The Authors

Jane Mallor has been a member of the Business Law faculty at Kelley School of Business, Indiana University, since 1976. She has a B.A. from Indiana University and a J.D. from Indiana University School of Law. She has been admitted to the Indiana Bar, the Bar of the Southern District of Indiana, and the Bar of the U.S. Supreme Court. She is a member of the Academy of Legal Studies in Business.

Professor Mallor has taught a range of courses, including an introductory legal environment course and a graduate-level legal concepts course, real estate law, university pedagogy courses for business doctoral students, and most recently, graduate and undergraduate courses on Internet law and e-commerce. She is a member of Indiana University's Faculty Colloquium for Excellence in Teaching and was a Lilly Postdoctoral Teaching Fellow. She has won a number of teaching awards, including the Amoco Foundation Award for Distinguished Teaching, the Dow Technology Teaching Award, and the Innovative Teaching Award. Her research has focused primarily on punitive damages, product liability, and employment rights. Her work has been published in law reviews such as *Hastings Law Journal, North Carolina Law Review, American Business Law Journal,* and *Notre Dame Lawyer.*

Jim Barnes currently serves as Dean of the School of Public and Environmental Affairs at Indiana University, the largest and third-ranked program of its kind in the country. He teaches courses in environmental law and ethics.

Dean Barnes received his J.D. from Harvard Law School (1967) and his bachelor's degree from Michigan State University (1964). He has had a distinguished career in academia, public service, and private law practice and has for many years co-authored a number of leading business law textbooks.

From 1985 to 1988, Dean Barnes served as the Deputy Administrator of the U.S. Environmental Protection Agency. As the Agency's number two official and chief operating officer he acquired extensive experience in environmental policymaking and administration. From 1983–85, he had been the EPA General Counsel, and in the early 1970s had participated in the formation of the EPA and served as chief-of-staff to its first administrator, William D. Ruckelshaus. Dean Barnes also served as General Counsel of the U.S. Department of Agriculture from 1981–83. Previously he was a trial attorney and special assistant to the Assistant Attorney General (Civil Division) in the U.S. Department of Justice (1969–70) and in 1973 served as an assistant to the Deputy Attorney General in the U.S. Department of Justice. For six years, 1975–81, he had an environmental law, commercial law, and litigation practice with the firm of Beveridge and Diamond in Washington, D.C.

Dean Barnes has served as a director of several corporations, including Long Island Lighting Company (LILCO) (1992–98), and as a mediator for a number of environmental disputes. In 1999, he was elected as a Fellow in the prestigious National Academy of Public Administration.

Dean Barnes began his academic career as Assistant Professor of Business in the School of Business at Indiana University (1967–69) and later taught courses in business law and social responsibilities of business at Georgetown University (1976–80) as an adjunct professor.

In 1970, Dean Barnes joined Charles Hewitt and John Donnell in picking up the authorship of *Business Law: Principles and Cases,* from Harold Lusk. He continues to co-author this textbook—now *Business Law and the Regulatory Environment,* the textbook in your hands, in its eleventh edition—with Jane Mallor, Michael Phillips, Tom Bowers, and Arlen Langvardt, all of Indiana University.

In 1980, Dean Barnes joined John Donnell and Michael Metzger in writing *Law for Business,* also published by Richard D. Irwin. He continues as a co-author of this textbook—now in its seventh edition—along with Terry Dworkin and Eric Richards of Indiana University.

Other business law textbooks authored or co-authored by Dean Barnes include: *Essentials of Business Law and the Regulatory Environment* (1995); *Law of Commercial Transactions and Business Associations* (1995); and *Programmed Learning Aid in Business Law* (1970).

Thomas Bowers is Co-Director of The Sports and Entertainment Academy in the Kelley School of

Business MBA Program at Indiana University and Professor in the Business Law Department and the Accounting Graduate Program at the Kelley School. As Academy Co-Director, Dr. Bowers has led the Academy from its start-up phase in 1995. He has written several articles on the business and law of sports in the *Sports Business Journal,* the *Boston Globe,* and the *Chicago Tribune.* As a Professor in the Accounting Graduate Program, Dr. Bowers teaches two courses that cover the law of commercial and corporate finance, business organizations, and professional liability from the perspective of consultants, auditors, and financial analysts. He has recieved more than a dozen teaching awards during his 23 years at Indiana University. Dr. Bowers joined the faculty of Indiana University after obtaining his B.S. in finance at The Ohio State University and his J.D. at New York University School of Law.

Michael L. Phillips is Professor Emeritus of Business Law at Indiana University's Kelley School of Business. During his 23 years at Indiana, Professor Phillips has written more than 40 law journal articles and also three scholarly books. He has served as editor-in-chief of the *American Business Law Journal.*

Arlen W. Langvardt, Professor of Business Law, joined the faculty of Indiana University's Kelley School of Business in 1985. Professor Langvardt earned a Bachelor of Arts degree (summa cum laude) from Hastings College in 1976 and a Juris Doctor degree (with distinction) from the University of Nebraska in 1981.

From 1981–85, Professor Langvardt was a trial attorney with firms in Nebraska. He tried cases in a variety of legal areas, including tort, contract, constitutional, and miscellaneous commercial cases, as well as criminal and domestic relations cases.

Professor Langvardt has received several teaching awards and honors at the undergraduate and MBA levels. His graduate-level teaching assignments have included Legal Concepts and Trends Affecting Business, Managing Legal and Ethical Risk, and Legal Issues in Marketing Management. At the undergraduate level, he has taught Legal Environment of Business, Legal Aspects of Marketing, Commercial Law, Personal Law, and Law and the Arts.

Most of Professor Langvardt's research focuses on the First Amendment's application in contexts such as advertising regulation, trademark protection, and corporate defamation. He has published numerous articles in law journals and business journals, including the *Minnesota Law Review,* the *American Business Law Journal,* the *Journal of Marketing,* the *Trademark Reporter,* the *Villanova Law Review,* and the *Kansas Law Review.* Professor Langvardt has won several research awards from professional associations, including the 1989 Holmes/Cardozo Award from the American Business Law Association (now the Academy of Legal Studies in Business). The Brand Names Education Foundation selected him as winner of the 1992 Ladas Memorial Award for writing the best trademark law article published in 1991. By invitation of the Brand Names Education Foundation, Professor Langvardt delivered the 1992 Boal Memorial Lecture (part of a lecture series on trademark and unfair competition law) at the Georgetown University Law Center. In 1998, he was named the Kelley School's Alumni Association Faculty Fellow, in recognition of his teaching, research, and service. Professor Langvardt will serve as Chair of the Kelley School's Department of Business Law beginning with the fall 2000 semester.

Professor Langvardt and his wife, Mary, are the parents of Kyle (age 17) and Tara (age 14).

Preface

This is the Eleventh UCC Edition (and the eighteenth overall edition) of a business law text that first appeared in 1935. Throughout its sixty-odd years of existence, this book has been a leader and an innovator in the fields of business law and the legal environment of business. One reason for the book's success is its clear and comprehensive treatment of the standard topics that form the traditional business law curriculum. Another reason is its responsiveness to changes in these traditional subjects and to new views about that curriculum. Prominent among the latter are the injection of regulatory materials that has largely defined the "legal environment" approach to business law, and the more recent emphasis on ethics and international issues. The Eleventh edition continues to emphasize change by devoting significantly more attention to the Internet and to e-commerce.

Continuing Strengths

The Eleventh UCC Edition continues the basic features that have made its predecessors successful. They include:

- *Comprehensive Coverage.* We believe that the text continues to excel both in the number of topics it addresses and the depth of coverage within each topic. This is true both of the basic business law subjects that form the core of the book and also of the regulatory and other subjects that are raid to constitute the "legal environment" curriculum.
- *Style and Presentation.* This text is written in a style that is direct, lucid, and organized, yet also relatively relaxed and conversational. For this reason, we often have been able to cover certain topics by assigning them as reading without lecturing on them. As always, key points and terms are emphasized; examples, charts, figures, and concept summaries are used liberally; and elements of a claim and lists of defenses are stated in numbered paragraphs.
- *Case Selection.* We try very hard to find cases that clearly illustrate important points made in the text, that should interest students, and that are fun to teach. Except when older decisions are landmarks or continue to best illustrate particular concepts, we also try to select recent cases. Our collective in-class teaching mxperience with recent editions has helped us determine which of those cases best meet these criteria.
- *AACSB Curricular Standards.* The AACSB's curriculum standards say that both undergraduate and MBA curricula should include ethical and global issues; should address the influence of political, social, legal and regulatory, environmental, and technological issues on business; and should also address the impact of demographic diversity on organizations. In addition to its obvious stress on legal and regulatory issues, the book contains chapters on business ethics, the legal environment for international business, and environmental law, as well as "Ethical and Public Policy Concerns" at the end of all chapters except the ethics chapter. By putting legal changes in their social, political, and economic context, several text chapters enhance students' understanding of how political and social changes influence business and the law. Chapter 50's discussion of employment discrimination law certainly speaks to the subject of workplace diversity. Finally, the Eleventh UCC Edition examines many specific legal issues involving e-commerce and the Internet.

Features

Concept Reviews appear throughout the chapters. These Concept Reviews visually represent important concepts presented in the text to help summarize key ideas at a glance and simplify students' conceptualization of complicated issues.

Cases include the judicial opinions accompanying court decisions. These help to provide concrete examples of the rules stated in the text, and to provide a real-life application of the legal rule.

Ethical and Public Policy Concerns questions at the end of each chapter offer critical thinking and application questions that relate to ethical /public policy concerns, an important part of the AACSB curricular standards.

Problem Cases are included at the end of each chapter to provide review questions for students.

Key Terms are bolded throughout the text and defined in the Glossary at the end of the text for better comprehension of important terminology.

Important Changes in This Edition

Although a few chapter titles have changed slightly, the Eleventh Edition's lineup of chapters remains basically unchanged from the tenth edition. As usual, there are many new cases, the text has been thoroughly updated throughout, and a good number of problem cases have been replaced with new ones. Previous users of this text will note a change in those problem cases: now the end-of-chapter materials include some problems of our own creation as well as real-life cases. We have introduced these hypothetical cases so that we can target particular issues that deserve emphasis. The Eleventh UCC Edition's most important substantive changes are as follows:

- To increase students' sensitivity to technology and the reciprocal relations between law and technology, the Eleventh Edition includes an Internet/e-commerce icon in the margin accompanying the text where Internet or e-commerce issues appear.
- Chapter 4 now includes a critical discussion of three familiar enemies of business ethics: moral relativism, psychological egoism, and ethical egoism.
- In addition to acquiring five new text cases, Chapter 8, which now bears the title "Intellectual Property and Unfair Competition," includes discussions of copyright infringement issues in Internet-related contexts, the Copyright Term Extension Act of 1998, and the Anticybersquatting Consumer Protection Act of 1999.
- The contracts chapters integrate e-commerce issues at various points. Examples include treatments of the proposed Uniform Computer Information Transactions Act in Chapter 9, shrinkwrap and clickwrap contracts in Chapter 10, and digital or electronic signatures in Chapter 16.
- Chapter 20's discussion of product liability now discusses the new *Restatement (Third) of Torts: Product Liability.*
- Chapters 36–38 have been updated to reflect the fact that a majority of the states have adopted the Revised Uniform Partnership Act.
- Chapter 39, which now bears the title "Limited Partnerships, Limited Liability Limited Partnerships, and Limited Liability Companies," has been revised to reflect the creation of a new business form, the limited liability limited partnership.
- Chapters 40 and 44 incorporate Internet issues by discussing the recent efforts of Internet companies to avoid state sales taxes through subsidiary corporations, and by including recent S.E.C. changes that permit Internet marketing of initial public offerings.
- In addition to including a new case that moves vertical maximum price-fixing from the per se category to rule-of-reason category, Chapter 48 includes the Justice Department's case against Microsoft.
- Chapter 52 has been updated to reflect developments in the European Union, including its adoption of the Euro as its common monetary unit.

The Package

- *Instructor's Manual.* The authors have prepared the comprehensive instructor's manual that accompanies this text. Each chapter in the manual contains outlined suggestions for structuring the presentation of the corresponding text chapter material, provides additional material and examples not mentioned in the text, discusses each text case while providing points for discussion with students, and answers the end-of-chapter problems and problem cases. Each text manual chapter also contains suggested answers to the chapter's ethical and public policy concerns. The Instructor's Manual is also available as a downloadable supplement on the Mallor Web site.
- *Test Bank.* The Test Bank consists of multiple choice, true-false, and short answer questions for each chapter. A computerized test bank is also available to qualified adopters in Windows and Macintosh formats so professors can edit, add, and delete questions of their own. The Test Bank is also available as a downloadable supplement on the Mallor Web site.
- *Case Videos.* These videos include 20 dramatized vignettes depicting real-life legal incidents in a business or personal setting. Each segment is approximately 5–6 minutes in length. Video case problems appear at the end of most chapters in this text. These videos are free to qualified adopters of the text.
- *Student Study Guide and Workbook.* This student manual is intended to assist students in their study of business law. It contains sample questions, study hints, chapter outlines, and questions for each

chapter in the text to use as a review. This study guide is available in print for nominal fee.

- **http://www.mhhe.com/mallor11e** *Web site.* The Web site to accompany the Eleventh Edition has been greatly expanded. Included now is information about Business Law in the news, case updates, Supreme Court updates, a NEW! CyberLaw section. This section contains updates and important information on recent developments in e-commerce, information technology, intellectual property, and Internet venture development, and how these issues relate to the legal environment of business today .
- *University Access Telecourse* NEW!! This text (and lead author Jane Mallor) are the foundation of a new teleweb course designed by University Access. This includes 12 hours of video, a student study guide, and a faculty guide. The program is designed for use for your distance learning course. The video programs present cases, interviews, and feature stories designed to help students understand the basic concepts of the course. The Student Guide directs students and provides them with objectives, exercises, assignments, summaries, and quizzes that correspond to each of the programs. The faculty guide then provides resources, objectives, examples, and assignments that correspond with the student guide.
- *Crash Course* is a NEW!! student resource developed by University Access for use with this text. It is course-specific, and emphasizes the core concepts that need to be retained from the course. It is a wonderful way to understand and develop the skills and concepts presented in the text. It contains such assets as interactive exercises, case studies, Internet research projects, and discussion starters. See the text Web site for more information on how to access this.

- *PowerWeb* is FREE to students who buy the Eleventh Edition of this text. It is the first online supplement to offer students access to: course-specific current articles refereed by content experts, weekly course updates, real-time news, study tips, Web research tips and exercises, daily news, interactive exercises and assessment tools, and access to Northernlight.com for extended research capabilities. See the text Web site for more information on how to access this.

Acknowledgments

We would like to thank the many reviewers who have contributed their ideas and time to the development of the Eleventh Edition. Our sincere appreciation to the following:

Audrey Bach, Oregon State University

Byron Beck, University of Phoenix

Andrew Benton, Pepperdine University

Douglas Briney, Eastern Oregon University

William Burke, University of Massachusetts, Lowell

John Campbell, Missouri Valley College

Greg Cannteson, William Jewell College

David Goodof, Salem State College

Lee Green, Baker University

Yacob Haile-Mariam, Norfolk State University

John Heinsius, Modesto Junior College

Jeff Holt, Tulsa Community College

Special Acceptance Problem Areas 231
Acceptance in Unilateral Contracts 231
Acceptance in Bilateral Contracts 232
Silence as Acceptance 232
Acceptance When a Writing Is Anticipated 233
Acceptance of Ambiguous Offers 235
Who Can Accept an Offer? 235

12 Consideration 240
Elements of Consideration 240
Legal Value 241
Bargained-For Exchange 243
Exchanges That Fail to Meet Consideration Requirements 243
Illusory Promises: Not Legal Value 243
Preexisting Duties 244
Past Consideration 249
Exceptions to the Consideration Requirement 249
Promissory Estoppel 250
Promises to Pay Debts Barred by Statutes of Limitations 252
Debts Barred by Bankruptcy Discharge 252
Charitable Subscriptions 252

13 Reality of Consent 257
Effect of Doctrines Discussed in This Chapter 257
Necessity for Prompt and Unequivocal Rescission 258
Misrepresentation and Fraud 258
Relationship between Misrepresentation and Fraud 258
Requirements for Rescission on the Ground of Misrepresentation 258
Mistake 261
Nature of Mistake 261
Requirements for Mutual Mistake 262
Requirements for Unilateral Mistake 265
Duress 266
Nature of Duress 266
Requirements for Duress 266
Economic Duress 266
Undue Influence 267
Nature of Undue Influence 267
Determining Undue Influence 267

14 Capacity to Contract 274
What is Capacity? 274
Effect of Lack of Capacity 275
Capacity of Minors 275
Minors' Right to Disaffirm 275
Period of Minority 275
Emancipation 275
Time of Disaffirmance 276
Ratification 277
Duties upon Disaffirmance 277
Effect of Misrepresentation of Age 280
Capacity of Mentally Impaired Persons 280
Theory of Incapacity 280
Test for Mental Incapacity 280
The Effect of Incapacity Caused by Mental Impairment 282
Contracts of Intoxicated Persons 283
Intoxication and Capacity 283

15 Illegality 286
Meaning of Illegality 286
Determining Whether an Agreement Is Illegal 287
Agreements in Violation of Statutes 288
Agreements Declared Illegal by Statute 288
Agreements That Violate the Public Policy of a Statute 289
Agreements That May Be in Violation of Public Policy Articulated by Courts 291
Agreements in Restraint of Competition 291
Exculpatory Clauses 296
Family Relationships and Public Policy 299
Unfairness in Agreements: Contracts of Adhesion and Unconscionable Contracts 299
Unconscionability 300
Contracts of Adhesion 301
Effect of Illegality 304
General Rule: No Remedy for Breach of Illegal Agreements 304
Exceptions 304

16 Writing 310
The Significance of Writing in Contract Law 310
Purposes of Writing 310
Writing and E-Commerce 311
Writing and Contract Enforcement 311
Overview of the Statute of Frauds 311
History and Purposes 311
Effect of Violation of the Statute of Frauds 312
Contracts Covered by Statute of Frauds 312
Collateral Contracts 312
Interest in Land 315
Contracts That Cannot be Performed within One Year 316
Sale of Goods for $500 or More 318
Promise of Executor or Administrator to Pay a Decedent's Debt Personally 319
Contract in Which Marriage Is the Consideration 320
Meeting the Requirements of the Statute of Frauds 320
Nature of the Writing Required 320
UCC: Alternative Means of Satisfying the Statute of Frauds in Sale of Goods Contracts 323
Promissory Estoppel and the Statute of Frauds 325
The Parol Evidence Rule 325
Explanation of the Rule 325

Scope of the Parol Evidence Rule 327
Admissible Parol Evidence 327
Interpretation of Contracts 328

17 Rights of Third Parties 333
Assignment of Contracts 333
Nature of Assignment of Rights 333
Creating an Assignment 335
Assignability of Rights 335
Nature of Assignee's Rights 338
Subsequent Assignments 339
Successive Assignments 339
Assignor's Warranty Liability to Assignee 339
Delegation of Duties 339
Nature of Delegation 339
Delegable Duties 340
Language Creating a Delegation 341
Assumption of Duties by Delegatee 341
Discharge of Delegator by Novation 341
Third-Party Beneficiaries 343
Intended Beneficiaries versus Incidental Beneficiaries 343
Vesting of Beneficiary's Rights 345

18 Performance and Remedies 349
Conditions 350
Nature of Conditions 350
Types of Conditions 350
Creation of Express Conditions 353
Excuse of Conditions 355
Performance of Contracts 355
Level of Performance Expected of the Promisor 355
Good Faith Performance 356
Breach of Contract 358
Effect of Material Breach 358
Determining the Materiality of the Breach 358
Anticipatory Repudiation 361
Recovery by a Party Who Has Committed Material Breach 362
Excuses for Nonperformance 363
Impossibility 363
Frustration of Venture 363
Commercial Impracticability 364
Other Grounds for Discharge 364
Discharge by Mutual Agreement 364
Discharge by Accord and Satisfaction 364
Discharge by Waiver 364
Discharge by Alteration 365
Discharge by Statute of Limitations 365
Discharge by Decree of Bankruptcy 365
Remedies for Breach of Contract 365
Types of Contract Remedies 365
Interests Protected by Contract Remedies 366
Legal Remedies (Damages) 366
Equitable Remedies 370
Restitution 372

Part Four *Sales*

  - *4. Prior Interpretations*
  - *5. Maxims*
- *C. Limits on the Power of Courts*

Today, businesspeople confront the law at every turn. For example, business firms continually use the law of property, contract, and agency. Indeed, business could hardly function without these and other basic bodies of law. In addition to assisting business activity, the legal system restricts it as well. Today, government regulates most aspects of a firm's operations—for example, advertising, product safety, employee relations, the issuance of securities, and behavior toward competitors.

Thus, businesspeople constantly use, rely on, react to, plan around—and sometimes violate—innumerable legal rules (or laws). For this reason, managers should have a general knowledge of the legal system and the most important legal rules affecting their firms. This text discusses many such rules, often in detail. But your ability to use and apply the legal rules affecting business is incomplete unless you also understand law's general nature, its functions, and how judges interpret it. This understanding could go some way toward reducing business complaints about the law and lawyers.

To help provide such an understanding, this chapter examines law's nature from four different angles. First, it describes, classifies, and ranks the various kinds of rules that are regarded as law in the United States—the *types of law.* This discussion, however, only partly conveys law's nature. Thus, the chapter's second section discusses a subject known as *jurisprudence* or legal philosophy. Jurisprudence tries to establish a general definition of law, and each of the competing definitions we examine highlights an important facet of law's many-sided nature. Shifting from the theoretical to the pragmatic, this chapter's third section examines some of the *functions* law

serves—what it does. The chapter concludes by discussing *legal reasoning,* the set of techniques judges use when interpreting legal rules. This discussion should help dispel the common misconception that the law consists of clear and precise commands that judges merely look up and then mechanically apply.

Types and Classifications of Law

The Types of Law

Constitutions **Constitutions,** which exist at the state and federal levels, have two general functions.[1] First, they set up the structure of government for the political unit they control (a state or the federal government). This involves creating the branches and subdivisions of the government and stating the powers given and denied to each. Through its **separation of powers,** for example, the U.S. Constitution establishes a Congress and gives it power to legislate or *make* law in certain areas, provides for a chief executive (the president) whose function is to execute or *enforce* the laws, and helps create a federal judiciary to *interpret* the laws. The U.S. Constitution also structures the relationship between the federal government and the states. In the process, it respects the principle of **federalism** by recognizing the states' power to make law in certain areas.

The second function of constitutions is to prevent other units of government from taking certain actions or passing certain laws. Constitutions do so mainly by prohibiting government action that restricts certain individual rights. The Bill of Rights to the U.S. Constitution is an example.

Statutes **Statutes** are laws created by Congress or a state legislature. They are stated in an authoritative form in statute books or codes. As you will see, however, their interpretation and application are often difficult.

Throughout this text, you will encounter state statutes that were originally drafted as **uniform acts.** Uniform acts are model statutes drafted by private bodies of lawyers and/or scholars. They do not become law until they are enacted by a legislature. Their aim is to produce state-by-state uniformity on the subjects they address. Examples include the Uniform Commercial Code (which deals with a wide range of commercial law subjects), the Revised Uniform Partnership Act, the Revised Uniform Limited Partnership Act, and the Revised Model Business Corporation Act.

Common Law The **common law** (also called judge-made law or case law) is that law made and applied by judges as they decide cases not governed by statutes or other types of law. In theory, the common law exists at the state level only. The common law originated in medieval England. It developed from the decisions of judges in settling disputes. Over time, judges began to follow the decisions of other judges in similar cases. This practice became formalized in the doctrine of ***stare decisis*** (let the decision stand). As you will see later in the chapter, *stare decisis* has enabled the common law to evolve to meet changing social conditions. Thus, the common law rules in force today often differ considerably from the common law rules of earlier times.

The common law came to America with the first English settlers and was applied by courts during the colonial period. It continued to be applied after the Revolution and the adoption of the Constitution, and it still governs many cases today. For example, the rules of tort, contract, and agency discussed in this text are mainly common law rules. However, the states have codified (enacted into statute) some parts of the common law. They also have passed statutes superseding judge-made law in certain situations. As discussed in Chapter 9, for example, the states have established special rules for contract cases involving the sale of goods by enacting Article 2 of the Uniform Commercial Code.

This text's torts, contracts, and agency chapters often refer to the *Restatement*—or *Restatement* (*Second*)—rule on a particular subject. The *Restatements* are collections of common law (and occasionally statutory) rules covering various areas of the law. Because they are promulgated by the American Law Institute rather than by courts, the *Restatements* are not law and do not bind courts. However, state courts often find *Restatement* rules persuasive and adopt them as common law rules within their states. Usually, the *Restatement* rules are the rules actually followed by a majority of the states. Occasionally, however, the *Restatements* stimulate changes in the common law by stating new rules that the courts later decide to follow.

[1] Chapter 3 discusses constitutional law as it applies to government regulation of business.

Equity The body of law called **equity** has traditionally tried to do discretionary rough justice in situations where common law rules would produce unfair results. In medieval England, common law rules were technical and rigid and the remedies available in common law courts were too few. This meant that some deserving parties could not obtain adequate relief in the common law courts. As a result, the chancellor, the king's most powerful executive officer, began to hear cases that the common law courts could not resolve fairly.

Eventually, separate equity courts emerged to handle the cases heard by the chancellor. These courts took control of a case only when there was no adequate remedy in a regular common law court. In equity courts, procedures were flexible, and rigid rules of law were de-emphasized in favor of general moral maxims. Equity courts also provided several remedies not available in the common law courts (which generally awarded only money damages or the recovery of property). Perhaps the most important of these *equitable remedies* is the **injunction,** a court order forbidding a party to do some act or commanding him to perform some act. Others include the contract remedies of **specific performance** (whereby a party is ordered to perform according to the terms of her contract), **reformation** (in which the court rewrites the contract's terms to reflect the parties' real intentions), and **rescission** (a cancellation of a contract in which the parties are returned to their precontractual position).

Like the common law, equity principles and practices were brought to the American colonies by the English settlers. They continued to be used after the Revolution and the adoption of the Constitution. Over time, however, the once-sharp line between law and equity has become blurred. Most states have abolished separate equity courts, now allowing one court to handle both legal and equitable claims. Also, equitable principles have been blended together with common law rules, and some traditional equity doctrines have been restated as common law or statutory rules. An example is the doctrine of unconscionability discussed in Chapter 15. Finally, courts sometimes combine an award of money damages with an equitable remedy.

Administrative Regulations and Decisions Throughout this century, the administrative agencies established by Congress and the state legislatures and discussed in Chapter 46 have acquired considerable power, importance, and influence over business. A major reason for the rise of administrative agencies was the collection of social and economic problems created by the industrialization of the United States that began late in the 19th century. Because legislatures generally lacked the time and expertise to deal with these problems on a continuing basis, the creation of specialized, expert agencies was almost inevitable.

Administrative agencies get the ability to make law through a *delegation* (or handing over) of power from the legislature. Agencies normally are created by a statute that specifies the areas in which the agency can make law and the scope of its power in each area. Often, these statutory delegations are worded so broadly that the legislature has, in effect, merely pointed to a problem and given the agency wide-ranging powers to deal with it.

The two kinds of law made by administrative agencies are **administrative regulations** and **agency decisions.** Like statutes, administrative regulations appear in a precise form in one authoritative source. However, they differ from statutes because the body enacting them is an agency, not the legislature. In addition, some agencies have an internal court structure that enables them to hear cases arising under the statutes and regulations they enforce. The resulting agency decisions are another kind of law.

Treaties According to the U.S. Constitution, **treaties** made by the president with foreign governments and approved by two-thirds of the U.S. Senate are "the supreme Law of the Land." As we note shortly, treaties invalidate inconsistent state (and sometimes federal) laws.

Ordinances State governments have subordinate units that exercise certain functions. Some of these units, such as school districts, have limited powers. Others, such as counties, municipalities, and townships, exercise various governmental functions. The enactments of municipalities are called **ordinances;** zoning ordinances are an example. The enactments of other political subdivisions may also be called ordinances.

Executive Orders In theory, the president or a state's governor is a chief executive who enforces the laws but has no law-making powers. However, these officials sometimes have the power to issue laws called **executive orders.** This power normally results from a legislative delegation.

Priority Rules

Because the different types of law conflict, rules for determining which type takes priority are necessary. Here, we briefly describe the most important such rules.

1. According to the principle of **federal supremacy,** the U.S. Constitution, federal laws enacted pursuant to it, and treaties are the supreme law of the land. This means that federal law defeats conflicting state law.
2. Constitutions defeat other types of law within their domain. Thus, a state constitution defeats all other state laws inconsistent with it, and the U.S. Constitution defeats inconsistent federal laws.
3. When a treaty conflicts with a federal statute over a purely domestic matter, the measure that is latest in time usually prevails.
4. Within either the state or the federal domain, statutes defeat conflicting laws that depend on a legislative delegation for their validity. For example, a state statute defeats an inconsistent state administrative regulation.
5. State statutes and any laws derived from them by delegation defeat inconsistent common law rules. For example, either a statute or a state administrative regulation defeats a conflicting common law rule.

Concept Review

The Types of Law Compared

	Who Enacts?	State and/or Federal?	Stated in One Authoritative Form?	Remarks
Constitutions	U.S. Constitution originally ratified by states; complex amendment process. States may vary.	Both	Yes, but see Chapter 3 on constitutional decision making.	Defeat other forms of positive law within sphere (federal or state)
Statutes	Legislatures	Both	Yes, but see this chapter's discussion of statutory interpretation.	Normally defeat other forms of positive law within sphere (federal or state) except constitutions
Common Law	Courts	In theory, state only	No. See this chapter's discussion of legal reasoning.	Law of tort, contract, and agency mainly common law
Equity	Formerly, equity courts; now usually courts in general	In theory, state only. But equitable principles pervade federal law as well.	No	Traditional separation of law and equity now virtually gone
Administrative Regulations	Administrative agencies	Both	Yes	See Chapter 46
Administrative Decisions	Administrative agencies	Both	No	See Chapter 46
Treaties	President plus two-thirds of Senate	Federal	Yes	Defeat inconsistent state law
Ordinances	Usually, local government bodies	State (mainly local)	Yes	
Executive Orders	Chief executives	Both	Yes	Usually based on delegation from legislature

Classifications of Law

Cutting across the different types of law are three common classifications of law. These classifications involve distinctions between: (1) criminal law and civil law, (2) substantive law and procedural law, and (3) public law and private law. One type of law might be classified in each of these ways. For example, a state homicide statute would be criminal, substantive, and public; a rule of contract law would be civil, substantive, and private.

Criminal and Civil Law **Criminal law** is the law under which the government prosecutes someone for committing a crime. It is said to create duties that are owed to the public as a whole. **Civil law** mainly concerns obligations that private parties owe to other private parties. It is the law applied when one private party sues another private party because the second party did not meet a legal duty owed to the first party. (For this purpose, the government may be treated as a private party and thus as a party to a civil suit; for example, a city may sue, or be sued by, a construction contractor.) Criminal penalties (e.g., imprisonment or fines) differ from civil remedies (e.g., money damages or equitable relief). Although most of the legal rules in this text are civil law rules, Chapter 5 deals specifically with the criminal law, and criminal provisions may appear in other chapters.

Even though the civil law and the criminal law are distinct bodies of law, the same behavior can violate both. For instance, if due to A's careless driving his car hits and injures B, A may face both a criminal prosecution by the state and B's civil suit for damages.

Substantive Law and Procedural Law **Substantive law** sets the rights and duties of people as they act in society. **Procedural law** controls the behavior of government bodies (mainly courts) as they establish and enforce rules of substantive law. A statute making murder a crime, for example, is a rule of substantive law. But the rules describing the proper conduct of a criminal trial are procedural. This text mainly discusses substantive law. Chapters 2 and 5 examine some of the procedural rules governing civil and criminal cases, respectively.

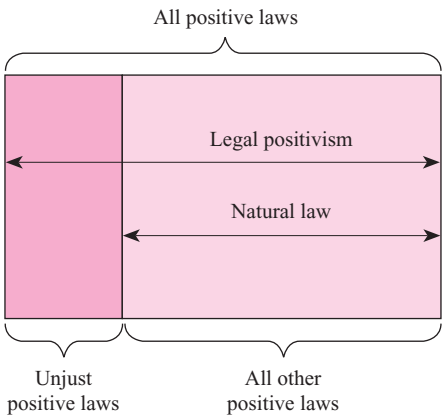
Public and Private Law **Public law** concerns the powers of government and the relations between government and private parties. Examples include constitutional law, administrative law, and criminal law. **Private law** establishes a framework of legal rules that enables private parties to set the rights and duties they owe each other. Examples include the rules of contract, property, and agency.

Jurisprudence

The types of law sometimes are collectively referred to as *positive law.* Positive law comprises the rules that have been laid down (or posited) by a recognized political authority. Knowing the types of positive law is essential for understanding the American legal system and the business law topics discussed in this text. But defining *law* by listing these different kinds of positive law is much like defining the word automobile by describing all the vehicles going by that name. To define law properly, some people say, we need a general description that captures its essence.

The field known as **jurisprudence** or legal philosophy tries to provide such a description. Over time, different schools of jurisprudence have emerged, each with its own distinctive view of law. The differences among these schools are not just academic matters. As Figure 1 suggests, their conceptions of law often affect their approach toward real-life issues.

Legal Positivism



One feature common to all types of positive law is their enactment by a recognized political authority such as a legislature or an administrative agency. This common feature underlies the definition of law adopted by the school of jurisprudence called **legal positivism.** Legal positivists define law as the *command of a recognized political authority.* To the British political philosopher Thomas Hobbes, for instance, "Law properly, is the word of him, that by right hath command over others."

The commands made by recognized political authorities can be good, bad, or indifferent in moral terms. But as Figure 2 demonstrates, to legal positivists such commands are valid law regardless of their goodness or badness. For positivists, in other words, legal validity and moral validity are different questions. Sometimes this view is expressed by the motto: "Law is law, just or not." For this reason, some (but not all) positivists say that every properly enacted positive law should be enforced and obeyed, whether just or not. Similarly,

Figure 1 *A Brief Sketch of the Jurisprudential Schools*

	Definition of Law	Relation between Law and Morality	Practical Tendency
Legal Positivism	Command of a recognized political authority	Separate questions: "law is law, just or not"	Valid positive law should be enforced and obeyed, just or not
Natural Law	All commands of recognized political authorities that are not unjust	"Unjust law is not law"	Unjust positive laws should not be enforced and obeyed
American Legal Realism	What public decisionmakers actually do	Unclear	"Law in action" often more important than "law in the books"
Sociological Jurisprudence	Process of social ordering in accordance with dominant social values and interests	Although moral values influence positive law, no way to say whether this is right or wrong	Law inevitably does (and should?) follow dominant social values and interests

Figure 2 *The Positivist and Natural Law Definitions of Law*

positivist judges usually try to enforce the law as written, excluding their own moral views from the process.

Natural Law

At first glance, legal positivism's "law is law, just or not" approach may seem like perfect common sense. But it presents a problem, for it could mean that *any* positive law (no matter how unjust) is valid law and should be enforced and obeyed so long as some recognized political authority (no matter how wicked) enacted it. Here, the school of jurisprudence known as **natural law** takes issue with legal positivism by rejecting the positivist separation of law and morality.

The basic idea behind most systems of natural law is that some higher law or set of universal moral rules binds all human beings in all times and places. The Roman statesman Marcus Cicero described natural law as "the highest reason, implanted in nature, which commands what ought to be done and forbids the opposite." Because this higher law determines what is ultimately good and ultimately bad, it is a criterion for evaluating positive law. To Saint Thomas Aquinas, for example, "every human law has just so much of the nature of law, as it is derived from the law of nature." To be genuine law, in other words, positive law must resemble the law of nature by being good—or at least by not being bad. This suggests the practical natural law definition of law depicted in Figures 1 and 2—that it equals those commands of recognized political authorities that do not offend the higher law by being unjust.

Unjust positive laws, on the other hand, simply are not law. As Cicero put it: "What of the many deadly, the many pestilential statutes which are imposed on peoples? These no more deserve to be called laws than the rules a band of robbers might pass in their assembly." This view sometimes is expressed by the motto: "An unjust law is not law." Because unjust positive

laws are not truly law, many natural law thinkers conclude that they should not be enforced or obeyed.

As compared with positivist judges, therefore, judges influenced by natural law ideas are more likely to read constitutional provisions broadly to strike down positive laws they regard as unjust. They also are more likely to let morality influence their interpretation of the law. Of course, neither judges nor natural law thinkers always agree about what is moral and immoral. This is a major difficulty for the natural law position. This difficulty allows legal positivists to claim that only by keeping legal and moral questions separate can we get any stability and predictability in the law.

American Legal Realism

To some people, the debate between natural law and legal positivism seems unreal. Not only is natural law pie-in-the-sky, such people might say, but sometimes positive law does not mean much either. For example, juries often pay little attention to the legal rules that are supposed to guide their decisions, and prosecutors frequently have discretion on whether or not to enforce criminal statutes. In some legal proceedings, moreover, the background, biases, and values of the judge—and not the positive law—determine the result. As the joke goes, justice sometimes is what the judge ate for breakfast.

Remarks like these typify the school of jurisprudence known as **American legal realism.** Legal realists regard the positivist law-in-the-books as less important than the *law in action*—the conduct of those who enforce and interpret the positive law. Thus, American legal realism defines law as the *behavior of public officials (mainly judges) as they deal with matters before the legal system.* Because the actions of such decisionmakers—and not the rules in the books—really affect people's lives, the realists say, this behavior is what counts and what deserves to be called law.

It is doubtful whether the legal realists have ever developed a common position on the relation between law and morality or the duty to obey positive law. But they have been quick to tell judges how to behave. Many realists feel that the modern judge should be a kind of social engineer who weighs all relevant values and considers social science findings when deciding a case. Such a judge would make the positive law only one factor in her decision. Because judges inevitably base their decisions on personal considerations, the realists seem to say, they should at least do this honestly and intelligently. To promote this kind of decision-making, the realists have sometimes favored fuzzy, discretionary rules that allow judges to decide each case according to its unique facts.

Sociological Jurisprudence

The term **sociological jurisprudence** is a general label uniting several different jurisprudential approaches whose common aim is to examine law within its social context. Their outlook is captured by the following quotation from Justice Oliver Wendell Holmes:

> The life of the law has not been logic: it has been experience. The felt necessities of the time, the prevalent moral and political theories, intuitions of public policy, avowed or unconscious, even the prejudices which judges share with their fellow-men, have had a good deal more to do than the syllogism in determining the rules by which men should be governed. The law embodies the story of a nation's development through many centuries, and it cannot be dealt with as if it contained only the axioms and corollaries of a book of mathematics.[2]

Despite this common outlook, there is no distinctive sociological definition of law. If one were attempted, it might go as follows: *Law is a process of social ordering reflecting society's dominant interests and values.*

Different Sociological Approaches By examining a few examples of sociological legal thinking, we can put some flesh on the definition just offered. The "dominant interests" portion of the definition is exemplified by the writings of Roscoe Pound, an influential 20th-century American legal philosopher. Pound developed a detailed catalog of the social interests that press on government and the legal system and thus shape positive law. During his life, Pound's catalog changed along with changes in American society. An example of the definition's "dominant values" component is the *historical school* of jurisprudence identified with the 19th-century German legal philosopher Friedrich Karl von Savigny. Savigny saw law as an unplanned, almost unconscious, reflection of the collective spirit (*Volksgeist*) of a particular society. In his view, legal change could only be explained historically, as a slow response to social change.

By emphasizing the influence of dominant social interests and values, Pound and Savigny undermine the legal positivist view that law is nothing more than

[2]Holmes, *The Common Law* (1881).

the command of some political authority. The early 20th-century Austrian legal philosopher Eugen Ehrlich went even further in rejecting positivism. He did so by distinguishing two different "processes of social ordering" contained within our definition of sociological jurisprudence. The first of these is "state law," or positive law. The second is the "living law," informal social controls such as customs, family ties, and business practices. By regarding both as law, Ehrlich blurred the line between positive law and other kinds of social ordering. In the process, he stimulated people to recognize that positive law is only one element within a spectrum of social controls.

The Implications of Sociological Jurisprudence

Because its definition of law includes social values, sociological jurisprudence seems to resemble natural law. But most sociological thinkers are only concerned with the *fact* that moral values influence the law, and not with the goodness or badness of those values. In Chapter 20, for instance, we note that laissez-faire economic values were widely shared in 19th-century America and strongly influenced the product liability law of that period. But we do not say whether this was good or bad. Thus, it might seem that sociological jurisprudence gives no practical advice to those who must enforce and obey positive law.

However, sociological jurisprudence has at least one practical implication—a tendency to urge that the law must change to meet changing social conditions and values. This is basically the familiar notion that the law should keep up with the times. Some might stick to this view even when society's values are changing for the worse. To Holmes, for example, "[t]he first requirement of a sound body of law is, that it should correspond with the actual feelings and demands of the community, *whether right or wrong.*"[3]

[3]The italics have been added for emphasis.

Rochin v. California *342 U.S. 165 (U.S. Sup. Ct. 1952)*[4]

In 1949, three Los Angeles County deputy sheriffs heard that Antonio Rochin was selling narcotics. In search of evidence, they entered Rochin's home one morning and forced open the door to his bedroom. They spotted two capsules on a nightstand beside the bed on which the half-clad Rochin was sitting. After the deputies asked, "Whose stuff is this?" Rochin quickly put the capsules in his mouth. The deputies then jumped Rochin and tried to force the capsules from his mouth. When this proved unsuccessful, they handcuffed Rochin and took him to a hospital. Over Rochin's opposition, they had a doctor insert a tube into his stomach and force an emetic (vomit-inducing) solution through the tube. This stomach pumping caused Rochin to vomit. Within the material he disgorged were two capsules containing morphine.

Rochin then was tried and convicted for possessing a morphine preparation in violation of California law. The two morphine capsules were the main evidence against him, and the trial court admitted this evidence over Rochin's objection. An intermediate appellate court and the California Supreme Court affirmed the conviction. Rochin then appealed to the U.S. Supreme Court. The main issue before the Court was whether the methods by which the deputies obtained the capsules violated the Due Process Clause of the U.S. Constitution's Fourteenth Amendment, which states that "No state shall . . . deprive any person of life, liberty, or property, without due process of law."

Note: *At the time this case was decided, evidence obtained through a forced stomach pumping probably was admissible in a majority of the states that had considered the question. Also, the Supreme Court did not then require that state courts exclude evidence obtained through an illegal search or seizure.*

Frankfurter, Justice The requirements of due process impose upon this Court an exercise of judgment upon the proceedings resulting in a conviction to ascertain whether they offend those canons of decency and fairness which express the notions of justice of English-speaking peoples even toward those charged with the most heinous offenses. These standards of justice are not authoritatively formulated anywhere as though they were specifics. Due

[4]At this point, you may want to read this chapter's appendix on the reading and briefing of cases.

process of law is a summarized guarantee of respect for those personal immunities so rooted in the traditions and conscience of our people as to be fundamental, or implicit in the concept of ordered liberty.

The vague contours of the due process clause do not leave judges at large. We may not draw upon our merely personal and private notions and disregard the limits that bind judges. These limits are derived from considerations that are fused in the whole nature of our judicial process. These are considerations deeply rooted in reason and in the compelling traditions of the legal profession. The due process clause places upon this Court the duty of exercising a judgment upon interests of society pushing in opposite directions. Due process thus conceived is not to be derided as a resort to the revival of "natural law."

Applying these general considerations to the present case, we conclude that the proceedings by which this conviction was obtained do more than offend some fastidious squeamishness or private sentimentalism about combatting crime too energetically. This is conduct that shocks the conscience. Illegally breaking into the privacy of Rochin, the struggle to open his mouth and remove what was there, the forcible extraction of his stomach's contents—this course of proceeding is bound to offend even hardened sensibilities. They are methods too close to the rack and the screw to permit of constitutional differentiation.

Judgment reversed in favor of Rochin.

Comparing the Schools

The *Rochin* case helps illustrate the differences among the schools of jurisprudence. To highlight those differences, consider the following questions. Do you believe Justice Frankfurter when he says that the Court's decision is not based on natural law? Is that decision closer to positivism's law-is-law-just-or-not approach, or to natural law's an-unjust-law-is-not-law approach? Do you think that a positivist would like this case? On the other hand, how would a legal realist look at *Rochin?* Specifically, what would such a person probably say about both the Court's decision and the police behavior here? With the benefit of hindsight, finally, it looks as if *Rochin* was a precursor of the many liberal criminal procedure decisions of the 1960s—decisions that probably had their roots in changed social values. If so, what might an exponent of sociological jurisprudence say about *Rochin?*

The Functions of Law

In traditional societies, people often viewed law as a set of unchanging rules that deserved obedience because they were part of the natural order of things. By now, however, most lawmakers treat law as a flexible tool or instrument for the accomplishment of chosen purposes. For example, the law of negotiable instruments discussed later in this text is designed to stimulate commercial activity by promoting the free movement of money substitutes such as promissory notes, checks, and drafts. Throughout the text, moreover, you see courts manipulating existing legal rules to get the results they desire. One strength of this *instrumentalist* attitude is its willingness to adapt the law to further the social good. One weakness is the legal instability and uncertainty those adaptations often produce.

Just as individual legal rules advance specific purposes, law as a whole serves many general social functions. Among the most important of those functions are:

1. *Peacekeeping.* The criminal law rules discussed in Chapter 5 best further this basic function of any legal system. Also, as Chapter 2 suggests, one major function of the civil law is the resolution of private disputes.
2. *Checking government power and thereby promoting personal freedom.* Obvious examples are the constitutional restrictions on government regulation in Chapter 3.
3. *Facilitating planning and the realization of reasonable expectations.* The rules of contract law discussed in Chapters 9–18 help fulfill this function of law.
4. *Promoting economic growth through free competition.* The antitrust laws discussed in Chapters 47–49 are among the many legal rules that help perform this function.

5. *Promoting social justice.* Throughout this century, government has intervened in private social and economic affairs to correct perceived injustices and give all citizens equal access to life's basic goods. One example is the collection of employer-employee regulations treated in Chapter 50.
6. *Protecting the environment.* The most important federal environmental statutes are discussed in Chapter 51.

Obviously, the law's various functions can conflict. The familiar clash between economic growth and environmental protection is an example. The *Rochin* case illustrates the equally familiar conflict between effective law enforcement and the preservation of personal rights. Only rarely does the law achieve one end without sacrificing others to some degree. In law, as in life, there generally is no such thing as a free lunch. Where the law's ends conflict, lawmakers can only try to strike the best possible balance among those ends. This suggests limits on the law's usefulness as a device for promoting particular social goals.

Legal Reasoning

This text's main aim is to describe the most important legal rules affecting business. Like most other business law texts, it states those rules in what lawyers call "black letter" form, using sentences saying that certain legal consequences will occur if certain events happen. Although it enables a clear statement of the law's commands, this black letter approach can be misleading. It suggests definiteness, certainty, permanence, and predictability—attributes the law frequently lacks. To illustrate this, and to give you some idea how lawyers think, we now discuss the two most important kinds of legal reasoning: **case law reasoning** and **statutory interpretation.**[5] However, we first must examine legal reasoning in general.

Legal reasoning is basically deductive, or syllogistic. The legal rule is the major premise, the facts are the minor premise, and the result is the product of combining the two. Suppose a state statute says that a driver operating an automobile between 55 and 70 miles per hour must pay a $50 fine (the rule or major premise) and that Jim Smith drives his car at 65 miles per hour (the facts or minor premise). If Jim is arrested, and if the necessary facts can be proved, he will be required to pay the $50 fine. As you will now see, however, legal reasoning often is more difficult than this example would suggest.

Case Law Reasoning

In cases governed by the common law, courts find the appropriate legal rules in prior cases or *precedents.* The standard for choosing and applying prior cases to decide present cases is the doctrine of *stare decisis,* which states that like cases should be decided alike.[6] That is, the present case should be decided in the same way as past cases presenting the same facts and the same legal issues. If a court decides that an alleged precedent is not like the present case and should not control the decision in that case, it *distinguishes* the prior case.[7]

Because every present case differs from the precedents in some respect, it is always theoretically possible to distinguish those precedents. For example, one could distinguish a prior case because both parties in that case had black hair, while one party in the present case has brown hair. Of course, such distinctions are usually ridiculous, because the differences they identify are insignificant in moral or social policy terms. In other words, a good distinction of a prior case involves a widely accepted ethical or policy reason for treating the present case differently from its predecessor. Because people disagree about moral ideas, public policies, and the degree to which they are accepted, and because all these factors change over time, judges may differ on the wisdom of distinguishing a prior case. This is a significant source of uncertainty in the common law. But it also gives the common law the flexibility to adapt to changing social conditions.

The following *MacPherson* case illustrates the common law's ability to change over time. In the series of New York cases *MacPherson* discusses, the **plaintiff** (the party suing) claimed that the **defendant** (the party being sued) had been negligent in manufacturing or inspecting some product, thus injuring the plaintiff,

[5]The reasoning courts employ in constitutional cases resembles that used in common law cases, but often is somewhat looser. On the way courts decide constitutional cases, see Chapter 3.

[6]*Stare decisis* should be distinguished from the doctrine of *res judicata,* which says that a final judicial decision on the merits conclusively settles the rights of *the parties to the case.*

[7]Also, while they exercise the power infrequently, courts sometimes completely *overrule* their prior decisions.

who later purchased or used the product.[8] In the mid-19th century, such suits often failed due to the general rule that a seller or manufacturer was not liable for negligence unless there was *privity of contract* between the defendant and the plaintiff. Privity of contract is the existence of a direct contractual relationship between two parties. Thus, the no-liability-outside-privity rule prevented injured plaintiffs from recovering against a seller or manufacturer who had sold the product to a dealer who resold it to the plaintiff. Over time, however, courts began to allow injured plaintiffs to recover from sellers or manufacturers with whom they had not directly dealt. These courts were creating *exceptions* to the general rule; that is, they were distinguishing prior cases announcing the rule and creating new rules to govern the situations they distinguished. *MacPherson* describes the gradual enlargement of such an exception in New York. Eventually, the exception "consumed the rule" by covering so many situations that the original rule became insignificant.[9]

[8]Negligence law is discussed in Chapter 7.

[9]The present status of the old no-liability-outside-privity rule in sale of goods cases is discussed in Chapter 20.

MacPherson v. Buick Motor Co. *111 N.E. 1050 (N.Y. Ct. App. 1916)*

One wheel of an automobile manufactured by the Buick Motor Company was made of defective wood. Buick could have discovered the defect had it made a reasonable inspection after it purchased the wheel from another manufacturer. Buick sold the car to a retail dealer, who then sold it to MacPherson. While MacPherson was driving his new Buick, the defective wheel collapsed and he was thrown from the vehicle. He sued Buick for his injuries in a New York trial court, alleging that it had negligently failed to inspect the wheel. Buick's main defense was that it had not dealt directly with MacPherson and thus owed no duty to him. Following trial and appellate court judgments in MacPherson's favor, Buick appealed to the New York Court of Appeals, the state's highest court.

Cardozo, Justice The foundations of this branch of the law were laid in *Thomas v. Winchester* (1852). A poison was falsely labeled. The sale was made to a druggist, who sold to a customer. The customer recovered damages from the seller who affixed the label. The defendant's negligence, it was said, put human life in imminent danger. A poison, falsely labeled, is likely to injure anyone who gets it. Because the danger is to be foreseen, there is a duty to avoid the injury. *Thomas v. Winchester* became quickly a landmark of the law. In the application of its principle there may, at times, have been uncertainty or even error. There has never been doubt or disavowal of the principle itself.

The chief cases are well known. *Loop v. Litchfield* (1870) was the case of a defect in a small balance wheel used on a circular saw. The manufacturer pointed out the defect to the buyer. The risk can hardly have been an imminent one, for the wheel lasted five years before it broke. In the meanwhile the buyer had made a lease of the machinery. It was held that the manufacturer was not answerable to the lessee. *Loop v. Litchfield* was followed by *Losee v. Clute* (1873), the case of the explosion of a steam boiler. That decision must be confined to its special facts. It was put upon the ground that the risk of injury was too remote. The buyer had not only accepted the boiler, but had tested it. The manufacturer knew that his own test was not the final one. The finality of the test has a bearing on the measure of diligence owing to persons other than the purchaser.

These early cases suggest a narrow construction of the rule. Later cases evince a more liberal spirit. In *Devlin v. Smith* (1882), the defendant contractor built a scaffold for a painter. The painter's workmen were injured. The contractor was held liable. He knew that the scaffold, if improperly constructed, was a most dangerous trap. He knew that it was to be used by the workmen. Building it for their use, he owed them a duty to build it with care. From *Devlin v. Smith* we turn to *Statler v. Ray Manufacturing Co.* (1909). The defendant manufactured a large coffee urn. It was installed in a restaurant. The urn exploded and injured

the plaintiff. We held that the manufacturer was liable. We said that the urn was of such a character that it was liable to become a source of great danger if not carefully and properly constructed.

It may be that *Devlin v. Smith* and *Statler v. Ray Manufacturing Co.* have extended the rule of *Thomas v. Winchester.* If so, this court is committed to the extension. The defendant argues that things imminently dangerous to human life are poisons, explosives, deadly weapons—things whose normal function is to injure or destroy. But whatever the rule in *Thomas v. Winchester* may once have been, it no longer has that restricted meaning. A scaffold is not inherently a destructive instrument. No one thinks of [a coffee urn] as an implement whose normal function is destruction.

We hold, then, that the principle of *Thomas v. Winchester* is not limited to things which are implements of destruction. If the nature of a thing is such that it is reasonably certain to place life and limb in peril when negligently made, it is a thing of danger. If to the element of danger there is added knowledge that the thing will be used by persons other than the purchaser, then, irrespective of contract, the manufacturer is under a duty to make it carefully.

The nature of an automobile gives warning of probable danger if its construction is defective. This automobile was designed to go 50 miles an hour. Unless its wheels were sound and strong, injury was almost certain. The defendant knew the danger. It knew that the car would be used by persons other than the buyer, a dealer in cars. The dealer was indeed the one person of whom it might be said with some certainty that by him the car would not be used. Yet the defendant would have us say that he was the one person it was under a legal duty to protect. The law does not lead us to so inconsequent a conclusion. Precedents drawn from the age of travel by stagecoach do not fit the conditions of travel today. The principle that the danger must be imminent does not change, but the things subject to the principle do change. They are whatever the needs of life in a developing civilization require them to be.

Judgment for MacPherson affirmed.

Statutory Interpretation

Because statutes are written in one authoritative form, their interpretation might seem easier than case law reasoning. However, this is not so. One reason courts face difficulties when interpreting statutes is the natural ambiguity of language. This is especially true when statutory words are applied to situations the legislature did not foresee. Also, legislators may deliberately use ambiguous language when they are unwilling or unable to deal specifically with each situation the statute was enacted to regulate. When this happens, the legislature expects courts and/or administrative agencies to fill in the details on a case-by-case basis. Other reasons for deliberate ambiguity include the need for legislative compromise and legislators' desire to avoid taking controversial positions.

Due to problems like these, courts need and use various techniques of statutory interpretation. As you will see shortly, different techniques can dictate different results in a particular case. Moreover, judges sometimes employ the techniques in an instrumentalist or result-oriented fashion, emphasizing the technique that will produce the result they want and downplaying the others. Thus, it is unclear which technique should control when different techniques yield different results. Although there are some "rules" on this subject, judges often ignore them or use them selectively.

Plain Meaning Courts begin their interpretation of a statute with its actual language. Where the statute's words have a clear, common, accepted meaning, some courts employ the *plain meaning rule.* This rule states that in such cases, the court should simply apply the statute according to the plain, accepted meaning of its words, and should not concern itself with anything else.

Legislative History Some courts, like the Supreme Court in the following *Weber* case, refuse to follow a statute's plain meaning when its legislative history suggests a different result. And almost all courts resort to legislative history when the statute's language is ambiguous. A statute's legislative history includes

the following sources: the reports of investigative committees or law revision commissions that led to the legislation, the hearings of the legislative committee(s) originally considering the legislation, any reports issued by such a committee, legislative debates, the report of a conference committee reconciling two houses' conflicting versions of the law, amendments or defeated amendments to the legislation, other bills not passed by the legislature but proposing similar legislation, and discrepancies between a bill passed by one house and the final version of the statute.

Sometimes a statute's legislative history provides no information or conflicting information about its meaning, its scope, or its purposes. Also, some sources are more authoritative than others. The worth of debates, for instance, may depend on which legislator (e.g., the sponsor of the bill or an uninformed blowhard) is quoted. Some sources are useful only in particular situations; prior unpassed bills and amendments or defeated amendments are examples. To illustrate those sources, consider whether mopeds are covered by an air pollution statute applying to "automobiles, trucks, buses, and other motorized passenger or cargo vehicles." If the statute's original version included mopeds but this reference was removed by amendment, it is unlikely that the legislature wanted mopeds to be covered. The same might be true if six similar unpassed bills had included mopeds but the bill that was eventually passed did not, or if one house had passed a bill including mopeds but mopeds did not appear in the final version of the legislation.

Courts use legislative history in two overlapping but distinguishable ways. They may use it to determine what the legislature thought about the specific meaning of statutory language. They may also use it to determine the overall aim, end, or goal of the legislation. In this second case, they then ask whether a particular interpretation of the statute is consistent with this purpose. To illustrate the difference between these two uses of legislative history, suppose that a court is considering whether our pollution statute's "other motorized passenger or cargo vehicles" language includes battery-powered vehicles. The court might scan the legislative history for specific references to battery-powered vehicles or other indications of what the legislature thought about their inclusion. However, the court might also use the same history to determine the overall aims of the statute, and then ask whether including battery-powered vehicles is consistent with those aims. Because the history probably would reveal that the statute's purpose was to reduce air pollution from internal combustion engines, the court might well conclude that battery-powered vehicles should not be covered.

General Public Purpose Occasionally, courts construe statutory language in the light of various *general public purposes*. These purposes are not the purposes underlying the statute in question; rather, they are widely accepted general notions of public policy. In one case, for example, the U.S. Supreme Court used the general public policy against racial discrimination in education as one argument for denying tax-exempt status to a private university that discriminated on the basis of race.[10]

Prior Interpretations Courts sometimes follow prior cases (and administrative decisions) interpreting a statute regardless of the statute's plain meaning or its legislative history. The main argument for following these prior interpretations is to promote stability and certainty by preventing each successive court that considers a statute from adopting its own interpretation. The courts' willingness to follow a prior interpretation depends on such factors as the number of past courts adopting the interpretation, the authoritativeness of those courts, and the number of years that the interpretation has been followed. Note that in *Weber,* the Supreme Court arguably did not follow one of its own prior interpretations.

Maxims Maxims are general rules of thumb employed in statutory interpretation. There are many maxims, and courts tend to use them or ignore them at their discretion. One example of a maxim is the *ejusdem generis* rule, which says that when general words follow words of a specific, limited meaning, the general language should be limited to things of the same class as those specifically stated. Suppose that the pollution statute quoted earlier listed 32 types of gas-powered vehicles and ended with the words "and other motorized passenger or cargo vehicles." Here, *ejusdem generis* probably would dictate that battery-powered vehicles not be included.

[10] *Bob Jones University v. United States,* 461 U.S. 574 (1983).

United Steelworkers v. Weber *443 U.S. 193 (U.S. Sup. Ct. 1979)*

As part of its collective bargaining agreement with the United Steelworkers of America, the Kaiser Aluminum and Chemical Company established a new on-the-job craft training program at its Gramercy, Louisiana plant. The selection of trainees for the program was based on seniority, but at least 50 percent of the new trainees had to be black until the percentage of black skilled craft workers in the plant approximated the percentage of blacks in the local labor force.

Brian Weber was a rejected white applicant who would have qualified for the program had the racial preference not existed. He sued Kaiser and the union in federal district court, arguing that the racial preference violated Title VII of the 1964 Civil Rights Act. Section 703(a) of the act stated: "It shall be an unlawful employment practice for an employer . . . to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin." Section 703(d) had a similar provision specifically forbidding racial discrimination in admission to apprenticeship or other training programs. Weber's suit was successful, and the federal court of appeals affirmed. Kaiser and the union appealed to the U.S. Supreme Court.

Brennan, Justice The only question before us is whether Title VII forbids private employers and unions from voluntarily agreeing upon bona fide affirmative action plans that accord racial preferences in the manner and for the purpose provided in the Kaiser-USWA plan. That question was expressly left open in *McDonald v. Santa Fe Trail Transp. Co.* (1976), which held, in a case not involving affirmative action, that Title VII protects whites as well as blacks from racial discrimination.

Weber argues that Congress intended in Title VII to prohibit all race-conscious affirmative action plans. His argument rests upon a literal interpretation of sections 703(a) and (d) of the act. Those sections make it unlawful to discriminate because of race in the selection of apprentices for training programs. Since, the argument runs, *McDonald* settled that Title VII forbids discrimination against whites as well as blacks, and since the Kaiser-USWA plan discriminated against white employees solely because they are white, it follows that the plan violates Title VII.

Weber's argument is not without force. But it overlooks the fact that the Kaiser-USWA plan is an affirmative action plan voluntarily adopted by private parties to eliminate traditional patterns of racial segregation. It is a familiar rule, that a thing may be within the letter of the statute and yet not within the statute, because not within its spirit. Sections 703(a) and (d) must therefore be read against the background of the legislative history of Title VII and the historical context from which the act arose. Examination of these sources makes clear that an interpretation that forbade all race-conscious affirmative action would bring about an end completely at variance with the purpose of the statute and must be rejected.

Congress's primary concern in enacting the prohibition against racial discrimination in Title VII was the plight of the Negro in our economy. Before 1964, blacks were largely relegated to unskilled and semi-skilled jobs. Because of automation the number of such jobs was rapidly decreasing. As a consequence the relative position of the Negro worker was steadily worsening. Congress feared that the goal of the Civil Rights Act—the integration of blacks into the mainstream of American society—could not be achieved unless this trend were reversed. Accordingly, it was clear to Congress that the crux of the problem was to open employment opportunities for Negroes in occupations which have traditionally been closed to them, and it was to this problem that Title VII's prohibition against racial discrimination in employment was primarily addressed.

Given this legislative history, we cannot agree with Weber that Congress intended to prohibit the private sector from taking effective steps to accomplish the goal that Congress designed Title VII to achieve. It would be ironic indeed if a law triggered by a nation's concern over centuries of racial injustice and intended to improve the lot of those who had been excluded from the American dream for so long, constituted the first legislative prohibition of

all voluntary, private, race-conscious efforts to abolish traditional patterns of racial segregation and hierarchy.

We need not define the line between permissible and impermissible affirmative action plans. It suffices to hold that the challenged plan falls on the permissible side of the line. The purposes of the plan mirror those of the statute. Both were designed to break down old patterns of racial segregation and hierarchy, and to open employment opportunities for Negroes in occupations which have been traditionally closed to them. At the same time the plan does not unnecessarily trammel the interests of the white employees. Nor does the plan create an absolute bar to the advancement of white employees; half of those trained in the program will be white. Moreover, the plan is a temporary measure. Preferential selection of craft trainees will end as soon as the percentage of black skilled craft workers approximates the percentage of blacks in the local labor force. We conclude therefore that the plan falls within the area of discretion left by Title VII to the private sector voluntarily to adopt affirmative action plans designed to eliminate conspicuous racial imbalance in traditionally segregated job categories.

Judgment reversed in favor of Kaiser and the union.

Limits on the Power of Courts

By now, you may think that anything goes when courts decide common law cases or interpret statutes. However, many factors discourage courts from adopting a totally freewheeling approach. Due to their legal training and mental makeup, judges tend to respect established precedents and the will of the legislature. Many courts issue written opinions, which expose judges to academic and professional criticism. Lower court judges may be discouraged from innovation by the fear of being overruled by a higher court. Finally, political factors inhibit judges. For example, some judges are elected, and even judges with lifetime tenure can sometimes be removed.

An even more fundamental limit on the power of courts is that they cannot make law until some parties present them with a case to decide. In addition, any such case must be a real dispute. That is, courts generally limit themselves to genuine, existing "cases or controversies" between real parties with tangible opposing interests in the lawsuit. Thus, courts generally do not issue *advisory opinions* on abstract legal questions unrelated to a genuine dispute, and do not decide *feigned controversies* that parties concoct to get answers to such questions. Also, courts may refuse to decide suits that are insufficiently *ripe* to have matured into a genuine controversy, or that are *moot* because there no longer is a real dispute between the parties. Expressing similar ideas is the doctrine of **standing to sue,** which generally requires that the plaintiff have some direct, tangible, and substantial stake in the outcome of the suit.

Nonetheless, state and federal **declaratory judgment** statutes allow parties to determine their rights and duties even though their controversy has not advanced to the point where harm has occurred and legal relief may be necessary. This enables them to determine their legal position without taking action that could expose them to liability. For example, if Joan thinks that she is not obligated to perform her contract to Jim, she may seek a declaratory judgment on the question rather than risk Jim's lawsuit by breaking the contract. Usually, though, a declaratory judgment is awarded only when the parties' dispute is sufficiently advanced to constitute a real case or controversy.

Ethical and Public Policy Concerns

1. What might be troubling about the result in this chapter's *Rochin* case? (*Hint:* Today, what aspect of the case is commonly regarded as one of the country's most serious problems?) As discussed in Chapter 4, moral philosophers sometimes distinguish *deontological* ethical theories from *consequentialist* (or teleological) ethical theories. Strict or extreme deontological theories say that certain actions are right or wrong and should be pursued or avoided, no matter what the consequences of doing so. Consequentialist theories, on the other hand, assess the moral worth of actions by looking to their consequences. Which of these approaches best describes the Supreme Court's decision in *Rochin?*

2. Earlier in this chapter, we quoted Justice Holmes's statement that "[t]he first requirement of a sound body of law is, that it should correspond with the actual feelings and demands of the community, whether right or wrong." This statement may mean that the law should reflect prevailing moral views, whatever they happen to be. What is good about such an approach to the law and to lawmaking? What is bad about it?

3. Legal positivists often say that even morally bad laws are still law and that such laws (or some of them, at least) should still be enforced and obeyed. What *moral* arguments can you make for this position?

Appendix
Reading and Briefing Cases

Throughout this text, you encounter cases—the judicial opinions accompanying court decisions. These cases are highly edited versions of their much longer originals. What follows are a few explanations and pointers to assist you in studying cases.

1. Each case has a *case name* that includes at least some of the parties to the case. Because the order of the parties may change when a case is appealed, do not assume that the first party listed is the plaintiff (the party suing) and the second the defendant (the party being sued). Also, because some cases have many plaintiffs and/or many defendants, the parties discussed in the court's opinion sometimes differ from those found in the case name.

2. Each case also has a *citation,* which includes the volume and page number of the legal reporter in which the full case appears, plus the year the case was decided. *United Steelworkers v. Weber,* for instance, begins on page 193 of volume 443 of the United States Reports (the official reporter for U.S. Supreme Court decisions), and was decided in 1979. (Each of the many different legal reporters has its own abbreviation, and they are too numerous to include here.) In the parenthesis accompanying the date, we also give you some information about the court that decided the case. For example: "U.S. Sup. Ct." is the United States Supreme Court, "3d Cir." is the U.S. Court of Appeals for the Third Circuit, "S.D.N.Y." is the U.S. District Court for the Southern District of New York, "Minn. Sup. Ct." is the Minnesota Supreme Court, and "Mich. Ct. App." is the Michigan Court of Appeals (a Michigan intermediate appellate court). Chapter 2 describes the various kinds of courts.

3. At the beginning of each case, there is a *statement of facts* containing the most important facts that gave rise to the case.

4. Immediately after the statement of facts, we give you the case's *procedural history.* (Chapter 2 discusses civil procedure and Chapter 5 discusses criminal procedure.) Basically, this history tells you what courts previously handled the case you are reading, and how they dealt with it.

5. Next comes your major concern: the *body of the court's opinion.* Here, the court typically determines the applicable law and applies it to the facts to reach a conclusion. The court's discussion of the relevant law may be elaborate; it can include prior cases, legislative history, applicable public policies, and more. The court's application of the law to the facts usually occurs after it has arrived at the applicable legal rule(s), but also may be intertwined with its legal discussion.

6. At the very end of the case, we complete the procedural history by stating the court's *decision.* For example, "Judgment reversed in favor of Smith" says that a lower court judgment against Smith was reversed on appeal, which means that Smith's appeal was successful and Smith wins.

7. The cases' main function is to provide concrete examples of rules stated in the text. (Frequently, the text tells you what point the case illustrates.) In studying law, it is easy to conclude that your task is finished once you have memorized a black letter rule. In real life, however, legal problems rarely present themselves as abstract questions of law; instead, they are hidden in particular situations you encounter or particular actions you take. Without some sense of a legal rule's real-life application, therefore, your knowledge of that rule is incomplete. The cases help provide this sense.

8. You may find it helpful to *brief* the cases. There is no one correct way to brief a case, but most good briefs contain the following elements: (1) a short statement of the relevant facts, (2) the case's prior history, (3) the question(s) or issue(s) the court had to decide, (4) the answer(s) to those question(s), (5) the reasoning the court used to justify its decision, and (6) the final result. Using "P" and "D" for the plaintiff and defendant, a brief of the *Weber* case might look like this:

United Steelworkers v. Weber (p. 15)

Facts The Ds were a private employer and a union that had voluntarily established a craft training program through a collective bargaining agreement. The procedures for selecting the program's trainees favored black workers over white workers by establishing an effective 50 percent quota for the former. P, a white worker who was denied access to the program, would have qualified had the racial preference not existed.
History P sued the Ds under Title VII of the 1964 Civil Rights Act, which forbids employment discrimination on the basis of race. He won in federal district court and the court of appeals affirmed. The Ds appealed to the U.S. Supreme Court.
Issue Does this voluntary racial preference favoring blacks violate Title VII's ban on racial discrimination in employment?
Answer No.
Reasoning Even though Title VII's plain meaning favors P and a prior interpretation holds that Title VII forbids racial discrimination against both whites and blacks, neither point is decisive. The reason is that holding for P would frustrate Title VII's purpose. Title VII's legislative history and its historical context make clear that its aim was to integrate blacks into the American mainstream. This was especially true in the area of employment, an area in which blacks were falling behind. The Ds' preference helped further this purpose because it helped blacks get better jobs, and declaring the preference illegal would have frustrated the purpose.
Result Court of appeals decision reversed; Ds win.

Problems and Problem Cases

1. In which way do administrative regulations resemble statutes? In which way do they differ from statutes?

2. Suppose that Congress passes a federal statute that conflicts with a state constitutional provision. The state argues that the constitutional provision should prevail over the statute because constitutions are a higher, more authoritative kind of law than statutes. Is this argument correct? Why or why not?

3. Suppose that someone objects to the president's promulgation of an executive order by claiming that the U.S. Constitution only gives the president the power to *execute* the laws, not the power to make them. What concept explains the president's power to make law through executive orders? Explain its meaning.

4. State A passes a statute declaring that those who sell heroin are to receive a mandatory 30-year prison sentence. Describe this statute in terms of the three classifications of law stated in the text—criminal/civil, substantive/procedural, and public/private.

5. Nation X is a dictatorship in which one ruler has the ultimate lawmaking power. The ruler issues a statute declaring that certain religious minorities are to be exterminated. An international convocation of jurisprudential scholars meets to discuss the question, "Is Nation X's extermination statute truly law?" What would be the typical natural law answer to this question? What would be the typical legal positivist response? Assume that all of those present at the convocation think that Nation X's statute is morally wrong.

6. Nation Y has enacted positive laws forbidding all abnormal sexual relations between consenting adults. However, the police of Nation Y rarely enforce these laws, and even when they do, prosecutors never bring charges against violators. What observation would American legal realists make about this situation? In order to determine what a believer in natural law would think about these laws, what else would you have to know?

7. Many states and localities used to have so-called Sunday Closing laws—statutes or ordinances forbidding the conduct of certain business on Sunday. A few may still do so. Often, these laws have not been obeyed or enforced. What would an extreme legal positivist tend to think about the duty to enforce and obey such laws? What would a natural law exponent who strongly believes in economic freedom tend to think about this question? What about a natural law adherent who is a Christian religious traditionalist? What observation would almost any American legal realist make about Sunday Closing laws? Looking at these laws from a sociological perspective, finally, what social factors help explain their original passage, their relative lack of enforcement today, and their continuance on the books despite their lack of enforcement?

8. The Supreme Court of State X is about to decide on the constitutionality of a statute restricting some controversial activity. Three of the court's justices—Justices A, B, and C—are taking the coming decision

very seriously. In an effort to determine the true rule of law that governs the case, Justice A is reading and rereading all the relevant precedents and legislative history. In order to determine what result is morally right, Justice B is reading books on moral philosophy. To determine what the public thinks, finally, Justice C is reading every available public opinion poll on the behavior at issue in the case. Which jurisprudential schools do Justices A, B, and C most nearly exemplify?

9. Although you would not know this from reading the *MacPherson* case in this chapter, two of the cases mentioned there distinguished *Thomas v. Winchester* (the case involving the falsely labeled poison) in a certain way. The courts in *Loop v. Litchfield* (the circular saw case) and *Losee v. Clute* (the steam boiler case) both distinguished *Thomas v. Winchester* because in *Thomas,* the thing that caused the injury—a poison—was *by its nature intended to cause harm.* In other words, these courts held that a poison should be treated differently from a circular saw that flies apart, or an exploding steam boiler. If the relevant public policy here is to allow recovery for injuries caused by highly dangerous products, does this distinction make any sense?

10. In 1910, the White Slave Traffic Act (usually known as the Mann Act) went into effect. Congress passed the act in response to an alleged white slave traffic in which gangs of certain nationalities were said to be forcing or luring American women into prostitution. One portion of the act stated that "any person who shall knowingly transport or cause to be transported . . . any woman or girl for the purpose of prostitution or debauchery, or for any other immoral purpose, . . . shall be deemed guilty of a felony." In 1913, F. Drew Caminetti was indicted for transporting a woman from Sacramento, California, to Reno, Nevada, to be his mistress. Which technique of statutory interpretation would you use in arguing that Caminetti is guilty under the Mann Act? Which technique would you use to argue that Caminetti should not be guilty under the act?

Most business law courses deal mainly with substantive legal rules—laws that tell people how to behave in organized social life. Examples include the rules of property, contract, tort, and agency law, as well as federal regulation of business. Most of these rules are civil law rules—rules the courts apply in suits between private parties. But what about the courts themselves? And what about the *procedures* courts follow in civil cases? This chapter discusses these and related matters. One of these related subjects, *alternative dispute resolution,* concerns a collection of processes for resolving private disputes outside the regular court system.

State Courts and Their Jurisdiction

The United States has 52 court systems—a federal system, plus a system for each state and the District of Columbia. This section describes the various kinds of

state courts. It also considers the kinds of cases they have power to resolve, or their *jurisdiction.*

Courts of Limited Jurisdiction

Minor criminal matters and civil disputes involving small amounts of money frequently are decided in *courts of limited jurisdiction* (also called courts of inferior or special jurisdiction). Examples include justice of the peace courts, traffic courts, probate courts, and small claims courts. Such courts often handle a large number of cases. Their procedures may be informal, the presiding judicial officer may not be a lawyer, and the parties may argue their own cases. Also, courts of limited jurisdiction usually are not courts of record; that is, they ordinarily do not keep a transcript of the testimony and proceedings. Thus, appeals from their decisions require a new trial (a trial *de novo*) in a trial court.

Trial Courts

Courts of limited jurisdiction find the relevant facts, identify the appropriate rule(s) of law, and combine the facts and the law to reach a decision. State trial courts do the same, but differ from inferior courts in at least three ways. First, they are not governed by the limits on civil damages or criminal penalties that govern courts of limited jurisdiction. Thus, cases involving significant dollar amounts or major criminal penalties usually begin at the trial court level. Second, trial courts are courts of record that keep detailed records of their proceedings. Third, the trial court judge almost always is a lawyer. The trial court's fact-finding function may be handled by the judge or by a jury. Determination of the applicable law is the judge's responsibility.

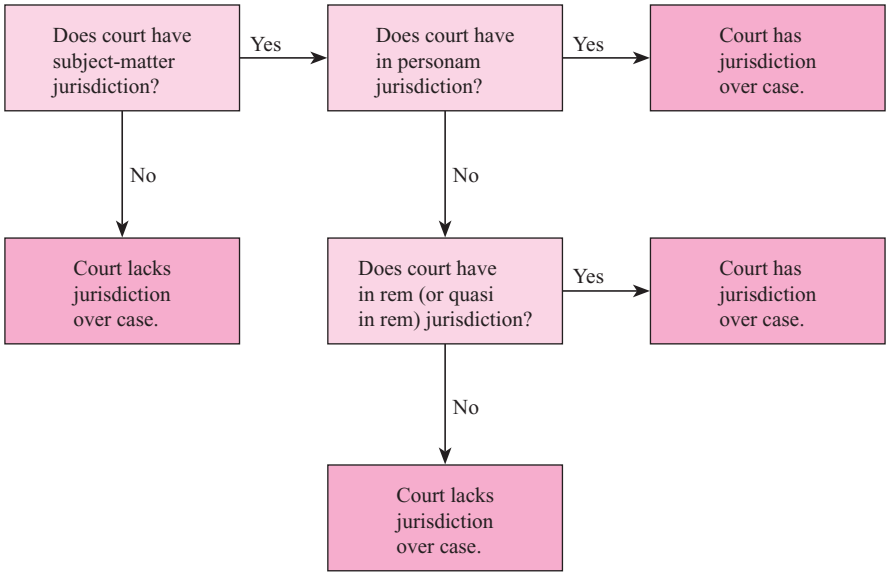
States usually have one trial court for each county. It may be called a circuit, superior, district, county, or common pleas court. Most state trial courts can hear a wide range of civil and criminal cases. They may have civil and criminal divisions. If no court of limited jurisdiction deals with these matters, state trial courts may also contain other divisions such as domestic relations courts, probate courts, and the like.

State Appeals Courts

In general, state appeals (or appellate) courts only decide legal questions. They have no jury and their judges do not find the facts. Thus, while appellate courts can correct legal errors made by the trial judge, they usually accept the trial court's findings of fact. Appellate courts also may hear appeals from state administrative agency decisions. Some states have only one appeals court (usually called the supreme court), while others also have an intermediate appellate court. The U.S. Supreme Court sometimes hears appeals from decisions of the state's highest court.

State Court Jurisdiction and Venue

The party who sues in a civil case (the plaintiff) cannot sue the defendant (the party being sued) in any court he chooses. Instead, the chosen court must have **jurisdiction** over the case. Jurisdiction is a court's power to hear a case and to issue a decision binding on the parties. As Figure 1 suggests, in order to render a binding decision in a civil case, a state court must have *both:* (1) subject-matter jurisdiction, and (2) *either* in personam jurisdiction *or* in rem jurisdiction. Even if a court has jurisdiction, it also must meet the state's **venue** requirements in order for the suit to proceed there.



Subject-Matter Jurisdiction **Subject-matter jurisdiction** is a court's power to decide the *type* of dispute involved in the case. Criminal courts, for example, cannot hear civil matters, and a $500,000 suit for breach of contract cannot proceed in a small claims court.

In Personam Jurisdiction Even a court with subject-matter jurisdiction cannot decide a civil case unless it also has either **in personam jurisdiction** or **in rem jurisdiction.** In personam jurisdiction is based on the residence, location, or activities of the defendant. A state court has in personam jurisdiction over defendants who are citizens or residents of the state (even if situated out-of-state), who are within the state's borders when process is served against them (even if nonresidents),[1] or who consent to the suit (for instance, by entering the state to defend against it).[2]

In addition, many states have enacted "long-arm" statutes that give their courts in personam jurisdiction over certain out-of-state defendants. Under these statutes, nonresident individuals and businesses become subject to the state's jurisdiction by, for example,

[1]Service of process is discussed later in the chapter.
[2]In some states, however, out-of-state defendants may make a *special appearance* to challenge the court's jurisdiction without consenting to that jurisdiction.

Figure 1 *State Court Jurisdiction*

Knowles v. Modglin *553 So. 2d 563 (Ala.Sup.Ct. 1989)*

Albert Knowles, an Alabama truck driver, died of natural causes in California while hauling produce from Alabama to California. After Knowles's body was discovered inside his truck, it was taken to Hems Brothers Mortuaries, where an autopsy was performed by Damon Reference Laboratories at the request of the local coroner. Both Hems and Damon did business in California. After a request from an Alabama funeral home, Hems prepared Knowles's body for shipment and arranged for it to be flown to his home town. Hems billed the Alabama funeral home for these services and for the price of a casket; it also mailed a statement to Knowles's wife.

Mrs. Knowles did not view her husband's body after its return to Alabama and before its burial, and no one positively identified the body as that of Mr. Knowles during this period. After the burial, Mrs. Knowles received an autopsy report from Damon describing a body that was different from her husband's body. As a result, she had the buried body exhumed and personally viewed it to verify that it was her husband's body—which it was. However, Mrs. Knowles also found that the body had been buried nude, had been packed in cotton in a "disaster pouch," was terribly discolored, and was lying in an awkward position. She described it as looking like "a monster."

Mrs. Knowles then sued Hems and Damon in an Alabama trial court for the wrongful mishandling of her husband's body. Both Damon and Hems had no contacts with Alabama other than those just described, and each moved to dismiss the claim because the court lacked in personam jurisdiction. After the court granted Damon's motion but denied Hems's motion, both Mrs. Knowles and Hems appealed to the Alabama Supreme Court.

Houston, Justice The issue is whether, consistent with the Due Process Clause of the Fourteenth Amendment to the United States Constitution, the defendants have sufficient contacts with this state to make it fair and reasonable to require them to come here to defend against the present action. Due process requires that to subject a defendant to a judgment in personam, he have certain minimum contacts with it such that the maintenance of the suit does not offend traditional notions of fair play and substantive justice. Alabama's long-arm statute has been interpreted to extend the jurisdiction of Al-

abama courts to the permissible limits of due process.

A relevant factor in a due process analysis is whether the defendant should have reasonably anticipated that he would be sued in the forum state. In determining [this question], it is essential that there be some act by which the defendant purposefully avails itself of the privilege of conducting activities within the forum state, thus invoking the benefits and protections of its laws. Other relevant factors include the burden placed on the defendant, the interest of the forum state in adjudicating the dispute, the plaintiff's interest in obtaining convenient and effective relief, and the interstate judicial system's interest in obtaining the most efficient resolution of the controversy.

The trial court did not err in dismissing Damon for lack of in personam jurisdiction. It does not appear that Damon ever had any contacts with Alabama, with the exception of mailing the autopsy report to Mrs. Knowles. Damon could not have reasonably anticipated that Mr. Knowles's body would make its way to Alabama, that it would not be positively identified by anyone before burial, and that, thereafter, Damon would be haled into an Alabama court to defend against a suit based on a misdescription contained in the autopsy report.

However, Hems established significant contacts with this state by agreeing to prepare and ship Mr. Knowles's body here. In addition, Hems sold Mrs. Knowles a casket, and later solicited payment by mail in Alabama. Hems purposefully availed itself of the privilege of conducting business in Alabama [and] should have reasonably anticipated being summoned to an Alabama court to answer any charges of misconduct in the handling and shipment of Mr. Knowles's body. Furthermore, given the progress in communications and transportation in recent years, we cannot say that it would be unduly burdensome for Hems to defend against the suit in an Alabama court. Considering the nature of Hems's activity, the resultant foreseeability of its being required to defend an action in Alabama, the obvious interest of the plaintiff in obtaining convenient and effective relief, and the relative lack of inconvenience that would be incurred by Hems in appearing and defending, it is fair and reasonable to require Hems to defend against this action in Alabama.

Trial court decision dismissing Mrs. Knowles's suit against Damon for lack of jurisdiction and finding jurisdiction over Hems affirmed.

doing business within the state, contracting to supply goods or services within the state, or committing a tort (a civil wrong) within the state. As the preceding *Knowles* case indicates, a state's assertion of in personam jurisdiction over an out-of-state defendant is subject to federal due process standards.

In Rem Jurisdiction **In rem jurisdiction** is based on the presence of *property* within the state. It empowers state courts to determine rights in that property even if the persons whose rights are affected are outside the state's in personam jurisdiction. For example, a state court's decision regarding title to land within the state is said to bind the world.[3]

Venue Even where a court has jurisdiction, it may be unable to decide the case because **venue** requirements have not been met. Venue presupposes jurisdiction, and venue questions only arise once jurisdiction is established or assumed. In general, a court has venue if it is a territorially fair and convenient forum in which to hear the case. Venue requirements typically are set by state statutes, which normally determine the county in which suit must be brought. For instance, the statute might say that a suit concerning land must be brought in the county where the land is located, and that other suits must be brought in the county where the defendant resides or is doing business. In certain cases where justice so requires,

[3]Another form of jurisdiction, *quasi in rem jurisdiction* or *attachment jurisdiction,* also is based on the presence of property within the state. Unlike cases based on in rem jurisdiction, cases based on quasi in rem jurisdiction do not necessarily determine rights in the property itself. Instead, the property is regarded as an extension of the out-of-state defendant, which enables the court to decide claims unrelated to the property. For example, a plaintiff might attach the defendant's bank account in the state where the bank is located, sue the defendant on a tort or contract claim unrelated to the bank account, and recover the amount of the judgment from the account if the suit is successful.

the defendant may obtain a *change of venue.* This can occur when, for example, a fair trial is impossible within a particular county.

Federal Courts and Their Jurisdiction

Federal District Courts

In the federal system, lawsuits usually begin in the federal district courts, which basically are federal trial courts. Like state trial courts, the federal district courts determine both the facts and the law. The fact-finding function may be entrusted to either the judge or a jury, but determining the law is the judge's responsibility. Each state has at least one district court, and each district court has at least one judge.

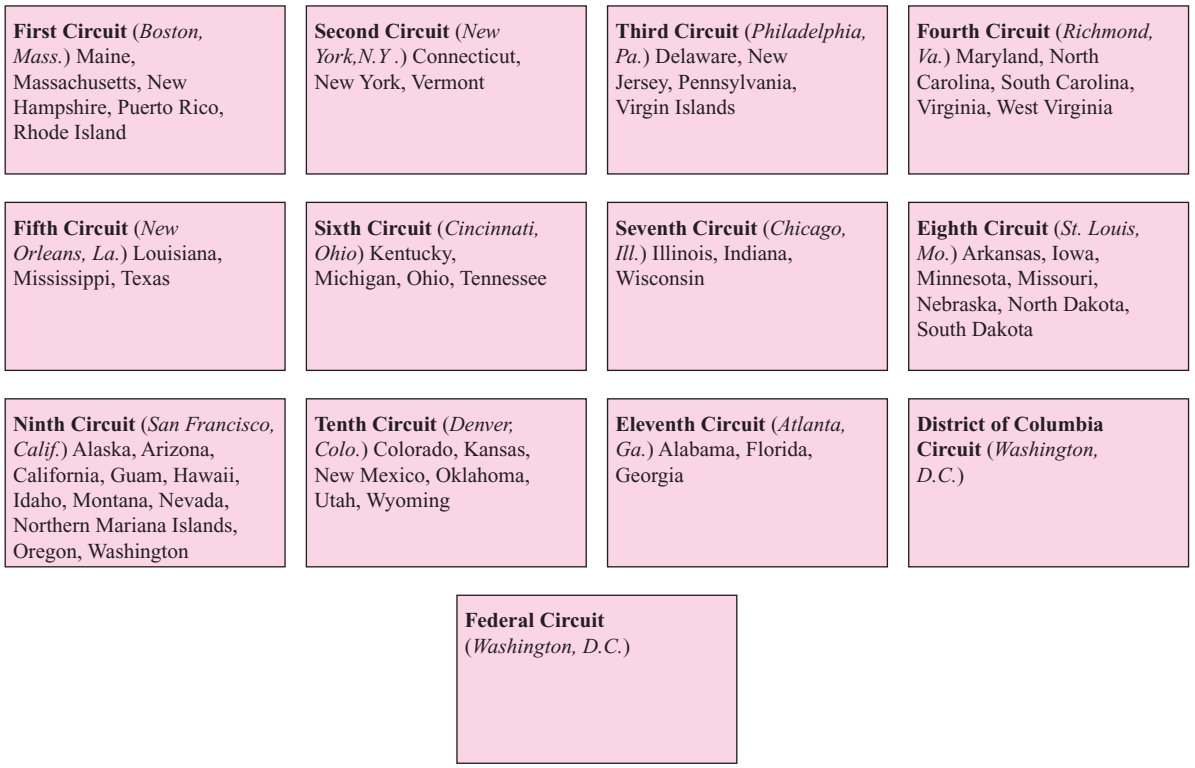
District Court Jurisdiction There are many bases of federal district court civil jurisdiction. The two most important are **diversity jurisdiction** and **federal question jurisdiction.** One traditional justification for diversity jurisdiction is to protect out-of-state defendants from potentially biased state courts. Diversity jurisdiction exists when: (1) the suit is between citizens of different states, and (2) the amount in controversy exceeds $75,000. Diversity jurisdiction also exists in certain suits between citizens of a state and citizens or governments of foreign nations where the amount in controversy exceeds $75,000. Under diversity jurisdiction, a corporation normally is a citizen of both the state where it has been incorporated and the state where it has its principal place of business.

Federal question jurisdiction exists when the case arises under the Constitution, laws, or treaties of the United States. The "arises under" requirement normally is met when a right created by federal law is a basic part of the plaintiff's case. There is no amount-in-controversy requirement for federal question jurisdiction.

A district court's diversity or federal question jurisdiction usually includes only those defendants who would be subject to the in personam jurisdiction of the state where the district court sits. Further limiting the plaintiff's choice of federal district courts are the federal system's complex venue requirements, which are beyond the scope of this text.

Concurrent Jurisdiction and Removal The federal district courts have *exclusive jurisdiction* over some matters—for example, patent and copyright cases. This means that such cases must be heard in federal district court. Often, however, the district courts have *concurrent jurisdiction* with state courts; here, both state and federal courts have jurisdiction over the case. For example, a plaintiff might assert state court in personam jurisdiction over an out-of-state defendant or might sue in a federal district court under that court's diversity jurisdiction. Also, a state court may decide a case involving a federal question if it has jurisdiction over that case. Where concurrent jurisdiction exists and the plaintiff opts for a state court, the defendant sometimes can *remove* the case to an appropriate federal district court.

Specialized Federal Courts



The federal court system also includes certain specialized federal courts, including the Court of Federal Claims (which hears claims against the United States), the Court of International Trade (which is concerned with tariff, customs, import and other trade matters), the Bankruptcy Courts (which operate as adjuncts of the district courts), and the Tax Court (which reviews certain IRS determinations). Usually, the decisions of these courts can be appealed to one or more of the federal courts of appeals.

Federal Courts of Appeals

Like state intermediate appellate courts, the U.S. courts of appeals do not find the facts, and they review only the legal conclusions reached by lower federal courts. As Figure 2 illustrates, there are 13 federal courts of appeals: 11 organized territorially into circuits covering several states each, one for the District of Columbia, and the Court of Appeals for the Federal Circuit.

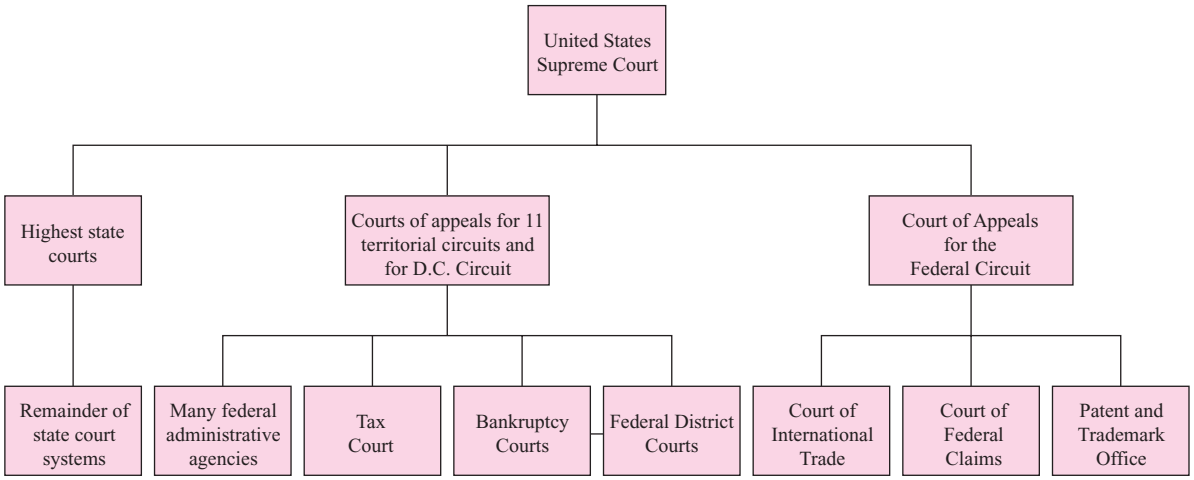
Except for the Court of Appeals for the Federal Circuit, the most important function of the U.S. courts of appeals is to hear appeals from decisions of the federal district courts. Appeals from a district court ordinarily proceed to the court of appeals for that district court's region. Appeals from the District Court for the Southern District of New York, for example, go to the Second Circuit Court of Appeals. The courts of appeals also hear appeals from the Tax Court, from many administrative agency decisions, and (via appellate panels they appoint) from some Bankruptcy Court decisions. The Court of Appeals for the Federal Circuit hears a wide variety of specialized appeals, including

Figure 2 *The Thirteen Federal Judicial Circuits*

some patent and trademark matters, Court of Federal Claims decisions, and decisions by the Court of International Trade.

The U.S. Supreme Court

The United States Supreme Court mainly is an appellate court. Thus, it considers only questions of law when it decides appeals. Most of the appeals handled by the Supreme Court come from the federal courts of appeals and the highest state courts.[4] Today, most appealable decisions from these courts fall within the Supreme Court's *certiorari* jurisdiction, under which the Court has discretion whether or not to hear the appeal. The Court hears only a small percentage of the many appeals it receives through its certiorari jurisdiction.



Virtually all appeals from the federal courts of appeals are within the Court's discretionary certiorari jurisdiction. Appeals from the highest state courts are within the certiorari jurisdiction when: (1) the validity of any treaty or federal statute has been questioned; (2) the validity of any state statute is questioned because it is repugnant to federal law; or (3) any title, right, privilege, or immunity is claimed under federal law. The Supreme Court usually defers to the highest state courts on questions of state law and does not hear appeals from those courts if the case involves only such questions.

In certain rare situations, finally, the U.S. Supreme Court has **original jurisdiction,** which means that it acts as a trial court. The Supreme Court has *original and exclusive* jurisdiction over all controversies between two or more states. It has *original,* but not exclusive, jurisdiction over cases involving foreign ambassadors, ministers, and like parties; controversies between the United States and a state; and cases where a state proceeds against citizens of another state or against aliens.

Figure 3 combines the federal and state court systems.

[4]There are, however, situations in which the Supreme Court will hear appeals directly from the federal district courts.

Figure 3 *A Simplified Model of the State and Federal Court Systems*

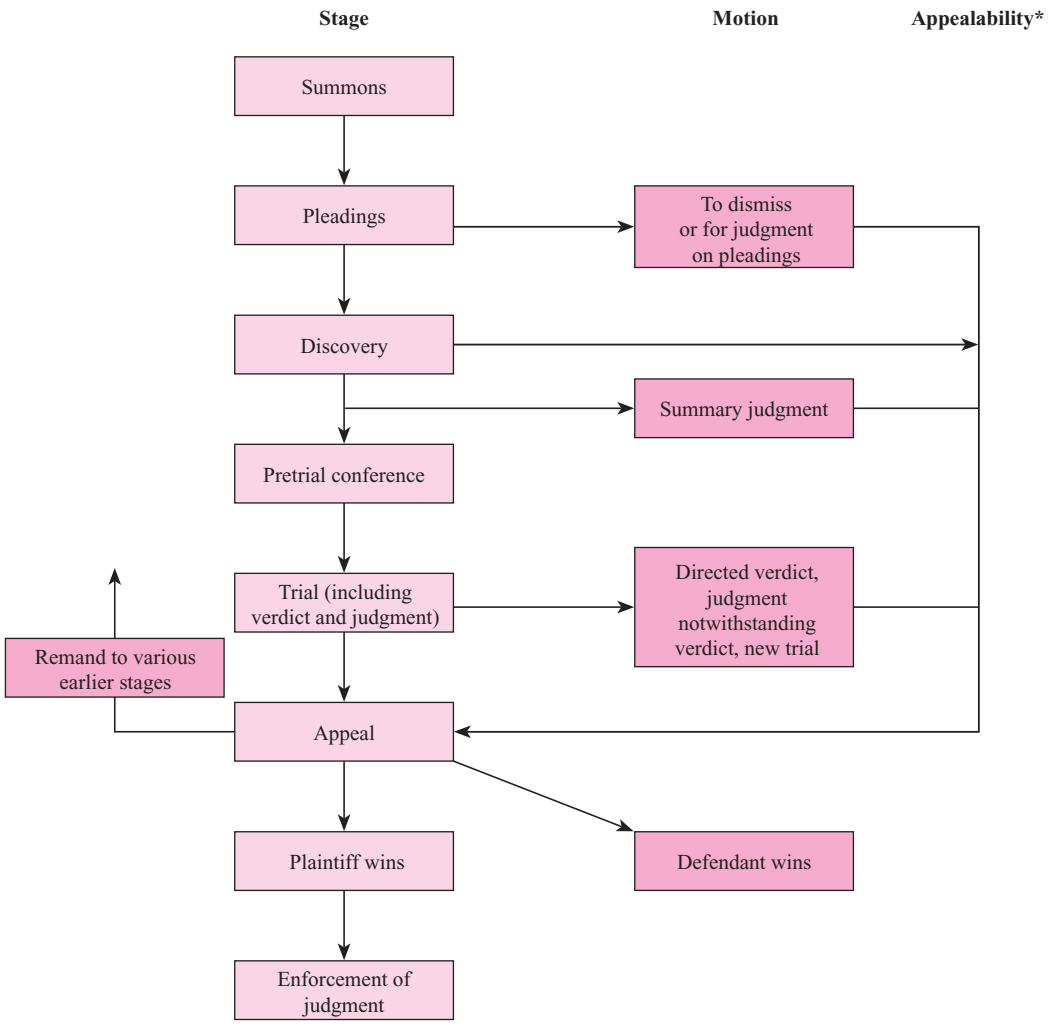
Civil Procedure

Civil procedure is the set of legal rules governing the conduct of a trial court case between private parties.[5] Because this law sometimes varies with the jurisdiction in question,[6] the following presentation merely summarizes the most widely accepted rules governing civil cases in state trial courts and the federal district courts. Knowing about these basic procedural matters is useful if you become involved in a civil lawsuit. Such knowledge also helps you understand the cases in this text. Figure 4 presents the major steps through which a civil case normally proceeds and the most significant motions the parties (or *litigants*) can make at each step.

In any civil case, the *adversary system* is at work. Through their attorneys, the litigants present contrary positions of fact or law before a theoretically impartial judge and possibly a jury. To win a civil case, the plaintiff must prove each element of his claim by a *preponderance of the evidence.*[7] That is, the plaintiff must show that the greater weight of the evidence—by credibility, not quantity—supports the existence of each element. In other words, the plaintiff must convince the fact finder that the existence of each factual element is more probable than its nonexistence. Thus, the lawyers for each party present their clients' version of the facts, try to convince the judge or jury that this version is true, and attempt to rebut conflicting factual allegations by the other party. Each attorney also seeks to persuade the judge that her reading of the law is correct.

Service of the Summons

The function of the **summons** is to notify the defendant that he is being sued. The summons typically names the plaintiff and states the time within which the defendant must enter an *appearance* in court (usually through her attorney). In most jurisdictions, it is accompanied by a copy of the plaintiff's complaint (which is described below).



