donor receives no consideration in return.

good faith Honesty in fact; an honest intention to abstain from taking an unfair advantage of another.

goodwill The value of a business due to expected continued public patronage of the business.

grantee A person to whom a grant is made.

grantor A person who makes a grant.

gravamen The gist, essence, or central point of a legal claim or argument.

gray market goods Goods lawfully bearing trademarks or using patented or copyrighted material, but imported into a foreign market without the authorization of the owner of the trademark, patent, or copyright.

guarantor A person who promises to perform the same obligation as another person (called the *principal*), upon the principal's default.

guaranty An undertaking by one person to be answerable for the payment of some debt, or the due performance of some contract or duty by another person, who remains liable to pay or perform the same.

guardian A person (in some rare cases, a corporation) to whom the law has entrusted the custody and control of the person, or estate, or both, of an incompetent person.

habeas corpus Any of several common law writs having as their object to bring a party before the court or judge. The only issue it presents is whether the prisoner is restrained of his liberty by due process.

hearing The supporting of one's contentions by argument and, if need be, by proof.

hedging A market transaction in which a party buys a certain quantity of a given commodity at the price current on the date of the purchase and sells an equal quantity of the same commodity for future delivery for the purpose of getting protection against loss due to fluctuation in the market.

heirs Those persons appointed by law to succeed to the estate of a decedent who has died without leaving a valid will.

holder A person in possession of a document of title or an instrument payable or indorsed to him, his order, or to bearer.

holder in due course A person who is a holder of a negotiable instrument who took the instrument for value, in good faith, without notice that it is overdue or has been dishonored or that there is any uncured default with respect to payment of another instrument issued as part of the same series, without notice that the instrument contains an unauthorized signature or has been altered, without notice of any claim of a property or possessory interest in it, and without notice that any party has any defense against it or claim in recoupment to it.

holding Language in a judicial opinion that is necessary for the decision the court reached and that is said to be binding on subsequent courts. Distinguished from *dictum.*

holding company A corporation whose purpose or function is to own or otherwise hold the shares of other corporations either for investment or control.

holographic will A will written in the handwriting of the testator.

homestead In a legal sense, the real estate occupied as a home and also the right to have it exempt from levy and forced sale. It is the land, not exceeding a prescribed amount, upon which the owner and his family reside, including the house in which they reside as an indispensable part.

i.e. That is.

illusory Deceiving or intending to deceive, as by false appearances; fallacious. An illusory promise is a promise that appears to be binding but that in fact does not bind the promisor.

immunity A personal favor granted by law, contrary to the general rule.

impanel To place the names of the jurors on a panel; to make a list of the names of those persons who have been selected for jury duty; to go through the process of selecting a jury that is to try a cause.

implied warranty A warranty created by operation of law.

implied warranty of habitability Implied warranty arising in lease or sale of residential real estate that the property will be fit for human habitation.

impossibility A doctrine under which a party to a contract is relieved of his or her duty to perform when that performance has become impossible because of the occurrence of an event unforeseen at the time of contracting.

inalienable Incapable of being alienated, transferred, or conveyed; nontransferable.

in camera In the judge's chambers; in private.

incapacity A legal disability, such as infancy or want of authority.

inception Initial stage. The word does not refer to a state of actual existence but to a condition of things or circumstances from which the thing may develop.

inchoate Imperfect; incipient; not completely formed.

incidental damages See *damages, incidental.*

independent contractor A person who contracts with a principal to perform some task according to his own methods, and who is not under the principal's control regarding the physical details of the work. Under the *Restatement (Second) of Agency,* an independent contractor may or may not be an agent.

indictment A finding by a grand jury that there is probable cause to believe an accused committed a crime.

indorsement Writing on the back of an instrument; the contract whereby the holder of an instrument (such as a draft, check, or note) or a document (such as a warehouse receipt or bill of lading) transfers to another person his right to such instrument and incurs the liabilities incident to the transfer.

infant See *minor.*

information A written accusation of crime brought by a public prosecuting officer to a court without the intervention of a grand jury.

injunction An equitable remedy whereby the defendant is ordered to perform certain acts or to desist from certain acts.

in pari delicto Equally at fault in tort or crime; in equal fault or guilt.

in personam Against a person. For example, in personam jurisdiction.

in re In the matter of.

in rem Against a thing and not against a person; concerning the condition or status of a thing; for example, in rem jurisdiction.

inside information Confidential information possessed by a person due to his relationship with a business.

insolvency In corporation law, the inability of a business to pay its currently maturing obligations.

instrument Formal or legal documents in writing, such as contracts, deeds, wills, bonds, leases, and mortgages.

insurable interest Any interest in property such that the owner would experience a benefit from the continued existence of the property or a loss from its destruction.

inter alia Among other things.

interlocutory Something not final but deciding only some subsidiary matter raised while a lawsuit is pending.

interpleader An equitable remedy applicable where one fears injury from conflicting claims. Where a person does not know which of two or more persons claiming certain property held by him has a right to it, filing a bill of interpleader forces the claimants to litigate the title between themselves.

interrogatory Written questions directed to a party, answered in writing, and signed under oath.

inter se Between or among themselves.

interstate Between or among two or more states.

intervening cause An intervening force that plays so substantial a role in causing a particular plaintiff's injury that it relieves a negligent defendant of any responsibility for that injury. Also called *superseding cause.*

intervention A proceeding by which one not originally made a party to an action or suit is permitted, on his own application, to appear therein and join one of the original parties in maintaining his cause of action or defense, or to assert some cause of action against some or all of the parties to the proceeding as originally instituted.

inter vivos A transaction between living persons.

intestate Having died without leaving a valid will.

in toto Wholly, completely.

intrastate Within a particular state.

investment contract In securities law, a type of security encompassing any contract by which an investor invests in a common enterprise with an expectation of profits solely from the efforts of persons other than the investor.

invitee A person who is on private premises for a purpose connected with the business interests of the possessor of those premises, or a member of the public who is lawfully on land open to the public.

ipso facto By the fact itself; by the very fact.

irrevocable letter of credit See *letter of credit, irrevocable.*

issue Lineal descendants such as children and grandchildren. This category of persons includes adopted children.

issued shares A corporation's shares that a corporation has sold to its shareholders. Includes shares repurchased by the corporation and retained as treasury shares, but not shares canceled or returned to unissued status.

issuer In securities law, a person who issues or proposes to issue a security; the person whose obligation is represented by a security.