The summons is usually delivered, or served, to the defendant by an appropriate public official after the plaintiff has filed his complaint with the court. To ensure that the defendant is properly notified of the suit, statutes, court rules, and constitutional due process guarantees set standards for proper service of the summons in particular cases. For example, personal delivery of the summons to the defendant almost always

[5]Criminal procedure is discussed in Chapter 5 and the procedures used before administrative agencies in Chapter 46.

[6]In the following discussion, the term *jurisdiction* refers to one of the 50 states, the District of Columbia, or the federal government.

[7]However, as discussed in Chapter 5, in a criminal case the government must prove the elements of the alleged crime *beyond a reasonable doubt.* Other burdens of proof—for example, the clear-and-convincing-evidence standard—exist as well.

Figure 4 *The Most Important Stages and Motions in Civil Litigation (Appeals Assumed)*

*As discussed later in the chapter, many other trial court rulings also are appealable.

meets these standards, and many jurisdictions also permit the summons to be left at the defendant's home or place of business. Service to corporations often may be accomplished by delivery of the summons to the firm's general or managing agent. Many state long-arm statutes permit out-of-state defendants to be served by registered mail. Although inadequate service of process may sometimes defeat the plaintiff's claim, in most jurisdictions the defendant must make his objection early or it will be waived.

The Pleadings

The **pleadings** are the documents the parties file with the court when they first state their respective cases. They include the **complaint,** the **answer,** and (in some jurisdictions) the **reply.** Traditionally, the pleadings' main function was to define and limit the issues to be decided by the court. Thus, only those issues raised in the pleadings were considered part of the case, amendments to the pleadings were rarely granted, and litigants

were bound to allegations admitted during the pleadings. Although many jurisdictions retain some of these rules, many also have relaxed them. The main reason is a new view about the purpose behind pleading rules—that their aim is less to define the issues for trial than to give the parties notice of each others' claims.

The Complaint The complaint states the plaintiff's claim in separate, numbered paragraphs. It must contain sufficient facts to show that the plaintiff is entitled to legal relief and to give the defendant reasonable notice of the nature of the plaintiff's claim. The complaint also must state the remedy requested by the plaintiff.

The Answer Unless the defendant makes a successful motion to dismiss (which is described later), she must file an answer to the plaintiff's complaint within a designated time after service of the complaint. The answer responds to the complaint paragraph by paragraph. Usually, it admits the allegations of each paragraph, denies them, or states that the defendant lacks the information to assess the truth or falsity of the allegations (which has much the same effect as a denial).

An answer may also include an **affirmative defense** to the claim asserted in the complaint. A successful affirmative defense enables the defendant to win the case even if all the allegations in the complaint are true and, by themselves, entitle the plaintiff to recover. For example, suppose that the plaintiff bases her suit on a contract that she alleges the defendant has breached (broken). The defendant's answer may admit or deny the existence of the contract or the assertion that the defendant breached it. In addition, the answer may make assertions that, if proven, would show that the defendant has an affirmative defense because the plaintiff's fraud induced the defendant to enter the contract.

Furthermore, the answer may contain a **counterclaim.**[8] A counterclaim is a *new* claim by the defendant arising from the matters stated in the complaint. Unlike an affirmative defense, it is not merely an attack on the plaintiff's claim, but is the defendant's attempt to obtain legal relief. In addition to using fraud as an affirmative defense to a plaintiff's contract claim, for example, a defendant might counterclaim for damages caused by that fraud.

The Reply In some jurisdictions, the plaintiff is allowed or required to respond to an affirmative defense or a counterclaim by making a reply. The reply is the plaintiff's point-by-point response (a kind of answer) to the allegations in the affirmative defense or counterclaim. However, many jurisdictions do not allow a reply to an affirmative defense; instead, the defendant's new allegations are automatically denied. Usually, though, a plaintiff who wishes to contest a counterclaim must reply to it.

Motion to Dismiss

Sometimes it is evident from the complaint or the pleadings that the plaintiff has no case. Here, it is wasteful for the suit to proceed further and it is useful to have a procedural device for ending it. This device has various names, but it is commonly called the **motion to dismiss.** This motion often is made after the plaintiff has filed his complaint. A similar motion allowed by some jurisdictions, the **motion for judgment on the pleadings,** normally occurs after the pleadings have been completed. A successful motion to dismiss means that the defendant wins the case; if the motion fails, the case proceeds further. Where an unsuccessful motion to dismiss was made immediately after the complaint, the defendant then must answer the complaint.

The motion to dismiss may be made on various grounds—for example, inadequate service of process or lack of jurisdiction. The most important type of motion to dismiss, however, is the motion to dismiss for failure to state a claim upon which relief can be granted, sometimes called the **demurrer.** This motion basically says "So what?" to the factual allegations in the complaint. It asserts that the plaintiff cannot recover even if all these allegations are true because no rule of law entitles him to win on those facts. Suppose that Potter sues Davis on the theory that Davis's bad breath is a form of "olfactory pollution" entitling Potter to recover damages. Potter's complaint describes Davis's breath and the distress it causes Potter in great detail. Even if all of Potter's factual allegations are true, Davis's motion to dismiss almost certainly will succeed. Thus, Davis will win the case, for there is no rule of law allowing a civil recovery for bad breath.

[8]The defendant also may file a *cross-claim* against another party who is a defendant in the plaintiff's suit, and also may file a *third-party complaint* against (or *implead*) some party who is not a defendant in the plaintiff's suit.

Discovery

Litigants sometimes lack the facts to prove their cases when the suit begins. To help them get those facts and to narrow and clarify the issues for trial, all jurisdictions permit the parties to undertake extensive **discovery** of relevant information. The most common kinds of discovery are **depositions** (oral examinations of a party or a party's witness by the other party's attorney), **interrogatories** (written questions directed to a party, answered in writing, and signed under oath), **requests for admissions** (one party's written demand that the other party agree to certain statements of fact or law), **requests for documents and other evidence,** and **physical and mental examinations.** The permissible limits of discovery are set by the trial judge, whose rulings are controlled by the procedural law of the jurisdiction. In an effort to make civil litigation less of a battle of wits or a sporting event and more of a disinterested search for the truth, many jurisdictions have liberalized their discovery rules to give parties freer access to all relevant facts.

The jurisdiction's law of evidence determines whether or when discovery findings are admissible trial evidence. However, almost all jurisdictions allow some discovery findings to be employed at trial for certain purposes. Depositions, for instance, may sometimes be used as "paper testimony" from dead or distant witnesses, or to attack the credibility of a witness whose trial testimony differs from statements she made at the deposition.

Summary Judgment

The **summary judgment** is a device for disposing of relatively clear cases without a trial. It differs from a demurrer because it involves factual determinations. To prevail, the party moving for a summary judgment must show that: (1) there is no genuine issue of material (legally significant) fact, and (2) he is entitled to judgment as a matter of law. A moving party satisfies the first element of the test by using the pleadings, discovery information, and affidavits (signed and sworn statements regarding matters of fact) to show that there is no real question about any significant fact. She satisfies the second element by showing that, given the established facts, the applicable law directs that she win.

Either or both parties may move for a summary judgment. If the court rules in favor of either party, that party wins the case. If no party's motion for summary judgment is granted, the case proceeds to trial. The judge may also grant a partial summary judgment, which settles some issues in the case but leaves the others to be decided at trial.

The Pretrial Conference

Depending on the jurisdiction, a **pretrial conference** is either mandatory or at the discretion of the trial judge. At this conference, the judge meets informally with the attorneys for both litigants. The judge may try to get the attorneys to stipulate, or agree to, the resolution of certain issues to simplify the trial. He may also encourage them to get their clients to settle the case by coming to an agreement that eliminates the need for a trial. If the case is not settled, the judge enters a pretrial order including the attorneys' stipulations and any other agreements. Ordinarily, this order binds the parties throughout the remainder of the case.

The Trial

Once the case has been through discovery and has survived any pretrial motions, it is set for trial. The trial may be before a judge alone, in which case the judge makes separate findings of fact and law before issuing the court's judgment. But if the right to a jury trial exists and either party demands one, the jury finds the facts while the judge continues to determine legal questions.[9] At a pretrial jury screening process known as *voir dire,* most jurisdictions: (1) allow biased potential jurors to be removed for cause, and (2) give the attorney for each party a certain number of *peremptory challenges,* which allow him to remove potential jurors without any cause.

The Basic Scenario At either a judge or a jury trial, the attorneys for each side typically begin by making opening statements explaining what they intend to prove. After this, the plaintiff's witnesses and other evidence are introduced and these witnesses are cross-examined by the defendant's attorney. This may be followed by the plaintiff's re-direct examination of his witnesses, and perhaps by the defendant's recross-

[9]The rules governing availability of a jury trial are largely beyond the scope of this text. The U.S. Constitution guarantees a jury trial in federal court suits "at common law" whose amount exceeds $20. Most of the states have similar constitutional provisions, often with a higher dollar amount. Also, Congress and the state legislatures may allow jury trials in various other cases.

examination of those same witnesses. Then, using the same procedures, the defendant's evidence is presented. Throughout each side's presentation, the opposing attorney may object to the admission of certain evidence. Using the law of evidence, the judge then decides whether the challenged proof is admissible. After the plaintiff and defendant have completed their initial presentations of evidence, each is allowed to offer evidence rebutting the other's evidence. Once all the evidence has been presented, each attorney makes a closing argument summarizing her position. In nonjury trials, the judge then makes findings of fact and law, renders judgment, and states the relief to which the plaintiff is entitled if the plaintiff is victorious.

Jury Trials Rather than proceeding to decide the case herself, the judge issues a **charge** or **instruction** to the jury at the end of a jury trial. The charge sets out the law applicable to the case. The judge may also summarize the evidence for the jury. Then the jury is supposed to make the necessary fact determinations, apply the law to these, and arrive at a **verdict** upon which the court's **judgment** is based.

The most common verdict is the **general verdict,** which requires only that the jury declare which party wins and the relief (if any) awarded. Because the jury need not state its factual findings or its application of the law to those findings, the general verdict gives the jury freedom to ignore the judge's charge and follow its own inclinations. Arguably, this freedom allows the jury to soften the law's rigors by bringing common sense and community values to bear on the case, but it also weakens the rule of law and allows juries to commit injustices. The **special verdict** is one response to this problem. Here, the jury only makes specific findings of fact, and the judge then applies the law to these findings. The decision whether to utilize a special verdict usually is within the trial judge's discretion.

Directed Verdict Although the general verdict gives the jury considerable power, the American legal system also has devices for limiting that power. The special verdict is one of these devices. Another, the **directed verdict,** essentially takes the case away from the jury and gives a judgment to one party before the jury gets a chance to decide. The motion for a directed verdict can be made by either party; it usually occurs after the other (nonmoving) party has presented her evidence. The moving party basically asserts that, even when read most favorably to the other party, the evidence leads to only one result and need not be considered by the jury. Courts differ on the test governing a motion for a directed verdict: some deny the motion if there is *any* evidence favoring the nonmoving party, while others deny the motion only if there is *substantial* evidence favoring the nonmoving party.

Judgment Notwithstanding the Verdict On occasion, the case is taken away from the jury and one party wins a judgment even after the jury has reached a verdict *against* that party. The device for doing so is the **judgment notwithstanding the verdict** (also known as the judgment *non obstante veredicto* or judgment n.o.v.). Some jurisdictions require that, in order to make a motion for judgment n.o.v, the moving party must previously have moved for a directed verdict. In any event, the standard used to decide the motion for judgment n.o.v. usually is the same standard the jurisdiction uses to decide the motion for a directed verdict.

Motion for a New Trial In a wide range of situations that vary among jurisdictions, the losing party can successfully move for a new trial. Acceptable reasons for granting a new trial include errors by the judge during the trial, jury or attorney misconduct, misapplication of the law, new evidence, or an award of excessive damages to the plaintiff.

Appeal

A final judgment generally prevents the parties from relitigating the same claim. But one or more parties still may appeal the trial court's decision. Normally, appellate courts consider only alleged errors of law made by the trial court. As Figure 4 indicated earlier in the chapter, among the matters ordinarily considered "legal" and thus appealable are the trial judge's decisions on a motion to dismiss or a motion for judgment on the pleadings, the scope of discovery, a motion for summary judgment, a motion for a directed verdict or for judgment notwithstanding the verdict, and a motion for a new trial. Other matters typically considered appealable include any trial court rulings on service of process, its rulings on the admission of evidence at trial, its legal findings in a nonjury trial, its instruction to the jury in a jury trial, and the damages or other relief awarded.

Among other things, appellate courts may *affirm* the trial court's decision, *reverse* it, or affirm one part of the decision and reverse another part. As Figure 4 also suggests, one of three things ordinarily results

Concept Review

The Major Civil Motions Compared

Motion	When Typically Made	By Whom Typically Made	Typical Test	Typical Effect if Successful
To Dismiss or for Judgment on the Pleadings	After complaint or pleadings	Defendant	Assuming the facts in the complaint are true, can plaintiff win as a matter of law?	Defendant wins case
For Summary Judgment	Varies; often after discovery	Either party	No genuine issue of material fact, and moving party entitled to judgment as a matter of law	Moving party wins case; partial summary judgment also possible
For Directed Verdict	After other party has presented evidence at trial	Either party	Two versions. Moving party loses if: (1) *any* evidence favoring nonmoving party; or (2) *substantial* evidence favoring nonmoving party	Moving party wins case
For Judgment Notwithstanding Verdict	After adverse jury verdict	Losing party	Same test jurisdiction uses for directed verdict	Moving party wins case
For New Trial	After adverse judgment or jury verdict	Losing party	Wide range of possible grounds	New trial ordered

from the appellate courts' disposition of an appeal: (1) the plaintiff wins the case; (2) the defendant wins the case; or (3) if the case is reversed in whole or in part, it is *remanded* (returned) to the trial court for further proceedings. For example, if the plaintiff appeals a trial court decision granting the defendant's motion to dismiss and the appellate court(s) affirm that decision, the plaintiff loses. On the other hand, where an appellate court reverses a trial court verdict and judgment in the defendant's favor, the plaintiff might win outright, or the case might be returned to the trial court for further proceedings not inconsistent with the appellate decision.

Enforcing a Judgment

In this text, you occasionally see cases in which someone was not sued even though he appeared to be liable to the plaintiff, and another party was sued instead. One explanation is that the first party was "judgment-proof"—so lacking in assets as to make a civil suit for damages impractical. The other party's financial condition also affects a winning plaintiff's ability to actually recover whatever damages she has been awarded.

When the defendant fails to pay as required after losing a civil suit, the winning plaintiff must enforce the judgment. Ordinarily, the plaintiff will obtain a *writ of execution* enabling the sheriff to seize designated property of the defendant and sell it at a judicial sale to satisfy the judgment. A judgment winner may also use a procedure known as *garnishment* to seize property, money, or wages of the defendant that are in the hands of a third party. If the property needed to satisfy the judgment is located in another state, the plaintiff must use that state's execution or garnishment procedures. Under the U.S. Constitution, the second state must give "full faith and credit" to the judgment of the state where the plaintiff originally sued. Finally, when the court has awarded an equitable remedy such as an injunction, the defendant may be found in contempt of court and subjected to a fine or imprisonment if he fails to obey the court's order.

Class Actions

So far, our civil procedure discussion has proceeded as if the plaintiff and the defendant each were a single party. Actually, several plaintiffs and/or defendants can be parties to one lawsuit. Also, each jurisdiction has procedural rules stating when other parties can be *joined* to a suit that begins without them.

One special type of multiparty suit, the **class action,** allows one or more persons to sue on behalf of themselves and all others who have suffered similar harm from substantially the same wrong. Class action suits by consumers, environmentalists, women, minorities, and other groups now are common events. The usual justifications for the class action are that: (1) it allows legal wrongs causing losses to a large number of widely dispersed parties to be fully compensated, and (2) it promotes economy of judicial effort by combining many similar claims into one suit.

The requirements for a class action vary among jurisdictions. The issues addressed by class action statutes include the following: whether there are questions of law and fact common to all members of the alleged class, whether the class is small enough to allow all of its members to join the case as parties rather than use a class action, and whether the plaintiff(s) and their attorney(s) can competently represent the class without conflicts of interest or other forms of unfairness. To protect the individual class members' right to be heard, some jurisdictions have required that unnamed or absent class members be given notice of the suit if this is reasonably possible. The damages awarded in a successful class action usually are apportioned among the entire class. Establishing the total recovery and distributing it to the class, however, pose problems when the class is large, the class members' injuries are indefinite, or some members cannot be identified.

Alternative Dispute Resolution

Courts are not the only devices for resolving civil disputes. Nor are they always the best means of doing so. Settling private disputes through the courts can be a cumbersome, lengthy, and expensive process for litigants. With the advent of a litigious society and the increasing caseloads it has produced, handling disputes in this fashion also imposes ever-greater social costs. For these reasons and others, the various forms of **alternative dispute resolution (ADR)** have assumed increasing importance in recent years. Proponents of ADR cite many considerations in its favor—for example: (1) quicker resolution of disputes; (2) lower costs in time, money, and aggravation for the parties; (3) reduced strain on an overloaded court system; (4) the ability to use decisionmakers with specialized expertise; and (5) flexible compromise decisions that promote and reflect consensus between the parties. Those who are skeptical of ADR worry about its potential for sloppy, biased, and/or lawless decisions. They also worry that it may sometimes mean second-class justice for ordinary people who deal with powerful economic interests. Sometimes, for example, agreements to submit disputes to alternative dispute resolution are buried in complex standard-form contracts drafted by a party with superior size, knowledge, and business sophistication and are unknowingly agreed to by less knowledgeable parties. Such clauses may compel ADR proceedings before decisionmakers who are biased in favor of the stronger party.

Common Forms of ADR

Settlement The settlement of a civil suit is not everyone's idea of an alternative dispute resolution mechanism. But it is an important means of avoiding protracted litigation, one that often is a sensible compromise for the parties. Many cases settle at some stage in the civil proceedings described previously. The typical settlement agreement is a contract whereby the defendant agrees to pay the plaintiff a sum of money, in exchange for the plaintiff's promise to release the defendant from liability on the claims in his suit. Although courts want to enforce settlement agreements, such agreements still must satisfy the requirements of contract law discussed later in this text. In some cases, moreover, the court must approve the settlement in order for it to be enforceable. Examples include class actions and litigation involving minors.

Arbitration Arbitration is the submission of a dispute to a neutral, nonjudicial third party (the *arbitrator*) who issues a binding decision resolving the dispute. Arbitration usually results from the parties' agreement. That agreement normally is made before

the dispute arises (most often through an *arbitration clause* in a contract), but it can occur after the dispute begins. Arbitration may also be compelled by statute. One example is the *compulsory arbitration* many states require as part of the collective bargaining process for certain public employees.

Arbitration usually is less formal than regular court proceedings. The arbitrator need not be an attorney; often, she is a professional who may be expert in the subject matter of the dispute. Although arbitration hearings often resemble civil trials, the applicable procedures, the rules for admission of evidence, and the record-keeping requirements typically are not as rigorous as those governing courts. Also, arbitrators have some freedom to ignore rules of substantive law that would bind a court.

The arbitrator's decision, called an *award,* is filed with a court, which will enforce it if necessary. The losing party may object to the arbitrator's award, but the courts' review of arbitration proceedings is limited. Possible grounds for overturning an arbitration award include: (1) its procurement by fraud, (2) the arbitrator's partiality or corruption, and (3) other misconduct by the arbitrator (e.g., refusing to hear relevant evidence).

Court-Annexed Arbitration In this form of ADR, certain kinds of civil lawsuits are diverted into arbitration. One example might be cases in which less than a specified dollar amount is at issue. Most often, court-annexed arbitration is mandatory and is ordered by the judge, but some jurisdictions merely offer litigants the option of arbitration. The losing party in a court-annexed arbitration still has the right to a regular trial.

Mediation In mediation, a neutral third party called a *mediator* helps the parties reach an agreeable, cooperative resolution of their dispute by facilitating communication between them, clarifying their areas of agreement and disagreement, helping them to see each other's viewpoints, suggesting settlement options, and so forth. Unlike arbitrators, mediators cannot make decisions that bind the parties. Instead, a successful mediation process typically results in a *mediation agreement.* Such agreements normally are enforced under regular contract law principles.

Mediation is used in a wide range of situations, including labor, commercial, family, and environmental disputes. It may occur by agreement of the parties after a dispute has arisen. It also may result from a previous contractual agreement by the parties. Increasingly, moreover, court-annexed mediation is either compelled or made available by courts in certain cases.

Summary Jury Trial Sometimes settlement of civil litigation is impeded because the litigants have different perceptions about the merits of their cases. In such cases, the summary jury trial may give either or both parties a needed dose of reality. As its name suggests, the summary jury trial is an abbreviated, nonpublic mock jury trial that does not bind the parties. Often, this "trial" occurs before a real judge, with jurors chosen from the regular pool of jurors. If the parties do not settle after completion of the summary jury trial, they still are entitled to a regular court trial. Also, there is some disagreement over whether courts can compel the parties to undergo a summary jury trial in the first place.

Minitrial A minitrial is an informal, abbreviated private "trial" whose aim is to promote settlement of disputes. Normally, it arises out of a private agreement that also describes the procedures to be followed. In the typical minitrial, counsel for the parties present their cases to a panel composed of senior management from each side. Sometimes a neutral advisor such as an attorney or a retired judge presides. This party may also offer an opinion about the case's likely outcome in court. After the presentations, the managers try to negotiate a settlement.

Other ADR Devices

Other ADR devices include: (1) *med/arb* (a hybrid of mediation and arbitration in which the third party first acts as a mediator, and then as an arbitrator); (2) the appointment of *magistrates* and *special masters* to perform various tasks during complex litigation in the federal courts; (3) *early neutral evaluation* (ENE) (a court-annexed procedure involving early, objective evaluation of the case by a neutral private attorney with experience in its subject matter); (4) *private judging* (in which litigants hire a private referee to issue a decision that may be binding but that usually does not preclude some recourse to the courts); and (5) *private panels* instituted by an industry or an organization to handle claims of certain kinds (e.g., the Better Business Bureau). Also, some formally legal processes are sometimes called ADR devices; examples include

small claims courts and the administrative procedures used to handle claims for veterans' benefits or Social Security benefits.

Ethical and Public Policy Concerns

1. As you might expect, the arguments against ADR often come from the legal profession. Are these self-serving arguments? Who stands to lose money and influence if ADR becomes more popular? Assuming that these arguments are self-serving, is this fact alone enough to rebut them?

2. The *Knowles* case earlier in this chapter used a style of legal reasoning different from the simple deductive model presented in Chapter 1. This style, which might be called *factor-based balancing,* appears from time to time in this text. Courts using this style of reasoning typically consider several factors (values or policy goals) when deciding. They assess a particular result in light of each factor, trying to determine whether that result advances or frustrates the values embodied in each factor. Then, they try to assess the overall desirability of that result by weighing its positive and negative effects against each other and determining whether the result has a positive or negative effect on balance. Such determinations naturally vary depending on the facts of the case. In *Knowles,* the decision was easy, for almost all the factors the court considered pulled in the same direction.

What is good about this kind of legal decision making? What is bad about it?

3. As noted in Chapter 4, debates in the ethics and business ethics literature have sometimes involved clashes between *utilitarian* ethical theories and *deontological rights-based* ethical theories. Utilitarians normally say that we should maximize total satisfaction, and they tend to approve measures that disadvantage particular individuals so long as those measures actually produce the most overall satisfaction. Such theories occasionally use social wealth maximization as a rough measure of total satisfaction. Deontological rights-based theories generally urge that some rights are so important that they can only be overridden by certain other rights, and *not* by maximum total utility.

Speaking generally, into which category would many foes of ADR fit? Assume that these people oppose ADR because they feel that due to the sloppiness of its procedures, it causes injustices to individuals—injustices that could be avoided were normal court procedures used. Although the use of such procedures costs more money than ADR, they assert, this is of no consequence because basic issues of justice are involved.

Speaking generally, into which category would many proponents of ADR fit? Assume that these people stress the social and economic costs created by the court system and argue that the widespread use of ADR would free money and resources for other purposes, thus making people wealthier and happier. This increased wealth and happiness, they would add, easily outweigh the personal suffering caused by whatever injustices ADR permits.

Problems and Problem Cases

1. Peters sues Davis. At trial, Peters's lawyer attempts to introduce certain evidence to help make his case. Davis's attorney objects, and the trial judge refuses to allow the evidence to be admitted. Peters eventually loses the case at the trial court level. He appeals, his attorney arguing that the trial judge's decision not to admit the evidence was erroneous. Davis's attorney argues that the appellate court cannot consider this question, because appellate courts review only errors of *law* (not fact) at the trial court level. Is Davis's attorney correct? Why or why not?

2. Phillips sues Dilks for $500,000 in a state small claims court set up to handle cases where the amount in controversy does not exceed $5,000. The court clearly does not have jurisdiction over the case. What *kind* of jurisdiction is absent here?

3. Dial, a resident of Indiana, vandalizes a parked car in Columbus, Ohio. This action results in harm to the car, and also prevents the owner from using it for a period of time. In the meantime, Dial has fled to Indiana and remains there. The owner, an Ohio resident, plans to sue Dial for trespass to personal property, a tort described in Chapter 6. He claims $5,000 in damages, and wants to sue either in an Ohio trial court or in a federal district court. Do each of these courts have jurisdiction over the case? Why or why not? Assume for purposes of this problem that: (a) subject-matter jurisdiction is present, (b) Dial has had no other contacts with the state of Ohio, and (c) Ohio has a long-arm statute with all the features described in the chapter.

4. Paul sues Dicken in a state trial court in Smith County. Both Paul and Dicken have spent their entire lives inside the state in question. Both parties live in Jones County, and the land at issue also is located there. Smith County is 200 miles from Jones County. Dicken's attorney argues that the Smith County trial court lacks *jurisdiction* over the case because the land in question is not located in Smith County. Is Dicken's attorney correct?

5. State two differences between the motion to dismiss for failure to state a claim upon which relief can be granted (or demurrer) and the motion for summary judgment.

6. In a suit by Pierce against Dodge, the jury has rendered a verdict in favor of Dodge. Pierce and her attorney think that the evidence was overwhelmingly in Pierce's favor. They also have reason to believe that the jury was bribed by someone connected with Dodge. What two motions can Pierce's attorney make in an attempt to overturn the jury's verdict?

7. While driving to work one day, Dember runs over Pearson, causing him severe injuries. Pearson sues Dember in a state trial court. His complaint alleges that Dember's negligent driving caused his injuries. The law of the state declares that if the plaintiff's own negligence contributed to his injury, the defendant has a complete defense and the plaintiff cannot recover. Dember wants to argue that whether he was negligent or not, Pearson's own negligence helped cause his injuries and that Pearson therefore has no case. In order to be *sure* of his ability to raise this argument at trial, what should Dember's attorney do in response to Pearson's complaint?

8. What is the main difference between a motion for a directed verdict and a motion for judgment notwithstanding the verdict?

9. The state of Mississippi is planning to sue the state of Massachusetts. Mississippi's attorney general wants to sue in an appropriate federal district court. Do the federal district courts have jurisdiction over this case? If not, which federal court does have jurisdiction? You can assume that Mississippi's suit involves issues of federal law, and that the amount in controversy exceeds $75,000.

10. Jackson was born in Texas but has had absolutely no contact with that state for 20 years. Jackson's father dies, and a Texas court interprets his will so that Jackson receives none of his father's property, which is located in Texas. Assume that the court had jurisdiction to make this decision. What *kinds* of jurisdiction did it have?

11. Pike sues Dillon, alleging that his parked car was destroyed due to Dillon's negligent driving. After the pleadings and discovery have been completed, Pike's attorney concludes that the case is an obvious winner on both the facts and the law. What motion should the attorney make in an attempt to win the case without having to go to trial?

12. Does ADR really resolve disputes without any help from the courts? Give two examples of ADR processes that depend on courts for their operation or their effectiveness and state how they depend on the courts.

- *C. Federal Preemption*

VII. The Takings Clause

Constitutions serve two general functions. They set up the structure of government, allocating power among its various branches and subdivisions. Constitutions also prevent government from taking certain actions—especially actions that restrict individual rights. As the following overview of its provisions suggests, the U.S. Constitution performs both these functions.[1] This chapter examines how the Constitution's performance of these functions affects government regulation of business.

[1]Appendix A to this book contains the text of the U.S. Constitution.

An Overview of the U.S. Constitution

The U.S. Constitution exhibits the principle of **separation of powers** by giving distinct powers to Congress, the president, and the federal courts. Thus, Article I of the Constitution establishes a Congress composed of a Senate and a House of Representatives, gives it sole power to legislate at the federal level, and sets out rules for the passage of legislation. Also, Article I, section 8 defines when Congress can make law by stating its *legislative powers.* Three of those powers—Congress's commerce, tax, and spending powers—are discussed later in this chapter.

Article II of the Constitution gives the president the *executive power*—the power to execute or enforce the laws passed by Congress. Section 2 of that article lists some other presidential powers, including the powers to command the nation's armed forces and to make treaties. Article III gives the *judicial power* of the United States to the Supreme Court and the other federal courts later established by Congress. Article III also determines the kinds of cases the federal courts can decide.

In addition to creating a separation of powers, Articles I, II, and III of the Constitution also set up a system of **checks and balances** among Congress, the president, and the courts. For example, Article I, section 7 gives the president the power to veto legislation passed by Congress, and also allows Congress to override such a veto by a two-thirds vote of each House. Article I, section 3 and Article II, section 4 provide that the president, the vice president, and other federal officials may be removed from office by a two-thirds vote of the Senate. Article II, section 2 says that treaties made by the president must be approved by a two-thirds vote of the Senate. Article III, section 2 gives Congress some control over the Supreme Court's appellate jurisdiction.

Sometimes, the U.S. Constitution also recognizes the principle of **federalism** in the way it structures power relations between the federal government and the states. Article I, section 9 lists certain powers that Congress cannot exercise. The Tenth Amendment provides that those powers the Constitution neither gives to the federal government nor denies to the states are reserved to the states or the people.

Article VI, however, makes the Constitution, laws, and treaties of the United States supreme over state law. As discussed later in this chapter, this means that where the Constitution gives Congress the power to legislate, this principle of **federal supremacy** allows federal statutes to *preempt* inconsistent state laws. The U.S. Constitution also puts specific limits on the states' lawmaking powers. One example from this chapter is Article I, section 10's command that no state shall pass any law impairing the obligation of contracts.

Article V sets the procedures for amending the Constitution. By now, the Constitution has been amended 26 times. The first 10 of these amendments comprise the Bill of Rights. Although the rights stated in the first 10 amendments once applied to the federal government alone, most of them now apply to the states as well. As you will learn, this is due to their *incorporation* within the Due Process Clause of the Fourteenth Amendment, which applies to the states.

The Evolution of the Constitution and the Role of the Supreme Court

According to Chapter 1's legal realists, written "book law" is less important than what public decision makers *actually do.* Using this approach, we discover a Constitution that differs from the written Constitution just described. For example, the actual powers of today's presidency exceed anything you would expect from reading Article II. As you will see throughout the chapter, moreover, some constitutional provisions now have a different practical meaning than they did when first enacted. American constitutional law is much more evolving than static.

Many of these changes result from the way one public decisionmaker—the U.S. Supreme Court—has interpreted the Constitution over time. In theory, constitutional change can be accomplished through the formal amendment process. Because this process is difficult to use, however, amendments to the Constitution have been relatively infrequent. For better or worse, therefore, the Supreme Court has been the Constitution's main amender. Many factors help explain the Supreme Court's ability and willingness to play this role. Due to their vagueness, some key constitutional provisions invite diverse interpretations; "due process of law" and "equal protection of the laws" are examples. Also, the history surrounding the enactment of constitutional provisions sometimes is sketchy, confused, or contradictory. Probably more important, however, is the perceived need to adapt the Constitution to changing social conditions. As the old saying goes, Supreme Court decisions tend to follow the election returns.

Under the power of **judicial review,** courts can declare the actions of other government bodies unconstitutional. How courts exercise this power depends on how they choose to read the Constitution. This means that courts—especially the Supreme Court—have political power. Indeed, the Supreme Court's nine justices

basically are public policymakers. Thus, their beliefs are important in determining how America is governed. This is why the justices' nomination and confirmation often involve so much political controversy.

But even though the Constitution frequently is what the Supreme Court says it is, the Court's power to shape the Constitution has limits. Some of these limits spring from the Constitution's language, which sometimes is quite clear. Others spring from the judges' adherence to the doctrine of *stare decisis* discussed in Chapter 1. Perhaps the most significant limits on judges' power, however, result from the tension between modern judicial review and democracy. Legislators are chosen by the people, while judges usually are unelected. Today, however, judges exercise political power by declaring the actions of legislatures unconstitutional under standards that are largely of the judiciary's own devising. This naturally leads to charges that courts are undemocratic, elitist institutions, and those charges put political constraints on courts. Those constraints exist because the Supreme Court and other courts depend on the other branches of government—and ultimately on public belief in judges' fidelity to the rule of law—to make their decisions effective. Thus, federal judges may be inhibited from declaring federal statutes unconstitutional because they are wary of power struggles with a more representative body such as Congress.

The Coverage and Structure of This Chapter

This chapter examines certain constitutional provisions that are important to business; it does not discuss constitutional law in its entirety. These provisions help define federal and state power to regulate the economy. The U.S. Constitution limits government regulatory power in two general ways. First, it restricts *federal* legislative authority by listing the powers Congress can exercise and restricting it to these **enumerated powers.** To be constitutional, that is, federal legislation must be based on a power specifically stated in the Constitution. Second, the U.S. Constitution limits both *state and federal* power by placing certain **independent checks** in the path of each. In effect, the independent checks declare that even if Congress has an enumerated power to act in a particular area or a state constitution authorizes a state to act in a certain way, there still are certain protected spheres into which neither can reach.

As Figure 1 suggests, therefore, a federal law must meet two general tests in order to be constitutional: (1) it must be based on an enumerated power of Congress, and (2) it must not collide with any of the independent checks. For example, Congress has the power to regulate commerce among the states. By itself, this power might allow Congress to pass legislation forbidding women from crossing state lines to buy or sell goods. But such a law, although arguably based on an enumerated power, surely would be unconstitutional. The reason is that it conflicts with an independent check—the equal protection guarantee discussed later in the chapter. Today, the independent checks are the main limitations on congressional power. The most important reason for the 20th-century decline of the enumerated powers limitation is the perceived need for active federal regulation of economic and social life. Recently, however, the enumerated powers limitation has begun to assume a bit more importance.

This chapter begins by discussing the most important state and federal powers to regulate economic matters. Next, the chapter examines certain independ-

Figure 1 *Enumerated Powers and Independent Checks*

	Law Does Not Conflict with Any Independent Check	Law Conflicts with an Independent Check
Law Is within Congress's Enumerated Powers	Law is constitutional	Law is unconstitutional
Law Is Not within Congress's Enumerated Powers	Law is unconstitutional	Law is unconstitutional

ent checks that apply to both the federal government and the states. After this, it discusses some independent checks affecting the states alone. The chapter concludes by treating a provision—the Takings Clause of the Fifth Amendment—that both recognizes a governmental power and limits its exercise.

State and Federal Power to Regulate

State Regulatory Power

Although state constitutions may do so, the U.S. Constitution does not list the powers state legislatures can exercise. However, the U.S. Constitution does place certain independent checks in the path of state lawmaking. It also declares that certain powers (e.g., creating currency and taxing imports) can be exercised only by Congress. In many other areas, though, Congress and the state legislatures have *concurrent powers.* Within those areas, both can make law unless Congress preempts state regulation under the supremacy clause. A very important state legislative power that operates concurrently with many congressional powers is the **police power.** The police power is a broad state power to regulate for the public health, safety, morals, and welfare.

Federal Regulatory Power

Article I, section 8 of the U.S. Constitution specifies a number of ways in which Congress can legislate concerning business and commercial matters. For example, it empowers Congress to coin and borrow money, regulate commerce with foreign nations, establish uniform laws regarding bankruptcies, create post offices, and regulate copyrights and patents. However, the most important congressional powers contained in Article I, section 8 are the powers to regulate commerce among the states, to lay and collect taxes, and to spend for the general welfare. Because they now are read so broadly, these three powers are the main constitutional bases for the extensive federal social and economic regulation that exists today.

The Commerce Power Article I, section 8 states that "The Congress shall have Power . . . To regulate Commerce . . . among the several States." The original reason for giving Congress this power to regulate *interstate commerce* was to block the protectionist state restrictions on interstate trade that were common after the Revolution and thus to nationalize economic life. This *commerce clause* has two major thrusts. First, as discussed later in the chapter, it is an independent check on state regulation that unduly restricts interstate commerce. Our present concern is the second aspect of the commerce clause—its role as a source of congressional regulatory power.

By its literal language, the commerce clause simply gives Congress power to regulate commerce that occurs among the states. Today, however, the clause basically is an all-purpose federal police power enabling Congress to regulate most activities within a state's borders (*intra*state matters). How has this transformation occurred?

The most important step in the transformation was the Supreme Court's conclusion that the power to regulate *interstate* commerce includes the power to regulate *intrastate* activities that affect interstate commerce. For example, in the *Shreveport Rate Cases* (1914), the Supreme Court upheld the Interstate Commerce Commission's regulation of railroad rates within Texas (an intrastate matter outside the language of the commerce clause) because those rates affected rail traffic between Texas and Louisiana (an interstate matter within the clause's language). Eventually, this "affecting commerce" doctrine was used to justify federal police power measures with a great intrastate reach. Over 30 years ago, for example, the Supreme Court upheld the application of the 1964 Civil Rights Act's "public accommodations" section to a family-owned restaurant in Birmingham, Alabama. It did so because the restaurant's racial discrimination affected interstate commerce by: (1) reducing the restaurant's business and limiting its purchases of out-of-state meat, and (2) restricting the ability of blacks to travel among the states.

As this example suggests, Congress now can regulate intrastate activities even though they have relatively little impact on commerce among the states. In our highly interdependent society, almost all intrastate activities have some effect on interstate commerce. This has led some people to believe that the intrastate reach of the commerce clause is virtually unlimited. In the following *Lopez* case, however, the Supreme Court made it clear that the commerce power still has some limits.

United States v. Lopez *514 U.S. 549 (U.S. Sup. Ct. 1995)*

Alfonso Lopez carried a concealed .38 caliber handgun and five bullets into his high school in San Antonio, Texas. For this, he was arrested and charged with violating section 922(q) of the federal Gun-Free School Zones Act of 1990, which forbids the knowing possession of a firearm within a school zone. After being found guilty of violating this statute, Lopez appealed his conviction. His argument was that section 922(q) was unconstitutional because it exceeded Congress's legislative power under the commerce clause. Agreeing with this argument, the Fifth Circuit Court of Appeals reversed Lopez's conviction. The government then appealed to the U.S. Supreme Court.

Rehnquist, Chief Justice The Constitution creates a federal government of enumerated powers. As James Madison wrote, "[t]he powers delegated by the proposed Constitution to the federal government are few and defined. Those which are to remain in the State governments are numerous and indefinite." This division of authority was adopted by the Framers to ensure protection of our fundamental liberties. Just as the separation and independence of the coordinate branches of the federal government serve to prevent the accumulation of excessive power in any one branch, a healthy balance of power between the states and the federal government will reduce the risk of tyranny and abuse from either front.

The Constitution delegates to Congress the power "[t]o regulate commerce with foreign Nations, and among the several States, and with the Indian Tribes." Congress's commerce authority includes the power to regulate those activities having a substantial relation to interstate commerce. The government's essential contention is that section 922(q) is valid because possession of a firearm in a local school zone substantially affect[s] interstate commerce. First, the costs of violent crime are substantial, and through the mechanism of insurance, those costs are spread throughout the population. Second, violent crime reduces the willingness of individuals to travel to areas of the country that are perceived to be unsafe. The government also argues that the presence of guns in schools poses a substantial threat to the educational process by threatening the learning environment. A handicapped educational process, in turn, will result in a less productive citizenry. That, in turn, would have an adverse effect on the nation's economic well-being.

We pause to consider the implications of the government's arguments. The government admits, under its "costs of crime" reasoning, that Congress could regulate not only all violent crime, but all activities that might lead to violent crime, regardless of how tenuously they relate to interstate commerce. Similarly, under the government's "national productivity" reasoning, Congress could regulate any activity that it found was related to the economic productivity of individual citizens: family law (including marriage, divorce, and child custody), for example. Under the theories that the government presents in support of section 922(q), it is difficult to perceive any limitation on federal power, even in areas such as criminal law enforcement or education where States historically have been sovereign. Thus, if we were to accept the government's arguments, we are hard-pressed to posit any activity by an individual that Congress is without power to regulate.

To uphold the government's contentions here, we would have to pile inference upon inference in a manner that would bid fair to convert congressional authority under the commerce clause to a general police power of the sort retained by the states. Admittedly, some of our prior cases have taken long steps down that road, giving great deference to congressional action. The broad language in these opinions has suggested the possibility of additional expansion, but we decline here to proceed any further. To do so would require us to conclude that the Constitution's enumeration of powers does not presuppose something not enumerated, and that there will never be a distinction between what is truly national and what is truly local. This we are unwilling to do.

Court of Appeals decision affirmed; Lopez wins.

The Taxing Power Article I, section 8 of the Constitution also states that "The Congress shall have Power To lay and collect Taxes, Duties, Imposts and Excises." The main purpose behind this *taxing power* is to raise revenue for the federal government.[2] But the taxing power can also serve as a regulatory device. Because the power to tax is the power to destroy, Congress can regulate by imposing a heavy tax on a disfavored activity. Although some past regulatory taxes have been struck down, today the reach of the taxing power, while poorly defined, still is very broad. Sometimes it is said that a regulatory tax is constitutional if its purpose could be furthered by one of Congress's other powers. Due to the broad scope of the commerce power, this may mean that the taxing power has few limits.

The Spending Power If taxing power regulation uses a federal club, congressional *spending power* regulation employs a federal carrot. After stating the taxing power, Article I, section 8 gives Congress a broad ability to spend for the general welfare. By basing the receipt of federal money on the performance of certain conditions, Congress can use the spending power to advance specific regulatory ends. For instance, conditional federal grants to the states are common today.

Over the past 50 years, congressional spending power regulation invariably has been upheld. Still, there are limits on its use. First, an exercise of the spending power must serve *general* public purposes, and not particular interests. Second, when Congress conditions the receipt of federal money on certain conditions, it must do so clearly. Third, the condition must be reasonably related to the purpose behind the federal expenditure. For example, Congress probably cannot condition a state's receipt of federal highway money on the state's adoption of a one-house legislature.

Independent Checks on the Federal Government and the States

Even if a regulation is within Congress's enumerated powers or a state's police power, it still is unconstitutional if it collides with one of the Constitution's *independent checks*. This section discusses three checks that limit both federal and state regulation of the economy. These are freedom of speech, due process, and equal protection. Before discussing these guarantees, however, we must consider three preliminary matters.

Incorporation

The Fifth Amendment prevents the federal government from depriving "any person of life, liberty, or property, without due process of law," and the Fourteenth Amendment does the same to the states. The First Amendment, however, applies only to the federal government. And the Fourteenth Amendment says that no *state* shall "deny to any person . . . the equal protection of the laws." Thus, while due process clearly applies to both the federal government and the states, the First Amendment seems to apply only to the federal government and the Equal Protection Clause only to the states. But the First Amendment's free speech guarantee has been included within the "liberty" protected by Fourteenth Amendment due process and thus made applicable to the states. This is part of the process of *incorporation* by which almost all Bill of Rights provisions now apply to the states. The Fourteenth Amendment's equal protection guarantee, on the other hand, has been made applicable to the federal government by incorporating it within the Fifth Amendment's Due Process Clause. Figure 2 summarizes all these points.

Government Action

People often talk as if the Constitution protects them against anyone who might threaten their rights. However, most of the Constitution's individual rights provisions block only the actions of *government* bodies, state and federal.[3] Private behavior that denies individual rights, while perhaps forbidden by statute, is not supposed to be a constitutional matter. This **government action** or **state action** requirement forces courts to distinguish between governmental behavior and private behavior. Their approach to this problem has varied over time.

[2]The Constitution imposes some restrictions on the types of taxes that may be used to raise revenue, but these restrictions are beyond the scope of this text.

[3]However, the Thirteenth Amendment, which bans slavery and involuntary servitude throughout the United States, does not have a state action requirement. Also, some state constitutions have individual rights provisions that lack a state action requirement.

Figure 2 *Why Certain Individual Rights Guarantees Apply to Both the Federal Government and the States*

Guarantee	Why Applicable to States	Why Applicable to Federal Government
Due Process	Text of Fourteenth Amendment	Text of Fifth Amendment
First Amendment	Incorporation within Fourteenth Amendment	Text of First Amendment
Equal Protection	Text of Fourteenth Amendment	Incorporation within Fifth Amendment

Before World War II, only formal organs of government such as legislatures, administrative agencies, municipalities, courts, prosecutors, and state universities were deemed state actors. But after the war, the scope of government action increased considerably, with all sorts of traditionally private behavior being subjected to individual rights limitations. In *Marsh v. Alabama* (1946), the Supreme Court treated a privately owned company town's restriction of free expression as government action under the *public function* theory because the town was like a regular municipality in most respects. Also, in *Shelley v. Kraemer* (1948), the Court held that state court enforcement of certain white homeowners' private agreements not to sell their homes to blacks was unconstitutional state action under the Equal Protection Clause. Later, in *Burton v. Wilmington Parking Authority* (1961), the Court concluded that racial discrimination by a privately owned restaurant located in a state-owned and state-operated parking garage was unconstitutional state action, in part because the garage and the restaurant were intertwined in a mutually beneficial "symbiotic" relationship. Among the other factors leading courts to find state action during the 1960s and 1970s were extensive government regulation of private activity and government financial aid to a private actor.

However, the Court severely restricted the reach of state action during the 1970s and 1980s. Now, private behavior is state action only when a regular unit of government is directly *responsible* for the challenged private behavior because it has coerced or encouraged such behavior. Also, the public function doctrine has been limited to situations in which a private entity exercises powers that have *traditionally* been *exclusively* reserved to the state; private police protection is a possible example. In addition, government regulation and government funding now are less important factors in state action determinations. Despite all these changes, however, state action doctrine probably has not returned to its narrow pre–World War II definition, and some uncertainty remains in this area.

To illustrate the Supreme Court's state action cutback, consider its 1982 decision in *Rendell-Baker v. Cohn,* where it rejected various constitutional challenges to the firing of teachers and counselors at a private school for maladjusted high school students because no state action was present. Although the school was extensively regulated by the state, this did not matter because no state regulation compelled or even influenced the challenged firings. Even though the school depended heavily on state funding, this was not sufficient for state action either. The Court also rejected a "symbiosis" argument without much discussion. Finally, it found the public function doctrine inapplicable because the education of maladjusted high school students, while public in nature, is not *exclusively* a state function.

Means-Ends Tests

Throughout this chapter, you will see tests of constitutionality that seem strange at first glance. One example is the test for determining whether laws that discriminate on the basis of sex violate equal protection. This test says that to be constitutional, such laws must be substantially related to the achievement of an important government purpose. The Equal Protection Clause does not contain such language. It simply says that "No State shall . . . deny to any person . . . the equal protection of the laws." What is going on here?

The sex discrimination test just stated is a **means-ends test.** Courts create such tests because no constitutional right is absolute, and because judges therefore must weigh individual rights against the social purposes served by laws that restrict those rights. In other words, means-ends tests determine how courts strike the balance between individual rights and the social needs that may justify their suppression. The "ends" component of a means-ends test specifies how *significant* a social

purpose must be in order to justify the restriction of a right. The "means" component states how *effectively* the challenged law must promote that purpose in order to be constitutional. In our sex discrimination test, for example, the challenged law must serve an "important" government purpose (the significance of the end) and must be "substantially" related to the achievement of that purpose (the effectiveness of the means).

Because some constitutional rights are deemed more important than others, courts use tougher tests of constitutionality in such cases and more lenient tests in other situations. Sometimes these tests are long, wordy, and complicated. Throughout the chapter, therefore, we simplify by employing three general kinds of means-ends tests:

1. *The rational basis test.* This is a very relaxed test of constitutionality that challenged laws usually pass with ease. A typical formulation of the rational basis test might say that government action need only have a *reasonable* relation to the achievement of a *legitimate* government purpose to be constitutional.
2. *Intermediate scrutiny.* This comes in many forms; the sex discrimination test we have been discussing is an example.
3. *Full strict scrutiny.* Here, the court might say that the challenged law must be *necessary* to the fulfillment of a *compelling* government purpose. Government action that is subjected to this rigorous test of constitutionality almost always is struck down.

Business and the First Amendment

The First Amendment says that "Congress shall make no law . . . abridging the freedom of speech." Despite its absolute language ("*no* law"), the First Amendment does not prohibit every law that restricts speech. As Justice Oliver Wendell Holmes once remarked, the First Amendment does not protect someone who falsely shouts "Fire!" in a crowded theater. But while the First Amendment's free speech guarantee is not absolute, government action restricting speech usually receives very strict judicial scrutiny. One justification for this high level of protection is the "marketplace" rationale. On this view, the free competition of ideas is the surest means of attaining truth and the marketplace of ideas best serves this end when restrictions on speech are kept to a minimum and all viewpoints can be considered.

This chapter does not consider most of the situations in which the First Amendment's free speech guarantee has been applied during the 20th century. Nor does it examine *corporate political speech,* which generally receives full First Amendment protection. Instead, we discuss one First Amendment issue of considerable concern to business—the government's power to regulate *commercial speech.*

Commercial Speech The definition of commercial speech is not completely clear, but most cases on the subject involve commercial advertising. No doubt some future litigation will involve e-commerce. In 1942, the Supreme Court ruled that commercial speech was outside the First Amendment's protection, but the Court reversed its position during the 1970s. Now, restrictions on commercial speech receive an *intermediate* level of means-ends scrutiny that is less rigorous than the full strict scrutiny given laws restricting corporate political speech. The test is that laws regulating commercial speech must *directly* advance a *substantial* government interest and must be *no more extensive than necessary* to advance that interest. However, laws regulating false or deceptive commercial speech, or requiring the disclosure of information useful to consumers, get only light scrutiny.

The usual justification for protecting commercial speech is to promote informed consumer choice by removing barriers to the flow of commercial information. The following case is an example. Note the two

44 Liquormart, Inc. v. Rhode Island *517 U.S. 484 (1996)*

A licensed Rhode Island liquor store named 44 Liquormart ran a newspaper advertisement containing an implied reference to the bargain prices at which people could buy its liquor. For this reason, the Rhode Island Liquor Control Administrator fined the store $400. The Administrator levied the fine under Rhode Island statutes forbidding public price advertising for alcoholic beverages.

44 Liquormart challenged its fine in federal district court, arguing that the statutes violated the First Amendment. After the district court granted 44 Liquormart's claim, the court of appeals reversed, finding the statutes constitutional. 44 Liquormart then appealed to the U.S. Supreme Court.

Stevens, Justice In *Central Hudson Gas & Electric Corporation v. Public Service Commission* (1980), we considered a regulation completely banning all promotional advertising by electric utilities. Five members of the Court recognized that the state interest in the conservation of energy was substantial, and that there was an immediate connection between advertising and demand for electricity. Nevertheless, they concluded that the regulation was invalid because the Commission had failed to make a showing that a more limited speech regulation would not have adequately served the state's interest. The majority explained that although the special nature of commercial speech may require less than strict review of its regulation, special concerns arise from regulations that entirely suppress commercial speech in order to pursue a nonspeech-related policy. As a result, the Court concluded that special care should attend the review of such blanket bans.

Rhode Island errs in concluding that *all* commercial speech regulations are subject to a similar form of constitutional review. When a state regulates commercial messages to protect consumers from misleading, deceptive, or aggressive sales practices, or requires the disclosure of beneficial consumer information, the purpose of its regulation is consistent with the reasons for according constitutional protection to commercial speech and therefore justifies less than strict review. However, when a state entirely prohibits the dissemination of truthful, nonmisleading commercial messages for reasons unrelated to the preservation of a fair bargaining process, there is far less reason to depart from the rigorous review that the First Amendment generally demands.

Rhode Island's price advertising ban constitutes a blanket prohibition against truthful, nonmisleading speech about a lawful product. The ban serves an end unrelated to consumer protection. Accordingly, we must review the price advertising ban with special care, mindful that speech prohibitions of this type rarely survive constitutional review.

The state argues that the price advertising prohibition should be upheld because it directly advances the state's substantial interest in promoting temperance, and because it is no more extensive than necessary. We cannot agree. Although the record suggests that the price advertising ban may have some impact on the purchasing patterns of temperate drinkers of modest means, the state has presented no evidence to suggest that its speech prohibition will *significantly* reduce marketwide consumption. Moreover, the evidence suggests that the abusive drinker will probably not be deterred by a marginal price increase, and that the true alcoholic may simply reduce his purchases of other necessities. Any conclusion that elimination of the ban would significantly increase alcohol consumption would require the sort of speculation or conjecture that is an unacceptable means of demonstrating that a restriction on commercial speech directly advances the state's asserted interest. Such speculation certainly does not suffice when the state takes aim at accurate commercial information for paternalistic ends.

The state also cannot satisfy the requirement that its restriction on speech be no more excessive than necessary. Higher prices can be maintained either by direct regulation or by increased taxation. Per capita purchases could be limited as is the case with prescription drugs. Even educational campaigns focused on the problems of excessive, or even moderate, drinking might prove to be more effective.

Court of appeals judgment in Rhode Island's favor reversed; 44 Liquormart wins.

ways in which the challenged law failed the constitutional test stated earlier.

Due Process

The Fifth and Fourteenth Amendments require that the federal government and the states observe **due process** when they deprive a person of life, liberty, or property. Due process has both *procedural* and *substantive* meanings.

Procedural Due Process

The traditional conception of due process, called **procedural due process,** establishes the *procedures* that government must

follow when it takes life, liberty, or property. Although the requirements of procedural due process vary from situation to situation, their core idea is that people are entitled to adequate *notice* of the government action to be taken against them and to some sort of *fair trial or hearing* before that action can occur.

In order to trigger due process protections, the government must deprive a person of life, liberty, or property. Procedural due process *liberty* includes a very broad and poorly defined range of freedoms. It even includes certain interests in personal reputation. For example, the firing of a government employee might require some kind of due process hearing if it is publicized, the fired employee's reputation is sufficiently damaged, and her future employment opportunities are restricted. The Supreme Court has said that procedural due process *property* is not created by the Constitution but by existing rules and understandings that stem from an independent source such as state law. These rules and understandings must give a person a *legitimate claim of entitlement* to a benefit, not merely some need, desire, or expectation for it. This definition includes almost all of the usual forms of property, as well as utility service, disability benefits, welfare benefits, and a driver's license. It also includes the job rights of tenured public employees who can be discharged only for cause, but not the rights of untenured or probationary employees.

Where there has been a deprivation of life, liberty, or property, how do courts determine what process is due? The following case addresses this problem.

Substantive Due Process Procedural due process does not challenge rules of *substantive law*—the rules that set standards of behavior for organized social life. For example, imagine that State X makes adultery a crime and allows people to be convicted of adultery without a trial. Arguments that adultery should not be a crime go to the substance of the statute, while objections to the lack of a trial are procedural in nature.

Sometimes, the due process clauses have been used to attack the substance of government action. For our purposes, the most important example of this **substantive due process** occurred early in the 20th century, when courts struck down various kinds of social legislation as denying due process. They did so mainly by reading freedom of contract and other economic rights into the liberty and property protected by the Fifth and Fourteenth Amendments, and then interpreting "due process of law" to require that laws denying such rights be subjected to means-ends scrutiny. The best-known example is the Supreme Court's 1905 decision in *Lochner v. New York,* in which it struck down a state law setting maximum hours of work for bakery employees because the statute limited freedom of contract and did not directly advance the legitimate state goal of promoting worker health.

Since 1937, this "economic" form of substantive due process has not been a significant check on government regulation of social and economic matters. Over that period, substantive due process attacks on such regulations have triggered only a lenient kind of rational basis review and thus have had little chance of success. In the

Gilbert v. Homar *520 U.S. 924 (U.S. Sup. Ct. 1997)*

On August 26, 1992, while employed as a policeman at East Stroudsburg University (ESU), a state institution, Richard Homar was arrested by the state police and charged with a drug felony. ESU officials then suspended Homar without pay. Although the criminal charges were dismissed on September 1, Homar's suspension remained in effect. On September 18, he finally was provided the opportunity to tell his side of the story to ESU officials. Subsequently, he was demoted to groundskeeper. He then filed suit under a federal civil rights statute, claiming that university officials' failure to provide him with notice and a hearing before suspending him without pay violated due process. The federal district court granted ESU summary judgment, but the court of appeals reversed. ESU appealed to the U.S. Supreme Court.

Scalia, Justice The protections of due process apply to government deprivation of those perquisites of government employment in which the employee has a constitutionally protected property interest. Although we have previously held that public employees who can be discharged only for cause have a constitutionally protected property interest in their tenure and cannot be fired without due process, we have not had to decide whether due process extends to discipline of tenured public

employees short of termination. ESU, however, does not contest this preliminary point, and so without deciding it we will assume that the suspension infringed a protected property interest, and turn at once to ESU's contention that Homar received all the process he was due.

In *Cleveland Board of Education v. Loudermill* (1985), we concluded that a public employee dismissible only for cause was entitled to a very limited hearing prior to his termination, to be followed by a more comprehensive post-termination hearing. Stressing that the pre-termination hearing should be an initial check against mistaken decisions, we held that pre-termination process need only include oral or written notice of the charges, an explanation of the employer's evidence, and an opportunity for the employee to tell his side of the story.

Due process is not a technical conception with a fixed content unrelated to time, place, and circumstances. Due process is flexible and calls for such procedural protections as the particular situation demands. Where a state must act quickly, or where it would be impractical to provide pre-deprivation process, post-deprivation process satisfies the requirements of the due process clause. To determine what process is constitutionally due, we have balanced three factors: first, the private interest that will be affected by the official action; second, the risk of an erroneous deprivation of such interest through the procedures used, and the probable value, if any, of additional or substitute procedural safeguards; and finally, the government's interest. Homar contends that he has a significant private interest in the uninterrupted receipt of his paycheck. But while our opinions have recognized the severity of depriving someone of the means of his livelihood, they have also emphasized that in determining what process is due, account must be taken of the length and finality of the deprivation. Unlike the employee in *Loudermill,* who faced termination, Homar faced only a temporary suspension without pay. So long as the suspended employee receives a sufficiently prompt post-suspension hearing, the lost income is relatively insubstantial (compared with termination), and fringe benefits such as health and life insurance are often not affected at all.

On the other side of the balance, the state has a significant interest in immediately suspending, when felony charges are filed against them, employees who occupy positions of great public trust and high public visibility, such as police officers. Homar contends that this interest in maintaining public confidence could have been accommodated by suspending him with pay until he had a hearing. We think, however, that the government does not have to give an employee charged with a felony a paid leave at taxpayer expense. If his services to the government are no longer useful once the felony charge has been filed, the Constitution does not require the government to bear the added expense of hiring a replacement while still paying him.

The last factor in the balancing, and the factor most important to resolution of this case, is the risk of erroneous deprivation and the likely value of any additional procedures. We noted in *Loudermill* that the purpose of a pre-termination hearing is to determine whether there are reasonable grounds to believe the charges against the employee are true and support the proposed action. By parity of reasoning, the purpose of any pre-suspension hearing would be to assure that there are reasonable grounds to support the suspension without pay. But here that has already been assured by the arrest and the filing of charges.

Whether Homar was provided an adequately prompt *post*-suspension hearing in the present case is a separate question. Although the charges against Homar were dropped on September 1, he did not receive any sort of hearing until September 18. Once the charges were dropped, the risk of erroneous deprivation increased substantially, and there was likely value in holding a prompt hearing. Because neither the court of appeals nor the district court addressed whether ESU violated due process by failing to provide a sufficiently prompt post-suspension hearing, we will not consider this issue in the first instance, but remand for consideration by the court of appeals.

Court of appeals decision reversed; case returned to the court of appeals to determine whether Homar was entitled to a post-deprivation hearing.

1970s and 1980s, however, substantive due process became increasingly important as a device for protecting *noneconomic* rights. The most important example is the so-called constitutional right of privacy, which consists of several rights that the Supreme Court regards as fundamental and as entitled to great constitutional protection. Recently the Supreme Court declared that these include the rights to marry, have children and direct their education and upbringing, enjoy marital privacy, use contraception, and have an abortion. Then it said that laws restricting these rights must be narrowly tailored to meet a compelling government purpose.

The following case involves two substantive due process claims: one based on an economic right and another based on a "personal" or noneconomic right. Do you agree with the court's decision?

Sammon v. New Jersey Board of Medical Examiners *66 F.3d 639 (3d Cir. 1995)*

People who wish to practice midwifery in New Jersey first must obtain a midwifery license from the state board of medical examiners. Candidates for a license must pass an examination of midwifery, possess good moral character, and receive a diploma from a school of midwifery or maternity hospital. They also must get a New Jersey–licensed physician to endorse their application.

A practicing midwife who was not licensed in New Jersey (Alice Sammon), several couples who wanted a midwife's assistance for future births (the parents), and several women who wanted to be midwives (the aspiring midwives) sued the state, claiming that its licensing scheme violated due process. They sought injunctive relief against the scheme's enforcement. The federal district court granted the defendants' motion to dismiss and the plaintiffs appealed.

Stapleton, Circuit Judge The first step in any substantive due process case is to determine the standard of review. The choice of a standard of review turns on whether a fundamental right is implicated. The interests at stake here are the interest of Sammon and the aspiring midwives in practicing midwifery and the interest of the parents in selecting a midwife of their choice. These are not the kinds of interests that have been found to be "fundamental" in the context of choosing the appropriate level of review for substantive due process purposes. State restrictions on the right to practice a profession receive rational basis review rather than higher scrutiny. Similarly, state restrictions on a patient's choice of particular health care providers are subjected only to rational basis review. We thus reject the plaintiffs' contention that fundamental rights are at stake here and that the statute must, accordingly, receive strict scrutiny. Where strict scrutiny is required, the state must show that the statute serves a compelling state interest and that the state's objective could not be achieved by a measure less restrictive of the plaintiff's fundamental right. Where rational basis review is appropriate, a statute withstands a substantive due process challenge if the state identifies a legitimate state interest that the legislature rationally could conclude was served by the statute. A court engaging in rational basis review is not entitled to second-guess the legislature on the factual assumptions or policy considerations underlying the statute. The sole permitted inquiry is whether the legislature rationally might have believed that the desired end would be served.

The state offers two state interests to justify the New Jersey regulatory scheme: the interest in protecting the health and welfare of the mother and the interest in protecting the health and welfare of the child. These are legitimate state interests. The regulatory scheme is also rationally related to these state interests. Each of the complained-of requirements might be thought to further the state's interest in assuring that would-be midwives are qualified to perform their jobs. Assuring that midwives are qualified, in turn, is rationally related to the state's valid interest in the health and safety of both mother and child.

The plaintiffs maintain that the 1800-hours-of-instruction requirement is not rationally related to New Jersey's legitimate goal of assuring that

midwives are qualified to perform their jobs. [But] this is a matter about which reasonable minds can differ. The mere fact that some students might perform as competent midwives without going through the full 1800 hours of training does not make the requirement irrational. A similar analysis reveals the rationality of the other statutory requirements. The requirement that would-be midwives receive their training through instruction at schools of midwifery or maternity hospitals rather than through apprenticeship training also reflects a legislative judgment about which reasonable minds can differ.

Plaintiffs profess concern about the physician endorsement requirement because it imposes a significant barrier to entry upon persons seeking to practice midwifery. This is true, they allege, since midwives are broadly perceived as potentially competing with obstetricians and physicians have a conflict of interest when asked to vouch for the qualifications of an aspiring midwife. It is, of course, rational to believe that an obstetrician asked to endorse the qualifications of a midwife candidate will not be a wholly objective evaluator of a candidate's qualifications. One can also make a substantial policy argument that the benefit to be derived from a physician endorsement requirement is outweighed by the burden it places on candidates. It is not irrational, however, to find value in soliciting the views of a medically trained individual who has had some personal contact with the candidate and has checked into his or her credentials, or to conclude that there are sufficient members of the medical profession willing to perform this public service in good faith to make such a requirement workable.

This controversy is one this court is not authorized to resolve and the plaintiffs must take their evidence and advocacy to the halls of the New Jersey legislature. The judgment of the district court will be affirmed.

District court judgment dismissing the plaintiffs' substantive due process claim affirmed.

Equal Protection

The Fourteenth Amendment's equal protection clause says that "[n]o State shall . . . deny to any person . . . the equal protection of the laws." Because it has been incorporated within Fifth Amendment due process, the clause also applies to the federal government. As currently interpreted, the equal protection guarantee applies to all situations in which government *classifies* or *distinguishes* people. The law inevitably makes distinctions among people, benefiting or burdening some groups but not others. The equal protection guarantee sets the standards such distinctions must meet to be constitutional.

The Basic Test The basic equal protection standard is the *rational basis* test described earlier. This is the standard usually applied to social and economic regulations that are challenged as denying equal protection. As the following case indicates, this lenient test usually does not impede state and federal regulation of social and economic matters.

City of Dallas v. Stanglin *490 U.S. 19 (U.S. Sup. Ct. 1989)*

The city of Dallas, Texas adopted an ordinance restricting admission to so-called "Class E" dance halls to persons between the ages of 14 and 18. However, it did not impose similar age limitations on most other establishments where teenagers might congregate—for example, skating rinks. Charles Stanglin, who in one building operated both a Class E dance hall and a roller-skating rink, sued for an injunction against enforcement of the ordinance in a Texas trial court. One of his arguments was that the ordinance denied equal protection because its distinction between Class E dance halls and other establishments for teenagers was irrational. The Texas trial court upheld the ordinance, but a higher Texas court struck down its age restriction. The city appealed to the U.S. Supreme Court.

Rehnquist, Chief Justice The Dallas ordinance implicates no suspect class. The question remaining is whether the classification survives rational basis scrutiny under the equal protection clause. The city has chosen to impose a rule that separates 14- to 18-year-olds from what may be the corrupting influences of older teenagers and young adults. An urban planner for the city testified: "Older kids can access drugs and alcohol, and they have more mature sexual attitudes, more liberal sexual attitudes in general. . . . And we're concerned about mixing up these individuals with youngsters [who] have not fully matured."

Stanglin claims that this restriction has no real connection with the city's stated objectives. Except for saloons and teenage dance halls, he argues, teenagers and adults in Dallas may associate with each other, including at the skating area of his rink. We think Stanglin's arguments misapprehend the nature of rational basis scrutiny, which is the most relaxed and tolerant form of judicial scrutiny under the equal protection clause. If the classification has some reasonable basis, it does not offend the Constitution simply because the classification is not made with mathematical nicety or because in practice it results in some inequality. The rational basis standard is true to the principle that the Fourteenth Amendment gives the federal courts no power to impose upon the states their views of what constitutes wise economic or social policy.

In the local economic sphere, it is only the invidious discrimination, the wholly arbitrary act, which cannot stand consistently with the Fourteenth Amendment. The city could reasonably conclude that teenagers might be susceptible to corrupting influences if permitted to frequent a dance hall with older persons [and that] limiting dance hall contacts between juveniles and adults would make less likely illicit or undesirable juvenile involvement with alcohol, illegal drugs, and promiscuous sex. It is true that the city allows teenagers and adults to roller-skate together, but skating involves less physical contact than dancing. The differences between the two activities may not be striking, but differentiations need not be striking in order to survive rational basis scrutiny.

Texas court decision striking down the age limitation reversed.

Stricter Scrutiny The rational basis test is the basic equal protection standard. Some classifications, however, get tougher means-ends scrutiny. Specifically, laws that discriminate regarding **fundamental rights** or involve **suspect classifications** now receive more rigorous review.

The list of rights regarded as "fundamental" for equal protection purposes is not completely clear, but it includes voting, interstate travel, and certain criminal procedure protections. Laws creating unequal enjoyment of these rights receive something resembling full strict scrutiny. In 1969, for instance, the Supreme Court struck down the District of Columbia's one-year residency requirement for receiving welfare benefits because that requirement unequally and impermissibly restricted the right of interstate travel.

Certain "suspect" bases of classification also trigger more rigorous equal protection review. As of late 1999, these **suspect classifications** and the level of scrutiny they attract are as follows:

1. *Race and national origin.* Classifications disadvantaging racial or national minorities receive the strictest kind of strict scrutiny and are almost never constitutional. Still, the Supreme Court has upheld so-called reverse racial discrimination—government action that benefits racial minorities and disadvantages whites. In 1989, however, a majority of the Court concluded that discrimination of this kind should receive the same full strict scrutiny as discrimination *against* racial or national minorities. Reversing a 1990 case, a 1995 Supreme Court decision held that this is true of federal government action as well as state action. It remains to be seen what impact these developments will have on the many federal and state programs preferring racial minorities.

2. *Alienage.* Classifications based on one's status as an alien also receive strict scrutiny of some kind, but it is doubtful whether this standard is as tough as the full strict scrutiny normally used in race discrimination cases. Under the "political function" exception, moreover, laws restricting aliens from employment in positions that are intimately related to democratic self-government only receive *rational basis* review. This exception has been read broadly to uphold laws

excluding aliens from being state troopers, public school teachers, and probation officers.

3. *Sex.* Although sex has never formally been declared a suspect classification, for nearly 20 years laws discriminating on the basis of gender have been subjected to a fairly tough form of *intermediate scrutiny.* As the Court said in 1996, such laws require an "exceedingly persuasive" justification. The usual test is that government action discriminating on the basis of sex must be *substantially* related to the furtherance of an *important* government purpose. Under this test, measures discriminating against women have almost always been struck down. The Supreme Court has said that laws disadvantaging men get the same scrutiny as those disadvantaging women, but this has not prevented the Court from upholding men-only draft registration and a law making statutory rape a crime for men alone.

4. *Illegitimacy.* Classifications based on one's illegitimate birth receive a form of *intermediate scrutiny* that probably is less strict than the scrutiny given gender-based classifications. Under this vague standard, the Court has struck down state laws discriminating against illegitimates in areas such as recovery for wrongful death, workers' compensation benefits, social security payments, inheritance, and child support.

Concept Review

The Levels of Equal Protection Review: A Rough Summary

Rational Basis Review	1. Most general social and economic regulations 2. Laws discriminating against aliens under the political function exception
Intermediate Scrutiny	1. Sex discrimination against both men and women 2. Discrimination against illegitimates
Full or Nearly Full Strict Scrutiny	1. Discrimination regarding fundamental rights 2. Federal and state racial discrimination against both blacks and whites 3. Most discrimination against aliens 4. National origin discrimination

Independent Checks Applying Only to the States

The Contract Clause

Article I, section 10 of the Constitution says: "No State shall . . . pass any . . . Law impairing the Obligation of Contracts." This *contract clause* applies to state laws that change the parties' performance obligations under an *existing* contract *after* that contract has been made.[4] The original purpose behind the contract clause was to strike down the many debtor relief statutes passed by the states after the Revolution. These statutes impaired the obligations of existing private contracts by relieving debtors of the obligations they owed to contract creditors. In two early 19th-century cases, however, the contract clause also was held to protect the obligations of *governmental* contracts, charters, and grants.

The contract clause probably was the most important constitutional check on state regulation of the economy in the 19th century. Beginning in the latter part of that century, though, the clause gradually became subordinate to legislation based on the states' police powers. By the mid-20th century, most observers treated the clause as a constitutional dead letter. In 1977, however, the Supreme Court gave the contract clause new life by announcing a fairly strict

[4]Also, under the Fifth Amendment's due process clause, standards similar to those described in this section apply to the federal government.

constitutional test governing situations where a state impairs *its own* contracts, charters, and grants. Such impairments, it said, must be "reasonable and necessary to serve an important public purpose." With one exception in 1978, however, the Court has continued its deference toward state regulations that impair the obligations of *private* contracts. The following *Exxon* case is an example.

Exxon Corporation v. Eagerton *462 U.S. 176 (U.S. Sup. Ct. 1983)*

For years, the Exxon Corporation paid a severance tax on the oil and gas it drilled in Alabama. Under the sales contracts that Exxon made with purchasers of its oil and gas, it was able to pass on any tax increase to the purchasers. In 1979, Alabama raised the severance tax from 4 to 6 percent and forbade producers of oil and gas from passing on the increase to purchasers.

Exxon sued the Alabama commissioner of revenue in an Alabama trial court, seeking a ruling that the pass-on restriction was unconstitutional under the contract clause. The trial court found for Exxon, but the Alabama Supreme Court reversed. Exxon appealed to the U.S. Supreme Court.

Marshall, Justice By barring Exxon from passing the tax increase through to its purchasers, the pass-through prohibition nullified the purchasers' contractual obligations to reimburse Exxon for any severance taxes. While the prohibition thus affects contractual obligations, it does not follow that the prohibition constituted a "Law impairing the Obligation of Contracts" within the meaning of the contract clause. Although the language of the clause is facially absolute, its prohibition must be accommodated to the inherent police power of the state to safeguard the vital interests of its people. If the law were otherwise, one would be able to obtain immunity from state regulation by making private contractual arrangements.

The contract clause does not deprive the states of their broad power to adopt general regulatory measures without being concerned that private contracts will be impaired, or even destroyed, as a result. Thus, a state prohibition law may be applied to contracts for the sale of beer that were valid when entered into, a law barring lotteries may be applied to lottery tickets that were valid when issued, and a workmen's compensation law may be applied to employers and employees operating under preexisting contracts of employment that made no provision for work-related injuries.

Like the laws upheld in these cases, the pass-through prohibition did not prescribe a rule limited in effect to contractual obligations or remedies, but instead imposed a generally applicable rule of conduct designed to advance a broad societal interest, protecting consumers from excessive prices. The prohibition applied to all oil and gas producers, regardless of whether they happened to be parties to sale contracts permitting them to pass tax increases through to their purchasers. The effect of the pass-through prohibition on existing contracts that did contain such a provision was incidental to its main effect of shielding consumers from the burden of the tax increase.

Judgment for the commissioner affirmed on the contract clause issue. Case returned to the Alabama Supreme Court for consideration of other questions.

Burden on Interstate Commerce

In addition to empowering Congress to regulate interstate commerce, the commerce clause also limits the states' ability to *burden* such commerce. This limitation is not expressly stated in the Constitution. Instead, it arises by implication from the commerce clause and reflects that clause's original purpose of blocking state protectionism and ensuring free interstate trade. This burden-on-commerce limitation operates independently of congressional legislation under the commerce power or other federal powers. If appropriate federal regulation is present, the preemption questions discussed in the next section may also arise.

Many different state laws can raise burden-on-commerce problems. For example, state regulation of transportation (e.g., limits on train or truck lengths) has been a prolific source of litigation. The same is true of state restrictions on the importation of goods or resources—for example, laws forbidding the sale of out-of-state food products unless they meet certain standards. Such restrictions sometimes benefit local economic interests and reflect their political influence. Burden-on-commerce issues also arise when states try to aid their own residents by blocking the export of scarce or valuable products, thus denying out-of-state buyers access to those products.

Due in part to the many different regulations it has had to consider, the Supreme Court has not adhered to one consistent test for determining when such regulations impermissibly burden interstate commerce. In a 1994 case, the Court said that laws that *discriminate* against interstate commerce must satisfy the strictest scrutiny to be constitutional. Discrimination is *express* when state laws treat local and interstate commerce unequally on their face. In 1992, for example, the Supreme Court considered a 1986 Oklahoma statute that required Oklahoma coal-fired electric generating plants producing power for sale in Oklahoma to burn at least 10 percent Oklahoma-mined coal. The Court said that because this measure treated Oklahoma coal differently from out-of-state coal, it expressly discriminated against interstate commerce and deserved very strict scrutiny. Because the Court suspected that the Oklahoma statute had protectionist motivations and because the alleged justifications for it were weak, the Court found the law unconstitutional.

State laws might also discriminate even though they are neutral on their face so far as interstate commerce is concerned. This occurs when their *effect* is to burden or hinder such commerce. In one case, for example, the Supreme Court considered a North Carolina statute requiring all closed containers of apples sold within the state to bear only the applicable U.S. grade or standard. Washington State, the nation's largest apple producer, had its own inspection and grading system for Washington apples, a system that generally was regarded as superior to the federal system. The Court struck down the North Carolina statute because it benefited local apple producers by forcing Washington sellers to regrade apples sold in North Carolina (thus raising their costs of doing business) and by undermining the competitive advantage provided by Washington's superior grading system.

On the other hand, state laws that *regulate even-handedly and have only incidental effects on interstate commerce* are constitutional if they serve legitimate state interests and their local benefits exceed the burden they place on interstate commerce. There is no sharp line between such regulations and those that are almost always unconstitutional under the tests discussed above. In a 1981 Supreme Court case, a state truck-length limitation that differed from the limitations imposed by neighboring states failed to satisfy these tests. First, the Court concluded that the measure did not further the state's legitimate interest in highway safety because the trucks the state banned generally were as safe as those it allowed. Second, whatever marginal safety advantage the law provided was outweighed by the numerous problems it posed for interstate trucking companies.

Finally, laws may unconstitutionally burden interstate commerce when they *directly regulate* that commerce. This can occur, for example, when state price regulations require firms to post the prices at which they will sell within the state and to promise that they will not sell below those prices in other states. Because they affect prices in other states, such regulations directly regulate interstate commerce and usually are unconstitutional.

Federal Preemption

The constitutional principle of **federal supremacy** dictates that where state law conflicts with valid federal law, the federal law is supreme. Where a state law conflicts with a federal statute, the state law is said to be *preempted* by the federal regulation. The central question in most federal preemption cases is Congress's intent. Thus, such cases often present questions of statutory interpretation that can be complex and that are decided on a case-by-case basis.

As the following *Mortier* case suggests, federal preemption of state law generally occurs for one or more of four reasons.

1. *There is a literal conflict between the state and federal measures, so that it is impossible to follow both simultaneously.*
2. *The federal law specifically states that it will preempt state regulation in certain areas.* Similar statements may also appear in the federal statute's legislative history, and courts may find such statements persuasive.
3. *The federal regulation is pervasive.* The fact that Congress has "occupied the field" by regulating a subject in great breadth and/or in considerable detail suggests its intent to displace state regulation of that subject. This may be especially true where

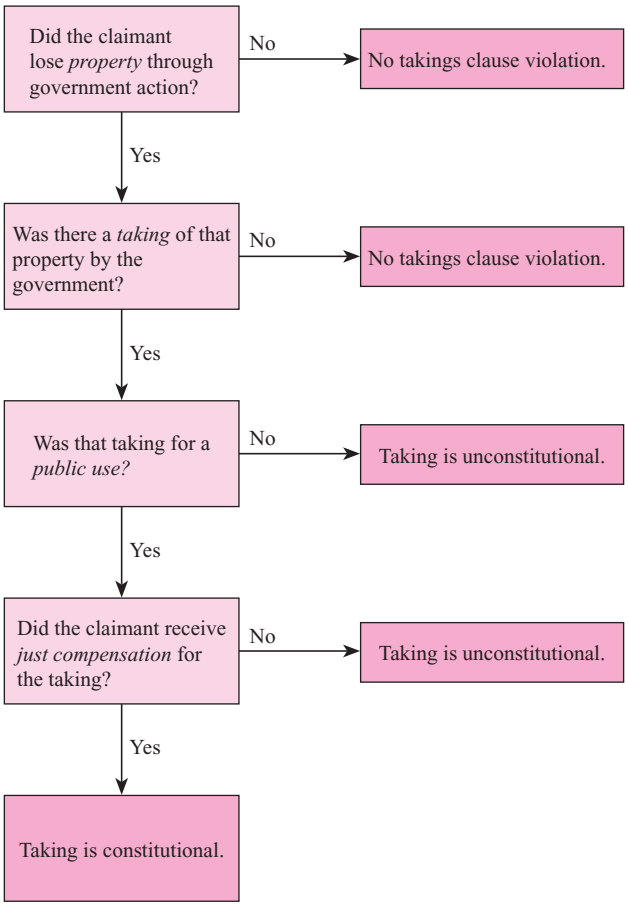
Congress has given an administrative agency broad regulatory power in a particular area.

4. *The state regulation is an obstacle to fulfilling the purposes of the federal law.* Here, the party challenging the state law's constitutionality typically claims that the state law interferes with the purposes she attributes to the federal measure (purposes usually found in its legislative history).

Wisconsin Public Intervenor v. Mortier *501 U.S. 597 (U.S. Sup. Ct. 1991)*

The small town of Casey in rural Wisconsin adopted an ordinance that regulated the use of pesticides. The ordinance required a permit for applications of pesticides to public lands, private lands subject to public use, and private lands by air. Ralph Mortier applied for a permit to spray a portion of his land from the air. The town granted him a permit, but refused to let him spray by air, and also restricted the areas in which Mortier could spray.

Mortier sued for a declaratory judgment against the ordinance in a state trial court, arguing that it was preempted by the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA). The Wisconsin Public Intervenor, an assistant attorney general charged with the protection of environmental rights, was admitted as a defendant in Mortier's suit. The trial court decided in Mortier's favor, and the Wisconsin Supreme Court affirmed. The state intervenor appealed to the U.S. Supreme Court.



White, Justice Under the supremacy clause, state laws that interfere with, or are contrary to, the laws of Congress are invalid. The ways in which federal law may preempt state law are well established. Congress's intent to supplant state authority in a particular field may be expressed in the terms of the statute. Absent explicit preemptive language, Congress's intent to supersede state law may nonetheless be implicit if a scheme of federal regulation is so pervasive as to make reasonable the inference that Congress left no room for the states to supplement it. Even when Congress has not chosen to occupy a particular field, preemption may occur to the extent that state and federal law actually conflict. Such a conflict arises when compliance with both federal and state regulations is a physical impossibility, or when a state law stands as an obstacle to the accomplishment and execution of the full purposes and objectives of Congress.

Applying these principles, we conclude that FIFRA does not preempt the town's ordinance either explicitly, implicitly, or by virtue of an actual conflict. FIFRA nowhere expressly supersedes local regulation of pesticide use. . . . Likewise, FIFRA fails to provide any clear and manifest indication that Congress sought to supplant local authority over pesticide regulation impliedly. While [its] 1972 amendments turned FIFRA into a comprehensive regulatory statute, the resulting scheme was not so pervasive as to make reasonable the inference that Congress left no room for the states to supplement it. FIFRA addresses numerous aspects of pesticide control in considerable detail, in particular: registration and classification, applicator certification, inspection of pesticide production facilities, and the possible ban and seizure of pesticides that are misbranded or that otherwise fail to meet federal requirements. FIFRA nonetheless leaves substantial portions of the field vacant, including the area at issue in this case. FIFRA nowhere seeks to establish an affirmative permit scheme for the actual use of pesticides. It certainly does not equate registration and labeling requirements with a general approval to apply pesticides throughout the nation without regard to regional and local factors like climate, population, geography, and water supply.

Finally, we discern no actual conflict either between FIFRA and the ordinance before us or between FIFRA and local regulation generally. Mortier does not rely, nor could he, on the theory that compliance with the ordinance and FIFRA is a physical impossibility. Instead, he urges that the town's ordinance stands as an obstacle to the statute's goals of promoting pesticide regulation that is coordinated solely on the federal and state levels, that rests upon some degree of technical expertise, and that does not unduly burden interstate commerce. Each one of these assertions rests on little more than snippets of legislative history and policy speculations. None of them is convincing.

Judgment reversed in favor of the Wisconsin intervenor.

Figure 3 *Analyzing a Takings Clause Case*

The Takings Clause

The Fifth Amendment says that "private property [shall not] be taken for public use, without just compensation." This **takings clause** has been incorporated within Fourteenth Amendment due process and thus applies to the states. Traditionally, it has often come into play when the government formally condemns land through its power of **eminent domain,**[5] but it has many other applications as well.

The takings clause recognizes government's power to take private property and also limits the exercise of that power. It does so by requiring that when *property* is subjected to a governmental *taking,* the taking must be for a *public purpose* and the property owner must receive *just compensation.* We now consider these four aspects of the takings clause in turn. Figure 3 describes how they interact.

1. *Property.* The takings clause protects other property interests besides land and interests in land. Although its full scope is unclear, the clause has been held to cover takings of personal property, liens, trade secrets, and contract rights.

2. *Taking.* Due to the range of property interests it may cover, the takings clause potentially has a broad scope. Another reason for the clause's wide possible application is the range of government activities that may be considered takings. Of course, the government's use of formal condemnation procedures to acquire private property almost always is a taking. There also is a

[5]Eminent domain and the takings clause's application to land use problems are discussed in Chapter 24.

taking when the government physically invades private property or allows someone else to do so. The following *Lucas* case describes this type of taking.

In addition, it has long been recognized that government regulation may so diminish the value of property or the owner's enjoyment of it as to constitute a taking. Land use regulation such as zoning is an example. Among the factors courts consider in such "regulatory taking" cases are the degree to which government deprives the owner of free possession, use, and disposition of his property; the overall economic impact of the regulation on the owner; and how much the regulation interferes with the owner's reasonable investment-backed expectations regarding the future use of the property. As *Lucas* declares, there is an automatic taking where the government denies the owner *all* economically beneficial uses of the land. Where this is not the case, courts occasionally apply some form of means-ends scrutiny in determining whether a regulatory taking has occurred.

3. *Public use.* Once a taking of property has occurred, it is unconstitutional unless it is for a public use. Because courts now apply a relaxed version of the rational basis test to resolve "public use" questions, that test is very easy to meet.

4. *Just compensation.* Even if a taking of property is for a public use, it still is unconstitutional if the property owner does not receive just compensation. Although the standards for determining just compensation vary with the circumstances, the basic test is the fair market value of the property at the time of the taking.

Lucas v. South Carolina Coastal Council *505 U.S. 1003 (U.S. Sup. Ct. 1992)*

In 1986, David Lucas paid $975,000 for two residential lots on the Isle of Palms in Charleston County, South Carolina. His aim was to build single-family homes on the lots. In 1988, however, the South Carolina legislature enacted the Beachfront Management Act, which prevented Lucas from erecting any permanent habitable structures on the two lots. Lucas then sued in a South Carolina trial court, arguing that the state had taken his property without just compensation. The trial court held in his favor, but the South Carolina Supreme Court reversed that decision. Lucas appealed to the U.S. Supreme Court.

Scalia, Justice Prior to Justice Holmes's exposition in *Pennsylvania Coal Co. v. Mahon* (1922), it was generally thought that the takings clause reached only a direct appropriation of property, or the functional equivalent of a practical ouster of the owner's possession. That case [gave birth to] the oft-cited maxim that while property may be regulated to a certain extent, if regulation goes too far it will be recognized as a taking. *Mahon* offered little insight into when a given regulation would be seen as going "too far." In the 70-odd years of succeeding "regulatory takings" jurisprudence, we have generally eschewed any set formula for determining how far is too far, preferring to engage in essentially ad hoc factual inquiries.

We have, however, described at least two categories of regulatory action as compensable without case-specific inquiry into the public interest advanced in support of the restraint. The first encompasses regulations that compel the property owner to suffer a physical invasion of his property. In general, no matter how minute the intrusion, and no matter how weighty the public purpose behind it, we have required compensation. For example in *Loretto v. Teleprompter Manhattan CATV Corp.* (1982), we determined that New York's law requiring landlords to allow television cable companies to emplace cable facilities in their apartment buildings constituted a taking, even though the facilities occupied at most only 1 1/2 cubic feet of the landlords' property. The second situation in which we have found categorical treatment appropriate is where the regulation denies all economically beneficial or productive use of land. . . . [W]hen the owner of real property has been called upon to sacrifice *all* economically beneficial uses in the name of the common good, he has suffered a taking. The trial court found Lucas's two beachfront lots to have been rendered valueless by [the state's] enforcement of the coastal-zone construction ban. Under Lucas's theory of the case, which rested upon our "no economically viable use" statements, that finding entitled him to compensation.

Where the state seeks to sustain regulation that deprives land of all economically beneficial use, it

may resist compensation only if the logically antecedent inquiry into the nature of the owner's estate shows that the proscribed use interests were not part of his title to begin with. Any limitation so severe [as a regulation that prohibits all economically viable uses of land] cannot be newly legislated (without compensation), but must inhere in the title itself, in the restrictions that background principles of the state's law of property and nuisance already place upon land ownership. A law or decree with such an effect must, in other words, do no more than duplicate the result that could have been achieved in the courts. When, however, a regulation that declares off-limits all economically productive or beneficial uses of land goes beyond what the relevant background principles would dictate, compensation must be paid to sustain it.

It seems unlikely that common-law principles would have prevented the erection of any habitable or productive improvements on Lucas's land. The question, however, is one of state law to be dealt with on remand. [To win,] South Carolina must identify background principles of nuisance and property law that prohibit the uses Lucas now intends in the circumstances in which the property is presently found. Only on this showing can the state fairly claim that, in proscribing all such beneficial uses, the Beachfront Management Act is taking nothing.

South Carolina Supreme Court's judgment against Lucas reversed; case returned to the South Carolina courts for proceedings not inconsistent with the Supreme Court's opinion.

Ethical and Public Policy Concerns

1. Courts sometimes state which rights are fundamental and protect those rights by imposing tough means-ends scrutiny on laws that restrict them. What fundamental ethical objection almost always applies to such actions by the courts? *Hint:* Look at the section on the evolution of the Constitution and the role of the Supreme Court.

2. Although this chapter is mainly concerned with economic rights, one of the great generalizations about modern American constitutional law is that since 1937 the Supreme Court has shifted from protecting economic rights to protecting personal rights. One example of the Court's former solicitude for economic rights is the doctrine of economic substantive due process mentioned earlier in the chapter. The most important aspect of modern substantive due process, on the other hand, is the constitutional right of privacy. Today, social and economic regulations that are challenged on substantive due process grounds usually get very light means-ends review, while fairly strict scrutiny still applies to some laws that violate fundamental privacy rights.

With all of the above in mind, consider the following groups of questions. Throughout, we assume for the sake of argument that it is desirable for courts to give great protection to personal rights.

a. Why are personal rights intrinsically more important than economic rights? Why, for example, is the right to an abortion more important than freedom of contract? Or consider the distinction between a right protected by the old-time substantive due process—the right to pursue a trade, occupation, or profession—and freedom of speech. To ordinary people, which right really matters the most in their daily lives? Finally, aren't freedom of contract and the right to pursue a chosen occupation "personal" rights, too?

b. What are the possible consequences of giving greater protection to economic rights? Would this imperil social and economic regulations intended to protect the poor and the powerless? In considering this question, examine the text's discussion of the Supreme Court's 1905 *Lochner* decision. Even if such regulations would be jeopardized, is this a decisive objection to giving greater protection to economic rights?

On the other hand, would greater constitutional protection for economic rights increase productivity and thereby benefit both rich and poor? Many free-market economists believe that this would happen. But the U.S. economy has grown spectacularly over the last 50 years even though economic rights have received little constitutional protection during that time.

c. If courts ever give economic rights greater protection, could they make intelligent decisions on the questions this would force them to consider? This would require that courts apply tougher means-ends scrutiny to social and economic regulations. This, in turn, probably means that they would have to decide with some precision how well particular statutes advance their purposes. Are courts likely to do a good job if they try this? How much do most lawyers know about these matters?

On the other hand, don't courts sometimes have to consider complex questions of social policy when they apply tough scrutiny to laws that restrict *personal* rights? If so, does this mean that courts also can handle issues related to economic rights?

Problems and Problem Cases

1. A female student at Virginia Polytechnic Institute (VPI) alleged that two VPI football players forcibly raped her. Afterward, one of the players told the student, "You better not have any f—ing diseases." Subsequently, the player announced publicly in a dormitory dining hall, "I like to get girls drunk and f—the s—out of them." The woman sued the two players under a provision of the federal Violence Against Women Act of 1994 that creates a private cause of action against any person who commits a crime of violence motivated by gender. The defendants alleged that the act was an unconstitutional assertion of the commerce power. In response, the plaintiff argued that violence motivated by gender animus imposes medical and legal costs upon its victims; discourages those who fear such violence from traveling, working, or transacting business at times or in places that they consider unsafe (thereby deterring some interstate travel, employment, and transactions); and, as a result, inhibits the productivity of its actual or potential victims and decreases the supply and demand for interstate products. Based on the *Lopez* case in the text, are these effects on interstate commerce sufficiently "substantial" for the act to be a constitutional assertion of the commerce power?

2. The U.S. Constitution's Tenth Amendment says that "[t]he powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." Many people feel that the Tenth Amendment puts strict limits on congressional power and strongly affirms the principle of federalism. Yet the Supreme Court has easily evaded the Tenth Amendment for most of this century, and it has a decent argument for doing so. What is that argument? *Hint:* The argument assumes that the commerce power and other federal regulatory powers are read very broadly.

3. In 1984, Congress passed a statute directing the Secretary of Transportation to withhold a percentage of the federal highway funds due to a state if the state allowed the purchase or possession of alcoholic beverages by those under 21 years of age. South Dakota, which permitted those 19 or older to buy 3.2 beer, sued to have the statute declared unconstitutional. On what enumerated power is this federal law based? Is it a constitutional exercise of that power? If the statute is constitutional, does this mean that South Dakota cannot permit the purchase or consumption of alcoholic beverages by those under 21?

4. The United States Olympic Committee (USOC) is a federally chartered private corporation. Under the Amateur Sports Act, it has broad powers to handle U.S. participation in international athletic competition and to promote amateur athletics within this country. In addition to granting the USOC its charter, Congress imposed certain regulatory requirements upon it and also gave it some funding. Congress also gave the USOC near-exclusive rights in the commercial and promotional use of the term *Olympic*. When the USOC sued to protect those rights, the defendant argued that its discriminatory enforcement of them violated the equal protection clause.

Suppose that you are an attorney for the defendant in this case. Based on the discussion in the text, what arguments would you make for the proposition that the USOC's enforcement of its rights was state action? Do you think that those arguments will succeed today? Why or why not?

5. The Youngs Drug Products Company planned a marketing campaign for its condoms. The campaign involved the unsolicited mass mailing of advertising fliers and other materials to the general public. The mailings were to include: (1) fliers promoting a range of products available in drugstores (including condoms), (2) fliers specifically promoting condoms, and (3) informational pamphlets discussing the usefulness

of condoms in preventing venereal disease and aiding family planning. Are Youngs's *fliers* commercial speech? What about the *informational pamphlets?*

6. Under Pennsylvania's Workers' Compensation Act, once an employer becomes liable for an employee's work-related injury, the employer or its insurer must pay for all "reasonable" and "necessary" medical treatment. Several employees who had been denied such benefits sued under a federal civil rights statute, alleging that they had been deprived of property without due process of law. Apparently, one reason for the denial was that the employees had not yet proved that the treatment for which they sought benefits was "reasonable" and "necessary." Assuming that there was state action here, were the employees deprived of a property interest?

7. One provision of the federal Deficit Reduction Act of 1984 established a 15-month freeze on the fees certain physicians could charge Medicare patients. A group of physicians challenged the constitutionality of this provision, alleging that it restricted freedom of contract in violation of the Fifth Amendment's due process clause. What *kind* of due process attack is this? Will it succeed?

8. The Minnesota legislature passed a statute banning the sale of milk in plastic nonrefillable, nonreusable containers. However, it allowed sales of milk in other nonrefillable, nonreusable containers such as paperboard cartons. One of the justifications for this ban on plastic jugs was that it would ease the state's solid waste disposal problems because plastic jugs occupy more space in landfills than other nonreturnable milk containers. A group of dairy businesses challenged the statute, arguing that its distinction between plastic containers and other containers was unconstitutional under the equal protection clause. What means-ends test or level of scrutiny applies in this case? Under that test, is easing the state's solid waste disposal problems a sufficiently important *end?* Under that test, is there a sufficiently close "fit" between the classification and that end to make the statutory *means* constitutional? In answering the last question, assume for the sake of argument that there were better ways of alleviating the solid waste disposal problem than banning plastic jugs while allowing paperboard cartons.

9. Oklahoma statutes set the age for drinking 3.2 beer at 21 for men and 18 for women. The asserted purpose behind the statutes (and the sex-based classification that they established) was traffic safety. The statutes were challenged as a denial of equal protection by male residents of Oklahoma. What level of scrutiny would this measure receive if *women* had been denied the right to drink 3.2 beer until they were 2l but men had been allowed to consume it at age 18? Should this standard change because the measure discriminates against *men?* Is the male challenge to the statute likely to be successful?

10. Should sexual orientation be a suspect classification under the equal protection clause? At least three criteria have been suggested for determining whether discrimination based on a trait should be "suspect." They are: (1) a history of discrimination and disapproval that makes those possessing the trait a "discrete and insular minority;" (2) the fact that the trait is not voluntarily acquired and cannot be voluntarily eliminated; and (3) the fact that the trait bears no relationship to one's ability to contribute to society. Based on these three tests, should sexual orientation be treated as a suspect classification?

11. Suppose that State X enacts a minimum wage law for women only. Why were such laws subject to a substantive due process attack in the early part of this century? Would such an attack succeed today? How might one successfully attack such a law today?

12. After nine years and eight months of service, Perry McClendon was fired from his sales job with the Ingersoll-Rand Company. Believing that Ingersoll-Rand fired him to avoid pension obligations that would have arisen after 10 years of service, McClendon sued the firm for wrongful discharge. During the litigation, Ingersoll-Rand argued that McClendon's common law claim was preempted by the Employee Retirement Income Security Act (ERISA). ERISA has a provision stating that: "[T]he provisions of this subchapter and subchapter III of this chapter shall supersede any and all State laws insofar as they may now or hereafter relate to any employee benefit plan [covered by relevant ERISA provisions]." Does this language preempt McClendon's claim?

13. The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) requires that all covered pesticides be registered with the Environmental Protection Agency (EPA) before their sale. In 1972, the act was amended to give applicants for registration broad powers to block the EPA's use and disclosure of trade

secrets submitted as part of the registration process. But in 1978 Congress again amended FIFRA to let the EPA disclose such trade secrets to the public on certain occasions and to use secrets submitted by one applicant when reviewing subsequent applications. Its aims were to streamline the registration process, thus making new products available to consumers more quickly. The Monsanto Company, which makes pesticides, sued to have FIFRA's provisions letting the EPA use and disclose applicants' trade secrets declared unconstitutional under the takings clause. Are trade secrets "property" for takings clause purposes? Is the "public use" test met here? Assuming that federal law gives Monsanto an adequate remedy for any taking that occurs, would such a taking be unconstitutional?

Chapter Four

Business Ethics, Corporate Social Responsibility, and the Control and Governance of Corporations

Chapter Outline

I. The Debate over the Large Corporation
- *A. The Plan of this Chapter*

II. Does Business Ethics Make Any Sense?
- *A. Moral Relativism*
- *B. Psychological Egoism*
- *C. Ethical Egoism*

III. Some Ethical Background
- *A. Deontological and Consequentialist Ethical Theories*
- *B. Rights Theories*
- *C. Utilitarianism*

IV. Ethical Theory and the Corporate Social Responsibility Debate
- *A. Ethical Supports for Profit-Maximization*
  - *1. Utilitarianism*
  - *2. Negative Economic Rights*
- *B. Ethical Supports for the Critics' Position*
- *1. Positive Rights*
- *2. Kantianism*
- *3. Utilitarianism*

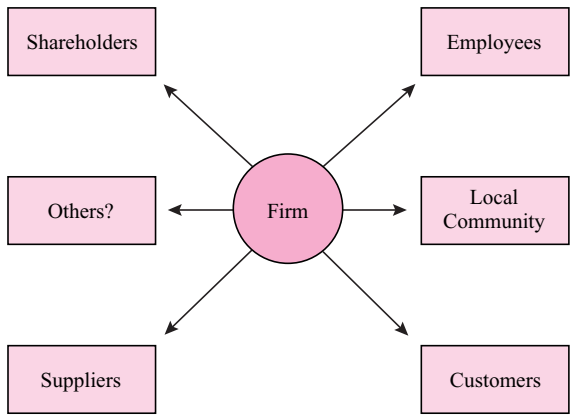
V. Practical Problems with the Defenders' Position
- *A. Markets and Other Private Forces*
  - *1. Market Checks*
  - *2. Protest, Publicity, and Public Opinion*
- *B. The Law*
  - *1. Corporate Influence on the Law's Content*
  - *2. Unknown Harms*
  - *3. Are Corporations Always Rational Actors?*
  - *4. Conscious Lawbreaking*
  - *5. Problems with the Criminal Sanction*

VI. Practical Problems with the Critics' Position
- *A. Responses from within the Business Community*
  - *1. Ethics Instruction*
  - *2. Corporate or Industry Codes of Ethical Conduct*
  - *3. The Corporate Stewardship Argument*
  - *4. Stakeholder Theory Revisited*
- *B. The Corporate Governance Agenda*
  - *1. Greater Shareholder Power*
  - *2. Changing the Composition of the Board*
  - *3. Changes in Management Structure*

VII. Summary and Conclusions

Over the past 10 to 20 years, ethics has increased its presence in the business curriculum. Ethics courses are a response to socially irresponsible business behavior—behavior in which businesspeople fail to meet basic ethical standards during the course of their work. Ordinarily such failures mean harm to society or to specific third parties. Business ethics courses usually proceed on the theory that such harm can be reduced, and socially responsible business behavior increased, if tomorrow's managers are instructed in their ethical obligations.

The Debate over the Large Corporation



Business ethics instruction is a relatively recent phenomenon, but it is only the latest stage in a century-long struggle to control corporate misbehavior.[1] In America, large corporations first appeared when the country began its rapid industrialization late in the 19th century. Ever since, such firms have been villains to some and heroes to others. Hostility to big business was one theme in the populist movement of the late 19th century, and the control of large corporations preoccupied the progressive movement of the early 20th century. The perceived need to check abuses of business power was a major force behind both the New Deal statutes of the 1930s and the many new federal regulations enacted during the 1960s and 1970s. Much the same motives underlie modern calls for more business ethics instruction.

Over the past 30 years, critics of corporations probably have been more vocal than their defenders. By now, the critics' litany of complaints is very familiar. In the single-minded pursuit of profits, the critics say, corporations despoil the environment, mistreat employees, fire loyal workers at will, abandon local communities without warning, sell shoddy and dangerous products, and corrupt the political process. Underlying these criticisms are some general perceptions about modern business. Large corporations, it is observed, perform such essential national economic functions as raw materials extraction, energy production, the provision of transportation and communications, and military production—functions that some countries entrust to government bodies. How corporations perform these functions is critical to the nation's well-being. Despite their importance, however, corporations are not nearly so accountable to the public as the formal organs of government. For example, the public has little to say about the appointment of their officers and directors. This lack of accountability is made all the more serious, critics maintain, by the tremendous power big corporations wield in many spheres of American life.

These criticisms and perceptions naturally have generated calls for changes in the ways corporations decide and behave. Throughout the 20th century, the law has been the main device for checking corporate misdeeds. However, some observers have come to feel that legal regulation, while an important element in any corporate control scheme, is insufficient by itself. To supplement regulation, they urge that business be led to adhere to standards of ethical or socially responsible behavior higher than those imposed by existing law. One example is the *stakeholder theory* of corporate social responsibility, which says that rather than striving only to maximize profits for shareholders, a business firm should balance shareholder interests against the interests of other stakeholders such as its employees, managers, suppliers, customers, and local community residents (see Figure 1). To promote such behavior, some corporate critics have proposed significant changes in the internal governance of corporations. Others have urged that the business community's own resources be brought to bear. It is within the latter context that the move toward ethics instruction has arisen.

Despite all the concern about abuses of its power, big business has contributed mightily to the unprecedented material abundance that America has experienced over the last century. In part for this reason, the debate about the modern corporation has not been totally dominated by its critics. In opposition to the critics, defenders of business argue that profit maximization should be its main goal and that the only ethical norms firms must follow are those embodied in the law. In short, they say that the only social responsibility of corporations is to maximize profits within the bounds set by the law.

Figure 1 *Stakeholder Theory—An Illustration*

[1]Of course, many of this chapter's observations apply to other business forms besides corporations.

Unlike stakeholder theory, therefore, this traditional view of corporate social responsibility stresses the interests of the firm's shareholders. Its main justification is economic. When corporations maximize profits under genuinely competitive conditions, their defenders insist, they use scarce economic resources efficiently and thereby maximize productivity. Because "ethical" firms recognize moral duties other than profit maximization and try to serve other constituencies besides shareholders, they are not likely to maximize profits. Thus, they should be less efficient and less productive than firms that worry only about the bottom line.

The corporation's defenders also disagree with its critics on a number of specific points raised above. In their view, corporate size is not the issue; what is critical is that firms efficiently *compete.* Because competitive markets and other private-sector forces such as unfavorable publicity go some way toward controlling business misbehavior, they add, corporate accountability is not a big problem. Where markets and other private forces fail to curb socially irresponsible conduct, moreover, the law can do the job. Indeed, sometimes the law does that job too well. In the corporate defenders' view of things, business often is hamstrung by a maze of regulations that deter socially valuable profit-seeking without producing comparable benefits.

The Plan of this Chapter

In the preceding discussion, we developed two general views of corporate social responsibility. To defenders of the corporation, the only moral obligations of business are to *maximize profits and to obey the law.* Critics of the corporation naturally want business firms to obey the law. All other things being equal, moreover, most of them have no particular quarrel with profit maximization. But they say that *business should recognize other moral obligations as well.* For example, stakeholder theory tells businesses to balance the interests of their various constituencies. This means that corporations have other moral obligations in addition to the moral obligation to maximize profits for their shareholders. This probably means that under stakeholder theory, profits will be lower than under the first view of corporate social responsibility.

Which view of corporate social responsibility is right? In large measure, the disagreement is *ethical.* In other words, the corporation's critics and its defenders disagree about how things *ought to be.* The chapter begins by discussing whether it makes sense to apply moral criteria to business behavior. Then it describes some ethical theories that are relevant to the debate over corporate social responsibility and examines those theories' implications for that debate. After this, the chapter criticizes an assumption often made by the corporation's defenders—that the law, markets, and other private forces adequately check corporate misbehavior. The chapter then turns its fire on some assumptions commonly made by the corporation's critics—that ethics instruction and other ethics initiatives from within the business community will significantly reduce corporate misconduct; and that where they fail, changes in corporate governance will do the job. The chapter's last section tries to state some tentative conclusions about the corporate social responsibility debate.

Does Business Ethics Make Any Sense?

For at least three reasons, some readers of this chapter probably think that it makes no sense to talk about ethical or socially responsible business behavior. The first is that, because people and societies differ about morality, there is no ethical truth and thus no objective moral standard by which business can be judged. Second, readers might believe that socially responsible corporate behavior is impossible because such behavior implies concern for others, when in fact people can act only in their own self-interest. Finally, some readers might believe that corporate social responsibility is nonsense because people *ought* to act only in their self-interest.

While these three views may pass as new and advanced thinking with certain students, they have been around for some time. They normally go by the names of **moral relativism, psychological egoism,** and **ethical egoism,** respectively. As we will see, each member of this threesome faces serious objections. Although these objections do not prove that it makes sense to talk about ethical business behavior, they at least weaken three common objections to that endeavor.

Moral Relativism

Moral relativism begins with the observation that different people and different societies often espouse different moral values. For example, the United States and most Middle-Eastern countries have quite different

views about the rights and duties of women. From this, some relativists infer that there is no objective truth about moral matters. They sometimes add that the moral judgments people make really are expressions of subjective preferences or feelings, or merely result from the culture in which one happened to be born.

Opponents of moral relativism sometimes argue that many ethical disagreements really are disagreements about the facts. If each side knew more technical details about nuclear power, for example, maybe there would be fewer disputes about the desirability of nuclear power plants. (But would more scientific knowledge produce more agreement about the morality of abortion?) Other opponents of relativism argue that there actually is much less moral disagreement than the relativists claim. How many people or societies approve of murder, rape, or child abuse? All other things being equal, how many think that it is better for people to be weak rather than strong, hard-hearted rather than compassionate, lazy rather than industrious, or stupid rather than intelligent?

The best argument against moral relativism, however, is that its conclusion does not follow from its premise. As a general rule, disagreement about *x* does not prove that there is no truth about *x.* No one, for example, thinks that scientific disputes destroy the possibility of scientific truth. Just because people and societies disagree about morality, therefore it does not follow that there is no moral truth. Even if relativism's skeptical conclusion somehow does follow from its premise, moreover, relativism still is in trouble. In that event, disagreement about *x* really does mean that there is no truth about *x.* But people obviously disagree about relativism, so on this assumption we cannot say whether it is true or false.

Psychological Egoism

Under most definitions of corporate social responsibility, businesses that act responsibly must sometimes act contrary to their self-interest. But what if people cannot do this? According to a theory known as psychological egoism, people *always* act in a self-interested fashion. If that is the case, what sense does it make to say that people should act ethically, when to act ethically is not in their self-interest? How can there be a moral obligation to do the impossible?

Obviously, much human behavior is self-interested, but most people would deny that all of it fits that description. Psychological egoists, however, love to point out how motives and behavior that seem altruistic really are self-interested. Thus love is something more akin to sexual attraction, pity is the feeling that *we* might suffer the same fate as the victim we pity, people give money to charity because it makes them feel good about themselves, and so forth. But what about hard cases such as the person who risks his life to save another's life? An egoist might say that here, as with someone who gives money to charity, the person acted to acquire a feeling of moral self-satisfaction. Similarly, people who give up their lives to save another's life act to avoid the guilt they would have felt had they survived. But just because someone derives satisfaction or avoids guilt from some action, it does not follow that this was the *reason* for the action. Maybe these people just acted out of simple concern for others, and got satisfaction as a kind of bonus.

Confronted with arguments like these, psychological egoists retreat to their final citadel. Human actions are self-interested, the egoists seem to say, because they are voluntary. For example, if Jan gives $100 to charity while Jill spends the same amount on her hairdo, each is merely doing what she wants to do. The same is true of someone who dies so that others might live. But while this kind of psychological egoism may be irrefutable, it also is empty. The reason is that nothing could ever count against it. Some philosophers of science maintain that assertions which cannot be falsified—which are consistent with any state of affairs—are not meaningful assertions about the world. Finally, even if we accept this last argument for psychological egoism, wouldn't we still want to distinguish between people who pursue their self-interest by doing good for others, and people who pursue their self-interest by looking out for themselves?

Ethical Egoism

Unlike psychological egoism, ethical egoism is a *moral theory:* it tells people what they ought to do. According to ethical egoism, each of us should always act in his or her own self-interest. Ethical egoism obviously can justify corporate profit-maximization. Indeed, ethical egoism may *command* it—if profit-seeking indeed is in the firm's self-interest. To the extent that socially responsible corporate behavior is not self-interested, furthermore, ethical egoism condemns it as wrong.

Ethical egoists sometimes argue that, if everyone believed ethical egoism and acted accordingly, people would behave more responsibly, our property and privacy would be more secure, and we would enjoy

greater prosperity. But notice what this argument implies: that responsibility, property, privacy, and prosperity are what is really good and that self-interested behavior only is good to the extent that it promotes these things. Instead, most ethical egoists probably feel that acting in one's self-interest is good in itself. Also, it is controversial whether ethical egoism actually does promote personal responsibility, respect for property and privacy, prosperity, and the like. In fact, critics of ethical egoism say that it would instead promote a war of all against all, as people fight for their interests when those interests conflict. Then again, recognition of this possibility might rationally compel ethical egoists to espouse law and order and stand up for altruism. In fact, it might even compel egoists to behave altruistically themselves. But they would do so only to induce other people to behave the same way. If he could get away with it, our prudent, rational egoist would still behave in the most self-interested ways imaginable.

Another argument against ethical egoism assumes that it is the business of a valid moral theory to decide who ought to get what. Suppose that Eric and Ellen each want a plot of land called Blackacre, and that it is in the interest of each to have Blackacre. If ethical egoism is true, the argument runs, then both Eric and Ellen ought to have Blackacre, which is a contradiction. A final argument against ethical egoism assumes that, generally speaking, it is a good thing for people to act in their own self-interest. But this is not the *only* good thing that there is. This means that in some cases, our self-interest must yield to other values. Another way to make the same point is to say that ethical egoism rips out one strand in a moral tradition, magnifies it, and thus creates the illusion that it is the only true moral value.

Some Ethical Background

Assuming, then, that the question makes sense, what *is* ethical or socially responsible corporate behavior? This question requires another: What is moral or ethical behavior generally? Of course, a full consideration of moral philosophy is far beyond the scope of this text. Nonetheless, two well-known ethical views have implications for the corporate social responsibility debate. The first of these views is **rights theory;** the other is **utilitarianism.** Before discussing these two views, however, we must consider the difference between **deontological** ethical theories and **consequentialist** (or teleological) theories.

Deontological and Consequentialist Ethical Theories

Suppose that by breaking a contract with another party you could make yourself richer without harming that party in any way. Is it morally right for you to break the contract under these circumstances? Moral philosophers called *consequentialists* generally would answer this question in the affirmative. The rightness or wrongness of an action, consequentialists say, depends on its *consequences.* Here, the consequences of breaking the contract clearly seem favorable: You are better off and the other party is no worse off. Because a consequentialist has to consider *all* of an action's likely consequences, however, he might conclude that you should perform the contract. For example, suppose that by breaking your contract you would encourage other people to break theirs when it would be harmful for them to do so.

Note that by breaking the contract you are breaking the *promise* contained in that contract. To some moral philosophers, promises are sacred (or nearly so). This attitude is an example of *deontological* moral thinking. Strict deontologists say that certain actions are right or wrong *in themselves*—irrespective of their consequences. Thus, a strict deontologist who believes in the sanctity of promises would say that you should never break your contracts, no matter what. Of course, a person can be a deontologist without thinking that promises always should be kept. For example, someone might believe that it is always wrong to take human life, or that people should always tell the truth, but not that promises are sacred.

Few moral philosophers have been strict deontologists. One possible exception, however, was the German philosopher Immanuel Kant (1724–1804). Kant apparently believed that certain moral rules apply universally, irrespective of their consequences. The key to determining these rules was his famous **categorical imperative.** One major formulation of the categorical imperative says: "Act only according to that maxim by which you can at the same time will that it should become a universal law."[2] Suppose you want to borrow

[2]This quotation and those that follow can be found in Kant, *Foundations of the Metaphysics of Morals,* 2nd ed. (MacMillan/Library of Liberal Arts paperback 1990), pp. 38–39, 46–47.

some money even though you know that you never will be able to repay the loan. To justify this action, you affirm the following maxim, rule, or principle: "When I believe myself to be in need of money, I will borrow money and promise to repay it, although I know I shall never be able to do so." According to Kant, you would not want this maxim to become a universal law. If it did become a universal law, no one would believe in promises to repay debts, and you would be unable to borrow the money you want. Thus, your maxim fails to satisfy the categorical imperative. Unless there is an alternative maxim that justifies such behavior and that can be universalized, it is wrong to falsely promise that you will repay a loan.

Kant also had a second major formulation of the categorical imperative: "Act so that you treat humanity, whether in your own person or in that of another, always as an end and never as a means only." One application of this statement is that we should not use or manipulate other people to serve our own purposes, but instead should appeal to their reason when trying to influence them. In Kant's eyes, if you falsely promise a lender that you will repay the money she lends you, you are *using* that person, because she would not rationally agree to the loan if she knew all the facts.

Strict deontological views like Kant's face an obvious problem—the absolute nature of the duties they assert. Such theories essentially say that we should *always* tell the truth, *never* lie, or *never* kill; and such positions are difficult for most morally reflective people to maintain. Responding to this difficulty, some philosophers have advocated what we will call *mixed deontological theories.* Some theories of this kind say that the rightness or wrongness of actions is not completely determined by their consequences but by their nature and the motives underlying them as well. Another kind of mixed deontological theory emphasizes the notion of **prima facie duties.**[3] Prima facie duties are moral rules that bind us unless they conflict with another, more compelling prima facie duty. In such cases, our *actual duty* is to obey the moral rule that is stronger under the circumstances. For example, your duty to preserve human life should override your duty to tell the truth if lying is necessary to prevent someone from being killed.

[3]The notion of prima facie duties comes from W. D. Ross, *The Right and the Good* (1930), pp. 18–34.

Rights Theories

Modern rights theories normally are mixed deontological theories that emphasize rights rather than duties. Such theories usually identify certain fundamental rights, try to justify them and establish their relative importance, and assert that such rights should be honored unless doing so would compromise a more important right. These rights may be either *negative* or *positive.* Negative rights such as freedom of contract, freedom of expression, and the right of privacy are claims that the community should not interfere with certain personal choices. Positive or "welfare" rights such as rights to old-age assistance or unemployment compensation are claims that the community should provide people with certain goods or services. Negative and positive rights differ in *what they require of other people.* Negative rights basically obligate us to leave the rightholder alone when she undertakes certain activities, while positive rights obligate us to do something for the rightholder.

Rights theorists naturally disagree about which rights are most important and the weight we should attach to particular rights. But they often agree on two general points:

1. *Where rights-based claims conflict, the right that is stronger under the circumstances wins out.* Thus, Justice Oliver Wendell Holmes's famous statement that no one has the right to shout "Fire!" in a crowded theater basically says that in some cases the rights to life and physical safety overcome free speech rights. Of course, there often is disagreement over the relative strength or importance of competing rights. Another problem, one suggested by the words "under the circumstances," is that our decision to favor one right over another often depends on the *degree* to which each is involved in the case before us. Even though someone might be hurt as a result, for example, most people would agree that someone has the moral right to scream "Fire!" at an outdoor fraternity party.

2. *Rights-based claims overcome utilitarian claims where the two conflict.* Rights, it is frequently said, are "trumps" that defeat arguments based on utility. This is because rights theories are deontological, which means that rights claims defeat the moral claims generated by consequences such as utility. However, some rights theorists say that utility can be considered where no rights are at stake. But what is a utilitarian claim and what is utility?

Utilitarianism

Utilitarianism says that the moral worth of actions depends on *their tendency to maximize utility.*[4] Thus, utilitarianism is a consequentialist ethical theory. In general, maximizing utility means achieving the greatest overall balance of satisfactions over dissatisfactions. The British utilitarian Jeremy Bentham (1748–1832) limited these satisfactions and dissatisfactions to pleasure and pain. Believing Bentham's approach too narrowly hedonistic, later utilitarians such as John Stuart Mill (1806–1873) broadened the notion of utility to include satisfactions such as health, knowledge, friendship, and aesthetic delights. Some modern utilitarians have urged that actions should be judged by their ability to promote the greatest net satisfaction of actual human preferences, whatever their nature. But no matter what the definition used, the aim generally is to maximize *total* or *aggregate* utility, not the individual actor's *own* utility.[5]

Utilitarianism has encountered many criticisms over time. One common objection is that there is no reliable method for measuring utility, however defined. Another is that utilitarianism is indifferent to the manner in which utility is realized. To a committed utilitarian, for example, satisfying sick or perverted desires is better than satisfying healthy ones if the former would generate more utility. So long as total utility is maximized, moreover, utilitarianism seems indifferent to inequalities in its distribution among society's members. Finally, utilitarianism tends to sacrifice personal rights and interests to the maximization of collective utility. If enough Romans congregate to watch the lion devour the Christian, their collective pleasure will outweigh the pain of the Christian, however intense.[6] Similarly, utilitarian calculations might justify evils such as slavery, religious intolerance, infanticide, and the extermination of despised minorities—so long as total net satisfaction is maximized thereby.

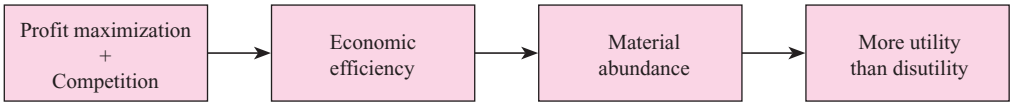
[4]This is *act-utilitarianism.* Another form of utilitarianism, called *rule-utilitarianism,* says that we should follow the *rule* that would maximize utility if it were consistently followed in like cases. For example, a rule-utilitarian might say that we should never break our promises because if we follow an absolute rule to this effect, we will generate more utility than if we try to make case-by-case judgments. As this example suggests, rule-utilitarianism sometimes resembles deontological theories in its practical results—but not in the reasoning producing those results.

[5]Some utilitarians, however, say that the standard should be *average* utility per capita, not total utility.

[6]M. Sandel, ed., *Liberalism and Its Critics* (1984), p. 2.

Ethical Theory and the Corporate Social Responsibility Debate

Defenders of the corporation generally say that business's only moral obligations are to maximize profits and to obey the law. The corporation's critics, on the other hand, assert that business has other moral obligations as well—obligations that may conflict with profit maximization. Assuming that there is a moral duty to obey the law, what does our brief review of ethical theory suggest about the remaining claims?



Ethical Supports for Profit Maximization

Utilitarianism The utilitarian argument for profit maximization assumes that material things usually give their possessors utility and that more material things usually mean more utility. The argument also assumes that the efficient allocation and use of society's scarce resources contribute powerfully to material abundance. Finally, the argument assumes that profit maximization under genuinely competitive conditions results in such an allocation and use of society's resources. Figure 2 summarizes the steps in the argument.

Why is there a relationship between profit maximization and efficiency? Firms that efficiently use resources generally can undersell their competitors. As a result, they gain greater sales and reap higher profits. For this reason, they often can outbid less efficient resource users. Hence, scarce resources are allocated efficiently; they flow to the users and uses most highly valued by consumers and best able to give them a maximum return on their expenditures. If corporate managers pursue goals other than profit maximization, resources will not be put to their most efficient uses and society's total wealth will be reduced by the resulting inefficiencies. In other words, corporate social responsibility generally does not come free.

To illustrate the last point, assume for simplicity's sake that there is no foreign competition in the American steel industry and that all domestic steel makers spontaneously decide to observe pollution standards stricter than those imposed by law. Also, assume that the firms know that their buyers may not be willing to pay extra for "responsibly" produced steel. Because such socially responsible behavior costs money, the

Figure 2 *A Utilitarian Argument for Profit Maximization*

firms face a dilemma. They can try to pass on the increased costs to buyers in the form of higher prices, thus reducing the buyers' return per dollar spent and, most likely, their ability to make other purchases and their overall utility. Higher prices also might cause some buyers to seek substitutes for steel, with obvious effects on the steel firms' profits and their shareholders' utility. Or the firms might decide to retain existing customers by refusing to increase prices despite the higher costs they face. In this case, the firms almost certainly would have to accept lower profits. If profits fall, dividends and salaries might be reduced, with corresponding utility losses for shareholders and employees. In addition, the firms' ability to bid for scarce resources such as iron ore also might suffer. The likely result is a flow of employees, investment funds, and resources away from those firms. This, in turn, may mean lower steel production, which may also mean lower societal utility. If all these various possible losses in utility exceed the utility gains from reduced pollution, the steel firms' "socially responsible" behavior is wrong from a utilitarian point of view.

As Figure 2 suggests, however, the utilitarian argument for profit maximization depends on at least two further assumptions:

1. As already mentioned, *profit maximization must occur under conditions of genuine competition.* As Adam Smith observed in his *The Wealth of Nations* over 200 years ago, people in the same business seldom converse, even on social occasions, without the conversation ending in a conspiracy against the public, or in some scheme to raise prices. In other words, competitors often try to thwart the market and maximize their profits by engaging in the various anticompetitive practices described in Chapters 48 and 49, or by using government to restrict competition. To the extent that they succeed, they weaken the link between profit-seeking and efficiency, thereby reducing utility.

For example, industries that get government to give them tariff protection or members of professions who establish government-backed occupational licensing schemes often gain significant protection from competition. This may allow them to restrict output, raise prices, and/or offer lower-quality products or services. To illustrate the point, consider the extreme case in which one firm has a monopoly in a certain product. Economists say that such a firm can maximize its sales revenues and reap monopoly profits by restricting output and raising prices. This results in inefficiencies, because the total amount of goods or services is reduced and purchasers of those goods or services do not receive a maximum return for the higher prices they pay. Outright monopolization is illegal under section 2 of the Sherman Act. But economists often argue that tacit price-fixing agreements among firms in *oligopolistic* industries have similar, if less serious, effects, and that the antitrust laws have done relatively little to curb oligopolistic price-fixing.[7] This is one example of a theme we stress later in the chapter—the law's limits as a corporate control device.

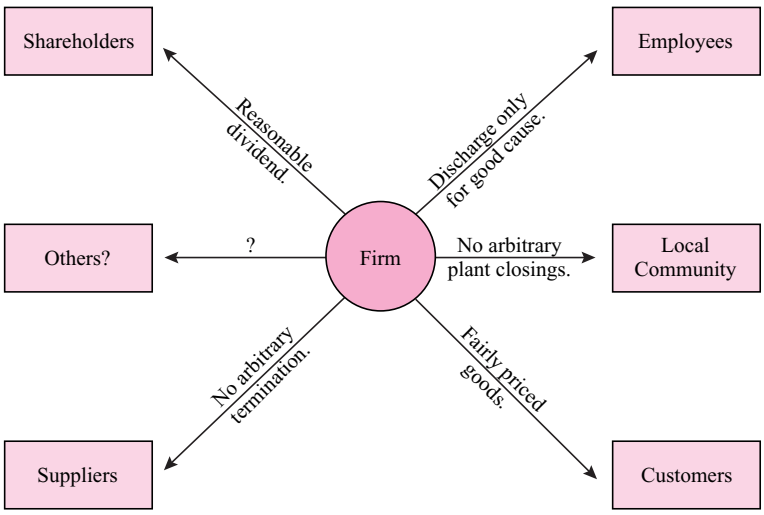
2. *The disutility resulting from profit maximization must not exceed the utility it produces.* This assumption is illustrated by our earlier steel industry example. In that example, it would be difficult to defend profit maximization on utilitarian grounds if the utility gained from reduced pollution exceeded the utility lost due to reduced efficiency. The point is that competitive profit-maximization often has social costs, and sometimes those costs outweigh the material benefits it provides.

Negative Economic Rights If they exist and are strong enough to outweigh other moral concerns, negative *economic* rights such as freedom of contract and property rights also support profit maximization. They do so mainly by protecting the activities through which profits are made.

[7]See Chapter 48. An oligopolistic industry is one dominated by a few large sellers.

For example, suppose that in order to maximize profits, the XYZ Corporation does not provide health insurance for its employees. If XYZ is criticized for failing to respect its employees' alleged positive right to decent health care, it can claim that its employees freely contracted to work on this basis, and that freedom of contract outweighs any right to decent health care. However, this argument faces difficulties if XYZ has greater bargaining power than its employees. To take another example, suppose that the ABC Corporation closes an inefficient plant to improve its profit picture. If members of the affected local community object, ABC might defend its action by saying that it has an absolute or near-absolute right to dispose of its property as it sees fit. Because the plant is its property, ABC could contend that it is morally entitled to shut down that plant whenever it desires.

Ethical Supports for the Critics' Position



Positive Rights The preceding arguments depended on the assumption that negative economic rights are very important, and on the absence of competing moral concerns strong enough to override them. But what if negative economic rights are less important than positive rights of all kinds? First, this would undermine an important defense of profit maximization. Second, it would powerfully justify the view that business has other ethical responsibilities besides maximizing profits. To be sure, some of these positive rights might diminish economic efficiency and productivity. But to a rights theorist, rights trump utilitarian claims.

How can positive rights justify the critics' position in the corporate social responsibility debate? Stakeholder theory provides an example. Suppose that each of the firm's various stakeholders has positive rights of one kind or another. This means that society in general—and the firm in particular—has certain duties to these stakeholders. Figure 3 provides one set of examples. You should be able to think of others.

Kantianism Kant's categorical imperative also might justify certain moral obligations to the firm's stakeholders.[8] Suppose that, consistent with the second major formulation of Kant's categorical imperative, stakeholders have a right to be treated as ends in themselves and not merely as means. This could mean that they should not be treated as objects to be used for corporate profit and discarded when they cease to be useful. If so, it might be wrong for a corporation to fire workers once their services are no longer required, or to suddenly leave a community with which it has had a long relationship. As discussed earlier, another im-

[8]For an argument resembling the one made in this paragraph, see W. Evan and R. Freeman, "A Stakeholder Theory of the Modern Corporation: Kantian Capitalism," in *Ethical Theory and Business,* 3rd. ed., ed. T. Beauchamp and N. Bowie (1988), pp. 97–112.

Figure 3 *Positive Rights and Stakeholder Theory (One Example)*

plication of the categorical imperative is that we should appeal to people's rational nature when trying to influence them or when taking action that affects their interests. This could mean that affected stakeholders should be allowed to participate in corporate governance, or at least be consulted and have their views taken into account before any adverse action against them can occur. Later in the chapter, we will examine proposals for stakeholder participation in corporate governance.

Utilitarianism Earlier we observed that for utilitarianism to justify full-fledged profit maximization, the utility profit maximization produces must exceed the disutility it creates. If the balance is always or nearly always unfavorable to profit maximization, maybe corporations should emphasize other goals more and profit maximization less. To make much the same point in a different way, maybe utilitarianism could justify stakeholder theory. Maybe, that is, a world in which businesses recognize all kinds of moral duties to their stakeholders would generate more net utility than a world devoted to profit maximization. To be sure, such a world probably would be poorer than a profit-maximizing world, but it might also be a safer and less anxious one. But then again, maybe material things yield enough extra utility to justify the disutilities created by profit maximization.

Practical Problems with the Defenders' Position

The previous section suggests that ethical theory does not clearly dictate any particular position on the corporate social responsibility debate. If so, how else might we evaluate the two views of corporate social responsibility sketched earlier? One possibility is to examine the *factual assumptions* each view makes. This section examines some assumptions made by many people who say that a corporation's main social responsibility is to maximize profits.

Although there often are real ethical differences between the corporation's critics and its defenders, no one thinks that business should maximize profits to the exclusion of everything else. According to the corporation's defenders, business's other (nonprofit-related) responsibilities can be met by obeying the law. This position is plausible only if the law is very effective in controlling corporate misbehavior. Also, the position becomes more plausible if private-sector forces such as markets and public opinion are significant checks on business misconduct. In fact, the corporation's defenders tend to assert—or assume—the truth of both these contentions. Thus, they say, it is safe to let managers concentrate on profit maximization because the law, the market, and various other private forces do so good a job keeping them in line. Figure 4 summarizes the defenders' major positions. Of course, not every defender of business embraces every one of Figure 4's propositions.

As we will see, however, the defenders' contentions are questionable. Market forces and other private checks, while sometimes effective, offer very incomplete protection against business misconduct. The law's ability to control such misconduct also has its limits. Thus, it may not be enough for firms simply to seek profits and obey the law. Even if you were convinced by the moral arguments for profit maximization, therefore, you still may want business to have other ethical responsibilities besides simply following the law.

Markets and Other Private Forces

Defenders of profit maximization tend to argue or assume that market forces and other private-sector activities force business to behave in a socially responsible fashion. For such reasons, the corporation's defenders sometimes conclude, there is little need for managers to abandon their

Figure 4 *Major Points Argued by Defenders of the Corporation*

Overall Position	Business's only moral responsibility is to maximize profits within the bounds set by the law.
Preferred Moral Theories	Utilitarianism and rights theories stressing negative economic rights
Other Arguments	1. Markets and other private forces such as protests, publicity, and public opinion are significant checks on business misconduct. 2. The law is a very effective (perhaps too effective) constraint on business.

profit orientation and the utility it generates. Unfortunately, however, market checks and other forms of private behavior have definite limits as corporate control devices. As a rule, the former check only certain kinds of corporate misbehavior. In addition, many practical obstacles stand in the way of the latter's success.

Market Checks Market forces clearly can influence corporate behavior for the better. Sooner or later, for example, firms that market defective and/or dangerous products will almost certainly lose business. This possibility naturally stimulates corporate managers to avoid this form of corporate irresponsibility. But are market checks well equipped to stop other forms of real or alleged corporate misbehavior such as overseas bribery, environmental degradation, and poor working conditions? In these cases, consumers of the offending firm's products may not be directly harmed by the firm's wrongdoing and thus may lack strong incentives to act against it. Indeed, they may not even know about the misconduct.

These considerations suggest that while market forces impel firms to offer safe and trouble-free products and services, they are much less effective against corporate irresponsibility that does not involve those products and services. In fact, market forces are not always effective even in the former case. One reason is that people who are injured or otherwise disadvantaged by defective products may not be aware of the harm at the time it occurs. In the past, for instance, some cigarette smokers did not know that cigarette smoking helps cause lung cancer. In some cases, even the manufacturer itself is unaware of these "unknown harms." In all these situations, some people will be harmed before the problem is discovered and corrective action taken. A second reason why market forces do not always curb product-related harms, one discussed later in this section, is that business organizations sometimes do not respond rationally to external pressures. This can prevent them from quickly acting on negative information about defective products.

Protest, Publicity, and Public Opinion Thus, market forces seem to check certain forms of corporate misbehavior but not others. However, other kinds of private activity appear not to have this limitation. Citizens angered by corporate misconduct can organize boycotts (which might also be regarded as a market check), initiate letter-writing campaigns, engage in picketing, and stage demonstrations against the offending firm. Such activities may attract media attention. Or the media itself may uncover and publicize irresponsible corporate behavior. Finally, the internet's potential as a corporate control device, while unclear, probably is not negligible. All these forms of private action can provoke government regulation, hurt the firm's image, and expose managers to criticism in their nonbusiness lives. The prospect of such happenings can force managers to change their ways for the better.

Thus, protests, publicity, and public opinion obviously *can* influence business conduct in responsible directions. But how often? Clearly, they cannot work where the offender is unaware of the misbehavior, or where knowledge of the misbehavior stays within the offender's confines. Even if the information becomes public, moreover, how many people will find out? Of those people, how many will view the information negatively? Within that group, how great is the level of concern? For those who are significantly concerned, what are the costs of taking action and the obstacles to organizing for collective action? Finally, how effectively can the offending firm counter any bad publicity that emerges? These questions suggest that a series of conditions normally must be met before protests, publicity, and public opinion can threaten a firm's well-being and thus change its behavior for the better.

The Law

Even the most ardent defender of business probably would admit that markets and free private activity have limitations as corporate control devices. However, he would be less inclined to concede that the law has any such weaknesses. In fact, he might well think that it puts excessive restrictions on business, thereby deterring valuable profit-seeking activity.

Throughout this century, the law has been the main means of controlling corporate misdeeds. Lawmakers usually assume that corporations are rational actors that can be deterred from misbehavior by the threats the law presents. Those threats are the sanctions (e.g., fines, civil damages) the law imposes on those who violate its rules. For deterrence to work effectively, corporate decisionmakers must understand when the law's penalties will be imposed, must fear the costs those penalties create, and must act rationally to avoid them.

Unfortunately, the law's ability to control irresponsible corporate behavior, while significant, has limits. Some of the reasons are discussed below. To the extent that these arguments are valid, the profit-maximizers' insistence that legal checks are sufficient to control corporate misbehavior is weakened. If so, then it may

make sense to say that business has moral duties that go beyond those stated in the law and to seek additional ways to make firms live up to those duties.

Corporate Influence on the Law's Content

One reason the law is an imperfect corporate control device, some argue, is that business has a significant voice in determining its content. Thus, the law sometimes reflects corporate interests. This may allow corporations to engage in unethical behavior that nonetheless is perfectly legal.

The political influence exerted by large corporations is a familiar subject. Because of their size, resources, and sophistication, they have (or can purchase) the ability to influence legislation through methods such as lobbying and contributions to business-oriented political action committees. Even if Congress or a state legislature passes hostile regulation, moreover, business sometimes can blunt its impact. It may use its political influence to reduce the funding received by the agency enforcing the legislation. Over time, business may co-opt the agency by inducing it to take a probusiness view of its functions. One way this occurs is through the continuous exchange of personnel between the agency and the industry it is supposed to regulate in the public interest. Also, an agency, the industry it regulates, and the congressional subcommittee controlling the agency may form a mutually beneficial relationship that is relatively impervious to outside influence (the so-called Iron Triangle).

By now, however, critics of the corporation have also become politically adept and sometimes can counteract corporate political power. Consumer groups and environmental groups are but two examples. More important, what is the implication of the previous arguments? That business should have *no* say in determining the rules by which it is governed?

Unknown Harms As noted earlier, for market forces to control corporate behavior, consumers must know that they are being harmed at the time the harm occurs. Reliance on the law involves a similar assumption—that legislators and regulators possess such knowledge. Legal action to control harmful corporate behavior usually will not happen until there is a clear need for it. Yet lawmakers learn about previously unknown harms even later than the business producing those harms or the people suffering them. This means that in some cases, legal action to correct those harms will occur only after they have already taken place. This is an obvious and almost inevitable limitation on the law's effectiveness as a control device.

Are Corporations Always Rational Actors?

Another argument against the law's ability to control corporations is that much of their irresponsible behavior results from an inability to respond sensibly to legal threats. The law's ability to affect business behavior depends on managers' clear perception of the penalties for illegal actions and their rational response to the resulting risk. To the extent that corporations fail these tests of clear perception and rational response, the law's ability to control them suffers.

But why should we think that business firms sometimes behave irrationally? Normal human failings aside, the main reasons concern some familiar facts about life in organizations. For instance, social psychologists and students of organizational behavior have long been aware of a phenomenon called *risky shift.* This means that a group of people who must reach consensus on an acceptable level of risk often choose a level higher than the level they would accept as individuals. Thus, decisions made by a team of managers may create greater legal problems than decisions made by an isolated manager. Also relevant here is the familiar phenomenon of *groupthink*—the tendency for members of a group to internalize the group's values and perceptions and to suppress critical thought. Thus, if our team of managers is planning a highly profitable venture to which the success of each team member is tied, each may minimize the venture's legal problems because these conflict with the group's goals.

Somewhat similar to groupthink is another familiar feature of organizational life: the tendency for *bad news not to get to the top.* When subordinates know that top managers are strongly committed to a particular course of action, they may not report problems for fear of provoking their superiors' disapproval. Ideally, of course, managers should want to be fully apprised of potential legal risks, but occasionally their response is to penalize the bearer of bad news instead. Also, subordinates may distort the information they present to their superiors in order to make their own performance look better than it actually is.

Finally, the complex and unwieldy organizational structures of some modern corporations sometimes diminish their capacity for rational and effective response to legal problems. For example, they may worsen the tendency for bad news not to reach top managers. They also may make it difficult for top managers to ensure that their decisions are fully implemented at lower levels.

Conscious Lawbreaking Throughout this chapter, we assume that business firms have a moral obligation to

obey the law. Yet businesses sometimes ignore the law's commands. Unlike the corporate irrationality just discussed, here we have disobedience that is knowing, thought-out, and deliberate. Corporations may conclude that breaking the law poses acceptable risks if the potential benefits are great, the penalties for violation are relatively light, and/or the chances of being sued or prosecuted are low. Sometimes, for example, it may make sense for a firm to continue to market a defect-ridden product rather than redesign it if competitors' products are no better and the costs of paying product liability claims or of procuring product liability insurance are sufficiently low that they can be passed on to consumers.

Other factors increase the likelihood that corporations will engage in conscious lawbreaking. The let's-take-the-risk mentality may be reinforced when the law is (or is perceived to be) uncertain. Corporate or industry norms may regard a measure of illegal (or borderline) behavior as morally acceptable. This is especially likely where corporate managers regard the relevant legal rules as misguided.

The tendency toward conscious lawbreaking could be reduced, many argue, by stiffer penalties and increased enforcement efforts. But corporate political influence may prevent either from occurring. As noted above, business sometimes tries to blunt politically popular legislation by devoting its efforts to such less visible matters as agency funding.

Problems with the Criminal Sanction The existence of conscious corporate lawbreaking leads naturally to a related subject—the effectiveness of criminal sanctions in the corporate context. As discussed in Chapter 5, both the corporate entity and individual corporation members can be liable for crimes committed in the course of the corporation's business. However, there are reasons to ask how well criminal liability checks corporate misconduct.

Criminal penalties directed at *the corporation itself* are a problematical control device. Such penalties work by deterring future misbehavior. But deterrence requires rationality, and as we have seen, corporate behavior is not always rational. In addition, some corporate crime results from internal bureaucratic malfunctions that the threat of criminal liability is unlikely to eliminate and that are difficult to eliminate in any event. Moreover, the main criminal penalty for corporations is the fine, and many observers believe that the fines now imposed on corporations are too small for effective deterrence. Although bigger fines might work better, corporate political influence could prevent them from ever being enacted or imposed. In addition, such fines involve possible injustices. In all likelihood, the costs they impose ultimately will be passed on to the firm's customers in the form of higher prices—or will fall on its shareholders (as lower dividends) or employees (as lower wages). Usually, these parties are unable to prevent the wrongdoing that gave rise to criminal liability and did not benefit from it. The managers responsible for the crime, on the other hand, may escape any significant financial penalty.

Such problems have led some observers to advocate greater *individual* criminal liability to control corporate misbehavior. Because managers with the power to order or prevent criminal activity would know that *they* will suffer if the activity is detected and a prosecution results, individual sanctions promise significant deterrence of corporate misconduct. In addition, this deterrence could be achieved without unjustly penalizing customers, shareholders, and innocent employees. Despite its apparent attractiveness, however, individual criminal liability suffers from serious problems. Due to the diffused, collective nature of corporate decisionmaking, it often is difficult to pinpoint the people with the necessary mental state for criminal liability. Where a guilty party can be identified, moreover, it may not be a high-level executive. Because bad news tends not to reach the top and because those at the top consciously avoid knowing too much, individual criminal liability often falls on middle-level managers instead. Juries may be unwilling to convict such people if they appear to be scapegoats for someone higher up. Even where either a middle or high-level manager is convicted, moreover, he may not go to jail. Instead, he may merely be fined, and then may be indemnified by the corporation. Even where the convicted party does jail time, he is likely to receive a short sentence in a "country club" institution where early parole is a possibility.

Practical Problems with the Critics' Position

The preceding section concluded that markets and other private-sector forces are useful, but imperfect, checks on corporate misbehavior, and that despite its importance as a corporate control device, the law is not as effective as many people believe. This suggests that if

Figure 5 *Major Points Argued by Critics of the Corporation*

Overall Position	Business has moral obligations that go beyond—and may conflict with—the duty to maximize profits.
Preferred Moral Theories	Rights theories emphasizing positive rights; Kantianism; Maybe utilitarianism
Other Arguments	1. Ethics instruction and other ethical initiatives from within the business community can significantly reduce corporate irresponsibility. 2. Where these methods fail, changes in the internal governance of corporations will cause them to behave responsibly.

business misconduct is to be adequately controlled, corporations have to assume other moral duties in addition to maximizing profits and obeying the law. But how can they be led to do so? Critics of the corporation often say that ethics instruction and other ethical initiatives from within the business community can play a significant role in producing such behavior.[9] Where these methods fail, critics often add, certain changes in the internal governance of corporations can cause them to behave more responsibly (see Figure 5). However, all these corporate control tactics face significant objections. First, it is questionable how well many of them will work. Second, some of them may negatively affect both the corporation's internal functioning and its profitability.

Responses from within the Business Community

Ethics Instruction In a sense, greater ethical awareness and more ethical behavior by business managers are *the* solutions to corporate irresponsibility. If all corporate decisionmakers possess such traits, business misbehavior should fall sharply and the need for other control devices should diminish appreciably. In recent years, business schools have increasingly attempted to advance this goal by injecting ethical considerations into their curricula. Such efforts are attempts to generate socially responsible corporate behavior by changing the outlook of existing and future managers.

Despite its promise, however, ethics instruction faces significant theoretical and practical problems. One concerns the substance of the instruction: Which moral theories and which values should receive emphasis? As this chapter's brief ethics discussion suggests, there is considerable disagreement on these questions. Worse yet, the various ethical theories may not have clear implications for the corporate social responsibility debate.

Even if there is consensus on ethical theory and its implications, moreover, can ethics instruction really instill the chosen values and make them stick after the educational process is completed? Ethics instruction is directed at people whose character—or lack thereof—has largely been formed by the time the instruction occurs. Although ethics instruction should increase the moral awareness of those who are predisposed to listen, its effect on the basically self-interested, indifferent, or unethical is questionable. Furthermore, even those who are positively influenced by ethics instruction may still behave irresponsibly if their careers or their livelihoods require them to act in their employer's financial interest. For the firm itself, ethical behavior may hurt earnings unless all the firm's competitors follow suit. And the thoughtways acquired in a business ethics course may not survive the tendency for organizations to socialize their members to accept the group's goals as paramount.

Corporate or Industry Codes of Ethical Conduct Over time, many large corporations and several industries have adopted codes of conduct to guide managerial and/or employee decisionmaking. There are two popular views about such codes. One sees them as genuine efforts to foster ethical behavior within a firm or an industry. The other regards them as thinly disguised attempts to make the firm function better, mislead the public into believing that business behaves ethically, forestall legislation that would impose stricter constraints on business, or limit competition

[9]These methods, of course, often have attracted significant support within the business community as well. Because they generally are consistent with the critics' agenda, however, we include them here.

under the veil of ethical standards. Even where the first view is correct, moreover, ethical codes do not address all possible forms of corporate misbehavior. Instead, they tend to emphasize either the behavior required for the firm's effective internal functioning (e.g., not accepting gifts from customers) or the relations between competitors within a particular industry (e.g., prohibitions on certain kinds of advertising).

The Corporate Stewardship Argument Earlier in the chapter, we suggested that some large, entrenched corporations in oligopolistic industries try to avoid competition by fixing prices and otherwise collaborating among themselves. Such behavior is bad for efficiency and probably for total utility. For certain observers of years past, however, it had great promise for promoting more responsible corporate behavior. Their argument was that once corporations become economically secure, they will be free to behave in a more ethical manner. One proponent of this position, which we call the corporate stewardship argument, contended that modern corporate managers have come to resemble a professional civil service more than a group of property-owning entrepreneurs.[10]

Corporate stewardship is a *possible* consequence of oligopolistic corporations' anticompetitive behavior, but is it a *necessary* result of such behavior? Rather than behaving ethically, such firms might simply try to maximize their return to shareholders, or instead might funnel money toward executive salaries and perquisites, a pleasant work environment, and so forth. Also, large, oligopolistic firms arguably are less accountable to outside forces than smaller businesses in competitive markets. Thus, the incentives for irresponsible behavior may *increase* because large, secure firms can indulge in such behavior with relative impunity.

Stakeholder Theory Revisited One way for an enlightened "corporate steward" to behave is to follow the stakeholder theory described earlier in this chapter. In other words, such a person might define ethical corporate behavior as the effort to balance the interests of the corporation's various constituencies. If our criticisms of the corporate stewardship argument are valid, it is questionable whether entrenched corporations in oligopolistic industries will behave in this way. But this definition of corporate social responsibility suffers from other problems as well. First, the interests of the relevant constituencies conflict. For instance, consumers' interest in lower prices may conflict with employees' interest in higher wages, and perhaps with the surrounding community's interest in environmental protection. From an ethical point of view, moreover, why should a corporation's immediate constituencies be favored over the larger society? For example, firms or industries that corrupt the national political processes to get unjustified tax breaks may well be helping their various stakeholders.

The Corporate Governance Agenda

Despite the problems they face, ethics instruction and other efforts from within the business community eventually may generate more responsible corporate conduct. But corporate critics of the 1960s and 1970s chose to encourage it in a more direct fashion. They did so by making various proposals for altering the *internal governance* of corporations. The general aim of such proposals was to give representation to the firm's stakeholders (as well as other groups deemed deserving) and to make corporations more sensitive to their interests.

This text's corporations chapters discuss some of these internal governance proposals, and this chapter supplements that discussion. Although a few such proposals have occasionally been adopted in modified form, public interest in them has diminished since the 1970s. However, they may again become popular if the political and attitudinal winds shift. Here, we discuss three such recommendations—and the problems they present—in general terms. First, however, we must say a few words about intracorporate power relations.

Corporation law gives a corporation's shareholders the power to elect directors who are empowered to manage the corporation. The directors, in turn, typically delegate this power to the corporation's officers while retaining general supervisory powers over them. This formal legal model suggests that the directors have more authority over corporate policy than does management, and that corporate policy ultimately is set by the shareholders as they elect the directors. Yet for much of the 20th century it has been widely agreed that management really runs the show within most large corporations, that directors tend to ratify managerial decisions, and that shareholders have little effective control over such decisions. The many reasons for this much-noted *separation of ownership from con-*

[10] A. Berle, *Power without Property* (1959), p. 113.

trol are beyond the scope of this chapter. Chief among these reasons, however, are the complexity of corporate decisionmaking and the limited time and expertise directors and shareholders can bring to bear on such matters.

Greater Shareholder Power Some proposals for changing internal corporate governance say that shareholders should have a greater voice in shaping corporate policy. Specific recommendations include giving shareholders greater power to nominate directors and the ability to adopt resolutions binding the directors.

Of the various corporate governance proposals, granting greater power to shareholders has the least to recommend it. For one thing, such proposals seem unrealistic when we consider the facts of intracorporate life noted above. Of particular importance here is a matter discussed in Chapters 42 and 43—management's tendency to get its way on corporate policy decisions by dominating the proxy machinery through which shareholders usually vote. If shareholders somehow were to exercise greater power, moreover, effective corporate decisionmaking could be impaired as this relatively uninformed group issues edicts to management.

From a corporate control perspective, however, the real problem with giving greater power to shareholders concerns the values they are likely to advance. Although it is conceivable that some corporate managers do not make profit maximization their first priority, the orientation of shareholders almost always is completely pecuniary. For this reason, shareholders are unlikely to initiate or approve corporate actions hostile to profit maximization. The same generally is true of institutional investors such as pension funds and mutual funds, which own significant blocks of stock in many corporations. Such investors tend to follow the "Wall Street Rule," under which they either support management or sell their shares.

Changing the Composition of the Board Despite the tendency for corporate management to dominate the board of directors, the board's formal legal powers still are considerable. Recognizing this, critics of the corporation have made innumerable recommendations for changing the board's composition to make corporations more representative and more responsible. Some of the recommendations have been fairly modest—for example, creating nominating committees composed of outside directors, requiring that there be more such directors and fewer insiders, and limiting the number of corporate boards on which one individual can serve.[11] More extreme proposals include recommendations that stakeholders or constituencies of all sorts (e.g., labor, government, creditors, local communities, minorities, environmentalists) be represented, that certain directors be assigned special areas of concern (e.g., consumer protection, environmental affairs), and that special committees of the board be given similar functions.

From a corporate social responsibility perspective, the basic problem with all such proposals is that they fail to confront the main reason for management's domination of the board—the limited time, information, and expertise that directors can bring to bear when considering corporate affairs. One solution to this problem is to give outside or constituency directors a full-time staff with the power to dig for information within the corporation. Doing so, however, effectively creates another—perhaps competing—layer of management within the corporate organizational structure. Although this could curtail certain corporate misdeeds, it could also lessen firms' ability to innovate and respond to changing developments, with negative implications for their profitability and the utility they can generate.

Another, more down-to-earth, set of problems with some of these proposals concerns the details of their implementation. Which constituencies deserve representation? How many directors should each constituency have? Within each constituency, what criteria should govern the choice of directors? For example, is it desirable or undesirable that they have business experience?

Finally, in addition to complicating the management structure, these proposals might make the board less cohesive and render it incapable of coherent action. Conflicts among stakeholder representatives or between insiders and outsiders are possible. In fact, the addition of constituency directors might simply mean the intrusion of broader social conflicts into corporate boardrooms. The board, that is, could be divided by disputes among consumers who want lower prices, workers who want higher wages and job security, environmentalists who want pollution to cease, and communities that want to preserve jobs and their tax bases. This could render the board incapable of pushing management in responsible directions.

[11] Inside directors usually are defined as either present or former managers of the firm on whose board they serve; normally, all other directors are regarded as outside directors.

Changes in Management Structure As noted above, one of the great commonplaces about large 20th-century corporations is the separation of ownership from control—the shift of power away from shareholders and directors to the corporation's managers. Because this is where true power resides, some corporate reformers argue, the best way to produce more responsible corporate behavior is to change the corporation's *management structure.*

The main proponent of this view, Christopher Stone, has made several recommendations for such changes.[12] They include the establishment of: (1) specified offices within certain corporations (e.g., offices for environmental affairs, worker safety, and product safety); (2) requirements for holding certain corporate positions (e.g., educational requirements for safety engineers); (3) offices for ensuring that relevant external information (e.g., data from auto repair shops for car manufacturers or data from doctors for drug companies) is received by the corporation; and (4) internal information-flow procedures for ensuring that relevant external information gets to the proper corporate departments (to guarantee, for instance, that bad news gets to the top). Stone and others have also recommended that corporations be required to make internal findings before undertaking certain activities. For example, drug companies might be required to produce a document resembling an environmental impact statement before marketing a new product.

These proposed requirements are procedural in the sense that they do not dictate what decisions a firm should make. Their aim is to ensure that corporations can anticipate problems before they arise so that timely responses are possible. Such requirements probably would not deter a strongly profit-oriented corporation from taking irresponsible actions. It also is possible that the corporate personnel responsible for implementing these requirements could be influenced by a strong internal profit orientation or frozen out of the final decisionmaking process.

In cases in which irresponsible corporate behavior results less from profit-seeking than from faulty perceptions, however, Stone's proposals could have an impact. For example, they may be especially effective in addressing the unknown-harms problem discussed earlier. But such benefits would probably be obtained only at the cost of further organizational complexity, with a consequent reduction in the corporation's ability to make quick responses to changing business conditions.

[12] C. Stone, *Where the Law Ends: The Social Control of Corporate Behavior* (1975), Chapters 17–19.

Summary and Conclusions

Critics of the corporation say that business should be held to a standard of socially responsible behavior higher than that imposed by law. Ethics instruction and other ethical initiatives from within businesses can do something to make responsible corporate behavior a reality. And where these fail, changes in internal corporate governance can finish the job. The corporation's defenders, on the other hand, say that the firm's only moral responsibility is to maximize profits within the bounds set by the law. Because the law, markets, and other private forces adequately restrain corporations, they add, this stance will not threaten society.

As this chapter has revealed, neither the corporation's critics nor its defenders have convincingly made their case. To be sure, each position finds some support in ethical theory. But philosophers disagree about the relative merits of these theories (and others). In addition, the more or less factual arguments made by each side have problems. At best, ethics instruction and ethics initiatives from within business can only supplement the other means of controlling corporate misconduct. Worse yet, the critics' proposed changes in corporate governance are likely either to adversely affect organizational effectiveness or to be ineffective—or both. As for the defenders' factual arguments, markets and such other private checks, while important constraints on corporate misconduct, have limited scope. Although the law has long been the main force by which society tries to check business misbehavior, it is far from a perfect control device.

What, then, can safely be said about the social responsibilities of business and the control of corporate misconduct? The three following generalizations strike us as valid.

1. *Competitive profit maximization is an extremely important—perhaps the most important—social responsibility of business.* Although the corporation's critics downplay competitive profit maximization and sometimes subordinate it to other values, they do not really deny this point. The reason is the economic efficiency and material abundance profit-maximizing

Concept Review

The Corporate Control Devices Compared: A Tentative Box Score

Device	Likely Effectiveness in Curbing Corporate Irresponsibility	Possible Costs in Efficiency and in Ineffective Corporate Decisionmaking	Remarks
Ethical Instruction	Will it take? Will it stick? Which values?	Disunity within corporation? Adverse effects on efficiency?	Effects probably long term
Codes of Conduct	Questionable, due to limited scope	Could be anticompetitive	A sham?
Corporate Stewardship	Questionable at best	By hypothesis, firms in question are inefficient oligopolists	Has this really happened? Would such firms necessarily behave ethically?
Advancing Stakeholder Interests	Interests of stakeholders may conflict	Occasional adverse effects on efficiency?	Are interests of stakeholders necessarily congruent with larger social good?
Market Forces and Private Action	Should vary with type of corporate misbehavior	Fairly low. Market forces tend to *promote* efficiency	Fine where they work
Greater Shareholder Power	Poor, due to pecuniary orientation of shareholders	Less coherent decisionmaking?	Maybe the weakest of the bunch
Packing the Board	Likely to be minimal unless the causes of board's subservience are overcome	Could adversely affect corporate decisionmaking and efficiency	Which constituencies and interests deserve representation?
Changing the Internal Management Structure	Probably most effective for unknown harms	Could complicate corporate decisionmaking	Focus on *management* structure an advantage
The Law	Despite limits on effectiveness, has a respectable track record	Can have adverse impact on efficiency	The best of a flawed group?

economic competition produces. For this reason, it finds ready support in utilitarianism. And it also contributes to the realization of certain positive economic rights. Without economic abundance, how likely are positive rights such as the rights to a decent living wage, unemployment compensation, old-age assistance, and adequate health care to be realized?

2. *Competitive profit maximization does not exhaust business's social responsibilities.* In other words, business has other moral obligations in addition to profit maximization. If the law, the market, and other private forces were as effective as the corporation's defenders sometimes seem to think, perhaps we could safely limit business's social responsibilities to profit

maximization. In fact, however, they are imperfect control devices. To be sure, this does not directly establish that business has other moral responsibilities besides competitive profit maximization; for that, a moral argument is needed. But the necessary arguments are readily available. As we have seen, positive rights clearly support such duties. In cases where profit-maximizing behavior's disutility exceeds its utility, utilitarianism supports those duties as well.

3. *For all its flaws, the law is—and probably will remain—the most important means by which society controls business misconduct.* This chapter's catalog of the law's imperfections reminds one of the old debate concerning whether a glass filled to its halfway mark is half empty or half full. Overall, the law is probably the best—or the least bad—of the control devices discussed in this chapter. Of these devices, only the law and the various private controls impose real penalties for corporate misbehavior. Although legal norms have no special claim to moral correctness, at least they are arrived at through a fairly open political process in which competing arguments may be weighed and evaluated. This cannot be said about the intuitions of some "responsible" businessperson, the edicts of some "public interest" group, or the theories of some academic economist or philosopher. As a general rule, finally, the law's commands should have less adverse effect on corporations' internal functioning than many of the corporate reform proposals.

More importantly, the law has a track record as a corporate control device, and that record contains a number of real accomplishments. For example, although the antitrust laws discussed in Chapters 47–49 remain controversial, they have at least eliminated some of the worst anticompetitive abuses that were common before their enactment. If nothing else, similarly, the federal securities regulations examined in Chapters 44–45 have prevented the shady practices that, some contend, helped produce the stock market crash of the late 1920s. Although environmentalists often demand more regulation, virtually everyone agrees that the environmental laws treated in Chapter 51 have appreciably improved the quality of our air and water and reduced our exposure to toxic substances. Finally, the various employment regulations discussed in Chapter 50—especially those forbidding employment discrimination—have worked enormous changes in the American workplace over the course of this century.

Problems and Problem Cases

1. Defenders of the corporation often argue that the principal moral obligation of business is to maximize profits within the law. But are the law's commands necessarily moral? And is there an ethical obligation to obey morally bad laws? What do the *natural law* and *legal positivist* schools of jurisprudence discussed in Chapter 1 say about these questions?

2. What is the difference between psychological egoism and ethical egoism? Can one consistently espouse psychological egoism and ethical egoism at the same time?

3. Along with five other people, you are exploring a cave beneath the ground. A rainstorm causes the water level in the cave to rise, forcing you to head back to the surface. You are first in line, an extremely fat man is second, and four other people trail the fat man. After you have safely passed through a very narrow opening in the tunnel, the fat man gets stuck in that same opening. Nothing can dislodge him. The rising waters threaten to drown the four people whose path is blocked by the fat man, but not the fat man himself. You just happen to have several sticks of dynamite and some matches with you. Ought you to blow up the fat man? How would a utilitarian answer this question? Do you agree? *Note:* This question asks what you *should* do, not what you could or would do.

4. Is the right to obtain an abortion a negative or a positive right? How about the asserted right to have one's abortion funded by the federal government or the states?

5. Suppose that by keeping your promise to A, you would give her 1,000 units of utility. However, by breaking your promise to A and performing the promised act for B, you would give B 1,001 units of utility. You have not promised B anything, however. Assume that it is impossible to perform for both A and B. Assume also that neither A nor B will suffer disutility from being denied the promise.

What course of action would utilitarianism dictate here? (The question refers to act-utilitarianism; see footnote 4 in this chapter.) What would a person who is a strict deontologist about promises recommend? What about a mixed deontologist who thinks that keeping promises is important but who also recognizes a duty to maximize utility? Which, if any, of

your answers would change if, instead of giving B 1,001 units of utility, breaking the promise to A would give B 1 million units of utility? Here, assume again that keeping the promise to A would give A only 1,000 units of utility.

6. A terrorist has planted a nuclear device that soon will totally destroy New York City. Shortly before the device is to go off, the authorities capture the terrorist and begin to interrogate her. The terrorist, however, refuses to tell where the device is hidden. As the deadline approaches, the authorities' thoughts naturally turn to torture. At this point, Newton Kindly, the U.S. Ambassador to the United Nations, says: "We can't do that! This person is a *human being* after all! Human beings have *rights,* among them the right not to be *used* as a means to others' ends without their consent. So what we've got to do is *rationally persuade* this lady to tell us where the bomb is hidden. Our basic principles demand no less."

What basic ethical orientation—consequentialist or deontological—does Newton's speech express? From which specific moral philosopher has Newton apparently gotten inspiration? What would a utilitarian think about Newton's speech? What do you think?

7. The ABC Corporation declares itself a "socially responsible" firm, and defines socially responsible behavior as behavior that maximizes the well-being of its various stakeholders. Then, ABC identifies the following stakeholders to which it feels responsible: its workers, consumers of its products, its shareholders, and the communities where its plants are situated. There are many possibilities, but identify three situations where the interests of two or more of these communities might clash. Feel free to assume whatever facts are necessary to create such conflicting interests.

8. One particular problem discussed in this chapter negatively affects both the ability of markets to control corporate misconduct and the law's ability to control such misconduct. What is that problem? Which of the corporate control devices discussed in this chapter probably is best equipped to address this problem?

9. Unknown to most Americans, the XYZ Corporation, which markets soft drinks, routinely bribes the officials of foreign nations in order to make sales there. Suppose that you are a critic of business who thinks that American firms' overseas bribery is clearly immoral. Which of the following corporate control techniques has the *best* (or least bad) chance of stopping XYZ's overseas bribery? The choices are: (1) market pressure from XYZ's American consumers, (2) XYZ's adoption of the stakeholder theory of corporate social responsibility, (3) giving greater power to XYZ's shareholders, and (4) legal penalties against American firms that engage in overseas bribery. Why are the three options you did *not* pick likely to be inadequate?

10. Many corporations pay quarterly dividends to their shareholders. Over time, the amount of these dividends and their rate of increase depend on the firm's earnings, or profits. All other things being equal, under which theory of corporate social responsibility—the obey-the-law-and-maximize-profits view, or stakeholder theory—are shareholders likely to get higher dividends? Try to formulate a corporate dividend policy that is consistent with stakeholder theory.

11. You have recently been appointed CEO of Pureco Pharmaceutical Corporation. While being briefed on company operations by your vice president for sales, you ask him about the seemingly high volume of business the company is doing in the sale of amphetamines. The vice president reluctantly admits that about 70 percent of Pureco's amphetamine sales are made to small pharmacies in Mexico. When asked why Mexican pharmacies should purchase such high quantities of amphetamines, the vice president says: "Well, I guess they buy them to resell in quantity." "You mean to drug dealers, don't you?" you respond. "Yeah, I guess so," he admits. "This means that a lot of this stuff is probably being smuggled back across the border and sold illegally in the United States, doesn't it?" you ask. "Yeah, probably," he replies, "but let me set you straight on a few things before you get too critical. First, this is a *very* profitable line of business for us, and the last thing you probably want to do as a new CEO is to take action that will negatively affect earnings. Second, we are violating no U.S. or Mexican law when we make these sales. Third, every other major U.S. pharmaceutical firm does the same thing. Fourth, if we stopped tomorrow, that would simply encourage the entry of illicit suppliers who might put *anything* in their drugs. Finally, due to the high R&D costs in this industry, losing the profits from these sales could impair our ability to develop new drugs that could do a lot of good." Should Pureco continue the Mexican sales?

Chapter Outline

I. The Criminal Law
- *A. Nature of Crime*
- *B. Purpose of the Criminal Sanction*
- *C. Essentials of Crime*
  - *1. Constitutional Limitations*
  - *2. Proof beyond a Reasonable Doubt*
  - *3. Defendant's Criminal Intent and Capacity*

II. Criminal Procedure
- *A. Criminal Prosecutions*
- *B. Constitutional Safeguards*
  - *1. The Fourth Amendment*
  - *2. The Fifth Amendment*
  - *3. The Sixth Amendment*

III. White-Collar Crimes and the Dilemmas of Corporate Control
- *A. Introduction*
- *B. Evolution of Corporate Criminal Liability*
- *C. Corporate Criminal Liability Today*
  - *1. Problems with Punishing Corporations*
- *D. Individual Liability for Corporate Crime*
  - *1. Problems with Individual Liability*
- *E. New Directions*

IV. Important White-Collar Crimes
- *A. Regulatory Offenses*
- *B. Fraudulent Acts*
- *C. Bribery and Giving of Illegal Gratuities*
- *D. RICO*
  - *1. Criminal RICO*
  - *2. Civil RICO*

V. Computer Crime

When one lists legal topics relevant to business, criminal law comes to mind less readily than contracts, torts, agency, corporations, and various other subjects dealt with in this text. Today, however, businesses and their employees are more likely than ever before to come in contact with the criminal justice system. A working understanding of major criminal law concepts therefore has become essential to a manager's education.

The Criminal Law

This century has witnessed society's increasing tendency to use the criminal law as a major device for controlling corporate behavior. Many regulatory statutes establish criminal and civil penalties for statutory violations. The criminal penalties often apply to individual employees as well as to their employers.

Advocates of using the criminal law in this way typically argue that doing so achieves a deterrence level superior to that produced by damage awards and other civil remedies. Corporations may be inclined to treat damage awards as simply a business cost and to violate regulatory provisions when doing so makes economic sense. Criminal prosecutions, however, threaten corporations with the stigma of a criminal conviction. In some cases, the criminal law allows society to penalize employees who would not be directly affected by a civil judgment against their employer. Moreover, by alerting private parties to a violation that could also give rise to a civil damage suit, criminal prosecutions may increase the likelihood that a corporation will bear the full costs of its actions.

Whatever the merit of these arguments, the threat of criminal prosecution plays an undeniable role in today's legal environment of business. Accordingly, this

chapter begins by examining the nature and essential components of the criminal law. It then considers various problems encountered in applying the criminal law to the corporate setting.

Nature of Crime

Crimes are *public wrongs*—acts prohibited by the state or federal government. Criminal prosecutions are initiated by a prosecutor (an elected or appointed government employee) in the name of the state or the United States, whichever is appropriate. Persons convicted of crimes bear the stigma of a criminal conviction—the social condemnation resulting from being found guilty. Convicted offenders also face the uniquely coercive force of the criminal sanction, society's punishment of those who violate its most important rules. This punishment may be a fine, imprisonment, or, in extreme cases, execution.

Our legal system also contemplates noncriminal consequences for violations of legal duties. The next two chapters deal with *torts,* private wrongs for which the wrongdoer must pay money damages to compensate the harmed victim. In some tort cases, the court may also assess punitive damages in order to punish the wrongdoer. Only the criminal sanction, however, combines the threat to life or liberty with the stigma of conviction. This potent combination makes the criminal sanction "the law's ultimate threat."[1]

Crimes are typically classified as felonies or misdemeanors. A **felony** is a serious crime such as murder, rape, arson, illicit drug-dealing, or a theft offense of sufficient magnitude. Most felonies involve significant moral culpability on the offender's part. Felonies are punishable by lengthy confinement of the convicted offender to a penitentiary, as well as by a fine. A person convicted of a felony may experience other adverse consequences, such as disenfranchisement (loss of voting rights) and disqualification from the practice of certain professions (e.g., law or medicine). A **misdemeanor,** on the other hand, is a lesser offense such as disorderly conduct or battery resulting in minor physical harm to the victim. Misdemeanor offenses usually involve less—sometimes much less—moral culpability than felony offenses. As such, misdemeanors are punishable by lesser fines and/or limited confinement in jail. Depending on their seriousness and potential for harm to the public, traffic violations are classified either as misdemeanors or as less serious **infractions.** Really only quasi-criminal, infractions usually are punishable by fines but not by confinement in jail.

It is a social question whether to classify a given act as criminal. As our social values have changed, so have our definitions of criminal conduct.

Purpose of the Criminal Sanction

Much of the disagreement about when the criminal sanction should be employed stems from a dispute over its purpose. Persons accepting the *utilitarian* view of the criminal sanction believe that prevention of socially undesirable behavior is the only proper purpose of criminal penalties. This prevention goal includes three major components: deterrence, rehabilitation, and incapacitation.

Deterrence theorists hold that the threat or imposition of punishment deters the commission of crimes in two ways. The first, *special deterrence,* occurs when punishment of a convicted offender deters him from committing further crimes. The second, *general deterrence,* results when punishment of a convicted wrongdoer deters other persons from committing a similar offense. Factors influencing the probable effectiveness of deterrence include the respective likelihoods that the crime will be detected, that detection will be followed by prosecution, and that prosecution will result in a conviction. The severity of the probable punishment serves as another key factor. In economic terms, effective deterrence requires that the penalty imposed for an offense, discounted by the likelihood of apprehension and conviction, must equal or exceed the gains to the offender from committing the offense.

A fundamental problem attends deterrence theories: We cannot be certain whether deterrence works because we can never know what the crime rate would be in the absence of punishment. For example, high levels of crime and recidivism (repeat offenses by previously punished offenders) may indicate only that sufficiently severe and certain criminal sanctions have not been employed, not that criminal sanctions in general cannot effectively deter. Deterrence theory's other major problem is its assumption that potential offenders are rational beings who consciously weigh the threat of punishment against the

[1]H. Packer, *The Limits of the Criminal Sanction* (Stanford, CA: Stanford University Press, 1968), p. 250.

benefits derived from an offense. The threat of punishment, however, may not deter the commission of criminal offenses produced by irrational or unconscious drives.

Rehabilitation of convicted offenders—changing their attitudes or values so that they are not inclined to commit future offenses—serves as another way to prevent undesirable behavior. Critics of rehabilitation commonly point to high rates of recidivism as evidence of the general failure of rehabilitation efforts to date. Even if rehabilitation efforts fail, however, *incapacitation* of convicted offenders results from their incarceration and thus contributes to the goal of prevention. While imprisoned, offenders have much less ability to commit other crimes.

Prevention is not the only asserted goal of the criminal sanction. Some persons see *retribution*—the infliction of deserved suffering on violators of society's most fundamental rules—as the central focus of criminal punishment. Under this theory, punishment satisfies community and individual desires for revenge and reinforces important social values. A retributionist therefore is unlikely to see prevention as a sufficient reason to criminalize socially undesirable but morally neutral behavior. When serious moral culpability is present, however, a retributionist is likely to favor punishment even if it would not prevent future offenses.

Figure 1 contains a general discussion of how state and federal law approach the proper determination of a convicted offender's punishment.

Figure 1 *A Note on State and Federal Approaches to Sentencing of Convicted Offenders*

Typical State Approaches

As a general rule, state laws on criminal punishments seek to further the deterrence, rehabilitation, and incapacitation purposes discussed in the text. State statutes usually set forth ranges of sentences (e.g., minimum and maximum amounts of fines and imprisonment) for each crime established by law. The court sets the convicted offender's sentence within the appropriate range unless the court places the defendant on probation.

Probation is effectively a conditional sentence that suspends the usual imprisonment and/or fine if the offender "toes the line" and meets other judicially imposed conditions for the period specified by the court. It is sometimes granted to first-time offenders and other convicted defendants deemed suitable candidates by the court. In deciding whether to order probation or an appropriate sentence within the statutory range, the court normally places considerable reliance on a presentence investigation conducted by the state probation office. Relevant information revealed in this investigation, coupled with evidence of the offender's prior criminal history, will influence the court in deciding at what point within the statutory range a particular offender's punishment should fall.

The Federal Approach

The federal approach to sentencing was essentially the same until recent years, when the Federal Sentencing Guidelines set by the U.S. Sentencing Commission took effect. In the Sentencing Reform Act of 1984, Congress created the Sentencing Commission and authorized it to develop sentencing guidelines. Congress thereby sought to reduce judicial discretion in sentencing and to minimize disparities among sentences imposed by judges on similar offenders. The Sentencing Guidelines, which are binding on federal courts and have been criticized by some judges, contain a table with more than 40 levels of seriousness of offense. Where a particular offender's crime and corresponding sentence are listed on the table depends on various factors associated with the offense and on the offender's prior criminal history. The court normally must sentence the defendant to what the table shows, although departures are allowed in the event of exceptional circumstances specified by the court. A special subset of rules known as the Corporate Sentencing Guidelines (discussed later in this chapter) governs the sentencing of organizations convicted of federal crimes.

For various crimes, the Federal Sentencing Guidelines appear to have led to the imposition of more severe—sometimes much more severe—sentences than had previously been the case. Although the prospect of probation for certain offenses still exists, an increased use of incarceration of individuals convicted of serious offenses also appears to have resulted from the Sentencing Guidelines. As for what purposes incarceration should serve, the Sentencing Reform Act specifically rejected rehabilitation as one of them. Instead, the statute stated that the goals of punishment should be education, deterrence, and incapacitation.

Essentials of Crime

To convict a defendant of a crime, the state ordinarily must: (1) demonstrate that his alleged acts violated a criminal statute; (2) prove beyond a reasonable doubt that he committed those acts; and (3) prove that he had the capacity to form a criminal intent. Crimes are *statutory* offenses. A given behavior is not a crime unless Congress or a state legislature has criminalized it.[2] As illustrated by the *Sun-Diamond Growers* case, which follows, courts normally interpret criminal statutes narrowly.

[2]Infractions of a minor criminal or quasi-criminal nature (such as traffic offenses) are often established by city or county ordinances but will not be considered here. For discussion of ordinances as a type of law, see Chapter 1.

United States v. Sun-Diamond Growers of California

526 U.S. 398 (U.S. Sup. Ct. 1999)

Sun-Diamond Growers of California was a trade association engaged in marketing and lobbying activities on behalf of its member cooperatives, which were owned by 5,000 producers of raisins, figs, walnuts, prunes, and hazelnuts. A federal grand jury indicted Sun-Diamond for an alleged violation of the illegal gratuity statute, 18 USC Section 201(c)(1)(A), which criminalizes a private party's giving of "anything of value" to a public official "for or because of any official act performed or to be performed" by the public official.

According to the indictment, Sun-Diamond violated Section 201(c)(1)(A) by giving then-Secretary of Agriculture Michael Espy approximately $5,900 in gratuities (tickets to the U.S. Open Tennis Tournament, luggage, meals, a framed print, and a crystal bowl). The indictment alluded to two Department of Agriculture–related matters in which Sun-Diamond had an interest in favorable treatment at the time Sun-Diamond gave the gifts to Secretary Espy. Nevertheless, the indictment did not allege a specific connection between either of the two matters and Sun-Diamond's conferral of the gifts. A federal district court jury found Sun-Diamond guilty. Holding that the district judge erred in instructing the jury that "it is sufficient if Sun-Diamond provided Espy with unauthorized compensation simply because he held public office," the U.S. Court of Appeals for the District of Columbia Circuit reversed and remanded. The U.S. Supreme Court granted certiorari.

Scalia, Justice In this case, we consider whether conviction under the illegal gratuity statute requires any showing beyond the fact that a gratuity was given because of the recipient's official position. The district court's instructions suggested that Section 201(c)(1)(A) did not require any connection between Sun-Diamond's intent [in giving the gifts] and a specific official act. [The statute] would be satisfied, according to the instructions, merely by a showing that Sun-Diamond gave Secretary Espy a gratuity because of his official position—perhaps, for example, to build a reservoir of goodwill that might ultimately affect one or more of a multitude of unspecified acts, now and in the future. The United States contends that [this interpretation of the statute] was correct.

This interpretation does not fit comfortably with the statutory text, which prohibits only gratuities given "for or because of *any official act* performed or to be performed" (emphasis added). It seems to us that this means "for or because of some particular official act of whatever identity"—just as the question "Do you like any composer?" normally means "Do you like some particular composer?" It is linguistically possible, of course, for the phrase to mean "for or because of official acts in general, without specification as to which one"—just as the question "Do you like any composer?" could mean "Do you like all composers, no matter their names or music?" But the former seems to us the more natural meaning. Why go through the trouble of requiring that the gift be made "for or because of any official act" . . . and then defining "official act" (in Section 201(a)(3)) to mean "any decision or action on any question, matter, cause, suit, proceeding or controversy, which may at any time be pending, or which may by law be brought before any public official in such official's official capacity," when, if the Government's interpretation were correct, it would have sufficed to say "for or because of such official's ability to favor the

donor in executing the functions of his office"? The insistence upon an "official act," carefully defined, seems pregnant with the requirement that some particular official act be identified and proved.

Besides thinking that this is the more natural meaning of Section 201(c)(1)(A), we are inclined to believe it correct because of the peculiar results that the Government's alternative reading would produce. It would criminalize, for example, token gifts to the President based on his official position and not linked to any identifiable act—such as the replica jerseys given by championship sports teams each year during ceremonial White House visits. Similarly, it would criminalize a high school principal's gift of a school baseball cap to the Secretary of Education, by reason of his office, on the occasion of the latter's visit to the school. That these examples are not fanciful is demonstrated by the fact that counsel for the United States maintained at oral argument that a group of farmers would violate Section 201(c)(1)(A) by providing a complimentary lunch for the Secretary of Agriculture in conjunction with his speech to the farmers concerning various matters of USDA policy—so long as the Secretary had before him, or had in prospect, matters affecting the farmers. Of course the Secretary of Agriculture *always* has before him or in prospect matters that affect farmers, just as the President always has before him or in prospect matters that affect college and professional sports, and the Secretary of Education matters that affect high schools.

A statute in this field that can linguistically be interpreted to be either a meat axe or a scalpel should reasonably be taken to be the latter. We hold that in order to establish a violation of 18 USC Section 201(c)(1)(A), the Government must prove a link between a thing of value conferred upon a public official and a specific "official act" for or because of which it was given.

Judgment of Court of Appeals affirmed.

Constitutional Limitations The U.S. Constitution prohibits *ex post facto* criminal laws. This means that a defendant's act must have been prohibited by statute at the time she committed it and that the penalty imposed must be the one provided for at the time of her offense.

The Constitution places other limits on legislative power to criminalize behavior. If behavior is constitutionally protected, it cannot be deemed criminal. For example, the right of privacy held implicit in the Constitution caused the Supreme Court, in *Griswold v. Connecticut,* to strike down state statutes that prohibited the use of contraceptive devices and the counseling or assisting of others in the use of such devices.[3] This decision provided the constitutional basis for the Court's historic *Roe v. Wade* decision, which limited the states' power to criminalize abortions.[4]

By prohibiting laws that unreasonably restrict freedom of expression, the First Amendment to the Constitution also plays a major role in limiting legislative power to criminalize behavior. Legislative attempts to hold persons criminally liable for the content of their written or spoken statements are usually suspect under the First Amendment. Various times during the past several years, the Supreme Court has considered the extent to which expressive conduct—an action that expresses a point of view or message regardless of whether written or spoken words accompany the action—merits First Amendment protection against government attempts to criminalize it. Figure 2 contains a discussion of the Court's expressive conduct decisions.

In addition to limiting the sorts of behavior that may be made criminal, the Constitution limits the manner in which behavior may be criminalized. The due process clauses of the Fifth and Fourteenth Amendments require that criminal statutes define the prohibited behavior precisely enough that law enforcement officers and ordinary members of the public can understand which behavior violates the law.[5] As *City of Chicago v. Morales,* which follows, illustrates, statutes that fail to provide such fair notice may be challenged as unconstitutionally vague. The Fourteenth Amendment's equal protection clause[6] prohibits criminal statutes that dis-

[3]381 U.S. 479 (U.S. Sup. Ct. 1965).

[5]Chapter 3 discusses due process in greater detail.
[6]Chapter 3 discusses equal protection in greater detail.

Figure 2 *Supreme Court Decisions Exploring First Amendment Limits on Legislative Power to Criminalize Expressive Conduct*

Texas v. Johnson

In the controversial case of *Texas v. Johnson,* 491 U.S. 397 (U.S. Sup. Ct. 1989), the Court held that Gregory Johnson's burning an American flag during a protest demonstration was protected expressive conduct. The Court reasoned that regardless of the presence or absence of spoken or written words, certain conduct such as flag-burning may be "sufficiently imbued with elements of communication" to come under the First Amendment umbrella. In view of the considerable First Amendment protection extended to political speech—to which Johnson's expressive conduct surely was equivalent—Johnson could not constitutionally be convicted of violating a Texas statute that prohibited the "desecration of a venerated object." A year later, in *U.S. v. Eichman,* 496 U.S. 310 (U.S. Sup. Ct. 1990), the Court used the *Johnson* rationale to strike down a federal statute that criminalized flag-burning.

Barnes v. Glen Theatre, Inc.

As if the flag-burning decisions somehow were not "hot" enough, the Court's expressive conduct focus then turned to nonobscene nude dancing. In *Barnes v. Glen Theatre, Inc.,* 501 U.S. 560 (U.S. Sup. Ct. 1991), the Court noted that such dancing is expressive conduct "marginally" within the First Amendment's protective scope. Nevertheless, in a plurality decision that did not produce a controlling rationale, the Court concluded that the First Amendment was not violated by Indiana's application of a public indecency statute to nude dancing.

R.A.V. v. City of St. Paul

R.A.V. v. City of St. Paul, 505 U.S. 377 (U.S. Sup. Ct. 1992) was a different story, however. There, the Court considered the city's hate-crimes ordinance, which prohibited placing on public or private property "a burning cross" or other symbol "which one knows or has reasonable grounds to know arouses anger, alarm or resentment in others on the basis of race, color, creed, religion or gender." The Court held that the ordinance was an impermissible content-based and viewpoint-based restriction on expressive conduct. The First Amendment thus protected the cross-burning defendants from being convicted of violating the ordinance, even though their behavior was, as the Court acknowledged, "reprehensible."

Wisconsin v. Mitchell

Although some observers assumed that *R.A.V.* would dictate a similar outcome in *Wisconsin v. Mitchell,* 508 U.S. 476 (U.S. Sup. Ct. 1993), it did not. Mitchell was convicted of aggravated battery for severely beating a child. On the basis of a Wisconsin statute that authorized the imposition of an enhanced maximum penalty when the offender selected his victim on the basis of the victim's race, Mitchell received a stiffer sentence than otherwise would have been allowed under the law. Rejecting Mitchell's argument that *R.A.V.* controlled and that the enhanced penalty he received was an unconstitutional criminalization of thought and expression, the Court upheld the imposition of the greater sentence. It distinguished *R.A.V.* by observing that the ordinance at issue there was obviously directed at expression, whereas the Wisconsin penalty-enhancement statute under which Mitchell was sentenced was nothing more than a permissible regulation of nonexpressive conduct.

criminatorily treat certain persons of the same class or arbitrarily discriminate among different classes of persons.[7] Legislatures usually are extended considerable latitude in making statutory classifications if the classifications have a rational basis. "Suspect" classifications, such as those based on race, are subjected to much closer judicial scrutiny, however.

Finally, the Constitution limits the type of punishment imposed on convicted offenders. The Eighth Amendment forbids "cruel and unusual punishments." This prohibition furnishes, for example, the constitutional basis for judicial decisions establishing limits on

[7]For an example, see *McLaughlin v. Florida,* 379 U.S. 1984 (U.S. Sup. Ct. 1964), where the Court struck down a Florida statute forbidding cohabitation between black males and white females on the ground that no valid statutory purpose justified prohibiting only interracial cohabitation.

the imposition of the death penalty.[8] Although various Supreme Court cases indicate that the Eighth Amendment may bar a sentence whose harshness is disproportionate to the seriousness of the defendant's offense, the Court has signaled that any Eighth Amendment concerns along these lines are unlikely to be triggered unless the sentence–crime disproportionality is exceedingly gross.[9]

[8]See, for example, *Thompson v. Oklahoma,* 487 U.S. 815 (U.S. Sup. Ct. 1988), where the Court held that the Eighth Amendment bars the execution of a defendant who was under 16 years of age at the time of his offense.

[9]See *Harmelin v. Michigan,* 501 U.S. 957 (U.S. Sup. Ct., 1991), where the Court upheld, against an Eighth Amendment-based attack, a statutorily mandated sentence of life imprisonment without parole for persons convicted of possessing 650 or more grams of cocaine.

City of Chicago v. Morales *527 U.S. 41 (U.S. Sup. Ct. 1999)*

Acting in response to public safety considerations and an apparent escalation in violent and drug-related criminal activity involving street gangs, Chicago's city council enacted the Gang Congregation Ordinance in 1992. The ordinance stated, in pertinent part:

> Whenever a police officer observes a person he reasonably believes to be a criminal street gang member loitering in any public place with one or more other persons, he shall order all such persons to disperse and remove themselves from the area. Any person who does not promptly obey such an order is in violation of this section.

The ordinance went on to define loitering as "remain[ing] in any one place with no apparent purpose." It also included a definition of criminal street gang. Violators of the ordinance could be subjected to a fine and a jail term and could be ordered to perform community service. During the first three years after the ordinance was enacted, Chicago police issued more than 89,000 dispersal orders and arrested more than 42,000 persons for violations of the ordinance. After an Illinois trial court, the Illinois Appellate Court, and the Illinois Supreme Court agreed with certain alleged violators' contentions that the ordinance was unconstitutionally vague, the U.S. Supreme Court granted certiorari.

Stevens, Justice The question presented is whether the ordinance violated the Due Process Clause of the Fourteenth Amendment to the Federal Constitution.

The broad sweep of the ordinance violates "the requirement that a legislature establish minimal guidelines to govern law enforcement." *Kolender v. Lawson,* 461 U.S. 352, 358 (1983). There are no such guidelines in the ordinance. In any public place in the city of Chicago, persons who stand or sit in the company of a gang member may be ordered to disperse unless their purpose is apparent. The mandatory language in the enactment directs the police to issue an order without first making any inquiry about their possible purposes. It matters not whether the reason that a gang member and his father, for example, might loiter near Wrigley Field is to rob an unsuspecting fan or just to get a glimpse of Sammy Sosa leaving the ballpark; in either event, if their purpose is not apparent to a nearby police officer, she may—indeed, she "shall"—order them to disperse.

Recognizing that the ordinance does reach a substantial amount of innocent conduct, we turn to its language to determine [whether] it "necessarily entrusts lawmaking to the moment-to-moment judgment of the policeman on his beat." *Kolender,* 461 U.S. at 359. The principal source of the vast discretion conferred on the police is the definition of loitering as "to remain in any one place with no apparent purpose." The "no apparent purpose" standard is inherently subjective because its application depends on whether some purpose is "apparent" to the officer on the scene.

Presumably an officer would have discretion to treat some purposes—perhaps a purpose to engage in idle conversation or simply to enjoy a cool breeze on a warm evening—as too frivolous to be apparent if he suspected a different ulterior motive. Moreover, an officer conscious of the city council's reasons for enacting the ordinance might well ignore its text and issue a dispersal order, even though an illicit purpose is actually apparent.

It is true, as the city argues, that the requirement that the officer reasonably believe that a group of loiterers contains a gang member does place a limit on the authority to order dispersal. That limitation would no doubt be sufficient if the ordinance only applied to loitering that had an apparently harmful purpose or effect, or possibly if it only applied to loitering by persons reasonably believed to be criminal gang members. But this ordinance, for reasons that are not explained in the findings of the city council, requires no harmful purpose and applies to non-gang members as well as suspected gang members. It applies to everyone in the city who may remain in one place with one suspected gang member as long as their purpose is not apparent to an officer observing them. Friends, relatives, teachers, counselors, or even total strangers might unwittingly engage in forbidden loitering if they happen to engage in idle conversation with a gang member.

In our judgment, the Illinois Supreme Court correctly concluded that the ordinance does not provide sufficiently specific limits on the enforcement discretion of the police to meet constitutional standards for definiteness and clarity.

Judgment of Illinois Supreme Court affirmed.

Proof beyond a Reasonable Doubt The serious matters at stake in a criminal case—the life and liberty of the accused—justify our legal system's placement of significant limits on the government's power to convict a person of a crime. One of the most fundamental safeguards is the presumption of innocence; defendants in criminal cases are presumed innocent until proven guilty. The due process clauses require the government to overcome this presumption by proving beyond a reasonable doubt every element of the offense charged against the defendant.[10] Requiring the government to meet this stern burden of proof minimizes the risk of erroneous criminal convictions.[11] It also reflects a strong belief shared by all common law jurisdictions about the proper way to enforce laws and administer justice.

Defendant's Criminal Intent and Capacity Most serious crimes require *mens rea,* or criminal intent, as an element. The level of fault required for a given criminal violation depends on the wording of the relevant statute. Many criminal statutes require proof of intentional wrongdoing. Others impose liability for reckless conduct or occasionally mere negligence. In the criminal context, recklessness generally means that the accused consciously disregarded a substantial risk that the harm prohibited by the statute would result from her actions. Negligence, in criminal cases, means that the accused failed to perceive a substantial risk of harm that a reasonable person would have perceived.

Criminal intent may be inferred from an accused's behavior, because a person is normally held to have intended the natural and probable consequences of her acts. The criminal intent requirement furthers the criminal law's general goal of punishing conscious wrongdoers. Accordingly, proof that the defendant had the capacity to form the required intent is a traditional prerequisite of criminal responsibility. The criminal law recognizes three general types of incapacity: *intoxication, infancy,* and *insanity.*

Although it is not a complete defense to criminal liability, voluntary intoxication may sometimes diminish the degree of a defendant's liability. A highly intoxicated person may be incapable of forming the specific criminal intent required for certain crimes. For example, many first-degree murder statutes require proof of *premeditation,* a conscious decision to kill. One who kills while highly intoxicated may be incapable of premeditation—meaning that he would not be guilty of first-degree murder. He may be convicted, however, of another homicide offense that does not require

[10]The beyond a reasonable doubt standard required of the government in criminal cases contemplates a stronger and more convincing showing than that required of plaintiffs in civil cases. As explained in Chapter 2, plaintiffs in civil cases need only prove the elements of their claims by a preponderance of the evidence.

[11]The beyond a reasonable doubt standard applies to the conviction phase of a criminal prosecution but not to the sentencing phase. Once the defendant has been convicted of a certain charge, the court determining the appropriate sentence may take into account other charges of which the defendant was acquitted if the conduct underlying those charges has been proven by a preponderance of the evidence. *United States v. Watts,* 519 U.S. 148 (U.S. Sup. Ct. 1997).

proof of premeditation.[12] Involuntary intoxication may be a complete defense to criminal liability.

The common law usually presumed that children younger than 14 years of age could not form a criminal intent. Today, most states treat juvenile offenders below a certain statutory age (usually 16 or 17) differently from adult offenders, with special juvenile court systems and separate detention facilities. Current juvenile law emphasizes rehabilitation rather than capacity issues. Repeat offenders or offenders charged with very serious offenses, however, may sometimes be treated as adults.

A criminal defendant's insanity may affect a criminal prosecution in various ways. Insanity rendering a defendant incapable of assisting in her defense will delay her trial until she regains sanity. Insanity manifesting itself after conviction, but before sentencing, may delay sentencing until sanity returns. If a condemned prisoner becomes insane while awaiting execution, the Eighth Amendment's prohibition of cruel and unusual punishment bars the execution.[13]

In addition, an accused's insanity at the time the charged act was committed may constitute a complete defense. This possible effect of insanity has generated expressions of public dissatisfaction, as well as disagreements over the proper basis on which to determine insanity. The primary common law test for insanity is the *M'Naghten* rule. This rule provides that a criminal defendant is not responsible if, at the time of the offense, he did not know the nature and quality of his act, or, if he did know this, he did not know his act was wrong.[14] Some states have replaced or supplemented this test with the *irresistible impulse* rule, which absolves a defendant of responsibility if mental disease rendered her incapable of controlling her behavior and resisting the impulse to commit a crime. Various jurisdictions apply the American Law Institute's insanity test. Under this test, a defendant is not responsible if, when the act was committed, mental disease or defect caused him to lack the substantial capacity to appreciate the wrongfulness of his act or to conform his conduct to the law's requirements.

[12]A state is free, however, to enact a statute that prohibits consideration of the defendant's voluntary intoxication in the determination of whether the defendant possessed the requisite intent. The Supreme Court recently held that such a statute does not violate the Fourteenth Amendment's due process clause. *Montana v. Egelhoff,* 518 U.S. 37 (U.S. Sup. Ct. 1996).
[13]*Ford v. Wainwright,* 477 U.S. 399 (U.S. Sup. Ct. 1986).
[14]This rule is derived from *Daniel M'Naghten's Case,* 8 Eng. Reprint 718 (House of Lords 1843).

Figure 3 *Essentials of Crime Checklist*

- Did the accused violate an existing statute?
- Is the statute constitutionally valid? Does it prohibit constitutionally protected behavior? Does it clearly define the prohibited behavior?
- Did the accused have the required ciminal intent? Did he have the capacity to form the required intent? May the necessary level of intent be inferred from his actions?
- Did the state prove each element of the crime beyond a reasonable doubt?

Although insanity defenses do not often succeed, two significant trends have been spurred by public reaction to highly publicized cases in which insanity defenses were raised. One is a tendency to return to the narrower *M'Naghten* standard or something closely resembling it. Congress has taken such an approach in prescribing the insanity standard applicable in federal criminal cases. The other trend is the creation of procedural rules that make it even more difficult for defendants to succeed with an insanity defense. Criminal defendants are presumed to be sane. Traditionally, once an accused introduced evidence tending to prove insanity, the government was expected to prove her sanity beyond a reasonable doubt. Today, however, many states and the federal government treat insanity as an affirmative defense under which the defendant bears the burden of proving insanity. In addition, some states have instituted a "guilty, but mentally ill" verdict as an alternative to the traditional "not guilty by reason of insanity" verdict. This alternative allows jurors to convict (rather than acquit) mentally ill defendants, with the assurance that they will receive postconviction treatment.

Figure 3 summarizes the essential components of criminal liability under our legal system.

Criminal Procedure

Criminal Prosecutions

Persons arrested for allegedly committing a crime are taken to the police station and booked. **Booking** is an administrative procedure for recording the suspect's arrest and the alleged offenses involved. In some states, temporary release on bail may be available at this stage.

After booking, the police file an arrest report with the prosecutor, who decides whether to charge the suspect with an offense. If she decides to prosecute, the prosecutor prepares a complaint identifying the accused and detailing the charges. Most states require that arrested suspects be taken promptly before a magistrate or other judicial officer (such as a justice of the peace or judge whose court is of limited jurisdiction) for an **initial appearance.** During this appearance, the magistrate informs the accused of the charges against him and outlines the accused's constitutional rights. In misdemeanor cases in which the accused pleads guilty, the sentence may be (but need not be) imposed without a later hearing. If the accused pleads not guilty to the misdemeanor charge, the case is set for trial. In felony cases, as well as misdemeanor cases in which the accused pleads not guilty, the magistrate sets the amount of bail.

In many states, defendants in felony cases are protected against unjustified prosecutions by an additional procedural step, the **preliminary hearing.** The prosecutor must introduce enough evidence at this hearing to persuade a magistrate that there is **probable cause** to believe the accused committed a felony.[15] If persuaded that probable cause exists, the magistrate binds over the defendant for trial in the appropriate court.

After a bindover, the formal charge against the defendant is filed with the trial court. The formal charge consists of either an **information** filed by the prosecutor or an **indictment** returned by a grand jury. Roughly half of the states require that a grand jury approve the decision to prosecute a person for a felony. Grand juries are bodies of citizens selected in the same manner as the members of a trial (petit) jury; often, they are chosen through random drawings from a list of registered voters. Grand juries traditionally included 23 members, with a majority vote being necessary for an indictment. Today, many states have reduced the size of grand juries. There is also significant variation in the number of votes required for an indictment. Indictment of an accused prior to a preliminary hearing normally eliminates the need for a preliminary hearing because the indictment serves essentially the same function as a magistrate's probable cause determination.

The remainder of the states allow felony defendants to be charged by either indictment or information, at the prosecutor's discretion. An **information** is a formal charge signed by the prosecutor outlining the facts supporting the charges against the defendant. In states allowing felony prosecution by information, prosecutors elect the information method in the vast majority of felony cases. Misdemeanor cases are prosecuted by information in virtually all states.[16]

Once an information or indictment has been filed with a trial court, an *arraignment* occurs. The defendant is brought before the court, informed of the charges, and asked to enter a plea. The defendant may plead guilty, not guilty, or nolo contendere. Although technically not an admission of guilt, nolo contendere pleas indicate that the defendant does not contest the charges. This decision by the defendant will lead to a finding of guilt. Unlike evidence of a guilty plea, however, evidence of a defendant's nolo plea is inadmissible in later civil cases against that defendant based on the same conduct amounting to the criminal violation. Individuals and corporate defendants therefore may find nolo pleas attractive when their chances of mounting a successful defense to the criminal prosecution are poor and the prospect of later civil suits is likely.

At or shortly after the arraignment, the defendant who pleads not guilty chooses the type of trial that will take place. Persons accused of serious crimes for which incarceration for more than six months is possible have a constitutional right to be tried by a jury of their peers. The accused, however, generally may waive this right and opt for a bench trial (i.e., before a judge only).

Constitutional Safeguards

The preceding pages referred to several procedural devices designed to protect persons accused of crime. The Bill of Rights, which consists of the first 10 amendments to the U.S. Constitution, sets forth other rights of criminal defendants. These rights guard against unjustified or erroneous criminal convictions and serve as reminders of government's proper role in the administration of justice in a democratic society. Justice Oliver Wendell Holmes aptly addressed this latter point when he said, "I think it less evil that some criminals should escape than that the government should play an ignoble part." Although the literal language of the Bill of Rights refers only to federal

[15]The state need not satisfy the beyond a reasonable doubt standard of proof at the preliminary hearing stage. The prosecutor sufficiently establishes probable cause by causing the magistrate to believe it is more likely than not that the defendant committed the felony alleged.

[16]For federal crimes, a prosecutor in the relevant U.S. Attorney's office files an information to institute the case if the offense involved carries a penalty of not more than one year of imprisonment. Federal prosecutions for more serious crimes with potentially more severe penalties are commenced by means of a grand jury indictment.

government actions, the U.S. Supreme Court has applied the most important Bill of Rights guarantees to state government actions by "selectively incorporating" those guarantees into the Fourteenth Amendment's due process clause. Once a particular safeguard has been found to be "implicit in the concept of ordered liberty" or "fundamental to the American scheme of justice," it has been applied equally in state and federal criminal trials. This has occurred with the constitutional protections examined earlier in this chapter as well as with the Fourth, Fifth, and Sixth Amendment guarantees discussed in the following pages.

The Fourth Amendment The Fourth Amendment protects persons against arbitrary and unreasonable governmental violations of their privacy rights. It states:

> The right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized.

The Fourth Amendment's language and judicial interpretations of it reflect the difficulties inherent in properly balancing citizens' legitimate expectations of privacy and government's legitimate interest in securing evidence of wrongdoing. Citizens are not protected against all searches and seizures—only against unreasonable ones. Because the Fourth Amendment safeguards reasonable privacy expectations, the Supreme Court has extended the amendment's protection to such places or items as private dwellings and immediately surrounding areas (often called the *curtilage*), telephone booths, sealed containers, and first-class mail. The Court has denied protection to places, items, or matters as to which it found no reasonable expectations of privacy, such as open fields, personal bank records, and voluntary conversations between criminal defendants and government informants. In *United States v. Hall,* which follows, a federal court of appeals considered whether a corporation and one of its executives possessed a reasonable expectation of privacy in the contents of garbage bags placed in a dumpster that was located on the corporation's property.

United States v. Hall *47 F.3d 1091 (11th Cir. 1995)*

William T. Parks, a special agent of the U.S. Customs Service, was investigating allegations that Bet-Air, Inc. (a Miami-based seller of spare aviation parts and supplies) had supplied restricted military parts to Iran. Parks entered Bet-Air's property and removed, from a garbage dumpster, a bag of shredded documents. The dumpster was located near the Bet-Air offices in a parking area reserved for the firm's employees. To reach the dumpster, Parks had to travel 40 yards on a private paved road. No signs indicated that the road was private. In later judicial proceedings, Parks testified that at the time he traveled on the road, he did not know he was on Bet-Air's property.