joint and several liability Liability of a group of persons in which the plaintiff may sue any member of the group individually and get a judgment against that person, or may sue all members of the group collectively.

joint bank account A bank account of two persons so fixed that they shall be joint owners thereof during their mutual lives, and the survivor shall take the whole on the death of other.

joint liability Liability of a group of persons in which, if one of these persons is sued, he can insist that the other liable parties be joined to the suit as codefendants, so that all must be sued collectively.

jointly Acting together or in concert or cooperating; holding in common or interdependently, not separately. Persons are jointly bound in a bond or note when both or all must be sued in one action for its enforcement, not either one at the election of the creditor.

joint tenancy An estate held by two or more jointly, with an equal right in all to share in the enjoyments of the land during their lives. An incident of joint tenancy is the right of survivorship.

joint venture A form of business organization identical to a partnership, except that it is engaged in a single project, not carrying on a business.

judgment A court's final resolution of a lawsuit or other proceeding submitted to it for decision.

judgment lien The statutory lien on the real property of a judgment debtor that is created by the judgment itself. At common law, a judgment imposes no lien on the real property of the judgment debtor, and to subject the property of the debtor to the judgment, it was necessary to take out a writ called an *elegit.*

judgment notwithstanding the verdict A judgment made by a judge contrary to a prior jury verdict whereby the judge effectively overrules the jury's verdict. Also called the *j.n.o.v.* or the *judgment non obstante veredicto.* Similar to the directed verdict, except that it occurs after the jury has issued its verdict.

judicial review The courts' power to declare the actions of the other branches of government unconstitutional.

jurisdiction The power of a court to hear and decide a case.

jurisprudence The philosophy of law. Also sometimes used to refer to the collected positive law of some jurisdiction.

jury A body of lay persons, selected by lot, or by some other fair and impartial means, to ascertain, under the guidance of the judge, the truth in questions of fact arising either in civil litigation or a criminal process.

kite To secure the temporary use of money by issuing or negotiating worthless paper and then redeeming such paper with the proceeds of similar paper. The word is also used as a noun, meaning the worthless paper thus employed.

laches The established doctrine of equity that, apart from any question of statutory limitation, its courts will discourage delay and sloth in the enforcement of rights. Equity demands conscience, good faith, and reasonable diligence.

land contract A conditional agreement for the sale and purchase of real estate in which the legal title to the property is retained by the seller until the purchaser has fulfilled the agreement, usually by completing the payment of the agreed-on purchase price.

larceny The unlawful taking and carrying away of personal property with the intent to deprive the owner of his property permanently.

last clear chance Under traditional tort principles, a doctrine that allowed a contributorily negligent plaintiff to recover despite his failure to exercise reasonable care for his own safety by arguing that the defendant had the superior opportunity (last clear chance) to avoid the harm.

law merchant The custom of merchants, or lex mercatorio, that grew out of the necessity and convenience of business, and that, although different from the general rules of the common law, was engrafted into it and became a part of it. It was founded on the custom and usage of merchants.

leading case The most significant and authoritative case regarded as having settled and determined a point of law. Often, the first case to have done so in a definitive and complete fashion.

leading questions Questions that suggest to the witness the answer desired or those that assume a fact to be proved that is not proved, or that, embodying a material fact, allow the witness to answer by a simple negative or affirmative.

lease A contract for the possession and use of land or other property, including goods, on one side, and a recompense of rent or other income on the other; a conveyance to a person for life, or years, or at will in consideration of a return of rent or other recompense.

legacy A bequest; a testamentary gift of personal property. Sometimes incorrectly applied to a testamentary gift of real property.

legal According to the principles of law; according to the method required by statute; by means of judicial proceedings; not equitable.

letter of credit An instrument containing a request (general or special) to pay to the bearer or person named money, or sell him or her some commodity on credit or give something of value and look to the drawer of the letter for recompense.

- **advised** The seller's bank acts as the seller's agent to collect against the letter of credit issued by the buyer's bank.
- **confirmed** The seller's bank agrees to assume liability on the letter of credit issued by the buyer's bank.
- **irrevocable** The issuing bank may not revoke the letter of credit issued by the buyer's bank.
- **standby** The seller's bank promises to pay the buyer if the seller defaults on his contract to deliver conforming goods.

levy At common law, a levy on goods consisted of an officer's entering the premises where they were and either leaving an assistant in charge of them or removing them after taking an inventory. Today, courts differ as to what is a valid levy, but by the weight of authority there must be an actual or constructive seizure of the goods. In most states, a levy on land must be made by some unequivocal act of the officer indicating the intention of singling out certain real estate for the satisfaction of the debt.

libel The defamation action appropriate to printed or written defamations, or to those that have a physical form.

license A personal privilege to do some act or series of acts on the land of another, without possessing any ownership interest in the land. A permit or authorization to do something that, without a license, would be unlawful.

licensee A person lawfully on land in possession of another for purposes unconnected with the business interests of the possessor.

lien In its most extensive meaning, it is a charge on property for the payment or discharge of a debt or duty; a qualified right; a proprietary interest that, in a given case, may be exercised over the property of another.

life estate A property interest that gives a person the right to possess and use property for a time that is measured by his lifetime or that of another person.

limited liability limited partnership A limited partnership that has elected to obtain limited liability status for all of its partners, including general partners, by filing with the secretary of state. Also called *LLLP.*

limited liability partnership A partnership that has elected to obtain limited liability for its partners by filing with the secretary of state. Also called *LLP.*

limited partner An owner of a limited partnership who has no right to manage the business but who possesses liability limited to his capital contribution to the business.

limited partnership A form of business organization that has one or more general partners who manage the business and have unlimited liability for the obligations of the business and one or more limited partners who do not manage and have limited liability.

liquidated damages The stipulation by the parties to a contract of the sum of money to be recovered by the aggrieved party in the event of a breach of the contract by the other party.

liquidated debt A debt that is due and certain. That is, one that is not the subject of a bona fide dispute either as to its existence or the amount that is owed.

lis pendens A pending suit. As applied to the doctrine of lis pendens, it is the jurisdiction, power, or control that courts acquire over property involved in a suit, pending the continuance of the action, and until its final judgment.

listing contract A so-called contract whereby an owner of real property employs a broker to procure a purchaser without giving the broker an exclusive right to sell. Under such an agreement, it is generally held that the employment may be terminated by the owner at will, and that a sale of the property by the owner terminates the employment.

litigant A party to a lawsuit.

living will A document executed with specific legal formalities stating a person's preference that heroic life support measures should not be used if there is no hope of the person's recovery.