When reconstructed, some of the previously shredded documents contained information seemingly relevant to the investigation. Parks used the shredded documents and the information they revealed as the basis for obtaining a warrant to search the Bet-Air premises. In executing the search warrant, Parks and other law enforcement officers seized numerous documents and Bet-Air records.

A federal grand jury later indicted Bet-Air's chairman, Terrence Hall, and other defendants on various counts related to the alleged supplying of restricted military parts to Iran. Contending that the Fourth Amendment had been violated, Hall filed a motion asking the court to suppress (i.e., exclude) all evidence derived from the warrantless search of the dumpster and all evidence seized during the search of the Bet-Air premises (the search pursuant to the warrant). The federal district court denied Hall's motion. Following a jury trial, Hall was convicted on all counts and sentenced to prison. Hall appealed to the 11th Circuit Court of Appeals.

Hatchett, Circuit Judge In *California v. Greenwood* (1988), the Supreme Court held that a warrantless search and seizure of garbage left in a plastic bag on the curb in front of, but outside the curtilage of, a private house did not violate the Fourth Amendment. The Court held that such a search would only violate the Fourth Amendment if the persons discarding the garbage manifested a

subjective expectation of privacy in their garbage that society accepts as objectively reasonable. The Court concluded that Greenwood had exposed his garbage to the public sufficiently to render his subjective expectation of privacy objectively unreasonable.

Hall points to the fact that Parks obtained documents that were shredded, then placed inside a green garbage bag, which was in turn placed inside a garbage dumpster. We believe that the manner in which Bet-Air disposed of its garbage serves only to demonstrate that Bet-Air manifested a subjective expectation of privacy in its discarded garbage. Whether Parks's actions were proscribed by the Fourth Amendment, however, turns on whether society is prepared to accept Bet-Air's subjective expectation of privacy as objectively reasonable.

It is well established that the Fourth Amendment protections apply [not only to residential property but also] to commercial premises. The Supreme Court's treatment of the expectation of privacy that the owner of commercial property enjoys in such property has differed significantly from the protection accorded an individual's home, [however]. Such distinctions are inevitable given the fundamental difference in the nature and uses of a residence as opposed to commercial property. These distinctions are drawn into sharp focus when, as in this case, the government intrudes into the area immediately surrounding the structure. In order for persons to preserve Fourth Amendment protection in the area immediately surrounding the residence, they must not conduct an activity or leave an object in the plain view of those outside the area. The occupant of a commercial building, in contrast, must take the additional precaution of affirmatively barring the public from the area. The Supreme Court has consistently held that the government is required to obtain a search warrant only when it wishes to search those areas of commercial property from which the public has been excluded.

Relying on the fact that the dumpster was within the "commercial curtilage" of Bet-Air's property and that it could only be accessed by traveling 40 yards on a private road, Hall asserts that the company's subjective expectation of privacy was objectively reasonable. Hall's heavy emphasis on Parks's trespass onto Bet-Air's private property is misplaced. The law of trespass forbids intrusions onto land that the Fourth Amendment would not proscribe. We note that although the road leading to Bet-Air's dumpster was private, the magistrate judge found that no "objective signs of restricted access such as signs, barricades, and the like" were present. Moreover, the magistrate judge also found that at the time Parks traveled the road, he believed it was a public road. [Bet-Air's] failure to exclude the public takes on increased significance when the asserted expectation of privacy is in discarded garbage. A commercial proprietor incurs a diminished expectation of privacy when garbage is placed in a dumpster which is located in a parking lot that the business shares with other businesses, and no steps are taken to limit the public's access to the dumpster. It is common knowledge that commercial dumpsters have long been a source of fruitful exploration for scavengers.

The Supreme Court used the concept of curtilage in *Hester v. United States* (1924) to distinguish between the area outside a person's house which the Fourth Amendment protects, and the open fields, which are afforded no Fourth Amendment protection. The Supreme Court has not squarely addressed the applicability of the common law concept of curtilage to commercial property. Given the Court's view of the relationship between the Fourth Amendment and commercial premises, however, we have little doubt that were the Court to embrace the so-called "business curtilage" concept, it would, at a minimum, require that the commercial proprietor take affirmative steps to exclude the public. In light of Bet-Air's failure to exclude the public from the area immediately surrounding its offices, we refuse to apply the so-called "business curtilage" concept in this case.

[W]e do not believe that Parks infringed upon any societal values the Fourth Amendment protects when he searched Bet-Air's garbage. Bet-Air did not take sufficient steps to restrict the public's access to its discarded garbage; therefore, its subjective expectation of privacy is not one that society is prepared to accept as objectively reasonable.

District court's denial of Hall's suppression motion affirmed.

Even when plainly protected areas or items are involved, not every governmental action is deemed sufficiently intrusive to constitute a search or seizure for Fourth Amendment purposes. Thus, for example, the Supreme Court held that exposing an airline traveler's luggage to a narcotics detection dog in a public place was not a search, considering the minimally intrusive nature of the intrusion and the narrow scope of information it revealed.[17] No seizure occurred, according to the Court in *Florida v. Bostick,* when police boarded a bus at a regular stop and asked a passenger for permission to search his luggage.[18]

In its treatment of the Fourth Amendment's warrant clause, the Supreme Court has engaged in similar balancing of individual and governmental interests. The warrant requirement further protects privacy interests by mandating that a judge or magistrate authorize and define the scope of intrusive governmental action. As a general rule, the Court has held that searches carried out without a proper warrant are unreasonable. Nonetheless, the Court has devised a lengthy list of exceptions to this general rule. The Court has upheld warrantless searches of the area within an arrestee's immediate control, of premises police enter in hot pursuit of an armed suspect, and of automobiles and containers located therein under certain circumstances (due to automobiles' mobile nature). Warrantless seizures of contraband items in the plain view of officers acting lawfully have likewise been upheld. The Court has also authorized customs searches, stop-and-frisk searches for weapons, inventory searches of property in an arrestee's possession, and consensual searches, despite the absence of a warrant in each of these instances. Finally, the Court has upheld warrantless administrative inspections of closely regulated businesses.[19] In *Illinois v. Wardlow,* which follows, the Court examined the legal standard that must be met in order for a stop-and-frisk detention to be justified.

[17] *United States v. Place,* 426 U.S. 696 (U.S. Sup. Ct. 1983). In this case, however, the Court also held that the warrantless detention of the defendant's luggage for 90 minutes was unlawful, given the fact that the agents in question had several hours' advance notice of the defendant's arrival.

[18] 501 U.S. 429 (U.S. Sup. Ct. 1991).

[19] See, e.g., *New York v. Burger,* 482 U.S. 691 (U.S. Sup. Ct. 1987).

Illinois v. Wardlow 2000 U.S. LEXIS *504 (U.S. Sup. Ct. 2000)*

Officers Nolan and Harvey occupied the last car in a four-car Chicago Police Department caravan that entered an area known for heavy narcotics trafficking. The officers intended to investigate drug transactions. Nolan observed a private citizen, Wardlow, who was standing next to a building and holding an opaque bag. Wardlow looked in the direction of the officers and then fled. The officers continued to observe Wardlow and eventually cornered him on the street. Nolan exited the police car and detained Wardlow. Because Nolan's experience indicated to him that weapons commonly were present when narcotics transactions occurred, he immediately conducted a protective patdown search for weapons. During the frisk of Wardlow, Nolan squeezed the bag Wardlow was carrying and felt a heavy, hard object similar in shape to a gun. Nolan opened the bag and discovered a .38-caliber handgun that carried five live rounds of ammunition. Nolan and Harvey then arrested Wardlow.

Prior to his trial on a charge of unlawful use of a weapon by a felon, Wardlow moved to suppress (i.e., exclude evidence of) the gun and the circumstances under which it was discovered. Wardlow based his motion on a contention that his Fourth Amendment rights had been violated. An Illinois trial judge denied Wardlow's motion and, in a bench trial, convicted him of the charged offense. Holding that the gun evidence should have been suppressed because Nolan did not have the reasonable suspicion necessary to justify the stop-and-frisk of Wardlow, the Illinois Appellate Court reversed Wardlow's conviction. The Illinois Supreme Court affirmed the appellate court's decision on the basis of similar reasoning. The U.S. Supreme Court granted certiorari.

Rehnquist, Chief Justice This case . . . is governed by the analysis we first applied in *Terry v. Ohio,* 392 U.S. 1 (1968). In *Terry,* we held that an officer may, consistent with the Fourth Amendment, conduct a brief, investigatory stop when the officer has a reasonable, articulable suspicion that criminal activity is afoot. While "reasonable suspicion" is a less demanding standard than probable cause and requires a

showing considerably less than preponderance of the evidence, the Fourth Amendment requires at least a minimal level of objective justification for making the stop. [*Terry* requires the officer to be able] to articulate more than an "inchoate and unparticularized suspicion or ¸hunch' of criminal activity."

Nolan and Harvey were [entering] an area known for heavy narcotics trafficking. It was in this context that Officer Nolan decided to investigate Wardlow after observing him flee. An individual's presence in an area of expected criminal activity, standing alone, is not enough to support a reasonable, particularized suspicion that the person is committing a crime. But officers are not required to ignore the relevant characteristics of a location in determining whether the circumstances are sufficiently suspicious to warrant further investigation. Accordingly, we have previously [listed] the fact that the stop occurred in a high crime area among the relevant contextual considerations in a *Terry* analysis.

In this case, moreover, it was not merely Wardlow's presence in an area of heavy narcotics trafficking that aroused the officers' suspicion but his unprovoked flight upon noticing the police. Our cases have also recognized that nervous, evasive behavior is a pertinent factor in determining reasonable suspicion. Headlong flight—wherever it occurs—is the consummate act of evasion. It is not necessarily indicative of wrongdoing, but it is certainly suggestive of such. The determination of reasonable suspicion must be based on commonsense judgments and inferences about human behavior. We conclude Officer Nolan was justified in suspecting that Wardlow was involved in criminal activity, and, therefore, in investigating further.

Such a holding is entirely consistent with our decision in *Florida v. Royer,* 460 U.S. 491 (1983), where we held that when an officer, without reasonable suspicion or probable cause, approaches an individual, the individual has a right to ignore the police and go about his business. But unprovoked flight is simply not a mere refusal to cooperate. Flight, by its very nature, is not "going about one's business"; in fact, it is just the opposite.

[Wardlow argues] that there are innocent reasons for flight from police. This fact is undoubtedly true, but does not establish a violation of the Fourth Amendment. Even in *Terry,* the conduct justifying the stop was ambiguous and susceptible of an innocent explanation. [There,] the officer observed two individuals pacing back and forth in front of a store, peering into the window and periodically conferring. All of this conduct was by itself lawful, but it also suggested that the individuals were casing the store for a planned robbery. *Terry* recognized that the officers could detain the individuals to resolve the ambiguity.

In allowing such detentions, *Terry* accepts the risk that officers may stop innocent people. Indeed, the Fourth Amendment accepts that risk in connection with more drastic police action; persons arrested and detained on probable cause to believe they have committed a crime may turn out to be innocent. The *Terry* stop is a far more minimal intrusion, simply allowing the officer to briefly investigate further. If the officer does not learn facts rising to the level of probable cause, the individual must be allowed to go on his way. But in this case the officers found Wardlow in possession of a handgun, and [properly] arrested him for violation of an Illinois firearms statute.

Judgment of Illinois Supreme Court reversed and case remanded for further proceedings.

The exclusionary rule serves as the basic remedial device in cases of Fourth Amendment violations. Under this judicially crafted rule, evidence seized in illegal searches cannot be used in a subsequent trial against an accused whose constitutional rights were violated.[20] Because the exclusionary rule may result in suppression of convincing evidence of crime, it has generated controversy. The rule's supporters regard it as necessary to deter police from violating citizens' constitutional rights. The rule's opponents assert that it has no deterrent effect on police who believed they were acting lawfully. A loudly voiced complaint in some quarters has been that "because of a policeman's error, a criminal goes free."

In the past two decades, the Court has responded to such criticism by rendering decisions that restrict the

[20]The Supreme Court initially authorized application of the exclusionary rule in federal criminal cases only. In *Mapp v. Ohio,* 367 U.S. 643 (U.S. Sup. Ct. 1961), the Court made the exclusionary rule applicable to state ciminal cases as well.

operation of the exclusionary rule. For example, in *Nix v. Williams,* the Court held that illegally obtained evidence may be introduced at trial if the prosecution convinces the trial judge that the evidence would inevitably have been obtained anyway by lawful means.[21] In *United States v. Leon,* the Court created a "good faith" exception to the exclusionary rule. This exception allows the use of evidence seized by police officers who acted pursuant to a search warrant later held invalid if the officers reasonably believed that the warrant was valid.[22] Although the Court has not extended the good faith exception to the warrantless search setting, it has expanded the exception's scope to include searches made in reliance on a statute that is later declared invalid.[23]

The Fifth Amendment The Fifth Amendment's due process clause guarantees basic procedural and substantive fairness to criminal defendants. In another significant provision, the Fifth Amendment protects against *compelled testimonial self-incrimination* by establishing that "[n]o person . . . shall be compelled in any criminal case to be a witness against himself." This provision prevents the government from coercing a defendant into making incriminating statements and thereby assisting in his own prosecution.

In *Miranda v. Arizona,* the Supreme Court established procedural requirements—the now-familiar *Miranda* warnings—to safeguard this Fifth Amendment right and other constitutional guarantees. The Court did so by requiring police to inform criminal suspects, before commencing custodial interrogation of them, that they have the right to remain silent, that any statements they make may be used as evidence against them, and that they have the right to the presence and assistance of a retained or court-appointed attorney (with court appointment occurring when suspects lack the financial ability to retain counsel).[24] Incriminating statements that an in-custody suspect makes without first having been given the *Miranda* warnings are inadmissible at trial. If the suspect invokes her right to silence, custodial interrogation must cease. If, on the other hand, the suspect knowingly and voluntarily waives her right to silence after having been given the *Miranda* warnings, her statements will be admissible.

The right to silence is limited, however, in various ways. For example, the traditional view that the Fifth Amendment applies only to *testimonial* admissions serves as the basis for allowing the police to compel an accused to furnish nontestimonial evidence such as fingerprints, samples of body fluids, and hair. Supreme Court decisions have recognized further limitations on the right to silence. For instance, a longstanding view holds that the right includes a corresponding implicit prohibition of prosecutorial comments at trial about the accused's failure to speak in his own defense. Although Supreme Court decisions still support this prohibition as a general rule, the Court has sometimes allowed prosecutors to use the defendant's pretrial silence to impeach his trial testimony. For example, the Court has held that the Fifth Amendment is not violated by prosecutorial use of a defendant's silence (either prearrest or postarrest, but in advance of any *Miranda* warnings) to discredit his trial testimony that he killed the victim in self-defense.[25]

A similar inclination to narrow *Miranda*'s applicability and effect has also been displayed by the Supreme Court during roughly the past decade. In *Moran v. Burbine,* for instance, the Court upheld a suspect's waiver of his *Miranda* rights and approved the use of his confession at trial, despite the police's failure to notify the suspect that an attorney retained for him by a family member was seeking to contact him.[26] As another example, *Illinois v. Perkins* established that an undercover police officer posing as a fellow inmate need not give a jailed suspect the *Miranda* warnings before asking questions that could lead to incriminating admissions.[27]

Although the *Miranda* warnings have been a required feature of law enforcement practice since the Supreme Court handed down its landmark decision in 1966, a controversial case before the Court as this book went to press raised surprising questions about the status and future viability of the warnings. In *United States v. Dickerson,* a 1999 decision, the U.S. Court of Appeals for the Fourth Circuit labeled the *Miranda* warnings as merely judicially created rules

of procedure that were neither grounded in, nor required by, the Constitution. The Fourth Circuit's holding that the *Miranda* warnings were not of constitutional dimension led it to conclude that the warnings' required status could be eliminated by appropriate legislation. Finally, the Fourth Circuit held that Congress, in a largely ignored 1968 statute, indeed had legislatively overruled the *Miranda* decision and the warnings it required. The 1968 statute stated that a suspect's confession was to be admissible at trial if it was voluntarily made—even if warnings such as those called for in *Miranda* were not given by the police. Yet the statute had sat essentially idle since its enactment, with even the U.S. Justice Department consistently taking the position that the statute was unconstitutional. In late 1999, the Supreme Court granted certiorari in the *Dickerson* case, in order to decide whether the 1968 statute was an unconstitutional attempt by Congress to overrule *Miranda.* As of the time this book went to press in early 2000, the Supreme Court had not decided the case.

The preceding discussion of the privilege against self-incrimination applies to criminal defendants in general. The Fifth Amendment's scope, however, has long been of particular concern to businesspersons charged with crimes. Documentary evidence often is quite important to the government's case in white-collar crime prosecutions. To what extent does the Fifth Amendment protect business records? More than a century ago, the Supreme Court held, in *Boyd v. United States,* that the Fifth Amendment protects individuals against compelled production of their private papers.[28]

In more recent years, however, the Court has drastically limited the scope of the protection contemplated by *Boyd.* The Court has held various times that the private papers privilege is personal and thus cannot be asserted by a corporation, partnership, or other "collective entity." Because such entities have no Fifth Amendment rights, the Court has held that when an organization's individual officer or agent has custody of organization records, the officer or agent cannot assert any personal privilege to prevent their disclosure. This rule holds even if the contents of the records incriminate her personally. Finally, various decisions allow the government to require business proprietors to keep certain records relevant to transactions that are appropriate subjects for government regulation. These "required records" are not entitled to private papers protection. They may be subpoenaed and used against the recordkeeper in prosecutions for regulatory violations.

The Court's business records decisions during the past quarter-century cast further doubt on the future of the private papers doctrine. Instead of focusing on whether subpoenaed records are private in nature, the Court now considers whether the *act of producing* the records would be sufficiently testimonial to trigger the privilege against self-incrimination. In *Fisher v. United States,* the Court held that an individual subpoenaed to produce personal documents may assert his Fifth Amendment privilege only if the act of producing the documents would involve incriminating testimonial admissions.[29] This is likely when the individual producing the records is in effect certifying the records' authenticity or admitting the existence of records previously unknown to the government (demonstrating that she had access to the records and, therefore, possible knowledge of any incriminating contents).

In *United States v. Doe,* the Court extended the act-of-production privilege to a sole proprietor whose proprietorship records were subpoenaed.[30] The Court, however, held that normal business records were not themselves protected by the Fifth Amendment because they were voluntarily prepared and thus not the product of compulsion. In view of *Doe*'s emphasis on the testimonial and potentially incriminating nature of the act of producing business records, some observers thought that officers of collective entities under government investigation might be able to assert their personal privileges against self-incrimination as a way to avoid producing incriminating business records. *Braswell v. United States,* however, dashed such hopes, as the Court refused to extend its *Doe* holding to cover a corporation's sole shareholder who acted in his capacity as custodian of corporate records.[31] The Court held that Braswell (the sole shareholder), having chosen to operate his business under the corporate form, was bound by the rule that corporations and similar entities have no Fifth Amendment privilege. Because Braswell acted in a representative capacity in producing the requested records, the government could not make evidentiary use of his act of production. The government, however, was free to use the contents of the records against Braswell and the corporation.

In the following *In re Grand Jury Subpoenas* decision, the Second Circuit Court of Appeals relied heavily on *Braswell* in rejecting a corporate president's Fifth Amendment–based attempt to avoid production of records pertaining to telephone lines listed in the president's name but paid for by the corporation.

Another important Fifth Amendment provision is the **double jeopardy clause.** This provision protects defendants from multiple criminal prosecutions for the same offense. It prevents an accused from being charged with more than one count of the same statutory violation for one offense, such as being charged with two robbery violations for a one-time robbery of

In re Grand Jury Subpoenas Dated October 22, 1991, and November 1, 1991 (U.S. v. Doe) *959 F.2d 1158 (2d Cir. 1992)*

A federal grand jury was investigating "John Doe," president and sole shareholder of the corporation "XYZ," concerning possible violations of federal securities and money-laundering statutes. During the investigation, the government learned that XYZ had paid the bills for various telephone lines, including those used by Doe in his homes and car. Grand jury subpoenas duces tecum (i.e., subpoenas calling for production of documents) were then served on the custodian of XYZ's corporate records, on Doe, and on the law firm Paul, Weiss, Rifkind, Wharton & Garrison (Paul-Weiss), which represented Doe. These subpoenas sought production of telephone bills, records, and statements of account regarding certain telephone numbers (including the numbers of the telephone lines in Doe's homes and car).

Paul-Weiss possessed copies of these documents because it had received them from its client, Doe. Paul-Weiss refused, however, to comply with the subpoena. To justify this refusal, Paul-Weiss asserted that any copies of records in its possession were exempted from production due to (1) Doe's Fifth Amendment privilege against self-incrimination, and (2) the attorney–client and attorney-work-product privileges. Contending that the subpoenaed documents amounted to corporate records of XYZ rather than records belonging to or created by Doe, the government maintained that the asserted privileges were inapplicable. The government therefore filed a motion asking the district court to order Paul-Weiss to provide the subpoenaed documents. Doe, who was permitted to intervene in the proceeding, raised the same arguments made by Paul-Weiss in its refusal to comply with the subpoena.

After an evidentiary hearing on the government's motion, the district court determined that the records and documents at issue were those of XYZ rather than Doe. Concluding that requiring Paul-Weiss or Doe to produce the subpoenaed material would not violate Doe's Fifth Amendment rights, the attorney–client privilege, or the attorney-work-product privilege, the district court granted the government's motion and entered an order compelling Paul-Weiss to produce the subpoenaed material. Doe appealed.

Kearse, Circuit Judge Doe contends that enforcement of the subpoena served on Paul-Weiss would violate his Fifth Amendment privilege principally because the act of producing the documents would tend to incriminate him. Preliminarily, we note that when documents have been transferred by a client to his attorney for the purpose of obtaining legal advice and the client claims attorney–client privilege, the attorney may refuse to produce the documents if the client, had he retained possession of them, would have had a Fifth Amendment privilege to refuse production. Accordingly, though Paul-Weiss was in possession of the subpoenaed records, we examine Doe's Fifth Amendment arguments as if Doe himself were the custodian.

The district court found that the subpoenaed records were not Doe's personal records but rather XYZ records. Artificial entities are not protected by the Fifth Amendment's prohibition against compelled self-incrimination. A corporation thus may not claim the privilege for the contents of its subpoenaed corporate records. Moreover, the custodian of corporate records is not entitled to refuse to produce those records on the ground that their contents may incriminate him personally, because they are not his personal records, and hence any incrimina-

tion would not be self-incrimination. This is so whether the subpoena for the corporate records is addressed to the corporation or to the custodian. Accordingly, Doe as custodian of XYZ's records is not entitled to prevent compliance with a subpoena calling for those records by asserting that the contents of those records would tend to incriminate him.

Further, the custodian of corporate records has no Fifth Amendment privilege to refuse to produce those records on the ground that the act of production itself would tend to incriminate him. This is the rule because, as pointed out by the Supreme Court in *Braswell v. United States,* "the custodian's act of production is not deemed a personal act, but rather an act of the corporation. Any claim of Fifth Amendment privilege asserted by the agent would be tantamount to a claim of privilege by the corporation—which of course possesses no such privilege." The policy reason for this limitation on the custodian's claim of privilege is that if not for this limitation, governmental efforts to investigate and prosecute white-collar crime by corporations and their agents would be seriously impaired. The fact that the custodian of corporate records is not entitled to assert an individual Fifth Amendment privilege to avoid producing the documents does not mean, however, that the custodian's act of production may be used against him. *Braswell* establishes that the government cannot make evidentiary use of the custodian's act of production.

Doe argues, however, that the above principles do not apply to him because, he contends, the subpoenaed documents are not in fact XYZ corporate records. Doe instead maintains that the records are his, either because they pertain to his personal telephone lines or because he obtained copies of the records from XYZ's files or from the telephone company for his own personal use. We disagree with Doe's characterization of the records. It is superficial for Doe to assert that the original records belonged to him because they pertained to his personal telephone lines. Although the lines may have been listed in his name, there was evidence that XYZ paid all of the bills, that Doe did not reimburse XYZ for these payments, that XYZ deducted the payments on its income tax returns, and that the telephone bills and statements had been stored in corporate files on corporate premises. The district court found that the documents were in fact XYZ corporate records. That finding was amply supported by the evidence.

We also reject Doe's assertion that he owns the subpoenaed records because all that remain in existence are copies. Copies of corporate records do not become the personal property of an individual merely because he caused the copies to be made. Allowing a corporate officer to obtain copies of corporate records and secure for them greater protection than could be enjoyed for the originals would create a rule ripe for abuse.

Further, even if we construed the copies of the telephone company records as papers belonging to Doe, compelled production of those papers would not violate Doe's privilege against self-incrimination. The Fifth Amendment does not proscribe the compelled production of every sort of incriminating evidence. It applies only when the accused is compelled to make a *testimonial* communication that is incriminating. When, as is the case here, the documents sought by the government were not prepared by the person subpoenaed and contain no testimonial declarations by him, a subpoena duces tecum does not compel self-incrimination.

Neither would the act of producing copies of the telephone company statements and bills cause Doe to incriminate himself. The subpoenaed documents were prepared and sent by the telephone company in the ordinary course of its business. There is no dispute that the bills were received or that the bills were paid by XYZ. The mere fact that Doe has or produces the copies of the records will not constitute testimonial self-incrimination.

We conclude that the district court correctly ruled that Doe's Fifth Amendment privilege does not entitle him to prevent Paul-Weiss from complying with the subpoena.

Order compelling Paul-Weiss to produce subpoenaed documents affirmed.

Note: In a later portion of the opinion not set forth here, the Second Circuit concluded that the district court correctly rejected Doe's and Paul-Weiss's attorney–client privilege and attorney-work-product privilege arguments.

one individual. This clause also prevents a second prosecution for the same offense after the defendant has been acquitted or convicted of that offense. Moreover, it bars the imposition of multiple punishments for the same offense.

The double jeopardy clause does not, however, preclude the possibility that a single criminal act may lead to more than one criminal prosecution. One criminal act may produce several statutory violations, all of which may give rise to prosecution. For example, a defendant who commits rape may also be prosecuted for battery, assault with a deadly weapon, and kidnapping if the facts of the case indicate that the relevant statutes were violated. In addition, the Supreme Court has long used a "same elements" test to determine what constitutes the same offense.[32] This means that a single criminal act with multiple victims (e.g., a restaurant robbery in which several patrons are robbed) could result in several prosecutions because the identity of each victim would be an additional fact or element of proof in each case.

In addition, the double jeopardy clause does not protect against multiple prosecutions by different sovereigns. A conviction or acquittal in a state prosecution does not prevent a subsequent federal prosecution for a federal offense arising out of the same event, or vice versa. This principle was illustrated in recent years by the prosecutions stemming from the highly publicized beating of motorist Rodney King at the hands of Los Angeles police officers. After the officers were found not guilty in state prosecutions stemming from the beating, two of them were found guilty in federal prosecutions for violations of King's civil rights.

Finally, the double jeopardy clause does not bar a private plaintiff from pursuing a *civil* case (normally for one or more of the intentional torts discussed in Chapter 6) against a defendant who was criminally prosecuted by the government for the same alleged conduct. The headline-dominating criminal and civil cases against O.J. Simpson furnish the best-known recent example of this principle.

The Sixth Amendment The Sixth Amendment contains several provisions applicable to criminal cases. It entitles criminal defendants to a speedy trial by an impartial jury and guarantees them the right to confront and cross-examine the witnesses against them. The Sixth Amendment also gives the accused in a criminal case the right "to have the assistance of counsel" in her defense. This provision has been interpreted to mean not only that the accused may employ her own attorney but also that an indigent criminal defendant is entitled to court-appointed counsel.[33] Included in the previously discussed *Miranda* warnings is a requirement that the police inform the accused of his right to counsel before custodial interrogation begins. *Edwards v. Arizona* established that once the accused has requested the assistance of counsel, he may not as a general rule be interrogated further until counsel is made available to him.[34] The Supreme Court later held that the *Edwards* rule against further questioning is triggered only by an *unambiguous* request for counsel.[35] In *McNeil v. Wisconsin,* the Court provided further latitude for law enforcement officers by holding that if a defendant has made an in-court request for an attorney's assistance regarding a crime with which he has been formally charged, that request does not preclude police interrogation of him—in the absence of counsel—regarding another unrelated crime.[36]

Finally, an accused is entitled to *effective* assistance of counsel. This means that the accused is entitled to representation at a point in the proceedings when an attorney may effectively assist him,[37] and to reasonably competent representation by that attorney. Inadequate assistance of counsel is a proper basis for setting aside a conviction and ordering a new trial.[38]

Figure 4 summarizes the major procedural safeguards enjoyed by defendants under our criminal justice system.

[32] *United States v. Dixon,* 509 U.S. 688 (U.S. Sup. Ct. 1993); *Blockburger v. United States,* 284 U.S. 299 (U.S. Sup. Ct. 1932).

[33] *Gideon v. Wainwright,* 372 U.S. 335 (U.S. Sup. Ct. 1963).

[34] 451 U.S. 477 (U.S. Sup. Ct. 1981).

[35] *Davis v. United States,* 512 U.S. 452 (U.S. Sup. Ct. 1994) (concluding that "Maybe I should talk to a lawyer" was too ambiguous to trigger the *Edwards* rule).

[36] 501 U.S. 171 (U.S. Sup. Ct. 1991).

[37] *Powell v. Alabama,* 287 U.S. 45 (U.S. Sup. Ct. 1932).

[38] In *Strickland v. Washington,* 446 U.S. 668 (U.S. Sup. Ct. 1984), the Court held that a defendant's conviction would not be set aside unless his attorney's performance fell below an objective standard of reasonableness and so prejudiced him as to result in the denial of a fair trial. As applied, this standard makes ineffective assistance of counsel claims rather difficult ones for convicted defendants to invoke successfully.

Figure 4 *Major Procedural Safeguards*

Fourth Amendment

- Prohibits unreasonable searches and seizures

Fifth Amendment

- Due process clause
  Presumption of innocence
  Prohibits vague criminal statutes
  Requires basic procedural and substantive fairness
- Right to silence
- Double jeopardy clause

Sixth Amendment

- Speedy trial
- Impartial jury
- Confront and cross-examine prosecution's witnesses
- Right to counsel

Eighth Amendment

- Forbids cruel and unusual punishments

White–Collar Crimes and the Dilemmas of Corporate Control

Introduction

White-collar crime is the term used to describe a wide variety of nonviolent criminal offenses committed by businesspersons and business organizations. Although this term often includes offenses committed by employees against their employers (such as theft, embezzlement, or accepting a bribe), our discussion will focus on criminal offenses committed by corporate employers and employees against society. Each year, corporate crime costs consumers billions of dollars. It takes various forms, from consumer fraud, securities fraud, and tax evasion to price-fixing, environmental pollution, and other regulatory violations. Corporate crime presents our legal system with a variety of problems—problems we have failed to resolve satisfactorily.

Corporations form the backbone of the most successful economic system in history. They dominate the international economic scene and provide us with substantial benefits in the forms of efficiently produced goods and services. Yet these same corporations may pollute the environment, swindle their customers, produce dangerously defective products, and conspire with others to injure or destroy competition. How are we to achieve effective control over these large organizations so important to our existence? Increasingly, we have come to rely on the criminal law as a major corporate control instrument. The criminal law, however, was developed with individual wrongdoers in mind. Who is at fault when a large organization causes social harm? Corporate crime is *organizational* in nature. Any given corporate action may be the product of the combined actions of many individuals acting within the corporate hierarchy. It may be that no individual had sufficient knowledge to possess the *mens rea* necessary for criminal responsibility under traditional criminal law principles. Moreover, criminally penalizing corporations raises special problems in view of the obvious inability to apply standard sanctions such as imprisonment to legal entities.

Evolution of Corporate Criminal Liability

The common law initially rejected the notion that corporations could be criminally responsible for their employees' actions. Early corporations, small in size and number, had little impact on public life. Their small size made it relatively easy to pinpoint individual wrongdoers within the corporation.

As corporations grew in size and power, however, the social need to control their activities grew accordingly. Not coincidentally, the rules governing corporate criminal liability began to change. Legislatures enacted statutes creating *public welfare offenses* of which corporations were convicted.[39] These regulatory offenses did not require proof of *mens rea.* By 1900, American courts had begun to impose criminal liability on corporations for general criminal offenses that required proof of *mens rea.* This expansion

[39]These statutes followed the lead of early corporate criminal liability cases in which criminal liability was imposed on public corporations such as municipalities—initially the most common type of corporation—for failures to perform such public duties as road and bridge repair.

of corporate criminal liability involved imputing the criminal intent of employees to the corporation in a fashion similar to the imposition of tort liability on corporations under the *respondeat superior* doctrine.[40]

Corporations now may face criminal liability for almost any offense if the statute in question indicates a legislative intent to hold corporations responsible. This legislative intent requirement is sometimes problematic. Many state criminal statutes may contain language suggesting an intent to hold only humans liable. For example, manslaughter statutes often define the offense as "the killing of one human being by the act of another." When statutes are framed, however, in more general terms—such as by referring to "persons"—courts are generally willing to apply them to corporate defendants.

Corporate Criminal Liability Today

Under the modern rule, a corporation may be held liable for criminal offenses committed by employees who *acted within the scope of their employment and for the benefit of the corporation.* A major corporate criminal liability issue centers around the classes of corporate employees whose intent can be imputed to the corporation. Some commentators argue that a corporation should be criminally responsible only for offenses committed by high corporate officials or those linked to them by authorization or acquiescence. (Virtually all courts impose criminal liability on a corporation under such circumstances.) This argument reflects fairness notions, for if any group of corporate employees can fairly be said to constitute a corporation's mind, that group is its top officers and directors.

The problem with imposing corporate liability only on the basis of top corporate officers' actions or knowledge is that such a policy often insulates the corporation from liability. Many corporate offenses may be directly traceable only to middle managers or more subordinate employees. It may be impossible to demonstrate that any higher-level corporate official had sufficient knowledge to constitute *mens rea.* Recognizing this problem, the federal courts have adopted a general rule that a corporation may be criminally liable for the actions of any of its agents, regardless of whether any link between the agents and higher-level corporate officials can be demonstrated.

Problems with Punishing Corporations Despite the legal theories that justify corporate criminal liability, the punishment of corporations remains a problem. Does a criminal conviction stigmatize a corporation in the same way it stigmatizes an individual? The notion of viewing a corporation as a criminal may be difficult for many people to embrace. Perhaps the only stigma resulting from a corporate criminal conviction is felt by the firm's employees, many of whom are entirely innocent of wrongdoing. Is it just to punish the innocent in an attempt to punish the guilty?

And what of the cash fine, the primary punishment imposed on convicted corporations? Most critics of corporate control strategies maintain that fines imposed on convicted firms tend to be too small to provide effective deterrence. These critics urge the use of fines keyed in some fashion to the corporate defendant's wealth. Larger fines may lead to undesirable results, however, if the corporate defendant ultimately passes along the fines to its customers (through higher prices), shareholders (through lower dividends or no dividends), or employees (through lower wages). Moreover, fines large enough to threaten corporate solvency may harm employees and those economically dependent on the corporation's financial well-being. Most of these persons, however, neither had the power to prevent the violation nor derived any benefit from it. The managers responsible for a violation may avoid the imposition of direct burdens on them when the fine is assessed against the corporation. Given the randomness inherent in criminal fines, legislatures may be unwilling to authorize—and courts reluctant to impose—fines large enough to produce deterrence.

Still other deficiencies make fines less-than-adequate corporate control devices. Fine strategies assume that all corporations are rationally acting profit-maximizers. Fines of sufficient size, it is argued, will erode the profit drive underlying most corporate violations. Numerous studies of actual corporate behavior, however, suggest that many corporations are neither profit-maximizers nor rational actors. Mature firms with well-established market shares may embrace goals other than profit maximization, such as technological prominence, increased market share, or higher employee salaries. In addition, the interests of managers who make corporate decisions and establish corporate policies may not coincide with the long-range

[40]Chapter 35 discusses *respondeat superior* in detail. For an early landmark case on this subject, see *New York Central & Hudson River R.R. v. United States,* 212 U.S. 481 (U.S. Sup. Ct. 1909).

economic interests of their corporate employers. The prospect that their employer could have to pay a substantial fine at some future point may not trouble top managers, who tend to have relatively short terms in office and are often compensated in part by large bonuses keyed to year-end profitability.

Individual Liability for Corporate Crime

Individuals who commit crimes while acting in corporate capacities have always been subjected to personal criminal liability. Most European nations reject corporate criminal liability and rely exclusively on individual criminal responsibility. In view of the problems associated with imposing criminal liability on corporations, individual liability may seem a more attractive control device. Besides being more consistent with traditional criminal law notions about the personal nature of guilt, individual liability may provide better deterrence than corporate liability if it enables society to use the criminal punishment threat against the persons who make important corporate decisions. The prospect of personal liability may cause individuals to resist corporate pressures to violate the law. If guilty individuals are identified and punished, the criminal law's purposes may be achieved without harm to innocent employees, shareholders, and consumers.

Problems with Individual Liability Attractive as it may sound, individual liability also poses significant problems when applied to corporate acts. Identifying responsible individuals within the corporate hierarchy becomes difficult—and frequently impossible—if we follow traditional notions and require proof of criminal intent. Business decisions leading to corporate wrongs often result from the collective actions of numerous corporate employees, none of whom had complete knowledge or specific criminal intent. Other corporate crimes are structural in the sense that they result from internal bureaucratic failures rather than the conscious actions of any individual or group.

Proving culpability on the part of high-level executives may be particularly difficult. Bad news sometimes does not reach them; other times, they consciously avoid knowledge that would lead to criminal responsibility. It therefore may be possible to demonstrate culpability only on the part of middle-level managers. Juries may be unwilling to convict such individuals, however, if they seem to be scapegoats for their unindicted superiors. Even when a culpable individual is identified, significant problems can prevent meaningful application of the criminal sanction. The individual in question may have died, retired, or been transferred to another post outside the jurisdiction where the offense occurred. If convicted, white-collar defendants usually are sentenced to little or no prison time. This phenomenon is generally attributed to public doubts about the moral culpability associated with certain white-collar offenses and to the positive image that such offenders—often well-educated, well-spoken community leaders—may possess. Most convicted white-collar offenders receive fines that may be small in comparison to their wealth.

These difficulties in imposing criminal penalties on individual employees have led to the creation of regulatory offenses that impose strict or vicarious liability on corporate officers. Strict liability offenses dispense with the requirement of proof of criminal intent but ordinarily require proof that the defendant committed some wrongful act. Vicarious liability offenses impose criminal liability on a defendant for the acts of third parties (normally, employees under the defendant's personal supervision), but may require proof of some form of *mens rea,* such as the defendant's negligent or reckless failure to supervise. Statutes often combine these two approaches by making corporate executives liable for the acts or omissions of corporate employees without requiring proof of criminal intent on the part of the employees. *United States v. Park,* discussed in Figure 5, is a famous example of such a prosecution.

Critics of strict liability offenses often argue that *mens rea* is a basic principle in our legal system and that it is unjust to stigmatize with a criminal conviction persons who are not morally culpable. In addition, critics doubt that strict liability statutes produce the deterrence sought by their proponents. Such statutes may reduce the moral impact of the criminal sanction if they apply it to relatively trivial offenses. Moreover, they may not result in enough convictions or sufficiently severe penalties to produce deterrence because juries and judges are unwilling to convict or punish defendants who may not be morally culpable. Although statutes creating strict liability offenses are generally held constitutional, they are disfavored by courts. Most courts require a clear indication of a legislative intent to dispense with the *mens rea* element.[41]

[41] See, for example, *United States v. U.S. Gypsum Co.,* 425 U.S. 422 (U.S. Sup. Ct. 1978).

Figure 5 *A Note on* United States v. Park, *421 U.S. 658 (U.S. Sup. Ct. 1975)*

Facts and Procedural History

John R. Park was CEO of Acme Markets, Inc., a national retail food chain with approximately 36,000 employees, 874 retail outlets, and 16 warehouses. Acme and Park were charged with five counts of violating the federal Food, Drug, and Cosmetic Act (the Act) by storing food shipped in interstate commerce in warehouses where it was exposed to rodent contamination. The violations were detected during Food and Drug Administration (FDA) inspections of Acme's Baltimore warehouse. Inspectors saw evidence of rodent infestation and unsanitary conditions, such as mouse droppings on the floor of the hanging meat room and alongside bales of lime Jell-O, and a hole chewed by a rodent in a bale of Jell-O. The FDA notified Park by letter of these findings.

Upon checking with Acme's vice president for legal affairs, Park learned that the Baltimore division vice president "was investigating the situation immediately and would be taking corrective action." An FDA inspection three months after the first one disclosed continued rodent contamination at the Baltimore warehouse despite improved sanitation there. The criminal charges were then filed against Acme and Park. Acme pleaded guilty; Park refused to do so. Park was convicted on each count, but the court of appeals overturned the conviction.

The Supreme Court's Decision

The Supreme Court, however, reversed. In sustaining Park's conviction, the Court noted that in view of the substantial public interest in purity of food, the Act did not require awareness of wrongdoing as an element of criminal conduct. This did not mean, however, that a person "remotely entangled in the proscribed shipment" was at risk of being criminally convicted. Instead, the defendant must be shown to have had "a responsible share" in the violation, such as by failing to exercise authority and supervisory responsibility. The Court emphasized that the Act imposes on supervisory personnel the "highest standard of foresight and vigilance." This includes a duty to seek out and remedy violations when they occur, and a duty to implement measures to prevent violations from occurring.

Although one who was "powerless" to prevent or correct the violation cannot be held criminally responsible under the Act, the Court emphasized that Park was hardly powerless. He had the authority and responsibility to prevent or correct the prohibited condition. The evidence showed that prior to the Baltimore warehouse inspections giving rise to the criminal charges, Park was advised by the FDA of unsanitary conditions in another Acme warehouse. According to the Court, Park thus acquired notice—prior to the time that the Baltimore warehouse violations were discovered—that he could not rely on his previously employed system of delegation to subordinates to prevent or correct unsanitary conditions at company warehouses. Despite evidence indicating Park's prior awareness of this system's deficiencies well before the Baltimore violations were discovered, Park had not instituted any new procedures designed to prevent violations of the Act. The Court therefore concluded that his conviction should stand.

Strict liability offenses are also criticized on the ground that even if responsible individuals within the corporation are convicted and punished appropriately, individual liability unaccompanied by corporate liability is unlikely to achieve effective corporate control. If immune from criminal liability, corporations could benefit financially from employees' violations of the law. Individual liability, unlike a corporate fine, does not force a corporation to give up the profits flowing from a violation. Thus, the corporation would have no incentive to avoid future violations. Incarcerated offenders would merely be replaced by others who might eventually yield to the pressures that produced the violations in the first place. Corporate liability, however, may sometimes encourage corporate efforts to prevent future violations. When an offense has occurred but no identifiable individual is sufficiently culpable to justify an individual prosecution of him or her, corporate liability is uniquely appropriate.

New Directions

The preceding discussion suggests that future efforts at corporate control are likely to include both corporate and individual criminal liability. It also suggests, however, that new approaches are necessary if society is to gain more effective control over corporate activities.

Various novel criminal penalties have been suggested in the individual liability setting. For example, white-collar offenders could be deprived of leisure time or sentenced to render public service rather than

being incarcerated or fined. Some have even suggested the licensing of managers, with license suspensions as a penalty for offenders. The common thread in these and other similar approaches is an attempt to create penalties that are meaningful yet not so severe that judges and juries are unwilling to impose them.

A promising suggestion regarding corporate liability involves imaginative judicial use of corporate probation for convicted corporate offenders. For example, courts could require convicted corporations to do self-studies identifying the source of a violation and proposing appropriate steps to prevent future violations. If bureaucratic failures caused the violation, the court could order a limited restructuring of the corporation's internal decisionmaking processes as a condition of obtaining probation or avoiding a penalty. Possible orders might include requiring the collection and monitoring of the data necessary to discover or prevent future violations and mandating the creation of new executive positions to monitor such data. Restructuring would minimize the previously discussed harm to innocent persons that often accompanies corporate financial penalties. In addition, restructuring could be a more effective way to achieve corporate rehabilitation than relying exclusively on a corporation's desire to avoid future fines as an incentive to police itself. Because restructuring would represent a new form of governmental intrusion into the private sector, however, it should be applied sparingly and with discretion.

The Federal Sentencing Guidelines, discussed earlier in this chapter in Figure 1, contain good reasons for corporations to institute measures to prevent regulatory violations. Under the subset of rules known as the Corporate Sentencing Guidelines, organizations convicted of violating federal law may face greatly increased penalties for certain offenses, with some crimes carrying fines as high as $290 million. The penalty imposed on an organization depends on its "culpability score," which increases (thus calling for a more severe penalty) if, for example, high-level corporate officers were involved in the offense or the organization had a history of such offenses. Even apart from the potentially severe penalties, however, the Corporate Sentencing Guidelines provide an incentive for corporations to adopt compliance programs designed "to prevent and detect violations of the law." The presence of an effective compliance program can reduce the corporation's culpability score for sentencing purposes. Prior to the time the Corporate Sentencing Guidelines took effect, courts generally concluded that the existence of a compliance program should not operate as a mitigating factor in the sentencing of a convicted organization.

Important White–Collar Crimes

Regulatory Offenses

Numerous state and federal regulatory statutes on a wide range of subjects prescribe criminal as well as civil liability for violations. The Food, Drug, and Cosmetic Act, at issue in the case discussed in Figure 5, is an example of such a statute. Other major federal regulatory offenses are discussed in later chapters. These include violations of the Sherman Antitrust Act, the Securities Act of 1933, the Securities Exchange Act of 1934, and the Clean Water Act of 1972.

Fraudulent Acts

Many business crimes involve some fraudulent conduct. In most states, it is a crime to obtain money or property by fraudulent pretenses, issue fraudulent checks, make false credit statements, or give short weights or measures. Certain forms of fraud in bankruptcy proceedings, such as false claims by creditors or fraudulent concealment or transfer of a debtor's assets, are federal criminal offenses.[42] In addition, federal mail fraud and wire fraud statutes make criminal the use of the mail, telephone, or telegrams to accomplish a fraudulent scheme. Another federal law makes it a crime to travel or otherwise use facilities in interstate commerce in order to commit criminal acts.

Bribery and Giving of Illegal Gratuities

State and federal law has long made it a crime to offer public officials gifts, favors, or anything of value to influence official decisions for private benefit. The *Sun-Diamond Growers* case, which appears earlier in the chapter, deals with such a statute. In 1977, Congress passed the Foreign Corrupt Practices Act, which criminalized giving anything of value to officials of foreign

[42]Chapter 29 discusses bankruptcy.

governments in an attempt to influence their official actions.[43] Most states also have enacted commercial bribery statutes that outlaw offering kickbacks and payoffs to private individuals to secure some commercial advantage.

RICO

When Congress passed the Racketeer Influenced and Corrupt Organizations Act (RICO) as part of the Organized Crime Control Act of 1970, lawmakers were primarily concerned about organized crime's increasing entry into legitimate business enterprises. RICO's broad language, however, allows the statute to be applied in a wide variety of cases having nothing to do with organized crime. As a result, RICO has become one of the most controversial pieces of legislation affecting business. Supporters of RICO argue that it is an effective and much-needed tool for attacking a broad range of unethical business practices. Its critics, however, see RICO as an overbroad statute that needlessly taints business reputations. Critics also argue that RICO has operated unduly to favor plaintiffs in civil litigation rather than serving as an aid to law enforcement.

Criminal RICO Under RICO, it is a federal crime to: (1) use income derived from a "pattern of racketeering activity" to acquire an interest in an enterprise, (2) acquire or maintain an interest in an enterprise through a pattern of racketeering activity, (3) conduct or participate in the affairs of an enterprise through a pattern of racketeering activity, or (4) conspire to do any of the preceding acts. RICO is a compound statute because it requires proof of "predicate" criminal offenses that constitute the necessary pattern of racketeering activity.

Racketeering activity includes the commission of any of more than 30 state or federal criminal offenses. Although most offenses that qualify (e.g., arson, gambling, extortion) have no relation to normal business transactions, such offenses as mail and wire fraud, securities fraud, and bribery are also included. Thus, many forms of business fraud may be alleged to be a racketeering activity. To show a *pattern* of such activity, the prosecution must first prove the defendant's commission of at least two acts of racketeering activity within a 10-year period. The pattern requirement also calls for proof that these acts are related and amount to (or pose the threat of) continuing racketeering activity. Most courts have interpreted the statutory term *enterprise* broadly, so that it includes partnerships and unincorporated associations as well as corporations.

Individuals found guilty of RICO violations are subject to substantial fines and imprisonment for up to 20 years. In addition, RICO violators risk the forfeiture of any interest gained in any enterprise as a result of a violation, as well as forfeiture of property derived from the prohibited racketeering activity. To prevent defendants from hiding assets that may be forfeitable upon conviction, federal prosecutors may seek pretrial orders freezing a defendant's assets. Some RICO critics argue that the harm such a freeze may work on a defendant's ability to conduct business, coupled with the threat of forfeiture of most or all of the business upon conviction, has led some defendants to make plea bargains rather than risk all by fighting prosecutions they believe to be unjustified.

Civil RICO Under RICO, the government may also seek various civil penalties for violations. These include divestiture of a defendant's interest in an enterprise, dissolution or reorganization of the enterprise, and injunctions against future racketeering activities by the defendant.

RICO's most controversial sections, however, allow private individuals to recover treble damages (three times their actual loss) and attorney's fees for injuries caused by a statutory violation. To qualify for recovery under RICO, a plaintiff must prove that the defendant violated RICO's provisions (as explained above) and that the plaintiff was "injured in his business or property" as a result. Aided by the Supreme Court's refusal, in *Sedima, S.P.R.L. v. Imrex Co.,*[44] to give a narrowing construction to the broadly phrased RICO, private plaintiffs have brought a large number of civil RICO cases in recent years. In *Sedima,* the Court rejected, as an erroneous statutory interpretation, some lower federal courts' approach of requiring civil RICO plaintiffs to prove that the defendant had actually been criminally convicted of a predicate offense. In addition, the Court rejected the argument that civil RICO plaintiffs should be expected to prove a "distinct racketeering injury" as a precondition of recovery. The Court acknowledged lower courts'

[43] Chapter 44 discusses the Foreign Corrupt Practices Act.

[44] 473 U.S. 479 (U.S. Sup. Ct. 1985).

concern about RICO's breadth and noted the fact that most civil RICO suits are filed against legitimate businesses rather than against "the archetypal, intimidating mobster." Nevertheless, the Court observed that "[t]his defect—if defect it is—is inherent in the statute as written, and its correction must lie with Congress."

The *Northwestern Bell* case, which follows, focuses on the necessary "pattern of racketeering activity" element of a RICO claim.

H.J. Inc. v. Northwestern Bell Telephone Co. *492 U.S. 229 (U.S. Sup. Ct. 1989)*

Customers of Northwestern Bell Telephone Company filed a class action suit alleging violations of RICO based on allegations that between 1980 and 1986, Northwestern Bell sought to influence members of the Minnesota Public Utilities Commission (MPUC) to approve rates for Northwestern in excess of a fair and reasonable amount. They alleged that Northwestern made cash payments to commissioners, negotiated with them regarding future employment, and paid for parties and meals, tickets to sporting events, and airline tickets. These acts, they alleged, were in violation of the state bribery statute and state common law prohibiting bribery. The district court dismissed their civil RICO claims because the complaint failed to allege the "multiple illegal schemes" that the Eighth Circuit Court of Appeals had previously held were necessary to establish a "pattern of racketeering activity" under RICO.

Brennan, Justice In *Sedima, S.P.R.L. v. Imrex Co.,* we acknowledged concern in some quarters over civil RICO's use against "legitimate" businesses, as well as "mobsters and organized criminals." But we suggested that RICO's expansive uses "appear to be primarily the result of the breadth of the predicate offenses, and the failure of Congress and the courts to develop a meaningful concept of ˛pattern.' " Congress has done nothing in the interim to illuminate RICO's key requirement of a pattern of racketeering activity, and developing a meaningful concept of "pattern" within the existing statutory framework has proved to be no easy task.

It is, nevertheless, a task we must undertake in order to decide this case. Our guides must be the text of the statute and its legislative history. We find no support in those sources for the proposition that predicate acts of racketeering may form a pattern only when they are a part of separate illegal schemes. Nor can we agree with those courts that have suggested that a pattern is established by proving two predicate acts, or with *amici* in this case who argue that the word "pattern" refers only to predicates that are indicative of a perpetrator involved in organized crime.

As we remarked in *Sedima,* the section of the statute headed "definitions," section 1961, does not so much define a pattern of racketeering activity as state a minimum necessary condition for the existence of such a pattern. Unlike other provisions in section 1961 that tell us what various concepts used in the Act "mean," section 1961(5) says of the phrase "pattern of racketeering activity" only that it "requires at least two acts of racketeering activity, one of which occurred after October 15, 1970, and the last of which occurred within 10 years after the commission of a prior act of racketeering activity."

Section 1961(5) does indicate that Congress envisioned circumstances in which no more than two predicates would be necessary to establish a pattern. But the statement that a pattern "requires at least" two predicates implies that while two acts are necessary, they may not be sufficient. Section 1961(5) concerns only the minimum *number* of predicates necessary to establish a pattern; and it assumes that there is something to a RICO pattern *beyond* simply the number of predicate acts involved. The legislative history bears out this interpretation, for the principal sponsor of the Senate bill expressly indicated that "proof of two acts of racketeering activity, without more, does not establish a pattern." Section 1961(5) does not identify, though, these additional prerequisites for establishing the existence of a RICO pattern.

In normal usage, the word "pattern" here would be taken to require more than just a multiplicity of racketeering predicates. A "pattern" is an

"arrangement or order of things or activity," 11 Oxford English Dictionary 357 (2d ed. 1989). It is not the number of predicates but the relationship that they bear to each other or to some external organizing principle that renders them "ordered" or "arranged."

RICO's legislative history reveals Congress' intent that to prove a pattern of racketeering activity a plaintiff or prosecutor must show that the racketeering predicates are related, *and* that they amount to or pose a threat of continued criminal activity. In the Organized Crime Control Act of 1970, Congress defined a pattern requirement solely in terms of the *relationship* of the defendant's criminal acts one to another: "criminal conduct forms a pattern if it embraces criminal acts that have the same or similar purposes, results, participants, victims, or methods of commission, or otherwise are interrelated by distinguishing characteristics and are not isolated events." We have no reason to suppose that Congress had in mind for RICO's pattern component any more constrained a notion of the relationships between predicates that would suffice.

RICO's legislative history also tells us, however, that the relatedness of racketeering activities is not alone enough to satisfy the pattern element. It must also be shown that the predicates themselves amount to, or that they otherwise constitute a threat of, *continuing* racketeering activity. It is this aspect of RICO's pattern element that has spawned the "multiple scheme" test adopted by the Court of Appeals in this case. But although proof that a defendant has been involved in multiple criminal schemes would certainly be highly relevant to the inquiry into the continuity of the defendant's racketeering activity, it is implausible to suppose that Congress thought continuity might be shown *only* by proof of multiple schemes. We adopt a less inflexible approach that seems to us to derive from a commonsense, everyday understanding of RICO's language and Congress' gloss on it. What a plaintiff or prosecutor must prove is continuity of racketeering activity, or its threat.

A party alleging a RICO violation may demonstrate continuity over a closed period by proving a series of related predicates extending over a substantial period of time. Predicate acts extending over a few weeks or months and threatening no future criminal conduct do not satisfy this requirement: Congress was concerned in RICO with long-term criminal conduct. Often a RICO action will be brought before continuity can be established in this way. In such cases, liability depends on whether the *threat* of continuity is demonstrated.

The threat of continuity is sufficiently established where the predicates can be attributed to a defendant operating as part of a long-term association that exists for criminal purposes. Such associations include, but extend well beyond, those traditionally grouped under the phrase "organized crime." The continuity requirement is likewise satisfied where it is shown that the predicates are a regular way of conducting defendant's ongoing legitimate business, or of conducting or participating in an ongoing legitimate RICO "enterprise."

Plaintiffs' complaint alleges that at different times over the course of at least a 6-year period the defendants gave five members of the MPUC numerous bribes, in several different forms, with the objective—in which they were allegedly successful—of causing these Commissioners to approve unfair and unreasonable rates. RICO defines bribery as a racketeering activity, so plaintiffs have alleged multiple predicate acts. They may be able to prove that the multiple predicates alleged constitute a "pattern of racketeering activity," in that they satisfy the requirements of relationship and continuity. The acts of bribery alleged are said to be related to a common purpose, to influence Commissioners to win approval of unfairly high rates for Northwestern Bell. Furthermore, the racketeering predicates allegedly occurred over at least a 6-year period, which may be sufficient to satisfy the continuity requirement. Alternatively, a threat of continuity might be established at trial by showing that the alleged bribes were a regular way of conducting or participating in the conduct of the alleged and ongoing RICO enterprise, the MPUC. The Court of Appeals thus erred in affirming the District Court's dismissal of plaintiffs' complaint for failure to plead "a pattern of racketeering activity."

Judgment reversed in favor of plaintiffs; case remanded for trial.

Figure 6 *A Note on Other Civil RICO Decisions of the Supreme Court*

Holmes v. Securities Investor Protection Corp.

In *Holmes v. Securities Investor Protection Corp.,* 503 U.S. 258 (U.S. Sup. Ct. 1992), the Court held that plaintiffs in treble damages cases under RICO must demonstrate that the harm they experienced was directly and proximately caused by the defendants' wrongful conduct. Plaintiffs whose injury was only an indirect result of the defendants' actions do not have legal standing to sue.

The defendant in *Holmes* allegedly engaged in fraudulent stock-manipulation schemes that caused certain broker-dealers to become insolvent and unable to meet their obligations to customers. When the broker-dealers collapsed financially, Securities Investor Protection Corp. (SIPC), a private corporation authorized by federal law, fulfilled its legal obligation to provide funds to satisfy the claims of customers of the insolvent broker-dealers. SIPC then brought a treble damages action under RICO against defendant Holmes on the theory that SIPC, having supplied the funds to pay the customers of the failed broker-dealers, stood in the shoes of the customers in terms of collecting losses caused by Holmes's alleged stock-manipulation schemes. The Court noted that even if SIPC stood in the customers' shoes, any loss being alleged by SIPC was too indirect to support a RICO claim against Holmes. The harm necessary to support a RICO claim would instead have been that experienced by the broker-dealers, whose financial demise presumably stemmed directly from Holmes's actions.

Reves v. Ernst & Young

The highly attractive treble damages and attorney's fee provisions in RICO led to the frequent use of RICO by plaintiffs in commercial fraud cases. Stockbrokers, banks, insurance companies, and accounting firms became typical targets of such civil litigation. In *Reves v. Ernst & Young,* 507 U.S. 170 (U.S. Sup. Ct. 1993), however, the Court limited plaintiffs' ability to use civil RICO against "outside" professionals such as accounting firms when financial institutions involved in fraudulent activities fail. The Court held that accounting firms and "other" outside professionals who performed work for such a financial institution are potentially liable under RICO only if they "participate[d] in the management or operation of the enterprise." Merely providing auditing services to the financial institution, without more, would not be sufficient to constitute participation in the management or operation of the enterprise.

Various RICO reform proposals have been unsuccessfully introduced in Congress. A 1995 reform measure that did become law, however, established that a civil RICO case cannot be based on conduct that would have been actionable as securities fraud unless the conduct amounting to securities fraud had resulted in a criminal conviction. Although the Supreme Court has generally continued to regard RICO reform as the task of Congress, the Court has in the past decade issued decisions that critics of frequent uses of civil RICO have found somewhat encouraging. Those decisions are discussed in Figure 6.

Computer Crime

As computers have come to play an increasingly important role in our society, new opportunities for crime have resulted. In some instances, computers may be used to accomplish crimes such as theft, embezzlement, espionage, and fraud. In others, computers or the information stored there may be targets of crimes such as unauthorized access, vandalism, tampering, or theft of services. The law's response to computer crimes has evolved with this new technology. For example, computer hacking—once viewed by some as a mischievous but clever activity—can now lead to significant prison sentences and fines.

The technical nature of computer crime complicates its detection and prosecution. Traditional criminal statutes have often proven inadequate because they tend not to address explicitly the types of crime associated with the use of computers. Assume, for example, that a general statute on theft defines the offense in terms of stealing "property," and that the defendant is charged with violating the statute by taking and using computer data without authorization. The court could decide to dismiss this case if categorizing data stored in a computer as "property" strikes the court as a strained interpretation of the statute. Although some courts have

interpreted existing criminal laws narrowly so as to exclude instances of computer abuse, other courts have construed them more broadly. In light of the uncertainties attending statutory interpretation, legislatures on the state and federal levels have become increasingly aware of the need to revise their criminal codes to be certain that they explicitly cover computer crime.

Almost all states have now enacted criminal statutes specifically outlawing certain abuses of computers. Common provisions prohibit such acts as obtaining access to a computer system without authorization, tampering with files or causing damage to a system (e.g., by spreading a virus or deleting files), invading the privacy of others, using a computer to commit fraud or theft, and trafficking in passwords or access codes.

On the federal level, computer crime has been prosecuted with some success under existing federal statutes, primarily those forbidding mail fraud, wire fraud, transportation of stolen property, and thefts of property. As has been true at the state level, successful prosecution of these cases often depends on broad interpretation of the statutory prerequisites. Another federal law deals more directly with improper uses of computers. Among the crimes covered by this federal statute are intentionally gaining unauthorized access to a computer used by or for the U.S. government, trafficking in passwords and other access devices, and using a computer to obtain government information that is protected from disclosure. It is also a crime to gain unauthorized access to the computer system of a private financial institution that has a connection with the federal government (such as federal insurance for the deposits in the financial institution). In addition, the statute criminalizes the transmission of codes, commands, or information if the transmission was intended to damage such an institution's computers, computer system, data, or programs.

Ethical and Public Policy Concerns

1. Few issues have managed to provoke more prolonged, heated controversy than the death penalty. Many of the arguments both for and against the death penalty are, at base, ethical arguments. Identify and briefly discuss some fundamental arguments on both sides of the issue.

2. Are strict and vicarious liability ethically defensible? Who would be more likely to support such liability, utilitarians or rights theorists? Which form of liability would rights theorists find more palatable?

3. Business opponents of RICO argue that federal prosecutors sometimes use the threat of asset forfeitures under the RICO statute to coerce business defendants to enter plea agreements that they would not otherwise enter. Assuming that these allegations are true, are such prosecutorial practices defensible?

Problems and Problem Cases

1. Two police officers on patrol observed Dickerson leaving an apartment building that the police department considered to be a "crack house," in view of the various drug-related complaints made to the police about the building. Dickerson began walking in the opposite direction after seeing the police car and the officers. Based on Dickerson's behavior and the fact that he had just left a building suspected of being a site of drug traffic, the officers decided to stop Dickerson and investigate further. The officers ordered Dickerson to stop and submit to a patdown search. Although the patdown search revealed no weapons, the officer who conducted the search noted a small lump in a pocket of Dickerson's jacket. The officer knew immediately that the lump was not a weapon but did not know what the lump was on the basis of initially touching it. After probing the lump further, the officer concluded that it could be contraband. The officer removed the "lump," which proved to be a plastic bag containing crack cocaine. Dickerson was arrested and later charged with possession of cocaine. Dickerson moved to suppress (i.e., exclude evidence of) the cocaine, on the ground that his Fourth Amendment rights were violated by the warrantless search and seizure. The trial court denied the motion to suppress, and Dickerson was found guilty. Did the trial court err in concluding that Dickerson's Fourth Amendment rights were not violated and in denying the motion to suppress?

2. An informant told the Eagan, Minnesota, police that while walking past the window of a ground-floor apartment, he had observed people putting a white powder into bags. Officer Thielen went to the apartment building to investigate. He looked in the window through a gap in the closed blind and observed the bagging operation for several minutes. When two men left the building in a previously identified Cadillac,

other police officers stopped the car. While one of the car's doors was open, the officers observed a black zippered pouch and a handgun on the floor of the vehicle. The officers arrested the car's occupants, Carter and Johns. A later search of the vehicle resulted in the discovery of pagers, a scale, and 47 grams of cocaine in plastic baggies. After seizing the car, the officers returned to the apartment and arrested its occupant, Thompson. A search of the apartment (conducted on the basis of a warrant) revealed cocaine residue on the kitchen table and plastic baggies similar to those found in the Cadillac. Officer Thielen identified Carter, Johns, and Thompson as the persons he had observed taking part in the bagging operation. It was later learned that Thompson was the apartment's lessee and that Carter and Johns, both of whom lived in Chicago, had come to the apartment for the sole purpose of packaging the cocaine. Carter and Johns had never been to the apartment before and were in the apartment for approximately two and one-half hours at the general time the bagging operation was conducted. In return for the use of the apartment, Carter and Johns had given some of the cocaine to Thompson. Carter and Johns were charged with controlled substance–related crimes. Prior to trial, they moved to suppress all evidence obtained from the apartment and the Cadillac. They contended that Officer Thielen's observation of them through the apartment window was an unreasonable search in violation of the Fourth Amendment and that all evidence obtained as a result was inadmissible. Were Carter and Johns entitled to claim the protection of the Fourth Amendment?

3. Mitchell pleaded guilty to various cocaine-related charges, including a charge of conspiring to distribute five or more kilograms of cocaine. At the time of her guilty plea, she reserved the right to contest the drug quantity attributable to her under the conspiracy charge. The federal district judge advised Mitchell that she would face a mandatory minimum sentence of 10 years if the government could show the required five kilograms, that the drug quantity would be determined at her sentencing hearing, and that by pleading guilty, she would be waiving her right "at trial to remain silent." Prior to accepting the guilty plea, the district judge conducted a plea colloquy with Mitchell in order to determine whether there was an appropriate basis for the plea. After the prosecutor explained the government's version of the facts, the district judge asked Mitchell whether she had done what the government alleged. Mitchell answered, "Some of it." After conferring with her attorney, Mitchell reaffirmed her intention to plead guilty. The district judge accepted the plea. Later, at the sentencing hearing, three of Mitchell's codefendants testified about amounts of cocaine sold by Mitchell. These codefendants had agreed to cooperate with the government as part of their own plea bargains. The amounts testified to by the codefendants totaled more than five kilograms. Mitchell did not testify at the sentencing hearing. The district judge accepted the testimony of the codefendants and explained to Mitchell that one of the reasons he had decided to give credence to the codefendants' testimony was Mitchell's failure to testify to the contrary at the time of the sentencing. The district judge sentenced Mitchell to the statutory minimum of 10 years on the conspiracy charge. Mitchell appealed, contending that the district judge erred (1) in concluding that her guilty plea waived her Fifth Amendment privilege against self-incrimination for purposes of sentencing, and (2) in drawing an adverse inference from her failure to testify at the sentencing hearing. Were Mitchell's arguments legally correct?

4. Dow Chemical Company operated a 2,000-acre chemical manufacturing facility at Midland, Michigan. The facility consisted of numerous covered buildings, with manufacturing equipment and piping conduits between various buildings plainly visible from the air. Dow maintained elaborate security around the perimeter of the complex to bar ground-level public views of these areas. It also investigated any low-level flights by aircraft over the facility. Dow did not, however, attempt to conceal all manufacturing equipment within the complex from aerial views because the cost would have been prohibitive. With Dow's consent, enforcement officials of the Environmental Protection Agency (EPA) made an on-site inspection of two power plants in this complex. When Dow denied EPA's request for another inspection, EPA did not seek an administrative search warrant. Instead, EPA employed a commercial aerial photographer, who used a standard floor-mounted, precision aerial mapping camera to take photographs of the facility from altitudes of 12,000, 3,000, and 1,200 feet. At all times, the aircraft was lawfully within navigable airspace. EPA did not inform Dow of this aerial photography. Was EPA's taking of aerial photographs of the Dow complex a search prohibited by the Fourth Amendment?

5. Doe, the target of a federal grand jury investigation, was subpoenaed to produce records of his accounts in banks in the Cayman Islands and Bermuda. He produced some records, testified that he had no other records in his possession or control, and invoked the Fifth Amendment when asked to reveal the existence or location of other records. The U.S. branches of Doe's banks cited their nations' bank secrecy laws and refused to comply with subpoenas ordering them to produce records of his accounts. At the government's request, the district court then ordered Doe to sign a consent directive authorizing the banks to turn over records of any and all accounts over which he had a right of withdrawal. The ordered consent directive, however, was to be structured so that it would not be an identification or acknowledgment by Doe of the existence of any such accounts. When Doe refused to obey the court's order, the court found him in contempt. Would being forced to sign the consent directive violate Doe's Fifth Amendment rights?

6. A Wyoming Highway Patrol officer stopped an automobile for speeding and driving with a faulty brake light. Two passengers were sitting in the front seat with the driver. While questioning the driver, the officer noticed a hypodermic syringe in the driver's shirt pocket. When asked by the officer why he had a syringe, the driver stated that he used it to take drugs. In light of the driver's admission, the officer searched the passenger compartment of the car to see whether contraband was present. He found a purse on the back seat. One of the passengers, Houghton, said that the purse was hers. Inside the purse were a pouch and a wallet-type container, each of which contained drug paraphernalia and illegal drugs. The State of Wyoming charged Houghton with a felony drug offense. Prior to trial, Houghton moved to suppress the evidence obtained from the purse. She contended that the officer's warrantless search of her purse violated her Fourth Amendment rights. The trial court denied Houghton's motion to suppress. A jury convicted Houghton of the felony drug offense. Did the trial court err in denying Houghton's motion to suppress?

7. Wright and Panikkar owned adjoining parcels of land on which their families operated separate tree farms. The tree farms had not been profitable. Wright and Panikkar therefore entered into separate four-year contracts with Annulli, who was experienced in the tree farm business. The contracts called for Annulli to manage the tree farms. They provided that Annulli would receive the profits from tree sales after he had paid Wright or Panikkar (whichever was appropriate) a base fee for each tree sold. After Annulli had successfully managed Wright's tree farm for two years, Wright terminated the contract. Annulli contended that this was a breach of contract by Wright. In addition, Annulli contended that Wright wrongfully induced Panikkar to breach his contract with Annulli and that Wright and his son stole, from Annulli, certain proprietary information and the value of certain services Annulli had performed. Annulli filed a civil RICO action against Wright, Panikkar, and members of their families. The pattern of racketeering activity alleged by Annulli consisted of supposed breaches of contract as well as tortious interference with contract and theft by deception (a state law offense). Was Annulli correct in his assertion that such actions may constitute a pattern of racketeering activity for purposes of RICO?

8. Muniz was arrested on a charge of driving under the influence of alcohol. He was taken to a booking center, where he was asked several questions by a police officer without first being given the *Miranda* warnings. Videotape (which included an audio portion) was used to record the questions and Muniz's answers. The officer asked Muniz his name, address, height, weight, eye color, date of birth, and current age. Muniz stumbled over answers to two of these questions. The officer then asked Muniz the date of his sixth birthday, but Muniz did not give the correct date. At a later point, Muniz was read the *Miranda* warnings for the first time. He was later convicted of the charged offense, with the trial court denying his motion to exclude the videotape (both video and audio portions) from evidence. Assume that the video portion of the tape violated neither the Fifth Amendment nor *Miranda.* Should all or any part of the audio portion of the tape (which contained Muniz's stumbling responses to two questions plus his incorrect answer to the sixth birthday date question) have been excluded as a violation of either the Fifth Amendment or *Miranda?*

9. Versaggi was employed by Kodak as a computer technician. Because he was responsible for maintaining and repairing certain telephone systems for the company, he had been given an "accelerator," a security

device that allowed him to access the telephone systems operated by two SL-100 computers. On two occasions during the same month, thousands of telephone lines at Kodak's offices and a Kodak industrial complex were shut down and rendered inoperable for up to an hour and a half as a result of a cause that initially was not known. It was later determined that Versaggi had accessed the SL-100 systems and, without authorization, had issued commands that caused the phone lines to shut down. Versaggi was charged with violating New York's computer tampering statute, which read as follows: "A person is guilty of computer tampering . . . when he uses or causes to be used a computer or computer service and having no right to do so . . . intentionally alters in any manner or destroys computer data or a computer program of another person." Versaggi contended that he was not guilty of violating the statute because he did not "alter" any computer programs. Instead, Versaggi maintained, he merely activated existing instructions that commanded the computers to shut down. The trial court concluded that Versaggi violated the computer tampering statute. Was the trial court correct?

10. The U.S. Bureau of Land Management was among the government agencies participating in a law enforcement task force that was investigating a possible conspiracy to grow and distribute marijuana. Elliott, a Bureau of Land Management agent, began to suspect Kyllo after learning that he resided in another unit of the same triplex in which the investigation's original target resided, that Kyllo's wife had recently been arrested for delivery and possession of a controlled substance, and that Kyllo had supposedly told a police informant that he (Kyllo) and his wife could supply marijuana. Elliott subpoenaed Kyllo's utility records, which indicated that Kyllo's electrical usage was abnormally high. This indicated to Elliott that Kyllo might be operating an indoor marijuana-growing operation. At Elliott's request, another officer used a thermal imaging device to examine the triplex where Kyllo resided. The officer used the device while sitting in a car that was parked on the street. Thermal imagers detect energy radiated from the outside surface of objects and internal heat that has been transmitted to the outside surface of an object. The officer's use of the thermal imager caused him to conclude that there was high heat loss coming from the roof above Kyllo's home in the area of the garage, and from one wall. He also concluded that Kyllo's housing unit "showed much warmer" than the other two units in the triplex. Elliott interpreted these results as further evidence of a marijuana-growing operation. He inferred that the high levels of heat emission indicated the presence of high-intensity lights, which are often used for indoor growing of marijuana. Elliott presented the above information to a magistrate, who issued a search warrant for Kyllo's home. A search pursuant to the warrant revealed the presence of a marijuana-growing operation. Considerable relevant evidence was seized. Kyllo was indicted for manufacturing marijuana. He moved to suppress the seized evidence on the theory that the warrantless use of the thermal imaging device violated the Fourth Amendment. Were Kyllo's Fourth Amendment rights violated?

11. A grand jury indicted Automated Medical Laboratories, Inc. (AML), Richmond Plasma Corporation (RPC) (a wholly owned AML subsidiary), and three former RPC managers for engaging in a conspiracy that included falsification of logbooks and records required to be maintained by businesses producing blood plasma. The falsification was designed to conceal from the Food and Drug Administration (FDA) various violations of federal regulations governing the plasmapheresis process and facilities. The evidence introduced at trial indicated that the managers and several other members of the team charged with ensuring compliance with FDA regulations had actively participated in record falsification. AML was convicted and appealed on the ground that there was no evidence that any officer or director of AML knowingly or willfully participated in or authorized the unlawful practices at RPC. Was AML's conviction in the absence of such proof proper?

12. A Phoenix police officer stopped Evans after seeing him drive the wrong way on a one-way street. During this traffic stop, the officer entered Evans's name into a computer data terminal located in his patrol car. The computer search revealed that there was an outstanding misdemeanor warrant for the arrest of Evans. Based upon this warrant, the officer placed Evans under arrest. While Evans was being handcuffed, he dropped a hand-rolled cigarette that, in the officer's judgment, smelled of marijuana. The officer then searched Evans's car and discovered a bag of marijuana under the front seat. The state charged Evans with

possession of marijuana. When the police informed the court that Evans had been arrested pursuant to the warrant listed in the computer records, court personnel discovered that the warrant had been quashed (canceled by the court) 17 days prior to the arrest. Evans filed a motion asking the court to suppress the seized marijuana on the theory that it was the fruit of an unlawful arrest. Testimony at the suppression hearing revealed that court employees had failed, in violation of their standard practice, to inform the police that the warrant had been quashed. The trial court granted the suppression motion and ordered that the seized evidence be excluded. The Arizona Court of Appeals reversed, concluding that the exclusionary rule should not be applied when an unlawful arrest resulted from errors of court employees rather than from any errors of police officers. Rejecting the distinction drawn by the Court of Appeals and holding that the exclusionary rule should apply, the Arizona Supreme Court reversed. Was the Arizona Supreme Court correct in doing so?

Chapter Six

Intentional Torts

Chapter Outline

I. Interference with Personal Rights
- *A. Battery*
- *B. Assault*
- *C. Infliction of Emotional Distress*
- *D. False Imprisonment*
- *E. Defamation*
  - *1. The Libel–Slander Distinction*
  - *2. False and Defamatory Statement*
  - *3. "Of and Concerning" the Plaintiff*
  - *4. Publication*
  - *5. Defenses and Privileges*
  - *6. Defamation and the Constitution*
- *F. Invasion of Privacy*
  - *1. Intrusion on Personal Solitude or Seclusion*
  - *2. Public Disclosure of Private Facts about a Person*
  - *3. False Light*
  - *4. Appropriation of Name or Likeness*
- *G. Misuse of Legal Proceedings*
- *H. Deceit (Fraud)*

II. Interference with Property Rights
- *A. Trespass to Land*
- *B. Private Nuisance*
- *C. Conversion*

III. Other Examples of Intentional Tort Liability

A **tort** is a *civil wrong* that is not a breach (breaking) of a contract. Tort cases and books on tort law identify different kinds of wrongfulness, culpability, or fault and define them differently. In this chapter and in Chapter 7, we use the following four kinds of wrongfulness.

1. *Intent.* We define intent as the desire to cause certain consequences or substantial certainty that those consequences will result from one's behavior. For example, if D pulls the trigger of a loaded handgun while aiming it at P with the desire to kill P or with a substantial certainty of killing him, and does kill him, D intended to kill P. This chapter discusses several *intentional torts,* most of which require an intent to do something or other.

2. *Recklessness.* The form of intent involving substantial certainty blends by degrees into a different kind of fault—recklessness. We define recklessness as a conscious indifference to a known high risk of harm created by one's behavior. Now suppose that, just because he likes the muzzle flash and the sound, D fires his handgun at random in a crowded subway station. One of D's shots injures P. D acted recklessly if he had no desire to hit P or anyone else and was not substantially certain that anyone would be hit, but nonetheless knew that this could easily result from his behavior. Recklessness appears from time to time in this chapter and in Chapter 7.

3. *Negligence.* We define negligence as conduct that falls below the level necessary to protect others against unreasonable risks of harm. In everyday language, negligence is careless behavior. Imagine that, without checking, D pulls the trigger on what he incorrectly and unreasonably thinks is an unloaded handgun. If the gun goes off, killing P, D has negligently caused P's death. Chapter 7 discusses negligence law in detail. Of course, negligence is not always easy to distinguish from recklessness; one difference is that recklessness usually involves a higher probability of harm.

Figure 1 *Crimes and Intentional Torts*

	Crimes	Intentional Torts
Nature	Criminal	Civil
Type of Law	Mainly statutory	Mainly common law
Actors	Prosecutor versus defendant	Plaintiff versus defendant
Burden	Beyond a reasonable doubt	Preponderance of the evidence
Punishment	Fines, imprisonment, execution	Compensatory and punitive damages

4. *Strict liability.* Strict liability is liability without fault, or liability irrespective of fault. In a strict liability case, the plaintiff need not prove intent, recklessness, negligence, or any other kind of wrongfulness on the defendant's part. However, strict liability is not automatic liability. A plaintiff must prove certain things in any strict liability case, but fault is not one of them. Chapter 7 discusses several kinds of strict liability, some of which are examined more fully in other chapters.

In addition to involving wrongfulness, tort law involves *civil* liability. This distinguishes it from the criminal law, which also involves wrongful behavior. As you saw in Chapter 1, a civil suit is a suit between private parties. In criminal cases, on the other hand, a prosecutor confronts the defendant. Also, the plaintiff's burden of proof in a tort case is the *preponderance of the evidence* rather than the more stringent beyond-a-reasonable-doubt standard normally applied in criminal cases. This means that the greater weight of the evidence introduced at the trial must support the plaintiff's position on every element of the case. Finally, the punishment imposed in civil cases (most often, damages) differs from the punishment imposed in criminal cases (e.g., execution, imprisonment, or a fine). Of course, the same behavior can create both civil and criminal liability. For example, a rapist may be criminally liable for rape and also liable for the torts of assault, battery, false imprisonment, and intentional infliction of emotional distress. Figure 1 summarizes the important differences between criminal and tort liability.

A plaintiff who wins a tort suit usually recovers the **actual damages** or **compensatory damages** that she suffered because of the tort. Depending on the facts of the case, these damages may be for direct and immediate harms, such as physical injuries, medical expenses, and lost pay and benefits, or for harms as intangible as loss of privacy, injury to reputation, and emotional distress. In cases where the defendant's behavior is particularly bad, injured victims may also be able to recover **punitive damages.** Punitive damages are not intended to compensate tort victims for their losses. Instead, they are designed to punish flagrant wrongdoers and to deter them and others from engaging in similar conduct in the future. Theoretically, therefore, punitive damages are reserved for the worst kinds of wrongdoing. Punitive damages have always been controversial, but they have grown more so in recent years due to the size of some punitive damage awards and the perception that juries are awarding them in situations where they are not justified.

Interference with Personal Rights

Intentional torts break down into three categories: (1) those involving interference with personal rights, (2) those involving interference with property rights, and (3) business or competitive torts. This chapter discusses the first two categories, while Chapter 8 discusses the third.

Battery

Battery is the intentional, harmful or offensive, touching of another without his consent. A contact is *harmful* if it produces bodily injury. However, battery also includes nonharmful contacts that are *offensive*—calculated to offend a reasonable sense of personal dignity. The *intent* required for a battery is either: (1) the

intent to cause a harmful or offensive contact, or (2) the intent to cause apprehension that such a contact is imminent. If, in order to scare Pine, Delano threatens to shoot Pine with a gun he mistakenly believes is unloaded, and ends up shooting Pine, Delano would be liable for battery. For battery to occur, moreover, the person who suffers the harmful or offensive contact does not have to be the person whom the wrongdoer intended to injure. Under a general intentional tort concept called *transferred intent,* a defendant who intends to injure one person but actually injures another is liable to the person injured, despite the absence of any specific desire to injure him. So, if Delano throws a rock at Thomas and hits Pike instead, Delano would be liable to Pike for battery.

As the previous examples suggest, the *touching* necessary for battery does not require direct contact between the defendant's body and the plaintiff's body. Thus, Delano would also be liable if he successfully laid a trap for Pike or poisoned him. Furthermore, there is a touching if the defendant causes contact with anything that is attached to the plaintiff's body. If the other elements of a battery are present, therefore, Delano would be liable to Pike if he shoots off Pike's hat. Finally, the plaintiff need not be conscious of the battery at the time it occurs. Thus, Delano would be liable if Delano sneaks up behind Pike and knocks him unconscious, without Pike's ever knowing what hit him.

However, there is no liability for battery if the plaintiff *consented* to the touching. As a general rule, consent must be freely and intelligently given to be a defense to battery. Consent also may be inferred from a person's voluntary participation in an activity, but it is ordinarily limited to contacts that are a normal consequence of the activity. Thus, Joe Frazier would not win a battery suit against Muhammad Ali for injuries he suffered during one of their title fights, but a quarterback who is knifed by a blitzing linebacker has a valid battery claim. Finally, the law infers consent to many touchings that are customary in normal social life or are reasonably necessary to it. Thus, Pike could not recover in battery if Delano tapped him on the shoulder to ask directions or brushed against him on a crowded street. Of course, many such contacts are not harmful or offensive, either.

The following *Wishnatsky* case concerns battery law's "offensiveness" requirement. Do you agree with the court's handling of the "reasonable sense of personal dignity" question?

Wishnatsky v. Huey *584 N.W.2d 859 (N.D. Ct. App. 1998)*

Martin Wishnatsky worked as a paralegal for attorney Peter Crary. One day, while Crary was engaged in a conversation with North Dakota Assistant Attorney General David Huey in Crary's office, Wishnatsky attempted to enter the room where the two lawyers were talking. At this, Huey pushed the door closed in Wishnatsky's face, forcing him back into the hall. Wishnatsky suffered no physical injury from Huey's action.

Wishnatsky sued Huey for battery. After the trial court granted Huey's motion for summary judgment, Wishnatsky appealed.

Per Curiam [In his *Commentaries*], Blackstone explained: "The least touching of another's person willfully, or in anger, is a battery; for the law cannot draw the line between different degrees of violence, and therefore totally prohibits the first and lowest stage of it: every man's person being sacred, and no other having a right to meddle with it, in any the slightest manner." On the other hand, "in a crowded world, a certain amount of personal contact is inevitable, and must be accepted." *Prosser and Keeton on the Law of Torts,* section 9, at 42 (5th ed. 1984).

The American Law Institute has balanced the interest in preventing unwanted contacts and the inevitable contacts in a crowded world. In the *Restatement (Second) of Torts,* an actor is subject to liability to another for battery if: (a) he acts intending to cause a harmful or offensive contact with the person of the other or a third person, or an imminent apprehension of such a contact, and (b) an offensive [or harmful] contact with the person of the other directly or indirectly results. A bodily contact is offensive if it offends a reasonable sense of personal dignity. In order that a contact be offensive to a reasonable sense of

personal dignity, it must be one which would offend the ordinary person, one not unduly sensitive as to his personal dignity. It must, therefore, be a contact which is unwarranted by the social usages prevalent at the time and place at which it is inflicted.

Huey supported [his] motion with his affidavit stating in part:

> Attorney Clary and I had settled into a serious discussion about the case and had established a good rapport when the door to his office suddenly swung open without a knock. An unidentified individual carrying some papers then strode in unannounced. I had not been told that anyone would be entering Attorney Crary's office during the private meeting. I subsequently learned that the individual's name is Martin Wishnatsky.

Wishnatsky responded to Huey's motion with his own affidavit stating in part:

1. I am a born-again Christian and cultivate holiness in my life. As a result I am very sensitive to evil spirits and am greatly disturbed by the demonic.
2. As I began to enter the office Mr. Huey threw his body weight against the door and forced me out into the hall. I had not said a word to him. At the same time, he snarled: "You get out of here." This was very shocking and frightening to me. My blood pressure began to rise, my heartbeat accelerated, and I felt waves of fear in the pit of my stomach. My hand began to shake and my body to tremble. Composing myself, I reentered the office, whereupon Mr. Huey began a half-demented tirade against me and stormed out into the hall.

The evidence demonstrates that Wishnatsky is unduly sensitive as to his personal dignity. The bodily contact was momentary, indirect, and incidental. Viewing the evidence in the light most favorable to Wishnatsky, we conclude that Huey's conduct, while rude and abrupt, would not be offensive to a reasonable sense of personal dignity. An ordinary person intruding upon a private conversation in Wishnatsky's manner would not have been offended by Huey's response to the intrusion.

Summary judgment for Huey affirmed.

Assault

Assault might be defined as an intentional attempt or offer to cause a harmful or offensive contact with another, where the attempt or offer causes a reasonable apprehension of imminent battery in the other person's mind. The necessary *intent* is the same as the intent required for battery. In an assault case, however, it is irrelevant whether the threatened contact actually occurs. Instead, the key thing is the plaintiff's *apprehension* of a harmful or offensive contact. Apprehension is not the same thing as fear; it might be described as a mental state like: "Uh, oh, here comes a battery!" Thus, even the bravest people can be apprehensive and can recover for assault.

As the *Ackerley* case to follow in the next section makes clear, this apprehension must concern an *imminent or immediate* battery. Thus, threats of a future battery do not create liability for assault. In addition, the plaintiff must experience apprehension *at the time the threatened battery occurs.* Therefore, if Dillon fires a rifle at Pine from a great distance and misses him, and only later does Pine learn of the attempt on his life, Dillon is not liable to Pine for assault. Finally, the plaintiff's apprehension must be *reasonable.* As a result, threatening words normally are not an assault unless they are accompanied by acts or circumstances indicating the defendant's intent to carry out the threat.

Infliction of Emotional Distress

For many years, courts refused to allow recovery for purely emotional injuries unless the defendant had committed some recognized tort. Thus, victims of such torts as assault, battery, and false imprisonment could recover for the emotional injuries resulting from these torts, but courts would not recognize an independent tort of infliction of emotional distress. The reasons for this judicial reluctance included a fear of spurious or trivial claims, concerns about proving purely emotional harms, and uncertainty about the proper boundaries of an independent tort. However, increased confidence in our knowledge about emotional injuries and a greater willingness to compensate such injuries have helped to overcome these judicial impediments. Today, most courts allow recovery for severe emotional distress regardless of whether the elements of any other tort are proven.

The courts are not, however, in complete agreement on the elements of this new tort. All courts require that a wrongdoer's conduct must be *outrageous* before liability for emotional distress arises. The *Restatement (Second) of Torts* speaks of conduct "so outrageous in character, and so extreme in degree, as to go beyond all possible bounds of decency, and to be regarded as atrocious, and utterly intolerable in a civilized community."[1] The courts also agree in requiring *severe* emotional distress. Some courts, however, still fear fictitious claims and also require proof of some bodily harm resulting from the victim's emotional distress. Finally, the *Restatement (Second)* says that the defendant must *intentionally* or *recklessly* inflict the distress in order to be liable.

In addition, some courts say that the plaintiff's distress must be distress that a reasonable person of ordinary sensibilities would suffer. In some cases, therefore, emotionally susceptible people may not recover even though they suffer severe distress. Even if his distress is unreasonable, however, a hypersensitive person still may win where the defendant acts outrageously by playing upon the sensitivity with knowledge of its existence. The same sometimes is true where the defendant behaves outrageously by abusing a position or relation that gives him authority over another. Examples include employers, police officers, landlords, and school authorities.

The courts also differ in the extent to which they allow recovery for emotional distress suffered as a result of witnessing outrageous conduct directed at persons other than the plaintiff. The *Restatement (Second)* suggests that people be allowed to recover for severe emotional distress resulting from witnessing outrageous behavior toward a member of their immediate family. Where the third person is not a member of the plaintiff's immediate family, the *Restatement (Second)* restricts liability to severe emotional distress that results in some bodily harm.

Besides involving an assault claim, the following case also considers the "severity" requirement for intentional infliction of emotional distress.

[1] *Restatement (Second) of Torts* § 46, comment d (1965). The other propositions attributed to the *Restatement (Second)* in this section also come from § 46.

Brower v. Ackerley *943 P.2d 1141 (Wash. Ct. App. 1998)*

Jordan Brower was a Seattle resident who was active in civic affairs. In October of 1991 Brower sued the city and Ackerley Communications, Inc., seeking enforcement of Seattle's billboard regulations. Although he later dropped the suit, by July of 1993 Brower's efforts had provoked the city into announcing that Ackerley Communications had erected dozens of illegal billboards, and into passing a new billboard ordinance.

Beginning around the time of the lawsuit and continuing through July of 1993, Brower received a series of harassing phone calls at his home. The calls were aggressive, loud, profane, insulting, and mean-spirited. They culminated with three calls on July 19, the night the city passed the new billboard ordinance. One of the callers called Brower a "d—." Another said, "I'm going to find out where you live and I'm going to kick your a—." In an eerie voice, a third said, "Ooooo, Jordan, oooo, you're finished; cut you in your sleep, you sack of s—."

After Brower complained to the police, the department was able to trace the calls to the apartment of Christopher Ackerley. Christopher and his brother Theodore, both in their early twenties, were the sons of Ackerley Communications' founder. Brower eventually sued the two Ackerleys for, among other things, assault and intentional infliction of emotional distress. After the Ackerleys moved for summary judgment, a Washington trial court dismissed Brower's claims. Brower then appealed. Throughout the following opinion, assume that the Ackerleys made the calls of which Brower complained.

Becker, Judge The *Restatement (Second) of Torts* defines assault as follows: "An actor is subject to liability to another if (a) he acts intending to cause a harmful or offensive contact with the person of the other or a third person, or an imminent apprehension of such a contact, and (b) the other is thereby put in such imminent apprehension. Words alone are not enough to make an actor liable for assault

"unless together with other acts or circumstances they put the other in reasonable apprehension of an imminent harmful or offensive contact with his person."

The Ackerleys argue that dismissal of Brower's assault claim was appropriate because the threatening words were unaccompanied by any physical acts or movements. Brower contends that the spoken threats became assaultive in view of the surrounding circumstances, including the fact that the calls were made to his home, at night, creating the impression that the caller was stalking him. [Brower's claim is one] we need not resolve because we find another issue dispositive: the physical harm threatened in the telephone calls was not imminent. The telephone calls on July 19 contained two explicit threats: "I'm going to find out where you live and I'm going to kick your a—," and "you're finished; cut you in your sleep." The words threatened action in the near future, but not the imminent future. We affirm the dismissal of the assault claim.

The tort of intentional or reckless infliction of emotional distress, more commonly known as the tort of outrage, is another vehicle for the recovery of emotional distress damages in the absence of other tort remedies. The Washington Supreme Court has defined the elements of outrage as: (1) extreme and outrageous conduct, (2) intentional or reckless infliction of emotional distress, and (3) severe emotional distress. For purposes of summary judgment, the Ackerleys do not dispute the characterization of the telephone calls as outrageous conduct, and they accept that any distress experienced by Brower was intentionally or recklessly inflicted. Their challenge is limited to the third element—whether the resulting emotional distress was severe.

Brower describes reacting with acute anxiety to the final [three] calls. He set his security system, checked the door and window locks, and gathered his wife and cats in an upstairs bedroom. He was nervous and was looking out the windows every few minutes. He and his wife thought someone might already be there. [He] was unable to fall asleep until after 2:00 a.m. His pulse went up, he got sweaty palms, and felt light-headed. He worried that if he left his home somebody would burn it down or break in. He says he was "very agitated and upset for days." His sleeping patterns changed. He would wake up in the night worrying about the threats. He said he became less effective as an activist and worried that his work would encourage more threats. His ability to concentrate deteriorated and he was more fatigued.

The Ackerleys contend Brower's distress, as described, cannot be viewed as severe because it fails to identify "objective symptomology." That requirement, however, belongs to the tort of negligent infliction of emotional distress. The Ackerleys next contend that Brower's alleged distress is too insignificant to satisfy the severity requirement. When the alleged conduct sufficiently establishes the first two elements, outrageous conduct and intentional or reckless infliction of emotional harm, we hold that a case of outrage should ordinarily go to a jury so long as the plaintiff's alleged damages are more than mere annoyance, inconvenience, or normal embarrassment that is an ordinary fact of life. According to comment j in the *Restatement,* severe distress "must be proved; but in many cases the extreme and outrageous character of the defendant's conduct is in itself important evidence that the distress has existed." In our view, this is such a case. The extremity of the conduct is in itself important evidence of the severity of distress experienced by the target. We conclude that Brower is entitled to take his outrage claim to a jury.

Dismissal of Brower's assault claim affirmed and dismissal of his intentional infliction of emotional distress claim reversed.

False Imprisonment

False imprisonment is the intentional *confinement* of another person for an *appreciable time* (a few minutes is enough) *without his consent.* The confinement element essentially involves the defendant's keeping the plaintiff within a circle that the defendant has created. It may result from physical barriers to the plaintiff's freedom of movement, such as locking a person in a room with no other doors or windows, or from physical force or the threat of physical force against the plaintiff. Confinement also may result from the assertion of legal authority to detain the plaintiff, or from the detention of the plaintiff's property (e.g., a purse containing a large

sum of money). Likewise, a threat to harm another, such as the plaintiff's spouse or child, can also be confinement if it prevents the plaintiff from moving.

The confinement must be *complete.* Partial confinement of another by blocking her path or by depriving her of one means of escape where several exist, such as locking one door of a building having several unlocked doors, is not false imprisonment. The fact that a means of escape exists, however, does not relieve the defendant of liability where the plaintiff cannot reasonably be expected to know of its existence. The same is true if the escape route involves some unreasonable risk of harm to the plaintiff, such as walking a tightrope or climbing out of a second-story window. The confinement also may be complete where using the escape route would involve some affront to the plaintiff's sense of personal dignity; for example, imagine that D steals P's clothes while P is swimming in the nude.

Although there is some disagreement on the subject, courts usually hold that the plaintiff must have *knowledge* of his confinement before liability for false imprisonment arises. In addition, there is no liability where the plaintiff has *consented* to his confinement. Such consent, however, must be freely given; consent in the face of an implied or actual threat of force or an assertion of legal authority by the confiner is not freely given.

Today, many false imprisonment cases involve a store's detention of people suspected of shoplifting. In an attempt to accommodate the legitimate interests of store owners, most states have passed statutes giving them a *conditional privilege* to stop suspected shoplifters. To obtain this defense, the owner usually must act with reasonable cause, act in a reasonable manner, and detain the suspect for only a reasonable length of time. These privilege statutes typically extend to other intentional torts besides false imprisonment. The following case provides an example.

Kmart Corporation v. Perdue *708 So. 2d 106 (Ala. Sup. Ct. 1997)*

Early in 1994, a Kmart manager notified Kmart's Birmingham, Alabama-area stores that Deborah Cameron and Sonja Perdue had been repeatedly returning merchandise without a receipt and getting cash refunds. The manager also stated his belief that the two women had earlier shoplifted the same merchandise from Kmart. For these reasons, he told all the Kmart loss control managers in the area to be on the lookout for Cameron and Perdue and to closely monitor their activities.

Among the recipients of this message was Doug Sharp, the loss control manager for Kmart's Bessemer, Alabama store. One night, after the Bessemer store refused to give Perdue a refund because she lacked a receipt, Sharp asked to speak to her, and led her to a loss control room in the store. Later, he detained Cameron in a separate loss control room after observing her putting a set of drapes into her purse. After each woman accused the other of making her steal merchandise and Cameron confessed to taking the draperies, the police arrived and arrested the two women for third-degree theft. Perdue and Cameron later were convicted for that crime, but those convictions were reversed on appeal. Then Perdue and Cameron sued Kmart and Sharp for, among other things, false imprisonment. After the jury awarded each plaintiff $2.0 million and the judge rejected the defendants' motions for a directed verdict and for judgment notwithstanding the verdict, Sharp and Kmart appealed.

Butts, Justice The evidence clearly shows that Sharp had been warned by his regional loss control supervisor that Cameron and Perdue had a suspicious pattern of returning expensive merchandise without a receipt and asking for cash refunds, that this practice was costing Kmart stores thousands of dollars, and that there was strong reason to suspect them of shoplifting. On the night in question, Perdue attempted to return merchandise without having a cash receipt, and Sharp saw Cameron putting a set of draperies into her purse.

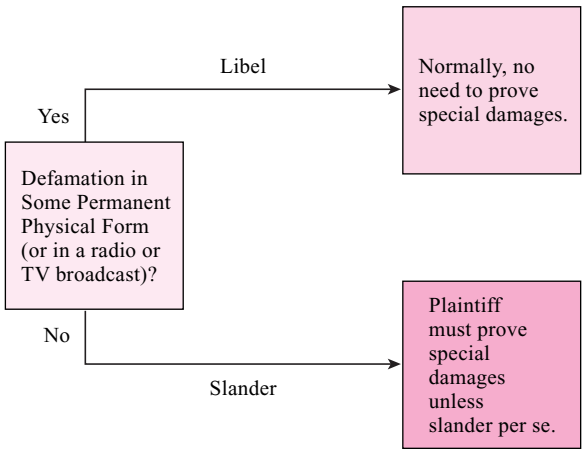
We agree with the defendants that the plaintiffs' claims alleging [false imprisonment] should not have been submitted to the jury. An Alabama statute provides:

> [A] merchant or a merchant's employee who has probable cause for believing that goods held for sale by the merchant have been unlawfully taken by a person and that he can recover them by taking the person into custody may, for the purpose of attempting to effect such recovery, take the person into custody and detain him in a reasonable manner for a reasonable

length of time. Such taking into custody and detention by a . . . merchant or merchant's employee shall not render such . . . merchant or merchant's employee criminally or civilly liable for false arrest, false imprisonment, or unlawful detention.

The evidence is sufficient to show that Kmart, acting through its agent Sharp, had probable cause to detain Cameron and Perdue and had reason to believe that detaining them might lead to the recovery of goods that Kmart held for sale. The trial court thus erred in denying the defendants' motions for a directed verdict and then later for judgment n.o.v. on the [false imprisonment] claim.

Trial court judgment for Perdue and Cameron reversed; case returned to the trial court for the entry of an order consistent with the Supreme Court's opinion.



Defamation

The tort of defamation protects the individual's interest in his reputation. Defamation is ordinarily defined as the (1) unprivileged (2) publication of (3) false and defamatory (4) statements concerning another. Before examining each of these elements, we must consider the distinction between two forms of defamation: **libel** and **slander.**

The Libel–Slander Distinction Libel refers to written or printed defamations or to other defamations that have a more or less permanent physical form, such as a defamatory picture, sign, or statue. Slander refers to all other defamatory statements—mainly oral defamation. Today, the great majority of courts treat defamatory statements in radio and television broadcasts as libel. The same probably is true of defamatory statements made on the Internet.

Why does the libel–slander distinction matter? Due to its more permanent nature and the seriousness we usually attach to the written word, recovery for libel is possible without proof of **special damages** (the loss of anything of monetary value) to the plaintiff. Slander, on the other hand, is generally not actionable without proof of special damages, unless the nature of the slanderous statement is so serious that it can be classified as *slander per se.* In slander per se, injury to the plaintiff's reputation is presumed. Slander per se ordinarily includes false and defamatory statements that the plaintiff has: (1) committed a crime involving moral turpitude or potential imprisonment, (2) has a loathsome disease (traditionally, a venereal disease or leprosy), (3) is professionally incompetent or guilty of professional misconduct, or (4) is guilty of serious sexual misconduct (traditionally, unchaste behavior by a woman). The *Starr* case, which follows shortly, presents a variation on this scheme.

Figure 2 *The Libel–Slander Distinction*

False and Defamatory Statement As noted later, truth is a complete defense in a defamation case. A *defamatory* statement is one that harms the reputation of another by injuring his community's estimation of him or by deterring others from associating or dealing with him. Whether a given statement is defamatory ordinarily is decided by the fact-finder.

"Of and Concerning" the Plaintiff Because defamation aims to protect reputation, an essential element of the tort is that the alleged defamatory statement must be "of and concerning" the plaintiff. That is, the statement must harm the particular plaintiff's reputation. This requirement presents several problems—problems whose many complexities are beyond the scope of this text. Thus, all the rules sketched below have exceptions.

What about allegedly *fictional accounts* whose characters resemble real people? Most courts say that

fictional accounts are defamatory if a reasonable reader would identify the plaintiff as the subject of the story. Similarly, *humorous or satirical accounts* ordinarily are not defamation unless a reasonable reader would believe that they purport to describe real events. Likewise, statements of *personal opinion* usually are not defamation because they are not statements of fact concerning the plaintiff.

Do defamatory statements concerning particular *groups* of people also defame the individuals who form those groups? Speaking very generally, an individual member of a defamed group cannot recover for damage to her own reputation unless the group is so small that the statement can reasonably be understood as referring to individual group members.

Finally, the courts have placed some limits on the persons or entities that can suffer injury to reputation. For example, no liability attaches to defamatory statements concerning the dead. Corporations and other business forms have a limited right to reputation and can recover for defamatory statements that harm them in their business or deter others from dealing with them. Statements about a corporation's officers, employees, or shareholders normally are not defamation of the corporation unless such statements also reflect on the manner in which the corporation conducts its business.[2]

Publication Liability for defamation requires publication of the defamatory statement. As a general rule, no widespread communication of a defamatory statement is necessary for publication. Communication of the defamatory statement to *one person* other than the person defamed ordinarily suffices.

So long as no one else receives or overhears it, however, an insulting message communicated directly from the defendant to the plaintiff is not actionable. In this and other cases, moreover, the traditional rule is that the defendant is not liable when *the plaintiff herself* publishes the offensive statement to another. In recent years, some courts have made an exception to this rule in cases where a discharged employee is forced to tell a potential future employer about false and defamatory statements made to her by her prior employer. According to the *Starr* case, however, this "compelled self-disclosure" rule has not found favor with most courts. *Starr* also raises another question on which courts disagree—whether *intracorporate statements* are published. Finally, the general rule is that one who repeats or republishes a defamatory statement is liable for defamation. This is true even if he identifies the source of the statement or expresses his disagreement with it.

Defenses and Privileges Even though it is called an intentional tort, defendants are strictly liable for defamation. Because so many defamatory statements have defenses, however, it is questionable whether this technicality matters much. Of course, the truth of the defamatory statement is a complete defense to liability. Defamatory statements may be *privileged* as well. Privileges to defamation liability recognize that, in some circumstances, other social interests are more important than an individual's right to reputation. Privileges can be *absolute* or *conditional.* Over the past 35 years, moreover, the Supreme Court has created a sort of "constitutional privilege" in certain cases involving public officials and public figures.

An **absolute privilege** shields the author of a defamatory statement regardless of her knowledge, motive, or intent. Where such a privilege applies, it operates as a complete defense to defamation liability. Absolutely privileged statements include those made by participants in judicial proceedings, legislators or witnesses in the course of legislative proceedings, certain executive officials in the course of their official duties, and between spouses in private. In each case, the theory behind the privilege is that complete freedom of expression is essential to the proper functioning of the relevant activity, and that potential liability for defamation would inhibit free expression.

Conditional (or qualified) privileges give the defendant a defense unless the privilege is *abused.* What constitutes abuse varies with the privilege in question. In general, conditional privileges are abused when the statement is made with knowledge of its falsity or reckless disregard of its truth or falsity, when the statement does not advance the purposes behind the privilege, or when it is unnecessarily made to inappropriate people.

There are several conditional privileges. One involves *statements made to advance the publisher's legitimate interests.* For example, a statement reasonably necessary to counteract the plaintiff's defamatory statement about the defendant would be conditionally privileged. One way the defendant might abuse this privilege is by making irrelevant statements that do not advance the goals of the privilege. For instance, Doris

[2] As Chapter 8 reveals, statements concerning the quality of a corporation's products or the quality of its title to land or other property may be the basis of an injurious falsehood suit.

might counter Paul's charge of financial corruption by saying that Paul has fathered an illegitimate child. A second conditional privilege involves *statements made to protect the interests of another.* For example, suppose that Dave tells Molly that her fiancé Peter has a criminal record. But Dave would abuse the privilege if he made the statement with knowledge of its falsity or was reckless about its truth or falsity. A third kind of conditional privilege concerns *statements made to promote a common interest.* Intracorporate communications—which may or may not be publications in the first place—are one example. But such communications normally would abuse the privilege if they are made to the public at large. Finally, the privilege called *fair comment* protects fair and accurate media reports of defamatory matter in reports or proceedings of official action or originating from public meetings.

Defamation and the Constitution Over the past 30 years, a conditional privilege of sorts has emerged from the interaction between defamation law and the First Amendment. The theory behind this "privilege" is that overzealous protection of individual reputation could restrict our constitutionally protected freedoms of speech and of the press and thereby inhibit the flow of information necessary to a free society. In 1964, the Court held that *public officials* seeking to recover for defamatory statements concerning performance of their official duties must prove *actual malice* (knowledge of falsity or reckless disregard for the truth) on the part of a media defendant to recover any damages. The Court subsequently extended the actual malice test to *public figures*—people in the public eye due to: (1) their celebrity status, or (2) their voluntarily involving themselves in matters of public controversy. Later, however, the Court refused to extend the actual-malice test to media defamation of *private citizens* who involuntarily become involved in matters of public concern. Instead, the Court held that to recover compensatory damages such people must prove some degree of fault at least amounting to negligence on the part of the defendant, and that to recover punitive damages they must prove actual malice. Finally, in a 1985 case involving a private figure plaintiff (a construction contractor) and defamatory speech about a matter of purely private concern (a false credit report), the Court upheld a recovery based on the common law strict liability standard.

Thus, the amount of protection the Constitution affords to otherwise defamatory statements appears to depend on two factors: (1) whether the plaintiff is a public figure/official or a private person; and (2) whether the subject matter of the speech at issue is a matter of public concern or private concern. The Court has yet to speak definitively on the standard it will apply to cases involving defamatory statements about private matters concerning public figures and officials.

Starr v. Pearle Vision, Inc. *54 F.3d 1548 (10th Cir. 1995)*

Jacqui Starr was general manager of a Pearle Vision retail optical store in Tulsa, Oklahoma. Three Pearle employees met with Starr to discuss a $4,000 deficit in her store's petty cash account. Starr refused to cooperate with the investigation and was officially fired for that reason. The three investigating employees made some allegedly defamatory statements about Starr's situation to two other Pearle employees (named Ballard and Ross) whom they were investigating. Later in April, Starr's successor as store manager told Katherine Winn, a friend of Starr's who was not a Pearle employee, that Starr "is no longer here" and "is in big trouble."

Starr sued Pearle for slander. Her three claims were that: (1) the investigating employees' statements to Ballard and Ross defamed her, (2) she would be required to engage in defamatory self-publication when asked about her previous employment in subsequent job applications, and (3) the new manager's statements to Winn defamed her. After the court granted Pearle's motion for summary judgment on all three claims, Starr appealed.

Ebel, Circuit Judge Under Oklahoma law, slander is a false and unprivileged publication, other than libel, which: (1) charges any person with crime, or with having been indicted, convicted, or punished for crime; (2) imputes in him the present existence of an infectious, contagious, or loathsome disease; (3) tends directly to injure him in respect to his office, profession, trade, or business; (4) imputes to

him impotence or want of chastity; or (5) which, by natural consequences, causes actual damage. The first four provisions constitute slander per se, whereas the fifth provision requires a showing of actual damages and thus states a slander per quod rule.

In 1944, the Oklahoma Supreme Court held that intracompany communications do not constitute actionable "publications." Publication is the communication of defamatory matter to a third person, and neither agents nor employees of a company are third persons in relation to the corporation because they are part and parcel of the corporation itself. [The corporation] is but communicating with itself.

Starr next contends that she has been, and will continue to be, forced to reveal the accusations surrounding her termination when applying for other positions. This is the so-called compelled self-publication doctrine, which holds that an individual who only utters the slanderous statement to the victim (and not a third party) may be liable if the victim is compelled to repeat the slander to a third person. The small number of jurisdictions that have embraced the self-publication doctrine articulate two formulations. The first imposes liability if the defendant knew or could have foreseen that the plaintiff would be *compelled* to repeat the defamatory statement. The second imposes liability if the defendant knew or could have foreseen that the plaintiff was *likely* to repeat the defamatory statement. In the absence of any Oklahoma authority, federal district courts have concluded that Oklahoma would not follow the self-publication theory because the vast majority of states considering the issue reject it. We agree. In any event, here the record does not convince us that Starr was compelled to repeat a slanderous statement to a prospective employer. First, Starr presents no evidence [of such a statement]. Moreover, Pearle's stated reason for terminating Starr was that she failed to cooperate with a company investigation. Thus, Starr would not publish a defamatory statement by informing third parties [of this], because [it] is a true statement.

We must evaluate the statement "she's in big trouble" in the context of the new manager informing Winn that Starr no longer worked at the [store]. Whether this comment imputes the commission of a crime or tends to injure the victim's professional reputation—and therefore constitutes slander per se—is a question for the factfinder. A claim of slander per se renders irrelevant the absence of evidence that a comment actually sullied the victim's reputation.

Summary judgment in Pearle's favor affirmed, except on Starr's claim that the new manager's statement to Winn defamed her. Case returned to the district court for proceedings consistent with the court of appeals' decision.

Invasion of Privacy

In tort law, the term *invasion of privacy* refers to four distinct torts. Each involves a different sense of the term privacy.

Intrusion on Personal Solitude or Seclusion

Any intentional intrusion on the solitude or seclusion of another constitutes an invasion of privacy if that intrusion would be highly offensive to a reasonable individual. The intrusion in question may be physical, such as an illegal search of a person's home or body or the opening of his mail. It may also be a nonphysical intrusion such as tapping another's telephone, examining her bank account, or subjecting her to harassing telephone calls. However, the tort applies only where there is a reasonable expectation of privacy. As a general rule, therefore, there is no liability for examining public records concerning a person, or observing or photographing him in a public place.

Public Disclosure of Private Facts about a Person

Publicizing facts concerning someone's private life can be an invasion of privacy if the publicity would be highly offensive to a reasonable person. The idea is that the public has no legitimate right to know certain aspects of a person's private life. Thus, publicity concerning someone's failure to pay his debts, humiliating illnesses he has suffered, or details about his sex life constitutes an invasion of privacy. Truth is *not* a defense to this type of invasion of privacy because the essence of the tort is giving unjustified publicity to purely private matters. Here, in further contrast to defamation, publicity means a *widespread*

dissemination of private details. For example, publication on the Internet probably would suffice.

Like defamation, this form of invasion of privacy potentially conflicts with the First Amendment. The courts have attempted to resolve this conflict in several ways. First, no liability ordinarily attaches to publicity concerning matters of public record or legitimate public interest. Second, public figures and public officials have no right of privacy concerning information that is reasonably related to their public lives.

False Light Publicity that places a person in a false light in the public eye can be an invasion of privacy if that false light would be highly offensive to a reasonable person. All that is required is unreasonable and highly objectionable publicity attributing to a person characteristics that he does not possess or beliefs that he does not hold. Examples include signing a person's name to a public letter that violates her deepest beliefs or attributing authorship of an inferior scholarly or artistic work to her. As in defamation cases, truth is an absolute defense to liability. However, it is not necessary that a person be defamed by the false light in which he is placed. Signing a pro-life person's name to a petition urging increased abortion rights would create liability for false light but not for defamation, while signing the same person's name to a petition urging infanticide probably would create liability for both torts.

Due to the overlap between false light and defamation, and the obvious First Amendment issues at stake, defendants in false light cases enjoy constitutional protections similar to those enjoyed by defamation defendants.

Appropriation of Name or Likeness Liability for invasion of privacy can exist when, without that person's consent, the defendant uses someone's name or likeness to imply his endorsement of a product or service or a nonexistent connection with the defendant's business. Here, liability extends beyond the use of the plaintiff's name or likeness to include other things associated with the plaintiff.

This form of invasion of privacy recognizes the personal property right connected with a person's identity and his exclusive right to control it. This raises the question whether, or to what extent, public figures have a *right of publicity.* To what extent, that is, do public persons have the right to control the use of their names, likenesses, or other matters associated with their identities? For example, should a well-known movie star have the right to prevent the writing of a book about her life or the televising of a docudrama about her? At this point, the scope of a public person's right of publicity varies greatly from state to state; considerable disagreement exists concerning such issues as its duration and inheritability.

Lake v. Wal-Mart Stores, Inc. *582 N.W.2d 231 (Minn. Sup. Ct. 1998)*

Nineteen-year-old Elli Lake and twenty-year-old Melissa Weber vacationed in Mexico with Weber's sister. During the vacation, Weber's sister took a photograph of Lake and Weber naked in the shower together. After their vacation, Lake and Weber brought five rolls of film to a Wal-Mart store and photo lab. When they received their developed photographs along with the negatives, an enclosed written notice stated that one or more of the photographs had not been printed because of their "nature." A few months later, an acquaintance of Lake and Weber alluded to the photograph and questioned their sexual orientation. A few months after that, another friend told Lake and Weber that a Wal-Mart employee had shown her a copy of the photograph. Still later, Lake was informed that one or more copies of the photograph were circulating in the community.

Lake and Weber then sued Wal-Mart, alleging the four traditional invasion-of-privacy torts. Wal-Mart made a motion to dismiss the complaint for failure to state a claim upon which relief may be granted. The district court granted Wal-Mart's motion, explaining that Minnesota has not recognized any of the four invasion-of-privacy torts. The court of appeals affirmed. Lake and Weber then appealed to the Minnesota Supreme Court.

Blatz, Chief Justice Whether Minnesota should recognize any or all of the invasion-of-privacy causes of action is a question of first impression in Minnesota. The *Restatement (Second) of Torts* outlines the four causes of action that comprise the tort generally referred to as invasion of privacy. Intrusion upon seclusion occurs when one intentionally intrudes, physically or otherwise, upon the solitude or

seclusion of another or his private affairs or concerns, if the intrusion would be highly offensive to a reasonable person. Appropriation protects an individual's identity and is committed when one appropriates to his own use or benefit the name or likeness of another. Publication of private facts is an invasion of privacy when one gives publicity to a matter concerning the private life of another if the matter publicized is of a kind that: (a) would be highly offensive to a reasonable person, and (b) is not of legitimate concern to the public. False light publicity occurs when one gives publicity to a matter concerning another that places the other before the public in a false light if: (a) the false light in which the other was placed would be highly offensive to a reasonable person, and (b) the actor had knowledge of or acted in reckless disregard as to the falsity of the publicized matter and the false light in which the other would be placed.

This court has the power to recognize and abolish common law doctrines. The common law is not composed of firmly fixed rules. As society changes over time, the common law must also evolve. To determine the common law, we look to other states as well as to England. The tort of invasion of privacy is rooted in a common law right to privacy first described in an 1890 law review article by Samuel Warren and Louis Brandeis. The article posited that the common law has always protected an individual's person and property, with the extent and nature of that protection changing over time. The fundamental right to privacy is both reflected in those protections and grows out of them.

Today, the vast majority of jurisdictions now recognize some form of the right to privacy. We join [them] and recognize the tort of invasion of privacy. The right to privacy is an integral part of our humanity; one has a public persona, exposed and active, and a private persona, guarded and preserved. The heart of our liberty is choosing which parts of our lives shall become public and which parts we shall hold close. Here Lake and Weber allege in their complaint that a photograph of their nude bodies has been publicized. One's naked body is a very private part of one's person and generally known to others only by choice. This is a type of privacy interest worthy of protection. Therefore, without consideration of the merits of Lake and Weber's claims, we recognize the torts of intrusion upon seclusion, appropriation, and publication of private facts. Accordingly, we reverse the [lower courts] and hold that Lake and Weber have stated a claim upon which relief may be granted and [that] their lawsuit may proceed.

We decline to recognize the tort of false light publicity at this time. We are concerned that claims under false light are similar to claims of defamation, and to the extent that false light is more expansive than defamation, tension between this tort and the First Amendment is increased. Defamation requires a false statement communicated to a third party that tends to harm a plaintiff's reputation. False light requires publicity, to a large number of people, of a falsity that places the plaintiff in a light that a reasonable person would find highly offensive. The primary difference between defamation and false light is that defamation addresses harm to reputation in the external world, while false light protects [against] harm to one's inner self. Most false light claims are actionable as defamation claims; because of the overlap with defamation and the other privacy torts, a case has rarely succeeded squarely on a false light claim.

We are also concerned that false light inhibits free speech guarantees provided by the First Amendment. We do not want to create a grave risk of serious impairment of the indispensable service of a free press in a free society if we saddle the press with the impossible burden of verifying the facts associated in news articles with a person's name, picture, or portrait, particularly as related to nondefamatory matter. Although there may be some untrue and hurtful publicity that should be actionable under false light, the risk of chilling speech is too great to justify protection for this small category of false publication not protected under defamation.

We are not persuaded that a new cause of action should be recognized if little additional protection is afforded plaintiffs. Thus we recognize a right to privacy present in the common law of Minnesota, including causes of action in tort for intrusion upon seclusion, appropriation, and publication of private facts, but we decline to recognize the tort of false light publicity.

Affirmed in part, reversed in part. Case returned to the trial court for proceedings consistent with the Supreme Court's opinion.

Misuse of Legal Proceedings

Three intentional torts protect people against the harm that can result from wrongfully instituted legal proceedings. **Malicious prosecution** affords a remedy for the wrongful institution of criminal proceedings. Recovery for malicious prosecution requires that: (1) the defendant initiated the proceedings without probable cause to believe that an offense had been committed, (2) the defendant did so for an improper purpose, and (3) the criminal proceedings eventually were terminated in the plaintiff's favor. **Wrongful use of civil proceedings** is designed to protect people from wrongfully instituted civil suits. Its elements are very similar to those for malicious prosecution.

Abuse of process imposes liability on those who initiate legal proceedings, whether criminal or civil, for a primary purpose other than the one for which the proceedings were designed. Abuse of process cases often involve situations in which the legal proceedings compel the other person to take some action unrelated to the subject of the suit. For example, Rogers wishes to buy Herbert's property, but Herbert refuses to sell. To pressure him into selling, Rogers files a private nuisance suit against Herbert, contending that Herbert's activities on his land interfere with Rogers' use and enjoyment of his adjoining property. Rogers may be liable to Herbert for abuse of process even though he had probable cause to file the suit and won the suit.

Deceit (Fraud)

Deceit (or fraud) is the formal name for the tort claim that is available to victims of knowing misrepresentations.[3] Liability for deceit usually requires a false statement of material important fact, knowingly or recklessly made by the defendant, with the intent to induce reliance by the plaintiff, actual and justifiable reliance by the plaintiff, and harm to the plaintiff due to his reliance. Because most deceit actions arise in a contractual setting, and because a tort action for deceit is only one of the remedies available to a victim of fraud, a fuller discussion of this topic is deferred until Chapter 13.

Can a defendant be liable in deceit for the *nondisclosure* of facts material to the transaction? The following *Maybee* case presents the *Restatement (Second)* rule on this subject.

[3]In addition, many states allow tort recovery for negligent misrepresentations under one theory or another.

Maybee v. Jacobs Motor Co. *519 N.W.2d 341 (S.D. Sup. Ct. 1994)*

Johnie Maybee purchased a 1984 Chevrolet van from Jacobs Motor Company for $8,700. No one at Jacobs told her that the van's original engine had been replaced with a rebuilt engine using a 1966 engine block. According to Maybee, the salesman with whom she dealt "just said that it was an '84 van that was in good condition and that they had used it around the business." In addition, no Jacobs employee mentioned that the van had dieseling and oil leakage problems. Although Maybee had the opportunity to ask questions and to have the van inspected by a mechanic, she declined.

About one month after the purchase, Maybee's husband took the van to a garage because it had been leaking oil. The mechanic discovered the 1966 block and also determined that the engine was in poor shape. In addition, an expert witness for Maybee later testified that, due to its high compression ratio, the engine required high-octane aviation fuel for its proper operation. Eventually, Maybee claimed, she parked the van in her yard because it "didn't work."

Maybee sued Jacobs for fraud and deceit. The jury found Jacobs liable, awarding Maybee $14,700 in compensatory damages and $75,000 in punitive damages. Because the $14,700 in compensatory damages was more than 10 times the $1,450 cost of replacing the engine, the trial court ordered a new trial on the damages question. Maybee appealed this order, and Jacobs appealed the jury's determination that it was liable for fraud and deceit.

Henderson, Justice Deceit requires proof that the misrepresentation was material to the formation of the contract and that the other party relied on the misrepresentation to her detriment. Such

misrepresentations include true statements which the maker knows or believes to be materially misleading because of the failure to state additional or qualifying matter. [According to] *Restatement (Second) of Torts* section 551(2)(e):

> One party to a business transaction is under a duty to exercise reasonable care to disclose to the other before the transaction is consummated . . .
>
> (e) *facts basic to the transaction,* if he knows that the other is about to enter into it under a mistake as to them, and that the other, because of the relationship between them, the customs of the trade or other objective circumstances, would reasonably expect a disclosure of those facts.

When a person purchases a 1984 vehicle, is the presence, within that vehicle, of an engine built for a 1966 model, which requires a fuel typically not used by vehicles on the road today, a fact basic to the transaction? The jury so found and this court finds that the evidence can support such a finding.

Nevertheless, a new trial on all issues is warranted due to our decision on the second issue. During closing argument, *Maybee's counsel stated that $1,500 would compensate his client.* Somehow, the jury calculated compensatory damages at $14,750 and additionally awarded $75,000 in punitive damages. The jury verdict indicates passion and prejudice as well as inconsistencies with the instructions and law. A trial solely on Maybee's damages would require essentially the same evidence as a trial on both the substantive merits of the fraud claim and damages. Because these issues are so interwoven, we find that they are not separable. A new trial on both damages and liability is warranted even though the evidence does support liability, which remains a jury question.

Trial court decision reversed; case returned to the trial court for a new trial on both liability and damages.

Interference with Property Rights

Trespass to Land

Trespass to land might be defined as any unauthorized or unprivileged intentional intrusion upon another's real property (land). Such intrusions include: (1) physically entering the plaintiff's land, (2) causing another to do so (e.g., by chasing her onto the land), (3) remaining on the land after one's right to remain has ceased (e.g., staying past the term of a lease), (4) failing to remove from the land anything one has a duty to remove, (5) causing something to enter the land (although some overlap with nuisance exists here), and (6) invading the airspace above the land or the subsurface beneath it (if property law and federal, state, and local regulations give the plaintiff rights to the airspace or subsurface and do not allow the defendant to intrude).

The intent required for trespass liability is simply the intent to be on the land or to cause it to be invaded. Thus, a person can be liable for trespass even though the trespass resulted from his mistaken belief that his entry was legally justified. Where the trespass is intentional, no actual harm to the land is required for liability, but actual harm is required for reckless or negligent trespasses.

Private Nuisance

In general, a private nuisance involves some interference with the plaintiff's use and enjoyment of her land. Unlike trespass to land, nuisance usually does not involve any physical invasion of the plaintiff's property. One source suggests that trespass requires an *invasion of tangible matter,* while nuisance involves other interferences.[4] Examples of such other interferences include odors, noise, smoke, light, and vibration. For nuisance liability to exist, however, the interference must be *substantial* and *unreasonable.* Finally, the defendant must intend the interference.

Despite the distinction just suggested, some courts have imposed nuisance liability in cases involving apparent invasions of tangible matter such as flooding, dust, and the pollution of a stream. The following *Ahnert* case, treated the plaintiffs' noise claim as a nuisance action and their dust as a trespass action. Not all courts would agree with this court's statement of the elements of nuisance recovery.

[4] *Prosser and Keeton on the Law of Torts,* 5th ed. (1984), p. 71.

Ahnert v. Getty 1997 Conn. Super. LEXIS 890 (Conn. Superior Court, New London 1997)

Bruno and Norma Ahnert lived across the street and approximately 500 feet from the Getty Granite Company. The Ahnerts sued Getty for nuisance and trespass to land, asserting that Getty's business produced excessive noise and dust. The noise, they further alleged, disturbed their sleep; and made conversation, television watching, and radio or stereo listening difficult. The dust, the Ahnerts added, meant that they could not open their windows for ventilation, and also rendered their outdoor premises unfit for use and enjoyment. Getty moved to dismiss the Ahnerts' claims because they failed to state claims upon which relief can be granted.

Handy, Judge In order to recover under a nuisance theory, a plaintiff must prove that: (1) the action complained of had a natural tendency to create danger and inflict injury upon person or property, (2) the danger created was a continuing one, (3) the [defendant's] use of the land was unreasonable or unlawful, and (4) the existence of the nuisance was the proximate cause of the plaintiff's injuries and damage. In this case, the plaintiffs have stated facts necessary to bring a valid cause of action for private nuisance. The plaintiffs have stated that they have an ownership interest in the affected property. The plaintiffs have alleged injury to land and person in that they have been deprived of the quiet enjoyment of the property and there has been a diminution in value of the property as a result of the defendant's conduct. The plaintiffs have asserted that the injury is a continuing one in that they have cited repeated actions by the defendant dating back to 1988. The plaintiffs have arguably asserted the unreasonableness or unlawfulness of the defendant's conduct by alleging that the noise levels emanating from the defendant's land exceed those prescribed by state regulation, as well as that the plaintiffs are unable either to open windows or have a conversation in the house. The plaintiffs have also asserted that the defendant's actions were the cause in fact of the plaintiffs' injuries. Accordingly, the court denied the defendant's motion to dismiss count one of the plaintiffs' complaint alleging nuisance.

In general, trespass is an unlawful intrusion that interferes with another's [real] property. A trespass may be committed on, or beneath, or above the surface of the earth and the phrase "surface of the earth" includes soil, water, trees, and other growths. A trespass need not be inflicted directly on another's realty, but may be committed by discharging foreign polluting matter at a point beyond the boundary of such realty.

The defendant asserts that the plaintiffs' allegation of trespass fails to allege the requisite intent for actionable trespass. However, the *Restatement* makes clear that action taken with the substantial certainty that the activity will result in entry of foreign matter on the property of another is actionable trespass. In this case, plaintiffs assert that the defendant knew or should have known that significant amounts of dust were settling outside of the defendant's premises, including on the plaintiffs' property. The plaintiffs have satisfied the intent element for trespass.

Getty's motion to dismiss denied.

Conversion

Conversion is the defendant's intentional exercise of dominion or control over the plaintiff's personal property without the plaintiff's consent. Usually, the personal property in question is the plaintiff's goods.[5] This can happen through the defendant's: (1) *acquisition* of the plaintiff's property (e.g., theft, fraud, and even the purchase of stolen property), (2) *removal* of the plaintiff's property (e.g., taking that property to the dump or moving the plaintiff's car), (3) *transfer* of the plaintiff's property (e.g., selling stolen goods or misdelivering property), (4) *withholding possession* of the plaintiff's property (e.g., refusing to return a car one was to repair), (5) *destruction or alteration* of the plaintiff's property, and (6) *using* the plaintiff's property (e.g., driving a car left with you for storage).

In each case, the necessary intent is merely the intent to exercise dominion or control over the property.

[5]Chapters 23 and 24 discuss the distinction between personal property and real property.

Thus, it is possible for the defendant to be liable if she buys or sells stolen property in good faith. However, conversion is limited to *serious* interferences with the plaintiff's property rights. The following *McCray* case lists many of the factors courts use to determine the seriousness of the interference.

If there is a serious interference and conversion, the defendant is liable for the *full value* of the property. What happens when the interference is nonserious? Although it has largely been superseded by conversion and its elements are hazy, a tort called **trespass to personal property** may come into play here. Suppose that Dalton goes to Friendly Motors and asks to test-drive a new Ford Taurus. If Dalton either wrecks the car, causing major damage, or drives it across the United States, he is probably liable for conversion and obligated to pay Friendly Motors the reasonable value of the car. On the other hand, if Dalton is merely involved in a fender-bender, or keeps the car for eight hours, he is probably only liable for trespass. Therefore, he is only obligated to pay damages to compensate Friendly for the loss in value of the car or for its loss of use of the car.

McCray v. Carstensen *492 N.W.2d 444 (Iowa Ct. App. 1992)*

R&J Associates leased commercial real estate from T&C Associates for a one-year period beginning May 1, 1989. The lease required that T&C give R&J ten days' notice before cancellation. R&J operated the leased premises as a bar featuring seminude dancers. However, R&J discontinued the business in March 1990 after losing its dance permit. In late March and early April, T&C noticed that the bar was not open and became aware that R&J had lost its permit. Also, R&J was late on its rent payment and the utility companies were seeking to shut off service to the bar. When T&C informed R&J that its rental payments would be higher if it renewed the lease, R&J denied any interest in renewing it.

For all these reasons, T&C took possession of the premises on April 7, 1990—without giving the required 10 days' notice. On April 18, it leased those premises to a new tenant. About this time, R&J demanded the return of personal property it had left on the premises, and T&C told it to contact the new tenant, adding that there should be no problem with returning the property. After R&J did so, the new tenant told R&J to submit a list of its possessions, because others were also claiming rights to the property left on the premises.

R&J never submitted this list, and it never again contacted T&C about its possessions. Instead, it sued T&C for conversion of those possessions. After the trial court held for T&C, R&J appealed.

Hayden, Judge The fact that T&C locked R&J out of the premises does not necessarily involve sufficient interference with R&J's personal property to constitute conversion. The following factors should be considered in determining the seriousness of the interference: (a) the extent and duration of the actor's dominion or control, (b) the actor's intent to assert a right inconsistent with the other's right of control, (c) the actor's good faith, (d) the extent and duration of the resulting interference with the other's right of control, (e) the harm done to the chattel, and (f) the inconvenience and expense caused to the other.

The fact that T&C failed to provide notice of default does not alone determine whether it converted the property. The issue is whether T&C's actions so seriously interfered with R&J's rights as to require T&C to pay the full value of the property. The following facts support the conclusion that T&C is not liable.

R&J contacted T&C only one time to discuss the return of its personal property. T&C asked R&J to contact the new tenant. The new tenant merely asked R&J to provide a list of its property. R&J failed to provide such a list and never contacted T&C with any complaints about the return of its property. At all times, T&C was willing to release the property and had no intent of denying access to R&J.

T&C acted in good faith when it took possession of the premises. T&C did not assert any rights inconsistent with R&J's rights. T&C also acted in good faith through its efforts to relet the premises. Finally, the personal property of R&J was not harmed. The items still remain in the building.

We conclude that T&C never interfered so seriously as to constitute a denial of R&J's right to its personal property.

Trial court decision in T&C's favor affirmed.

Other Examples of Intentional Tort Liability

Chapter 8 discusses three additional intentional torts that protect various economic interests and often involve unfair competition. These are: *injurious falsehood* (a kind of business defamation), *intentional interference with contractual relations,* and *interference with prospective advantage.* Chapter 50 examines an intentional tortlike recovery for wrongful discharge called the *public policy* exception to employment at will. In Chapter 53, finally, this text discusses the recoveries some states allow for *bad faith breach of contract.*

Ethical and Public Policy Concerns

1. Tort law attempts to protect various individual interests by giving persons whose rights are violated by others the ability to sue for money damages. Can monetary awards, however, ever truly compensate persons who have suffered harms such as an invasion of privacy or emotional distress? If not, how do we justify such awards?

2. Safeco Plastics Corporation owns a plant upstream from Morrison's farm. Safeco periodically discharges large amounts of water into the stream, a practice which occasionally results in the flooding of Morrison's property. Assuming that it is cheaper for Safeco to pay damages to Morrison for trespass or nuisance than it is to take corrective steps to prevent the flooding, is it ethically proper for Safeco to continue to flood Morrison's land?

3. Maxwell is defamed by an article in a local newspaper as a result of careless reporting. When confronted with its error, the paper promptly apologizes and runs an article retracting the defamatory statement. Maxwell has noticed no negative effects from the article, but his lawyer advises him that he would have no trouble proving defamation by the paper and that, as a result, the paper's liability insurance company would probably be eager to settle in the event that Maxwell files suit. Should Maxwell sue?

Problems and Problem Cases

1. Betty England worked at a Dairy Queen restaurant owned by S&M Foods in Tallulah, Louisiana. One day while she was at work, her manager, Larry Garley, became upset when several incorrectly prepared hamburgers were returned by a customer. Garley expressed his dissatisfaction by throwing a hamburger that hit England on the leg. Assume that while Garley was not trying to hit England with the hamburger, he was aware that she was substantially certain to be hit as a result of his action. Also, assume that England was not harmed by the hamburger. England sued Garley for battery. Did Garley have the necessary intent for battery liability? Does England's not suffering harm defeat her battery claim?

2. Terry Brown, age 18, was an hourly worker for the Stauffer Chemical Company. His supervisor was LeRoy Mehring. One day, Mehring entered the office where Brown was working and said, "Let's go, sweetheart." After Brown told Mehring that his name was not sweetheart, Mehring replied, "O.K., sweetheart." At this, Brown called Mehring a "scab." After further exchanges between the two men, Mehring told Brown that he was fired. Brown claimed that while he was getting his things together in order to leave, "Mehring continually called me ¸sweetheart' as well as obscene names and gave me pats on the rear at different times." Is Mehring liable for battery?

3. One day, while Marcus McBryde was at his parents' home, he saw several youths in a car approaching the McBryde house. After McBryde grabbed a gun from under his parents' bed, the other youths began firing at the McBryde house. In order to scare the other youths, Marcus fired four shots toward their car. One of the four shots hit Eric Hall, who was not in the car and who lived next door to the McBryde residence. McBryde had no desire to hit Hall. Hall sued McBryde for battery. McBryde argues that the suit must fail because: (1) he did not intend to hit anyone, only to scare the youths in the car; and (2) he did not intend either to hit or to scare Hall. Are these good arguments? Why or why not?

4. Acting on information that someone had just stolen several cartons of cigarettes from the store, the manager of Harvey's Supermarket stepped outside and

approached Speight, who had walked out of the store only moments earlier. Upon being asked by the manager if he had anything that did not belong to him, Speight answered: "No, do you want to see?" He then briefly held the sides of his jacket open and let them close, at which point the manager parted the jacket with his hands to see if anything was concealed there. Was this a battery? Is the store liable for falsely imprisoning Speight?

5. After Donna Drejza was violently raped by a former boyfriend whom she had voluntarily admitted to her home, the police took her to the Department's Sex Offense Branch, where she was interviewed by Detective Michael Vaccaro. Drejza testified that Vaccaro acted obnoxiously throughout the interview, snickered at her account of the rape, and treated her with scorn, apparently because she had formerly had voluntary sexual relations with her assailant and later had voluntarily admitted him to her home. Due to Vaccaro's behavior, Drejza claimed, she suffered severe emotional distress. Under the definition in the text, would Vaccaro's behavior qualify as "outrageous"? If not, what additional factor might make it outrageous?

6. Irma White, a church-going woman in her late forties, was employed at a Monsanto refinery. While working in the canning department, she and three other employees were told to transfer a corrosive and hazardous chemical from a larger container into smaller containers. After they asked for rubber gloves and goggles, a supervisor sent for the equipment. In the meantime, White began cleaning up the work area and one of the other employees went to another area to do some work. The other two employees sat around waiting for the safety equipment, contrary to a work rule requiring employees to busy themselves in such situations.

After learning that the group was idle, Gary McDermott, the canning department foreman, went to the work station. Once there, he launched into a profane one-minute tirade directed at White and the other two workers present, calling them "motherf—s," accusing them of sitting on their "f—g asses," and threatening to "show them to the gate." At this, White became upset and began to experience pain in her chest, pounding in her head, and difficulty in breathing. Her family physician met her at the hospital, where he admitted her, fearing that she was having a heart attack. She was later diagnosed as having had an acute anxiety reaction.

White later sued Monsanto for intentional infliction of emotional distress. Was her distress sufficiently severe for liability? Was McDermott's behavior sufficiently outrageous for liability?

7. In February 1986, Lois Grimsley, a 46-year-old security inspector, unexpectedly gave birth in her home less than two days after doctors had told her that her stomach pains were nothing more than a urinary tract infection and a case of hemorrhoids. A reporter from a local newspaper interviewed Grimsley about the birth, and Grimsley provided details about it and posed for a picture with the child. The story appeared in the local paper the following day, was subsequently picked up by the Associated Press, and also appeared in several other newspapers. In July 1986, a synopsis of the article (including a photo of Grimsley and her son) appeared in the "Hard Times" section of *Penthouse* magazine (a section that the magazine describes as "a compendium of bizarre, idiotic, lurid, and ofttimes witless driblets of information culled from the nation's press") under the heading "Birth of a Hemorrhoid." Grimsley filed suit against *Penthouse* for defamation, invasion of privacy, and intentional infliction of mental distress. Should her suit succeed?

8. In September 1987, *The National Enquirer* ran an article reporting Henry Dempsey's harrowing escape from injury or death when he fell out of a small airplane while in flight but clung to the open boarding ladder of the plane, surviving his copilot's landing with only a few scratches. Dempsey had refused to be interviewed for the article, despite repeated attempts by an *Enquirer* reporter to gain an interview. The reporter allegedly came to his home twice, repeatedly drove past his home for three-quarters of an hour after the first refusal, and followed him to a restaurant where she attempted to photograph him and again requested an interview. After the article appeared, Dempsey filed suit against the *Enquirer* for invasion of privacy and intentional infliction of emotional distress. Should Dempsey's suit succeed?

9. Cynthia Cheatham creates unique clothing designs and displays them at bikers' events. At a Chillicothe, Ohio bikers' festival, Cheatham wore one of her designs. The design displayed her bottom through fishnet fabric that replaced cut-out portions of her blue jeans. Later, a drawing reproducing the picture appeared on the front of a T-shirt depicted in an advertisement for shirts made by

T-Shurte's. T-Shurte's may have sold at least several hundred T-shirts bearing the drawing. Cheatham sued T-Shurte's for all four forms of invasion of privacy. In each case, give *one* argument *against* her recovering.

10. The Blanks purchased a lot in the Indian Fork subdivision next to a lot owned by Gary Rawson. When Rawson built his home, he located a basketball goal and dog pen immediately next to the property separating the two lots. The Blanks complained to the subdivision developer that Rawson was violating the minimum setback restrictions applicable to the subdivision and were told that Rawson had received permission from the developer to do so. They then filed a nuisance suit against Rawson. At the trial, they alleged that the sound of the basketball hitting the backboard when Rawson's son played was offensive and that when he missed, the ball could come into their yard. They also stated that the dog was a large one and that the pen was not cleaned regularly, with the result that offensive odors continued to reach their property despite the 10-foot privacy fence Rawson had erected between their properties shortly after their complaint against him was filed. Was the trial judge's order forcing Rawson to remove or relocate the goal and the dog pen proper?

11. Robert Briggs and Daniel and Marcia Burke were adjoining suburban homeowners. One day, a large oak tree growing on Briggs's property suddenly fell onto the Burkes' property, causing $7,900 in damages to their garage. The cause of the tree's collapse was unclear, and Briggs denied knowledge of any condition that might have caused it to collapse. Under the test used in the text, should the Burkes sue for trespass to land or for nuisance? Can the Burkes recover? Assume that Briggs was negligent.

12. Moore was receiving treatment for hairy-cell leukemia at a university hospital. After his spleen was removed as part of that treatment, the treating physician and another university employee determined that his cells were unique. Without Moore's knowledge or consent, they applied genetic engineering techniques to his cells, producing a cell-line that they patented and marketed very successfully through agreements with a pharmaceutical company and a biotechnology firm. To further their research, they continued to monitor him and take tissue samples from him for almost seven years after his spleen was removed. When Moore discovered the truth, he filed a conversion suit against the university, which moved to dismiss his claim, arguing that he had no property right in his spleen and that, in any event, his cells were worthless without their subsequent modifications to them. Should Moore's suit survive their motion to dismiss?

13. Samsung Electronics America ran a series of advertisements prepared by David Deutsch Associates in a number of national publications. The ads were set in the 21st century and depicted a current item from the popular culture and a Samsung electronic product. The basic message was that the Samsung products would still be used in the future. One of the ads depicted a robot dressed in a wig, gown, and jewelry that Deutsch consciously selected to resemble Vanna White, the hostess of the "Wheel of Fortune" game show. The robot was posed next to a game board which was instantly recognizable as the Wheel of Fortune set, in a stance for which White is famous. The caption of the ad read: "Longest-running game show. 2012 A.D." Are Samsung and Deutsch liable to White for appropriating her name or likeness for commercial purposes?

Chapter Seven

Negligence and Strict Liability

Chapter Outline

I. Negligence
- *A. Breach of Duty*
  - *1. The Reasonable Person Standard*
  - *2. Special Duties*
  - *3. Negligence Per Se*
- *B. Injury*
  - *1. Negligent Infliction of Emotional Distress*
- *C. Causation*
  - *1. Actual Causation*
  - *2. Proximate Cause*
  - *3. Intervening Forces*
  - *4. Exceptions*
- *D. Res Ipsa Loquitur*
- *E. Negligence Defenses*
  - *1. Contributory Negligence*
  - *2. Comparative Negligence*
  - *3. Assumption of Risk*

II. Strict Liability
- *A. Abnormally Dangerous Activities*
- *B. Statutory Strict Liability*

III. Tort Reform

The Industrial Revolution that changed the face of 19th-century America created serious problems for the law of torts. Railroads, factories, machinery, and new technologies meant increased injuries to people and their property. These injuries did not fit within the intentional torts framework because most of them were unintended. In response, courts created the modern law of **negligence.**

Originally, negligence law was not very kind to injured plaintiffs. One reason, some say, was the fear that if infant industries were held responsible for all the harms they caused, the country's industrial development would be seriously retarded. With the achievement of a viable industrial economy in the 20th century, this feeling has tended to fade. Also fading over the same period was the 19th-century belief that there should be no tort liability without genuine fault on the defendant's part. More and more, the injuries compensated by tort law are now seen as the unavoidable consequences of life in a highly industrialized, high-speed, technologically advanced society. Thus, rather than worrying about fault, modern courts and legislatures sometimes impose tort liability on the party best able to bear the financial costs of these unavoidable consequences—usually, the defendant. As a result, negligence law has become more proplaintiff throughout much of this century. In some cases, moreover, courts and legislatures have imposed **strict liability**—liability without fault—on defendants. Due in part to the financial pressures this increased liability has put on defendants, however, a **tort reform** movement has emerged in recent years. Its main aim is to limit plaintiffs' ability to recover and/or the damages they can receive.

Negligence

Chapter 6 defined negligence as conduct that falls below the level necessary to protect others against unreasonable risks of harm. The elements of a negligence case—the things the plaintiff must prove to recover—are: (1) a **breach of duty** by the defendant, (2) **actual injury** suffered by the plaintiff, and (3) actual and proximate **causation** between the breach and the injury. To win, a plaintiff must also overcome any **defenses** to negligence liability raised by the defendant.

The two traditional negligence defenses are **contributory negligence** and **assumption of risk.** However, these traditional defenses are being superseded by newer defenses that go by the names **comparative negligence** and **comparative fault.**

Breach of Duty

The Reasonable Person Standard The basic idea behind negligence law is that each member of society has a duty to behave so as to avoid unreasonable risks of harm to others. This means that each of us must act like a *reasonable person of ordinary prudence in similar circumstances.* If a person's conduct falls below this standard, he has *breached a duty.* This "reasonable person" standard is *objective* in two senses of the term. First, the reasonable person is a hypothetical person with some ideal attributes—not a real human being. Second, the reasonable person standard focuses on behavior rather than on the defendant's subjective mental state. Finally, the standard is *flexible* because it lets courts tailor their decisions to the facts of the case.

How do courts determine this objective yet flexible reasonable person standard in specific cases? They consider and balance certain factors as those factors apply to the situation before them. The most important such factor is the *reasonable foreseeability* of harm. The idea is that the reasonable person acts so as to avoid reasonably foreseeable risks of harm to others. Suppose that Donald gets into an automobile accident with Peter after Donald falls asleep at the wheel. Because falling asleep at the wheel involves a foreseeable risk of harm to others, a reasonable person would not behave that way. And because Donald's conduct fell short of this behavioral standard, he has breached a duty to Peter. However, this probably would not be true if Donald's falling asleep at the wheel was due to a sudden, severe, and unforeseeable blackout. On the other hand, there probably would be a breach of duty if Donald drove the car after being warned by a doctor that he was subject to sudden blackouts.

Negligence law does not require that we protect others against all foreseeable risks of harm. Instead, the risk created by the defendant's conduct need only be an *unreasonable* one. In determining the reasonableness of the risk, courts consider other factors besides the foreseeability of harm. One such factor is the *seriousness* or *magnitude* of the foreseeable harm. As the seriousness of the harm increases, so does the duty to avoid it. Another factor is the *social utility* of the defendant's conduct. The more valuable that conduct, the less likely that it will be a breach of duty. A further consideration is the *ease or difficulty of avoiding the risk.* Negligence law normally does not require that defendants make superhuman efforts to avoid harm to others. The following *Duncan* case considers some of these factors.

To a limited extent, negligence law also considers the *personal characteristics* of the defendant. For example, children are generally required to act as would a reasonable person of similar age, intelligence, and experience under similar circumstances. People with physical disabilities must act as would a reasonable person with the same disability. Mental deficiencies, however, ordinarily do not relieve a person from the duty to conform to the normal reasonable person standard. The same is true of voluntary and negligent intoxication.

Finally, negligence law is sensitive to the *context* in which the defendant acted. For example, someone confronted with an emergency requiring rapid decisions and action need not employ the same level of caution and deliberation as someone in circumstances allowing for calm reflection and deliberate action.

Duncan v. Union Pacific Railroad Co. 790 P.2d 595 (Utah Ct. App. 1990), *affirmed,* 842 P.2d 832 (Utah Sup. Ct. 1992)

At about 8:50 P.M. one evening, a Union Pacific train struck an automobile at a crossing with Droubay Road in a rural Utah county, killing all four of the car's occupants. There was no evidence that the train was negligently operated. Three roadside signs warned oncoming motorists about the crossing. Although there were no flashing lights or other mechanical devices at the crossing, nothing obstructed a motorist's view of the tracks for several thousand feet.

The heirs of the accident victims sued Union Pacific for negligent maintenance of the crossing. The possibility that the driver of the car was at fault apparently was not an issue in the case. After Union Pacific successfully moved for summary judgment, the plaintiffs appealed.

Bullock, Senior District Judge Every railroad crossing is hazardous, but, since it is not practicable to eliminate all railroad crossings, the simple existence of a crossing is not in itself a breach of duty. Much of everyday life presents hazards; driving or walking along a street is hazardous, and so are stairs, electricity, and many other things, but we tolerate those hazards because of the impracticability of eliminating them. The question is not whether a hazard existed, but rather whether, under prevailing community standards, the defendant should bear the responsibility to discover and ameliorate a hazard, in light of the practicability of doing so and the costs and benefits to society of requiring the defendant so to act. In the case of railroad crossings, the cost of eliminating the hazard, such as by installing overpasses at all railroad crossings, including rural ones, does not warrant a duty of care so rigorous that simply having a railroad cross a street is tortious. Rather, for a railroad to be liable for a crossing mishap, there must be something about the railroad's right of way that creates a hazard to motorists greater than the hazard presented by the simple fact that the railroad and the street intersect.

It would thus be error to hold that a railroad right of way cannot cross a street. However, for such a crossing, the railroad is required to take every reasonable action to assure the safety of motorists who can reasonably be expected to cross the right of way. In determining what is reasonable under the circumstances of a specific case, the trier of fact must weigh the burden on the railroad, and indirectly on the public, of requiring added precautions, against the benefits that would be derived by the public from such precautions. For example, in [one] case, wild vegetation on the right of way obscured oncoming trains from motorists at the crossing. The cost of removing or maintaining the vegetation was minimal compared to the enormous benefit to the public of being able to see an approaching train at a frequent crossing. The imposition of a tort duty on the railroad to remove or maintain the vegetation was therefore clearly correct.

In this case, there is nothing to indicate what could have made Union Pacific's right of way safer to motorists crossing on Droubay Road. The path of the train is clearly visible to oncoming motorists. Plaintiffs suggest that Union Pacific should have placed warning signs and devices on Droubay Road, including automatic gates blocking traffic on the road from crossing the tracks when a train was approaching. It is not, however, the responsibility of the railroad to place signs and devices on the public road. The design and maintenance of state roads and the control of traffic on state roads are the Utah Department of Transportation's (UDOT's) responsibilities and prerogatives.

The net effect of this holding is that if the railroad's right of way does not negligently obscure an oncoming train, the train is properly operated, and some visible warning sign is present, then the plaintiff is not entitled to relief for an injury at the crossing. We do not consider this outcome to be harsh or unjust, although any tragedy in which life is lost or impaired is regrettable, whatever the cause.

Summary judgment in Union Pacific's favor affirmed.

Special Duties In some situations, courts have fashioned particular negligence duties rather than applying the general reasonable person standard. When performing their professional duties, for example, professionals such as doctors, lawyers, and accountants generally must exercise the knowledge, skill, and care ordinarily possessed and employed by members of the profession.[1] Also, common carriers and (sometimes) innkeepers are held to an extremely high duty of care approaching strict liability when they are sued for damaging or losing their customers' property. Many courts say that they also must exercise great caution to protect their passengers and lodgers against personal injury—especially against the foreseeable wrongful acts of third persons. This is true even though the law has long refused to recognize any general duty to aid and protect others from third-party wrongdoing unless the defendant's actions foreseeably increased the risk of such wrongdoing. Some recent decisions have imposed a duty on landlords to protect their tenants against the foreseeable criminal acts of others.

Another important set of special duties runs from possessors of land to those who enter on that land. Traditionally, the duty owed by the possessor has

[1]Chapter 45 discusses professional liability in greater detail.

depended on the classification into which the entering party fits. The three such classifications are:

1. *Invitees.* Invitees are of two general types. The first consist of "business visitors" who are invited to enter the land for a purpose connected with the possessor's business. Examples include customers, patrons, and delivery persons. The second class of invitees consists of "public invitees" who are invited to enter land that is held open to the public. Examples include people using government or municipal facilities such as parks, swimming pools, and public offices; people attending free public lectures and church services; and people responding to advertisements that something will be given away. But the entry must be for the purpose for which the land is held open. Thus, a person who enters a public library merely to meet a friend is not an invitee.

A possessor of land must exercise reasonable care for the safety of his invitees. In particular, he must protect an invitee against dangerous on-premises conditions that he knows about, or reasonably should discover, and that the invitee is unlikely to discover.

2. *Licensees.* A licensee enters the land solely for his own purposes and not in the possessor's business interest. He does, however, enter with the possessor's consent. Examples include social guests, door-to-door salespeople, those soliciting money for charity, and even those taking a shortcut across the property. As these examples suggest, often the consent is implied. In most cases, the possessor need only warn licensees of dangerous on-premises conditions that they are unlikely to discover.

3. *Trespassers.* A trespasser enters the land without its possessor's consent and without any other privilege. Traditionally, a possessor of land owed trespassers no duty to exercise reasonable care for their safety, and only a duty not to willfully and wantonly injure them once their presence was known.

Recent years have seen some tendency to erode these traditional distinctions. Some courts no longer distinguish between licensees and invitees, holding that the possessor's duties are the same in each case. Also, the courts have created additional duties that possessors owe to trespassers. For example, a higher level of care is often required for trespassers who are known to constantly enter the land, and for children who are known to be likely to trespass.

The following *Culli* case applies the traditional rule on a landowner's liability to an invitee.

Culli v. Marathon Petroleum Co. *862 F.2d 119 (7th Cir. 1988)*

Elizabeth Culli stopped at a 24-hour self-service gas station operated by Marathon Petroleum. She filled her gas tank and then picked up five eight-pack cartons of soda. After paying for the gas, she headed back toward her car. Before Culli reached her car, however, she slipped and fell on a "clearish" slippery substance in a pool approximately 8 to 10 inches in width and length. Culli suffered a compound fracture of her ankle and had to use a wheelchair and walker for several months thereafter.

At the trial of Culli's negligence suit against Marathon, the evidence indicated that the station typically was staffed by one person, who would primarily stay inside and run the cash register, and who also was responsible for replenishing supplies of the various items sold at the station. The station lot was normally swept once a day during the night shift. There was also testimony that spills generally occurred once or twice each day, and that one employee had asked the station manager to hire more help because the station was understaffed, a request that he relayed to his superiors but that went unheeded. After a jury awarded Culli $87,500, Marathon appealed.

Will, Senior District Judge The defendant owed the plaintiff invitee the duty of maintaining its property in a reasonably safe condition. This includes a duty to inspect and repair dangerous conditions on the property or give adequate warnings to prevent injury. To be liable, Marathon must have had actual or constructive notice of the dangerous condition. Both parties agree that Marathon did not have actual notice.

Constructive notice can be established under Illinois law under two alternative theories: (1) the dangerous condition existed for a sufficient amount of time so that it would have been discovered by the exercise of ordinary care, or (2) the dangerous condition was part of a pattern of conduct or a recurring incident.

In *Hresil v. Sears, Roebuck & Co.* (1980), plaintiff sought damages for injuries she suffered when she slipped on a "gob" of phlegm in the defendant's self-service store. At the time of her accident, there were few customers in the store and, due to the inactivity in the store at the place where she fell, the foreign substance could have been on the floor for at least 10 minutes. The court found that, as a matter of law, 10 minutes was not long enough to give Sears constructive notice of the gob, and "to charge the store with constructive notice would place upon the store the unfair requirement of the constant patrolling of its aisles."

Because of the lack of testimony establishing how long the substance in this case was present, we do not know if it was present for a period of time which would have placed Marathon on constructive notice of it. It could have been present for a few minutes or several hours. Under the first constructive notice theory, evidence establishing how long the particular substance was present is necessary.

Under the second constructive notice theory, what is needed is a pattern of dangerous conditions which were not attended to within a reasonable time. There was substantial evidence presented at trial establishing that there were spills on a daily basis in the pump area and that the volume of sales on the day in question made it unreasonable for Marathon to sweep the lot only at night and operate for most of the day with only one attendant who was primarily confined to the cash register. The evidence is sufficient to support the jury's verdict that Marathon's maintenance of its property was unreasonable and proximately caused Culli's injury.

Judgment for Culli affirmed.

Negligence Per Se Sometimes courts use statutes, ordinances, and administrative regulations to determine how a reasonable person would behave. Under the doctrine of **negligence per se,** the defendant's violation of such laws may create a breach of duty. In addition to the violation, the plaintiff normally must: (1) be within the class of persons intended to be protected by the statute or other law, and (2) suffer harm of a sort that the statute or other law was intended to protect against. In the following *Carman* case, the plaintiff was not within the class of persons to be protected.

Carman v. Dunaway Timber Co. *949 S.W.2d 569 (Ky. Sup. Ct. 1997)*

Louis Carman, a logger, delivered some logs to the Dunaway Timber Company. The logs were secured by three chains fastened to Carman's truck by chain binders. It was Dunaway's policy for all loggers to unchain their own loads before it would accept the logs. Once the logs were unchained, Dunaway would unload them with a front-end loader. Pursuant to this policy, Carman proceeded to remove the binders and unchain the logs once he arrived at Dunaway's place of business. During this process, a log fell from the truck and injured Carman, requiring that his leg be amputated below the knee.

Carman sued Dunaway for negligence. His claim was based on a regulation promulgated pursuant to the Kentucky Occupational Safety and Health Act. The regulation said: "Binders on logs shall not be released prior to securing with unloading lines or other unloading device." Carman argued that Dunaway could have complied with this regulation by using a front-end loader to brace the load while the logs were being unchained. After a jury trial, the trial court awarded judgment to Dunaway, and an intermediate appellate court affirmed this decision. Carman appealed to the Kentucky Supreme Court.

Cooper, Justice Under proper circumstances, violations of administrative regulations constitute negligence per se. However, in order for a violation to become negligence per se, the plaintiff must be a member of the class of persons intended to be protected by the regulation, and the injury suffered must be an event which the regulation was designed to prevent. If both questions are answered in the affirmative, negligence per se is established and the applicable regulation defines the relevant standard of care. Here, although the accident was an event which the regulation was designed to prevent, Carman was not a member of the class of persons intended to be protected.

The purpose of the Kentucky Occupational Safety and Health Act is the prevention of "any detriment to the safety and health of all employees, both public and private, covered by this chapter." Each employer [must] "furnish to each of his employees employment and a place of employment which are free from recognized hazards that are causing or are likely to cause death or serious physical harm to his employees." An "employee" [is] "any person employed." An "employer" [is] "any entity for whom a person is employed." Carman was not an employee, and certainly not Dunaway's employee; thus, he was not within the class of persons the regulations were designed to protect.

Since this is not a case in which the standard of care is supplied by the regulations, the duty owed to Carman by Dunaway must be defined by common law, i.e., that degree of care exercised by reasonable and prudent timber companies toward persons who sell and deliver logs to their places of business. The trial judge correctly permitted Dunaway to introduce evidence of custom within the industry to prove this standard of care. Carman was permitted to produce the regulation as evidence to the contrary.

Judgment in Dunaway's favor affirmed.

Injury

A plaintiff in a negligence case must prove not only that the defendant breached a duty owed to the plaintiff, but also that the plaintiff suffered actual injury, and that this injury was to an interest the law seeks to protect. Ordinarily, personal injury to the plaintiff and damage to her property meet this test. Purely monetary damage such as lost profits may sometimes qualify as well. Serious problems arise, however, when the plaintiff's injury is *emotional* in nature.[2]

Negligent Infliction of Emotional Distress As you learned in Chapter 6, the law has long been reluctant to afford recovery for purely emotional harms. This is due, among other things, to the danger of spurious claims and the difficulty of placing a monetary value on emotional injuries. Until fairly recently, most courts would not allow a plaintiff to recover for emotional injuries resulting from a defendant's negligence without some impact on or contact with the plaintiff's person. Today, many courts have abandoned this "impact rule" and allow recovery for foreseeable emotional injuries standing alone. Many such courts, however, still require proof that some serious physical injury or symptoms resulted from the plaintiff's emotional distress. Nonetheless, some other courts have dispensed with the injury requirement where the plaintiff has suffered serious emotional distress as a foreseeable consequence of the defendant's negligent conduct.

[2]Another problem of this kind, emotional distress suffered by plaintiffs who witness negligently caused harm to another person, is beyond the scope of this text.

Causation

Even if the defendant has breached a duty and the plaintiff has suffered actual injury, there is no liability for negligence without the required causal relationship between breach and injury. The causation question involves three issues: (1) was there *actual causation* between breach and injury? (2) was the breach a *proximate cause* of the injury? and (3) what was the effect of any *intervening force* arising after the breach and helping to cause the injury? Actual causation is always necessary for a negligence recovery. Proximate causation normally is necessary as well, although sometimes special "intervening force" rules may apply instead.

Actual Causation Suppose that, just as Dave breaches a duty by driving his car at 90 miles per hour on

a crowded street, Pete is injured by a falling tree limb five blocks away. If Pete sues Dave for negligence, he may have little trouble proving Dave's breach and his own injury. Yet Pete surely will not recover, because Dave's behavior was not the *actual* cause of Pete's injury. To determine the existence of actual cause, many courts employ a "but for" test. Under this test, a defendant's conduct is the actual cause of a plaintiff's injury if that injury would not have occurred except for (or but for) the defendant's breach of duty. Here, Pete's injury *would* have occurred even if Dave had not breached a duty.

In some cases, however, a person's negligent conduct may combine with another person's negligent conduct to cause a plaintiff's injury. For example, suppose that fires negligently set by Dustin and Dibble combine to burn down Potter's house. If each fire would have destroyed Potter's house on its own, the but-for test would absolve both Dustin and Dibble. In such cases, courts often ask whether each defendant's conduct was a *substantial factor* in bringing about the plaintiff's injury. Under this test, both Dustin and Dibble probably would be liable for Potter's loss.

Proximate Cause Questions of proximate cause assume the existence of actual causation. The proximate cause question arises because it seems unfair to hold a defendant liable for all the injuries actually caused by her breach—no matter how remote, bizarre, or unforeseeable they are. Thus, courts typically say that a negligent defendant is liable only for the *proximate* results of her breach. Proximate cause, then, concerns the required degree of proximity or closeness between the defendant's breach and the injury it actually caused.

The courts have not reached any substantial agreement on the test for determining the proximate cause question. In reality, that question is one of social policy. In deciding which test to adopt, a court must recognize both that negligent defendants can be exposed to catastrophic liability by a lenient test for proximate cause, and also that a restrictive test prevents some innocent victims from recovering any compensation for their losses. Courts have responded in a variety of ways to this difficult choice.

Some courts have said that a negligent defendant is liable only for the "natural and probable consequences" of his actions. Others have limited a negligent person's liability for unforeseeable injuries by saying that he is liable only to plaintiffs who are within the "scope of the foreseeable risk." Although this rule is often characterized as a rule of causation, actually it is a rule limiting the defendant's *duty,* because courts adopting the rule hold that a defendant owes no duty to those to whom he cannot foresee any injury. In still another approach to the proximate cause question, the *Restatement (Second) of Torts* suggests that a defendant's negligence is not the legal cause of a plaintiff's injury if, looking back after the harm, it appears "highly extraordinary" to the court that the defendant's breach should have brought about the plaintiff's injury.[3] Adopting yet a further approach, the following *Republic of France* case asks whether the plaintiff's injury was a foreseeable consequence of the defendant's breach. Under this approach, courts first find or assume a breach of duty, and then ask whether, given that breach, the injury was foreseeable.

[3] *Restatement (Second) of Torts* § 435(2) (1965).

Republic of France v. United States *290 F.2d 395 (5th Cir. 1961)*

On April 16, 1947, the SS Grandchamp, *a cargo ship owned by the Republic of France and operated by the French Line, was loading a cargo of Fertilizer Grade Ammonium Nitrate (FGAN) at Texas City, Texas. A fire began on board the ship, apparently as a result of a cigarette or match carelessly discarded by a longshoreman in one of the ship's holds. Despite attempts to put it out, the fire spread quickly. A little over an hour after the fire was first discovered, the* Grandchamp *exploded with tremendous force. Fire and burning debris spread throughout the waterfront, touching off further fires and explosions in other ships, refineries, gasoline storage tanks, and chemical plants. When the conflagration was over, 500 people had been killed, and more than 3,000 had been injured. The evidence indicated that even though ammonium nitrate was known throughout the transportation industry as an oxidizing agent and as a fire hazard, no one aboard the* Grandchamp *made any attempt to prevent smoking in the ship's holds.*

Numerous lawsuits were filed after the incident. In the following opinion, treat the United States (which paid out considerable sums to victims of the disaster) as the plaintiff, and the Republic of France and the French Line as defendants. At trial, the defendants had argued that they should not be liable for claims arising out of the explosion because FGAN was not known to be capable of exploding under the circumstances of this case. When the federal district court rejected their petition for limitation of liability, they appealed.

Rives, Circuit Judge In Texas, as elsewhere, not only proximate causal connection but also the very existence of a duty depends upon reasonable foreseeability of consequences. The test of whether a negligent act or omission is a proximate cause of an injury is whether the wrongdoer might by the exercise of ordinary care have foreseen that some similar injury might result from the negligence.

The United States argues with much force that the district court found that fault or negligence of the owners caused the fire and permitted it to increase in intensity, and that the fire caused the disastrous explosion. It insists that that causal connection is sufficient. The fallacy in that chain of argument is that it is only the operation of natural forces theretofore recognized as normal which one is charged with foreseeing.

The district court found it "undoubtedly true that the force and devastating effects of this explosion shocked and surprised the scientific field as well as the transportation industry." The court further found as to ammonium nitrate, which constituted approximately 95 percent of the FGAN, and which, with the benefit of hindsight, we now know to be the explosive part of the mixture:

> Despite its use as a principal ingredient of high explosives, at the time of the disaster ammonium nitrate was not, and is not now, classified as an "explosive" for transportation purposes by the Interstate Commerce Commission or the Coast Guard. This is true because it was considered that to cause the detonation of ammonium nitrate, an initial shock or "booster" of considerable magnitude was required. The chances of such an initial or booster detonation being encountered in normal conditions of transportation has always been considered so remote as to be negligible.

Substantially all of the evidence is to the effect that the explosion, as distinguished from the fire, could not reasonably have been foreseen.

It would be ironic indeed if the United States were permitted to impose liability for these claims on the Republic of France and the French Line by claiming now that the officials and employees of the French Government and the master of the *Grandchamp* should have known that FGAN was a dangerous explosive and that an explosion from fire should reasonably have been anticipated.

Judgment reversed in favor of the defendants.

Intervening Forces In some cases, an *intervening force* (or intervening cause) occurring *after* a defendant's negligence may play a significant role in bringing about the plaintiff's injury. For example, suppose that after Davis sets a fire, a high wind springs up and spreads the fire to Parker's home, or that after Davis negligently runs Parker down with his car, a thief steals Parker's wallet while he lies unconscious. If the intervening force is a *foreseeable* one, it usually will not relieve the defendant from liability. So, if high winds are a reasonably common occurrence in the locality, Davis probably is liable for the damage to Parker's home even though his fire would not have spread that far under the wind conditions that existed when he started it. Likewise, in our second example, Davis probably is liable for the theft of Parker's wallet if the theft is foreseeable, given the time and location of the accident.

On the other hand, if the intervening force that contributes to the plaintiff's injury is *unforeseeable,* most courts hold that it is a superseding cause that absolves the defendant of any liability for negligence. For example, Dalton negligently starts a fire that causes injury to several persons. The driver of an ambulance summoned to the scene has been drinking on duty and, as a result, loses control of his ambulance and runs up onto a sidewalk, injuring several pedestrians. Most courts would not hold Dalton responsible for the pedestrians' injuries.

One important exception to this second rule concerns unforeseeable intervening causes that produce a

harm that is foreseeable because it is identical to the harm risked by the defendant's negligence. Why should the defendant escape liability because an all-too-foreseeable consequence of its conduct came about through unforeseeable means? For example, if the owners of a concert hall negligently fail to install the number of emergency exits required by law, the owners will not escape liability to those burned and trampled during a fire just because that fire was caused by an insane concert-goer who set himself ablaze.

Exceptions Whatever test for proximate cause a court adopts, most courts agree on certain basic causation rules. In case of a conflict, these rules supersede the proximate cause and intervening force rules stated earlier. One such rule is that persons guilty of negligence "take their victims as they find them." This means that a negligent defendant is liable for the full extent of his victim's injuries if those injuries are aggravated by some preexisting physical susceptibility of the victim—even though this susceptibility could not have been foreseen. Similarly, negligent defendants normally are liable for diseases contracted by their victims while in a weakened state caused by their injuries. They are *jointly* liable—along with the attending physician—for negligent medical care that their victims receive for their injuries.

Also, negligent defendants ordinarily are responsible for injuries sustained by persons seeking to avoid being injured by the defendant's negligence. For example, if Peters swerves to avoid being hit by Denning's negligently driven car and in the process loses control of her own car and is injured, Denning is liable for Peters's injuries. Finally, it is commonly said that "danger invites rescue." This means that negligent persons are liable to those injured in a nonreckless attempt to rescue the victims of their negligence. This is true even if the rescue attempt was unforeseeable. As a general rule, such nonreckless rescuers also beat the various "contributory fault" defenses discussed later in the chapter.

Res Ipsa Loquitur

In some cases, negligence may be difficult to prove because the defendant has superior knowledge of the circumstances surrounding the plaintiff's injury. It may not be in the defendant's best interests to disclose those circumstances if they point to liability on his part. The classic example is *Byrne v. Boadle,* where a pedestrian was hit on the head by a barrel of flour that fell from a warehouse owned by the defendant.[4] The victim had no way of knowing what caused the barrel to fall; he merely knew he had been injured. The only people likely to have known the relevant facts were the owners of the warehouse and their employees, but they most likely were the ones responsible for the accident. After observing that "[a] barrel could not roll out of a warehouse without some negligence," the English court required the defendant owner to show that he was not at fault.

Byrne v. Boadle eventually led to the doctrine of ***res ipsa loquitur*** ("the thing speaks for itself"). *Res ipsa* applies when: (1) the defendant has exclusive control of the instrumentality of harm (and therefore probable knowledge of, and responsibility for, the cause of the harm), (2) the harm that occurred would not ordinarily occur in the absence of negligence, and (3) the plaintiff was in no way responsible for his own injury. What happens when these three elements are satisfied? The answers vary from state to state, but usually this creates an inference or presumption of negligence and causation. In general, the defendant runs a significant risk of losing the case if he does not produce evidence to rebut this inference or presumption.

Negligence Defenses

The common law traditionally recognized two defenses to negligence: **contributory negligence** and **assumption of risk.** In many states, however, one or both of these traditional defenses has been superseded by new defenses called **comparative negligence** and **comparative fault.**

Contributory Negligence Contributory negligence is the plaintiff's failure to exercise reasonable care for her own safety. Where it still applies, contributory negligence is a complete defense for the defendant if it is a substantial factor in producing the plaintiff's injury. So, if Parker steps into the path of Dworkin's speeding car without first checking to see whether any cars are coming, Parker would be denied any recovery against Dworkin due to the clear causal relationship between his injury and his failure to exercise reasonable care for his own safety. But if Parker is injured one night when his speeding car crashes into a

[4] 2 H. & C. 722 (Eng. 1863).

large, unmarked hole in a city street, and if the accident would have occurred even had Parker been driving at a legal speed, he is not barred from recovering against the city for its negligence.

Traditionally, a contributorily negligent plaintiff could overcome an otherwise-valid contributory negligence defense by showing that the defendant had the **last clear chance** to avoid the injury. The doctrine of last clear chance focuses on who was last at fault in time. Therefore, if, despite the plaintiff's contributory negligence, the harm could have been avoided had the defendant exercised reasonable care, the defendant's superior opportunity to avoid the accident makes him more at fault and justifies imposing liability upon him. For example, Preston pulls into the path of Durban's speeding car without looking, causing an accident. When Preston sues, Durban argues that Preston's behavior is contributory negligence. But if Preston can convince the court that Durban had the last clear chance of avoiding the accident, Preston will beat Durban's contributory negligence defense. This might involve demonstrating that Durban was reasonably aware of Preston's plight, had time to act, and had a reasonable option available to him.

Comparative Negligence Traditionally, even a minor failure to exercise reasonable care for one's own safety—only a slight departure from the standard of reasonable self-protectiveness—gave the defendant a complete contributory negligence defense. This rule, which some say resulted from the 19th-century desire to protect railroads and infant manufacturing interests from negligence liability, came under increasing attack in the 20th century. The main reasons are the all-or-nothing situation the traditional rule creates and its harsh impact on many plaintiffs. For example, the rule may prevent slightly negligent plaintiffs from recovering any compensation for their losses, while only marginally more careful plaintiffs get a full recovery.

In response to such complaints, most of the states have adopted **comparative negligence** systems either by statute or by judicial decision. The details of these systems vary, but the principle underlying them is essentially the same: Courts seek to determine the relative negligence of the parties and award damages in proportion to the degree of negligence determined. The formula is:

$$\text{Plaintiff's recovery} = \text{Defendant's percentage share of the negligence causing the injury} \times \text{Plaintiff's provable damages}$$

For example, assume that Dunne negligently injures Porter and Porter suffers $10,000 in damages. A jury determines that Dunne was 80 percent at fault and Porter 20 percent at fault. Under comparative negligence, Porter could recover only $8,000 from Dunne. But what if Dunne's share of the negligence is determined to be 40 percent and Porter's 60 percent? Here, the results vary depending on whether the state in question has adopted a *pure* or a *mixed* comparative negligence system. Under a pure system, courts apply the preceding formula no matter what the plaintiff's and the defendant's percentage shares of the negligence; thus, Porter would recover $4,000 in a pure comparative negligence state. Under a mixed system, the formula operates only when the defendant's share of the negligence is greater than (or, in some states, greater than or equal to) 50 percent. Otherwise, the traditional rule operates. In such states, therefore, Porter would recover nothing. Figure 1 summarizes the rules discussed in this section.

Figure 1 *Plaintiff's Recovery under Contributory and Comparative Negligence Systems*

Plaintiff's Relative Fault	Contributory Negligence	Comparative Negligence (Pure)	Comparative Negligence (Mixed)
0%	100%	100%	100%
10	0	90	90
60	0	40	0
90	0	10	0

Assumption of Risk Assumption of risk is the plaintiff's *voluntary* consent to a *known* danger. Voluntariness basically means that the plaintiff accepted the risk of her own free will; knowledge means that the nature and extent of the risk was subjectively present to the plaintiff's consciousness. Often, the plaintiff's knowledge and voluntariness are implied from the facts of the case. For example, Pilson voluntarily goes for a ride in Dudley's car, even though Dudley has told Pilson that her car's brakes are not working properly. Pilson probably has assumed the risk of injury from the car's defective brakes.

A plaintiff can also expressly assume the risk of injury by entering a contract purporting to relieve the defendant of a duty of care that he would otherwise owe to the plaintiff. Such contract provisions are called *exculpatory clauses.* Chapter 15 discusses exculpatory clauses and the numerous limitations that courts have imposed on their enforceability. The most important such limitations are that the plaintiff have knowledge of the exculpatory clause (which often boils down to a question of its conspicuousness), and that the plaintiff must accept it voluntarily (which does not happen when the defendant has greatly superior bargaining power).

What happens to assumption of risk in comparative negligence states? Some of these states have eliminated assumption of risk as a separate defense. Some comparative negligence states have also eliminated the traditional doctrine of last clear chance. But how can such rules, which have important policy justifications, be completely discarded? Thus, assumption of risk and last clear chance often are incorporated within the state's comparative negligence scheme. In such states, comparative negligence basically becomes **comparative fault.** Although the terms comparative negligence and comparative fault often are used interchangeably, technically the former involves only negligence and the latter involves all kinds of fault. In a comparative fault state, therefore, the fact finder determines the plaintiff's and the defendant's relative shares of the fault—including assumption of risk and last clear chance—causing the plaintiff's injury.

The following *Jones* case is a straightforward application of traditional assumption of risk. In the *Davenport* case which follows *Jones,* the court made assumption of risk part of the state's mixed comparative negligence scheme (effectively making it comparative fault). Note, however, that this was not true for express assumption of risk.

Jones v. Kappa Alpha Order, Inc. *730 So. 2d 203 (Ala. Sup. Ct. 1998)*

Jason Jones enrolled at Auburn University in 1993. In September of that year, he became a pledge at the Kappa Alpha fraternity (KA). Over the next year, KA's brothers hazed Jones in various ways, including: (1) making him jump into a ditch filled with urine, feces, dinner leftovers, and vomit; (2) paddling his buttocks; (3) pushing and kicking him; (4) making him run a gauntlet in which he was pushed, hit, and kicked some more; and (5) making him attend 2:00 A.M. hazing meetings. Jones continued to participate in these and other hazing activities until he was eventually suspended from Auburn for poor academic performance. Even though he knew that 20 to 40 percent of his pledge class withdrew from the pledge program, Jones kept on because he wanted to become a full member of KA.

In October of 1995, however, Jones sued the national and local KA organizations for, among other things, negligent hazing in violation of a state criminal antihazing statute. The trial court granted the defendants' motion for summary judgment on these claims. The intermediate appellate court affirmed the trial court as to the national organization, but reversed it as to the local chapter. It held that the local chapter's violation of the antihazing statute was negligence per se, and that the question of whether Jones assumed the risks of hazing was for the jury. KA appealed to the Alabama Supreme Court.

See, Justice The general principle of assumption of risk is that a plaintiff who voluntarily assumes a risk of harm arising from the negligent or reckless conduct of the defendant cannot recover for such harm. Assumption of risk has two subjective elements: (1) the plaintiff's knowledge and appreciation of the risk; and (2) the plaintiff's voluntary exposure to that risk. In order to find as a matter of law

that Jones assumed the risk, this court must determine that Jones knew and appreciated the risks of hazing and that he voluntarily exposed himself to those risks.

This court has previously held that the knowledge-and-awareness element of assumption of risk was satisfied where a worker who was injured when he slipped on ice had known that the ice was present on the floor but continued working, [and where] a person entered a vehicle with knowledge that the door latch was defective and conscious of the hazards involved in doing so. Given Jones's early introduction to the practice of hazing and its hazards, the trial court correctly determined that Jones knew of and appreciated the risks of hazing.

KA [also] argues that Jones voluntarily exposed himself to the hazing. Jones responds by arguing that a coercive environment hampered his free will to the extent that he could not voluntarily choose to leave the fraternity. In reversing the summary judgment, [the intermediate appellate court] stated: "In today's society numerous college students are confronted with the great pressures associated with fraternity life and . . . compliance with the initiation requirements places the students in a position of functioning in what may be construed as a coercive environment."

The record indicates that Jones voluntarily chose to continue his participation in the hazing. After numerous hazing events, Jones continued to come back for more two o'clock meetings, more paddlings, and more gauntlet runs, and did so for a full academic year. Moreover, we are not convinced by Jones's argument that peer pressure created a coercive environment that prevented him from exercising free choice. Jones had reached the age of majority when he enrolled at Auburn. College students and fraternity members are not children. Save for very few legal exceptions, they are adult citizens, ready, able, and willing to be responsible for their own actions. Thus, even for college students, the privileges of liberty are wrapped up in the obligations of responsibility. As a responsible adult in the eyes of the law, Jones cannot be heard to argue that peer pressure prevented him from leaving the very hazing activities that, he admits, several of his peers left.

Intermediate appellate court decision reversed. Case returned to the trial court for proceedings not inconsistent with the Supreme Court's opinion.

Davenport v. Cotton Hope Plantation *508 S.E.2d 565 (S.C. Sup. Ct. 1998)*

Alvin Davenport, who leased a condominium at the Cotton Hope Plantation on Hilton Head Island, South Carolina, complained to Cotton Hope that the floodlights at the bottom of the stairway to his unit were not working. Before Cotton Hope got around to fixing the floodlights, Davenport was injured when he tried to descend the stairway one night. Specifically, he fell after attempting to place his foot on what appeared to be a step but actually was a shadow caused by the inoperative floodlight.

Davenport sued Cotton Hope in negligence in a South Carolina trial court. The trial court directed a verdict against him because he had assumed the risk of his injury, and, in the alternative, because he was more than 50 percent at fault in causing the injury. After Davenport appealed, the intermediate appellate court reversed, holding that under South Carolina's comparative negligence system, assumption of risk no longer was an independent defense, that it instead was just a factor to be considered in determining the parties' relative fault, and that that issue should have gone to the jury. Cotton Hope appealed to the South Carolina Supreme Court.

Toal, Judge A threshold question is whether assumption of risk survives as a complete bar to recovery under South Carolina's comparative negligence system. In 1991, we adopted a modified version of comparative negligence. Under this system, a plaintiff in a negligence action may recover damages if his or her negligence is not greater than that of the defendant. Not so clear was what would become of assumption of risk.

An overwhelming majority of jurisdictions that have adopted some form of comparative negligence have abolished assumption of risk as an absolute bar

to recovery. In analyzing the continuing viability of assumption of risk in a comparative negligence system, many courts distinguish between express assumption of risk and implied assumption of risk. Express assumption of risk applies when the parties expressly agree in advance, either in writing or orally, that the plaintiff will relieve the defendant of his or her legal duty toward the plaintiff. Even in those comparative fault jurisdictions that have abrogated assumption of risk, the rule remains that express assumption of risk continues as an absolute defense in an action for negligence. The reason is that express assumption of risk sounds in contract, not tort, and is based upon an express manifestation of consent. Implied assumption of risk arises when the plaintiff implicitly, rather than expressly, assumes known risks.

It is contrary to the basic premise of our fault system to allow a defendant, who is at fault in causing an accident, to escape bearing any of its cost, while requiring a plaintiff, who is no more than equally at fault, to bear all of its costs. The defendant's fault is not diminished solely because the plaintiff knowingly assumes a risk. In our comparative fault system, it would be incongruous to absolve the defendant of all liability based only on whether the plaintiff assumed the risk of injury. Comparative negligence seeks to assess and compare the negligence of both the plaintiff and the defendant. This goal would clearly be thwarted by adhering to the common law defense of assumption of risk. Our conclusion that the absolute defense of assumption of risk is inconsistent with South Carolina's comparative negligence system is buttressed by our recent opinion in *Spahn v. Town of Port Royal* (1998), [where] we held that last clear chance had been subsumed by our adoption of comparative negligence. We therefore hold that a plaintiff is not barred from recovery by assumption of risk unless the degree of fault arising therefrom is greater than the negligence of the defendant.

Cotton Hope argues that we should affirm the trial court's ruling that, as a matter of law, Davenport was more than 50 percent negligent. The trial court based its ruling on the fact that Davenport knew of the danger weeks before his accident, and had a safe alternate route. However, there also was evidence suggesting that Cotton Hope was negligent in failing to properly maintain the lighting in the stairway. It could be reasonably concluded that Davenport's negligence in proceeding down the stairway did not exceed Cotton Hope's negligence. Thus, [that issue] is properly submitted for jury determination.

Court of Appeals decision returning the case to the trial court affirmed.

Strict Liability

Strict liability is liability without fault or irrespective of fault. This means that in strict liability cases, the defendant is liable even though he did not intend to cause the harm and did not bring it about through his recklessness or negligence. Also, defendants in strict liability cases traditionally have had fewer defenses to liability than defendants in negligence cases.

The imposition of strict liability is a social policy decision that the risk associated with an activity should be borne by those who pursue it, rather than by innocent people who are exposed to that risk. Such liability has been justified either by the defendant's voluntary decision to engage in a particularly risky activity or, more recently, by the defendant's superior ability to bear losses. Thus, corporations are often thought superior to individuals as risk bearers because they can pass the costs of liability on to consumers in the form of higher prices for goods or services. Through strict liability, therefore, the economic costs created by certain harms are transferred from the victims to defendants to society at large, or "socialized." This strategy often is called *risk spreading* or *socialization of risk.*

When does strict liability apply? The owners of trespassing livestock and the keepers of naturally dangerous wild animals were among the first classes of defendants on whom the courts imposed strict liability. Today, the two most important activities subject to judicially imposed strict liability are abnormally dangerous (or ultrahazardous) activities and the manufacture or sale of defective and unreasonably dangerous products. We discuss the latter in Chapter 20 and the former

immediately below. After that, this chapter briefly examines some forms of statutory strict liability.

Abnormally Dangerous Activities

Abnormally dangerous (or ultrahazardous) activities are activities that necessarily involve a risk of harm to others that cannot be eliminated by the exercise of reasonable care. Among the activities treated as abnormally dangerous are blasting, crop dusting, stunt flying, and, in one case, the transportation of large quantities of gasoline by truck. The following *Klein* case discusses the numerous factors that courts sometimes consider before deciding whether a particular activity should be classified as abnormally dangerous. Traditionally, contributory negligence has not been a defense in ultrahazardous activity cases, but assumption of risk has been a defense.

Klein v. Pyrodyne Corporation *810 P.2d 917 (Wash. Sup. Ct. 1991)*

Pyrodyne Corporation was hired to display the fireworks at the Western Washington State Fairgrounds in Puyallup, Washington, on July 4, 1987. During the display, one of the 5-inch mortars was knocked into a horizontal position, from which position a rocket inside ignited and flew 500 feet parallel to the earth, exploding near the crowd of onlookers. Danny and Marion Klein were injured by the explosion. They filed a strict liability suit against Pyrodyne. They also argued that Pyrodyne failed to carry out a number of the statutory and regulatory requirements for preparing and setting off fireworks. Pyrodyne argued that the accident was caused by a rocket detonating in its mortar tube without ever leaving the ground, causing another rocket to be knocked over, ignited, and set off horizontally. Pyrodyne moved for summary judgment on the ground that negligence principles should be applied to the case. When the trial court denied its motion and found it strictly liable, Pyrodyne appealed.

Guy, Justice The modern doctrine of strict liability for abnormally dangerous activities derives from *Rylands v. Fletcher* (Eng. 1866), in which the defendant's reservoir flooded mine shafts on the plaintiff's adjoining land. *Rylands v. Fletcher* has come to stand for the rule that the defendant will be liable when he damages another by a thing or activity unduly dangerous and inappropriate to the place where it is maintained, in the light of the character of that place and its surroundings.

The basic principle of *Rylands v. Fletcher* has been accepted by the *Restatement (Second) of Torts.* Section 519 of the *Restatement* provides that any party carrying on an "abnormally dangerous activity" is strictly liable for the ensuing damages. Section 520 of the *Restatement* lists six factors that are to be considered in determining whether an activity is "abnormally dangerous": (a) a high degree of risk of some harm to the person, land, or chattels of others; (b) the likelihood that the harm that results from it will be great; (c) an inability to eliminate the risk by the exercise of reasonable care; (d) the extent to which the activity is not a matter of common usage; (e) the inappropriateness of the activity to the place where it is carried on; and (f) the extent to which its value to the community is outweighed by its dangerous attributes. The comments to section 520 explain how these factors should be evaluated: "Any one of them is not necessarily sufficient of itself in a particular case, and ordinarily several of them will be required for strict liability. On the other hand, it is not necessary that each of them be present, especially if others weigh heavily."

We find that the factors stated in clauses (a), (b), and (c) are all present in the case of fireworks displays. Any time a person ignites rockets with the intention of sending them aloft to explode in the presence of large crowds of people, a high risk of serious personal injury or property damage is created. That risk arises because of the possibility that a rocket will malfunction or be misdirected. Furthermore, no matter how much care pyrotechnicians exercise, they cannot entirely eliminate the high risk inherent in setting off powerful explosives near crowds.

Pyrodyne argues that the factor stated in clause (d) is not met because fireworks are a common way to celebrate the 4th of July. Although fireworks are

frequently and regularly enjoyed by the public, few persons set off special fireworks displays. Indeed, anyone wishing to do so must first obtain a license.

The Puyallup Fairgrounds is an appropriate place for the fireworks show because the audience can be seated at a reasonable distance from the display. Therefore, the clause (e) factor is not present in this case. The factor in clause (f) requires analysis of the extent to which the value of the fireworks to the community outweighs its dangerous attributes. This country has a longstanding tradition of fireworks on the 4th of July. That tradition suggests that we have decided that the value of fireworks on the day celebrating our national independence and unity outweighs the risks of injuries and damage.

In sum, we find that setting off public fireworks displays satisfies four of the six conditions under the *Restatement* test. We therefore hold that conducting public fireworks displays is an abnormally dangerous activity justifying the imposition of strict liability.

Judgment for the Kleins affirmed.

Statutory Strict Liability

Strict liability principles are also embodied in modern legislation. The most important examples are the workers' compensation acts passed by most states early in this century, which Chapter 50 discusses in detail. Such statutes allow employees to recover statutorily limited amounts from their employers without any fault on the employer's part or any contributory fault on the employee's part. Employers participate in a compulsory liability insurance system and are expected to pass the costs of the system on to consumers, who then become the ultimate bearers of the human costs of industrial production. Other examples of statutory strict liability include the dram shop statutes of some states, which impose liability on sellers of alcoholic beverages without proof of negligence when third parties are harmed due to a buyer's intoxication. Also included is the statutory strict liability that some states impose on the operators of aircraft for ground damage resulting from aviation accidents.

Tort Reform

The risk-spreading strategy just described has not been trouble-free. Over the past 20 years or so, there has been considerable talk about a crisis in the liability insurance system. From time to time over that period, the insurance system has been marked by outright refusals of coverage, reductions in coverage, and escalating premiums when coverage remains available. To some, this intermittent liability insurance crisis is largely the fault of the insurance industry. Among other things, such people argue that insurers have manufactured the crisis to get unjustified premium increases and to divert attention from insurer mismanagement of invested premium income.

To other observers, however, the reason for the crisis is the explosion in tort liability that has occurred in recent years. Examples include the tendency toward greater imposition of strict liability, increases in the frequency and size of punitive damage awards, and similar increases in awards for noneconomic harms such as pain and suffering. The greater costs this explosion imposes on defendants, these observers say, naturally increase the price and diminish the availability of liability insurance. In some cases, therefore, businesses may be required to self-insure or to "go naked" without insurance coverage. In others, they may be able to obtain insurance—but only at a price that cannot be completely passed on to consumers. Where the costs can be fully passed on, the argument continues, they depress the economy by diminishing consumers' purchasing power, adding to inflation, or both. In addition, our argument concludes, the liability explosion impedes the development of new products and technologies that might result in huge awards for injured plaintiffs.

These beliefs have fueled a movement for tort reform. By the mid-1990s, most states had enacted some form of tort reform legislation. Such legislation typically follows one or both of two strategies: (1) limiting defendants' tort *liability* (plaintiffs' ability to get a judgment), and (2) limiting the *damages* plaintiffs can recover once they get a judgment. One example of the former is legislation restricting the liability of social hosts or businesses for the damage caused by intoxicated people to whom they serve alcohol. Perhaps the

most common examples of the latter are statutory caps or other limits on recoveries for punitive damages and noneconomic harm.

In addition, local governments in many states now enjoy statutory limits on their liability for negligence, affording them partial relief from negligence claims for improper maintenance of streets and traffic signals—claims that sometimes accompany automobile accident cases. Likewise, physicians in a number of states have received some relief from spiraling liability costs by devices such as caps on the amount recoverable in liability suits and mandatory pretrial mediation of all claims over a prescribed threshold.

The battle for tort reform is far from over, however. Tort reform opponents who lost the fight against tort reform in the legislature have continued it in the courts. They have done so primarily by challenging tort reform measures on state constitutional grounds. Such challenges have succeeded in some states and have been rebuffed in others.

Ethical and Public Policy Concerns

1. In the famous case of *Palsgraf v. Long Island Railroad,* the plaintiff was injured when a late-boarding train passenger dropped a package of fireworks he was carrying as he attempted to board a train that was pulling out of the station. Two railroad employees were trying to help him board, one pulling and one pushing. The package was jostled loose and exploded on impact. The concussion from the explosion caused some scales to fall on the victim, who was standing several feet away from the action. The defendant railroad escaped liability to the victim because the court found it had no duty to her because its employees could not reasonably have foreseen that they were endangering her by their actions. Yet plainly the harm would not have occurred had the railroad's employees refused to allow the passenger to try to board a moving train. Even if the railroad had no legal duty to Palsgraf, did it have any ethical duty to her?

2. Implicit in the idea of proximate cause is the fact that a negligent defendant can be the actual cause of some plaintiffs' injuries but avoid any liability for those injuries because his negligence was not the proximate cause of such injuries. Is the doctrine of proximate cause ethically justifiable?

3. While proximate cause allows defendants to avoid responsibility for some consequences of their negligence, strict liability imposes liability on persons who participate in abnormally dangerous activities even though they exercised all possible care to avoid injuring anyone. Can such liability be ethically justified?

Problems and Problem Cases

1. The Citizens for Bob Olexo Campaign Committee rented three tanks of helium from James Dawes Company. The helium was to be used to fill balloons that were to be handed out to the public during the Belmont County Fair. Although the agreement with Dawes called for the Committee to return the used cylinders, they were left at the fairgrounds leaning up against a commercial building. Philip C. Jeffers III, age 14, attended a football game at the fairgrounds, where he and some friends discovered the tanks. Despite the warning on the tanks, which said "CAUTION! HIGH PRESSURE GAS. CAN CAUSE RAPID SUFFOCATION," Jeffers inhaled some helium from one of the tanks, collapsed and died. Jeffers's father sued the Dawes Company, which moved for a summary judgment on a number of grounds, among which was the argument that it owed no duty to Jeffers. Should Dawes's motion be granted?

2. A young man abducted R.M.V., age 10, from the sidewalk in front of her home and dragged her across the street to a vacant apartment at the Chalmette Apartments. He raped her, put her in the closet, told her not to leave, and disappeared. The apartment in question was described by the police officer called to the scene as "empty, filthy, dirty, and full of debris." Glass was broken from its windows and the front door was off its hinges. In the two years prior to the attack on R.M.V., Dallas police had investigated many serious crimes committed at the Chalmette Apartments complex. A Dallas City Ordinance established minimum standards for property owners, requiring them, among other things, to "keep the doors and windows of a vacant structure or vacant portion of a structure securely closed to prevent unauthorized entry." Gaile Nixon, R.M.V.'s mother, filed a negligence suit against Chalmette's owner and Mr. Property Management Company, Inc., the manager of the complex. Were the defendants correct in arguing that they owed no duty to R.M.V.?

3. Ludmila Hresil and her niece were shopping at a Sears retail store. There were few shoppers in the store at the time. Hresil spent about ten minutes in the store's women's department, where she observed no other shoppers. After Hresil's niece completed a purchase in another part of the store, the two women began to walk through the women's department. Hresil, who was pushing a shopping cart, suddenly lost her balance and struggled to avoid a fall. As she did so, her right leg struck the shopping cart and began to swell. Hresil observed a "gob" on the floor where she had slipped. Later, a Sears employee said that "it looked like someone spat on the floor, like it was phlegm." Under the reasonable person standard, did Sears breach a duty to Hresil by not cleaning up the gob? *Hint:* Assume that Hresil could prove that the gob was on the floor only for the ten minutes she spent in the women's department.

4. After a collision between a dump truck and a car at the intersection of two North Carolina roads, the dump truck traveled about 130 feet before hitting a GTE South telephone booth in a grocery store parking lot adjoining one of the roads. The booth was located within the right-of-way for the road it adjoined. Inside the booth was Laura Baldwin, who suffered injuries when the dump truck struck the booth. The North Carolina Department of Transportation had adopted the following regulation: "Telephone pay-station booths or other commercial telephone installations are not permitted on highway rights-of-way, except in rest areas or truck weigh stations." If Baldwin sues GTE South under negligence per se, will she win? Assume that it can be proven beyond the shadow of a doubt that the regulation was intended only to protect motorists who stray from the highway against collisions with phone booths.

5. Higgins and some friends went to a night baseball game at Comiskey Park in Chicago. Near the end of the game, Higgins went to the men's room. On his way back to his seat, he walked down a corridor that ran past a concession stand. As he passed the stand, the door to the front of the stand (a 4′ by 6′ sheet of plywood attached to the top of the stand and hooked to an eyelet in the ceiling when opened) fell from its open position and struck him on the head, causing permanent head and neck injuries. None of the eyewitnesses to the incident saw anyone touch either the door or the hook securing it, or do anything that might have caused the door to fall. There was, however, testimony that, just before the door fell, the crowd in the stadium was screaming and stamping, and that one "could feel the place tremble." Higgins sued the Chicago White Sox, owners of the stadium, arguing that *res ipsa loquitur* should be applied to the case. Was he right?

6. Frank Bills was injured when he fell on the exterior landing of his apartment building during a snow and ice storm. The landing was covered with a thin coat of ice. Bills sued his landlord, Willow Run 1 Apartments, in negligence. He argued that his fall would not have occurred if the landing had complied with a local building code. The preface to the building code stated that it was "dedicated to the development of better building construction and greater safety to the public." However, the exact nature of Willow Run's alleged building code violation was unclear. Assuming that Willow Run had violated some building code provision, did it breach a duty to Bills here? If it did breach a duty, what other issue would remain for resolution?

7. A vehicle driven by Solomon Bomze collided with a vehicle driven by Tu Loi at an intersection in the parking lot of a shopping mall leased and operated by New Plan Realty Trust. The accident occurred because Bomze failed to stop at the intersection. A stop sign previously placed at the crossing had been vandalized the day before the accident, and New Plan had not yet replaced it. However, the word "stop" was painted in yellow on the asphalt of the lane followed by Bomze. After the initial collision, Tu Loi left his car to check it for damage. In the meantime, Bomze's car continued in a circular fashion, struck a parked car, and then headed toward Tu Loi, eventually pinning him against his own car and causing him serious injury. Assume that New Plan breached a duty to Tu Loi by not immediately replacing the sign. But New Plan argues that it is not liable because the weird behavior of Bomze's car after the impact makes that car an unforeseeable intervening force. Is this a good argument?

8. Allen Beckett, a fourth-year player on his high school baseball team, was injured when he collided with another player during outfielder practice. The accident occurred after the coach conducting the practice hit a fly ball to Beckett. Beckett called for the ball, but the wind was blowing so hard that neither the coach nor the other players heard him. The coach called for another player to catch the ball, and that player and Beckett collided head-on. Beckett's jaw was broken, and he

filed suit against the school, arguing that it had failed to warn him of the danger of such collisions, failed to adequately supervise the practice, and had conducted the practice in an unreasonably dangerous manner. At one point in his testimony Beckett denied that he had ever heard of baseball players colliding and said that he had no knowledge of any accidents happening on baseball fields. Under cross-examination, however, he admitted that his coaches had repeatedly stressed communication among players to avoid accidents, that it was possible on such a windy day for his voice to have gotten lost in the wind, and that the same type of thing could have happened in a game. Was the trial court summary judgment in favor of the school proper?

9. Charles Roggow, a truck driver, made a delivery of scrap aluminum to a processing plant owned by the Mineral Processing Corporation. After making the delivery, Roggow was to pick up an unloaded trailer. Because Mineral Processing's employees had failed to secure the header bar of the trailer (the part that secures the sides of the trailer to prevent damaging vibration), Roggow had to fasten the bar before leaving the plant. The pin securing the bar had to be set in place at the very top of the trailer, but Mineral Processing had no ladder available. Consequently, Tracy Phillips, a Mineral Processing employee, offered to assist Roggow by placing him in the bucket of a high-loader and raising him high enough to set the bar in place. Roggow accepted the offer and succeeded in fastening the header bar, but as Phillips was lowering him to the ground, Phillips's sleeve caught the high-loader's dump lever, causing the bucket to overturn and Roggow to fall approximately nine feet onto a concrete floor.

Roggow sued Mineral Processing in negligence for his resulting injuries. After a trial, the jury found Roggow's damages to be $80,000, but reduced his award to $48,000 because they found him to be 40 percent at fault. Roggow moved for a new trial, arguing, among other things, that the trial court erred in refusing to instruct the jury on traditional last clear chance, which would have wiped out the defendant's contributory negligence defense. What will be the result under a comparative fault statute with a broad definition of "fault"?