LLLP See *limited liability limited partnership.*

LLP See *limited liability partnership.*

long-arm statute A state statute that grants to a state's courts broad authority to exercise jurisdiction over out-of-state persons who have contacts with the state.

looting In corporation law, the transfer of a corporation's assets to its managers or controlling shareholders at less than fair value.

magistrate A word commonly applied to the lower judicial officers such as justices of the peace, police judges, town recorders, and other local judicial functionaries. In a broader sense, a magistrate is a public civil officer invested with some part of the legislative, executive, or judicial power given by the Constitution. The president of the United States is the chief magistrate of the nation.

maker A person who makes or executes an instrument. The signer of an instrument.

malfeasance The doing of an act that a person ought not to do at all. It is to be distinguished from misfeasance—the improper doing of an act that a person might lawfully do.

malicious prosecution An intentional tort designed to protect against the wrongful initiation of criminal proceedings.

mandamus We command. It is a command issuing from a competent jurisdiction, in the name of the state or sovereign, directed to some inferior court, officer, corporation, or person, requiring the performance of a particular duty therein specified, which duty results from the official station of the party to whom it is directed, or from operation of law.

margin A deposit by a buyer in stocks with a seller or a stockbroker, as security to cover fluctuations in the market in reference to stocks that the buyer has purchased but for which he has not paid. Commodities are also traded on margin.

marshals Ministerial officers belonging to the executive department of the federal government, who with their deputies have the same powers of executing the laws of the United States in each state as the sheriffs and their deputies in such state may have in executing the laws of that state.

material Important. In securities law, a fact is material if a reasonable person would consider it important in his decision to purchase shares or to vote shares.

materialman's lien A claim created by law for the purpose of securing a priority of payment of the price or value of materials furnished in erecting or repairing a building or other structure.

mechanic's lien A claim created by law for the purpose of securing a priority of payment of the price or value of work performed and materials furnished in erecting or repairing a building or other structure; as such, it attaches to the land as well as to the buildings erected therein.

memorandum A writing.

mens rea A guilty mind; criminal intent.

merchant Under the Uniform Commercial Code, one who regularly deals in goods of the kind sold in the contract at issue, or holds himself out as having special knowledge or skill relevant to such goods, or who makes the sale through an agent who regularly deals in such goods or claims such knowledge or skill.

merchantable Of good quality and salable, but not necessarily the best. As applied to articles sold, the word requires that the article shall be such as is usually sold in the market, of medium quality, and bringing the average price.

merger In corporation law, traditionally, a transaction by which one corporation acquires another corporation, with the acquiring corporation being owned by the shareholders of both corporations and the acquired corporation going out of existence. Today, loosely applied to any negotiated acquisition of one corporation by another.

merger clause A contract clause providing that the written contract is the complete expression of the parties' agreement. Also called *integration clause.*

mining partnership A form of business organization used for mining and drilling mineral resources that is identical to a partnership, except that mining partnership interests are freely transferable.

minor A person who has not reached the age at which the law recognizes a general contractual capacity (called *majority*), which is 18 in most states.

misdemeanor Any crime that is punishable neither by death nor by imprisonment in a state prison.

misrepresentation The assertion of a fact that is not in accord with the truth. A contract can be rescinded on the ground of misrepresentation when the assertion relates to a material fact or is made fraudulently and the other party actually and justifiably relies on the assertion.

mistrial An invalid trial due to lack of jurisdiction, error in selection of jurors, or some other fundamental requirement.

mitigation of damages A reduction in the amount of damages due to extenuating circumstances.

mortgage A conveyance of property to secure the performance of some obligation, the conveyance to be void on the due performance thereof.

mortgagee The creditor to whom property has been mortgaged to secure the performance of an obligation.

mortgagor The owner of the property that has been mortgaged or pledged as security for a debt.

motion to dismiss A motion made by the defendant in a civil case to defeat the plaintiff's case, usually after the complaint or all the pleadings have been completed. The most common form of motion to dismiss is the motion to dismiss for failure to state a claim on which relief can be granted, which attacks the legal sufficiency of the plaintiff's complaint. See *demurrer.*

motive The cause or reason that induced a person to commit a crime.

mutuality Reciprocal obligations of the parties required to make a contract binding on either party.

national ambient air quality standards Federally established air pollution standards designed to protect the public health and welfare.

natural law A body of allegedly existing ethical rules or principles that is morally superior to positive law and that prevails over positive law in case of a clash between it and the natural law. See *positive law.*

necessaries That which is reasonably necessary for a minor's proper and suitable maintenance, in view of the income level and social position of the minor's family.

negligence The omission to do something that a reasonable person, guided by those considerations that ordinarily regulate human affairs, would do, or doing something that a prudent and reasonable person would not do.

negligence per se The doctrine that provides that a conclusive presumption of breach of duty arises when a defendant has violated a statute and thereby caused a harm the statute was designed to prevent to a person the statute was designed to protect.

negotiable Capable of being transferred by indorsement or delivery so as to give the holder a right to sue in his or her own name and to avoid certain defenses against the payee.

negotiable instrument An instrument that may be transferred or negotiated, so that the holder may maintain an action thereon in his own name.

negotiation The transfer of an instrument in such form that the transferee becomes a holder.

NME A nonmarket economy; a socialist economy in which a central government owns and controls all significant means of production, thereby setting prices and the levels of production.

nolo contendere A no contest plea by the defendant in a criminal case that has much the same effect as a guilty plea but that cannot be used as an admission of guilt in other legal proceedings.

nominal damages See *damages, nominal.*

non compos mentis Mentally incompetent.

nonfeasance In the law of agency, the total omission or failure of an agent to enter on the performance of some distinct duty or undertaking that he or she has agreed with the principal to do.

non obstante veredicto Notwithstanding the verdict. J.n.o.v. See *judgment notwithstanding the verdict.*

no-par value stock Stock of a corporation having no face or par value.

novation A mutual agreement, between all parties concerned, for the discharge of a valid existing obligation by the substitution of a new valid obligation on the part of the debtor or another, or a like agreement for the discharge of a debtor to his creditor by the substitution of a new creditor.

nudum pactum A naked promise, a promise for which there is no consideration.

nuisance That which endangers life or health, gives offense to the senses, violates the laws of decency, or obstructs the reasonable and comfortable use of property.

nuncupative will An oral will. Such wills are valid in some states, but only under limited circumstances and to a limited extent.

oath Any form of attestation by which a person signifies that he is bound in conscience to perform an act faithfully and truthfully.

obiter dictum That which is said in passing; a rule of law set forth in a court's opinion but not necessary to decide the case. See *dictum.*

objection In the trial of a case the formal remonstrance made by counsel to something that has been said or done, in order to obtain the court's ruling thereon.

obligee A person to whom another is bound by a promise or other obligation; a promisee.

obligor A person who is bound by a promise or other obligation; a promisor.

offer A proposal by one person to another that is intended to create legal relations on acceptance by the person to whom it is made.

offeree A person to whom an offer is made.

offeror A person who makes an offer.

opinion The opinion of the court represents merely the reasons for its judgment, while the decision of the court is the judgment itself.

oppression The officers, directors, or controlling shareholder's isolation of one group of shareholders for disadvantageous treatment to the benefit of another group of shareholders.

option A separate contract in which an offeror agrees not to revoke her offer for a stated period of time in exchange for some valuable consideration.

option agreement A share transfer restriction granting a corporation or its shareholders an option to buy a selling shareholder's shares at a price determined by the agreement.

ordinance A legislative enactment of a county or an incorporated city or town.

original jurisdiction The power to decide a case as a trial court.

outstanding shares A corporation's shares currently held by shareholders.

overdraft The withdrawal from a bank by a depositor of money in excess of the amount of money he or she has on deposit there.

overdue When an instrument is not paid when due or at maturity.

overplus That which remains; a balance left over.

owner's risk A term employed by common carriers in bills of lading and shipping receipts to signify that the carrier does not assume responsibility for the safety of the goods.

par Par means equal, and par value means a value equal to the face of a bond or a stock certificate.

parent corporation A corporation that owns a controlling interest of another corporation, called a *subsidiary corporation.*

parol Oral; verbal; by word of mouth.

parol evidence Where a written contract exists, evidence about promises or statements made prior to or during the execution of the writing that are not contained in the written contract.

parties All persons who are interested in the subject matter of an action and who have a right to make defense, control the proceedings, examine and cross-examine witnesses, and appeal from the judgment.

partition A proceeding the object of which is to enable those who own property as joint tenants or tenants in common to put an end to the tenancy so as to vest in each a sole estate in specific property or an allotment of the lands and tenements. If a division of the estate is impracticable, the estate ought to be sold and the proceeds divided.

partners The owners of a partnership.

partnership A form of business organization; specifically, an association of two or more persons to carry on a business as co-owners for profit.

partnership agreement A formal written contract between the partners of a partnership that states the rights and the responsibilities of the partners.

partnership at will A partnership whose partnership agreement does not specify any term or undertaking to be accomplished.

partnership by estoppel See *purported partnership.*

partnership interest A partner's ownership interest in a partnership which embodies the partner's transferable interest and the partner's management and other rights.

partner's transferable interest In partnership law, a partner's share of the partnership's profits and losses and right to receive partnership distributions.

party to be charged The person against whom enforcement of a contract is sought; the person who is asserting the statute of frauds as a defense.

par value An arbitrary dollar amount assigned to shares by the articles of incorporation, representing the minimum amount of consideration for which the corporation may issue the shares and the portion of consideration that must be allocated to the stated capital amount.

patent A patent for land is a conveyance of title to government lands by the government; a patent of an invention is the right of monopoly secured by statute to those who invent or discover new and useful devices and processes.

patentee The holder of a patent.

pawn A pledge; a bailment of personal property as security for some debt or engagement, redeemable on certain terms, and with an implied power of sale on default.

payee A person to whom a payment is made or is made payable.

pecuniary Financial; pertaining or relating to money.

pendente lite During the litigation.

per capita A distribution of property in which each member of a group shares equally.

per curiam By the court as a whole, without an opinion signed by a particular judge.

peremptory challenge A challenge to a proposed juror that a defendant may make as an absolute right, and that cannot be questioned by either opposing counsel or the court.

perfection The process or method by which a secured party obtains a priority in certain collateral belonging to a debtor against creditors or claimants of a debtor; it usually entails giving notice of the security interest, such as by taking possession or filing a financial statement.

performance The fulfillment of a contractual duty.

periodic tenancy The tenancy that exists when the landlord and tenant agree that rent will be paid in regular successive intervals until notice to terminate is given but do not agree on a specific duration of the lease. A typical periodic tenancy is a tenancy from month to month.

perjury The willful and corrupt false swearing or affirming, after an oath lawfully administered, in the course of a judicial or quasi-judicial proceeding, as to some matter material to the issue or point in question.

per se In itself or as such.

personal property All objects and rights, other than real property, that can be owned. See *real property.*

per stirpes A distribution in which each surviving descendant divides the share that his or her parent would have taken if the parent had survived. Also called *by right of representation.*

petition In equity pleading, a petition is in the nature of a pleading (at least when filed by a stranger to the suit) and forms a basis for independent action.

petition (bankruptcy) The document filed with the appropriate federal court that initiates a bankruptcy proceeding. It may be either a voluntary petition (i.e., filed by the debtor) or an involuntary petition (i.e., filed by creditors).

piercing the corporate veil Holding a shareholder responsible for acts of a corporation due to a shareholder's domination and improper use of the corporation.

plaintiff The party who sues in a civil case.

plaintiff in error The unsuccessful party to the action who prosecutes a writ of error in a higher court.

plea A plea is an answer to a declaration or complaint or any material allegation of fact therein that, if untrue, would defeat the action. In criminal procedure, a plea is the matter that the accused, on his arraignment, alleges in answer to the charge against him.

pleadings The documents the parties file with the court when they state their claims and counterarguments early in a civil case. Examples include the complaint and the answer.

pledge A pawn; a bailment of personal property as security for some debt or engagement, redeemable on certain terms, and with an implied power of sale on default.

pledgee A person to whom personal property is pledged by a pledgor.

pledgor A person who makes a pledge of personal property to a pledgee.

police power The states' power to regulate to promote the public health, safety, morals, and welfare.

positive law Laws actually and specifically enacted or adopted by proper authority for the government of a jural society as distinguished from principles of morality or laws of honor.

possession Respecting real property, exclusive dominion and control such as owners of like property usually exercise over it. Manual control of personal property either as owner or as one having a qualified right in it.

postdated check A check dated with a date later than its date of issue.

power of attorney A written authorization by a principal to an agent to perform specified acts on behalf of the principal. See *attorney-in-fact.*

precedent A past judicial decision relied on as authority in a present case.