10. On January 9, 1979, a railroad car leased by American Cyanamid (American) and containing 20,000 gallons of acrylonitrile manufactured by American, began leaking. At the time, the car was sitting just south of Chicago in the Blue Island yard of the Indiana Harbor Belt Railroad (Indiana) awaiting switching to Conrail for delivery to its final destination. Indiana's employees stopped the leak but were uncertain about how much of the car's contents had escaped. Because acrylonitrile is flammable, highly toxic, and possibly carcinogenic, Illinois authorities ordered homes near the yard temporarily evacuated. Later, it was discovered that only about a quarter of the car's contents had leaked, but the Illinois Department of Environmental Protection, fearing that the soil and water had been contaminated, ordered Indiana to take decontamination measures costing $981,000. Indiana sued American on negligence and strict liability theories seeking to recover its expenses. Evidence introduced at the trial included a list of 125 hazardous materials that are shipped in highest volume on the nation's railroads. Acrylonitrile was the 53rd most hazardous on the list. Was the trial court's entry of summary judgment for Indiana on the strict liability claim proper?

11. Mark Brown sustained serious burns when his rental home was destroyed by a fire. The fire began when Brown attempted to light his oil stove and unknowingly ignited underground natural gas leaking into his home from a damaged gas line several blocks away. The gas leak was caused years earlier, when a firm laying underground telephone cable damaged a gas transmission line owned by Washington Water Power (WWP). Brown sued WWP in strict liability. Under the *Restatement* factors discussed in the *Klein* case, should WWP be liable on the theory that natural gas transmission is an abnormally dangerous activity?

Chapter 8

Intellectual Property and Unfair Competition

Chapter Outline

I. **Protection of Intellectual Property**
- A. *Patents*
  - 1. *What Is Patentable?*
  - 2. *Obtaining a Patent*
  - 3. *Ownership and Transfer of Patent Rights*
  - 4. *Patent Infringement*
  - 5. *Defenses to Patent Infringement*
- B. *Copyrights*
  - 1. *Coverage*
  - 2. *Creation and Notice*
  - 3. *Duration*
  - 4. *Ownership Rights*
  - 5. *Infringement*
  - 6. *The Fair Use Defense*
- C. *Trademarks*
  - 1. *Protected Marks*
  - 2. *Distinctiveness*
  - 3. *Federal Registration*
  - 4. *Transfer of Rights*
  - 5. *Losing Federal Trademark Protection*
  - 6. *Trademark Infringement*
  - 7. *Trademark Dilution*
  - 8. *Cybersquatting Prevention*

II. **Trade Secrets**
- A. *Definition of a Trade Secret*
- B. *Ownership and Transfer of Trade Secrets*
- C. *Misappropriation of Trade Secrets*

III. **Commercial Torts**
- A. *Injurious Falsehood*
  - 1. *Elements and Damages*
  - 2. *Injurious Falsehood and Defamation*
- B. *Interference with Contractual Relations*
- C. *Interference with Prospective Advantage*

IV. **Lanham Act Section 43 (a)**

This chapter discusses certain legal rules that limit free competition by allowing civil recoveries for abuses of that freedom. These abuses are: (1) infringement of intellectual property rights protected by patent, copyright, and trademark law; (2) the misappropriation of trade secrets; (3) the intentional torts of injurious falsehood, interference with contractual relations, and interference with prospective advantage; and (4) the various forms of unfair competition attacked by section 43(a) of the Lanham Act. Indeed, the term *unfair competition* describes the whole chapter. In general, competition is deemed unfair because: (1) it discourages creative endeavor by robbing creative people of the fruits of their innovations, or (2) it renders commercial life too uncivilized for the law to tolerate.

Protection of Intellectual Property

Patents

A patent may be viewed as an agreement between an inventor and the federal government. Under that agreement, the inventor obtains the exclusive right (for a

limited time) to make, use, and sell his invention, in return for making the invention public by giving the government certain information about it. The patent holder's (or **patentee's**) monopoly encourages the creation and disclosure of inventions by stopping third parties from appropriating them once they become public. However, third parties may develop the invention in ways that do not interfere with the patentee's rights.

What Is Patentable? An inventor may patent: (1) a *process* (a mode of treatment of certain materials to produce a given result), (2) a *machine,* (3) a *manufacture* or product, (4) a *composition of matter* (a combination of elements with qualities not present in the elements taken individually, such as a new chemical compound), (5) an *improvement* of any of the above, (6) an *ornamental design* for a product, and (7) a *plant* produced by asexual reproduction. Naturally occurring things (e.g., a new wild plant) are not patentable. In addition, abstract ideas, scientific laws, and other mental concepts are not patentable, although their practical applications often are. In *Diamond v. Diehr,*[1] for instance, the Supreme Court held that a computer program may be patentable if it is part of a patentable process.[2]

Even though an invention fits within one of the above categories, it is not patentable if it lacks novelty, is obvious, or has no utility, or if the patent applicant is an inappropriate applicant.[3] One aspect of the *novelty* requirement is the rule that no patent should be issued where *before the invention's creation* it has been: (1) known or used in the United States, (2) patented in the United States or a foreign country, or (3) described in a printed publication in the United States or a foreign country. Another aspect is the requirement that no patent should be issued if more than one year before the *patent application* the invention was: (1) patented in the United States or a foreign country, (2) described in a printed publication in the United States or a foreign country, or (3) in public use or on sale in the United States. The *Pfaff* case, which follows shortly, deals with the rule just noted.

In addition, there can be no patent if the invention would have been *obvious* to a person having ordinary skill in the area. A patentable invention must also have *utility,* or usefulness. Finally, there can be no patent if the applicant did not create the invention in question, or if she abandoned the invention. *Creation* problems frequently arise where several people allegedly contributed to the invention. *Abandonment* may be by express statement, such as publicly devoting an invention to humanity, or by implication from conduct, such as delaying for an unreasonable length of time before making a patent application.

Obtaining a Patent The Patent and Trademark Office of the Department of Commerce handles patent applications. The application must include a *specification* describing the invention with sufficient detail and clarity to enable a person skilled in the relevant field to make and use the invention. The application must also contain a *drawing* when this is necessary for understanding the subject matter to be patented. The Patent Office then determines whether the invention meets the various tests for patentability. If the application is rejected, the applicant may resubmit it. Once any of the applicant's claims have been rejected twice, the applicant may appeal to the Office's Board of Patent Appeals and Interferences. Subsequent appeals to the federal courts are also possible.

[1] 450 U.S. 175 (U.S. Sup. Ct. 1981).
[2] As discussed later in this chapter, computer programs may obtain copyright and trade secret protection.
[3] Plant and design patents are subject to requirements that are slightly different from those stated here.

Pfaff v. Wells Electronics, Inc. *525 U.S. 55 (1998)*

Wayne Pfaff began development work on a new computer chip socket in November 1980. He prepared detailed engineering drawings that described the design and dimensions of the socket and the materials to be used in making it. Pfaff sent the drawings to a manufacturer in February or March 1981. Prior to March 17, 1981, he showed a sketch of his concept to representatives of Texas Instruments. On April 8, 1981, the Texas Instruments representatives provided Pfaff a written confirmation of a previously placed oral purchase order for 30,100 of the new sockets. The total purchase price was $91,155. In accordance with his usual business practice, Pfaff did not make and test a prototype of the socket before offering to sell it.

The manufacturer to which Pfaff sent his drawings took a few months to develop the customized tooling necessary to produce the socket. The first actual sockets were not produced until the summer of 1981. Pfaff filled the Texas Instruments order in July 1981. Other orders followed, as the socket became a commercial success. On April 19, 1982, Pfaff applied for a patent on the socket. A patent was issued to him in January 1985. Pfaff later filed an infringement action against Wells Electronics, Inc., which produced a competing socket. Wells Electronics argued that Pfaff's patent was invalid under section 102(b) of the Patent Act of 1952, which states that a patent cannot be obtained for an invention if it has been "on sale" for more than a year before the filing of the patent application.

The federal district court rejected Wells Electronics' section 102(b) defense because Pfaff had filed the patent application less than a year after reducing the invention to practice (i.e., less than a year after the first actual sockets were produced and available for sale). The district court held Wells Electronics liable for infringement but the U.S. Court of Appeals for the Federal Circuit reversed. The Court of Appeals held that Pfaff's patent was invalid because the socket had been offered for sale on a commercial basis more than a year before the filing of the patent application. The U.S. Supreme Court granted certiorari.

Stevens, Justice Section 102(b) of the Patent Act of 1952 provides that no person is entitled to patent an "invention" that has been "on sale" for more than one year before filing a patent application. We granted certiorari to determine whether the commercial marketing of a newly invented product may mark the beginning of the one-year period even though the invention has not yet been reduced to practice.

On April 19, 1982, Pfaff filed an application for a patent on the computer chip socket. Therefore, April 19, 1981 constitutes the critical date for purposes of the on-sale bar of section 102(b); if the one-year period began to run before that date, Pfaff lost his right to patent his invention.

The primary meaning of the word "invention" in the Patent Act unquestionably refers to the inventor's conception rather than to a physical embodiment of the idea. The statute does not contain any express requirement that an invention must be reduced to practice before it can be patented. Neither the statutory definition of the term nor the basic conditions for obtaining a patent make any mention of "reduction to practice."

It is well settled that an invention may be patented before it is reduced to practice. In 1888, this Court upheld a patent issued to Alexander Graham Bell even though he had filed his application before constructing a working telephone. [In upholding the issuance of the patent to Bell, the Court stated:]

> The law does not require that a discoverer or inventor, in order to get a patent for a process, must have succeeded in bringing his art to the highest degree of perfection. It is enough if he describes his method with sufficient clearness and precision to enable those skilled in the matter to understand what the process is, and if he points out some practicable way of putting it into operation.

The Telephone Cases, 126 U.S. 1 (1888).

When we apply the reasoning of *The Telephone Cases* to the facts of the case before us today, it is evident that Pfaff could have obtained a patent on his novel socket when he accepted the purchase order from Texas Instruments for 30,100 units. At that time he provided the manufacturer with a description and drawings that had "sufficient clearness and precision to enable those skilled in the matter" to produce the device. The parties agree that the sockets manufactured to fill that order embody Pfaff's conception. We can find no basis in the text of section 102(b) or in the facts of this case for concluding that Pfaff's invention was not "on sale" within the meaning of the statute until after it has been reduced to practice.

When Pfaff accepted the purchase order for his new sockets prior to April 8, 1981, his invention was ready for patenting. The fact that the manufacturer was able to produce the socket using his detailed drawings and specifications demonstrates this fact. Furthermore, those sockets contained all the elements of the invention claimed in the patent. Therefore, Pfaff's patent is invalid because the invention had been on sale for more than one year in this country before he filed his patent application.

Judgment of Court of Appeals affirmed.

Ownership and Transfer of Patent Rights Until a relatively recent change in federal law, a patent normally gave the patentee exclusive rights to make, use, and sell the patented invention for 17 years from the date the patent was granted. In order to bring the United States into compliance with the General Agreement on Tariffs and Trade (an international agreement commonly known as GATT), Congress amended the patent law to provide that the patentee's exclusive rights to make, use, and sell the patented invention generally exist until the expiration of 20 years from the date the patent application was filed. This duration rule applies to patents that result from applications filed on or after June 8, 1995. (A design patent, however, exists for 14 years from the date it was granted.) A 1999 enactment of Congress allowed for the possible extension of a patent's duration if the Patent Office delayed an unreasonably long time in acting on and approving the patentee's application.

The patentee may transfer ownership of the patent by making a written *assignment* of it to another party. Alternatively, the patentee may retain ownership and *license* others to exercise some or all of the patent rights.

Usually, the party who created the invention is the patent holder. What happens, however, when the creator of the invention is an employee and her employer seeks rights in the invention? If the invention was developed by an employee *hired to do inventive or creative work,* she must use the invention solely for the employer's benefit and must assign any patents she obtains to the employer. If the employee was hired for purposes *other than invention or creation,* however, she owns any patent she acquires. Finally, regardless of the purpose for which the employee was hired, the *shop right* doctrine gives the employer a nonexclusive, royalty-free *license* to use the employee's invention if it was created on company time and through the use of company facilities. Any patent the employee might retain is still effective against parties other than the employer.

Patent Infringement Patent infringement occurs when a defendant, without authorization from the patentee, takes action that usurps any of the patentee's rights to make, use, and sell the patented invention. Infringement may be established under principles of *literal* infringement or under a judicially developed approach known as the *doctrine of equivalents.* Infringement is literal in nature when the subject matter made, used, or sold by the defendant clearly falls within the stated terms of the claim of invention set forth in the patentee's specification. Under the doctrine of equivalents, a defendant may be held liable for infringement even though the subject matter he made, used, or sold contained elements that were not identical to those described in the patentee's claim of invention, if the elements of the defendant's subject matter nonetheless may be seen as equivalent to those of the patented invention. A traditional formulation of the test posed by the doctrine of equivalents is whether the alleged infringer's subject matter performs substantially the same function as the protected invention in substantially the same way, in order to obtain the same result.

Recently, an alleged infringer sought to convince the Supreme Court to abolish the doctrine of equivalents on the ground that it effectively allows patentees to extend the scope of patent protection beyond the stated terms approved by the Patent Office when it issued the patent. In *Warner-Jenkinson Co. v. Hilton Davis Chemical Co.,*[4] however, the Court rejected this attack on the doctrine. The Court observed that in view of courts' longstanding use of the doctrine (use in which Congress seemingly acquiesced by not legislatively prohibiting it), arguments for abolishing the doctrine would be better addressed to Congress. The *Warner-Jenkinson* Court did acknowledge, however, that overly broad application of the doctrine of equivalents could lead to an unwarranted expansion of patent owners' rights. Therefore, the Court held that the doctrine of equivalents must be applied to the *individual elements* of the patentee's claim of invention rather than to the patentee's invention *as a whole.*

One who *actively induces* another's infringement of a patent is liable as an infringer if he knows and intends that the infringement occur. For example, if Ingram directly infringes Paxton's patent on a machine and Doyle knowingly sold Ingram an instruction manual for the machine, Doyle may be liable as an infringer. Finally, if one knowingly sells a direct patent infringer a component of a patented invention or something useful in employing a patented process, the seller may be liable for *contributory infringement.* Here, the thing sold must be a material part of the invention and must not be a staple article of commerce with some other significant use. Suppose that Irving directly infringes Potter's patent for a radio by selling virtually identical radios. If Davis sells Irving sophisticated circuitry for the radios with knowledge of Irving's infringement, Davis may be

[4] 520 U.S. 17 (U.S. Sup. Ct. 1997).

liable for contributory infringement, assuming that the circuitry is an important component of the radios and has no other significant uses.

The basic recovery for patent infringement is damages adequate to compensate for the infringement, plus court costs and interest. The damages cannot be less than a reasonable royalty for the use made of the invention by the infringer. The court may in its discretion award damages of up to three times those actually suffered. Finally, injunctive relief is available, and attorney's fees may be awarded in exceptional cases.

Defenses to Patent Infringement One defense to a patent infringement suit is that the subject matter of the alleged infringement is neither within the literal scope of the patent nor substantially equivalent to the patented invention. The alleged infringer may also defend by attacking the validity of the patent. Despite having been approved by the Patent and Trademark Office, patents are sometimes declared invalid when challenged in court.

In appropriate cases, the defendant can assert that the patentee has committed *patent misuse.* This is behavior that unjustifiably exploits the patent monopoly. For example, the patentee may require the purchaser of a license on his patent to buy his unpatented goods, or may tie the obtaining of a license on one of his patented inventions to the purchase of a license on another.[5] One who refuses the patentee's terms and later infringes the patent may attempt to escape liability by arguing that the patentee misused his monopoly position.

Copyrights

Copyright law gives certain exclusive rights to creators of *original works of authorship.* It prevents others from using their work, gives them an incentive to innovate, and thereby benefits society. Yet copyright law also tries to balance these purposes against the equally compelling public interest in the free movement of ideas, information, and commerce. It does so mainly by limiting the intellectual products it protects and by allowing the fair use defense described later.

Coverage The federal Copyright Act protects a wide range of works of authorship, including books, periodical articles, dramatic and musical compositions, works of art, motion pictures, sound recordings, lectures, computer programs, and architectural plans. To merit copyright protection, such works must be *fixed*—set out in a tangible medium of expression from which they can be perceived, reproduced, or communicated. They also must be *original* (the author's own work) and *creative* (reflecting exercise of the creator's judgment). Unlike the inventions protected by patent law, however, copyrightable works need not be novel.

Copyright protection does not extend to ideas, facts, procedures, processes, systems, methods of operation, concepts, principles, or discoveries *as such.* However, it may protect the *forms and ways in which they are expressed.* The story line of a play, for instance, is protected, but the ideas, themes, or messages underlying it are not. Although there is no copyright protection over facts, the expression in nonfiction works and compilations of fact is protected.

Computer programs involve their own special problems. It is fairly well settled that copyright law protects a program's *object code* (program instructions that are machine-readable but not intelligible to humans) and *source code* (instructions intelligible to humans). But there is less agreement about the copyrightability of a program's nonliteral elements such as its organization, its structure, and its presentation of information on the screen. Most of the courts that have considered the issue hold that nonliteral elements may sometimes be protected by copyright law, but courts differ about the extent of this protection.

Creation and Notice A copyright comes into existence upon the creation and fixing of a protected work. Although a copyright owner may register the copyright with the Copyright Office of the Library of Congress, registration is not necessary for the copyright to exist. However, registration normally is a procedural prerequisite to filing a suit for copyright infringement. Even though it is not required, copyright owners often provide *notice* of the copyright. Federal law authorizes a basic form of notice for use with most copyrighted works. A book, for example, might include the term *Copyright* (or the abbreviation *Copr.* or the symbol©), the year of its first publication, and the name of the copyright owner in a location likely to give reasonable notice to readers.

Duration Article I, Section 8 of the U.S. Constitution empowers Congress to enact copyright and patent laws that "secur[e] for limited Times to Authors and

[5]Some forms of patent misuse may be antitrust violations. Chapter 49 discusses the interaction between patent law and antitrust law.

Inventors the exclusive Right to their respective Writings and Discoveries." Thus, copyrights and patents cannot last forever. Even so, the history of copyright protection in the United States has featured various significant lengthenings of the "limited time" a copyright endures. When a copyright's duration ends, the underlying work enters the public domain and becomes available for any uses other parties wish to make of it. The former copyright owner, therefore, loses control over the work and forfeits what had been valuable legal rights.

With the enactment of the Sonny Bono Copyright Term Extension Act (hereinafter "CTEA") in late 1998, Congress conferred a substantial benefit on copyright owners. The CTEA added 20 years to the duration of copyrights, not only for works created after the CTEA's enactment *but also for any preexisting work that was still under valid copyright protection* as of the CTEA's October 1998 effective date. Copyright owners—especially some whose copyrights on older works would soon have expired if not for the enactment of the CTEA—mounted a significant lobbying effort in favor of the term extension provided by the CTEA.

The CTEA's effect cannot be understood without discussion of the copyright duration rules that existed immediately before the CTEA's enactment. One set of rules applied to works created in 1978 or thereafter; another set applied to pre-1978 works. The copyright on pre-1978 works was good for a term of 28 years from first publication of the work, plus a renewal term of 47 years. (The renewal term had been only 28 years until Congress changed the law roughly a quarter-century ago and added 19 more years to the renewal term for any work then under valid copyright protection.) As a result, 75 years of protection was available for pre-1978 works.

For works created in 1978 or thereafter, Congress scrapped the initial-term-plus-renewal-term approach, opting instead for a normally applicable rule that the copyright lasts for the life of the author/creator plus 50 years. This basic duration rule did not apply, however, if the copyrighted work, though created in 1978 or thereafter, was a work-for-hire. (The two types of work-for-hire will be explained below.) In a work-for-hire situation, the copyright would exist for 75 years from first publication of the work or 100 years from creation of it, whichever came first.

The CTEA tacked on 20 years to the durations contemplated by the rules discussed in the preceding two paragraphs. A pre-1978 work that was still under valid copyright protection as of late 1998 (when the CTEA took effect) now has a total protection period of 95 years from first publication—a 28-year initial term plus a renewal term that has been lengthened from 47 to 67 years. The copyright on Disney's "Steamboat Willie" cartoon—best-known for its introduction of the famous Mickey Mouse character—serves as an example. The protection period for the Steamboat Willie copyright began to run in the late 1920s, when the cartoon was released and distributed (i.e., published, for purposes of copyright law). Given the rule that existed immediately before the CTEA's enactment (an initial term of 28 years plus a renewal term of 47 years), the Steamboat Willie copyright would have expired within the first few years of the current century. The CTEA, however, gave Disney an additional 20 years of rights over the Steamboat Willie cartoon before it would pass into the public domain.

With the enactment of the CTEA, the basic duration rule for works created in 1978 or thereafter is now life of the author/creator plus 70 years (up from 50). The duration rule for a work-for-hire is now 95 years from first publication (up from 75) or 120 years from creation (up from 100), whichever comes first.

A work-for-hire exists when: (1) an employee, in the course of her regular employment duties, prepares a copyrightable work; or (2) an individual or corporation and an independent contractor (i.e., nonemployee) enter into a written agreement under which the independent contractor is to prepare, for the retaining individual or corporation, one of several types of copyrightable works designated in the Copyright Act. In the first situation, the employer is legally classified as the work's author and copyright owner. In the second situation, the party who (or which) retained the independent contractor is considered the resulting work's author and copyright owner.

Ownership Rights A copyright owner has exclusive rights to reproduce the copyrighted work, prepare derivative works based on it (e.g., a movie version of a novel), and distribute copies of the work by sale or otherwise. With certain copyrighted works, the copyright owner also obtains the exclusive right to perform the work or display it publicly. Copyright ownership initially resides in the creator of the copyrighted work, but the copyright may be transferred to another party. Also, the owner may individually transfer any of the listed rights, or a portion of each, without losing ownership of the remaining rights. Most transfers of copyright ownership require a writing signed by the owner or his agent. The owner may also retain ownership while licensing the copyrighted work or a portion of it.

Infringement Those who violate any of the copyright owner's exclusive rights may be liable for copyright infringement. Infringement is fairly easily proven when direct evidence of significant copying exists; verbatim copying of protected material is an example. Usually, however, proof of infringement involves establishing that: (1) the defendant had *access* to the copyrighted work; (2) the defendant engaged in enough *copying*—either deliberately or subconsciously—that the resemblance between the allegedly infringing work and the copyrighted work does not seem coincidental; and (3) there is *substantial similarity* between the two works.

Access may be proven circumstantially, such as by showing that the copyrighted work was widely circulated. The copying and substantial similarity elements, which closely relate to each other, necessarily involve discretionary case-by-case determinations. Of course, the copying and substantial similarity must exist with regard to the copyrighted work's protected expression. Copying of general ideas, facts, themes, and the like (i.e., copying of unprotected matter) is not infringement. The defendant's having paraphrased protected expression does not constitute a defense to what otherwise appears to be infringement. Neither does the defendant's having credited the copyrighted work as the source from which the defendant borrowed.

Recent years' technological advances and the explosion in Internet usage have led to difficult copyright questions. For instance, the MP3 technology allows relatively easy downloading of musical recordings in digital files. Owners of copyrights on songs and recordings have expressed concern that consumers' growing use of the MP3 technology and sharing of MP3 files may lead to copyright violations that would be widespread but very difficult to detect or stop. As a result, record companies have begun exploring ways in which they might use the MP3 technology to their advantage.

Another Internet-related issue deals with how narrowly or broadly to define the class of parties potentially liable for copyright infringement. If, without Osborne's consent, Jennings posts Osborne's copyrighted material on an electronic bulletin board operated by Devaney, is only Jennings liable to Osborne, or is Devaney also liable? In the 1998 Digital Millennium Copyright Act, Congress enacted "safe harbor" provisions designed to protect many service providers (such as Devaney in this hypothetical) from liability for the actions of direct infringers who posted or transmitted copyrighted material. The Digital Millennium Copyright Act also outlawed, with some exceptions, the circumvention of technological measures (e.g., scrambling, encryption, or similar devices) that control access to a copyrighted work.

The basic recovery for copyright infringement is the owner's actual damages plus the attributable profits received by the infringer. In lieu of the basic remedy, however, the plaintiff may usually elect to receive *statutory damages.* The statutory damages set by the trial judge or jury must fall within the range of $500 to $20,000 unless the infringement was willful, in which event the maximum rises to $100,000. These limits do not apply if the plaintiff elects the basic remedy, however. Injunctive relief and awards of costs and attorney's fees are possible in appropriate cases. Although it seldom does so, the federal government may pursue a criminal copyright infringement prosecution if the infringement was willful and for purposes of commercial advantage or private financial gain.

The Fair Use Defense The fair use defense to a copyright infringement suit requires the weighing of factors whose application varies from case to case. These factors are: (1) the purpose and character of the use, (2) the nature of the copyrighted work, (3) the amount and substantiality of the portion used in relation to the copyrighted work as a whole, and (4) the effect of the use on the potential market for the copyrighted work or on its value. *Campbell v. Acuff-Rose Music, Inc.,* which follows, discusses the reasons for the fair use defense and applies the fair use factors in the context of an allegedly infringing parody of a copyrighted song.

Campbell v. Acuff-Rose Music, Inc. *510 U.S. 569 (U.S. Sup. Ct. 1994)*

In 1964, Roy Orbison and William Dees wrote a song titled "Oh, Pretty Woman." They assigned their rights in the song to Acuff-Rose Music, Inc., the copyright owner at all times relevant to this case. In 1989, Luther Campbell, a member of the rap music group known as 2 Live Crew, wrote a parodic version of "Oh, Pretty Woman." The group sought Acuff-Rose's permission to use the parody on an album. Despite Acuff-Rose's

denial of permission, 2 Live Crew used the parody on the "As Clean As They Wanna Be" album. Roughly a year after this recording was released (and approximately 250,000 copies had been sold), Acuff-Rose sued 2 Live Crew and its record company for copyright infringement. The federal district court granted summary judgment to the defendants on the ground of fair use. The Sixth Circuit Court of Appeals reversed, holding that the defendants were not entitled to the fair use defense. The U.S. Supreme Court granted certiorari.

Souter, Justice It is uncontested that 2 Live Crew's song would be an infringement . . . , but for a finding of fair use. The fair use doctrine . . . "permits [and requires] courts to avoid rigid application of the copyright statute when, on occasion, it would stifle the very creativity which that law is designed to foster" (quoting *Stewart v. Abend* [1990]).

The first factor in a fair use enquiry is "the purpose and character of the use, including whether such use is of a commercial nature or is for nonprofit educational purposes" (quoting Copyright Act, section 107). The enquiry here may be guided by the examples given in . . . section 107, looking to whether the use is for criticism, or comment, or news reporting, and the like. The central purpose of this investigation is to see . . . whether the new work [reflects] a further purpose or different character, altering the [original work] with new expression, meaning, or message; it asks, in other words, whether . . . the new work is "transformative." Although such transformative use is not absolutely necessary for a finding of fair use, . . . transformative works . . . lie at the heart of the fair use doctrine's guarantee of breathing space within the confines of copyright. [T]he more transformative the new work, the less will be the significance of other factors, like commercialism, that may weigh against a finding of fair use.

[P]arody has an obvious claim to transformative value. [I]t can provide social benefit, by shedding light on an earlier work and, in the process, creating a new one. We thus line up with the courts that have held that parody, like other comment or criticism, may claim fair use under section 107. If, [however], the commentary has no critical bearing on the substance or style of the original composition, which the alleged infringer merely uses to get attention or to avoid the drudgery in working up something fresh, the claim to fairness in borrowing from another's work diminishes accordingly (if it does not vanish), and other facts, like the extent of its commerciality, loom larger.

Parody needs to mimic an original to make its point, and so has some claim to use the creation of its victim's . . . imagination. The fact that parody can claim legitimacy for some appropriation does not, [however], tell either parodist or judge much about where to draw the line. [P]arody may or may not be fair use, and . . . , like any other use, [must] be judged case by case.

We have less difficulty in finding [criticism of the original] in 2 Live Crew's song than the Court of Appeals did, although having found it we will not . . . evaluat[e] its quality. Whether . . . parody is in good taste or bad does not . . . matter to fair use. While we might not assign a high rank to the parodic elements here, we think it fair to say that 2 Live Crew's song reasonably could be perceived as commenting on the original. 2 Live Crew juxtaposes the romantic musings of a man whose fantasy comes true, with degrading taunts, a bawdy demand for sex, and a sigh of relief from paternal responsibility. The later words can be taken as a comment on the naivete of the original [and] as a rejection of its sentiment that ignores the ugliness of street life and the debasement that it signifies.

The Court of Appeals, however, immediately cut short the enquiry into 2 Live Crew's fair use claim by confining its treatment of the first factor [to] the commercial nature of the use. In giving virtually dispositive weight to the commercial nature of the parody, the Court of Appeals erred. The language of the statute makes clear that the commercial or nonprofit educational purpose of a work is only one element of the first factor enquiry. Congress resisted [efforts to create] categories of presumptively fair use. Accordingly, the mere fact that a use is educational and not for profit does not insulate it from a finding of infringement, any more than the commercial character of a use bars a finding of fairness.

If, indeed, commerciality carried presumptive force against a finding of fairness, the presumption would swallow nearly all of the illustrative uses listed in . . . section 107, including news reporting, comment, criticism, teaching, scholarship, and research, since those activities are generally conducted for profit in this country. Congress could not

have intended such a rule. [Commercial use merely] "tends to weigh against a finding of fair use" (quoting *Harper & Row Publishers, Inc. v. Nation Enterprises* [1985]). But that is all, and the fact that even the force of that tendency will vary with the context is a further reason against elevating commerciality to hard presumptive significance. The use, for example, of a copyrighted work to advertise a product, even in a parody, will be entitled to less indulgence . . . than the sale of a parody for its own sake.

The second statutory factor, "the nature of the copyrighted work," [recognizes] that some works are closer to the core of intended copyright protection than others, with the consequence that fair use is more difficult to establish when the former works are copied. [T]he Orbison original's creative expression for public dissemination falls within [this] core. [Such a conclusion furnishes little help, however] in separating the fair use sheep from the infringing goats in a parody case, since parodies almost invariably copy from publicly known, expressive works.

The third factor asks whether "the amount and substantiality of the portion used in relation to the copyrighted work as a whole" are reasonable in relation to the purpose of the copying (quoting section 107). The Court of Appeals is . . . correct that this factor calls for thought not only about the quantity of the materials used, but about their quality and importance, too. In *Harper & Row,* for example, *The Nation* [a magazine] had taken only some 300 words out of President Ford's memoirs, but we signalled the significance of the question in finding them to amount to "the heart of the book." We also agree with the Court of Appeals that whether a "substantial portion of the infringing work was copied verbatim" . . . is a relevant question.

Where we part company with the court below is in applying these guides to parody. Parody's humor, or in any event its comment, necessarily springs from recognizable allusion to its object through distorted imitation. Its art lies in the tension between a known original and its parodic twin. When parody takes aim at a particular original work, the parody must be able to "conjure up" at least enough of that original to make the object of its critical wit recognizable. What makes for this recognition is quotation of the original's most distinctive or memorable features, which the parodist can be sure the audience will know.

[T]he Court of Appeals was insufficiently appreciative of parody's need for the recognizable sight or sound when it ruled 2 Live Crew's use unreasonable as a matter of law. [I]f quotation of the opening riff and the first line [of "Oh, Pretty Woman"] may be said to go to the "heart" of the original, the heart is also what most readily conjures up the song for parody. Copying does not become excessive in relation to parodic purpose merely because the portion taken was the original's heart. If 2 Live Crew had copied a significantly less memorable part . . . , it is difficult to see how its parodic character would have come through.

This is not, of course, to say that anyone who calls himself a parodist can skim the cream and get away scot free. [T]he question of fairness asks what else the parodist did besides [borrow from] the original. It is significant that 2 Live Crew not only copied the first line . . . , but thereafter departed markedly from the Orbison lyrics for its own ends. 2 Live Crew not only copied the bass riff and repeated it, but also produced otherwise distinctive sounds, [added] solos in different keys, and alter[ed] the drum beat. [A]s to the lyrics, we think the Court of Appeals correctly suggested that "no more was taken than necessary." As to the music, we express no opinion whether repetition of the bass riff is excessive copying, and we remand to permit evaluation of the amount taken, in light of the song's parodic purpose and character, its transformative elements, and consideration of the potential for market substitution.

The fourth fair use factor is "the effect of the use upon the potential market for or value of the copyrighted work" (quoting section 107). The enquiry "must take account not only of harm to the original but also of harm to the market for derivative works" (quoting *Harper & Row*). The [Court of Appeals] reasoned that because "the use of the copyrighted work is wholly commercial, we presume a likelihood of future harm to Acuff-Rose exists." [T]he court resolved the fourth factor against 2 Live Crew, just as it had the first, by applying a presumption about the effect of commercial use, a presumption which as applied here we hold to be error. No "presumption" or inference of market harm . . . is applicable to a case involving something beyond mere duplication for commercial purposes. [W]hen a commercial use amounts to mere duplication of the entirety of an original, it clearly . . . serves as a

market replacement . . . , making it likely that cognizable market harm to the original will occur. But when . . . the second use is transformative, market substitution is at least less certain, and market harm may not be so readily inferred. Indeed, as to parody, it is more likely that the new work will not affect the market for the original . . . by acting as a substitute for it. This is so because the parody and the original usually serve different market functions.

We do not, of course, suggest that a parody may not harm the market at all, but when a lethal parody, like a scathing theater review, kills demand for the original, it does not produce a harm cognizable under the Copyright Act. [T]he role of the courts is to distinguish between biting criticism that suppresses demand [an effect permitted by law] and copyright infringement, which usurps [demand].

2 Live Crew's song comprises not only parody but also rap music, and the derivative market for rap music is a proper focus of enquiry. Evidence of substantial harm to it would weigh against a finding of fair use, because the licensing of derivatives is an important economic incentive to the creation of originals. Although 2 Live Crew submitted uncontroverted affidavits on the question of market harm to the original, neither they, nor Acuff-Rose, introduced evidence or affidavits addressing the likely effect of 2 Live Crew's parodic rap song on the market for a non-parody, rap version of "Oh, Pretty Woman." The evidentiary hole will doubtless be plugged on remand.

Decision of Court of Appeals reversed and remanded for further proceedings.

Trademarks

Trademarks help purchasers identify favored products and services. For this reason, they also give sellers and manufacturers an incentive to innovate and strive for quality. However, both these ends would be defeated if competitors were free to appropriate each other's trademarks. Thus, the federal Lanham Act protects trademark owners against certain uses of their marks by third parties.[6]

Protected Marks The Lanham Act recognizes four kinds of marks. It defines a **trademark** as any word, name, symbol, device, or combination thereof used by a manufacturer or seller to identify its products and distinguish them from the products of competitors. Although trademarks consisting of single words or names are most commonly encountered, federal trademark protection has sometimes been extended to colors, pictures, label and package designs, slogans, sounds, arrangements of numbers and/or letters (e.g., "7-Eleven"), and shapes of goods or their containers (e.g., Coca-Cola bottles). The *Qualitex* case, which follows shortly, contains examples of the wide variety of potentially protectible trademarks.

Service marks resemble trademarks but identify and distinguish services. **Certification marks** certify the origin, materials, quality, method of manufacture, and other aspects of goods and services. Here, the user of the mark and its owner are distinct parties. A retailer, for example, may sell products bearing the Good Housekeeping Seal of Approval. **Collective marks** are trademarks or service marks used by organizations to identify themselves as the source of goods or services. Trade union and trade association marks fall into this category. Although all four kinds of marks receive federal protection, this chapter focuses on trademarks and service marks, using the terms *mark* or *trademark* to refer to both.

Distinctiveness Because their purpose is to help consumers identify products and services, trademarks must be *distinctive* to merit maximum Lanham Act protection. Marks fall into five general categories of distinctiveness (or nondistinctiveness):

1. *Arbitrary or fanciful marks.* These marks are the most distinctive—and the most likely to be protected—because they do not describe the qualities of the product or service they identify. The "Exxon" trademark is an example.

2. *Suggestive marks.* These marks convey the nature of a product or service only through imagination, thought, and perception. They do not actually describe

[6]In addition, the owner of a trademark may enjoy legal protection under common law trademark doctrines and state trademark statutes.

the underlying product or service. The "Dietene" trademark for a dietary food supplement is an example. Although not as clearly distinctive as arbitrary or fanciful marks, suggestive marks are nonetheless classified as distinctive. Hence, they are good candidates for protection.

3. *Descriptive marks.* These marks directly describe the product or service they identify (e.g., "Realemon," for bottled lemon juice). Descriptive marks are not protected unless they acquire *secondary meaning.* This occurs when their identification with a particular source of goods or services has become firmly established in the minds of a substantial number of buyers. "Realemon," of course, now has secondary meaning. Among the factors considered in secondary-meaning determinations are the length of time the mark has been used, the volume of sales associated with that use, and the nature of the advertising employing the mark. When applied to a package delivery service, for instance, the term *overnight* is usually descriptive and thus not protectible. It may come to deserve trademark protection, however, through long use by a single firm that advertised it extensively and made many sales while doing so. As will be seen, the same approach is taken concerning deceptively misdescriptive and geographically descriptive marks.

4. *Marks that are not inherently distinctive.* Although these marks are not distinctive in the usual senses of arbitrary nature, fanciful quality, or suggestiveness, proof of secondary meaning effectively makes these marks distinctive. They are therefore protectible if secondary meaning exists. The *Qualitex* case deals with a potentially protectible trademark of this type, product color.

5. *Generic terms.* Generic terms (e.g., "diamond" or "truck") simply refer to the general class of which the particular product or service is one example. Because any seller has the right to call a product or service by its common name, generic terms are ineligible for trademark protection.

Federal Registration Once the seller of a product or service uses a mark in commerce or forms a bona fide intention to do so very soon, she may apply to register the mark with the U.S. Patent and Trademark Office. The office reviews applications for distinctiveness. Its decision to deny or grant the application may be contested by the applicant or by a party who feels that he would be injured by registration of the mark. Such challenges may eventually reach the federal courts.

Trademarks of sufficient distinctiveness are placed on the Principal Register of the Patent and Trademark Office. A mark's inclusion in the Principal Register: (1) is prima facie evidence of the mark's ownership, validity, and registration (which is useful in trademark infringement suits); (2) gives nationwide constructive notice of the owner's claim of ownership (thus eliminating the need to show that the defendant in an infringement suit had notice of the mark); (3) entitles the mark owner to assistance from the Bureau of Customs in stopping the importation of certain goods that, without the consent of the mark owner, bear a likeness of the mark; and (4) means that the mark will be incontestable after five years of registered status (as described later).

Even though they are not distinctive, certain other marks may merit placement on the Principal Register if they have acquired secondary meaning. These include: (1) marks that are *not inherently distinctive* (as discussed earlier); (2) *descriptive* marks (as discussed earlier); (3) *deceptively misdescriptive* marks (such as "Dura-Skin," for plastic gloves); (4) *geographically descriptive* marks (such as "Indiana-Made"); and (5) marks that are *primarily a surname* (because as a matter of general policy, persons who have a certain last name should be fairly free to use that name in connection with their businesses). Once a mark in one of these classifications achieves registered status, the mark's owner obtains the legal benefits described in the previous paragraph.

Regardless of their distinctiveness, however, some kinds of marks are denied placement on the Principal Register. These include marks that: (1) consist of the flags or other insignia of governments; (2) consist of the name, portrait, or signature of a living person who has not given consent to the trademark use; (3) are immoral, deceptive, or scandalous; or (4) are likely to cause confusion because they resemble a mark previously registered or used in the United States.

The *Qualitex* case, which follows, contains the U.S. Supreme Court's answer to a question on which lower courts had split: whether color is eligible for trademark registration and protection. *Qualitex* also addresses a number of related issues that the Trademark Office and courts face in deciding whether a trademark claimed by a party is entitled to registration.

Qualitex Co. v. Jacobson Products Co. *514 U.S. 159 (U.S. Sup. Ct. 1995)*

Qualitex Co. produces pads that dry-cleaning firms use on their presses. Since the 1950s, Qualitex has colored its press pads a shade of green-gold. In 1989, Jacobson Products Co. began producing press pads for sale to dry-cleaning firms. Jacobson colored its pads a green-gold resembling the shade used by Qualitex. In 1991, the U.S. Patent & Trademark Office (PTO) granted Qualitex a trademark registration for the green-gold color (as used on press pads). Qualitex then added a trademark infringement count to an unfair competition lawsuit it had previously filed against Jacobson. Qualitex won the case, but the Ninth Circuit Court of Appeals set aside the judgment in Qualitex's favor on the trademark infringement claim. In the Ninth Circuit's view, the Lanham Act did not allow any party to have "color alone" registered as a trademark. The U.S. Supreme Court granted certiorari.

Breyer, Justice The question in this case is whether the Lanham Act permits the registration of a trademark that consists, purely and simply, of a color. The courts of appeals have differed as to whether the law recognizes the use of color alone as a trademark.

[T]he Lanham Act . . . would seem to include color within the universe of things that can qualify as a trademark. [It] says that trademarks "includ[e] any word, name, symbol, or device, or combination thereof" (quoting section 1127). Since human beings might use as a "symbol" . . . almost anything . . . capable of carrying meaning, this language . . . is not restrictive. The courts and the PTO have authorized for use as a mark a particular shape (of a Coca-Cola bottle), a particular sound (of NBC's three chimes), and even a particular scent (of plumeria blossoms on sewing thread). If a shape, a sound, and a fragrance can act as symbols, why . . . can a color not do the same?

A color is also capable of satisfying the more important part of the statutory definition . . . , which requires that a person "us[e]" or "inten[d] to use" the mark "to identify and distinguish his or her goods . . . from those manufactured or sold by others and to indicate the source of the goods" (quoting section 1127). True, a product's color is unlike "fanciful," "arbitrary," or "suggestive" words or designs, which almost *automatically* tell a customer that they refer to a brand. The imaginary word "Suntost" . . . on a jar of orange jam immediately would signal a brand or a product "source"; the jam's orange color does not do so. But, over time, customers may come to treat a particular color on a product or its packaging (say, a color that in context seems unusual, such as pink on a firm's insulating material or red on the head of a large industrial bolt) as signifying a brand. [I]f so, the color would have come to identify and distinguish the goods—i.e., to "indicate" their "source"—much in the way that descriptive words on a product (say, "Trim" on nail clippers . . .) can come to indicate a product's origin. In this circumstance, trademark law says that the word (e.g., "Trim"), although not inherently distinctive, has developed "secondary meaning." "[S]econdary meaning" is acquired when "in the minds of the public, the primary significance of a product feature . . . is to identify the source of the product rather than the product itself" (quoting *Inwood Laboratories, Inc. v. Ives Laboratories, Inc.* [1982]). [I]f trademark law permits a descriptive word with secondary meaning to act as a mark, why would it not permit a color, under similar circumstances, to do the same?

We cannot find . . . any obvious theoretical objection to the use of color alone as a trademark, where that color has attained "secondary meaning" and therefore identifies and distinguishes a particular brand (and thus indicates its "source"). [T]rademark law, by preventing others from copying a source-identifying mark, . . . assures a potential customer that *this* item—the item with this mark—is made by the same producer as other similarly marked items that he or she liked (or disliked) in the past. At the same time, the law helps assure a producer that it (and not an imitating competitor) will reap the financial, reputation-related rewards associated with a desirable product. It is the source-distinguishing ability of a mark—not its ontological status as color, shape, fragrance, word, or sign—that permits it to serve these basic purposes.

Neither can we find a principled objection to the use of color as a mark in the important "functionality" doctrine. [This] doctrine prevents trademark

law, which seeks to promote competition by protecting a firm's reputation, from instead inhibiting legitimate competition by allowing a producer to control a useful product feature. It is the province of patent law, not trademark law, to encourage invention by granting inventors a monopoly over new product designs or functions for a limited time, after which competitors are free to use the innovation. If a product's functional features could be used as trademarks, however, a monopoly over such features could be obtained without regard to whether they qualify as patents and could be extended forever (because trademarks may be renewed in perpetuity). "[A] product feature is functional," and cannot serve as a trademark, "if it is essential to the use or purpose of the article or if it affects the cost or quality of the article," that is, if exclusive use of the feature would put competitors at a significant non-reputation-related advantage (quoting *Inwood Laboratories*). Although sometimes color plays an important role (unrelated to source identification) in making a product more desirable, sometimes it does not. [T]his latter fact—that sometimes color is not essential to a product's use or purpose and does not affect cost or quality—indicates that the doctrine of "functionality" does not create an absolute bar to the use of color alone as a mark.

Qualitex's green-gold press pad color . . . acts as a symbol. Having developed secondary meaning (for customers identified the green-gold color as Qualitex's), it identifies the press pads' source. [T]he green-gold color serves no other function. [The district court saw] "no competitive need in the press pad industry for the green-gold color, since other colors are equally usable." Accordingly, unless there is some special reason that convincingly militates against the use of color alone as a trademark, trademark law would protect Qualitex's use of the green-gold color on its press pads.

Jacobson [argues] that there are four [such] reasons. *First,* Jacobson says that if the law permits the use of color as a trademark, it will produce uncertainty and unresolvable court disputes about what shades of a color a competitor may lawfully use. We do not believe, however, that color, in this respect, is special. Courts traditionally decide quite difficult questions about whether two words or phrases or symbols are sufficiently similar, in context, to confuse buyers. Legal standards exist to guide courts in making such comparisons. We do not see why courts could not apply those standards to a color, replicating, if necessary, lighting conditions under which a colored product is normally sold. [C]ourts already have done so in cases where a trademark consists of a color plus a design, [e.g.], a colored symbol such as a gold stripe (around a sewer pipe), a yellow strand of wire rope, or a "brilliant yellow" band (on ampules).

Second, Jacobson argues . . . that colors are in limited supply. Jacobson claims that if one of many competitors can appropriate a particular color for [trademark] use . . . , and each competitor then tries to do the same, the supply of colors will soon be depleted. This [unpersuasive] argument . . . relies on an occasional problem to justify a blanket prohibition. When a color serves as a mark, normally alternative colors will likely be available for similar use by others. Moreover, if that is not so—if a "color depletion" . . . problem does arise—the trademark doctrine of "functionality" normally would . . . prevent the anticompetitive consequences that Jacobson's argument posits.

The functionality doctrine . . . protects competitors against a disadvantage (unrelated to recognition or reputation) that trademark protection might otherwise impose. For example, this Court has written that competitors might be free to copy the color of a medical pill whose color serves to identify the kind of medication (e.g., a type of blood medicine) in addition to its source. [L]ower courts have permitted competitors to copy the green color of farm machinery (because customers wanted their farm equipment to match) and have barred the use of black as a trademark on outboard boat motors (because black has the special functional attributes of decreasing the apparent size of the motor and ensuring compatibility with many different boat colors). [W]here a color serves a significant nontrademark function . . . , courts will examine whether its use as a mark would permit one competitor . . . to interfere with legitimate (nontrademark-related) competition through actual or potential exclusive use of an important product ingredient. [That examination] ordinarily . . . should prevent the anticompetitive consequences of Jacobson's hypothetical "color depletion" argument . . .

Third, Jacobson points to many older cases . . . in support of its position. [Those] cases, however,

interpreted trademark law as it existed [in common law form] *before* 1946, when Congress enacted the Lanham Act [and] significantly changed and liberalized the common law. [I]n 1985, the Federal Circuit [Court of Appeals] considered . . . the Lanham Act's changes . . . and held that trademark protection for color was consistent with the "jurisprudence under the Lanham Act developed in accordance with the statutory principle that if a mark is capable of being or becoming distinctive of [the] applicant's goods in commerce, then it is capable of serving as a trademark" (quoting *In re Owens-Corning Fiberglass Corp.* [1985]). [W]e believe the Federal Circuit was right . . . At a minimum, the Lanham Act's changes left the courts free to reevaluate the preexisting legal precedent which had absolutely forbidden the use of color alone as a trademark.

Fourth, Jacobson argues that there is no need to permit color alone . . . as a trademark because a firm already may use color as part of a trademark, say, as a colored circle or colored letter or colored word . . . [T]his argument begs the question. One can understand why a firm might find it difficult to place a usable symbol or word on a product (say, a large industrial bolt that customers normally see from a distance). [I]n such instances, a firm might want to use color, pure and simple, instead of color as part of a design. [W]e conclude that the Ninth Circuit erred in barring Qualitex's use of color as a trademark.

Decision of Ninth Circuit Court of Appeals reversed.

Transfer of Rights Because of the purposes underlying trademark law, transferring trademark rights is more difficult than transferring copyright or patent interests. A trademark owner may license the use of the mark, but only if the owner reserves control over the nature and quality of the goods or services as to which the licensee will use the mark. An uncontrolled "naked license" would allow the sale of goods or services bearing the mark but lacking the qualities formerly associated with it, and could confuse purchasers. Trademark rights may also be assigned or sold, but only along with the sale of the goodwill of the business originally using the mark.

Losing Federal Trademark Protection Federal registration of a trademark lasts for 10 years, with renewals for additional 10-year periods possible. However, trademark protection may be lost before the period expires. The government must cancel a registration six years after its date unless the registrant files with the Patent and Trademark Office, within the fifth and sixth years following the registration date, an affidavit detailing that the mark is in use or explaining its nonuse.

Any person who believes that he is or will be damaged by a mark's registration may petition the Patent and Trademark Office to cancel that registration. Normally, the petition must be filed within five years of the mark's registration, because the mark becomes *incontestable* as regards goods or services with which it has continuously been used for five consecutive years after the registration.[7] A mark's incontestability means that the permissible grounds for canceling its registration are limited. Even an incontestable mark, however, may be canceled *at any time* if, among other things, it was obtained by fraud, has been abandoned, or has become the generic name for the goods or services it identifies. *Abandonment* may occur through an express statement or agreement to abandon, through the mark's losing its significance as an indication of origin, or through the owner's failure to use it. A mark acquires a *generic meaning* when it comes to refer to a class of products or services rather than a particular source's product or service. For example, this has happened to such once-protected marks as aspirin, escalator, and thermos.

Trademark Infringement A trademark is infringed when, without the owner's consent, another party uses a substantially similar mark in connection with the sale of goods or services and this is likely to cause confusion concerning their source or concerning whether there is an endorsement relationship or other affiliation between the mark's owner and the other party. The *Brookfield Communications* case, which follows shortly, deals with trademark infringe-

[7]The Lanham Act's incontestability provision also imposes on the owner an affidavit requirement resembling the cancellation affidavit requirement just mentioned.

ment issues stemming from a World Wide Web domain name dispute. It also discusses many of the factors courts consider when determining whether the use is likely to cause confusion. A trademark owner who wins an infringement suit may obtain an injunction against uses of the mark that are likely to cause confusion. In addition, the owner may obtain money damages for provable injury resulting from the infringement , as well as attributable profits realized by the infringing defendant.

Brookfield Communications, Inc. v. West Coast Entertainment Corp.

174 F.3d 1036 (9th Cir. 1999)

Brookfield Communications, Inc., produced software that provided information to entertainment industry professionals such as film studios, production companies, agents, directors, and actors. In December 1993, Brookfield introduced software that featured entertainment industry information of interest to smaller companies and individual consumers who did not want to purchase Brookfield's professional-level alternative. Brookfield used MOVIEBUFF as the name of its consumer-level software, whose searchable databases and related applications contained information such as box office receipts, film release schedules, entertainment news, and names of executives, agents, directors, and actors.

In 1996, Brookfield attempted to register the World Wide Web domain name "moviebuff.com" with Network Solutions, Inc., which was then the exclusive registrar of ".com" domain names. Brookfield learned, however, that this domain name had already been registered (in February 1996) to West Coast Entertainment Corporation, which owned a large chain of video rental stores. Brookfield therefore registered two other domain names in May and September 1996. It launched web sites bearing those domain names to sell MOVIEBUFF software and offer an online searchable database for which it also used the MOVIEBUFF name. In August 1997, Brookfield applied to the Patent & Trademark Office (PTO) for registration of MOVIEBUFF as a mark used in connection with goods and services. The PTO issued trademark and service mark registrations to Brookfield in September 1998.

Brookfield learned, in October 1998, that West Coast planned to launch a "moviebuff.com" web site that would contain a searchable entertainment database similar to Brookfield's. West Coast claimed that it had registered the "moviebuff.com" domain name nearly two years earlier because the term "movie buff" was part of its federally registered (since 1991) service mark, THE MOVIE BUFF'S MOVIE STORE. After a November 1998 press release made clear that West Coast would in fact launch the "moviebuff.com" web site featuring a searchable entertainment database, Brookfield sued West Coast for trademark infringement. Brookfield contended that West Coast's use of "moviebuff.com" would infringe Brookfield's MOVIEBUFF mark.

The district court denied Brookfield's request for a preliminary injunction that would have barred West Coast from using "moviebuff.com." The court reasoned that West Coast was effectively the senior user of MOVIEBUFF because of its long-standing service mark (THE MOVIE BUFF'S MOVIE STORE) and because it acquired rights over the "moviebuff.com" domain name before Brookfield's use of MOVIEBUFF as the name of Brookfield's Internet-based searchable database. The court also concluded that Brookfield had not established likelihood of consumer confusion. Brookfield appealed to the Ninth Circuit Court of Appeals.

O'Scannlain, Circuit Judge To resolve whether West Coast's use of "moviebuff.com" constitutes trademark infringement, we must first determine whether Brookfield has a valid, protectible trademark interest in the MOVIEBUFF mark. Brookfield's registration of the mark on the Principal Register constitutes prima facie evidence of the validity of the registered mark and of Brookfield's exclusive right to use the mark on the goods and services specified in the registration. [Although West Coast could have rebutted this presumption by showing that it used the mark in commerce first, West Coast did not make an adequate showing in this regard. Because consumers would not view "moviebuff.com" and THE MOVIE BUFF'S MOVIE STORE as virtually identical marks, the district court erred in concluding that West Coast's first use of "moviebuff.com" effectively occurred prior to or during 1991, when THE MOVIE BUFF'S MOVIE STORE became a registered

mark. Moreover, even though West Coast obtained the "moviebuff.com" domain name registration in February 1996, West Coast's first real use of "moviebuff.com," for purposes of determining trademark priority, did not occur until November 1998 (when West Coast issued a press release announcing its web site). By that time, Brookfield had made substantial use of the MOVIEBUFF mark.] [W]e must conclude that Brookfield is the senior user because it marketed MOVIEBUFF products well before West Coast began using "moviebuff.com" in commerce.

Establishing seniority, however, is only half the battle. Brookfield must also show that the public is likely to be somehow confused about the source or sponsorship of West Coast's "moviebuff.com" web site—and somehow to associate that site with Brookfield. We look to the following factors for guidance in determining [whether a] likelihood of confusion [exists]: similarity of the conflicting designations; relatedness or proximity of the two companies' products or services; strength of [the trademark owner's] mark; marketing channels used; degree of care likely to be exercised by purchasers in selecting goods; [the alleged infringer's] intent in selecting its mark; evidence of actual confusion; and likelihood of expansion in product lines. [T]his eight-factor test . . . is pliant. Some factors are much more important than others, and the relative importance of each individual factor will be case-specific. Although some factors—such as the similarity of the marks and whether the two companies are direct competitors—will always be important, it is often possible to reach a conclusion with respect to likelihood of confusion after considering only a subset of the factors.

We begin by comparing the allegedly infringing mark to the federally registered mark. [As a general rule,] the more similar the marks in terms of appearance, sound, and meaning, the greater the likelihood of confusion. [I]t is readily apparent that West Coast's allegedly infringing mark is essentially identical to Brookfield's mark MOVIEBUFF. [T]here are differences in capitalization and the addition of ".com" in West Coast's complete domain name, but these differences are inconsequential in light of the fact that web addresses are not caps-sensitive and that the ".com" top-level domain signifies the site's commercial nature.

Looks aren't everything, so we consider the similarity of sound and meaning. The two marks are pronounced the same way, except that one would say "dot.com" at the end of West Coast's mark. Because many companies use domain names comprised of ".com" as the top-level domain with their corporate name or trademark as the second-level domain, the addition of ".com" is of diminished importance in distinguishing the mark. The domain name is more than a mere address: like trademarks, second-level domain names communicate information as to source. [M]any web users are likely to associate "moviebuff.com" with the trademark MOVIEBUFF, thinking that it is operated by the company that makes MOVIEBUFF products and services.

The similarity of marks alone, [however], does not necessarily lead to consumer confusion. [W]e must . . . consider the relatedness of the products and services offered. Related goods are generally more likely than unrelated goods to confuse the public as to the producers of the goods. Here, both companies offer products and services relating to the entertainment industry generally, and their principal lines of business both relate to movies specifically. [T]he competitive proximity of their products is quite high. Just as Brookfield's MOVIEBUFF is a searchable database with detailed information on films, West Coast's web site features a similar searchable database. [T]he products are used for similar purposes [and] the two companies compete for the patronage of an overlapping audience. The use of similar marks to offer similar products accordingly weighs heavily in favor of likelihood of confusion. [In addition,] West Coast and Brookfield both utilize the Web as a marketing and advertising facility, a factor that courts have consistently recognized as exarcerbating the likelihood of confusion.

Given the virtual identity of "moviebuff.com" and MOVIEBUFF, the relatedness of the products and services accompanied by those marks, and the companies' simultaneous use of the Web as a marketing and advertising tool, many forms of consumer confusion are likely to result. People surfing the Web for information on MOVIEBUFF may confuse MOVIEBUFF with the searchable entertainment database at "moviebuff.com" and simply assume that they have reached Brookfield's web site. [E]ntering a web site takes little effort—usually one

click from a linked site or a search engine's list; thus Web surfers are more likely to be confused as to the ownership of a web site than traditional patrons of a brick-and-mortar store would be of a store's ownership. Alternatively, they may incorrectly believe that West Coast licensed MOVIEBUFF from Brookfield. Other consumers may simply believe that West Coast bought out Brookfield or that they are related companies.

Yet other forms of confusion are likely to ensue. Consumers may wrongly assume that the MOVIEBUFF database they were searching for is no longer offered, having been replaced by West Coast's entertainment database, and thus simply use the services at West Coast's web site. And even where people realize, immediately upon accessing "moviebuff.com," that they have reached a site operated by West Coast and wholly unrelated to Brookfield, West Coast will still have gained a customer by appropriating the goodwill that Brookfield has developed in its MOVIEBUFF mark.

The factors that we have considered so far . . . lead us to the tentative conclusion that Brookfield has made a strong showing of likelihood of confusion. Because it is possible that the remaining factors will tip the scale back the other way . . . , we consider the remaining [ones], beginning with the strength of Brookfield's mark. The stronger a mark—meaning the more likely it is to be remembered and associated in the public's mind with the mark's owner—the greater the protection it is accorded by the trademark laws. [MOVIEBUFF is a distinctive mark because it is suggestive, making it stronger than a descriptive mark but weaker than a mark that is distinctive for reasons of fanciful nature or arbitrary assignment.] [Here, however,] the products involved are closely related and West Coast's domain name is nearly identical to Brookfield's trademark. [Therefore, in this case,] the strength of the mark is of diminished importance in the likelihood of confusion analysis.

We thus turn to intent. An inference of confusion has . . . been deemed appropriate where a mark is adopted with the intent to deceive the public. There is, however, no evidence . . . that West Coast registered "moviebuff.com" with the principal intent of confusing consumers. Brookfield correctly points out that, by the time West Coast launched its web site, it did know of Brookfield's claim to rights in the trademark MOVIEBUFF. But when it registered the domain name with Network Solutions, West Coast did not know of Brookfield's rights in MOVIEBUFF. West Coast claims that it had already invested considerable sums in developing its "moviebuff.com" web site by the time that Brookfield informed it of its rights in the trademark. Considered as a whole, this factor appears indeterminate.

The final three [likelihood of confusion] factors—evidence of actual confusion, likelihood of expansion in product lines, and purchaser care—do not affect our ultimate conclusion. Actual confusion is not relevant [in this case] because Brookfield filed suit before West Coast began actively using the "moviebuff.com" mark and thus never had the opportunity to collect information on actual confusion. The likelihood of expansion in product lines factor is relatively unimportant where two companies already compete to a significant extent.

[T]he degree of care likely to be exercised by purchasers of the products in question [deserves more comment]. Likelihood of confusion is determined on the basis of a reasonably prudent consumer. What is expected of this reasonably prudent consumer depends on the circumstances. We [sometimes] expect him to be more discerning—and less easily confused—when he is purchasing expensive items, and when the products are being marketed primarily to expert buyers. On the other hand, when dealing with inexpensive products, consumers [may be] likely to exercise less care, thus making confusion more likely. The complexity in this case arises because we must consider both entertainment professionals, who probably will take the time . . . to find the specific product they want, and movie devotees, who will be more easily confused as to the source of the database offered at West Coast's web site. Who is the reasonably prudent consumer [in this situation involving mixed buyers]? Although . . . the issue of purchaser care in mixed buyer [situations is potentially significant in some cases], [w]e need not . . . decide this question now because the purchaser confusion factor, even considered in the light most favorable to West Coast, is not sufficient to overcome the likelihood of confusion established by the other factors we have analyzed.

District court's denial of preliminary injunction reversed; case remanded for further proceedings.

Concept Review

The Three Forms of Intellectual Property Compared

	Patent	Copyright	Trademark
What is Protected?	Process, machine, product, composition of matter, improvement, ornamental design, plant produced by asexual reproduction, if *novel, nonobvious,* and *useful*	Wide range of works of authorship that are *fixed, original,* and *creative*	Trademarks, service marks, certification marks, and collective marks of sufficient distinctiveness
Registration Needed?	Yes	Although copyright exists in the absence of registration, registration often necessary for infringement suit	Necessary for infringement suit under Lanham Act section 32(1). Unregistered marks protected under Lanham Act section 43(a), common law, and state statutes.
Duration	20 years from application	Life of the author plus 70 years, unless work-for-hire	If registered, 10 years, with 10-year renewals possible
Transferability	By assignment or license	By assignment or license	By assignment or license, though limited
How Infringed	Making, using, or selling patented invention or its substantial equivalent	Violation of owner's exclusive rights to reproduce, prepare derivative works, distribute copies, perform, or display. But *fair use* defense available.	Use of substantially similar version of mark in way that is likely to cause confusion concerning source, endorsement, or affiliation. Dilution cause of action available for famous marks.

Trademark Dilution In recent years, Congress granted owners of certain marks an alternative to the standard claim of trademark infringement. The Federal Trademark Dilution Act (FTDA), which took effect in 1996 and was placed in the Lanham Act as section 43(c), allows the owner of a "famous" mark to seek legal relief when another party's commercial use of a substantially similar version of the famous mark causes "dilution of [the mark's] distinctive quality." Under the FTDA, a mark need not be a registered mark in order to be "famous." Proof of likelihood of confusion—essential to a claim for trademark infringement—is not required for purposes of this claim of trademark *dilution.* The FTDA provides that if dilution is established, the owner of the famous mark will normally be entitled only to the standard remedy of an injunction against the defendant's continued use of the diluting version of the mark. Damages and the infringer's profits are recoverable by the owner of the famous mark only if the evidence reveals that the defendant willfully sought either to trade on the mark owner's reputation or to cause dilution of the mark.

For purposes of the FTDA and similar statutes that exist in roughly half the states, dilution occurs if the

defendant's use of the plaintiff's trademark causes the public, which previously had associated the trademark only with the plaintiff, to associate the trademark with the defendant as well. When this takes place, the trademark's distinctiveness has been whittled away—i.e., diluted—even if the public recognizes that the plaintiff and defendant are not affiliated and that they provide different products or services. Courts interpreting the FTDA and the state dilution statutes have concluded that dilution may occur in another way: through the defendant's use of the plaintiff's trademark in an unwholesome context (normally one suggesting illicit sexual or drug-related connotations). Use of the trademark in such a context may dilute it by tarnishing its reputation.

Cybersquatting Prevention As revealed in the *Brookfield Communications* case earlier, trademark infringement principles sometimes govern conflicts between one party's claim of trademark rights and another's claim of rights over a World Wide Web domain name. Such disputes sometimes raise dilution issues as well. In a 1999 enactment, Congress paid special attention to the trademark rights–domain name rights conflict by enacting the Anticybersquatting Consumer Protection Act (hereinafter "ACPA"). The ACPA authorizes a civil action in favor of a trademark owner against any person who, having a "bad faith intent to profit" from the owner's mark, registers, sells, purchases, licenses, or otherwise uses a domain name that is identical or confusingly similar to the owner's mark (or would dilute the mark, if it is famous). Among the factors listed in the ACPA as relevant to the existence of bad faith intent to profit are a defendant's intent to divert consumers from the mark owner's online location to a site that could harm the mark's goodwill, and a defendant's offer to sell the domain name to the mark owner without having used, or intended to use, the domain name in the offering of goods or services.

If the trademark owner wins a cybersquatting action, the court may order the forfeiture or cancellation of the domain name or may order that it be transferred to the mark owner. The successful trademark owner may also recover actual damages as well as the cybersquatter's attributable profits. Borrowing the statutory damages concept from the Copyright Act, the ACPA provides that in lieu of actual damages plus profits, the trademark owner may elect to recover statutory damages falling within a range of $1,000 to $100,000 per domain name, "as the court considers just."

Trade Secrets

The law provides at least two means of protecting creative inventions. Owners of such inventions may go public and obtain monopoly patent rights. As an alternative, they may keep the invention secret and rely on trade secrets law to protect it. Figure 1 sketches some of the advantages and disadvantages of each alternative.

Figure 1 *Patent and Trade Secrets Protection Compared*

Factor	Patent Law	Trade Secrets Law
Range of Protected Matter?	Probably narrower than trade secrets law	Probably broader than patent law
Need to Register?	Yes	No
Burden of Maintaining Secrecy?	No	Yes
Duration	20 years from application	However long secrecy is maintained
Transferability	Fairly easy	Fairly easy
Ability to Keep Knowledge Secret?	No	Yes, if secrecy really maintained
Effective Monopoly over Protected Matter?	Yes	No, because discovery/use by proper means is permissible

The policies underlying patent protection and trade secrets protection differ. The general aim of patent law is to encourage the creation and disclosure of inventions by granting the patentee a temporary monopoly in the patented invention in exchange for his making it public. Trade secrets, however, are nonpublic by definition. Although protecting trade secrets may stimulate creative activity, it also keeps the information from becoming public knowledge. Thus, the main justification for trade secrets protection is simply to preserve certain standards of commercial morality.

Definition of a Trade Secret

A trade secret can be defined as any secret formula, pattern, process, program, device, method, technique, or compilation of information used in the owner's business, if it gives its owner an advantage over competitors who do not know it or use it.[8] Examples include chemical formulas, computer software, manufacturing processes, designs for machines, and customer lists. To be protectible, a trade secret must usually have sufficient value or originality to provide an actual or potential competitive advantage. It need not possess the novelty required for patent protection, however.

The *North Atlantic Instruments* case, which follows shortly, considers factors courts may examine when determining whether a trade secret exists. As some of the factors suggest, a trade secret must actually be *secret.* A substantial measure of secrecy is necessary, but it need not be absolute. Thus, information that becomes public knowledge or becomes generally known in the industry cannot be a trade secret. Similarly, information that is reasonably discoverable by proper means may not be protected. "Proper means" include independent invention of the secret, observation of a publicly displayed product, the owner's advertising, published literature, product analysis, and reverse engineering (starting with a legitimately acquired product and working backward to discover how it was developed).

In addition, a firm claiming a trade secret must usually show that it took *reasonable measures to ensure secrecy.* Examples include advising employees about the secret's secrecy, limiting access to the secret on a need-to-know basis, requiring those given access to sign a nondisclosure agreement, disclosing the secret only on a confidential basis, and controlling access to an office or plant. Computer software licensing agreements commonly forbid the licensee to copy the program except for backup and archival purposes, require the licensee and its employees to sign confidentiality agreements, call for those employees to use the program only in the course of their jobs, and require the licensee to use the program only in a central processing unit. Because the owner must only make *reasonable* efforts to ensure secrecy, however, she need not adopt extreme measures to block every ingenious form of industrial espionage.

Ownership and Transfer of Trade Secrets

The owner of a trade secret is usually the person who developed it or the business under whose auspices it was generated. Establishing the ownership of a trade secret can pose problems, however, when an employee develops a secret in the course of her employment. In such cases, courts often find the *employer* to be the owner if: (1) the employee was hired to do creative work related to the secret, (2) the employee agreed not to divulge or use trade secrets, or (3) other employees contributed to the development of the secret. Even when the employee owns the secret, the employer still may obtain a royalty-free license to use it through the shop right doctrine discussed in the section on patents.

The owner of a trade secret may transfer rights in the secret to third parties. This may occur by assignment (in which case the owner loses title) or by license (in which case the owner retains title but allows the transferee certain uses of the secret).

Misappropriation of Trade Secrets

Misappropriation of a trade secret can occur in various ways, most of which involve *disclosure* or *use* of the secret. For example, misappropriation liability occurs when the secret is disclosed or used by one who did one of the following:

1. Acquired it by *improper means.* Improper means include theft, trespass, wiretapping, spying, bugging, bribery, fraud, impersonation, and eavesdropping.

2. Acquired it from a party who *is known or should be known* to have obtained it by improper means. For example, a free-lance industrial spy might obtain one

[8]This definition comes mainly from *Restatement (Third) of Unfair Competition* § 39 (1995) with some additions from *Uniform Trade Secrets Act* § 1(4) (1985). Many states have adopted the Uniform Trade Secrets Act (UTSA) in some form. The discussion in this chapter is a composite of the *Restatement*'s and the UTSA's rules.

firm's trade secrets by improper means and sell them to the firm's competitors. If those competitors know or have reason to know that the spy obtained the secrets by improper means, they are liable for misappropriation along with the spy.

3. *Breached a duty of confidentiality regarding the secret.* If an employer owns a trade secret, for example, an employee is generally bound not to use or disclose it during his employment or thereafter.[9] The *North Atlantic Instruments* case presents an application of this rule. The employee may, however, utilize general knowledge and skills acquired during her employment.

[9]This is an application of the agent's duty of loyalty, which is discussed in Chapter 34.

North Atlantic Instruments, Inc. v. Haber *188 F.3d 38 (2d Cir. 1999)*

North Atlantic Instruments, Inc., manufactured electronic equipment used on ships, tanks, and aircraft. In August 1994, North Atlantic acquired Transmagnetics, Inc. (TMI), which designed, manufactured, and sold customized electronic devices to a limited number of engineers in the aerospace and high tech industries. At the time North Atlantic acquired TMI, Fred Haber was a one-third owner of TMI, as well as its president and head of sales. This position allowed Haber to develop extensive client contacts. North Atlantic conditioned its agreement to acquire TMI on Haber's continuing to work for North Atlantic in a role similar to the role he had played at TMI.

The specialized nature of TMI's business made the identity of the relatively small number of engineers who required its products especially crucial to its business success. Even in companies employing thousands of engineers, a very small number of those engineers—sometimes only two—might need the technology produced by TMI. The identity and needs of that small number of engineers (i.e., TMI's client contacts) would have been very difficult for any company to derive on its own. TMI's list of client contacts was among the intangible assets for which North Atlantic paid when it acquired TMI.

North Atlantic retained Haber as president of its new TMI division. An employment agreement between North Atlantic and Haber ran until July 31, 1997. Its terms obligated Haber not to disclose North Atlantic's customer lists, trade secrets, or other confidential information, either during his employment by North Atlantic or after that employment ceased. As president of the TMI division, Haber had access through desktop and laptop computers to information about North Atlantic's technology and customer bases, including lists of clients and information about their individual product needs and purchases. In July 1997, Haber left North Atlantic to join Apex Signal Corp., which manufactured products targeted toward the same niche market as North Atlantic's TMI division. According to North Atlantic, Apex began targeting North Atlantic's customer base, with Haber allegedly asking clients he had dealt with at North Atlantic and TMI to do business with Apex. North Atlantic also contended that Haber had taken its confidential client information with him when he joined Apex.

North Atlantic sued Haber and Apex for misappropriation of trade secrets and requested a preliminary injunction. The federal district court referred the injunction request to a magistrate, who conducted an extensive hearing and issued a report recommending issuance of the injunction. The district court adopted the magistrate's report and preliminarily enjoined Haber and Apex from using the individual client contacts Haber had developed at North Atlantic and TMI. Haber and Apex appealed.

Straub, Circuit Judge To succeed on a claim for the misappropriation of trade secrets under New York law, a party must demonstrate: (1) that it possessed a trade secret, and (2) that the defendants used the trade secret in breach of an agreement, confidential relationship, or duty, or as a result of discovery by improper means.

We first consider whether the District Court properly concluded that North Atlantic's client list, which contains the identities and preferences of its client contacts, constitutes a protectable trade secret. A trade secret is any formula, pattern, device, or compilation of information which is used in one's business, and which gives the owner an

opportunity to obtain an advantage over competitors who do not know or use it. [Precedent cases indicate that a] customer list developed by a business through substantial effort and kept in confidence may be treated as a trade secret and protected at the owner's instance against disclosure to a competitor, provided the information it contains is not otherwise readily ascertainable.

The Magistrate Judge concluded that the list of *companies* to which North Atlantic's TMI division sold was not a trade secret. By contrast, [he] determined that the *identities of individual contact people* with whom Haber dealt while at North Atlantic or TMI were protectable trade secrets. The Magistrate Judge . . . determin[ed] that information on specific contact people was not readily available to others in the industry. That is, Haber generated the list of specific contact people—the people who required the customized technology produced by TMI and North Atlantic's TMI division—over the 50 years he had worked in the industry, more than half of which he spent at TMI. The Magistrate Judge relied . . . on the testimony of North Atlantic's chief executive, who described the needle-in-the-haystack character of the search for the handful of engineers in companies of 100,000 employees who might have a use for one of North Atlantic's customized products.

The Magistrate Judge [also] conclud[ed] that North Atlantic took numerous appropriate measures to prevent unauthorized disclosure of the information contained in its list of client contacts. [These measures included the use of nondisclosure provisions in employment agreements and other access restrictions.] The Magistrate Judge next assessed the value of the list of client contacts and the energy and effort necessary to create it. [H]e pointed to the testimony by North Atlantic's chief executive stating that "in the technology business, the most expensive thing to replicate is your relationships with your customers." [In addition,] the Magistrate Judge concluded that the client contact list assembled over Haber's years at TMI and North Atlantic's TMI division could probably be duplicated, but only with great difficulty.

We hold that the District Court did not err in adopting the Magistrate Judge's extensive and detailed factual determination that the identity of North Atlantic's client contacts was a protectable trade secret. Numerous cases applying New York law have held that where, as here, it would be difficult to duplicate a customer list because it reflected individual customer preferences, trade secret protection should apply.

We next consider whether the defendants' use of a trade secret—specifically the list of client contacts—was in breach of a duty. Both this Circuit and numerous New York courts have held that an agent has a duty not to use confidential knowledge acquired in his employment in competition with his principal. Such a duty exists as well after the employment is terminated as during its continuance . . . and is implied in every contract of employment. [Moreover, the employment agreement between North Atlantic and Haber] provided expressly that Haber had a comparable duty to maintain the confidentiality of TMI's and North Atlantic's trade secrets. In this way, [the employment agreement] makes explicit an employee's implied duties under New York law with respect to confidential information.

[A]t the hearing before the Magistrate Judge, North Atlantic produced a printout of confidential client information from North Atlantic's customer database, printed by Haber on September 5, 1997—over one month after he had left North Atlantic—and found in Apex's files. Haber clearly used the information on the day he printed the file. That day, he sent a fax to a contact listed on the form. Testimony at the hearing suggested that it would have been impossible for Haber to have generated th[e] information [in the file printed on September 5, 1997] unless he had taken files with him when he left North Atlantic.

Based on the facts in the record, it is clear that Haber violated the duties imposed both by the employment agreement and by New York's laws. [T]he District Court properly concluded that North Atlantic has demonstrated a likelihood of success on the merits of its misappropriation of trade secrets claim. Finally, [w]e have held [in a prior case] that the loss of trade secrets cannot be measured in money damages because a trade secret, once lost, is, of course, lost forever. We conclude that North Atlantic would be irreparably harmed in the absence of an injunction.

Decision of District Court affirmed.

Remedies for misappropriation of a trade secret include damages, which may involve both the actual loss caused by the misappropriation and the defendant's unjust enrichment. In some states, punitive damages are awarded for willful and malicious misappropriations. Also, an injunction may be issued against actual or threatened misappropriations.

Commercial Torts

In addition to the intentional torts discussed in Chapter 6, other intentional torts involve business or commercial competition. These torts may help promote innovation by protecting creative businesses against certain competitive abuses. Their main aim, however, is simply to uphold certain minimum standards of commercial morality.

Injurious Falsehood

Injurious falsehood also goes by names such as product disparagement, slander of title, and trade libel. This tort involves the publication of false statements that disparage another's business, property, or title to property, and thus harm her economic interests. One common kind of injurious falsehood involves false statements that disparage either a person's *property rights* in land, things, or intangibles, or their *quality.* The property rights in question include virtually all legally protected property interests that can be sold; examples include leases, mineral rights, trademarks, copyrights, and corporate stock. Injurious falsehood also includes false statements that harm another's economic interests even though they do not disparage property or property rights as such.

Elements and Damages In injurious falsehood cases, the plaintiff must prove that the defendant made a false statement of the sort just described, and that the statement was communicated to a third party. The *Jefferson County School District* case, which follows shortly, deals with the sometimes difficult problem of distinguishing between false statements of "fact" and statements of opinion.

The degree of fault required for liability is unclear. Sources often say that the standard is malice, but formulations of this differ. The *Restatement* requires either knowledge that the statement is false, or reckless disregard as to its truth or falsity. There is usually no liability for false statements that are made negligently and in good faith.

The plaintiff must also prove that the false statement played a substantial part in causing him to suffer *special damages.* These may include: losses resulting from the diminished value of disparaged property; the expense of measures for counteracting the false statement (e.g., advertising or litigation expenses); losses resulting from the breach of an existing contract by a third party; and the loss of prospective business. In cases involving the loss of prospective business, the plaintiff is usually required to show that some specific person or persons refused to buy because of the disparagement. This rule is often relaxed, however, where these losses are difficult to prove.

The special damages that the plaintiff is required to prove are his usual—and virtually his only—remedy in injurious falsehood cases. Damages for personal injury or emotional distress, for instance, are generally not recoverable. However, punitive damages and injunctive relief are sometimes obtainable.

Injurious Falsehood and Defamation Injurious falsehood may or may not overlap with the tort of defamation discussed in Chapter 6. Statements impugning a businessperson's character or conduct are probably defamatory. If, on the other hand, the false statement is limited to the plaintiff's business, property, or economic interests, his normal claim is for injurious falsehood. Both claims are possible when the injurious falsehood implies something about the plaintiff's character and affects his overall reputation. An example is a defendant's false allegation that the plaintiff knowingly sells dangerous products to children.

Defamation law's absolute and conditional privileges generally apply in injurious falsehood cases.[10] Certain other privileges protect defendants who are sued for injurious falsehood. For example, a rival claimant may in good faith disparage another's property rights by asserting his own competing rights. Similarly, one may make a good faith allegation that a competitor is infringing one's patent, copyright, or trademark. Finally, a person may sometimes make unfavorable comparisons between her product and that of a competitor. This privilege is generally limited to sales talk asserting the superiority of one's own product and does not cover unfavorable statements about a competitor's product.

[10]Chapter 6 discusses those privileges.

Jefferson County School District v. Moody's Investor's Services, Inc.

175 F.3d 848 (10th Cir. 1999)

In 1993, the Jefferson County School District decided to refinance part of its bonded indebtedness by issuing refunding bonds. The School District selected two firms other than Moody's Investor's Services, Inc. (hereinafter "Moody"), to rate the bonds, even though it had used Moody's services in the past.

The School District brought the bonds to market in late 1993. Initially, the bonds sold well. Less than two hours into the sales period, however, Moody published an article about the bonds in its "Rating News," an electronically distributed information service sent to subscribers and news services. Moody stated in the article that even though it had not been asked to rate the bonds, it intended to assign a rating to the issue subsequent to the sale. The article went on to discuss the bonds and the School District's financial condition, concluding that "the outlook on the district's general obligation debt is negative, reflecting the district's ongoing financial pressures due in part to the state's [Colorado's] past underfunding of the school finance act as well as legal uncertainties and financial constraints under Amendment 1." Amendment 1, a 1992 measure, had changed the Colorado Constitution by requiring voter approval of certain tax increases.

Within minutes after Moody released the article, Dow Jones & Company's "The Dow Jones Capital Market Reports" issued an electronic communication repeating Moody's statement about the refunding bonds' "negative outlook." According to the School District, Moody's article adversely affected the marketing of the bonds. Purchase orders ceased, several buyers canceled prior orders, and the School District found it necessary to reprice the bonds at a higher interest rate in order to complete the sale. As a result, the School District alleged, it suffered a net loss of $769,000. Contending the statement in Moody's article falsely indicated that the School District's financial condition was not creditworthy, the School District sued Moody for injurious falsehood. The federal district court dismissed the School District's complaint for failure to state a claim upon which relief could be granted. The court based its ruling on a conclusion that Moody's statement, rather than being provably false, was an expression of opinion protected by the First Amendment. The School District appealed.

Henry, Circuit Judge In *Milkovich v. Lorain Journal Co.,* 497 U.S. 1 (U.S. Sup. Ct. 1990), . . . the Supreme Court addressed [an] important limitation on the scope of defamation [and presumably injurious falsehood] laws. [T]he Court concluded [that] "a statement of opinion relating to matters of public concern which does not contain a provably false factual connotation will receive full constitutional protection." Importantly, in reaching this conclusion, the Court rejected the argument that the First Amendment creates "a wholesale defamation exception for anything that might be labeled 'opinion.' " It reasoned that expressions of opinion may often imply an assertion of objective fact:

> If a speaker says, "In my opinion, John Jones is a liar," he implies a knowledge of facts which lead to the conclusion that Jones told an untruth. Even if he states the facts upon which he bases his opinion, if those facts are either incorrect or incomplete, or if his assessment of them is erroneous, the statement may still imply a false assertion of fact. Simply couching such statements in terms of opinion does not dispel these implications; and the statement, "In my opinion Jones is a liar," can cause as much damage to reputation as the statement, "Jones is a liar."
>
> *Milkovich,* 497 U.S. at 18-19.

The [*Milkovich*] Court then considered the allegedly defamatory statement in the case before it—[a statement] that anyone who had attended a wrestling meet "knows in his heart" that a coach had lied in testifying about the meet at a subsequent hearing. [Because] a reasonable factfinder could conclude that the article implied an assertion that the plaintiff had committed perjury, [and because this assertion of perjury] was sufficiently factual to be susceptible of being proved true or false, [the Court] concluded that the statement about the coach's testimony was not an expression of opinion protected by the First Amendment.

[T]he sufficiency of the School District's allegations may be assessed by considering the first line of inquiry identified in *Milkovich:* whether a reasonable factfinder could conclude that Moody's article im-

plied a false assertion of fact about the School District's financial condition. We begin by examining the allegedly false statement that the School District maintains [was] implied by Moody's article. [This implied statement]—that the School District was not creditworthy—is no more specific than Moody's statement about the refunding bonds' "negative outlook." [A] statement regarding the creditworthiness of a bond issuer could well depend on a myriad of factors, many of them not provably true or false. [O]ne evaluator of the bonds might point to legal developments [such as] those identified by Moody in concluding that the issuer was not creditworthy. Another evaluator might point to increasing property values in making a more optimistic assessment. The difference in the evaluators' assessments of the bonds could result from differing views about the relative weight to be assigned to those factors or from other philosophical or theoretical disagreements rather than from one evaluator's reliance on inaccurate information. [I]n light of its failure to identify a more specific statement, the School District has failed to demonstrate that Moody's implied statement about its creditworthiness is provably false.

Because the alleged statement about a lack of creditworthiness is so vague, the School District's interpretation of Moody's article would be plausible only if it could establish that the article implied some other specific . . . false assertions about the School District's financial condition. [T]he article's use of the phrase "ongoing financial pressure" undermines [the School District's efforts in that regard]. The range of factors that could cause "ongoing financial pressures" is vast, ranging from constitutional and statutory changes, court decisions, property values, inflation, and labor costs to many other factors too numerous to catalogue. In order for the School District to prove that Moody's article implied an assertion about the factors causing the District's "ongoing financial pressures," it would need to identify one or [more] of these many factors, . . . demonstrate that a reasonable reader of Moody's Rating News could discern those assertions from the general references to the refunding bonds' "negative outlook" and the School District's "ongoing financial pressures," [and] prove that those specific assertions were false. The allegations of the School District's complaint do not permit such strained inferences.

We emphasize that the phrases "negative outlook" [and] "ongoing financial pressures" are not necessarily too indefinite to imply a false statement of fact. If coupled with specific factual assertions, such statements might not be immunized from [defamation or injurious falsehood] claims by the First Amendment. Moreover, the fact that Moody's article describes its evaluation as an opinion is not sufficient, standing alone, to establish that Moody's statements are protected. If such an opinion were shown to have materially false components, the issuer should not be shielded from liability by raising the word "opinion" as a shibboleth. However, in this case, the School District's failure to identify a specific false statement reasonably implied from Moody's article, combined with the vagueness of the phrases "negative outlook" and "ongoing financial pressures," indicates that Moody's article constitutes a protected expression of opinion.

District court's dismissal of complaint affirmed.

Interference with Contractual Relations

In a suit for intentional interference with contractual relations, one party to a contract claims that the defendant's interference with the other party's performance of the contract wrongly caused the plaintiff to lose the benefit of that performance. One can interfere with the performance of a contract by causing a party to repudiate it, or by wholly or partly preventing that party's performance. The means of interference can range from mere persuasion to threatened or actual violence. The agreement whose performance is impeded, however, must be an *existing* contract. This includes contracts that are voidable, unenforceable, or subject to contract defenses, but *not* void bargains, contracts that are illegal on public policy grounds, or contracts to marry. Finally, the defendant must have *intended* to cause the breach; there is usually no liability for negligent contract interferences.

Even if the plaintiff proves these threshold requirements, the defendant is liable only if his behavior was *improper.* The *RAN* case, which follows shortly, lists

the factors the *Restatement* uses to decide this question. Despite the flexible, case-by-case nature of such determinations, a few generalizations about improper interference are possible.

1. If the contract's performance was blocked by such clearly improper means as threats of physical violence, misrepresentations, defamatory statements, bribery, harassment, or bad faith civil or criminal actions, the defendant usually is liable. Liability is also likely where the interference was motivated *solely* by malice, spite, or a simple desire to meddle.

2. If his means and motives are legitimate, a defendant generally escapes liability when his contract interference is in the *public interest*—for example, when he informs an airport that an air traffic controller habitually uses hallucinogenic drugs. The same is true when the defendant acts to *protect a person for whose welfare she is responsible*—for example, when a mother induces a private school to discharge a diseased student who could infect her children.

3. A contract interference resulting from the defendant's good faith effort to protect her own *existing* legal or economic interests usually does not create liability so long as appropriate means are used. For example, a landowner can probably induce his tenant to breach a sublease to a party whose business detracts from the land's value. However, business parties generally cannot interfere with existing contract rights merely to further some *prospective* competitive advantage. For example, a seller cannot entice its competitors' customers to break existing contracts with those competitors.

4. Finally, competitors are unlikely to incur liability where, as is still often true of employment contracts, the agreement interfered with is *terminable at will.*[11] The reason is that in such cases, the plaintiff has only an expectancy that the contract will continue, and not a right to have it continued. Thus, a firm that hires away its competitors' at-will employees usually escapes liability.

The basic measure of damages for intentional interference with contractual relations is the value of the lost contract performance. Some courts also award compensatory damages reasonably linked to the interference (including emotional distress and damage to reputation). Sometimes the plaintiff may obtain an injunction prohibiting further interferences.

Interference with Prospective Advantage

The rules and remedies for intentional interference with prospective advantage parallel those for interference with contractual relations. The main difference is that the former tort involves interferences with *prospective* relations rather than existing contracts. The protected future relations are mainly potential contractual relations of a business or commercial sort. Liability for interference with such relations requires intent; negligence does not suffice.

The "improper interference" factors weighed in interference-with-contract cases generally apply to interference with prospective advantage as well. One difference, however, is that interference with prospective advantage can be justified if: (1) the plaintiff and the defendant are in competition for the prospective relation with which the defendant interferes; (2) the defendant's purpose is at least partly competitive; (3) the defendant does not use such improper means as physical threats, misrepresentations, and bad faith lawsuits; and (4) the defendant's behavior does not create an unlawful restraint of trade under the antitrust laws or other regulations. Thus, a competitor ordinarily can win customers by offering lower prices and attract suppliers by offering higher prices. Unless this is otherwise illegal, he can also refuse to deal with suppliers or buyers who also deal with his competitors.

[11] Chapter 50 discusses terminable-at-will employment contracts.

RAN Corporation v. Hudesman *823 P.2d 646 (Alaska Sup. Ct. 1991)*

David Hudesman leased commercial property housing the Red Dog Saloon to Don Harris, the saloon's owner and operator. The lease said that Harris could assign it to any subtenant or assignee who was financially responsible and would properly care for the premises. It also required that Hudesman consent to such an assignment, but added that this consent could not be withheld unreasonably. After Harris decided to relocate his business, he was contacted by Richard Stone, president of the RAN Corporation. Stone wanted to use

the property for an artifacts gallery. Harris and Stone agreed that Harris would assign the lease for $15,000, conditional on Hudesman's approval.

About this time, a politically influential man named Jerry Reinwand contacted Hudesman about the property. In exchange for Reinwand's promise to help Hudesman secure government leases for a large building Hudesman owned, Hudesman promised Reinwand that if Harris relocated his business, Reinwand would be assigned the property. Then Hudesman told Harris that he would not consent to Harris's assignment of the lease to RAN, and that Harris would be "looking at litigation" if he tried to assign the lease to Stone. Therefore, Harris told Stone that the deal was off, returned his $15,000 deposit, and assigned the lease to Reinwand for $15,000.

RAN then sued for an injunction to invalidate Reinwand's lease and to enforce its assignment contract with Harris, and also for damages. After RAN settled with several defendants, its main remaining claims were interference with contractual relations and interference with prospective advantage claims against Hudesman. When both parties moved for summary judgment, the trial court held for Hudesman. RAN appealed.

Matthews, Justice The elements of intentional interference with contractual relations are: (1) a contract existed, (2) the defendant knew of the contract and intended to induce a breach, (3) the contract was breached, (4) the defendant's wrongful conduct engendered the breach, (5) the breach caused the plaintiff's damages, and (6) the defendant's conduct was not privileged or justified. The fourth, fifth, and sixth elements also apply to the related tort of intentional interference with prospective economic advantage. As our analysis applies equally to either tort, we will refer to them collectively.

The sixth element is troublingly vague. The *Restatement (Second) of Torts* section 767 speaks not in terms of "privilege," but requires that the actor's conduct not be "improper." Other authorities used the catchword "malice." Regardless of the phrase used, the critical question is what conduct is not "privileged" or "improper" or "malicious." The *Restatement* lists seven factors for consideration: (1) the nature of the actor's conduct, (2) the actor's motive, (3) the interests of the other with which the actor's conduct interferes, (4) the interests sought to be advanced by the actor, (5) the social interests in protecting the freedom of action of the actor and the contractual interests of the other, (6) the proximity or remoteness of the actor's conduct to the interference, and (7) the relations between the parties. While these factors are relevant in some or all incarnations of the interference tort, they are hard to apply in any sort of predictive way.

Instead of relying on the *Restatement* factors, we [have] adopted a test of privilege which hold[s] that where an actor has a direct financial interest, he is privileged to interfere with a contract for economic reasons, but not where he is motivated by spite, malice, or some other improper motive. In our view, this rule applies to this case. A number of other cases have recognized that a landlord has a sufficient interest to interfere with a prospective or actual lease assignment. The right to intervene has also been recognized in the analogous setting of transfers of distributorships.

It seems beyond reasonable argument that an owner of property has a financial interest in the assignment of a lease of the property he owns. An effective lease assignment makes the assignee the tenant of the owner. The tenant has an obligation to pay rent directly to the owner, and the use, or abuse, of the property by the assignee may affect its value to the owner. Further, the owner may know of another potential assignee who will pay more rent than the prospective assignee. Moreover, the owner may wish to terminate the lease based on knowledge of a more profitable use for the property.

Since Hudesman had a direct financial interest in the proposed assignment of the lease, the essential question in determining if interference is justified is whether Hudesman's conduct is motivated by a desire to protect his economic interest, or whether it is motivated by spite, malice, or some other improper objective. As there is no evidence of spite, malice, or other improper objective—Hudesman did not even know RAN Corporation's principals—and since it is clear that Hudesman refused to approve the assignment because he believed that he would receive a greater economic benefit from a tenancy by Reinwand, the interference was justified.

Hudesman's threat of litigation does not seem relevant to RAN's claim for interference. RAN's

assignment agreement with Harris was explicitly conditional on Hudesman's approval. When Hudesman disapproved of the assignment, the interference was complete. Hudesman's disapproval may have been a breach of the Hudesman/Harris lease, but it was privileged from a tort standpoint because of Hudesman's preexisting interest as a property owner-lessor. The threat of litigation may, at worst, have been another breach of the Hudesman/Harris lease. However, it too was not tortious and it was, in any case, superfluous to the interference, because RAN's prospective economic relationship was terminated by Hudesman's disapproval, not by his threat to sue.

Lower court judgment in favor of Hudesman affirmed.

Lanham Act Section 43(a)

Section 43(a) of the Lanham Act basically creates a federal law of unfair competition. Section 43(a) is not a consumer remedy; it is normally available only to commercial parties, who usually are the defendant's competitors. The section creates civil liability for a wide range of false, misleading, confusing, or deceptive descriptions of fact made in connection with goods or services. Section 43(a)'s many applications include:

1. *Tort claims for "palming off" or "passing off."* This tort involves false representations that are likely to induce third parties to believe that the defendant's goods or services are those of the plaintiff. Such representations include imitations of the plaintiff's trademarks, trade names, packages, labels, containers, employee uniforms, and place of business.

2. *Trade dress infringement claims.* These claims resemble passing-off claims. A product's trade dress is its overall appearance and sales image. Section 43(a) prohibits a party from passing off its goods or services as those of a competitor by employing a substantially similar trade dress that is likely to confuse consumers as to the source of its products or services. For example, a competitor that sells antifreeze in jugs that are similar in size, shape, and color to a well-known competitor's jugs may face section 43(a) liability.

3. *Claims for infringement of both registered and unregistered trademarks.*

4. *Commercial appropriation of name or likeness claims and right of publicity claims* (discussed in Chapter 6).

5. *False advertising claims.* This important application of section 43(a) includes ads that misrepresent the nature, qualities, or characteristics of either the *advertiser's* products and services or a *competitor's* products and services. Section 43(a) applies to ads that are likely to mislead buyers even if they are not clearly false on their face, and to ads with certain deceptive *omissions.* In the *United Industries* case, the court discusses the types of statements that may violate section 43(a).

United Industries Corp. v. The Clorox Co. *140 F.3d 1175 (8th Cir. 1998)*

The Clorox Co.'s "Combat" brand was the top-selling roach bait insecticide on the market. United Industries Corp. (hereinafter "UI") produced "Maxattrax," a relatively new roach bait insecticide. The statement that Maxattrax "kills roaches in 24 hours" appeared on the product's packaging. In a legal action filed against Clorox, UI sought a declaratory judgment that this statement did not constitute false advertising. Clorox filed an answer and counterclaim. In the counterclaim, Clorox contended that one of UI's television commercials for Maxattrax constituted false advertising in violation of Lanham Act section 43(a).

The 15-second Maxattrax commercial to which Clorox objected began with a split-screen depiction of two roach bait products on two kitchen countertops. Although the lighting was dark, the viewer could see the Maxattrax box on the left. On the right was a "Roach Box" that was generally similar to the packaging used by Clorox for its Combat brand. An announcer asked, "Can you guess which bait kills roaches in 24 hours?" As the lighting grew brighter, the camera panned beyond the boxes to reveal, on the Maxattrax side,

a clean, orderly kitchen that was uninhabited by roaches. On the other side, however, the kitchen was in a chaotic state, with cupboards and drawers opening, items on the counter turning over, paper towels spinning off a dispenser, and a spice rack convulsing and losing its spices. All of this disorder was the apparent result of a major roach infestation. At the same time, the message "Based on lab tests" appeared in small print at the bottom of the screen. The two roach-bait boxes then reappeared on a split-screen, with computer-animated roaches appearing to kick over the "Roach Bait" box and dance gleefully on it. As the commercial's final visual showed the Maxattrax box, an announcer stated that "[t]o kill roaches in 24 hours, it's hot-shot Maxattrax. Maxattrax, it's the no-wait roach bait." The final phrase was also displayed in print on the screen.

Clorox filed a motion for a preliminary injunction against the commercial. When the federal district court denied the motion, Clorox appealed.

Wollman, Circuit Judge [Lanham Act section 43(a)] prohibits commercial advertising or promotion that misrepresents the nature, characteristics, qualities, or geographic origin of the advertiser's or another person's goods, services, or commercial activities. The false statement necessary to establish a Lanham Act [section 43(a)] violation generally falls into one of two categories: (1) commercial claims that are literally false as a factual matter; and (2) claims that may be literally true or ambiguous but which implicitly convey a false impression, are misleading in context, or [are] likely to deceive consumers. Many claims will actually fall into a third category, generally known as "puffery." Puffery is exaggerated advertising, blustering, and boasting upon which no reasonable buyer would rely and is not actionable under section 43(a). Non-actionable puffery includes representations of product superiority that are vague or highly subjective. However, false descriptions of specific or absolute characteristics of a product and specific, measurable claims of product superiority based on product testing are not puffery and are actionable.

If a plaintiff proves that a challenged claim [in an advertisement] is literally false, a court may grant relief without considering whether the buying public was actually misled; actual consumer confusion need not be proved. In some circumstances, even a visual image, or a visual image combined with an audio component, may be literally false. The greater the degree to which a message relies upon the viewer or consumer to integrate its components and draw the apparent conclusion, however, the less likely it is that a finding of literal falsity will be supported. Commercial claims that are implicit, attenuated, or merely suggestive usually cannot fairly be characterized as literally false.

The district court determined that the Maxattrax commercial conveyed an explicit message that the product killed roaches in 24 hours and found that this message was literally true. Clorox argues that [in view of its combination of visual and audio elements,] the Maxattrax commercial conveyed three additional explicit messages that are literally false: (1) that Maxattrax controls roach infestations in consumers' homes within 24 hours; (2) that Combat and other roach baits are entirely ineffective in consumers' homes within 24 hours; and (3) that Maxattrax provides superior performance in consumers' homes in comparison to Combat and other roach baits.

Our review of the record satisfies us that the [district court was] clearly correct in its assessment that the audio and print components of the advertisement are literally true. The scientific evidence and expert testimony . . . satisfactorily established that Maxattrax roach bait "kills roaches in 24 hours." Clorox protests that this statement is literally true only in circumstances where a particular roach actually comes into contact with the product. This complaint rings hollow. The requirement that roaches must come into contact with the poison for it to be effective is the central premise of the roach bait line of products. We will not presume the average consumer to be incapable of comprehending the essential nature of a roach trap.

Similarly, we conclude that the district court did not err in determining that the Maxattrax commercial did not convey explicit visual messages that were literally false. The depiction of a Maxattrax box in a pristine, roach-free kitchen, coupled with the depiction of a kitchen in disarray in which animated roaches happily dance about on a generic roach trap, is not sufficient . . . to constitute literal falsity in the

manner in which it was presented. [M]oreover, the audio component of the advertisement, emphasizing only the 24-hour time frame and quick roach kill with no mention of complete infestation control, fosters ambiguity regarding the intended message and renders the commercial much more susceptible to differing, plausible interpretations. Thus, . . . the district court's finding that the commercial did not explicitly convey a literally false message that Maxattrax will completely control a home roach infestation within 24 hours is not clearly erroneous.