preemptive right A shareholder's option to purchase new issuances of shares in proportion to the shareholder's current ownership of the corporation.

preference The act of a debtor in paying or securing one or more of his creditors in a manner more favorable to them than to other creditors or to the exclusion of such other creditors. In the absence of statute, a preference is perfectly good, but to be legal it must be bona fide, and not a mere subterfuge of the debtor to secure a future benefit to himself or to prevent the application of his property to his debts.

preferential Having priority.

preferred shareholders Shareholders who have dividend and liquidation preferences over other classes of shareholders, usually common shareholders.

prenuptial contract A contract between prospective marriage partners respecting matters such as property ownership and division.

preponderance Most; majority; more probable than not.

prerogative A special power, privilege, or immunity, usually used in reference to an official or his office.

presentment A demand for acceptance or payment of a negotiable instrument made on the maker, acceptor, drawee, or other payor by or on behalf of the holder.

presumption A term used to signify that which may be assumed without proof, or taken for granted. It is asserted as a self-evident result of human reason and experience.

pretermitted In the law of wills, an heir born after the execution of the testator's will.

prima facie At first sight; a fact that is presumed to be true unless disproved by contrary evidence.

prima facie case A case sufficiently strong that, unless rebutted by the defendant in some fashion, it entitles the plaintiff to recover against the defendant.

principal In agency law, one under whose direction an agent acts and for whose benefit that agent acts.

priority Having precedence or the better right.

privilege Generally, a legal right to engage in conduct that would otherwise result in legal liability. Privileges are commonly classified as absolute (unqualified) or conditional (qualified). Occasionally, privilege is also used to denote a legal right to refrain from particular behavior (e.g., the constitutional privilege against self-incrimination).

privity of contract The existence of a direct contractual relation between two parties.

probate A term used to include all matters of which probate courts have jurisdiction, which in many states are the estates of deceased persons and of persons under guardianship.

procedural law The body of law controlling public bodies such as courts, as they create and enforce rules of substantive law. See *substantive law.*

proceeds Whatever is received on the sale, exchange, collection, or other disposition of collateral.

process Generally, the summons or notice of beginning of suit.

proffer To offer for acceptance or to make a tender of.

profit An interest in land giving a person the right to enter land owned by another and remove natural resources (e.g., timber) from the land. Also called *profit à prendre.*

promisee The person to whom a promise is made.

promisor A person who makes a promise to another; a person who promises.

promissory estoppel An equitable doctrine that protects those who foreseeably and reasonably rely on the promises of others by enforcing such promises when enforcement is necessary to avoid injustice, even though one or more of the elements normally required for an enforceable agreement is absent.

promissory note Commercial paper or instrument in which the maker promises to pay a specific sum of money to another person, to his order, or to bearer.

promoter A person who incorporates a business, organizes its initial management, and raises its initial capital.

property Something that is capable of being owned. A right or interest associated with something that gives the owner the ability to exercise dominion over it.

pro rata Proportionate; in proportion.

prospectus In securities law, a document given to prospective purchasers of a security that contains information about an issuer of securities and the securities being issued.

pro tanto For so much; to such an extent.

proximate cause A legal limitation on a negligent wrongdoer's liability for the actual consequences of his actions. Such wrongdoers are said to be relieved of responsibility for consequences that are too remote or not the proximate result of their actions. Various tests for proximate cause are employed by the courts.

proxy A person who is authorized to vote the shares of another person. Also, the written authorization empowering a person to vote the shares of another person.

pseudoforeign corporation A corporation incorporated under the laws of a state but doing most of its business in one other state.

publicly held corporation A corporation owned by a large number of widely dispersed shareholders.

punitive damages See *damages, punitive.*

purchase money security interest A security interest that is (1) taken or retained by the seller of collateral to secure all or part of its purchase price or (2) taken by a debtor to acquire rights in or the use of the collateral if the value is so used.

purported partnership The appearance of partnership when there is no partnership; it arises when a person misleads a second person into believing that the first person is a partner of a third person; a theory that allows the second person to recover from the first person all reasonable damages the second person has suffered due to his reliance on the appearance of partnership.

put A type of option permitting a person to sell a fixed number of securities at a fixed price at a specified time. Compare *call.*

qualified acceptance A conditional or modified acceptance. In order to create a contract, an acceptance must accept the offer substantially as made; hence, a qualified acceptance is no acceptance at all, is treated by the courts as a rejection of the offer made, and is in effect an offer by the offeree, which the offeror may, if he chooses, accept and thus create a contract.

quantum meruit As much as is deserved. A part of a common law action in assumpsit for the value of services rendered.

quash To vacate or make void.

quasi-contract The doctrine by which courts imply, as a matter of law, a promise to pay the reasonable value of goods or services when the party receiving such goods or services has knowingly done so under circumstances that make it unfair to retain them without paying for them.

quasi-judicial Acts of public officers involving investigation of facts and drawing conclusions from them as a basis of official action.

quiet title, action to An action to establish a claimant's title in land by requiring adverse claimants to come into court to prove their claim or to be barred from asserting it later.

quitclaim deed A deed conveying only the right, title, and interest of the grantor in the property described, as distinguished from a deed conveying the property itself.

quorum That number of persons, shares represented, or officers who may lawfully transact the business of a meeting called for that purpose.

quo warranto By what authority. The name of a writ (and also of the whole pleading) by which the government commences an action to recover an office or franchise from the person or corporation in possession of it.

ratification The adoption or affirmance by a person of a prior act that did not bind him.

real property The earth's crust and all things firmly attached to it.

rebuttal Testimony addressed to evidence produced by the opposite party; rebutting evidence.

receiver One appointed by a court to take charge of a business or the property of another during litigation to preserve it and/or to dispose of it as directed by the court.

recklessness Behavior that indicates a conscious disregard for a known high risk of probable harm to others.

recognizance At common law, an obligation entered into before some court of record or magistrate duly authorized, with a condition to do some particular act, usually to appear and answer to a criminal accusation. Being taken in open court and entered on the order book, it was valid without the signature or seal of any of the obligors.

recorder A public officer of a town or county charged with the duty of keeping the record books required by law to be kept in his or her office and of receiving and causing to be copied in such books such instruments as by law are entitled to be recorded.

redemption The buying back of one's property after it has been sold. The right to redeem property sold under an order or decree of court is purely a privilege conferred by, and does not exist independently of, statute.

redemption right Also called a call. In corporation law, the right of a corporation to repurchase shares held by existing shareholders.

redress Remedy; indemnity; reparation.

reformation An equitable remedy in which a court effectively rewrites the terms of a contract.

rejection In contract law, an express or implied manifestation of an offeree's unwillingness to contract on the terms of an offer. In sales law, a buyer's refusal to accept goods because they are defective or nonconforming.

release The giving up or abandoning of a claim or right to a person against whom the claim exists or the right is to be enforced or exercised. It is the discharge of a debt by the act of the party, in distinction from an extinguishment that is a discharge by operation of law.

remainderman One who is entitled to the remainder of the estate after a particular estate carved out of it has expired.

remand A process whereby an appellate court returns the case to a lower court (usually a trial court) for proceedings not inconsistent with the appellate court's decision.

remedy The appropriate legal form of relief by which a remediable right may be enforced.

remittitur The certificate of reversal issued by an appellate court upon reversing the order or judgment appealed from.

repatriation An investor's removal to the investor's nation of profits from his investment in a foreign nation.

replevin A common law action by which the owner recovers possession of his own goods.

repudiation Indicating to another party to a contract that the party does not intend to perform his obligations.

res The thing; the subject matter of a suit; the property involved in the litigation; a matter; property; the business; the affair; the transaction.

rescind As the word is applied to contracts, to terminate the contract as to future transactions or to annul the contract from the beginning.

rescission The rescinding or cancellation of a contract or transaction. In general, its effect is to restore the parties to their original precontractual position.

residue Residuary; all that portion of the estate of a testator of which no effectual disposition has been made by his will otherwise than in the residuary clause.

res ipsa loquitur Literally, the thing speaks for itself. A doctrine that, in some circumstances, gives rise to an inference that a defendant was negligent and that his negligence was the cause of the plaintiff's injury.

res judicata A matter that has been adjudicated; that which is definitely settled by a judicial decision.

respondeat superior A legal doctrine making an employer (or master) liable for the torts of an employee (servant) that are committed within the scope of the employee's employment.

respondent A term often used to describe the party charged in an administrative proceeding. The party adverse to the appellant in a case appealed to a higher court. In this sense, often synonymous with *appellee.*

Restatement(s) Collections of legal rules produced by the American Law Institute, covering certain subject matter areas. Although *Restatements* are often persuasive to courts, they are not legally binding unless adopted by the highest court of a particular state.

restitution A remedy whereby one is able to obtain the return of that which he has given the other party, or an amount of money equivalent to that which he has given the other party.

restrictive covenant An agreement restricting the use of real property.

reverse To reject or overturn a judgment or order of a court. An appellate court, for example, may reverse the decision of a trial court. See *affirm.*

revocation In general, the recalling or voiding of a prior action. In contract law, the withdrawal of an offer by the offeror prior to effective acceptance by the offeree.

right An interest given and protected by law. In corporation law, an option to purchase shares given to existing shareholders, permitting them to buy quantities of newly issued securities in proportion to their current ownership.

right of appraisal See *dissenter's rights.*

right of first refusal In corporation law, a share transfer restriction granting a corporation or its shareholders an option to match the offer that a selling shareholder receives for her shares. See also *option agreement.*

right of survivorship A feature of some types of co-ownership of property causing a co-owner's interest in property to be transferred on his death immediately and by operation of law to his surviving co-owner(s). See *tenancy by the entirety* and *joint tenancy.*

riparian Pertaining to or situated on the bank of a river.

sale of goods The transfer of ownership to tangible personal property in exchange for money, other goods, or the performance of service.

sale on approval A conditional sale that is to become final only in case the buyer, after a trial, approves or is satisfied with the article sold.

sale or return A contract in which the seller delivers a quantity of goods to the buyer on the understanding that if the buyer desires to retain, use, or sell any portion of the goods, he will consider such part as having been sold to him, and that he will return the balance or hold it as bailee for the seller.

sanction The penalty that will be incurred by a wrongdoer for the violation of a law.

satisfaction A performance of the terms of an accord. If such terms require a payment of a sum of money, then satisfaction means that such payment has been made.

scienter In cases of fraud and deceit, the word means knowledge on the part of the person making the representations, at the time when they are made, that they are false. In an action for deceit, scienter must be proved.

S corporation Also called *subchapter S corporation.* A close corporation whose shareholders have elected to be taxed essentially like partners are taxed under federal income tax law.

seal At common law, a seal is an impression on wax or some other tenacious material, but in modern practice the letters *l.s.* (locus sigilli) or the word *seal* enclosed in a scroll, either written, or printed, and acknowledged in the body of the instrument to be a seal, are often used as substitutes.

security An instrument commonly dealt with in the securities markets or commonly recognized as a medium of investment and evidencing an obligation of an issuer or a share, participation, or other interest in an enterprise.

security agreement An agreement that creates or provides a security interest or lien on personal property. A term used in the UCC including a wide range of transactions in the nature of chattel mortgages, conditional sales, and so on.

security interest A lien given by a debtor to his creditor to secure payment or performance of a debt or obligation.

service As applied to a process of courts, the word ordinarily implies something in the nature of an act or proceeding adverse to the party served, or of a notice to him.

set off That right that exists between two parties, each of whom, under an independent contract, owes an ascertained amount to the other, to calculate their respective debts by way of mutual deduction, so that, in any action brought for the larger debt, the residue only, after such deduction, shall be recovered.

settlor A person who creates a trust. Also called *trustor.*

severable contract A contract that is not entire or indivisible. If the consideration is single, the contract is entire; but if it is expressly or by necessary implication apportioned, the contract is severable. The question is ordinarily determined by inquiring whether the contract embraces one or more subject matters, whether the obligation is due at the same time to the same person, and whether the consideration is entire or apportioned.

share An equity security, representing a shareholder's ownership of a corporation.

share dividend See *dividends, share.*

shareholder Also called *stockholder.* An owner of a corporation, who has no inherent right to manage the corporation but has liability limited to his capital contribution.

share split Also called *stock split.* Traditionally, a corporation's dividing existing shares into two or more shares, thereby increasing the number of authorized, issued, and outstanding shares and reducing their par value. In modern corporation law, treated like a share dividend.

sight A term signifying the date of the acceptance or that of protest for the nonacceptance of a bill of exchange; for example, 10 days after sight.

sinking fund A fund established by an issuer of securities to accumulate funds to repurchase the issuer's securities.