Clorox also contends that the commercial conveys an explicit message of comparative superiority that is literally false. [When] a defendant has buttressed a claim of superiority [of the defendant's product] by attributing it to the results of scientific testing, a plaintiff must prove that the tests relied upon were not sufficiently reliable to permit one to conclude with reasonable certainty that they established the proposition for which they were cited. The Maxattrax commercial indicates in small print at the bottom of the screen that its implied answer to the posed question, "Can you guess which bait kills roaches in 24 hours?" is "[b]ased on lab tests." In order for this claim to be considered literally false, then, Clorox must establish that the tests to which the commercial referred were not sufficiently reliable to support its claims with reasonable certainty. The district court determined that the scientific research provided by UI was reliable and supported the commercial's claims. We agree. Laboratory testing indicates that the toxin in Maxattrax kills within 24 hours those roaches that come into contact with it. Some other roach bait products will not kill a roach within that interval, and in fact, are not even intended to do so.

Any additional messages in the Maxattrax commercial perceived by Clorox . . . are not sufficiently explicit or unambiguous . . . to constitute specific false claims of a literal nature. [However, statements] that are literally true or ambiguous but which nevertheless have a tendency to mislead or deceive the consumer are actionable under the Lanham Act. Where a commercial claim is not literally false but is misleading in context, proof that the advertising actually conveyed the implied message and thereby deceived a significant portion of the recipients becomes critical.

Clorox contends that when one assesses the comparative visuals and implicit messages in the commercial, a consumer might be misled to construe them as a claim that Maxattrax will completely control an infestation by killing all of the roaches in one's home within 24 hours, while its competitors will fail to do the same. In fact, Maxattrax will kill only those roaches which come into contact with the product; actual control of a roach problem may take several weeks. Whether one accepts the district court's more literal interpretation of the commercial's message or Clorox's proposed construction, however, is highly dependent upon context and inferences, and Clorox's view is unsupported at this point by expert testimony, surveys, or consumer reaction evidence of any kind. It is . . . a classic question of fact, the resolution of which we will not disturb absent a showing of clear error by the district court. Clorox has not made such a showing.

District court's denial of preliminary injunction affirmed.

Ethical and Public Policy Concerns

1. An ethical theory known as *utilitarianism s*ays that the test for the moral worth of actions is their ability to produce the greatest degree of aggregate net satisfaction throughout society. Some utilitarians say that satisfaction is maximized when people are best able to realize their individual preferences. Some say that one measure of satisfaction is the creation of economic wealth. Look at the purposes said to underlie trademark law. Are these generally utilitarian? Why or why not?

2. Legal reasoning is sometimes deductive or syllogistic. In such cases, the court states a general rule as a major premise, treats the facts as a minor premise, and applies the rule to the facts to generate a result. But another style of legal reasoning called *factor-based balancing* proceeds differently. In cases of this kind, the court states various factors that are relevant

to its decision and decides by weighing these factors against one another under the facts before it. Which cases in this chapter use this method in whole or in part? Based on those cases, what is good about this style of legal reasoning? Are sensible decisions possible in any other way? On the other hand, what is bad about this decisionmaking process? In answering this last question, consider whether or how well this process enables business parties to predict the legal consequences of their behavior.

Problems and Problem Cases

1. Huey J. Rivet patented an "amphibious marsh craft" for hauling loads and laying pipeline in swamps. Rivet's model could "walk" over stumps for extended periods while carrying heavy loads. Later, Robert Wilson, who had once worked for Rivet as a welder, began marketing a similar craft. The craft sold by Wilson differed from the craft described in the specification accompanying Rivet's patent application in several respects. Overall, though, the Wilson boat performed much the same functions about as effectively as the Rivet craft, and used much the same engineering techniques and concepts to do so. Has Wilson infringed Rivet's patent?

2. Lorna Nelson, half-sister of the rock star Prince, sued Prince for copyright infringement. She alleged that Prince's hit "U Got the look" infringed her copyrighted song "What's Cooking in this Book." Lorna's song, to which Prince had access, had six verses totaling 35 lines and 176 words. "U Got the look" had eight verses totaling 47 lines and 242 words. The alleged infringements concerned the following verses and words from the two songs:

a. Lorna's verse 2: "I glanced up and saw you, a smile so pretty." *Prince's verses 2 and 7:* "I woke up, I've never seen such a pretty girl."

b. Lorna's verse 3: "Makeup was rolling down my face." *Prince's verse 5:* "A whole hour just to make up your face."

c. Lorna's verse 6: "What's cooking in this book, what's cooking in . . . " *Prince's verses 4 and 6:* "U sho 'nuf do be cooking in my book."

d. Lorna's verses 1 and 6: "Take a look, Take another look." *Prince's verses 1 and 7:* "U got the look."

The main issue in the case was whether there was substantial similarity between the lyrics just quoted. Are these lyrics sufficiently similar to justify imposing liability on Prince?

3. Irena Narell wrote a book that was a social history of the Bay Area Jewish community. Narell's book, titled *Our City: The Jews of San Francisco,* was published in 1981. It sold fewer than 5,000 copies. In 1986, Narell repurchased the copyright and the remaining inventory from the publisher. Cynthia Freeman's novel, *Illusions of Love,* was published in hardcover in 1984 and in paperback in 1986. Approximately 1 million copies of the novel were sold. *Illusions* told a fictional story about the heir of a large, wealthy Jewish family. In the story, the heir had to choose between his family and a lover from a vastly different background. Freeman consulted and used *Our City* in writing *Illusions.* Portions of *Illusions* were based on historical events described in *Our City. Illusions* also contained several instances of verbatim copying from *Our City.* These instances totaled approximately 300 words. In various other places, *Illusions* contained paraphrases of passages from *Our City.* Narell sued Freeman and her publishers for copyright infringement. The defendants argued that they should be protected against liability by the fair use defense. Should the defendants succeed with the fair use defense?

4. Jack Elo founded Ikon Photographic Corp. (IPC) to market inexpensive 35 mm and 110 mm pocket cameras. IPC applied to register the "Ikon" trademark and its logo but failed to obtain registration on the Principal Register. Later, IPC managed to obtain registration of a separate "Ikon" mark with a stylized "I" logo. Eventually, Nikon, Inc., sued IPC for infringement of the "Nikon" trademark. Nikon primarily manufactures cameras that are more expensive and complicated than those sold by IPC. However, Nikon had also been making point-and-shoot cameras similar to IPC's offerings. Should IPC be held liable for trademark infringement?

5. Since the 1970s, Nike, Inc., has used the word NIKE and a swoosh design as trademarks in connection with the footwear, clothing items, and related accessories it produces and sells. Both NIKE and the swoosh design are well-known, federally registered trademarks. Since 1989, Nike has used the now-familiar slogan JUST DO IT in connection with the promotion of its products. Michael Stanard began designing and selling T-shirts and sweatshirts that bore the name MIKE and a swoosh design as a takeoff on, and parody

of, the Nike trademarks. Stanard, who gave the name "Just Did It" Enterprises to this business venture, chose persons named "Mike" (and their relatives) as his target market. He sought to reach these persons by mailing brochures to them. Nike sued Stanard for trademark infringement. Should Nike win the case?

6. E. I. du Pont de Nemours & Co. was building a plant to develop a highly secret unpatented process for producing methanol. During the construction, some of its trade secrets were exposed to view from the air because the plant in which they were contained did not yet have a roof. These secrets were photographed from an airplane by two photographers who were hired by persons unknown to take pictures of the new construction. Did this action amount to a misappropriation of Du Pont's trade secrets?

7. Time-Life Books published a book titled *Exercising for Fitness.* The book contained a reproduction of the famous Charles Atlas, Ltd., advertisement in which a 97-pound weakling uses Atlas's Dynamic Tension body-building program to become a real man after a bully kicks sand in his face and that of his girlfriend. The caption accompanying the reproduction told the book's readers that Atlas's program is a system of isometric exercises. On the same page, the book warned readers about the extreme dangers of isometric exercises. Atlas sued Time-Life for injurious falsehood. According to Atlas, the book's caption was false because Atlas's method was not isometric in nature. Atlas alleged that Time-Life made this false statement with knowledge of its falsity or with an intent to injure Atlas. Atlas contended that the false caption, coupled with the warning about the dangers of isometric exercises, caused it to suffer economic loss in the form of decreased sales and expenses to counteract the falsehood. Atlas's complaint did not identify any specific lost customers, however. Arguing that the allegations in Atlas's complaint were not sufficient to state a claim upon which relief could be granted, Time-Life moved to dismiss the complaint. Were Atlas's allegations sufficient to state a claim against Time-Life?

8. In 1989, Marion Merrell Dow, Inc. (MMD), developed "Cardizem CD," an improved version of a prescription diltiazem drug that MMD had introduced several years earlier. The Food and Drug Administration (FDA) approved Cardizem CD for the treatment of angina and hypertension. Cardizem CD and its predecessor versions generated huge sales figures. Approximately three years after Cardizem CD came on the market, Rhone-Poulenc Rorer Pharmaceuticals, Inc. (RPR), introduced a prescription diltiazem drug known as "Dilacor XR." It was less expensive than Cardizem CD. Dilacor XR received approval from the FDA for treatment of hypertension but not angina. Physicians may prescribe an FDA-approved drug for nonapproved uses. Federal law applicable at the time, however, prohibited the drug's manufacturer from promoting nonapproved uses. Through an advertising campaign, RPR sought to convince physicians to prescribe Dilacor XR instead of Cardizem CD. MMD responded with advertisements and promotional materials meant to dissuade physicians from prescribing Dilacor XR in place of Cardizem CD.

RPR brought a false advertising action against MMD under section 43(a) of the Lanham Act. MMD responded with a section 43(a)–based false advertising counterclaim against RPR. MMD based its counterclaim on Dilacor XR advertisements that featured images such as two similar gasoline pumps or airline tickets with dramatically different prices, accompanied by the slogan, "Which one would you choose[?]" The federal district court concluded that RPR's advertisements "contain[ed] a hidden message encouraging indiscriminate substitution" by prescribing physicians. This message, the court held, was false or misleading because it failed to disclose that Dilacor XR had not been approved by the FDA for treatment of angina. The court therefore ordered RPR to engage in corrective advertising revealing the fact that the FDA had not approved Dilacor XR for the treatment of angina. Was the court correct in concluding that RPR violated section 43(a) and that corrective advertising was an appropriate remedy?

9. The New Mexico and Arizona Land Company owned a sizable tract of land in Arizona. It leased a portion of this land, which contained water for grazing, to the Bar J Bar Cattle Company. New Mexico had the right to cancel the lease upon 30 days' notice once it sold the land. Malcolm Pace, who owned a ranch adjoining the Bar J Bar ranch and wanted its water rights, bought the land leased by Bar J Bar from New Mexico. Shortly thereafter, New Mexico gave Bar J Bar 30 days' notice of termination. Bar J Bar sued Pace for intentional interference with contractual relations. One feature of the Bar J Bar lease weakens its chances of recovery against Pace. What is that feature of the lease? *Hint:* The answer requires that you make an analogy to

a subject discussed in this chapter's discussion of intentional interference with contractual relations.

10. Tony Mason created a mixed drink that he named "Lynchburg Lemonade." The drink consisted of Jack Daniel whiskey, Triple Sec, sweet and sour mix, and 7-Up. Mason, who developed the recipe one evening while seeking to ease a sore throat, served the drink at his restaurant and lounge. The drink became a very big seller for Mason. He informed only a few of his employees of the details of the recipe and instructed each of those employees not to tell anyone else. To prevent customers from learning the recipe, those in charge of mixing the beverage did so in the back of the restaurant and lounge. Winston Randle, a sales representative for Jack Daniel Distillery, drank Lynchburg Lemonade while in Mason's restaurant and lounge. Although the source of his information was unclear, Randle learned the recipe for the drink at that time. Randle informed his superiors about Lynchburg Lemonade and its recipe. Roughly one year later, Jack Daniel was developing a national promotion campaign for the drink. Mason, who never received compensation for Jack Daniel's use of the Lynchburg Lemonade recipe, sued Jack Daniel and Randle for misappropriation of a trade secret. Mason won a jury verdict. The defendants appealed. They argued, among other things, that the recipe for Lynchburg Lemonade was not a valid trade secret because it could be fairly easily duplicated and bore some resemblance to drinks classified as part of the "Collins" family of drinks. Was the recipe a valid trade secret?

11. A Quaker State Corp. television commercial asserted that "tests prove" the following claim: "At start-up Quaker State 10W-30 protects better than any other leading 10W-30 motor oil." The commercial also depicted an engine, superimposed over which were bottles of Quaker State motor oil and four competing oils, including Castrol GTX 10W-30. Nearby was a bar graph displaying the superior speed with which Quaker State oil flows to engine components once the engine is started. Castrol, Inc., sued Quaker State for false advertising under Lanham Act section 43(a). Castrol sought a preliminary injunction against Quaker State's airing the commercial. The evidence presented to the court indicated that Quaker State's oil did indeed reach engine parts faster at start-up than did its competitors' oil, but that this had no discernible effect on engine wear. The apparent reason was that the "residual oil" remaining from prior engine starts protects the engine until new oil arrives. Should an injunction be granted against the airing of the Quaker State commercial?

Chapter Outline

I. The Nature of Contracts
- A. *The Functions of Contracts*
- B. *The Evolution of Contract Law*
- C. *The Methods of Contracting*

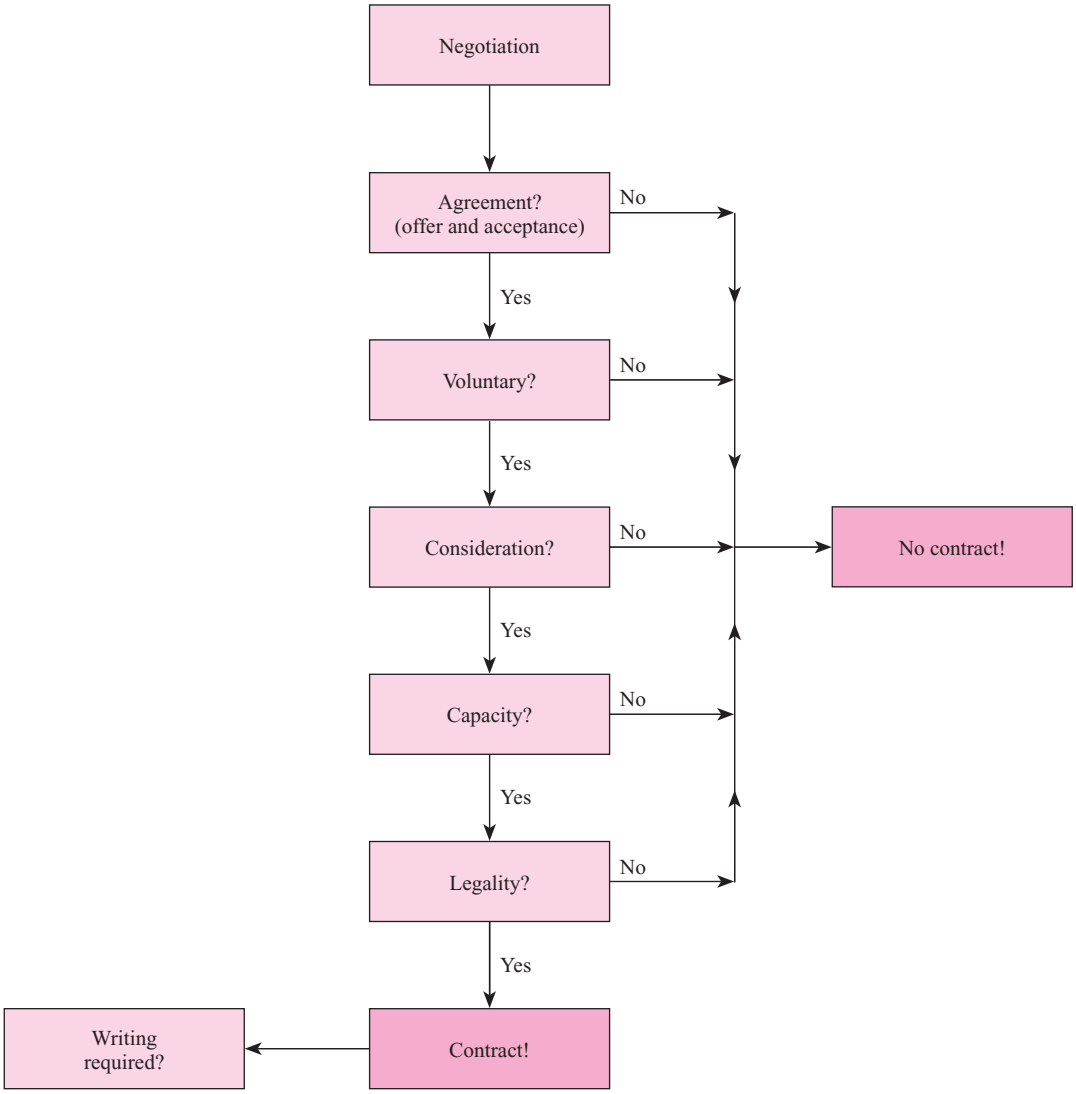
II. Basic Contract Concepts and Types
- A. *Bilateral and Unilateral Contracts*
- B. *Valid, Unenforceable, Voidable, and Void Contracts*
- C. *Express and Implied Contracts*
- D. *Executed and Executory Contracts*

III. Sources of Law Governing Contracts
- A. *The Uniform Commercial Code: Origin and Purposes*
- B. *Application of Article 2*
- C. *Application of the Common Law of Contracts*
- D. *Law Governing "Hybrid" Contracts*
- E. *Relationship of the UCC and the Common Law of Contracts*
- F. *Basic Differences in the Nature of Article 2 and the Common Law of Contracts*
- G. *Influence of Restatement (Second) of Contracts*

IV. "Noncontract" Obligations
- A. *Quasi-Contract*
- B. *Promissory Estoppel*

The law of contracts deals with the enforcement of promises. It is important to realize from the outset of your study of contracts that *not every promise is legally enforceable.* (If every promise were enforceable, this chapter could be one sentence long!) We have all made and broken promises without fear of being sued. If you promise to take a friend out to dinner and then fail to do so, you would be shocked to be sued for breach of contract. What separates such promises from legally enforceable contracts? The law of contracts sorts out what promises are enforceable, to what extent, and how they will be enforced.

The Nature of Contracts



The essence of a contract is that it is a *legally enforceable* promise or set of promises. In other words, when a set of promises has the status of *contract,* a person injured by a breach of that contract is entitled to call on the government (courts) to force the breaching party to honor the contract.

Over the years, the common law courts have developed several basic tests that a promise must meet before it is treated as a contract. These tests comprise the basic elements of contract. Contracts are *agreements* (an *offer,* made and *accepted*) that are *voluntarily* created by persons with the *capacity* to contract. The objectives of the agreement must be *legal* and, in most cases, the agreement must be supported by some *consideration* (a bargained-for exchange of legal value). (See Figure 1.) The following chapters discuss each of these elements and other points that are necessary to enable you to distinguish contracts from unenforceable, social promises.

The Functions of Contracts

Contracts give us the ability to enter into agreements with others with confidence that we may call on the *law*—not merely the good faith of the other party—to make sure that those agreements will be honored. Within limitations that you will study later, *contracting lets us*

Figure 1 *Getting to Contract*

create a type of private law—the terms of the agreements we make—that governs our relations with others.

Contracts facilitate the planning that is necessary in a modern, industrialized society. Who would invest in a business if she could not rely on the fact that the builders and suppliers of the facilities and equipment, the suppliers of the raw materials necessary to manufacture products, and the customers who agree to purchase those products would all honor their commitments? How could we make loans, sell goods on credit, or rent property unless loan agreements, conditional sales agreements, and leases were backed by the force of the law? Contract, then, is necessary to the world as we know it. Like that world, its particulars tend to change over time, while its general characteristics remain largely stable.

The Evolution of Contract Law

The contract idea is ancient. Thousands of years ago, Egyptians and Mesopotamians recognized devices like contracts; by the 15th century, the common law courts

of England had developed a variety of theories to justify enforcing certain promises. Contract law did not, however, assume major importance in our legal system until the 19th century, when many social factors combined to shape the common law of contract. Laissez-faire (free market) economic ideas had a profound influence on public policy thinking during this period, and the Industrial Revolution created the necessity for private planning and certainty in commercial transactions. The typical contract situation in the early decades of the 19th century involved face-to-face transactions between parties with relatively equal bargaining power who dealt with relatively simple goods.

The contract law that emerged from this period was strongly influenced by these factors. Its central principle was *freedom of contract.* Freedom of contract is the idea that contracts should be enforced because they are the products of the free wills of their creators, who should, within broad limits, be free to determine the extent of their obligations. The proper role of the courts in such a system of contract was to enforce these freely made bargains but otherwise to adopt a hands-off stance. The freedom to make good deals carried with it the risk of making bad deals. As long as a person voluntarily entered a contract, it would generally be enforced against him, even if the result was grossly unfair. And since equal bargaining power tended to be assumed, the courts were usually unwilling to hear defenses based on unequal bargaining power. This judicial posture allowed the courts to create a pure contract law consisting of precise, clear, and technical rules that were capable of general, almost mechanical, application. Such a law of contract met the needs of the marketplace by affording the predictable and consistent results necessary to facilitate private planning.

As long as most contracts resembled the typical transaction envisioned by 19th-century contract law, such rules made sense. America's Industrial Revolution, however, undermined many of the assumptions about the characteristics of the typical contract that had been made in the previous era. Regional, and later national, markets produced longer chains of distribution. This fact, combined with more efficient means of communication, meant that people often contracted with persons whom they did not know for goods that they had never seen. The emergence of large business organizations after the Civil War produced obvious disparities of bargaining power in many contract situations. These large organizations found it more efficient to standardize their numerous transactions by employing standard form contracts, which also could be used to exploit disproportionate bargaining power by dictating the terms of their agreements.

Contract law evolved to reflect these changes in social reality. During the 20th century, there was a dramatic increase in government regulation of private contractual relationships. Think of all the statutes governing the terms of what were once purely private contractual relationships. Legislatures commonly dictate many of the basic terms of insurance contracts. Employment contracts are governed by a host of laws concerning maximum hours worked, minimum wages paid, employer liability for on-the-job injuries, unemployment compensation, and retirement benefits. In some circumstances, product liability statutes impose liability on the manufacturers and sellers of products regardless of the terms of their sales contracts. The purpose of much of this regulation has been to protect persons who lack sufficient bargaining power to protect themselves.

Nor have the legislatures been the only source of public supervision of private agreements. Courts have been increasingly concerned with creating contract rules that produce fair results. The precise, technical rules that characterized traditional common law contract have given way to permit some broader, imprecise standards such as good faith, injustice, reasonableness, and unconscionability. The reason for such standards is clear. If courts are increasingly called on to evaluate private contracts on the basis of fairness, it is necessary to fashion rules that afford the degree of judicial discretion required to reach just decisions in the increasingly complex and varied contract cases that reach the courts.

Despite the increased attention to fairness in contract law, the agreement between the parties is still the heart of every contract.

The Methods of Contracting

Many students reading about contract law for the first time may have the idea that contracts must be in writing to be enforceable. Generally speaking, that is not true. There are some situations in which the law requires certain kinds of contracts to be evidenced by a writing to be enforced. The most common examples of those situations are covered in Chapter 16. Unless the law specifically requires a certain kind of contract to be in writing, an oral contract that can be proven is as legally enforceable as a written one.

Contracts can be and are made in many ways. When most of us imagine a contract, we envision two parties bargaining for a deal, then drafting a contract on paper

and signing it or shaking hands. Some contracts are negotiated and formed in that way. Far more common today, however, is the use of **standardized form contracts.** Standardized form contracts are contracts that are preprinted by one party and presented to the other party for signing. In most situations, the party who drafts and presents the standardized contract is the party who has the most bargaining power and/or sophistication in the transaction. Frequently, the terms of standardized contracts are non-negotiable. Such contracts have the advantage of providing an efficient method of standardizing common transactions. On the other hand, they present the dangers that the party who signs the contract will not know what he is agreeing to and that the party who drafts and presents the contract will take advantage of his bargaining power to include terms that are oppressive or abnormal in that kind of transaction.

Standardized contracts are common online as well as in the physical world. You have probably entered into online standardized contracts when you downloaded software from the Internet, joined an online service, initialized an e-mail account, or purchased goods online. The terms of standardized contracts online are usually presented in a manner that requires the viewer to click on an icon indicating agreement before he can proceed in the program. Standardized online contracts presented in this way are often called **clickwrap contracts** or **click-through contracts.** If you have purchased mass-marketed software in a package, you have probably noticed that the program disk is packaged in a sealed package with a notice that states that your opening the package constitutes agreement with the terms of a proposed standardized license agreement. These are called **shrinkwrap contracts** or **shrinkwrap licenses,** a name that refers to the practice of sealing software in shrinkwrapped packaging. The enforceability of clickwraps and shrinkwraps, which has been a controversial topic, will be discussed in Chapter 10.

Basic Contract Concepts and Types

Bilateral and Unilateral Contracts

Contracts have traditionally been classified as **bilateral** or **unilateral,** depending on whether one or both of the parties have made a promise. In unilateral contracts, only one party makes a promise. For example, Perks Café issues "frequent buyer" cards to its customers, and stamps the cards each time a customer buys a cup of coffee. Perks promises to give any customer a free cup of coffee if the customer buys 10 cups of coffee and has his "frequent buyer" card stamped 10 times. In this case, Perks has made an offer for a unilateral contract, a contract that will be created with a customer only if and when the customer buys 10 cups of coffee and has his card stamped ten times. In a bilateral contract, by contrast, *both* parties exchange promises and the contract is formed as soon as the promises are exchanged. For example, if Perks Café promises to pay Willowtown Mall $1,000 a month if Willowtown Mall will promise to lease a kiosk in the mall to Perks for the holiday season, Perks has made an offer for a bilateral contract because it is offering a promise in exchange for a promise. If Willowtown Mall makes the requested promise, a bilateral contract is formed at that point—even before the parties begin performing any of the acts that they have promised to do.

Valid, Unenforceable, Voidable, and Void Contracts

A **valid contract** is one that meets all of the legal requirements for a binding contract. Valid contracts are, therefore, enforceable in court.

An **unenforceable contract** is one that meets the basic legal requirements for a contract but may not be enforceable because of some other legal rule. You'll learn about an example of this in Chapter 16, which discusses the statute of frauds, a rule that requires certain kinds of contracts to be evidenced by a writing. If a contract is one of those for which the statute of frauds requires a writing, but no writing is made, the contract is said to be unenforceable. Another example of an unenforceable contract is an otherwise valid contract whose enforcement is barred by the applicable contract statute of limitations.

Voidable contracts are those in which one or more of the parties have the legal right to cancel their obligations under the contract. For example, a contract that is induced by fraud or duress is voidable (cancellable) at the election of the injured party. Other situations in which contracts are voidable are discussed in Chapters 13 and 14. The important feature of a voidable contract is that the injured party has the *right* to cancel the contract *if he chooses.* That right belongs only to the injured party, and if he does not cancel the contract, it can be enforced by either party.

Void contracts are agreements that create no legal obligations and for which no remedy will be given. Contracts to commit crimes, such as "hit" contracts, are classic examples of void contracts. Illegal contracts such as these are discussed in Chapter 15.

Express and Implied Contracts

In an **express contract,** the parties have directly stated the terms of their contract orally or in writing at the time the contract was formed. However, the mutual agreement necessary to create a contract may also be demonstrated by the conduct of the parties. When the surrounding facts and circumstances indicate that an agreement has in fact been reached, an **implied contract** (also called a contract implied in fact) has been created. When you go to a doctor for treatment, for example, you do not ordinarily state the terms of your agreement in advance, although it is clear that you do, in fact, have an agreement. A court would infer a promise by your doctor to use reasonable care and skill in treating you and a return promise on your part to pay a reasonable fee for her services.

Executed and Executory Contracts

A contract is **executed** when all of the parties have fully performed their contractual duties, and it is **executory** until such duties have been fully performed.

Any contract may be described using one or more of the above terms. For example, Eurocars, Inc., orders five new Mercedes-Benz 500 SLs from Mercedes. Mercedes sends Eurocars its standard acknowledgment form accepting the order. The parties have a *valid, express, bilateral* contract that will be *executory* until Mercedes delivers the cars and Eurocars pays for them.

Sources of Law Governing Contracts

Two bodies of law—Article 2 of the Uniform Commercial Code and the common law of contracts—govern contracts today. The Uniform Commercial Code, or UCC, is statutory law in every state. The common law of contracts is court-made law that, like all court-made law, is in a constant state of evolution. Determining what body of law applies to a contract problem is a very important first step in analyzing that problem.

The Uniform Commercial Code: Origin and Purposes

The UCC was created by the American Law Institute and the National Conference of Commissioners on Uniform State Laws. All of the states have adopted it except Louisiana, which has adopted only part of the Code. The drafters of the Code had several purposes in mind, the most obvious of which was to establish a uniform set of rules to govern commercial transactions, which are often conducted across state lines.[1]

In addition to promoting uniformity, the drafters of the Code sought to create a body of rules that would realistically and fairly solve the common problems occurring in everyday commercial transactions. Finally, the drafters tried to formulate rules that would promote fair dealing and higher standards in the marketplace.

The UCC contains nine articles, most of which are discussed in detail in Parts 4, 6, and 7 of this book. The most important Code article for our present purposes is Article 2, which deals with the sale of goods.

The UCC has changed and is in the process of continuing to change in response to changes in technology and business transactions. At the time of this writing, revisions to Article 2 have been proposed that may be enacted in coming years. In some instances, the creation of new bodies of uniform law have been necessary to govern transactions that are similar to but different in significant ways from the sale of goods. For example, as leasing became a more common way of executing and financing transactions in goods, a separate UCC article, Article 2A, was enacted to govern the *lease* of goods.

Similarly, a separate body of uniform law dealing with computer information transactions such as software licenses and Internet access contracts has been under development for a number of years. The proposed statute was originally conceived of as an article of the UCC called Article 2B, but is now being put forward as a separate statute called the Uniform Com-

[1]Despite the Code's almost national adoption, however, complete uniformity has not been achieved. Many states have varied or amended the Code's language in specific instances, and some Code provisions were drafted in alternative ways, giving the states more than one version of particular Code provisions to choose from. Also, the various state courts have reached different conclusions about the meaning of particular Code sections. Work is currently under way to revise many basic sections of the Code, so uniformity will continue to be a problem as states adopt the revised sections at different rates and to different degrees.

puter Information Transactions Act, or UCITA. UCITA is now being proposed to state legislatures, and if widely enacted, will surely have an important impact on the future of U.S. contract law.

Application of Article 2

Article 2 expressly applies only to *contracts for the sale of goods* [2–102] (the numbers in brackets refer to specific Code sections). The essence of the definition of goods in the UCC [1–105] is that *goods* are *tangible, movable, personal property.* So, contracts for the sale of such items as motor vehicles, books, appliances, and clothing are covered by Article 2.

Application of the Common Law of Contracts

Article 2 of the UCC applies to contracts for the sale of goods, but it does *not* apply to contracts for the sale of real estate or intangibles such as stocks and bonds, because those kinds of property do not constitute goods. Article 2 also does not apply to *service* contracts. Contracts for the sale of real estate, services, and intangibles are governed by the common law of contracts.

Law Governing "Hybrid" Contracts

Many contracts involve a hybrid of both goods and services. As the following *Pittsley* case discusses, the test that the courts most frequently use to determine whether Article 2 applies to such a contract is to ask which element, goods or services, *predominates* in the contract. Is the major purpose or thrust of the agreement the rendering of a service, or is it the sale of goods, with any services involved being merely incidental to that sale? This means that contracts calling for services that involve significant elements of personal skill or judgment in addition to goods probably are not governed by Article 2. Construction contracts, remodeling contracts, and auto repair contracts are all examples of mixed goods and services contracts that may be considered outside the scope of the Code.

Pittsley v. Houser *875 P.2d 232 (Idaho Ct. App.1994)*

In September of 1988, Jane Pittsley contracted with Hilton Contract Carpet Co. for the installation of carpet in her home for $4,402. Hilton paid the installers $700 to put the carpet in Pittsley's home. After the carpet was installed, Pittsley complained to Hilton that some seams were visible, that gaps appeared, that the carpet did not lie flat in all areas, and that it failed to reach the wall in certain locations. Although Hilton made various attempts to fix the installation, Pittsley was not satisfied with the work. Eventually, Pittsley refused any further efforts to fix the carpet. Pittsley initially paid Hilton $3,500 on the contract, but refused to pay the remaining balance of $902.

Pittsley later filed suit, seeking rescission of the contract, return of the $3,500, and other damages. Hilton counterclaimed for the balance remaining on the contract. At trial, the magistrate found that there were defects in the installation and that the carpet had been installed in an unworkmanlike manner, but that there was a lack of evidence about damages. The trial court awarded Pittsley $400 damages and awarded Hilton $902 on its counterclaim, representing the money remaining on the contract. Pittsley appealed to the district court, claiming that the transaction involved was governed by the UCC and arguing that a different result would have been reached had the UCC been applied. The district court agreed with Pittsley's argument, reversing and remanding the case to the magistrate to make additional findings of fact and to apply the UCC to the transaction. Hilton appealed.

Swanstrom, J., pro tem Hilton argues that there were no defects in the goods that were the subject of the transaction, only in the installation, making application of the UCC inappropriate. The single question upon which this appeal depends is whether the UCC is applicable to the subject transaction. If the underlying transaction involved the sale of "goods," then the UCC would apply. If the transaction did not involve goods, but rather was for services, then application of the UCC would be

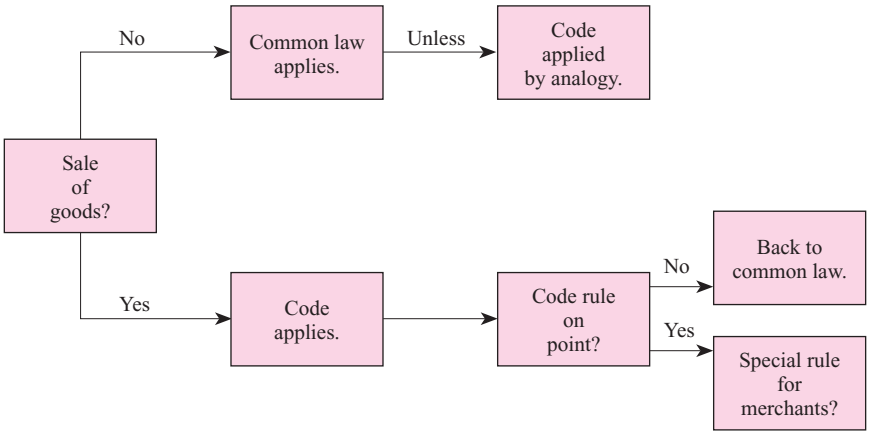
erroneous. Section 2–105(1) defines "goods" as "all things which are movable at the time of identification to the contract for sale. . . ." Although there is little dispute that carpets are "goods," the transaction in this case also involved installation, a service. Such hybrid transactions, involving both goods and services, raise difficult questions about the applicability of the UCC. Two lines of authority have emerged to deal with such situations.

The first line of authority, and the majority position, utilizes the "predominant factor" test. The Ninth Circuit, applying the Idaho Uniform Commercial Code to the subject transaction, restated the predominant factor test as:

> The test for inclusion or exclusion is not whether they are mixed, but, granting that they are mixed, whether their predominant factor, their thrust, their purpose, reasonably stated, is the rendition of service, with goods incidentally involved (e.g., contract with artist for painting) or is a transaction of sale, with labor incidentally involved (e.g., installation of a water heater in a bathroom).

This test essentially involves consideration of the contract in its entirety, applying the UCC to the entire contract or not at all.

The second line of authority, which Hilton urges us to adopt, allows the contract to be severed into different parts, applying the UCC to the goods involved in the contract, but not to the non-goods involved, including services as well as other non-goods assets and property. Thus, an action focusing on defects or problems with the goods themselves would be covered by the UCC, while a suit based on the service provided or some other non-goods aspect would not be covered by the UCC. This position was advanced by the Tenth Circuit Court of Appeals in *Foster v. Colorado Radio Corp.,* which involved the sale of a radio station. The court in *Foster* held that, although there was a single contract for the purchase of a radio station, the UCC applied only to the actual goods that were covered under the contract. Thus, the court applied different analyses and remedies to two different aspects of the same contract.



We believe the predominant factor test is the more prudent rule. Severing contracts into various parts, attempting to label each as goods or non-goods and applying different law to each separate part clearly contravenes the UCC's declared purpose "to simplify, clarify and modernize the law governing commercial transactions." Section 1–102(2)(a). As the Supreme Court of Tennessee suggested in *Hudson v. Town & Country True Value Hardware, Inc.,* such a rule would, in many contexts, present "difficult and in some instances insurmountable problems of proof in segregating assets and determining their respective values at the time of the original contract and at the time of resale, in order to apply two different measures of damages."

Applying the predominant factor test to the case before us, we conclude that the UCC was applicable to the subject transaction. The record indicates that the contract between the parties called for "165 yds Masterpiece#2122—Installed" for a price of $4,319.50. There was an additional charge for removing the existing carpet. The record indicates that Hilton paid the installers $700 for the work done in laying Pittsley's carpet. It appears that Pittsley entered into this contract for the purpose of obtaining carpet of a certain quality and color. It does not appear that the installation, either who would provide it or the nature of the work, was a factor in inducing Pittsley to choose Hilton as the carpet supplier. On these facts, we conclude that the sale of the carpet was the predominant factor in the contract, with the installation being merely incidental to the purchase. Therefore, in failing to consider the UCC, the magistrate did not apply the correct legal principles to the facts as found. We must therefore vacate the judgment and remand for further findings of fact and application of the UCC to the subject transaction.

On remand, the magistrate may consider such issues as whether the carpet was properly rejected under Section 2–602 or whether the actions of Pittsley constituted acceptance under Section 2–606. If the goods were accepted, the magistrate may consider if the acceptance could have been revoked under Section 2–608. The magistrate may then consider the various remedies that are available under the UCC and any other provisions of the code that the court deems applicable.

Judgment vacated in favor of Pittsley and remanded for further proceedings.

Figure 2 *When the Uniform Commercial Code Applies*

Relationship of the UCC and the Common Law of Contracts

Two important qualifications must be made concerning the application of Code contract principles. First, the Code does not change *all* of the traditional contract rules. Where no specific Code rule exists, traditional contract law rules apply to contracts for the sale of goods. Second, and ultimately far more important, the courts have demonstrated a significant tendency to apply Code contract concepts by analogy to some contracts that are not technically covered by Article 2. For example, the Code concepts of good faith dealing and unconscionability have enjoyed wide application in cases that are technically outside the scope of Article 2. Thus, the Code is an important influence in shaping the evolution of contract law in general, and if this trend toward broader application of Code principles continues, the time may come when the dichotomy between Code principles and traditional contract rules is a thing of the past. (See Figure 2.)

Basic Differences in the Nature of Article 2 and the Common Law of Contracts

Many of the provisions of Article 2 differ from traditional common law rules in a variety of important ways. The Code is more concerned with rewarding people's legitimate expectations than with technical rules, so it is generally more flexible than the common law of contracts. A court that applies the Code is more likely to find that the parties had a contract than is a court that applies the common law of contracts [2–204]. In some cases, the Code gives less weight to technical requirements such as consideration [2–205 and 2–209].

The drafters of the Code sought to create practical rules to deal with what people actually do in today's marketplace. We live in the day of the form contract, so some of the Code's rules try to deal fairly with that fact [2–205, 2–207, 2–209(2), and 2–302]. The words *reasonable, commercially reasonable,* and *seasonably* (within a reasonable time) are found throughout the Code. This reasonableness standard is different from the hypothetical reasonable person standard in tort law. A court that tries to decide what is reasonable under the Code is more likely to be concerned with what people really do in the marketplace than with what a nonexistent reasonable person would do.

The drafters of the Code wanted to promote fair dealing and higher standards in the marketplace, so they imposed a **duty of good faith** [1–203] in the performance and enforcement of every contract under the Code. Good faith means "honesty in fact," which is required of all parties to sales contracts [1–201(19)]. In addition, merchants are required to observe "reasonable commercial standards of fair dealing" [2–103(1)(b)]. The parties cannot alter this duty of good faith by agreement [1–102(3)]. Finally, the Code expressly recognizes the concept of an **un-**

conscionable contract, one that is grossly unfair or one-sided, and it gives the courts broad discretionary powers to deal fairly with such contracts [2–302].[2]

The Code also recognizes that buyers tend to place more reliance on professional sellers and that professionals are generally more knowledgeable and better able to protect themselves than nonprofessionals. So, the Code distinguishes between **merchants** and nonmerchants by holding merchants to a higher standard in some cases [2–201(2), 2–205, and 2–207(2)]. The Code defines the term *merchant* [2–104(1)] on a case-by-case basis. If a person regularly deals in the kind of goods being sold, or pretends to have some special knowledge about the goods, or employed an agent in the sale who fits either of these two descriptions, that person is a merchant for the purposes of the contract in question. So, if you buy a used car from a used-car dealer, the dealer is a merchant for the purposes of your contract. But, if you buy a refrigerator from a used-car dealer, the dealer is probably not a merchant.

Influence of Restatement (Second) of Contracts

In 1932, the American Law Institute published the first *Restatement of Contracts,*[3] an attempt to codify and systematize the soundest principles of contract law gleaned from thousands of often conflicting judicial decisions. As the product of a private organization, the *Restatement* did not have the force of law, but as the considered judgment of some of the leading scholars of the legal profession, it was highly influential in shaping the evolution of contract law. The *Restatement (Second) of Contracts,* issued in 1979, is an attempt to reflect the significant changes that have occurred in contract law in the years following the birth of the first *Restatement.* The *Restatement (Second)* reflects the "shift from rules to standards" in modern contract law—the shift from precise, technical rules to broader, discretionary principles that produce just results.[4] In fact, many *Restatement (Second)* provisions are virtually identical to their Code analogues. For example, the *Restatement (Second)* has explicitly embraced the Code concepts of *good faith*[5] and *unconscionability.*[6]

The *Restatement (Second)* does *not* have the force of law. Nonetheless, it can be and has been influential in shaping the evolution of contract law because courts have the option of adopting a *Restatement (Second)* approach to the contract issues presented in the cases that come before them. Particular approaches suggested by the *Restatement (Second)* will be mentioned in some of the following chapters.

"Noncontract" Obligations

Before we proceed to a discussion of the individual elements of contract law, there is one more group of introductory concepts to be considered. Although contract obligations normally require mutual agreement and an exchange of value, there are some circumstances in which the law enforces an obligation to pay for certain losses or benefits even in the absence of mutual agreement and exchange of value. We will refer to these circumstances as "noncontract" obligations because they impose the duty on a person to pay for a loss or benefit yet they do not meet the criteria for formation of a contract. These noncontract doctrines give a person who cannot establish the existence of a contract a chance to obtain compensation.

Quasi-Contract

Requiring all the elements of a binding contract before contractual obligation is imposed can cause injustice in some cases. One person may have provided goods or services to another person who benefited from them but has no contractual obligation to pay for them because no facts exist that would justify a court in implying a promise to pay for them. Such a situation can also arise in cases where the parties contemplated entering into a binding contract but some legal defense exists that prevents the enforcement of the agreement. Consider the following examples:

1. Jones paints Smith's house by mistake, thinking it belongs to Reed. Smith knows that Jones is painting his house but does not inform him of his error. There are no facts from which a court can infer that

[2]Chapter 15 discusses unconscionability in detail.
[3]See Chapter 1 for a general discussion of the *Restatement* phenomenon.
[4]Speidel, "Restatement Second: Omitted Terms and Contract Method," 67 *Cornell L. Rev.* 785, 786 (1982).
[5]*Restatement (Second) of Contracts* § 205 (1981).
[6]*Restatement (Second) of Contracts* § 208 (1981).

Jones and Smith have a contract because the parties have had no prior discussions or dealings.

2. Thomas Products fraudulently induces Perkins to buy a household products franchise by grossly misstating the average revenues of its franchisees. Perkins discovers the misrepresentation after he has resold some products that he has received but before he has paid Thomas for them. Perkins elects to rescind (cancel) the franchise contract on the basis of the fraud.

In the preceding examples, both Smith and Perkins have good defenses to contract liability; however, enabling Smith to get a free paint job and Perkins to avoid paying for the goods he resold would *unjustly enrich* them at the expense of Jones and Thomas. To deal with such cases and to prevent such unjust enrichment, the courts imply *as a matter of law* a promise by the benefited party to pay the *reasonable value* of the benefits he received. This idea is called **quasi-contract** (or contract implied in law) because it represents an obligation imposed by law to avoid injustice, not a contractual obligation created by voluntary consent. Quasi-contract liability has been imposed in situations too numerous and varied to detail. In general, however, quasi-contract liability is imposed when one party *confers a benefit* on another who *knowingly accepts it* and *retains it* under circumstances that make it *unjust* to do so without paying for it. So, if Jones painted Smith's house while Smith was away on vacation, Smith would probably not be liable for the reasonable value of the paint job because he did *not* knowingly accept it and because he has no way to return it to Jones. The following *DCB Construction Co.* case highlights the central importance of the unjust enrichment idea to quasi-contract liability.

DCB Construction Co., Inc. v. The Central City Development Co.

965 P.2d 115 (Colo. Sup. Ct. 1998)

Central City Development Company (CCDC) is the owner of a historic commercial building in Central City, Colorado. In January of 1992, CCDC entered into a five-year lease of the building with Santa Barbara Capital, Inc. The lease permitted Santa Barbara to use the property only for limited-stakes gambling. The lease further provided that Santa Barbara would not make alterations or additions that would impair the historic character of the site, and that CCDC had the right to approve all plans and specifications for remodeling. CCDC agreed that such approval would not be unreasonably withheld.

Santa Barbara entered into a contract with DCB Construction Co., Inc. (DCB), to perform significant work on the interior of the building, and CCDC approved the plans. The lease between CCDC and Santa Barbara provided that Santa Barbara would pay all costs associated with remodeling regardless of the amount, and would indemnify CCDC against any liens or claims arising out of the work. Santa Barbara was to post a notice on the premises informing architects, draftsmen, planners, contractors or subcontractors, and suppliers of labor or material and equipment that the property would not be subject to a lien for the improvements. Santa Barbara did in fact post the notice, which stated in pertinent part:

> *[CCDC] shall not be liable for any erection, construction, alteration, removal, addition, repair, or other improvement, and the owner's interest in the above described property shall not be subject to a lien for any erection, construction, alteration, removal, addition, repair, or other improvement to [the leased premises].*

DCB was aware of the notice and it made no attempt to place a lien on the property.

Under its contract with Santa Barbara, DCB completed significant improvements to the interior of the building. A representative of CCDC was present on the premises fairly regularly during the construction; however, CCDC did not communicate with or direct DCB regarding the work. In November of 1992, DCB stopped work on the building because of Santa Barbara's failure to pay. In all, DCB submitted bills to Santa Barbara totaling $371,245, of which amount Santa Barbara paid $76,515.

Santa Barbara also defaulted under its lease agreement, and stopped paying rent in December of 1992. After Santa Barbara vacated the premises, CCDC placed a "For Rent" sign on the building, but, as of the date

of the trial, had received no inquir ies about purchasing or leasing the building. DCB sued CCDC, claiming unjust enrichment on the part of CCDC. The trial court ruled in favor of DCB and awarded it $333,191. CCDC appealed, and the court of appeals reversed. DCB then appealed.

Kourlis, Justice DCB's claim of unjust enrichment is a legal claim in quasi-contract for money damages based upon principles of restitution. When restitution is the primary basis of a claim, it invokes what has been called a "contract implied in law." The unjust enrichment claim in the context of a contract implied in law does not depend in any way upon a promise or privity between the parties. As the court of appeals noted in the instant case, "the claim arises, 'not from consent of the parties, as in the case of contracts, express or implied in fact, but from the law of natural immutable justice and equity.' " Thus a "contract implied in law" is not really a contract at all, and may even be imposed in the face of a clearly expressed contrary intent if justice requires.

We restate the test for recovery under a theory of unjust enrichment as:

> (1) at plaintiff's expense (2) defendant received a benefit (3) under circumstances that would make it unjust for defendant to retain the benefit without paying.

We next proceed to apply this general test to this case in the context of tenant finish construction.

Considering the first prong of the test, in this case there is no question that any benefit CCDC received came at DCB's expense. DCB performed construction work on CCDC's building over a period of approximately six months, and Santa Barbara paid DCB for only a fraction of the work. The second prong examines whether defendant was benefited or enriched. The trial court specifically found that the building is now worth more than it was before DCB's work. The trial court's finding that the building is now worth more after the remodeling than before is sufficient to show that CCDC benefitted. Accordingly, the first two elements of the test, benefit to CCDC at DCB's expense, have been established.

The third prong of the test requires consideration of whether it would be unjust to allow CCDC to retain the benefit conferred without paying its value. The notion of what is or is not "unjust" is an inherently malleable and unpredictable standard. Because tenants frequently contract for improvements to leased property, the law must be sufficiently predictable so that the appropriate parties can adequately calculate and make adjustments for the risks they face. Landlords need to know, with some degree of certainty, what behavior and circumstances will subject them to these claims; and contractors likewise should be able to make risk-adjusted pricing decisions and implement appropriate payment-protection provisions. Thus, we think it is important to articulate a general rule, applicable in this context, that provides more stability and predictability than an ad hoc review.

With this principle in mind, we begin our analysis with two basic propositions. First, there is the general rule that when an individual who is not the owner orders improvements on the owner's land and then fails to pay the contractor or supplier, "the owner is not liable to the contractor or supplier unless he agreed to pay them." 3 Dan B. Dobbs, The Law of Remedies 5 12.20(3) at 473 (2d ed. 1993). The rule seeks to protect personal autonomy and rights of choice. Ordinarily, an owner should not be forced into "legal relations with someone other than the contract partner he ha[s] chosen." Second, the *Restatement of Restitution* 110 provides that "[a] person who has conferred a benefit upon another as the performance of a contract with a third person is not entitled to restitution from the other merely because of the failure of performance by the third person."

Application of these principles to this case suggests that CCDC should not be held liable for the improvements ordered by Santa Barbara. CCDC did not agree to pay for the improvements, and should not be forced into a quasi-contractual relationship with DCB. It is not enough that CCDC owns the improved building and that Santa Barbara breached its contract to pay for those improvements. There must be more. It is unjust for a contractor to bear the loss of a debt unpaid. However, it is not necessarily just or right to impose that debt upon the owner of the property merely to rectify the first injustice. If that were so, anyone benefitting from another's services could be liable for those services. We all enjoy the protection that we are generally not liable for services or goods

for which we did not contract. The courts should be slow to impose obligations in the absence of a contract; slow to impose the debts of one party upon another. Hence an injustice that warrants the court's imposition of the remedy of restitution must rest not only in the loss to the contractor, but also in the conduct of the owner. The *Restatement of Restitution* sets forth several general doctrines, such as fraud, mistake, coercion, and request, that are instructive in defining the notion of injustice. Although this list does not exhaust the potential sources of injustice, it provides a framework with which to begin analysis of unjust enrichment claims. Some of these doctrines lend themselves to application within the context of nonbargained benefits. If, for example, a landlord has actually engaged in fraud to induce a contractor either to enter into the contract with a tenant, or to continue performance when the contractor might otherwise have ceased, this situation will likely sustain a claim of unjust enrichment. Likewise, principles of coercion or duress might provide a foundation for unjust enrichment as a primary source of right. In the instant case, we do not have allegations that fit neatly into the applicable "injustice" categories suggested by the *Restatement.* However, the general theme of these doctrines sheds light on the concept of unjust enrichment in the landlord/tenant/contractor context. The principle that defines and connects these examples is that "injustice" involves some form of improper conduct by the party to be charged.

DCB cites *Frank M. Hall & Co. v. Southwest Properties Venture* and contends that the nature of CCDC's involvement in the enterprise is sufficient to render its retention of the benefit unjust. In *Hall,* the court of appeals held that a contractor could recover in unjust enrichment from a landlord where:

> [t]he landlord not only gave its permission for the work but took an active role in its completion. Indeed, the lease required that the improvements be made, and provided that they would revert to the landlord upon termination of the lease. They were made according to the landlord's specifications, and were inspected and approved by it.

DCB asserts that here, as in *Hall,* CCDC gave permission for the work, took an active role in its completion, required that the improvements be made according to CCDC specifications, and contracted to retain the improvements upon lease termination.

We hold that these facts alone would not render CCDC's retention of the benefit unjust. A landlord will virtually always retain the right to give or withhold permission for work to be done on its premises. As owner of the premises, the landlord is generally required to apply for and execute building permits or other necessary documents. The landlord has a strong and legitimate interest in pre-approving and monitoring any significant construction. Similarly, the landlord's participation in creating and/or approving specifications is a natural product of its interest in the property and is a matter of concern solely between the landlord and the tenant. We do not find it unjust for a landlord to be closely involved in an enterprise for which it has contracted and given consideration to another. We thus disapprove that portion of *Hall* that would allow an unjust enrichment claim based solely upon the landlord's involvement. If we were to approve this formula for evaluating injustice, we would adopt a rule that essentially makes the landlord an insurer of the risk assumed by contractors in extending credit to tenants. Rather, we hold that injustice in this context requires some type of improper, deceitful, or misleading conduct by the landlord. Here, there is no evidence that CCDC improperly created the impression that either CCDC or Santa Barbara would pay for the work being done. In fact, CCDC posted a notice that not only informed DCB that it would not be subject to mechanics' liens, but also explicitly disclaimed any type of liability for the work. A notice alone might not suffice to absolve a landlord from liability if the landlord had otherwise engaged in improper conduct that negated the effect of a notice. However, here CCDC did not engage in any type of improper, deceitful, or misleading conduct. Absent such conduct, we do not find that CCDC's retention of any benefit received is unjust. In order for a tenant's contractor to attach liability upon an owner of property under an unjust enrichment claim, the contractor must be able to show that the landlord has engaged in some form of improper, deceitful, or misleading conduct. CCDC did not mislead DCB in any way, thus CCDC was not unjustly enriched by DCB's performance of its contract with Santa Barbara.

Judgment affirmed in favor of CCDC.

Promissory Estoppel

Another very important idea that courts have developed to deal with the unfairness that would sometimes result from the strict application of traditional contract principles is the doctrine of **promissory estoppel.** In numerous situations one person may *rely* on a promise made by another even though the promise and surrounding circumstances are not sufficient to justify the conclusion that a contract has been created because one or more of the required elements is missing. To allow the person who made such a promise (the promisor) to argue that no contract was created would sometimes work an injustice on the person who relied on the promise (the promisee). For example, in *Ricketts v. Scothorn,* a grandfather's promise to pay his granddaughter interest on a demand note he gave her so that she would not have to work was enforced against him after she had quit her job in reliance on his promise.[7] The Nebraska Supreme Court acknowledged that such promises were traditionally unenforceable because they were gratuitous and not supported by any consideration, but held that the granddaughter's reliance prevented her grandfather from raising his lack of consideration defense. In the early decades of this century, many courts began to extend similar protection to relying promisees. They said that persons who made promises that produced such reliance were *estopped,* or equitably prevented, from raising any defense they had to the enforcement of their promise. Out of such cases grew the doctrine of promissory estoppel. Section 90 of the *Restatement (Second) of Contracts* states:

> A promise which the promisor should reasonably expect to induce action or forbearance on the part of the promisee or a third person and which does induce such action or forbearance is binding if injustice can be avoided only by enforcement of the promise. The remedy granted for breach may be limited as justice requires.

Thus, the elements of promissory estoppel are a *promise* that the *promisor should foresee is likely to induce reliance, reliance* on the promise by the promisee, and *injustice* as a result of that reliance. (See Figure 3.) The following *Goff-Hamel* case provides an example of promissory estoppel.

Figure 3 *Contract and Noncontract Theories of Recovery*

Theory	Key Concept	Remedy
Contract	Voluntary agreement	Enforce promise
Quasi-Contract	Unjust enrichment	Reasonable value of services
Promissory Estoppel	Foreseeable reliance	Enforce promise or recover reliance losses

[7] 57 Neb. 51, 77 N.W. 365 (1898).

Goff-Hamel v. Obstetricians & Gynecologists, P.C.

588 N.W.2d 798 (Neb. Sup. Ct. 1999)

Julie Goff-Hamel worked for Hastings Family Planning for 11 years. Prior to leaving Hastings Family Planning, Goff-Hamel was earning $24,000 plus 6 weeks' paid maternity leave, 6 weeks' vacation, 12 paid holidays, 12 sick days, an educational reimbursement, and medical and dental insurance coverage. In June of 1993, Dr. George Adam, a part owner of Obstetricians, had approached Goff-Hamel about working for him as a patient relations and outreach coordinator at Obstetricians. Goff-Hamel initially declined the offer, explaining that she had made commitments to do some training in the fall and to hire and help train a new bookkeeper. Adam spoke to Goff-Hamel approximately one month later, asking her to reconsider and whether she was ready to "jump ship and come work for him." Goff-Hamel told Adam she would be interested in hearing some details, and an interview was set for July 27 at Adam's office.

At the meeting, Adam told Goff-Hamel that the position would be full time and would start at a salary of $10 per hour and that she would be provided two weeks' paid vacation, three or four paid holidays, uniforms, and an educational stipend. A retirement plan would start after the end of the second year, retroactive to the

end of the first year. The job would not provide health insurance. Goff-Hamel was offered a job with Obstetricians during the July 27, 1993, meeting, and she accepted the job offer at that time. She expressed concern that she be given time to finish some projects at Hastings Family Planning, and it was agreed that she would start her employment on October 4. Goff-Hamel gave notice to Hastings Family Planning in August, informing them that she would be resigning to take a job with Obstetricians.

Later, Goff-Hamel went to Obstetricians' office and was provided with uniforms for her job. She was given a copy of her schedule for the first week of work, but did not receive a copy of the employee handbook. On October 3, 1993, an Obstetricians representative told Goff-Hamel that she should not report to work the next morning as had been planned, because the wife of another part-owner of Obstetricians opposed her hiring.

Goff-Hamel brought this action against Obstetricians, seeking damages for breach of an alleged oral employment contract or, in the alternative, damages for detrimental reliance on a promise of employment. The trial court granted summary judgment in favor of Obstetricians, and Goff-Hamel appealed.

Wright, J. It is undisputed that on July 27, 1993, Obstetricians offered Goff-Hamel employment and that she accepted. The oral agreement did not specify that the employment was for a definite period. We have consistently held that when employment is not for a definite term and there are no contractual, statutory, or constitutional restrictions upon the right of discharge, an employer may lawfully discharge an employee whenever and for whatever cause it chooses. Therefore, the trial court correctly determined as a matter of law that Goff-Hamel could not bring a claim for breach of an employment contract.

Goff-Hamel's second cause of action was based upon promissory estoppel. Promissory estoppel provides for damages as justice requires and does not attempt to provide the plaintiff damages based upon the benefit of the bargain. It requires only that reliance be reasonable and foreseeable. It does not impose the requirement that the promise giving rise to the cause of action must be so comprehensive in scope as to meet the requirements of an offer that would ripen into a contract if accepted by the promisee. We have not specifically addressed whether promissory estoppel may be asserted as the basis for a cause of action for detrimental reliance upon a promise of at-will employment. In *Merrick v. Thomas,* the employee was terminated from her job approximately 4 months after she had been hired. We determined that because the employee had worked for a time, the employer had kept his promise to employ the plaintiff and that promissory estoppel was not available. We did not consider whether a cause of action based upon promissory estoppel could be stated by a prospective at-will employee who had been induced to leave previous gainful employment based upon the promise of other employment, but who did not commence employment at the new job.

Other jurisdictions which have addressed the question of whether a cause of action for promissory estoppel can be stated in the context of a prospective at-will employee are split on the issue. Some have held that an employee can recover damages incurred as a result of resigning from the former at-will employment in reliance on a promise of other at-will employment. They have determined that when a prospective employer knows or should know that a promise of employment will induce an employee to leave his or her current job, such employer shall be liable for the reliant's damages. Recognizing that both the prospective new employer and the prior employer could have fired the employee without cause at any time, they have concluded that the employee would have continued to work in his or her prior employment if it were not for the offer by the prospective employer. Although damages have not been allowed for wages lost from the prospective at-will employment, damages have been allowed based upon wages from the prior employment and other damages incurred in reliance on the job offer.

In contrast, other jurisdictions have held as a matter of law that a prospective employee cannot recover damages incurred in reliance on an unfulfilled promise of at-will employment, concluding that reliance on a promise consisting solely of at-will employment is unreasonable as a matter of law because the employee should know that the promised employment could be terminated by the employer at any time for any reason without liability. These courts have stated that an anomalous result occurs when recovery is allowed for an employee who has not begun work,

when the same employee's job could be terminated without liability 1 day after beginning work.

Having reviewed and considered decisions from other jurisdictions, we conclude under the facts of this case that promissory estoppel can be asserted in connection with the offer of at-will employment and that the trial court erred in granting Obstetricians summary judgment. A cause of action for promissory estoppel is based upon a promise which the promisor should reasonably expect to induce action or forbearance on the part of the promisee which does in fact induce such action or forbearance. Here, promissory estoppel is appropriate where Goff-Hamel acted to her detriment in order to avail herself of the promised employment.

We therefore reverse the judgment of the trial court and remand the cause for further proceedings in accordance with this opinion.

Reversed and remanded in favor of Goff-Hamel.

When you consider these elements, it is obvious that promissory estoppel is fundamentally different from traditional contract principles. Contract is traditionally thought of as protecting *agreements* or bargains. Promissory estoppel, on the other hand, protects *reliance.* Early promissory estoppel cases applied the doctrine only to gift promises like the one made by the grandfather in the previous example. As subsequent chapters demonstrate, however, promissory estoppel is now being used by the courts to prevent offerors from revoking their offers, to enforce indefinite promises, and to enforce oral promises that would ordinarily have to be in writing.

Ethical and Public Policy Concerns

1. Compare and contrast the ethical values at the heart of classical contract law with those at the heart of modern contract law. If all contracts today fit the typical model assumed by classical contract law, would we necessarily feel ethically compelled to treat them differently than they were treated under classical contract law?

2. Do a brief social cost–benefit analysis of the shift from rules to standards that has occurred in modern contract law. Do a contrasting cost–benefit analysis of the rule-oriented approach of classical contract law.

3. The idea that contracts should be enforced because they are voluntary agreements can obviously be justified on ethical grounds. What ethical justifications, if any, can you give for departing from the notion of voluntary agreement in quasi-contract and promissory estoppel cases?

Problems and Problem Cases

1. Intending to marry as soon as Donald's divorce became final, Rose Elsten and Donald Cook moved to Tucson in 1969 and lived there together until 1981. Although they did not marry, Rose used Donald's last name and they represented themselves to the community as husband and wife. Both parties worked throughout most of the relationship, pooling their income in two joint accounts and acquiring a house, two cars, and a number of shares of stock, all owned as joint tenants with right of survivorship. Rose left Donald in 1981. Of their joint assets, she received only one car and a few hundred dollars; Donald retained the balance. Rose filed suit against Donald, arguing that he had breached their agreement to share their assets equally. In her deposition she said: "[E]verything we did and purchased, whether it be a vacuum cleaner or a car, was together as husband and wife. It was just something *that we agreed on,* that is how we were going to do it." Did a contract exist?

2. Hart Engineering Company was the general contractor for the construction of the Fields Point Waste Water Treatment Facility. Hart posted the necessary bond for the project, and Seaboard Surety Company wrote the bond. Hart subcontracted with Menard & Co. Building Contractors to do the masonry work. Menard purchased building materials for the project from Corrado, but neither Menard nor anyone else ever paid Corrado for the materials. Did Hart and Seaboard have the obligation to pay Corrado?

3. Advent Systems, a British company, developed an electronic document management system (EDMS), a process for transforming engineering drawings and

similar documents into a computer database. Unisys Corporation decided to market Advent's EDMS in the United States. In 1987, Advent and Unisys signed contracts in which Advent agreed to provide the software and hardware making up the EDMS, as well as sales and marketing material and the technical personnel to work with Unisys employees in building and installing the document systems. The agreement was to continue for two years, subject to automatic renewal or termination on notice. Was the UCC applicable to this contract?

4. Slodov adopted a four-month-old puppy from the Animal Protective League (APL) for a fee of $45, which covered the costs of neutering or spaying, shots, collar, starter kit, and two weeks of veterinary care. She signed an adoption agreement that stipulated that the APL would treat the dog at no cost to Slodov for two weeks after the adoption. According to the agreement, the APL would not be held responsible for any treatment of the dog outside the APL clinic. The dog became ill several times and Slodov took the dog to a private veterinarian rather than to the APL clinic. She then requested that the APL pay the veterinary bills, including advertising costs of placing the dog for adoption, because her landlord would not allow dogs in the apartment, and the APL refused. Slodov brought suit against APL on a variety of theories, including breach of warranties under the UCC. She claimed that the APL was a merchant under the UCC. Was it?

5. Chow arranged through a travel agent to fly from Indianapolis to Singapore on June 27, 1986. Singapore Airlines gave him a round-trip ticket that included a TWA flight to Los Angeles. Shortly before the trip, Chow's flight was rerouted so that he had to fly to St. Louis first and then to San Francisco. During the St. Louis stopover, the flight developed engine trouble, causing a substantial delay. TWA personnel assured Chow that if he missed his connecting flight, TWA would arrange for him to take the next Singapore flight out of San Francisco. After the engine problem was fixed, TWA delayed the flight's departure an additional two hours to board additional passengers. Chow was again assured that if he missed his scheduled flight, TWA would make arrangements for him. Chow missed his Singapore flight by minutes, and was housed overnight at TWA's expense in San Francisco after once more being assured that TWA would make arrangements to get him on the next Singapore flight. When he called Singapore Airlines the next morning to see whether TWA had made him a reservation, Chow was told that no arrangements had been made. When he contacted TWA, he was told TWA would make the arrangements immediately. After waiting several hours, Chow learned TWA had still not made the arrangements and was told that TWA could no longer help him. Because Singapore Airlines no longer had economy class seats available, Chow had to buy a business class seat at an additional cost of $928. When he filed suit against TWA for that amount, TWA argued that the Conditions of Contract printed on Chow's ticket disclaimed any liability for failure to make connections. Did Chow have a valid claim against TWA?

6. Elizabeth Balano owned a building. In 1990, David Pauffhausen, a carpenter and an artist, asked Balano for permission to renovate her building because he hoped to convert the building into a fine art print shop. Balano approved Pauffhausen's request, with the understanding that he would pay her $60.00 per month after he "got the business up and running." Over the course of Pauffhausen's extensive renovations, Balano at various times signed notes to various town authorities approving his work and allowing him to procure permits. She also gave him a signed note in 1991 stating: "To Whom it may Concern—David can use my house as long as he needs it." The building was revamped sufficiently to allow Pauffhausen to host two art shows in 1994 and 1995. Balano died in October of 1995. Her personal representatives offered Pauffhausen one year of free rent, after which his rent would be $60 per month, but for no definite term. Pauffhausen rejected the offer, presumably because the tenancy after the one-year period could be terminated at will. Pauffhausen filed a claim for $12,300 against Balano's estate for the value of the work that he had done on the building. Does Pauffhausen have any basis for his claim?

7. Management Recruiters is a personnel search firm. Robert Malooly, an account executive for Management Recruiters, was attempting to place James Fortney in a sales position. On April 5, 1993, Malooly contacted Donald Thaemert, general manager of Display Pak, to set up an interview with Fortney. During their telephone conversation, the following exchange took place:

Malooly: You know, we do charge a fee for our services if you hire.

Thaemert: Uh-huh.

Malooly: And I'll send you a schedule on that, Don.

Thaemert: Would you, please?

Malooly: You bet.

Management Recruiters sent a fee agreement to Display Pak. The fee agreement provided that it was being sent to confirm the terms of "our oral agreement." It also stated that: "IF THESE TERMS DO NOT REFLECT YOUR UNDERSTANDING OF OUR AGREEMENT, PLEASE CALL US IMMEDIATELY." The agreement further provided that "[a] fee is due only if a Candidate enters into any type of a business relationship with you . . . within two years after our last communication with you about the Candidate." The agreement listed the fee as 25 percent of the candidate's first-year compensation. Thaemert interviewed Fortney for a full-time sales position on April 8. Thaemert decided that Fortney did not meet Display Pak's needs because he did not have sales experience, but Display Pak did need someone with a design background to work on a specific temporary job. On April 12, Thaemert told Malooly that Display Pak was not going to hire Fortney. Thaemert proposed that Display Pak be allowed to hire Fortney for the temporary design position without paying the recruiting fee, claiming it would benefit all parties. Either Malooly or one of his associates told Thaemert that if Display Pak hired Fortney on a temporary basis, Management Recruiters would charge its normal fee. Fortney worked for Display Pak on a temporary basis in April 1993 and again in the fall of 1993. Malooly learned of Fortney's work with Display Pak and sent Display Pak an invoice seeking its fee. Display Pak refused to pay. Management Recruiters filed a complaint. Display Pak responded that the parties never entered into a contract. Was a kind of contract discussed in this chapter formed in this case?

8. Robert Darling designed and sold a system of linked concrete blocks, called Linkrete, for use in shore protections in arctic conditions. Endicott Island is a 45-acre artificial island in Alaska that was developed for oil extraction. In 1980, Darling was contacted by Exxon and Sohio Alaska Petroleum Company, who were involved in developing the Endicott project, and sold each of them samples of Linkrete for test purposes. Later, thinking that Exxon would be the operator of the Endicott project, Darling presented a seminar on Linkrete for Exxon's engineering firm. When it later became clear that Sohio would be the operator of the Endicott project, Darling communicated with two engineering firms, Tekmarine and Parsons, and supplied them with information about Linkrete. In 1984, when Sohio put the shore protection system up for bid, Darling informed Sohio that the system it had specified in its bid might infringe on Darling's pending patent for Linkrete. No contract to do the Endicott project was ever formed with Darling, and the Endicott shore protection system was manufactured and installed by Tekmarine and Parsons. Does Darling have a good case against the developers of the Endicott project for quasi-contract?

9. Stephen Gall and his family became ill after drinking contaminated water supplied to their home by the McKeesport Municipal Water Authority. They filed suit against the utility, arguing, among other things, that the utility had breached the UCC implied warranty of merchantability when it sold them contaminated water. The utility moved to dismiss their complaint, arguing that since water was not "goods," the UCC did not apply. Should the Galls' complaint be dismissed?

10. Honeywell and Minolta Japan entered into a "TCL Agreement," which provided for Honeywell to provide Minolta confidential design information and developmental automatic focus components. Minolta Japan agreed that the Honeywell design information was proprietary to Honeywell and that Honeywell granted to Minolta Japan the right to use the design information for the design, manufacture, use, and sale of Minolta's Japan photographic equipment, provided that Minolta Japan's photographic equipment contained a Honeywell component as an integral part. The agreement provided for Minolta to give Honeywell $85,000 in consideration for the design information. Minolta promised to keep the design information confidential until a specified date. The TCL Agreement further provided that Minolta would have the right to purchase components in quantities that Honeywell could reasonably supply and according to certain standard terms that were specified in the contract. A dispute later arose and the court had to decide whether the UCC statute of limitations for breach of contract or the common law statute of limitations for breach of contract applied. Did the UCC apply to this transaction?

11. CMD *Video Case.* Stevens went to look at a car owned by Marx that he had seen advertised in the private classified ad section of the newspaper. He wanted to buy the car and tentatively agreed on a price with Marx, but he asked if he could wait until his wife could see the car that evening. Marx agreed, promising in writing not to sell the car to anyone else in the interim. When Stevens and his wife returned to Marx's house that evening, however, they found that Marx had sold the car to another buyer for $100 more than the price Marx and Stevens had discussed. Stevens filed a breach of contract suit against Marx, pointing to a section of the UCC that provides that merchants can't revoke signed written offers. Should Stevens win?

Chapter Ten

The Agreement: Offer

Chapter Outline

I. Requirements for an Offer
- *A. Intent to Contract*
  - *1. The Objective Standard of Intent*
- *B. Definiteness of Terms*
  - *1. Definiteness Standards under the Common Law*
  - *2. Definiteness Standards under the UCC*
- *C. Communication to Offeree*

II. Special Offer Problem Areas
- *A. Advertisements*
- *B. Rewards*
- *C. Auctions*
- *D. Bids*
- *E. Which Terms Are Included in the Offer?*

III. Termination of Offers
- *A. Terms of the Offer*
- *B. Lapse of Time*
- *C. Revocation*
  - *1. General Rule: Offers Are Revocable*
  - *2. Exceptions to the General Rule*
  - *3. Time of Effectiveness of Revocations*
- *D. Rejection*
  - *1. Time of Effectiveness of Rejections*
- *E. Death or Insanity of Either Party*
- *F. Destruction of Subject Matter*
- *G. Intervening Illegality*

The concept of mutual agreement lies at the heart of traditional contract law. Courts faced with deciding whether two or more persons entered into a contract look first for an *agreement* between the parties. Because the formation of an agreement is normally a two-step process by which one party makes a proposal and the other responds to the proposal, it is customary to analyze the agreement in two parts: *offer* and *acceptance.* This chapter, which concerns itself with the offer, and the next chapter, which covers acceptance, focus on the tools used by courts to determine whether the parties have reached the kind of agreement that becomes the foundation of a contract.

Requirements for an Offer

An **offer** is the critically important first step in the contract formation process. An offer says, in effect, "This is it—if you agree to these terms, we have a contract." The person who makes an offer (**the offeror**) gives the person to whom she makes the offer (**the offeree**) the power to bind her to a contract simply by accepting the offer.

Not every proposal qualifies as an offer. Some proposals are vague, for example, or made in jest, or thrown out merely as a way of opening negotiations. To distinguish an offer, courts look for three requirements.

First, they look for some objective indication of a *present intent to contract* on the part of the offeror. Second, they look for specificity, or *definiteness,* in the terms of the alleged offer. Third, they look to see whether the alleged offer has been *communicated to the offeree.*

The preceding chapter discussed the fact that contracts for the sale of goods are governed by Article 2 of the UCC whereas contracts for services, real estate, and intangibles are generally governed by the common law of contracts. Common law and UCC standards for contract formation have a great deal in common, but they also differ somewhat. This chapter will point out those areas in which an offer for the sale of goods would be treated somewhat differently from an offer for services, real estate, and intangibles.

Intent to Contract

For a proposal to be considered an offer, the offeror must indicate *present intent to contract.* Present intent means the intent to enter the contract upon acceptance. It signifies that the offeror is not joking, haggling, or equivocating. It makes sense that intent on the part of the offeror would be required for an offer—otherwise, an unwilling person might wrongly be bound to a contract. But what is meant by intent? Should courts look at what the offeror actually in his own mind (*subjectively*) intended? Or should intent be judged by the impression that he has given to the rest of the world through words, acts, and circumstances that *objectively* indicate that intent?

The Objective Standard of Intent Early American courts took a subjective approach to contract formation, asking whether there was truly a "meeting of the minds" between the parties. This subjective standard, however, created uncertainty in the enforcement of contracts because it left every contract vulnerable to disputes about actual intent. The desire to meet the needs of the marketplace by affording predictable and consistent results in contracts cases dictated a shift toward an *objective theory of contracts.* By the middle of the 19th century, the objective approach to contract formation, which judges agreement by looking at the parties' outward manifestations of intent, was firmly established in American law. Judge Learned Hand once described the effect of the objective contract theory as follows:

> A contract has, strictly speaking, nothing to do with the personal, or individual, intent of the parties. A contract is an obligation attached by the mere force of law to certain acts of the parties, usually words, which ordinarily accompany and represent a known intent. If however, it were proved by 20 bishops that either party when he used the words intended something else than the usual meaning which the law imposes on them, he would still be held, unless there were mutual mistake or something else of that sort.[1]

Following the objective theory of contracts, then, an offeror's intent will be judged by an objective standard—that is, what his words, acts, and the circumstances signify about his intent. If a reasonable person familiar with all the circumstances would be justified in believing that the offeror intended to contract, a court would find that the intent requirement of an offer was satisfied even if the offeror himself says that he did not intend to contract.

Definiteness of Terms

If Smith says to Ford, "I'd like to buy your house," and Ford responds, "You've got a deal," has a contract been formed? An obvious problem here is lack of specificity. A proposal that fails to state specifically what the offeror is willing to do and what he asks in return for his performance is unlikely to be considered an offer. One reason for the requirement of definiteness is that definiteness and specificity in an offer tend to indicate an intent to contract, whereas indefiniteness and lack of specificity tend to indicate that the parties are still negotiating and have not yet reached agreement. In the conversation between Smith and Ford, Smith's statement that he'd like to buy Ford's house is merely an invitation to offer or an invitation to negotiate. It indicates a willingness to contract in the future if the parties can reach agreement on mutually acceptable terms, but not a present intent to contract. If, however, Smith sends Ford a detailed and specific written document stating all of the material terms and conditions on which he is willing to buy the house and Ford writes back agreeing to Smith's terms, the parties' intent to contract would be objectively indicated and a contract probably would be created.

A second reason definiteness is important is that courts need to know the terms on which the parties agreed in order to determine if a breach of contract has occurred and calculate a remedy if it has. Keep in mind that the offer often contains all the terms of the parties'

[1] *Hotchkiss v. National City Bank,* 200 F. 287, 293 (S.D.N.Y. 1911).

contract. This is so because all that an offeree is allowed to do in most cases is to accept or reject the terms of the offer. If an agreement is too indefinite, a court would not have a basis for giving a remedy if one of the parties alleged that the "contract" was breached.

Definiteness Standards under the Common Law Classical contract law took the position that courts are contract enforcers, not contract makers. The prospect of enforcing an agreement in which the parties had omitted terms or left terms open for later agreement was unthinkable to courts that took a traditional, hands-off approach to contracts. Traditionally, contract law required a relatively high standard of definiteness for offers, requiring that all the essential terms of a proposed contract be stated in the offer. The traditional insistence on definiteness can serve useful ends. It can prevent a person from being held to an agreement when none was reached or from being bound by a contract term to which he never assented. Often, however, it can operate to frustrate the expectations of parties who intend to contract but, for whatever reason, fail to procure an agreement that specifies all the terms of the contract. The definiteness standard, like much of contract law, is constantly evolving. The trend of modern contract law is to tolerate a lower degree of specificity in agreements than classical contract law would have tolerated. Although it is still unlikely that an agreement that leaves open important aspects of a transaction will be enforced, the following *Mears* case provides an example of a contemporary court's approach to definiteness.

Mears v. Nationwide Insurance Company *91 F.3d 1118 (8th Cir. 1996)*

Nationwide traditionally holds a regional convention for its employees every three years. The conventions are intended to boost employee morale by recognizing workplace achievements. Nationwide planned to have a regional convention for the South Central Regional Offices (SOCRO) in July 1994. Nationwide created planning committees, among them a committee responsible for selecting a convention theme. It decided to have a theme contest and drafted the following announcement:

Special Announcement

The 1994 SOCRO Claims Convention plans are being developed and we need your creativity. We don't know where. We don't know when. And we don't have a theme. That's where you come in. A contest is hereby announced to create a theme. Here's what you could win:

His and Hers Mercedes
An all expense paid trip for two around the world
Additional prize to be announced
(All prizes subject to availability)

Only two rules apply:

1. The slogan is limited to no more than eight words.
2. All entries must be submitted to Linda McCauley, Regional Office by August 1, 1993.

Put your thinking caps on, get those creative juices flowing, tap the far reaches of your mind. Prior themes are not eligible. As you will remember, our 1991 theme was "Our Moving Force is You." Don't delay. Like Ed McMahon says, you can't win if you don't enter.

David Mears, who worked out of his home as a claims adjuster for Nationwide, was one of about 185 SOCRO employees who received the announcement. Mears decided to enter the contest and submitted several themes, including, "At the Top and Still Climbing." Several months after submitting his theme, Mears left Nationwide.

In October 1993, Peterson, a member of the convention theme committee, notified Mears that his theme had been chosen for the 1994 convention. Mears claims that Peterson also told him that he had won two Mercedes-Benz automobiles, a fact that Peterson disputes. In January 1994, Mears spoke with Peterson again to ask about the status of the cars. Peterson warned him that he might not receive the cars for three reasons:

first, Nationwide might change the convention theme; second, Mears was no longer employed by Nationwide, and third, the contest was a joke.

In the end, Nationwide used the theme submitted by Mears for the July convention. The theme appeared on name tags and convention booklets, and provided an overarching message for the convention events. After the convention, Mears spoke with a member of the convention theme committee, who informed Mears that Nationwide never intended to award the two automobiles and offered Mears a restaurant gift certificate instead.

Mears sued Nationwide for breach of contract. At trial, Nationwide admitted that the contest was legitimate, but argued that Mears was not entitled to the two Mercedes-Benz automobiles as a prize. The jury found in favor of Mears and awarded him $60,000, but the court granted judgment for Nationwide as a matter of law on the ground that no contract was formed because the terms were not definite enough to be enforced. Mears appealed.

Magill, Circuit Judge In order to be binding, a contract must be reasonably certain as to its terms and requirements. A contract is sufficiently certain if it provides a basis for determining the existence of a breach and for giving an appropriate remedy. The law does not favor the destruction of contracts because of uncertainty.

Nationwide's contest notice offered several prizes and gave no indication of which prize the winning theme submitter would receive. However, a contract that is ambiguous can be made certain by the subsequent actions or declarations of the parties.

At trial, both Peterson and Mears testified that she told him that he had won two Mercedes while at a dinner attended by many Nationwide employees. Peterson claimed that she spoke with a facetious tone and, in reality, had no intention of awarding the automobiles. Mears, on the other hand, took Peterson at her word and believed that of the prizes listed on the contest announcement, he had won the Mercedes. It appears that others around Mears also believed that he had won the automobiles. Faced with this factual dispute, the jury had to decide which version of events was more credible. They believed Mears and we perceive no reasoning for undoing this jury determination.

Because the contest contract could be reasonably construed to entitle Mears to two Mercedes-Benz automobiles, the only remaining uncertainty lies in the type of Mercedes to be awarded. There is a wide range of values for Mercedes, depending largely on the model and year. This uncertainty, however, is not fatal. First, contract terms are interpreted with strong determination for what is reasonable. Under reasonable interpretation of the contest contract, the jury could expect the automobiles to be new. Second, when a minor ambiguity exists in a contract, Arkansas law allows the complaining party to insist on the reasonable interpretation that is least favorable to him. Indeed, in *Dolly Parker Motors, Inc. v. Stinson,* the Arkansas Supreme Court held that a contract that specified only the make of the automobile had enough certainty to be enforceable. These two factors, taken together, are sufficient to support the jury's conclusion that Nationwide owed Mears two of Mercedes-Benz's least expensive new automobiles as his contest prize. At trial, Nationwide did not offer any evidence of the price of such a Mercedes-Benz. Mears, on the other hand, testified that the least expensive new Mercedes-Benz cost $31,450. He based this figure on information from Mercedes-Benz dealerships in Little Rock and in Fayetteville. In the absence of contrary testimony from Nationwide, the jury reasonably concluded that Mears suffered $60,000 in damages.

For the reasons stated, we reverse the district court's order of judgment as a matter of law and reinstate the jury's verdict for $60,000.

Reversed in favor of Mears.

Definiteness Standards under the UCC The UCC, with its increased emphasis on furthering people's justifiable expectations and its encouragement of a hands-on approach by the courts, often creates contractual liability in situations where no contract would have resulted at common law. Perhaps no part of the Code better illustrates this basic difference between the UCC and classical common law than does the basic Code section on contract formation [2–204]. This section says that sales contracts under Article 2 can be

created "in any manner sufficient to show agreement, including conduct which recognizes the existence of a contract" [2–204(1)]. So, if the parties are acting as though they have a contract by delivering or accepting goods or payment, for example, this may be enough to create a binding contract, even if it is impossible to point to a particular moment in time when the contract was created [2–204(2)].

An important difference between Code and classical common law standards for definiteness is that under the Code, the fact that the parties left open one or more terms of their agreement does not necessarily mean that their agreement is too indefinite to enforce. A sales contract is created if the court finds that the parties intended to make a contract and that their agreement is complete enough to allow the court to reach a fair settlement of their dispute ("a reasonably certain basis for giving an appropriate remedy" [2–204(3)]). If a term is left open in a contract that meets these two standards, that open term or "gap" can be "filled" by inserting a presumption found in the Code's "gap-filling" rules. The gap-filling rules allow courts to fill contract terms left open on matters of price [2–305], quantity [2–306], delivery [2–307, 2–308, and 2–309(1)], and time for payment [2–310] when such terms have been left open by the parties.[2] Of course, if a term was left out because the parties were *unable* to reach agreement about it, this would indicate that the intent to contract was absent and no contract would result, even under the Code's more liberal rules. *Intention is still at the heart of these modern contract rules;* the difference is that courts applying Code principles seek to further the parties' *underlying* intent to contract even though the parties have failed to express their intention about specific aspects of their agreement.

Communication to Offeree

When an offeror communicates the terms of an offer to an offeree, he objectively indicates an intent to be bound by those terms. The fact that an offer has *not* been communicated, on the other hand, may be evidence that the offeror has not yet decided to enter into a binding agreement. For example, assume that Stevens and Meyer have been negotiating over the sale of Meyer's restaurant. Stevens confides in his friend, Reilly, that he plans to offer Meyer $150,000 for the restaurant. Reilly goes to Meyer and tells Meyer that Stevens has decided to offer him $150,000 for the restaurant and has drawn up a written offer to that effect. After learning the details of the offer from Reilly, Meyer telephones Stevens and says, "I accept your offer." Is Stevens now contractually obligated to buy the restaurant? No. Since *Stevens* did not communicate the proposal to Meyer, there was no offer for Meyer to accept.

Special Offer Problem Areas

Advertisements

Generally speaking, advertisements for the sale of goods at specified prices are *not* considered to be offers. Rather, they are treated as being invitations to offer or negotiate. The same rule is generally applied to signs, handbills, catalogs, price lists, and price quotations. This rule is based on the presumed intent of the sellers involved. It is not reasonable to conclude that a seller who has a limited number of items to sell intends to give every person who sees her ad, sign, or catalog the power to bind her to contract. Thus, if Customer sees Retailer's advertisement of Whizbang XL laptop computers for $2,000 and goes to Retailer's store indicating his intent to buy the computer, Customer is making an offer, which Retailer is free to accept or reject. This is so because *Customer* is manifesting a present intent to contract on the definite terms of the ad.

In some cases, however, particular ads have been held to amount to offers. Such ads are usually highly specific about the nature and number of items offered for sale and what is requested in return. This specificity precludes the possibility that the offeror could become contractually bound to an infinite number of offerees. In addition, many of the ads treated as offers have required some special performance by would-be buyers or have in some other way clearly indicated that immediate action by the buyer creates a binding agreement. The potential for unfairness to those who attempt to accept such ads and their fundamental difference from ordinary ads justify treating them as offers. *Jackson v. Investment Corporation of Palm Beach* presents an example of an advertisement that was held to constitute an offer.

[2]Chapter 19 discusses these Code provisions in detail.

Jackson v. Investment Corp. of Palm Beach *585 So.2d 949 (Fla. Ct. App. 1991)*

John Jackson read an ad in the Miami Herald *that stated that the Pic-6 Jackpot for the last evening of the dog track racing season would be $825,000. Jackson went to the track on that date, picked the winner in the six designated races, and won the jackpot. However, Investment Corporation of Palm Beach, the owner of the dog track, contended that it should not have to pay more than $25,000 because it had intended the amount of the jackpot to be $25,000, not $825,000. The mix-up occurred when Investment submitted to the newspaper a prior ad with the following words written on the face of it: "Guaranteed Jackpot $25,000 must go tonight," and the newspaper employee who prepared the final draft of the ad mistook the dollar sign with only one slash-mark to be the number 8. Investment paid Jackson $25,000 on the night of the races but Jackson later brought suit to claim the balance. At trial, the judge instructed the jury that it should find for Investment unless the evidence supported the claim that Investment intended by its newspaper advertisement to make an offer to pay a guaranteed jackpot of $825,000. The jury returned a verdict in favor of Investment and the trial judge entered judgment on the verdict. Jackson appealed, claiming that this instruction to the jury was erroneous.*

Downey, Judge There was no evidence adduced that Investment intended the jackpot to be $825,000. Jackson concedes that Investment never intended the jackpot to be the larger amount. The point is that Investment's subjective intent was not material in determining what the contract was between the parties. As the Florida Supreme Court said in *Gendzier v. Bielecki,* quoting from Justice Oliver Wendell Holmes:

> The making of a contract depends not on the agreement of two minds in one intention, but on the agreement of two sets of external signs—not on the parties having meant the same thing but on their having said the same thing.

Professor Williston, in his work on Contracts, describes the test as:

> [T]he test of the true interpretation of an offer or acceptance is not what the party making it thought it meant or intended it to mean, but what a reasonable person in the position of the parties would have thought it meant. 1 *Williston on Contracts* sec. 94, 339-40.

It appears to us that the law, applicable to offers of a reward, is also applicable to the type of advertisement involved in this case. The offer is a mere proposal or conditional promise which, if accepted before it is revoked, creates a binding contract. We have given due consideration to Investment's argument regarding the advertisement as an "invitation to bargain," but find it inapposite here. The "invitation to bargain" rule appears to be applied in advertising wherein:

> Neither the advertiser nor the reader of his notice understands that the latter is empowered to close the deal without further expression by the former. Such advertisements are understood to be mere requests to consider and examine and negotiate; and no one can reasonably regard them otherwise unless the circumstances are exceptional and the words used are very plain and clear. 1 *Corbin on Contracts* sec. 25 (1963).

Here there are no further negotiations indicated. If a member of the public buys a winning ticket on six races, he has accepted the offer and the parties have a contract. We thus hold that the trial court erred in instructing the jury as it did and we reverse the judgment appealed from and remand the cause for a new trial.

Judgment reversed in favor of Jackson.

Rewards

Advertisements offering rewards for lost property, for information, or for the capture of criminals are generally treated as offers for unilateral contracts. To accept the offer and be entitled to the stated reward, offerees must perform the requested act—return the lost property, supply the requested information, or capture the wanted criminal. Some courts have held that only offerees who started performance with knowledge of the offer are entitled to the reward. Other courts, however,

have indicated the only requirement is that the offeree know of the reward before completing performance. In reality, the result in most such cases probably reflects the court's perception of what is fairer given the facts involved in the particular case at hand.

Auctions

Sellers at auctions are generally treated as making an invitation to offer. Those who bid on offered goods are, therefore, treated as making offers that the owner of the goods may accept or reject. Acceptance occurs only when the auctioneer strikes the goods off to the highest bidder; the auctioneer may withdraw the goods at any time before acceptance. However, when an auction is advertised as being "without reserve," the seller is treated as having made an offer to sell the goods to the highest bidder and the goods cannot be withdrawn after a call for bids has been made unless no bids are made within a reasonable time.[3]

Bids

The bidding process is a fertile source of contract disputes. Advertisements for bids are generally treated as invitations to offer. Those who submit bids are treated as offerors. According to general contract principles, bidders can withdraw their bids at any time prior to acceptance by the offeree inviting the bids and the offeree is free to accept or reject any bid. The previously announced terms of the bidding may alter these rules, however. For example, if the advertisement for bids unconditionally states that the contract will be awarded to the lowest responsible bidder, this will be treated as an offer that is accepted by the lowest bidder. Only proof by the offeror that the lowest bidder is not responsible can prevent the formation of a contract. Also, under some circumstances discussed later in this chapter, promissory estoppel may operate to prevent bidders from withdrawing their bids.

Bids for governmental contracts are generally covered by specific statutes rather than by general contract principles. Such statutes ordinarily establish the rules governing the bidding process, often require that the contract be awarded to the lowest bidder, and frequently establish special rules or penalties governing the withdrawal of bids.

[3]These rules and others concerned with the sale of goods by auction are contained in section 2–328 of the UCC.

Which Terms Are Included in the Offer?

After making a determination that an offer existed, a court must decide which terms were included in the offer so that it can determine the terms of the parties' contract. Put another way, which terms of the offer are binding on the offeree who accepts it? Should offerees, for example, be bound by fine-print clauses or by clauses on the back of the contract? Originally, the courts tended to hold that offerees were bound by all the terms of the offer on the theory that every person had a duty to protect himself by reading agreements carefully before signing them.

In today's world of lengthy, complex form contracts, however, people often sign agreements that they have not fully read or do not fully understand. Modern courts tend to recognize this fact by saying that offerees are bound only by terms of which they had actual or reasonable notice. If the offeree actually read the term in question, or if a reasonable person should have been aware of it, it will probably become part of the parties' contract. A fine-print provision on the back of a theater ticket would probably not be binding on a theater patron, however, because a reasonable person would not normally expect such a ticket to contain contractual terms. By contrast, the terms printed on a multipage airline ticket might well be considered binding on the purchaser if such documents would be expected to contain terms of the contract.

One controversy along these lines has been raised by the standardized contracting techniques that almost always accompany the transfer of computer software. For example, Stacy goes to the Gigantic State University Bookstore and purchases software in a package. When Stacy opens the package, she finds that the CD containing the program is sealed in an envelope and that it bears a label stating that by opening the envelope, Stacy is accepting the terms of a license agreement that is contained somewhere in the packaging. The label states that if Stacy does not want to accept the terms of the license, she can return the software. The license contains a variety of terms that generally protect the software manufacturer. This method of contracting is often called **shrinkwrap** contracting. Stacy rips open the envelope without reading the license agreement and installs the software. If a conflict arises later concerning one of the terms of the

license agreement, should the law hold that the terms of the license agreement are contractually binding? A critic of shrinkwrap contracting would argue that the terms should not be part of the contract because the contract was formed when Stacy purchased the program from Gigantic State University Bookstore, and Stacy did not know of the license or its terms at that point. Also, consumers like Stacy may not understand that by opening the sealed package they are entering a contract the terms of which they are unlikely to have read and may not understand. The following *ProCD* case responds to these arguments and provides rationales for considering shrinkwrap terms to be included in the software licensor's offer and the contract that is ultimately formed. The Uniform Computer Transactions Information Act (UCITA), the proposed law to govern computer information transactions, contains specific provisions for determining the effectiveness of shrinkwrap contracts and "click-through" contracts.

ProCD Inc. v. Zeidenberg *86 F.3d 1447 (7th Cir. 1996)*

ProCD compiled information from more than 3,000 telephone directories into a computer database and sold a version of this database called SelectPhone on CD-ROM disks. The database in SelectPhone cost more than $10 million to compile and is expensive to keep current. For commercial users such as retailers and manufacturers, SelectPhone is a much cheaper alternative to the expensive mailing lists that such users otherwise would purchase from various information intermediaries. For noncommercial users, SelectPhone has less value, functioning as a substitute for calling long-distance information or other directory. ProCD decided to sell its database to the general public for personal use at a low price (approximately $150 for the set of five disks), while selling to commercial users at a higher price. If ProCD had to recover all of its cost and make a profit by charging a single price—that is, if it could not charge more to commercial users than to the general public—it would have to raise the price substantially above $150. To help ensure that no commercial users purchased the database at the lower, noncommercial price, ProCD marketed the consumer product with a kind of contract that is popularly known as a "shrinkwrap license." A shrinkwrap license limits the ways that the person who acquires computer software can use the software. It gets its name from the fact that retail software packages are covered in plastic or cellophane "shrinkwrap." Every box containing ProCD's consumer product declares that the software comes with restrictions stated in an enclosed license. This license, which is encoded on the CD-ROM disks as well as printed in the manual, and which appears on a user's screen every time the software runs, limits use of the application program and listings to noncommercial purposes.

Matthew Zeidenberg bought a consumer package of SelectPhone in 1994 from a retail outlet in Madison, Wisconsin, but decided to ignore the license. He formed Silken Mountain Web Services, Inc., to resell the information in the SelectPhone database. The corporation made the database available on the Internet to anyone willing to pay its price—which was less than ProCD charged its commercial customers. Zeidenberg purchased two additional SelectPhone packages, each with an updated version of the database, and made the latest information available over the World Wide Web, for a price, through his corporation. ProCD filed suit against Zeidenberg seeking an injunction against dissemination of the database that exceeds the rights specified in the licenses. The district court held the licenses ineffectual because their terms do not appear on the outside of the package. ProCD appealed.

Easterbrook, Circuit Judge We treat the licenses as ordinary contracts accompanying the sale of products. Zeidenberg [argues] that placing the package of software on the shelf is an "offer," which the customer "accepts" by paying the asking price and leaving the store with the goods. In Wisconsin, as elsewhere, a contract includes only the terms on which the parties have agreed. One cannot

agree to hidden terms. So far, so good—but one of the terms to which Zeidenberg agreed by purchasing the software is that the transaction was subject to a license.

Zeidenberg's position therefore must be that the printed terms on the outside of a box are the parties' contract—except for printed terms that refer to or incorporate other terms. But why would Wisconsin fetter the parties' choice in this way? Vendors can put the entire terms of a contract on the outside of a box only by using microscopic type, removing other information that buyers might find more useful (such as what the software does, and on which computers it works), or both. The "Read Me" included with most software, describing system requirements and potential incompatibilities, may be equivalent to 10 pages of type; warranties and license restrictions take up more space. Notice on the outside, terms on the inside, and a right to return the software for a refund if the terms are unacceptable (a right that the license expressly extends), may be a means of doing business valuable to buyers and sellers alike.

Transactions in which the exchange of money precedes the communication of terms are common. Consider the purchase of an airline ticket. The traveler calls the carrier or an agent, is quoted a price, reserves a seat, pays, and gets a ticket, in that order. The ticket contains elaborate terms, which the traveler can reject by canceling the reservation. To use the ticket is to accept the terms, even terms that in retrospect are disadvantageous. Consumer goods work the same way. Someone who wants to buy a radio set visits a store, pays, and walks out with a box. Inside the box is a leaflet containing some terms, the most important of which usually is the warranty, read for the first time in the comfort of home. By Zeidenberg's lights, the warranty in the box is irrelevant.

Next consider the software industry itself. Only a minority of sales take place over the counter, where there are boxes to peruse. A customer may place an order by phone in response to a line item in a catalog or a review in a magazine. Much software is ordered over the Internet by purchasers who have never seen the box. Increasingly, software arrives by wire. There is no box; there is only a collection of information that includes data, an application program, instructions, many limitations, and the terms of sale. The user purchases a serial number which activates the software's features. On Zeidenberg's arguments, these unboxed sales are unfettered by terms.

A vendor, as master of the offer, may invite acceptance by conduct and may propose limitations on the kind of conduct that constitutes acceptance. A buyer may accept by performing the acts the vendor proposes to treat as acceptance. And that is what happened. ProCD proposed a contract that a buyer would accept by *using* the software after having an opportunity to read the license at leisure. This Zeidenberg did. He had no choice, because the software splashed the license on the screen and would not let him proceed without indicating acceptance. Ours is not a case in which a consumer opens a package to find an insert saying "you owe us an extra $10,000" and the seller files suit to collect. Any buyer finding such a demand can prevent formation of the contract by returning the package, as can any consumer who concludes that the terms of the license make the software worth less than the purchase price. Zeidenberg inspected the package, tried out the software, learned of the license, and did not reject the goods.

Zeidenberg has not located any case holding that the ordinary terms found in shrinkwrap licenses require any special prominence. In the end, the terms of the license are conceptually identical to the contents of the package. Just as no court would dream of saying that SelectPhone must contain 3,100 phone books rather than 3,000, or must sell for $100 rather than $150—although any of these changes would be welcomed by the customer—so, we believe, Wisconsin would not let the buyer pick and choose among terms. Terms of use are no less a part of "the product" than are the size of the database and the speed with which the software compiles listings. Competition among vendors, not judicial revision of a package's contents, is how consumers are protected in a market economy.

Reversed and remanded in favor of ProCD.

Termination of Offers

After a court has determined the existence and content of an offer, it must determine the duration of the offer. Was the offer still in existence when the offeree attempted to accept it? If not, no contract was created and the offeree is treated as having made an offer that the original offeror is free to accept or reject. This is so because, by attempting to accept an offer that has terminated, the offeree has indicated a present intent to contract on the terms of the original offer though he lacks the power to bind the offeror to a contract due to the original offer's termination.