situs Location; local position; the place where a person or thing is, is his situs. Intangible property has no actual situs, but it may have a legal situs, and for the purpose of taxation,

its legal situs is at the place where it is owned and not at the place where it is owed.

slander The defamation action appropriate to oral defamation.

sole proprietor The owner of a sole proprietorship.

sole proprietorship A form of business under which one person owns and controls the business.

sovereign immunity Generally, the idea that the sovereign (or state) may not be sued unless it consents to be sued. In antitrust law, the statutory immunity from antitrust liability for governmental actions that foreign governments enjoy under the Foreign Sovereign Immunities Act of 1976.

special damages See *damages, special.*

specific performance A contract remedy whereby the defendant is ordered to perform according to the terms of his contract.

stale check A check more than six months past its date of issue.

standby letter of credit See *letter of credit, standby.*

standing The legal requirement that anyone seeking to challenge a particular action in court must demonstrate that such action substantially affects his legitimate interests before he will be entitled to bring suit.

stare decisis A doctrine whereby a court is said to be bound to follow past cases that are like the present case on the facts and on the legal issues it presents, and that are issued by an authoritative court.

stated capital Also called *capital stock.* A balance sheet account; shareholders' capital contributions representing the par value of par shares or stated value of no-par shares.

stated value An arbitrary dollar amount assigned to shares by the board of directors, representing the minimum amount of consideration for which the corporation may issue the shares and the portion of consideration that must be allocated to the stated capital account.

state implementation plan A document prepared by states in which the emissions to the air from individual sources are limited legally so that the area will meet the national ambient air quality standards.

status quo The existing state of things. In contract law, returning a party to status quo or status quo ante means putting him in the position he was in before entering the contract.

statute of frauds A statute that provides that no lawsuit may be brought to enforce certain classes of contracts unless there is a written note or memorandum signed by the party against whom enforcement is sought or by his agent.

statute of limitations A statute that requires that certain classes of lawsuits must be brought within defined limits of time after the right to begin them accrued or the right to bring the lawsuit is lost.

stipulation An agreement between opposing counsel in a pending action, usually required to be made in open court and entered on the minutes of the court, or else to be in writing and filed in the action, ordinarily entered into for the purpose of avoiding delay, trouble, or expense in the conduct of the action.

stock A business's inventory. Also, as used in corporation and securities law, see *share.*

stock dividend See *dividends, share.*

stockholder See *shareholder.*

stock split See *share split.*

stoppage in transitu A right that the vendor of goods on credit has to recall them, or retake them, on the discovery of the insolvency of the vendee. It continues so long as the carrier remains in the possession and control of the goods or until there has been an actual or constructive delivery to the vendee, or some third person has acquired a bona fide right in them.

stop-payment order A request made by the drawer of a check to the drawee asking that the order to pay not be followed.

straight voting A form of voting for directors that ordinarily permits a shareholder to cast a number of votes equal to the number of shares he owns for as many nominees as there are directors to be elected. See *cumulative voting.*

strict liability Legal responsibility placed on an individual for the results of his actions irrespective of whether he was culpable or at fault.

strike suit In corporation law, a derivative suit motivated primarily by an intent to gain an out-of-court settlement for the suing shareholder personally or to earn large attorney's fees for lawyers, rather than to obtain a recovery for the corporation.

subchapter S corporation See *S corporation.*

sub judice Before a court.

sublease A transfer of some but not all of a tenant's remaining right to possess property under a lease.

sub nom Under the name of.

subpoena A process for compelling a witness to appear before a court and give testimony.

subrogation The substitution of one person in the place of another with reference to a lawful claim or right, frequently referred to as the doctrine of substitution. It is a device adopted or invented by equity to compel the ultimate discharge of a debt or obligation by the person who in good conscience ought to pay it.

subscription In corporation law, a promise by a person to purchase from a corporation a specified number of shares at a specified price.

subsidiary corporation A corporation owned and controlled by another corporation, called a *parent corporation.*

substantive law The body of law setting out rights and duties that affect how people behave in organized social life. See *procedural law.*

sui generis Of its own kind, unique, peculiar to itself.

summary judgment A method of reaching a judgment in a civil case before trial. The standard for granting a motion for summary judgment is that there be no significant issue of material fact and that the moving party be entitled to judgment as a matter of law.

summary proceedings Proceedings, usually statutory, in the course of which many formalities are dispensed with. But such proceedings are not concluded without proper investigation of the facts, or without notice, or an opportunity to be heard by the person alleged to have committed the act, or whose property is sought to be affected.

summons A writ or process issued and served on a defendant in a civil action for the purpose of securing his appearance in the action.

superseding cause See *intervening cause.*

supra Above; above mentioned; in addition to.

surety A person who promises to perform the same obligation as another person (the principal) and who is jointly liable along with the principal for that obligation's performance. See *guarantor.*

T/A Trading as, indicating the use of a trade name.

tacking The adding together of successive periods of adverse possession of persons in privity with each other, in order to constitute one continuous adverse possession for the time required by the statute, to establish title.

takeover A tender offer; also applied generally to any acquisition of one business by another business.

tangible Having a physical existence; real; substantial; evident.

tariff A tax or duty imposed on goods by a nation when the goods are imported into that nation.

tax haven A nation that has no or minimal taxation of personal, business, and investment income.

tenancy General term indicating a possessory interest in property. In landlord–tenant law, a property owner's conveyance to another person of the right to possess the property exclusively for a period of time.

tenancy at sufferance The leasehold interest that occurs when a tenant remains in possession of property after the expiration of a lease.

tenancy at will A leasehold interest that occurs when property is leased for an indefinite period of time and is terminable at the will of either landlord or tenant.

tenancy by the entirety A form of co-ownership of property by a married couple that gives the owners a right of survivorship and cannot be severed during life by the act of only one of the parties.

tenancy for a term A leasehold interest that results when the landlord and tenant agree on a specific duration for a lease and fix the date on which the tenancy will terminate.

tenancy in common A form of co-ownership of property that is freely disposable both during life and at death, and in which the co-owners have undivided interests in the property and equal rights to possess the property.

tender An unconditional offer of payment, consisting in the actual production in money or legal tender of a sum not less than the amount due.

tender offer A public offer by a bidder to purchase a subject company's shares directly from its shareholders at a specified price for a fixed period of time.

testament A will; the disposition of one's property to take effect after death.

testator A deceased person who died leaving a will.

testimony In some contexts, the word bears the same import as the word *evidence,* but in most connections it has a much narrower meaning. Testimony is the words heard from the witness in court, and evidence is what the jury considers it worth.

thin capitalization In corporation law, a ground for piercing the corporate veil due to the shareholders' contributing too little capital to the corporation in relation to its needs.

third-party beneficiary A person who is not a party to a contract but who has the right to enforce it because the parties to the contract made the contract with the intent to benefit him.

title Legal ownership; also, a document evidencing legal rights to real or personal property.

tombstone advertisement A brief newspaper advertisement alerting prospective shareholders that an issuer is offering to sell the securities described in the advertisement.

tort A private (civil) wrong against a person or his property.

tortfeasor A person who commits a tort; a wrongdoer.

tortious Partaking of the nature of a tort; wrongful; injurious.

trade fixtures Articles of personal property that have been annexed to real property leased by a tenant during the term of the lease and that are necessary to the carrying on of a trade.

trademark A distinctive word, name, symbol, device, or combination thereof, which enables consumers to identify favored products or services and which may find protection under state or federal law.

trade secret A secret formula, pattern, process, program, device, method, technique, or compilation of information that is used in its owner's business and affords that owner a competitive advantage. Trade secrets are protected by state law.

transcript A copy of a writing.

transferee A person to whom a transfer is made.

transfer of partner's transferable interest A partner's voluntary transfer of her transferable interest to another person, such as the partner's creditor, giving the transferee the right to receive the partner's share of distributions from the partnership.

transferor A person who makes a transfer.

treasury shares Previously outstanding shares repurchased by a corporation that are not canceled or restored to unissued status.

treble damages See *damages, treble.*

trespass An unauthorized entry on another's property.

trial An examination before a competent tribunal, according to the law of the land, of the facts or law put in issue in a cause, for the purpose of determining such issue. When the court hears and determines any issue of fact or law for the purpose of determining the rights of the parties, it may be considered a trial.

trust A legal relationship in which a person who has legal title to property has the duty to hold it for the use or benefit of another person. The term is also used in a general sense to mean confidence reposed in one person by another.

trustee A person in whom property is vested in trust for another.

trustee in bankruptcy The federal bankruptcy act defines the term as an officer, and he is an officer of the courts in a certain restricted sense, but not in any such sense as a receiver. He takes the legal title to the property of the bankrupt and in respect to suits stands in the same general position as a trustee of an express trust or an executor. His duties are fixed by statute. He is to collect and reduce to money the property of the estate of the bankrupt.

ultra vires Beyond the powers. In administrative law, it describes an act that is beyond the authority granted to an administrative agency by its enabling legislation. In corporation law, it describes a corporation's performing an act beyond the limits of its purposes as stated in its articles of incorporation.

unconscionable In contract law, a contract that is grossly unfair or one-sided; one that "shocks the conscience of the court."

unilateral contract A contract formed by an offer or a promise on one side for an act to be done on the other, and a doing of the act by the other by way of acceptance of the offer or promise; that is, a contract wherein the only acceptance of the offer that is necessary is the performance of the act.

unliquidated Undetermined in amount.

usage of trade Customs and practices generally known by people in the business and usually assumed by parties to a contract for goods of that type.

usurpation In corporation law, an officer, director, or shareholder's taking to himself a business opportunity that belongs to his corporation.

usury The taking of more than the law allows on a loan or for forbearance of a debt. Illegal interest; interest in excess of the rate allowed by law.

valid Effective; operative; not void; subsisting; sufficient in law.

value Under the Code (except for negotiable instruments and bank collections), generally any consideration sufficient to support a simple contract.

vendee A purchaser of property. The word is more commonly applied to a purchaser of real property, the word *buyer* being more commonly applied to the purchaser of personal property.

vendor A person who sells property to a vendee. The words *vendor* and *vendee* are more commonly applied to the seller and purchaser of real estate, and the words *seller* and *buyer* are more commonly applied to the seller and purchaser of personal property.

venire The name of a writ by which a jury is summoned.

venue A requirement distinct from jurisdiction that the court be geographically situated so that it is the most appropriate and convenient court to try the case.

verdict Usually, the decision made by a jury and reported to the judge on the matters or questions submitted to it at trial. In some situations, however, the judge may be the party issuing a verdict, as, for example, in the motion for a directed verdict. See *directed verdict.*

versus Against.

vest To give an immediate fixed right of present or future enjoyment.

vicarious liability The imposition of liability on one party for the wrongs of another. Also called *imputed liability.* For example, the civil liability of a principal for the wrongs his agent commits when acting within the scope of his employment. See *respondeat superior.* Such liability is also occasionally encountered in the criminal context (e.g., the criminal liability that some regulatory statutes impose on managers for the actions of employees under their supervision).

void That which is entirely null. A void act is one that is not binding on either party and that is not susceptible of ratification.

voidable Capable of being made void; not utterly null, but annullable, and hence that may be either voided or confirmed. See *avoid.*

voidable title A title that is capable of, or subject to, being judged invalid or void.

voting trust A type of shareholder voting arrangement by which shareholders transfer their voting rights to a voting trustee.

waive To throw away; to relinquish voluntarily, as a right that one may enforce, if he chooses.

waiver The intentional relinquishment of a known right. It is a voluntary act and implies an election by the party to dispense with something of value, or to forgo some advantage that he or she might have demanded and insisted on.

warehouse receipt A receipt issued by a person engaged in the business of storing goods for hire.

warrant An order authorizing a payment of money by another person to a third person. Also, an option to purchase a security. As a verb, the word means to defend; to guarantee; to enter into an obligation of warranty.

warrant of arrest A legal process issued by competent authority, usually directed to regular officers of the law, but occasionally issued to private persons named in it, directing the arrest of a person or persons on grounds stated therein.

warranty An undertaking relating to characteristics of a thing being sold; a guaranty.

waste The material alteration, abuse, or destructive use of property by one in rightful possession of it that results in injury to one having an underlying interest in it.

watered shares Also called *watered stock.* Shares issued in exchange for property that has been overvalued. See *bonus shares* and *discount shares.*

will A document executed with specific legal formalities that contains a person's instructions about the disposition of his property at his death.

winding up In partnership and corporation law, the orderly liquidation of the business's assets.

writ A commandment of a court given for the purpose of compelling certain action from the defendant, and usually executed by a sheriff or other judicial officer.

writ of certiorari An order of a court to an inferior court to forward the record of a case for reexamination by the superior court.

wrongful use of civil proceedings An intentional tort designed to protect against the wrongful initiation of civil proceedings.