Terms of the Offer

The offeror is often said to be "the master of the offer." This means that offerors have the power to determine the terms and conditions under which they are bound to a contract. As the following *Keller v. Bones* case indicates, an offeror may include terms in the offer that limit its effective life. These may be specific terms, such as "you must accept by December 5, 2000," or "this offer is good for five days," or more general terms such as "for immediate acceptance," "prompt wire acceptance," or "by return mail." General time limitation language in an offer can raise difficult problems of interpretation for courts trying to decide whether an offeree accepted before the offer terminated. Even more specific language, such as "this offer is good for five days," can cause problems if the offer does not specify whether the five-day period begins when the offer is sent or when the offeree receives it. Not all courts agree on such questions, so wise offerors should be as specific as possible in stating when their offers terminate.

Keller v. Bones *8 Neb. App. 946, 2000 Neb. App. LEXIS 16 (Neb. Ct. App. 2000)*

Calvin R. Bones and Audrey J. Bones are the trustees of the Calvin R. and Audrey J. Bones Family Trust. The trust owned a ranch in Nebraska that the Boneses decided to sell. On June 11, 1997, the Boneses listed the ranch for sale with Agri Affiliates, a real estate agent. According to the listing agreement between the Boneses and Agri, if the listing sold to the current tenants, Lydic Brothers, the agent would receive only a 1 percent commission. On the other hand, if the listing sold to anyone else, the agent would receive a 6 percent commission. On July 17, 1997, Dean Keller submitted to Agri a written offer to buy the ranch for $490,000. The offer required written acceptance sent through registered mail or delivered to Keller personally. It also stated that it would be withdrawn if not accepted by July 21 at 5 P.M. Paragraph 15 of the offer states in part that "upon execution by Seller, this agreement shall become a binding contract." At 4:53 P.M. on July 21, the Boneses faxed a signed copy of the offer to Agri. In addition, at 5:12 P.M. on July 21, Loren Johnson, Agri's representative, telephoned Keller and left a voicemail message to inform him of the Boneses' acceptance. On July 22, 1997, Don Lydic, a representative of Lydic Brothers, informed the Boneses and the agent that Lydic Brothers would match Keller's offer for the ranch. The Boneses wanted to accept Don Lydic's offer and sell the ranch to Lydic Brothers. Later that same day, Agri asked Keller if he would be willing to release the Boneses from the agreement and "back out" of the deal. Keller refused and asserted that he wanted to go forward with the sale. The Boneses unequivocally informed Keller on December 5, 1997, that they would not sell the ranch to him. After the Boneses failed to close, Keller brought suit against the Boneses, seeking relief for breach of contract. The Boneses asserted that no contract existed (1) because their acceptance was not communicated to the buyer within the time specified in the offer and the attempted acceptance thus became a counteroffer and (2) because the buyer did not communicate to the sellers that he accepted their counteroffer. Both parties moved for summary judgment. The trial court found in favor of the Boneses' motion and dismissed the case. Keller appealed.

Hannon, Judge Essentially, this case presents one question: did a contract exist between Keller and the Boneses for the sale of the ranch? Keller argues that the Boneses accepted his offer and that the contract became binding the moment the Boneses signed the offer due to the language in paragraph 15. In its most basic sense, the offer in this case was a buyer's promise to purchase real estate for a cer-

tain amount if the seller promised to sell. In this way, the Boneses' acceptance must have been communicated to Keller in order for the acceptance to be valid. This case lacks an effective communication to the offeror to create a contract. Neither the Boneses' act of signing the offer, albeit before the offer expired, nor the Boneses' act of faxing a signed copy to their agent constituted the requisite "communication" to the buyer in order to form a binding contract. Acceptance cannot become effective to create a contract until some irrevocable element occurs which places the acceptance "beyond the power or control of the sender." Neither of the Boneses' actions described above fulfills this requirement, because the acceptance never left their control. Keller argues that [his] offer included a clause which purported to make the contract binding at the moment the Boneses signed it. He also argues that parties are free to create their own terms of contracting as long as the terms do not violate public policy. Even in light of the parties' freedom to contract as they choose, acceptance must be communicated to the offeror. Furthermore, we are considering not the terms of the parties' contract but whether the parties entered into one. With respect to the voice message left on Keller's answering machine shortly after the deadline had passed, we find that the message could not constitute an acceptance of Keller's offer. In *Kline v. Metcalfe Construction Co.,* the Nebraska Supreme Court stated:

> The offerer has a right to prescribe in his offer any conditions as to time, place, quantity, mode of acceptance, or other matters which it may please him to insert in and make a part thereof, and the acceptance, to conclude the agreement, must in every respect meet and correspond with the offer, neither falling short of nor going beyond the terms proposed, but exactly meeting them at all points and closing with them just as they stand, and, in the absence of such an acceptance, subsequent words or acts of the parties cannot create a contract.

In *Wolf v. Tastee Freez Corp.,* the court stated "[t]hat the acceptance of an offer must be made within the time specified in the offer is a general rule of law. . . . The power to create a contract by acceptance of an offer terminates at the time specified in the offer."

We believe that under a provision specifically designating the time within which notice must be given, that time is of the essence, and such provision is to be strictly construed. Keller's offer required that the Boneses accept in writing by 5 P.M. on July 21, 1997, through registered mail or delivering the acceptance to Keller personally. Additionally, paragraph 15 of the offer states in part, "Time is of the essence of this agreement and each and every provision hereof." The voice message left on Keller's answering machine was not in writing, occurred after the deadline, and was not delivered by the means specified in the offer; thus, it could not constitute an acceptance.

The Boneses' late acceptance could constitute a counteroffer. A binding contract can result from the oral acceptance of such a counteroffer. The Boneses' signing of the offer by Keller would constitute the written embodiment of the counteroffer, and its oral acceptance by Keller could have resulted in a contract. However, Keller does not rely upon this theory, and in any event, there was no communication from Keller to the Boneses or their agent which could be interpreted as an acceptance of any counteroffer from the Boneses. For the foregoing reasons, we affirm the district court's order granting summary judgment in favor of the Boneses because no contract existed.

Affirmed in favor of the Boneses.

Lapse of Time

Offers that fail to provide a specific time for acceptance are valid for a reasonable time. What constitutes a reasonable time depends on the circumstances surrounding the offer. How long would a reasonable person in the offeree's position believe she had to accept the offer? Offers involving things subject to rapid fluctuations in value, such as stocks, bonds, or commodities futures, have a very brief duration. The same is true for offers involving goods that may spoil, such as produce.

The context of the parties' negotiations is another factor relevant to determining the duration of an offer. For example, most courts hold that when parties bargain face-to-face or over the telephone, the normal

time for acceptance does not extend past the conclusion of their conversation unless the offeror indicates a contrary intention. Where negotiations are carried out by mail or telegram, the time for acceptance would ordinarily include at least the normal time for communicating the offer and a prompt response by the offeree. Finally, in cases where the parties have dealt with each other on a regular basis in the past, the timing of their prior transactions would be highly relevant in measuring the reasonable time for acceptance.

Revocation

General Rule: Offers Are Revocable As the masters of their offers, offerors can give offerees the power to bind them to contracts by making offers. They can also terminate that power by revoking their offers. The general common law rule on revocations is that offerors may revoke their offers at any time prior to acceptance, *even if they have promised to hold the offer open for a stated period of time.*

Exceptions to the General Rule In the following situations (summarized in Figure 1), however, offerors are *not* free to revoke their offers:

1. *Options.* An **option** is a separate contract in which an offeror agrees not to revoke her offer for a stated time in exchange for some valuable consideration. You can think of it as a contract in which an offeror sells her right to revoke her offer. For example, Jones, in exchange for $5,000, agrees to give Dewey Development Co. a six-month option to purchase her farm for $550,000. In this situation, Jones would not be free to revoke the offer during the six-month period of the option. The offeree, Dewey Development, has no obligation to accept Jones's offer. In effect, it has merely purchased the right to consider the offer for the stated time without fear that Jones will revoke it. The traditional common law rule on options requires the actual payment of the agreed-on consideration before an option contract becomes enforceable. Therefore, in the above example, if Dewey Development never, in fact, paid the $5,000, no option was created and Jones could revoke her offer at any time prior to its acceptance by Dewey Development.

Figure 1 *When Offerors Cannot Revoke*

Options	Offeror has promised to hold offer open and has received consideration for that promise
Firm Offers	Merchant offeror makes written offer to buy or sell goods, giving assurances that the offer will be help open
Unilateral Contract Offers	Offeree has started to perform requested act before offeror revokes
Promissory Estoppel	Offeree foreseeably and reasonably relies on offer being held open, and will suffer injustice if it is revoked

2. *Offers for unilateral contracts.* Suppose Franklin makes the following offer for a unilateral contract to Waters: "If you mow my lawn, I'll pay you $25." Given that an offeree in a unilateral contract must fully perform the requested act to accept the offer, can Franklin wait until Waters is almost finished mowing the lawn and then say "I revoke!"? Obviously, the application of the general rule that offerors can revoke at any time before acceptance creates the potential for injustice when applied to offers for unilateral contracts, because it would allow an offeror to revoke after the offeree has begun performance but before he has had a chance to complete it. To prevent injustice to offerees who rely on such offers by beginning performance, two basic approaches are available to modern courts.

Some courts have held that once the offeree has begun to perform, the offeror's power to revoke is suspended for the amount of time reasonably necessary for the offeree to complete performance. Another approach to the unilateral contract dilemma is to hold that a bilateral contract is created once the offeree begins performance.

3. *Promissory estoppel.* In some cases in which the offeree *relies* on the offer being kept open, the doctrine of promissory estoppel can operate to prevent offerors from revoking their offers prior to acceptance. Section 87(2) of the *Restatement (Second)* says:

> An offer which the offeror should reasonably expect to induce action or forbearance of a substantial character on the part of the offeree before acceptance and which does induce such action or forbearance is binding as an option contract to the extent necessary to avoid injustice.

Many of the cases in which promissory estoppel has been used successfully to prevent revocation of offers

involve the bidding process. For example, Gigantic General Contractor seeks to get the general contract to build a new high school gymnasium for Shadyside School District. It receives bids from subcontractors. Liny Electric submits the lowest bid to perform the electrical work on the job and Gigantic uses Liny's bid in preparing its bid for the general contract. Here, Liny has made an offer to Gigantic, but Gigantic cannot accept that offer until it knows whether it has gotten the general contract. The school district awards the general contract to Gigantic. Before Gigantic can accept Liny's offer, however, Liny attempts to revoke it. In this situation, a court could use the doctrine of promissory estoppel to hold that the offer could not be revoked.

4. *Firm offers for the sale of goods [Note: This applies to offers for the sale of goods ONLY!].* The Code makes a major change in the common law rules governing the revocability of offers by recognizing the concept of a **firm offer** [2–205]. Like an option, a firm offer is irrevocable for a period of time. In contrast to an option, however, a firm offer does not require consideration to be given in exchange for the offeror's promise to keep the offer open. Not all offers to buy or sell goods qualify as firm offers, however. To be a firm offer, an offer must:

- Be made by an offeror who is a *merchant.*
- Be contained in a signed writing.[4]
- Give assurances that the offer will be kept open.

An offer to buy or sell goods that fails to satisfy these three requirements is governed by the general common law rule and is revocable at any time prior to acceptance. If an offer *does* meet the requirements of a firm offer, however, it will be irrevocable for the time stated in the offer. If no specific time is stated in the offer, it will be irrevocable for a *reasonable* time. Regardless of the terms of the firm offer, the outer limit on a firm offer's irrevocability is *three months.* For example, if Worldwide Widget makes an offer in a signed writing in which it proposes to sell a quantity of its XL Turbo Widget to Howell Hardware and gives assurances that the offer will be kept open for a year, the offer is a firm offer, but it can be revoked after three months if Howell Hardware has not yet accepted it.

[4]Under the UCC [1–201(39)], the word *signed* includes any symbol that a person makes or adopts with the intent to authenticate a writing.

In some cases, however, offerees are the true originators of an assurance term in an offer. When offerees have effective control of the terms of the offer by providing their customers with preprinted purchase order forms or order blanks, they may be tempted to take advantage of their merchant customers by placing an assurance term in their order forms. This would allow offerees to await market developments before deciding whether to fill the order, while their merchant customers, who may have signed the order without reading all of its terms, would be powerless to revoke. To prevent such unfairness, the Code requires that assurance terms on forms provided by offerees be separately signed by the offeror to effect a firm offer. For example, if Fashionable Mfg. Co. supplies its customer, Retailer, with preprinted order forms that contain a fine-print provision giving assurances that the customer's offer to purchase goods will be held open for one month, the purported promise to keep the offer open would not be enforceable unless Retailer separately signed that provision.

Time of Effectiveness of Revocations The question of *when* a revocation is effective to terminate an offer is often a critical issue in the contract formation process. For example, Davis offers to landscape Winter's property for $1,500. Two days after making the offer, Davis changes his mind and mails Winter a letter revoking the offer. The next day, Winter, who has not received Davis's letter, telephones Davis and attempts to accept. Contract? Yes. The general rule on this point is that revocations are effective only when they are actually *received* by the offeree.

The only major exception to the general rule on effectiveness of revocations concerns offers to the general public. Because it would be impossible in most cases to reach every offeree with a revocation, it is generally held that a revocation made in the same manner as the offer is effective when published, without proof of communication to the offeree.

Rejection

An offeree may expressly reject an offer by indicating that he is unwilling to accept it. He may also impliedly reject it by making a counteroffer, an offer to contract on terms materially different from the terms of the offer. As a general rule, either form of rejection by the offeree terminates his power to accept the offer. This is so because an offeror who receives a

rejection may rely on the offeree's expressed desire not to accept the offer by making another offer to a different offeree.

One exception to the general rule that rejections terminate offers concerns offers that are the subject of an option contract. Some courts hold that a rejection does not terminate an option contract and that the offeree who rejects still has the power to accept the offer later, so long as the acceptance is effective within the option period.

Concept Review

What Terminates Offers?

- Their own terms
- Lapse of time
- Revocation
- Rejection
- Death or insanity of offeror or offeree
- Destruction of subject matter
- Intervening illegality

Time of Effectiveness of Rejections As a general rule, rejections, like revocations, are effective only when actually received by the offeror. Therefore, an offeree who has mailed a rejection could still change her mind and accept if she communicates the acceptance before the offeror receives the rejection.[5]

Death or Insanity of Either Party

The death or insanity of either party to an offer automatically terminates the offer without notice. A meeting of the minds is obviously impossible when one of the parties has died or become insane.[6]

Destruction of Subject Matter

If, prior to an acceptance of an offer, the subject matter of a proposed contract is destroyed without the knowledge or fault of either party, the offer is terminated.[7] So, if Marks offers to sell Wiggins his lakeside cottage and the cottage is destroyed by fire before Wiggins accepts, the offer was terminated on the destruction of the cottage. Subsequent acceptance by Wiggins would not create a contract.

Intervening Illegality

An offer is terminated if the performance of the contract it proposes becomes illegal before the offer is accepted. So, if a computer manufacturer offered to sell sophisticated computer equipment to another country, but two days later, before the offer was accepted, Congress placed an embargo on all sales to this country, the offer was terminated by the embargo.[8]

Ethical and Public Policy Concerns

1. Classical contract theory has traditionally found strong ethical justification in the notion of voluntary consent. To parties who want out of their contracts and ask why they should be held to them, the law has often responded: "Because you agreed to them." How does this ethical justification square with the objective theory of contract, which can in some cases result in holding people to agreements that are inconsistent with their subjective intent? Is there some other ethical justification for holding people to the objective manifes-

[5]Chapter 11 discusses this subject in detail.

[6]Death or insanity of a party that occurs after a contract has been formed can excuse performance in contracts that call for personal services to be performed by the person who has died or become insane. This is discussed in Chapter 18.

[7]In some circumstances, destruction of subject matter can also serve as a legal excuse for a party's failure to perform his obligations under an existing contract. Chapter 18 discusses this subject.

[8]In some circumstances, intervening illegality can also serve as a legal excuse for a party's failure to perform his obligations under an existing contract. Chapter 18 discusses this subject.

tations of consent, regardless of their actual or subjective intent?

2. Compare and contrast the underlying ethical justifications of the classical and modern contract positions on what terms are included in offers. Is it ethical for businesses who deal with consumers or other unsophisticated parties to "hide" contract terms under misleading headings, in small print, or on the reverse side of contracts? What about putting form contracts in complex, technical language that consumers are unlikely to understand?

3. As you learned earlier in this chapter, there are now a number of exceptions to the traditional rule that offerors can revoke at any time prior to acceptance, even if they have promised not to. Is there an ethical basis for each of these exceptions? If so, what is it?

Problems and Problem Cases

1. In 1989, the New Jersey Highway Authority increased its tolls from 25 cents to 35 cents. In connection with this increase, it authorized the sale of tokens for a discounted price—$10 for a roll of 40 tokens, a savings of $4 per roll for customers—for a limited time. The authority advertised this sale through several media, including signs on the parkway itself. Shortly after the discount sale began, complaints were made that the tokens were not available. The authority explained that the shortage probably resulted from an unanticipated demand for the tokens resulting from purchasers hoarding them. The authority then began limiting the sales to certain days of the week, but even with that limitation, the demand could not be satisfied. Schlictman, a motorist who used the toll roads, sued the authority for breach of contract after trying unsuccessfully, on five different occasions within the authorized sale dates and times, to buy the discounted tokens. What should the result be?

2. Brown went to a 7-Eleven store to purchase two California Lottery tickets. The store clerk informed him that the terminal was not functioning properly and that only tickets with terminal-generated number selections could be purchased. The clerk suggested Brown travel to another store nearby, but he was unable to get there in time. Brown sued the owner of 7-Eleven on several claims, including breach of contract. He claimed that a unilateral contract was formed when he responded to the defendant's advertisement of a "short-cut to millions" by tendering his play slips and sufficient money to the 7-Eleven clerk, and that the failure of the clerk to sell him the lottery tickets resulted in a loss of approximately $7.25 million, because Brown would have picked the winning numbers. Was a unilateral contract formed here?

3. On August 4, 1980, Normile made a written offer to buy property owned by Miller. Miller signed and returned the offer after making several substantial changes in its terms and initialing those changes. The executed form was delivered to Normile by Byer, the real estate agent who had shown him the property. In the early afternoon of August 5, 1980, Miller accepted an offer by Segal to buy her property on terms similar to those in the modified offer she had returned to Normile. At 2:00 P.M. that day, Byer told Normile: "You snooze, you lose; the property has been sold." Shortly thereafter, Normile attempted to accept Miller's proposal. Was the trial court correct in ruling that Normile and Miller had no contract?

4. Schiff, a self-styled tax rebel who had made a career out of his tax protest activities, appeared live on the February 7, 1983, CBS News "Nightwatch" program. During the course of the program, which had a viewer participant format, Schiff repeated his long-standing position that "there is nothing in the Internal Revenue Code which says anyone is legally required to pay the tax." Later in the program, Schiff stated: "If anybody calls this show and cites any section of this Code that says an individual is required to file a tax return, I will pay them $100,000." Newman, an attorney, did not see Schiff live on "Nightwatch," but saw a two-minute taped segment of the original "Nightwatch" interview several hours later on the "CBS Morning News." Certain that Schiff's statements were incorrect, Newman telephoned and wrote "CBS Morning News," attempting to accept Schiff's offer by citing Internal Revenue Code provisions requiring individuals to pay federal income tax. CBS forwarded Newman's letter to Schiff, who refused to pay on the ground that Newman had not properly accepted his offer. Newman sued Schiff for breach of contract. Will Newman win?

5. Less than an hour before his estranged wife underwent emergency surgery for an ectopic pregnancy caused by another man, McAdoo was asked to sign a standard form contract prepared by St. John's

Episcopal Hospital. McAdoo testified that at the time he signed the form his wife's physical appearance and declared mental state convinced him that she was near death. Further, he stated that, under such circumstances, it did not occur to him to read carefully or question the implications of the papers he was being asked to sign. The form contained a provision that read as follows:

> ASSIGNMENT OF INSURANCE BENEFITS: I hereby authorize payment directly to the above named hospital of the hospital expense benefits otherwise payable to me but not to exceed the hospital's regular charges for this period of hospitalization. I understand that I am financially responsible to the hospital for the charges not covered by my group insurance plan.

McAdoo's wife survived and was discharged from St. John's eight days later. McAdoo did not visit her after the day of the operation and had not had any further contact with her when the hospital filed suit against him to collect her hospital bill. Should St. John's be able to enforce the agreement against McAdoo?

6. In May 1991, Glazner and others owned a house on property located in Mobile. Parker, a resident of New York, decided to move to Alabama and she sought the services of real estate agent Evelyn Anderson for assistance in locating a house. After looking at various properties with Anderson, Parker decided to purchase the Glazner property. With Anderson's assistance, Parker completed a standard realtor's form contract as her offer, or "proposed" contract, on the house. Anderson met with Glazner and presented that written offer, but Glazner rejected it. Anderson then completed, at Glazner's request, a second realtor's contract as a counteroffer. This counteroffer incorporated terms dictated by Glazner, and Glazner signed the counteroffer. One term of this proposed contract was that the sale of the property was to be concluded or "closed" by June 1, 1991. Earnest money was stated in this proposed contract to be $2,000. Anderson presented the counteroffer, but Parker objected to the June 1, 1991, closing date. At Parker's request, Anderson then phoned Glazner. Anderson explained to Glazner that Parker wanted to close on July 15, 1991, and was willing to increase the earnest money from $2,000 to $5,000. According to Anderson, Glazner orally authorized her to amend his counteroffer by adding the words "closing date to be July 15, 1991." Glazner later denied that he authorized Anderson to so change his proposed contract (that is, the counteroffer). Anderson changed the proposed contract to state a July 15, 1991, closing date. Parker then signed the amended proposed contract. Later, Parker tendered $5,000 as earnest money that was to be held in Anderson's escrow account. Anderson mailed Glazner a copy of the contract and thereafter telephoned to verify that Glazner had received it, and Glazner acknowledged that he had. Glazner received a copy of this contract in the mail and observed the alteration of the closing date. He questioned Anderson about the change several times thereafter and told Anderson that "if the financial papers are satisfactory and we determine that her [Parker's] ability to perform on the contract [is] satisfactory, we also [will] accept that date." Three days before the scheduled July 15 closing date, Glazner advised Anderson that he would not close on the contract. Parker sued Glazner and the other owners of the house for breach of contract, and Glazner contended that no contract was formed because the terms of his counteroffer had been changed after he made the counteroffer. Under the facts stated, could a contract have been formed between Glazner and Parker?

7. Lords and Waters were both licensed real estate salespersons or brokers and members of the Mesa-Chandler-Tempe Board of Realtors. In 1985, Lords solicited from Waters offers to purchase a certain parcel of real estate. Although Lords did not have a written agreement with the owners of the property "listing" the property for sale with Lords, he did have a verbal listing agreement. Waters later obtained a written offer from Bush to purchase the property. The offer contained Bush's name, address, and phone number, and provided for payment of a real estate commission in the amount of 6 percent, half of which was to be paid to Lords, and half to Waters. Waters's share of the commission would have been $66,000. Waters gave the written offer to Lords, who submitted it to the owners. Instead of accepting this offer, however, the owners contacted Bush directly and negotiated a sale of the property to Bush on terms virtually identical to those contained in the original offer, except that the commission provision was deleted. No real estate commission was ever paid in connection with the sale of the property to Bush. Waters sued Lords and others to recover a commission on the sale. Waters's primary argument is that the parties' mutual membership in the Mesa-Chandler-Tempe Board of Realtors gave rise to a contract. The documents of the Board of Realtors that

Waters introduced to show the existence of a contract included the Code of Ethics of the organization. The preamble to the Code of Ethics provides, in part:

> Under all is the land. Upon its wise utilization and widely allocated ownership depend the survival and growth of free institutions and of our civilization. . . . The REALTOR, therefore, is zealous to maintain and improve the standards of his calling and shares with his fellow REALTORS a common responsibility for its integrity and honor. The term REALTOR has come to connote competency, fairness, and high integrity resulting from adherence to a lofty ideal of moral conduct in business relations

Did language like this create a contract between Waters and Lord to require the payment of a commission to Waters?

8. Mariah Carey is a famous entertainer. Vian, who was Carey's stepfather before she achieved stardom, was in the business of designing, producing, and marketing gift and novelty items. Vian claimed that Carey agreed orally to give him a license to produce "Mariah dolls," which would be statuettes of the singer that would play her most popular songs. Vian asserted that this right was given in exchange for his financial and emotional support of Carey, including picking her up from late-night recording sessions, providing her with the use of a car, paying for dental care, allowing her to use his boat for business meetings and rehearsals, and giving her various items to help furnish her apartment. Vian based his claim of an oral contract on three conversations, twice in the family car and once on Vian's boat. Vian said to Carey, "Don't forget about the Mariah dolls," and "I get the Mariah dolls." According to Vian, on one occasion Carey responded, "Okay" and on other occasions, she merely smiled and nodded. Although Carey admits that Vian mentioned the dolls two or three times, she testified that she thought it was a joke. Claiming that Carey breached the contract to license dolls in her likeness, Vian brought this action for breach of contract. Was a contract formed?

9. In June 1973, Berryman signed an agreement giving Kmoch, a real estate broker, a 120-day option to purchase 960 acres of Berryman's land in exchange for "$10.00 and other valuable consideration," which was never paid. Kmoch hired two agricultural consultants to produce a report that he intended to use in order to interest other investors in joining him to exercise the option. In late July 1973, Berryman telephoned Kmoch and asked to be released from the option agreement. Nothing definite was agreed to, and Berryman later sold the land to another person. In August, Kmoch decided to exercise the option and contacted the local Federal Land Bank representative to make arrangements to buy the land. After being told by the representative that Berryman had sold the property, Kmoch sent Berryman a letter attempting to exercise the option. Kmoch argued that the option was still in effect and that, in any event, Berryman was estopped from revoking it. Was Kmoch right?

10. Stout went to work for Fisher Industries as president of the company in 1995. He insisted on a written employment contract because he was concerned about the possibility of a change in the control or ownership of the company. The parties agreed that Stout would be paid a base salary of $160,000 per year and that there would be an incentive program. They signed a document that stated in part:

> The following is [sic] eight general terms that were agreed to in the employment of Don Stout by Fisher Industries:
>
> * * *
>
> 3. An incentive bonus program will be entered into which be [sic] satisfactory to both parties.
>
> ***
>
> 4. A salary deferral program will be investigated.
>
> ***
>
> 8. A severance pay package will be included in the agreement.

Stout unsuccessfully continued to attempt to obtain a final written employment contract with Fisher. In 1996, there was a change in ownership of Fisher, and Fisher terminated Stout's employment. Stout sued Fisher for breach of contract, claiming that Fisher breached its contract by, among other things, failing to pay severance pay and incentives. Assuming the written document quoted above is the only proof of a contract, will Fisher win this suit?

11. DVD *Video Case.* Justin and Judy received a flyer in the mail from a supermarket advertising New York strip steak for $.99 per pound. When they went to the supermarket to buy the steak, however, an employee of the store told them that the ad was an error; the price was intended to be $7.99 per pound, not $.99. The employee pointed to a memo posted in the store that

announced that the ad was an error. Was the ad an offer? If it had been an offer, would the memo posted in the store be a valid revocation?

12. *Video Case.* Judy and Justin received a flyer that stated, "Dear Preferred Customer: Special closeout of Ubachi VCRs. Only 3 available at this unbelievable price, first come, first served, no rain checks." Was this an offer?

13. *Video Case.* Judy and Justin saw a newspaper ad for a brand new Mark Twelve Luxury Automobile for $9,999. Although Justin thought the ad might be a typographical mistake, there was no fine print in the ad and the two decided to go to the dealership and see if it would "make good on the offer." Once there, they learned that the price of the car was $29,999, not $9,999. The salesman stated that the advertised price was an obvious typo. Is the dealership obligated to sell the car to Judy and Justin for $9,999?

14. *Video Case.* Jeff visited a car dealership and test-drove a used car. After discussing the price with the salesman, Jake, and learning that he could purchase the car for $500 less than the sticker price, Jeff asked Jake to hold the car for him until 8:00 that evening so that he could bring his wife back to see the car. Jake agreed, writing out a note promising not to sell the car before 8:00 P.M. The note was written on dealership stationery, but Jake did not sign his name. The dealership broke its promise and sold the car to Jones before 8:00 P.M. Was it free to revoke its offer to Jeff? Jones, the new purchaser of the car (and a nonmerchant), later offered in a signed writing to sell the car to Jill and to hold the car for her until she returned with her husband. Could Jones revoke this offer?

15. *Video Case.* Mike, a roofing contractor, had submitted a bid to resurface a roof on the Bobco factory in Industrial Park. He had gotten encouraging signals about getting the job and was just about to get a signed contract to do the work when the Bobco factory was burned to the ground. What is the status of Mike's offer to resurface the roof?

16. *Video Case.* Salesperson takes an order having Customer, who is a merchant, sign the order form. The order form states that the offer will remain open for a length of time. Can Customer revoke the offer?

Chapter Eleven

The Agreement: Acceptance

Chapter Outline

I. What Is an Acceptance?
- *A. Intention to Accept*
- *B. Intent and Acceptance on the Offeror's Terms*
  - *1. Common Law: Traditional "Mirror Image" Rule*
  - *2. UCC Standard for Acceptance on the Offeror's Terms: The "Battle of the Forms"*
- *C. Communication of Acceptance*
  - *1. Manner of Communication*

II. When Is Acceptance Communicated?
- *A. Acceptances by Instantaneous Forms of Communication*
- *B. Acceptances by Noninstantaneous Forms of Communication*

- *C. Stipulated Means of Communication*

III. Special Acceptance Problem Areas
- *A. Acceptance in Unilateral Contracts*
- *B. Acceptance in Bilateral Contracts*
- *C. Silence as Acceptance*
- *D. Acceptance When a Writing is Anticipated*
- *E. Acceptance of Ambiguous Offers*
  - *1. Acceptance by Shipment*
- *F. Who Can Accept an Offer?*

The preceding chapter discussed the circumstances under which a proposal will constitute the first stage of an agreement: the offer. This chapter focuses on the final stage of forming an agreement: the acceptance. The acceptance is vitally important because it is with the acceptance that the contract is formed. This chapter discusses the requirements for making a valid acceptance as well as the rules concerning the time at which a contract comes into being.

What Is an Acceptance?

An **acceptance** is "a manifestation of assent to the terms [of the offer] made by the offeree in the manner invited or required by the offer."[1] In determining if an offeree accepted an offer and created a contract, a court will look for evidence of three factors: (1) the offeree intended to enter the contract, (2) the offeree accepted on the terms proposed by the offeror, and (3) the offeree communicated his acceptance to the offeror.

Intention to Accept

In determining whether an offeree accepted an offer, the court is looking for the same *present intent to contract* on the part of the offeree that it found on the part of the offeror. And, as is true of intent to make an offer,

[1] *Restatement (Second) of Contracts* § 50(1) (1981).

intent to accept is judged by an objective standard. The difference is that the offeree must objectively indicate a present intent to contract on the terms of the offer for a contract to result. As the master of the offer, the offeror may specify in detail what behavior is required of the offeree to bind him to a contract. If the offeror does so, the offeree must ordinarily comply with all the terms of the offer before a contract results.

Intent and Acceptance on the Offeror's Terms

Common Law: Traditional "Mirror Image" Rule The traditional contract law rule is that an acceptance must be the *mirror image* of the offer. Attempts by offerees to change the terms of the offer or to add new terms to it are treated as counteroffers because they impliedly indicate an intent by the offeree to reject the offer instead of being bound by its terms. However, recent years have witnessed a judicial tendency to apply the mirror image rule in a more liberal fashion by holding that only *material* (important) variances between an offer and a purported acceptance result in an implied rejection of the offer.

Even under the mirror image rule, no rejection is implied if an offeree merely asks about the terms of the offer without indicating its rejection (an *inquiry regarding terms*), or accepts the offer's terms while complaining about them (a *grumbling acceptance*). Distinguishing among a counteroffer, an inquiry regarding terms, and a grumbling acceptance is often a difficult task. The fundamental issue, however, remains the same: Did the offeree objectively indicate a present intent to be bound by the terms of the offer? You will see an example of the mirror image rule in the following *Panagotacos* case.

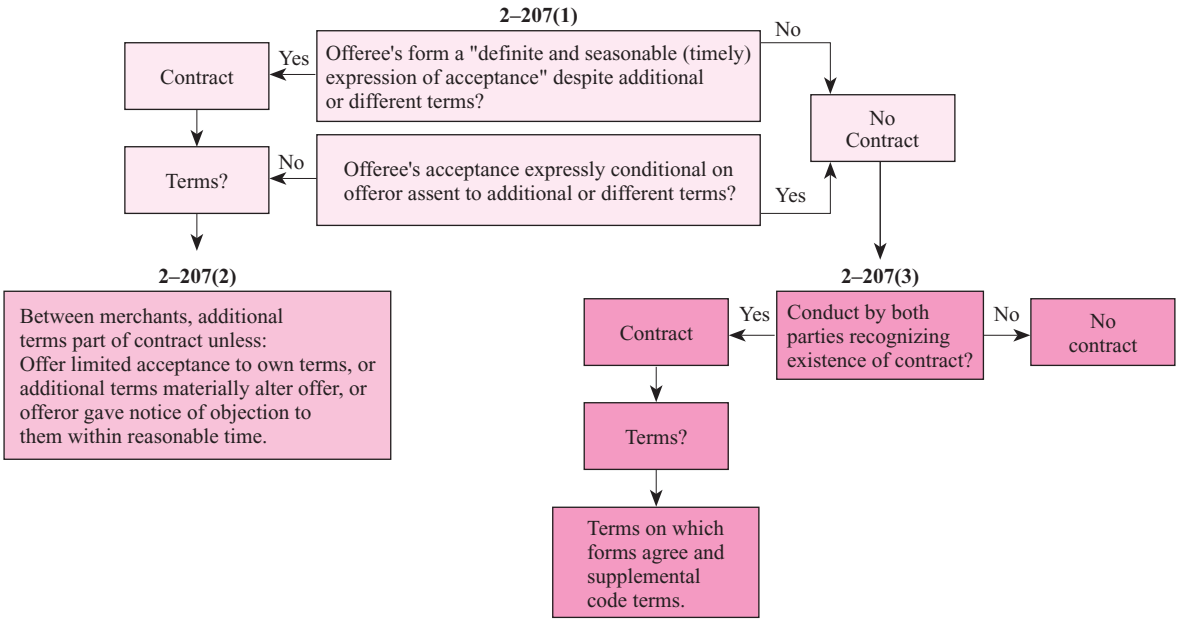
Panagotacos v. Bank of America *60 Cal. App. 4th 851 (Ct. App. Cal. 1998)*

In August 1993, James and Diane Panagotacos found a house in Galaxidi, Greece, that they wanted to buy. On August 26, 1993, the Geselschaps, the owners of the house, wrote to the Panagotacoses and offered to sell it to them for $160,000. This proposal was subject to several conditions: first, that the money for the property be paid in Germany, and second, that delivery of the money occur no later than April 15, 1994. On January 18, 1994, the Panagotacoses wrote to the Geselschaps and enclosed a signed copy of the Geselschaps' offer letter to indicate their agreement to purchase the property. Their letter, however, included the statement that "both parties will need an attorney in Greece where papers need to be signed and the money and title exchanged." The Geselschaps wrote back on January 27, 1994, stating that the condition proposed in their offer that payment of the money occur in Germany was essential and that the Panagotacoses' remarks about payment in Greece indicated that they had failed to agree. Over the next several months, the parties continued to correspond about the property.

In the meantime, the Panagotacoses set about trying to get a loan to pay for the Geselschaps' house. They intended to use some real estate that they owned in California as security for such a loan. In March of 1994, James Panagotacos applied for a loan from First Interstate Bank. He was told that it would take three or four weeks for the loan to be funded. The process of getting the loan was delayed, however, when it was discovered that Bank of America had already recorded an interest in the Panagotacoses' California property, and Interstate Bank insisted that this be cleared up before it would fund the loan. (The Panagotacoses had used the California property as security for a loan from Bank of America in 1974, and had paid it off by 1982, but Bank of America had not filed the proper documentation to clear up the title to the property.) Bank of America finally provided the correct documentation on April 12, 1994, and Interstate Bank made loan documents available to the Panagotacoses on that same date. On April 13, 1994, the Panagotacoses wrote the Geselschaps indicating a willingness to comply with the condition that payment for the property be made in Germany. They stated that they were prepared to send the money but needed an account number and, realizing that they would be unable to complete the deal prior to the April 15, 1994, deadline, they requested an extension of the agreement. They further suggested that payment of the money occur in Amsterdam or Germany in June. The Geselschaps refused to extend the agreement.

The Geselschaps sold the Greek property to another buyer on April 15, 1994. The Panagotacoses sued Bank of America, alleging that the Bank's failure to clear up the title problems in a timely manner had caused them to be unable to complete their loan transaction in time to purchase the Greek property. Bank of America moved for summary judgment, arguing that the Panagotacoses suffered no damages as a result of the delay because the Panagotacoses had no binding contract to purchase the Greek property. The trial court granted the motion, finding that there was no contract between the parties. The Panagotacoses appealed.

Hanlon, P. J. The Panagotacoses contend that the contract to purchase the Greek property was enforceable because the essential terms of the contract were reasonably certain. While it is true that the essential terms of the contract were set forth in the Geselschaps' August 26, 1993, offer, that does not resolve the question presented in this case because the Panagotacoses never accepted the August 26, 1993, offer. Although they sent the Geselschaps a signed copy of the offer, they added an additional term in the accompanying letter proposing that payment for the property occur in Greece. That proposal constituted a counteroffer."[T]erms proposed in an offer must be met exactly, precisely and unequivocally for its acceptance to result in the formation of a binding contract and a qualified acceptance amounts to a new proposal or counteroffer putting an end to the original offer. . . . " [*Apablasa v. Merritt & Co.* (1959) 176 Cal. App. 2d 719]. Here, the Panagotacoses' counteroffer was not accepted by the Geselschaps who viewed their condition that the money be paid outside of Greece as an essential one. Although the Geselschaps continued to entertain discussion over the property with the Panagotacoses, no binding contract was formed. Indeed, on January 27, 1994, the Geselschaps informed the Panagotacoses that given their failure to agree on terms, they intended to offer the property to others. Finally, even the Panagotacoses' letter of April 13, 1994, to the Geselschaps in which they agreed to send the money to Germany did not constitute an acceptance of the August 26, 1993, offer because they again proposed additional terms, including an extension of the April 15, 1994, deadline and payment in June. Given these facts, the trial court properly found that there was not a binding contract between the parties. In their reply brief, the Panagotacoses argue that their proposal regarding the payment terms was simply a "grumbling acceptance" which was sufficient to form a contract. While a "grumbling acceptance" which is unqualified, though made with some protest, is sufficient to show an agreement, the Panagotacoses' letter was a qualified acceptance which failed to give assent to a term the Geselschaps viewed as essential to the contract. The Panagotacoses' April 13, 1994, letter also makes clear that Bank of America's delayed reconveyance did not result in the Panagotacoses' inability to purchase the Greek property. The Panagotacoses delayed until April 13 to agree to the Geselschaps' condition requiring payment in Germany. At that point, they had no agreement with the Geselschaps as to how the transfer of money was to occur. And, the Geselschaps did not communicate a method of payment to the Panagotacoses prior to the April 15 deadline. The Panagotacoses lost the opportunity to purchase the property because they failed to timely accept the Geselschaps' offer. Bank of America was not responsible for that failure.



Judgment affirmed in favor of Bank of America.

UCC Standard for Acceptance on the Offeror's Terms: The "Battle of the Forms"

Strictly applying the mirror image rule to modern commercial transactions, most of which are carried out by using preprinted form contracts, would often result in frustrating the parties' true intent. Offerors use standard order forms prepared by their lawyers, and offerees use standard acceptance or acknowledgment forms drafted by their counsel. The odds that these forms will agree in every detail are slight, as are the odds that the parties will read each other's forms in their entirety. Instead, the parties to such transactions are likely to read only crucial provisions concerning the goods ordered, the price, and the delivery date called for, and if these terms are agreeable, believe that they have a contract.

If a dispute arose before the parties started to perform, a court strictly applying the mirror image rule would hold that no contract resulted because the offer

Figure 1 *The "Battle of the Forms"—A Section 2–207 Flowchart*

and acceptance forms did not match exactly. If a dispute arose after performance had commenced, the court would probably hold that the offeror had impliedly accepted the offeree's counteroffer and was bound by its terms.

Because neither of these results is very satisfactory, the Code, in a very controversial provision often called the "Battle of the Forms" section [2–207] (see Figure 1), has changed the mirror image rule for contracts involving the sale of goods. As you will see in the following *Union Carbide* case, UCC section 2–207 allows the formation of a contract even when there is some variance between the terms of the offer and the terms of the acceptance. It also makes it possible, under *some* circumstances, for a term contained in the acceptance form to become part of the contract. The Code provides that a *definite and timely expression of acceptance* creates a contract, even if it includes terms that are *different from those stated in the offer* or even if it states *additional terms* that the offer did not address [2–207(1)]. An attempted acceptance that *was expressly conditioned* on the offeror's agreement to the offeree's terms would *not* be a valid acceptance, however [2–207(1)].

What are the terms of a contract created by the exchange of standardized forms? The *additional* terms contained in the offeree's form are treated as "proposals for addition to the contract." If the parties are both *merchants,* the additional terms become part of the contract *unless:*

1. The offer *expressly limited acceptance* to its own terms.
2. The new terms would *materially alter* the offer, or
3. The offeror gives notice of objection to the new terms within a reasonable time after receiving the acceptance [2–207(2)].

The *Union Carbide* case shows how courts analyze whether a term contained in the acceptance has become part of the contract.

When the offeree has made his acceptance expressly conditional on the offeror's agreement to the new terms or when the offeree's response to the offer is clearly not "an expression of acceptance" (e.g., an express rejection), no contract is created under section 2–207(1). A contract will only result in such cases if the parties engage in conduct that "recognizes the ex-

istence of a contract," such as an exchange of performance. Unlike her counterpart under traditional contract principles, however, the offeror who accepts performance in the face of an express rejection or expressly conditional acceptance is not thereby bound to all of the terms contained in the offeree's response. Instead, the Code provides that the terms of a contract created by such performance are those on which the parties' writings *agree,* supplemented by appropriate gap-filling provisions from the Code [2–207(3)].

Union Carbide Corp. v. Oscar Mayer Foods Corp. *947 F.2d 1333 (7th Cir. 1991)*

Union Carbide sold Oscar Mayer plastic casings that Oscar Mayer uses in manufacturing sausages. The prices in Union Carbide's invoices to Oscar Mayer included two 1 percent sales taxes that are applicable to sales that originate in Chicago. In 1980, another one of Oscar Mayer's suppliers of plastic sausage casings began charging a price that was 1 percent lower than Union Carbide's. This supplier had begun accepting orders at an office outside of Chicago and had decided that therefore it did not have to pay one of the sales taxes. When Oscar Mayer informed Union Carbide of this, Union Carbide instructed its customers to send their orders to an address outside Chicago, too, and it stopped paying both sales taxes and therefore deleted them from the invoices it sent Oscar Mayer. Thus, Union Carbide had met and indeed beat the other supplier's discount by lowering its price 2 percent compared to the other supplier's reduction of 1 percent.

In 1988, the Illinois tax authorities decided that the two sales taxes were due notwithstanding the change of address and assessed Union Carbide $88,000 in back taxes on sales to Oscar Mayer and $55,000 in interest on those sales. Union Carbide paid this and then turned around and brought this suit to recover what it had paid from Oscar Mayer, claiming that Oscar Mayer had agreed to indemnify it for all sales tax liability. It relied on the following provision printed on the back of its invoices to Oscar Mayer and also in a "price book" that it sent its customers:

> In addition to the purchase price, Buyer shall pay Seller the amount of all governmental taxes . . . that Seller may be required to pay with respect to the production, sale or transportation of any materials delivered hereunder.

The trial court granted a summary judgment in favor of Oscar Mayer, and Union Carbide appealed.

Posner, Circuit Judge The common law rule was that if the purported acceptance of an offer was not identical to the offer, the acceptance was a fresh offer and had to be expressly accepted by the original offeror for the parties to have a contract. This "mirror image" rule was widely believed to take insufficient account of the incorrigible fallibility of human beings engaged in commercial as in other dealings, and is changed by the Uniform Commercial Code, which allows an acceptance to make a contract even if it adds terms to the offer. Moreover, if it is a contract between "merchants" (in the sense of "pros," UCC section 2–104[1]—as Union Carbide and Oscar Mayer are)—the additional terms become part of the contract. But not any additional terms; only those to which the offeror would be unlikely to object, because they fill out the contract in an expectable fashion, and hence do not alter it materially. If a term added by the offeree in his acceptance works a material alteration of the offer, the acceptance is still effective, but the term is not: that is, the contract is enforceable minus the term the offeree tried to add. An alteration is material if consent to it cannot be presumed. What is expectable, hence unsurprising, is okay; what is unexpected, hence surprising, is not.

This is not the end of the analysis, however. Even if the alteration is material, the other party can, of course, decide to accept it. Put differently, consent can be inferred from other things besides the unsurprising character of the new term: even from silence, in the face of a course of dealings that makes it reasonable for the other party to infer consent from a failure to object. An offeror can protect himself against additional terms, material or not, by expressly limiting acceptance to the terms of the offer.

The record does not reveal the origins of Union Carbide's dealings with Oscar Mayer. All we know is that in 1980 the parties' method of dealing was as follows. Oscar Mayer would from time to time send

large purchase orders to Union Carbide which would not be filled immediately but instead would be filed for future reference. When Oscar Mayer actually needed casings it would phone Union Carbide and tell it how many it needed and Union Carbide would ship the casings the next day. After the casings arrived Oscar Mayer would send Union Carbide a purchase order for the shipment on the same form used for the standing orders. These "release orders," as the specific purchase orders were called, were like checks written against a bank account—only this was a sausage-casings account. At about the same time that Oscar Mayer sent Union Carbide a release order, Union Carbide would send Oscar Mayer an invoice for the shipment—and the so-called indemnity clause was on the back of the invoice and also in a price book that Union Carbide sent its customers from time to time. So every actual purchase of sausage casings involved an exchange of four documents: the standing order, the price book, the release order, the invoice. Such a pattern of sequential exchange of documents governing a single sale is a prototypical situation for the application of UCC section 2–207. Union Carbide does not question that for purposes of our decision the purchase orders by Oscar Mayer are the offers and Union Carbide's invoices are the acceptances, and that the price book, if it be assumed to be an offer, was never accepted. So the indemnity clause was binding on Oscar Mayer only if the clause did not work a material alteration of the terms in the purchase orders.

Those orders don't exactly *discuss* taxes, but they contain a space for sales tax to be added into the purchase price, and Union Carbide points out that, consistent with this indication of willingness to pay sales tax, Oscar Mayer paid uncomplainingly all sales taxes that appeared on Union Carbide's invoices. If the sales tax rates had risen, Oscar Mayer would have had to pay the higher rates. What difference does it make, asks Union Carbide, if the increase took the form of an assessment of back taxes? It makes a big difference, amounting to a material alteration to which Oscar Mayer did not consent either explicitly or implicitly. If a tax increase showed up on an invoice, Oscar Mayer would have to pay but might then decide to cease buying casings from Union Carbide, as it had every right to do; it did not have a requirements contract with Union Carbide but could switch at will to other suppliers some of whom might not be subject to the tax. To assume responsibility for taxes shown on an individual invoice is quite different from assuming an open-ended, indeed incalculable, liability for back taxes. The tax clause altered the contract materially; and since the clause was at best ambiguous, this is not a case where consent can realistically be inferred from Oscar Mayer's silence in the face of a succession of acceptances (Union Carbide's invoices) containing the new term. There was no breach of contract.

Judgment affirmed in favor of Oscar Mayer.

Communication of Acceptance

To accept an offer for a bilateral contract, the offeree must make the promise requested by the offer. In Chapter 10, you learned that an offeror must communicate the terms of his proposal to the offeree before an offer results. This is so because communication is a necessary component of the present intent to contract required for the creation of an offer. For similar reasons, it is generally held that an offeree must communicate his intent to be bound by the offer before a contract can be created. To accept an offer for a unilateral contract, however, the offeree must perform the requested act. The traditional contract law rule on this point assumes that the offeror will learn of the offeree's performance and holds that no further notice from the offeree is necessary to create a contract unless the offeror specifically requests notice.

Manner of Communication The offeror, as the master of the offer, has the power to specify the precise time, place, and manner in which acceptance must be communicated. This is called a *stipulation.* If the offeror stipulates a particular manner of acceptance, the offeree must respond in this way to form a valid acceptance. Suppose Prompt Printing makes an offer to Jackson and the offer states that Jackson must respond by certified mail. If Jackson deviates from the offer's

instructions in any significant way, no contract results unless Prompt Printing indicates a willingness to be bound by the deviating acceptance. If, however, the offer merely *suggests* a method or place of communication or is *silent* on such matters, the offeree may accept within a *reasonable time* by *any reasonable means* of communication. So, if Prompt Printing's offer did not *require* any particular manner of accepting the offer, Jackson could accept the offer by any reasonable manner of communication within a reasonable time.

When Is Acceptance Communicated?

Acceptances by Instantaneous Forms of Communication

When the parties are dealing face-to-face, by telephone, or by other means of communication that are virtually instantaneous, there are few problems determining when the acceptance was communicated. As soon as the offeree says, "I accept," or words to that effect, a contract is created, assuming that the offer is still in existence.

Acceptances by Noninstantaneous Forms of Communication

Suppose the circumstances under which the offer was made reasonably led the offeree to believe that acceptance by some noninstantaneous form of communication is acceptable, and the offeree responds by using mail, telegraph, or some other means of communication that creates a time lag between the dispatching of the acceptance and its actual receipt by the offeror. The practical problems involving the timing of acceptance multiply in such transactions. The offeror may be attempting to revoke the offer while the offeree is attempting to accept it. An acceptance may get lost and never be received by the offeror. The time limit for accepting the offer may be rapidly approaching. Was the offer accepted before a revocation was received or before the offer expired? Does a lost acceptance create a contract when it is dispatched, or is it totally ineffective?

Under the so-called *"mailbox rule,"* properly addressed and dispatched acceptances can become effective when they are *dispatched,* even if they are lost and never received by the offeror. The mailbox rule, which is discussed further in the following *Cantu v. Central Education Agency* case, protects the offeree's reasonable belief that a binding contract was created when the acceptance was dispatched. By the same token, it exposes the offeror to the risk of being bound by an acceptance that she has never received. The offeror, however, has the ability to minimize this risk by stipulating in her offer that she must actually receive the acceptance for it to be effective. Offerors who do this maximize the time that they have to revoke their offers and ensure that they will never be bound by an acceptance that they have not received.

Operation of the Mailbox Rule: Common Law of Contracts As traditionally applied by the common law of contracts, the mailbox rule would make acceptances effective upon dispatch when the offeree used a manner of communication that was expressly or impliedly **authorized** (invited) by the offeror. Any manner of communication *suggested* by the offeror (e.g., "You may respond by mail") would be expressly authorized, resulting in an acceptance sent by the suggested means being effective on dispatch. Unless circumstances indicated to the contrary, a manner of communication *used by the offeror in making the offer* would be impliedly authorized (e.g., an offer sent by mail would impliedly authorize an acceptance by mail), as would a manner of communication common in the parties' trade or business (e.g., a trade usage in the parties' business that offers are made by mail and accepted by telegram would authorize an acceptance by telegram). Conversely, an improperly dispatched acceptance or one that was sent by some means of communication that was *nonauthorized* would be effective when *received,* assuming that the offer was still open at that time. This placed on the offeree the risk of the offer being revoked or the acceptance being lost.

The mailbox rule is often applied more liberally by courts today. A modern version of the mailbox rule that is sanctioned by the *Restatement (Second)* holds that an offer that does not indicate otherwise is considered to invite acceptance by *any reasonable means* of communication, and a properly dispatched acceptance sent by a reasonable means of communication within a reasonable time is effective on dispatch. The *Cantu* case illustrates the more liberal version of the mailbox rule.

Cantu v. Central Education Agency *884 S.W.2d 565 (Ct. App. Tex. 1994)*

Cantu was hired as a special education teacher by the San Benito Consolidated Independent School District under a one-year contract for the 1990–91 school year. On Saturday, August 18, 1990, shortly before the start of the school year, Cantu hand-delivered to her supervisor a letter of resignation, effective August 17, 1990. In this letter, Cantu requested that her final paycheck be forwarded to an address in McAllen, Texas, some fifty miles from the San Benito office where she tendered the resignation. The San Benito superintendent of schools, the only official authorized to accept resignations on behalf of the school district, received Cantu's resignation on Monday, August 20. The superintendent wrote a letter accepting Cantu's resignation the same day and deposited the letter, properly stamped and addressed, in the mail at approximately 5:15 P.M. that afternoon. At about 8:00 A.M. the next morning, August 21, Cantu hand-delivered to the superintendent's office a letter withdrawing her resignation. This letter contained a San Benito return address. In response, the superintendent hand-delivered that same day a copy of his letter mailed the previous day to inform Cantu that her resignation had been accepted and could not be withdrawn. The dispute was taken to the State Commissioner of Education, who concluded that the school district's refusal to honor Cantu's contract was lawful, because the school district's acceptance of Cantu's resignation was effective when mailed, which resulted in the formation of an agreement to rescind Cantu's employment contract. Cantu sued for judicial review of the Commissioner's final order, and the trial court affirmed the Commissioner's decision. Cantu appealed.

Smith, Justice The sole legal question presented for our review is the proper scope of the "mailbox rule" under Texas law and whether the rule was applied correctly. None of the parties to this appeal disputes that an agreement to rescind Cantu's employment contract requires the elements of an offer, acceptance, and consideration. Rather, Cantu contends in a single point of error that the trial court erred in ruling that the agreement to rescind her contract of employment became effective when the superintendent deposited his letter accepting Cantu's resignation in the mail. Cantu argues that, under Texas law, an acceptance binds the parties in contract on mailing only if the offeror has sent the offer by mail or has expressly authorized acceptance by mail. There was no express authorization for the school district to accept Cantu's offer by mail. The question presented is whether authorization to accept by mail may be implied only when the offer is delivered by mail or also when the existing circumstances make it reasonable for the offeree to so accept.

The aphorism "the offeror is the master of his offer" reflects the power of the offeror to impose conditions on acceptance of an offer, specify the manner of acceptance, or withdraw the offer before the offeree has effectively exercised the power of acceptance. However, more often than not, an offeror does not expressly authorize a particular mode, medium, or manner of acceptance. Consequently, particularly with parties communicating at a distance, a rule of law is needed to establish the point of contract formation and allocate the risk of loss and inconvenience that inevitably falls to one of the parties between the time that the offeree exercises, and the offeror receives, the acceptance. See 1 Arthur L. Corbin, Contracts section 78 (1963). As Professor Corbin notes, courts could adopt a rule that no acceptance is effective until received, absent express authorization by the offeror; however, the mailbox rule, which makes acceptance effective on dispatch, closes the deal and enables performance more promptly, and places the risk of inconvenience on the party who originally has power to control the manner of acceptance. Moreover, "the mailing of a letter has long been a customary and expected way of accepting [an] offer." *Id.* Therefore, "even though the offer was not made by mail and there was no [express] authorization, the existing circumstances may be such as to make it reasonable for the offeree to accept by mail and to give the offeror reason to know that the acceptance will be so made." *Id.* In short, acceptance by mail is impliedly authorized if reasonable under the circumstances.

The *Restatement* approves and adopts this approach: an acceptance by any medium reasonable

under the circumstances is effective on dispatch, absent a contrary indication in the offer. *Restatement (Second) of Contracts* sections 30(2), 63(a), 65, 66 (1979). In addition, the *Restatement* specifically recognizes that acceptance by mail is ordinarily reasonable if the parties are negotiating at a distance or even if a written offer is delivered in person to an offeree in the same city.

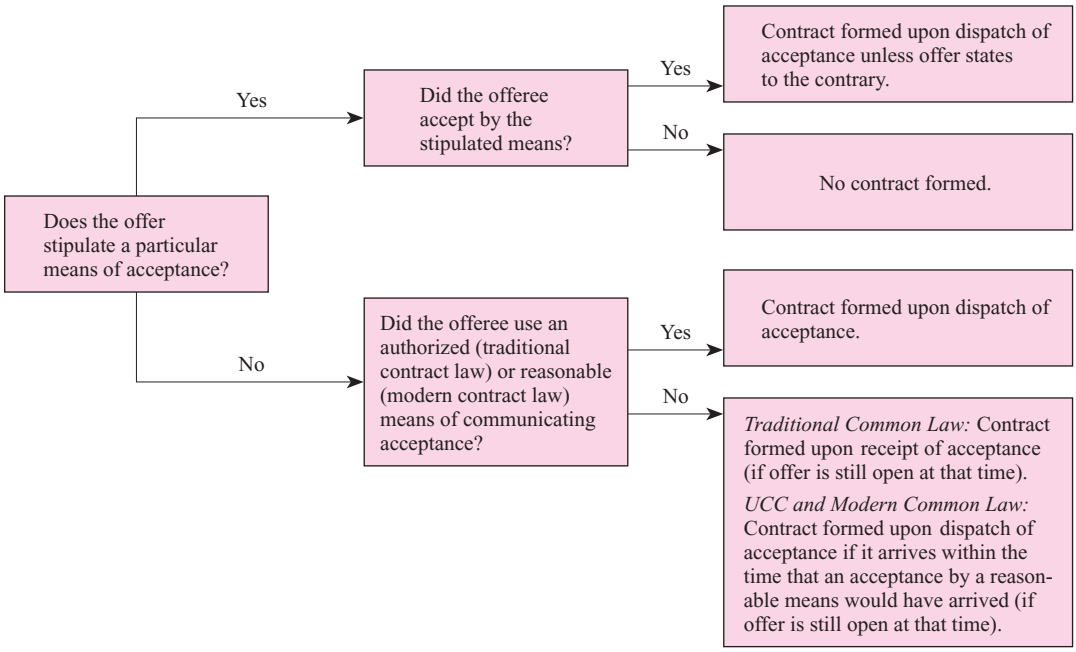
Looking at the circumstances presented for our review, we agree with the Commissioner and the trial court that it was reasonable for the superintendent to accept Cantu's offer of resignation by mail. Cantu tendered her resignation shortly before the start of the school year—at a time when both parties could not fail to appreciate the need for immediate action by the district to locate a replacement. In fact, she delivered the letter on a Saturday, when the Superintendent could neither receive nor respond to her offer, further delaying matters by two days. Finally, Cantu's request that her final paycheck be forwarded to an address some fifty miles away indicated that she could no longer be reached in San Benito and that she did not intend to return to the school premises or school district offices. The Commissioner of Education and district court properly concluded that it was reasonable for the school district to accept Cantu's offer by mail. We affirm the trial court judgment that the Commission correctly determined that the school district accepted Cantu's resignation, rescinding her employment contract, before Cantu attempted to withdraw her offer of resignation.

Affirmed in favor of the school district.

Operation of the Mailbox Rule: UCC The UCC, like the *Restatement (Second),* provides that an offer that does not specify a particular means of acceptance is considered to invite acceptance by *any reasonable means* of communication. It also provides that a properly dispatched acceptance sent by a reasonable means of communication within a reasonable time is effective on dispatch. What is reasonable depends on the circumstances in which the offer was made. These include the speed and reliability of the means used by the offeree, the nature of the transaction (e.g., does the agreement involve goods subject to rapid price fluctuations?), the existence of any trade usage governing the transaction, and the existence of prior dealings between the parties (e.g., has the offeree previously used the mail to accept telegraphed offers from the offeror?). So, under proper circumstances, a mailed response to a telegraphed offer or a telegraphed response to a mailed offer might be considered reasonable and therefore effective on dispatch.

What if an offeree attempts to accept the offer by some means that is *unreasonable* under the circumstances or if the acceptance is not properly addressed or dispatched (e.g., misaddressed or accompanied by insufficient postage)? The UCC rejects the traditional rule that such acceptances cannot be effective until received. It provides that an acceptance sent by an unreasonable means would be effective on dispatch *if* it is received within the time that an acceptance by a reasonable means would normally have arrived.

Stipulated Means of Communication



As we discussed earlier, an offer may stipulate the means of communication that the offeree must use to accept by saying, in effect: "You must accept by mail." An acceptance by the stipulated means of communication is effective on dispatch, just like an acceptance by any other reasonable or authorized means of communication (see Figure 2). The difference is that an acceptance by other than the stipulated means does not create a contract because it is an acceptance at variance with the terms of the offer.

Special Acceptance Problem Areas

Acceptance in Unilateral Contracts

A unilateral contract involves the exchange of a promise for an act. To accept an offer to enter such a contract, the offeree must perform the requested act. As you learned in the last chapter, however, courts applying modern contract rules may prevent an offeror from revoking such an offer once the offeree has begun performance. This is achieved by holding either that a bilateral contract is created by the beginning of

Figure 2 *Time of Acceptance*

performance or that the offeror's power to revoke is suspended for the period of time reasonably necessary for the offeree to complete performance.

Acceptance in Bilateral Contracts

A bilateral contract involves the exchange of a promise for a promise. As a general rule, to accept an offer to enter such a contract, an offeree must *make the promise requested by the offer.* This may be done in a variety of ways. For example, Wallace sends Stevens a detailed offer for the purchase of Stevens's business. Within the time period prescribed by the offer, Stevens sends Wallace a letter that says, "I accept your offer." Stevens has *expressly* accepted Wallace's offer, creating a contract on the terms of the offer. Acceptance, however, can be *implied* as well as expressed. Offerees who take action that objectively indicates agreement risk the formation of a contract. For example, offerees who act in a manner that is inconsistent with an offeror's ownership of offered property are commonly held to have accepted the offeror's terms. So, if Arnold, a farmer, leaves 10 bushels of corn with Porter, the owner of a grocery store, saying, "Look this corn over. If you want it, it's $5 a bushel," and Porter sells the corn, he has impliedly accepted Arnold's offer. But what if Porter just let the corn sit and, when Arnold returned a week later, Porter told Arnold that he did not want it? Could Porter's failure to act ever amount to an acceptance?

Silence as Acceptance

Since contract law generally requires some objective indication that an offeree intends to contract, the general rule is that an offeree's silence, without more, is *not* an acceptance. In addition, it is generally held that an offeror cannot impose on the offeree a duty to respond to the offer. So, even if Arnold made an offer to sell corn to Porter and said, "If I don't hear from you in three days, I'll assume you're buying the corn," Porter's silence would still not amount to acceptance.

On the other hand, the circumstances of a case sometimes impose a duty on the offeree to reject the offer affirmatively or be bound by its terms. These are cases in which the offeree's silence objectively indicates an intent to accept. Customary trade practice or prior dealings between the parties may indicate that

silence signals acceptance. So, if Arnold and Porter had dealt with each other on numerous occasions and Porter had always promptly returned items that he did not want, Porter's silent retention of the goods for a week would probably constitute an acceptance. Likewise, an offeree's silence can also operate as an acceptance if the offeree has indicated that it will. For example, Porter (the *offeree*) tells Arnold, "If you don't hear from me in three days, I accept."

Finally, it is generally held that offerees who accept an offeror's performance knowing what the offeror expects in return for his performance have impliedly accepted the offeror's terms. So, if Apex Paving Corporation offers to do the paving work on a new subdivision being developed by Majestic Homes Corporation, and Majestic fails to respond to Apex's offer but allows Apex to do the work, most courts would hold that Majestic is bound by the terms of Apex's offer.

Acceptance When a Writing Is Anticipated

Frequently, the parties to a contract intend to prepare a written draft of their agreement for both parties to sign. This is a good idea not only because the law requires written evidence of some contracts,[2] but also because it provides written evidence of the terms of the agreement if a dispute arises at a later date. If a dispute arises before such a writing has been prepared or signed, however, a question may arise concerning whether the signing of the agreement was a necessary condition to the creation of a contract. A party to the agreement who now wants out of the deal may argue that the parties did not intend to be bound until both parties signed the writing. As the following *Texaco* case indicates, a clear expression of such an intent by the parties during the negotiation process prevents the formation of a contract until both parties have signed. However, in the absence of such a clear expression of intent, the courts ask whether a reasonable person familiar with all the circumstances of the parties' negotiations would conclude that the parties intended to be bound only when a formal agreement was signed. If it appears that the parties had concluded their negotiations and reached agreement on all the essential aspects of the transaction, most courts would probably find a contract at the time agreement was reached, even though no formal agreement had been signed.

[2]Chapter 16 discusses this subject in detail.

Texaco, Inc. v. Pennzoil Co. *729 S.W.2d 768 (Tex. Ct. App. 1987)*

On December 28, 1983, in the wake of well-publicized dissension between the board of directors of Getty Oil Company and Gordon Getty, Pennzoil announced an unsolicited, public tender offer for 16 million shares of Getty Oil at $100 each. Gordon Getty was a director of Getty Oil and the owner, as trustee of the Sarah C. Getty Trust, of 40.2 percent of the 79.1 million outstanding shares of Getty Oil. Shortly thereafter, Pennzoil contacted both Gordon Getty and a representative of the J. Paul Getty Museum, which held 11.8 percent of the shares of Getty Oil, to discuss the tender offer and the possible purchase of Getty Oil.

The parties drafted and signed a Memorandum of Agreement providing that Pennzoil and the Trust (with Gordon Getty as trustee) were to become partners on a ⅗ths to ⅖ths basis, respectively, in owning and operating Getty Oil. The museum was to receive $110 per share for its 11.8 percent ownership, and all other outstanding public shares were to be cashed in by the company at $110 per share. The memorandum provided that it was subject to the approval of Getty Oil's board. On January 2, 1984, the board voted to reject the memorandum price as too low and made a counterproposal to Pennzoil of $110 per share plus a $10 debenture. On January 3, the board received a revised Pennzoil proposal of $110 per share plus a $3 "stub" that was to be paid after the sale of a Getty Oil subsidiary. After discussion, the board voted 15 to 1 to accept Pennzoil's proposal if the stub price was raised to $5. This counteroffer was accepted by Pennzoil later the same day. On January 4, Getty Oil and Pennzoil issued identical press releases announcing an agreement in principle on the terms of the Memorandum of Agreement. Pennzoil's lawyers began working on a formal transaction agreement describing the deal in more detail than the outline of terms contained in the Memorandum of Agreement and press release.

On January 5, the board of Texaco, which had been in contact with Getty Oil's investment banker, authorized its officers to make an offer for 100 percent of Getty Oil's stock. Texaco first contacted the Getty Museum, which, after discussion, agreed to sell its shares to Texaco. Later that evening, Gordon Getty accepted Texaco's offer of $125 per share. On January 6, the Getty Board voted to withdraw its previous counteroffer to Pennzoil and to accept Texaco's offer. Pennzoil later filed suit against Texaco for tortious interference with its contract with the Getty entities. At trial, Texaco argued, among other things, that no contract had existed between Pennzoil and the Getty entities. The jury disagreed, awarding Pennzoil $7.53 billion in actual damages and $3 billion in punitive damages. Texaco appealed.

Warren, Justice Texaco contends that there was insufficient evidence to support the jury's finding that at the end of the Getty Oil board meeting on January 3, the Getty entities intended to bind themselves to an agreement with Pennzoil. Pennzoil contends that the evidence showed that the parties intended to be bound to the terms in the Memorandum of Agreement plus a price term of $110 plus a $5 stub, even though the parties may have contemplated a later, more formal document to memorialize the agreement already reached. If parties do not intend to be bound to an agreement until it is reduced to writing and signed by both parties, then there is no contract until that event occurs. If there is no understanding that a signed writing is necessary before the parties will be bound, and the parties have agreed upon all substantial terms, then an informal agreement can be binding, even though the parties contemplated evidencing their agreement in a formal document later. It is the parties' expressed intent that controls which rule of contract formation applies. Only the outward expressions of intent are considered—secret or subjective intent is immaterial to the question of whether the parties were bound.

Several factors have been articulated to help determine whether the parties intended to be bound only by a formal, signed writing: (1) whether a party expressly reserved the right to be bound only when a written agreement is signed; (2) whether there was any partial performance by one party that the party disclaiming the contract accepted; (3) whether all essential terms of the alleged contract had been agreed upon; and (4) whether the complexity or magnitude of the transaction was such that a formal, executed writing would normally be expected.

Any intent of the parties not to be bound before signing a formal document is not so clearly expressed in the press release to establish, as a matter of law, that there was no contract at that time. The press release does refer to an agreement "in principle" and states that the "transaction" is subject to execution of a definitive merger agreement. But the release as a whole is worded in indicative terms, not in subjunctive or hypothetical ones. The press release describes what shareholders will receive, what Pennzoil will contribute, that Pennzoil will be granted an option, etc.

We find little relevant partial performance in this case that might show that the parties believed that they were bound by a contract. However, the absence of relevant part performance in this short period of time does not compel the conclusion that no contract existed.

There was sufficient evidence for the jury to conclude that the parties had reached agreement on all essential terms of the transaction with only the mechanics and details left to be supplied by the parties' attorneys. Although there may have been many specific items relating to the transaction agreement draft that had yet to be put in final form, there is sufficient evidence to support a conclusion by the jury that the parties did not consider any of Texaco's asserted "open items" significant obstacles precluding an intent to be bound.

Although the magnitude of the transaction here was such that normally a signed writing would be expected, there was sufficient evidence to support an inference by the jury that that expectation was satisfied here initially by the Memorandum of Agreement, signed by a majority of shareholders of Getty Oil and approved by the board with a higher price, and by the transaction agreement in progress that had been intended to memorialize the agreement previously reached.

Judgment for Pennzoil affirmed.

[*Note:* The court's decision was contingent on a reduction in the punitive damages awarded by the jury from $3 billion to $1 billion. Texaco ultimately sought reorganization under the protection of the Bankruptcy Court and the parties finally settled the case for $3 billion.]

Acceptance of Ambiguous Offers

Although offerors have the power to specify the manner in which their offers can be accepted by requiring that the offeree make a return promise (a bilateral contract) or perform a specific act (a unilateral contract), often an offer is unclear about which form of acceptance is necessary to create a contract. In such a case, the offer may be accepted in any manner that is *reasonable* in light of the circumstances surrounding the offer. Thus, either a promise to perform or performance, if reasonable, creates a contract.

Acceptance by Shipment The Code specifically elaborates on the rule stated in the preceding section by stating that an order requesting prompt or current shipment of goods may be accepted either by a *prompt promise to ship* or by a *prompt or current shipment* of the goods [2–206(1)(b)]. So, if Ampex Corporation orders 500 IBM personal computers from Marks Office Supply, to be shipped immediately, Marks could accept either by promptly promising to ship the goods or by promptly shipping them. If Marks accepts by shipping, any subsequent attempt by Ampex to revoke the order will be ineffective.

What if Marks did not have 500 IBMs in stock and Marks knew that Ampex desperately needed the goods? Marks might be tempted to ship another brand of computers (that is, *nonconforming goods*—goods different from what the buyer ordered), hoping that Ampex would be forced by its circumstances to accept them because by the time they arrived it would be too late to get the correct goods elsewhere. Marks would argue that by shipping the wrong goods it had made a counteroffer because it had not performed the act requested by Ampex's order. If Ampex accepts the goods, Marks could argue that Ampex has impliedly accepted the counteroffer. If Ampex rejects the goods, Marks would arguably have no liability since it did not accept the order.

The Code prevents such a result by providing that prompt shipment of either conforming goods (what the order asked for) or nonconforming goods (something else) operates as an acceptance of the order [2–206(1)(b)]. This protects buyers such as Ampex because sellers who ship the wrong goods have simultaneously accepted their offers and breached the contract by sending the wrong merchandise.[3]

But what if Marks is an honest seller merely trying to help out a customer that has placed a rush order? Must Marks expose itself to liability for breach of contract in the process? The Code prevents such a result by providing that no contract is created if the seller notifies the buyer within a reasonable time that the shipment of nonconforming goods is intended as an accommodation (an attempt to help the buyer) [2–206(1)(b)]. In this case, the shipment is merely a counteroffer that the buyer is free to accept or reject and the seller's notification gives the buyer the opportunity to seek the goods he needs elsewhere.

Who Can Accept an Offer?

As the masters of their offers, offerees have the right to determine who can bind them to a contract. So, the only person with the legal power to accept an offer and create a contract is the *original offeree.* An attempt to accept by anyone other than the offeree is treated as an offer, because the party attempting to accept is indicating a present intent to contract on the original offer's terms. For example, Price offers to sell his car to Waterhouse for $5,000. Anderson learns of the offer, calls Price, and attempts to accept. Anderson has made an offer that Price is free to accept or reject.

Ethical and Public Policy Concerns

1. It should be apparent to you from the discussion of section 2–207 of the Code, the "Battle of the Forms" section, that the application of that section can sometimes result in a party's being held to a contract term that she has not actually consented to. How can this be justified?

2. Compare the ethical standards underlying the traditional contract law approach to the seller who ships nonconforming goods with the ethical standards reflected by section 2–206(1)(b) of the Code.

3. Compare the public policy stances implicit in the different ways in which traditional and modern contract law treat offeree attempts to accept by an nonauthorized or unreasonable means of communication.

Problems and Problem Cases

1. Providence and Worcester (P & W) owned a waterfront property in East Providence, Rhode Island.

[3]Chapter 19 discusses the rights and responsibilities of the buyer and seller following the shipment of nonconforming goods.

Railroad tracks were situated on the property, but the property was not being used for railroad purposes at the time this case arose. A Rhode Island statute regulated rail properties, providing that all rail properties within the state offered for sale by any railway corporation be offered for sale to the state at the lowest price at which the railway corporation was willing to sell. The statute required railway corporations to notify the state in writing if they desired to sell any rail properties and give the state a period of not more than 30 days from receipt of the notification to accept the offer. In December of 1986, P & W gave written notice to the state that it proposed to sell the property for $100,000 with a closing to be held on January 17, 1986. P & W's letter stated that, "[I]f the State's rights are not exercised within such period, we shall deem ourselves free to sell the property to Promet Corp. in accordance with the terms of the enclosed Real Estate Agreement." On January 7, 1986, DeSimone, director of transportation for the state, wrote P & W stating, "I am writing to you on behalf of the State of Rhode Island to exercise its right to accept the offer to purchase." The letter also stated, "[o]f course, you understand that certain wording in the Real Estate Sales Agreement relating to 'buyer' and obligations concerning the removal of track would be inappropriate to the purpose of the State's purchase." DeSimone asked for a meeting to "revise the existing offer to conform to the State's acceptance." On April 11, 1986, the state filed suit against P & W claiming that P & W was refusing to convey the property to the state and was about to convey it to Promet Corp. in violation of the state's rights. Several days later, P & W did convey the property to Promet. P & W asserted that no contract for the sale of the parcel was ever formed with the state. Is P & W correct?

2. First Texas Savings Association promoted a "$5,000 Scoreboard Challenge" contest. Contestants who completed an entry form and deposited it with First Texas were eligible for a random drawing. The winner was to receive an $80 savings account with First Texas, plus four tickets to a Dallas Mavericks home basketball game chosen by First Texas. If the Mavericks held their opponent in the chosen game to 89 or fewer points, the winner was to receive an additional $5,000 money market certificate. In October 1982, Jergins deposited a completed entry form with First Texas. On November 1, 1982, First tried to amend the contest rules by posting notice at its branches that the Mavericks would have to hold their opponent to 85 or fewer points before the contest winner would receive the $5,000. In late December, Jergins was notified that she had won the $80 savings account and tickets to the January 22, 1983, game against the Utah Jazz. The notice contained the revised contest terms. The Mavericks held the Jazz to 88 points. Was Jergins entitled to the $5,000?

3. Schultz, the president of Home Ice, a manufacturer of block ice, entered into negotiations with Ratliff, who ran Big "R" Ice, for the sale of ice. Schultz had a "Contract of Sale" drafted stating that Home Ice was to sell, and Big "R" Ice was to buy, a minimum of three thousand 300-pound blocks of ice between May 1, 1990, and December 31, 1990, at a price of $7.00 per block. In a paragraph labeled "*Additional Terms,*" the document further stated that Big "R" would *not* sell block ice to these individuals during the term of the contract:

> (a) Jim Creech or Camden Ice Services
>
> (b) Vestal Ice Co.
>
> (c) Barham Ice Co.

Schultz dated the contract May 29, 1990, signed it, and mailed it to Big "R." A few weeks later, Schultz received the contract back from Big "R," signed by Ratliff. Under the "*Additional Terms*" paragraph, there was a typed addition that stated: "(d) Larry Heinrich d/b/a Custom Cube or any other business." This was initialed "RLR." Schultz was confused about the meaning of this addition and thought that Ratliff's addition was probably a mistake. After further conversations with Ratliff, Schultz added another handwritten paragraph to the agreement on June 26th, reflecting what she thought he wanted in the contract:

> (d) Seller agrees not to sell block ice to Larry Heinrich d/b/a Custom Cube or Larry Heinrich doing business under any other name during the term of this contract.

Schultz initialed this addition and sent the contract back to Big "R," but Ratliff did not initial it and send it back to her. In late June, Big "R" purchased three loads of ice from Home Ice at the price mentioned in the contract. A dispute later arose between the parties and Home Ice sued Big "R" for breach of contract. The trial court found that no contract was formed. Was the trial court correct?

4. Lambert owned the Rainbow Fruit Co. in Boston, which sold Christmas trees and wreaths at retail during the holiday season. From 1987 through 1989, Lambert bought Christmas trees at wholesale from Joan and Sam Kysar pursuant to a written form contract signed by both parties. The front of the order form contained spaces in which the size, grade, quantity, and price of each Christmas tree order could be filled in; a small space at the bottom of the page, labeled as "other," was used by the parties to note additional terms and conditions. The back of the order form stated the fixed terms of the contract. One of these fixed terms provided that the contract was to be interpreted under the law of the *State of Washington* and any action that might be brought to enforce the contract would be brought in *Clark County, Washington.* In July, the Kysars visited Boston to discuss Lambert's needs for the upcoming Christmas season. On their return to Washington, they sent Lambert an order form, filled out and signed by Joan Kysar. The numbers handwritten on the form by Joan Kysar provided for an order of 2,600 Christmas trees at $11.60 apiece. At the bottom of the form, in the space marked "other," Kysar wrote that the order was "based on 4 loads of 650 trees each. All trucks will be loaded to capacity. 25% deposit . . . balance due on or before 12/10/89." Lambert received the order form in late July, but apparently thought that it overstated the quantity of trees needed for the next season. Writing on the same order form submitted by the Kysars, he changed the notation "4 loads of 650 trees each," to read "3 loads of 550 trees," and changed the total number ordered from "2600" to "1650." Lambert also recomputed the total amount due and the amount of the required 25 percent deposit. He inserted the new figures over Joan Kysar's handwritten figures at the bottom of the form and returned the form to the Kysars. He made no change to the $11.60 unit price or to any other contract provisions. On November 25, 29, and December 1, in accordance with the instructions on the altered order form, the Kysars sent Lambert the requested 1,650 trees, in three loads, by overland truck. After delivery of the trees, Lambert's inspection allegedly revealed that the trees "were dry, not fresh, and appeared old." The Kysars then sued Lambert in Clark County, Washington, seeking payment for the trees. A dispute arose between the parties about whether the term on the order form stating that lawsuits would be brought in Clark County, Washington, was part of the parties' contract. Was it?

5. On February 21, 1990, Barto went to Estate Motors, Ltd., to buy a new Mercedes-Benz 500SL. Barto was told that because of limited production in Germany and great demand for that model, it would be at least 18 months before a new 500SL could be delivered to him. The salesperson told Barto that Estate Motors would order the car for him if Barto would pay a $500 deposit with the order. Barto agreed and paid Estate Motors $500 with his personal check. Barto and the salesperson then executed a "Retail Buyer's Order" form. The form stated the model, body type, color, and upholstery specifications for the car. No price was specified on the form and neither the dealer nor the salesperson signed in the space provided to indicate the dealer's approval of the order. It stated at the bottom "THIS ORDER IS NOT A BINDING CONTRACT." The reverse side of the form contained 10 additional terms and conditions, including payment in cash or cashier's check upon delivery. On February 22, the day after this form was executed, Estate Motors placed an order with the manufacturer for a new 500SL with the specifications requested by Barto. On February 23, Estate Motors cashed Barto's $500 check. Nine months later, Congress amended the Internal Revenue Code to include a "luxury tax" on purchases of certain passenger vehicles, boats, and aircraft. The statute contained a "pre-existing binding contract" exception that stated that the new tax would not be imposed on sales made after December 31, 1990, if there was a binding contract for the purchase of a covered luxury item in existence as of September 30, 1990. In mid-August of 1991, nearly 18 months after Barto's payment of the $500 deposit and the execution of the order, Estate Motors notified Barto that his Mercedes would be ready for him to pick up on August 30. It also told him for the first time that he would have to pay the luxury tax on his new car ($6,995.00) when he came to pick it up. Barto believed that his car fell within the "pre-existing binding contract" exception to the luxury tax statute because his order for the car had been placed before September 30, 1990. Barto paid for the car and paid the tax, but claimed a refund from the U.S. government on the ground that he had a "binding contract" for the Mercedes-Benz in February of 1990, when the order was placed. The government, however, argued that no contract existed until August 30, 1991, when Barto paid his full purchase price and received his new car. Is Barto right?

6. On January 16, 1987, Koop, an employee of Professional Search, Inc., called Renner, the director of systems software for Northwest Airlines, to inquire about possible job openings in Renner's department. Koop explained to Renner that if Northwest Airlines hired a candidate recommended by Professional Search, Professional Search would be entitled to charge Northwest Airlines 30 percent of the candidate's starting salary. Renner told Koop that a systems analyst position was open and described the job. Renner also stated that Northwest Airlines was not currently interviewing for that position and that Koop should direct further inquiries to Northwest Airlines's human resources department. Later, Koop and Wawrzyniak discussed Wawrzyniak's desire to be placed as a systems analyst and Wawrzyniak signed a placement contract. On January 20, 1987, Koop sent Wawrzyniak's résumé to Renner. He later called Renner, who told him the résumé "looked good." On February 19, Wawrzyniak filled out an application for a systems position with Northwest Airlines, claiming he heard of the opening through a friend. On April 13, Northwest Airlines hired Wawrzyniak. Professional Search claimed that a placement contract had been formed between it and Northwest Airlines, and sought to recover its $12,000 commission. Will Professional Search prevail?

7. Edwards, who was expecting a baby, was attempting to make day care arrangements for the child for five mornings a week. On October 10, 1990, she completed an application for day care with Martha Rounds Academy for Children. The application asked for "anticipated date of entrance," "arrival time," and "pickup time," to which Edwards responded "June/July 1991," "8:30," and "1:00," respectively. After this the form stated, "the Academy will be open from 6:30 A.M. to 6:00 P.M. Monday through Friday. Preschool class hours are 8:30 A.M. to 11:30 A.M." Under the section titled "Program," Edwards made a checkmark next to "Infants—Morning Only" and under "Days" wrote, "Mon., Tues., Wed., Thurs., Fri." Further, the application stated:

> We request that a child attend at least two days per week. The Academy must know the specific days your child will be in attendance. A two week advance notice is required for any schedule change. Nonrefundable enrollment fee of $35 enclosed.

Finally, the application was signed by plaintiff and her husband and at the bottom was the following language: "Thank you for your interest. We are looking forward to serving you and caring for your child." Edwards enclosed a check for $35 with "DAY CARE/ENROLMT FEE" written in the memo blank, and the Academy cashed the check. Edwards and her husband received a letter dated October 17, 1990, from Beel, one of the Academy directors stating, "We are in receipt of your application for your baby-to-be to attend Martha Rounds Academy for Children Monday through Friday A.M. starting June or July 1991. This application will place your baby's name on our waiting list, and we will make every effort possible to accommodate you at the time requested. However, if we should be full then, we will notify you just as soon as a vacancy occurs."

In January of 1991, Edwards telephoned Brady, another Academy director. She informed Brady that she wanted her child to begin attending day care on July 29, 1991. Brady indicated this would not be a problem and that they would be "holding a spot open" for the child. Edwards stated she was told to telephone Brady or Beel after the baby was born in order to let them know that her plans had not changed. On March 8, 1991, a couple of weeks after her daughter's birth, Edwards telephoned Beel and related her earlier conversation with Brady. Beel informed Edward that her child would not be accepted because of defendant's "two full day minimum attendance requirement." Edwards stated this was the first time she was ever informed of an attendance requirement. Edwards claimed that a contract to provide day care services five mornings a week had been formed, and she sued Martha Rounds Academy for breach of contract. The trial court entered a summary judgment in favor of Martha Rounds Academy. Was this ruling correct?

8. On March 30, Cushing, a member of an antinuclear protest group, applied to the New Hampshire adjutant general's office for permission to hold a dance in the Portsmouth armory. On March 31, the adjutant general mailed a signed contract offer agreeing to rent the armory to the group. The agreement required Cushing to accept by signing a copy of the agreement and returning it to the adjutant general within five days after its receipt. On April 3, Cushing received the offer and signed it. At 6:30 P.M. on April 4, Cushing received a call from the adjutant general attempting to revoke the offer. Cushing told the adjutant general that he had signed the contract and placed it in the office outbox on April 3, customary office practice being to collect all mail from outboxes at the end of the day and deposit it in the U.S. Mail. On April 6, the adjutant general's

office received the signed contract in the mail, dated April 3 and postmarked April 5. Assuming Cushing was telling the truth, did the parties have a contract?

9. In 1985, State Farm Mutual Insurance issued Casto an automobile insurance policy on her Jaguar. Casto also insured a second car, a Porsche, with State Farm. Some time in September or early October 1987, Casto received two renewal notices for her policy on the Jaguar, indicating that the next premium was due on October 10, 1987. State Farm sent a notice of cancellation on October 15, indicating that the policy would be canceled on October 29. Casto denied having received this notice. On October 20, Casto placed two checks, one for the Jaguar and one for the Porsche, in two preaddressed envelopes that had been supplied by State Farm. She gave these envelopes to Donald Dick, who mailed them on the same day. The envelope containing the Porsche payment was timely delivered to State Farm, but State Farm never received the Jaguar payment, and that policy was canceled. Casto was involved in an accident on November 20 while driving the Jaguar. When she made a claim with State Farm, she learned that the policy had been canceled. After the accident, the envelope containing the Jaguar payment was returned to her stamped, "Returned for postage." The envelope did not bear any postage when returned to Casto. Casto brought a declaratory judgment action seeking a declaration that her insurance policy was in effect as of the date of the accident. Was it?

10. Soldau was fired by Organon, Inc. He received a letter from Organon offering to pay him double the normal severance pay if he would sign a release giving up all claims against the company. The letter incorporated the proposed release, which Soldau signed, dated, and deposited in a mailbox outside a post office. When he returned home, Soldau found that he had received a check from Organon in the amount of the increased severance pay. He returned to the post office and persuaded a postal employee to open the mailbox and retrieve the release. Soldau cashed Organon's check and subsequently filed an age discrimination suit against Organon. Was Soldau bound by the release?

Chapter Twelve

Consideration

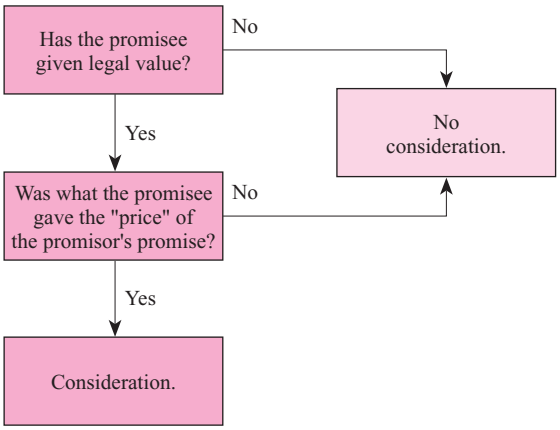
Chapter Outline

I. Elements of Consideration
- *A. Legal Value*
  - *1. Adequacy of Consideration*
- *B. Bargained-For Exchange*

II. Exchanges That Fail to Meet Consideration Requirements
- *A. Illusory Promises*
  - *1. Effect of Cancellation or Termination Clauses*
  - *2. Effect of Output and Requirements Contracts*
  - *3. Effect of Exclusive Dealing Contracts*
- *B. Preexisting Duties*
  - *1. Preexisting Public Duties*
  - *2. Preexisting Contractual Duties and Modifications of Contracts under the Common Law*
  - *3. Preexisting Duty and Contract Modification under the UCC*
  - *4. Preexisting Duty and Agreements to Settle Debts*
- *C. Past Consideration*
  - *1. Moral Obligation*

III. Exceptions to the Consideration Requirement
- *A. Promissory Estoppel*
- *B. Promises to Pay Debts Barred by Statutes of Limitations*
- *C. Promises to Pay Debts Barred by Bankruptcy Discharge*
- *D. Charitable Subscriptions*

One of the things that separates a contract from an unenforceable social promise is that a contract requires voluntary agreement by two or more parties. Not all agreements, however, are enforceable contracts. At a fairly early point in the development of classical contract law, the common law courts decided not to enforce gratuitous (free) promises. Instead, only promises supported by consideration were enforceable in a court of law. This was consistent with the notion that the purpose of contract law was to enforce freely made bargains. As one 19th-century work on contracts put it: "The common law . . . gives effect only to contracts that are founded on the mutual exigencies of men, and does not compel the performance of any merely gratuitous agreements."[1] The concept of consideration distinguishes agreements that the law will enforce from gratuitous promises, which are normally unenforceable. This chapter focuses on the concept of consideration.



[1]T. Metcalf, *Principles of the Law of Contracts* (1874), p. 161.

Elements of Consideration

A common definition of **consideration** is *legal value, bargained for and given in exchange for an act or a promise.* Thus, a promise generally cannot be enforced against the person who made it (the *promisor*) unless the person to whom the promise was made (the *promisee*) has given up something of legal value in exchange for the promise. In effect, the requirement of consideration means that a promisee must pay the price that the promisor asked to gain the right to enforce the promisor's promise. So, if the promisor did not ask for anything in exchange for making her promise or if what the promisor asked for did not have legal value (e.g., because it was something to which she was already entitled), her promise is not enforceable against her because it is not supported by consideration. Figure 1 illustrates the elements of consideration.

Consider the early case of *Thorne v. Deas,* in which the part owner of a sailing ship named the *Sea Nymph* promised his co-owners that he would insure the ship for

Figure 1 *The Elements of Consideration*

an upcoming voyage.[2] He failed to do so, and when the ship was lost at sea, the court found that he was not liable to his co-owners for breaching his promise to insure the ship. Why? Because his promise was purely gratuitous; he had neither asked for nor received anything in exchange for making it. Therefore, it was unenforceable because it was not supported by consideration.

This early example illustrates two important aspects of the consideration requirement. First, the requirement *tended to limit the scope of a promisor's liability for his promises* by insulating him from liability for gratuitous promises and by protecting him against liability for reliance on such promises. Second, the mechanical application of the requirement *often produced unfair results.* This potential for unfairness has produced considerable dissatisfaction with the consideration concept. As the rest of this chapter indicates, the relative importance of consideration in modern contract law has been somewhat eroded by numerous exceptions to the consideration requirement and by judicial applications of consideration principles designed to produce fair results.

Legal Value

Consideration can be an act in the case of a unilateral contract or a promise in the case of a bilateral contract. An act or a promise can have legal value in one of two ways. If, in exchange for the promisor's promise, the promisee does, or agrees to do, something he had no prior legal duty to do, that provides legal value. If, in exchange for the promisor's promise, the promisee refrains from doing, or agrees not to do, something she has a legal right to do, that also provides legal value. Note that this definition does not require that an act or a promise have monetary (economic) value to amount to consideration. Thus, in a famous 19th-century case, *Hamer v. Sidway,*[3] an uncle's promise to pay his nephew $5,000 if he refrained from using tobacco, drinking, swearing, and playing cards or billiards for money until his 21st birthday was held to be supported by consideration. Indeed, the nephew had refrained from doing any of these acts, even though he may have benefited from so refraining. He had a legal right to indulge in such activities, yet he had refrained from doing so at his uncle's request and in exchange for his uncle's promise. This was all that was required for consideration.

Adequacy of Consideration The point that the legal value requirement is not concerned with actual value is further borne out by the fact that the courts generally will not concern themselves with questions regarding the adequacy of the consideration that the promisee gave. This means that as long as the promisee's act or promise satisfies the legal value test, the courts do not ask whether that act or promise was worth what the promisor gave, or promised to give, in return for it. You will see an example of the application of this rule in the following *Brads* case. This rule on adequacy of consideration reflects the laissez-faire assumptions underlying classical contract law. Freedom of contract includes the freedom to make bad bargains as well as good ones, so promisors' promises are enforceable if they got what they asked for in exchange for making their promises, even if what they asked for was not nearly so valuable in worldly terms as what they promised in return. Also, a court taking a hands-off stance concerning private contracts would be reluctant to step in and second-guess the parties by setting aside a transaction that both parties at one time considered satisfactory. Finally, the rule against considering the adequacy of consideration can promote certainty and predictability in commercial transactions by denying legal effect to what would otherwise be a possible basis for challenging the enforceability of a contract—the inequality of the exchange.

[2] 4 Johns. 84 (N.Y. 1809).

[3] 27 N.E. 256 (N.Y. Ct. App. 1891).

Several qualifications must be made concerning the general rule on adequacy of consideration. First, if the inadequacy of consideration is apparent on the face of the agreement, most courts conclude that the agreement was a disguised gift rather than an enforceable bargain. Thus, an agreement calling for an unequal exchange of money (e.g., $500 for $1,000) or identical goods (20 business law textbooks for 40 identical business law textbooks) and containing no other terms would probably be unenforceable. Gross inadequacy of consideration may also give rise to an inference of fraud, duress,[4] lack of capacity,[5] unconscionability,[6] or some other independent basis for setting aside a contract. However, inadequacy of consideration, standing alone, is never sufficient to prove lack of true consent or contractual capacity. Although gross inadequacy of consideration is not, by itself, ordinarily a sufficient reason to set aside a contract, the courts may refuse to grant specific performance or other equitable remedies to persons seeking to enforce unfair bargains.

Finally, some agreements recite "$1," or "$1 and other valuable consideration," or some other small amount as consideration for a promise. If no other consideration is actually exchanged, this is called *nominal consideration.* Often, such agreements are attempts to make gratuitous promises look like true bargains by reciting a nonexistent consideration. Most courts refuse to enforce such agreements unless they find that the stated consideration was truly bargained for.

[4]Fraud and duress are discussed in Chapter 13.
[5]Lack of capacity is discussed in Chapter 14.
[6]Chapter 15 discusses unconscionability in detail.

Brads v. First Baptist Church of Germantown

624N.E.2d 737 (Ohio Ct. App. 1993)

Marvin Brads became pastor of the First Baptist Church of Germantown, Ohio, in January 1958. In June 1971, Brads had a heart attack. While he was recuperating, an officer of the church told Brads that the church had voted to pay his full salary for the remainder of his lifetime. That promise was unperformed because Brads later recovered and returned to work. In April 1980, Brads again had heart problems. On the advice of his doctor, Brads approached the deacons of the church about retirement. Brads proposed that his salary be reduced after retirement through a series of gradual step-downs to an amount approximately one-third of the salary he was then receiving. Brads's proposal was accepted by the deacons. Under the terms of the agreement, the church placed Brads on disability retirement status, conferred an honorary title on him, gave him office space in the church, and allotted him retirement benefits according to the agreed step-down schedule. Brads was required to aid, assist, and advise whomever the church called as a new pastor, to the extent Brads's health would allow. Brads and the church deacons jointly recommended to the congregation that it adopt the agreement, which the congregation did, unanimously. Brads then left his position as pastor and his benefits commenced.

In 1985, the congregation was advised by a church officer that the benefits paid to Brads under the 1980 agreement should continue for Brads's lifetime. The congregation once again unanimously approved and reaffirmed the agreement. Brads received his benefits from 1980 through early July 1990, when he was notified by church officials that he had been dismissed from the membership of the church and that no more payments would be made to him. Other benefits, such as free office space, were also discontinued.

Brads sued the church, claiming that it had breached its contract to pay Brads's retirement benefits for life. At trial, the jury returned a verdict in favor of Brads. The church appealed, contending that there was no consideration to support the promise to pay retirement benefits for life.

Grady, Presiding Judge Consideration is, of course, an element necessary for a binding contract and a complete lack of any consideration is a valid defense to a breach of contract action. Consideration may consist of either a detriment to the promisee or a benefit to the promisor. A benefit may consist of some right, interest, or profit accruing to the promisor, while a detriment may consist of some

forbearance, loss, or responsibility given, suffered, or undertaken by the promisee. Absent a showing of fraud, consideration is not deemed legally insufficient merely because it is inadequate.

The evidence demonstrates that in 1980 Brads proposed a gradual reduction in the salary he was being paid to a final amount representing approximately one-third of that salary. According to the evidence presented by Brads, all parties knew and understood this final step-down amount would be paid to Brads for life. Brads was obligated to aid whomever the Church called as a new pastor. The parties jointly prepared an agreement in writing, which was adopted by the congregation in 1980 and readopted in 1985. Over the course of the next 10 years, Brads preached occasionally at First Baptist Church, taught Sunday school classes there, served on the budget committee and helped with administrative matters.

The foregoing evidence demonstrates that the Church received a benefit in the form of Brads's promise to assist a new pastor and that Brads received the benefits of payments, office space and title. Each party performed on these promises to confer an actual benefit on the other. Those benefits were the product of the agreement and subsequent to it. We conclude that there is some competent evidence to demonstrate the existence of consideration by Brads.

Affirmed in favor of Brads.

Bargained-For Exchange

Up to this point, we have focused on the legal value component of our consideration definition. But the fact that a promisee's act or promise provides legal value is not, in itself, a sufficient basis for finding that it amounted to consideration. In addition, the promisee's act or promise must have been bargained for and given in exchange for the promisor's promise. In effect, it must be the price that the promisor asked for in exchange for making his promise. Over a hundred years ago, Oliver Wendell Holmes, one of our most renowned jurists, expressed this idea when he said, "It is the essence of a consideration that, by the terms of the agreement, it is given and accepted as the motive or inducement of the promise."[7]

Exchanges That Fail to Meet Consideration Requirements

Illusory Promises

For a promise to serve as consideration in a bilateral contract, the promisee must have promised to do, or to refrain from doing, something at the promisor's request. It seems obvious, therefore, that if the promisee's promise is illusory because it really does not bind the promisee to do or refrain from doing anything, such a promise could not serve as consideration. Such agreements are often said to lack the mutuality of obligation required for an agreement to be enforceable. So, a promisee's promise to buy "all the sugar that I want" or to "paint your house if I feel like it" would not be sufficient consideration for a promisor's return promise to sell sugar or hire a painter. In neither case has the promisee given the promisor anything of legal value in exchange for the promisor's promise. Remember, though: So long as the promisee has given legal value, the agreement will be enforceable even though what the promisee gave is worth substantially less than what the promisor promised in return.

Effect of Cancellation or Termination Clauses

The fact that an agreement allows one or both of the parties to cancel or terminate their contractual obligations does not necessarily mean that the party (or parties) with the power to cancel has given an illusory promise. Such provisions are a common and necessary part of many business relationships. The central issue in such cases concerns whether a promise subject to cancellation or termination actually represents a binding obligation. A right to cancel or terminate at any time, for any reason, and without any notice would clearly render illusory any other promise by the party possessing such a right. However, limits on the circumstances under which cancellation may occur (such

[7] O. W. Holmes, *The Common Law* (1881), p. 239.

as a dealer's failure to live up to dealership obligations), or the time in which cancellation may occur (such as no cancellations for the first 90 days), or a requirement of advance notice of cancellation (such as a 30-day notice requirement) would all effectively remove a promise from the illusory category. This is so because in each case the party making such a promise has bound himself to do *something* in exchange for the other party's promise. A party's duty of good faith and fair dealing can also limit the right to terminate and prevent its promise from being considered illusory.

Effect of Output and Requirements Contracts Contracts in which one party to the agreement agrees to buy all of the other party's production of a particular commodity (*output* contracts) or to supply all of another party's needs for a particular commodity (*requirements* contracts) are common business transactions that serve legitimate business purposes. They can reduce a seller's selling costs and provide buyers with a secure source of supply. Prior to the enactment of the UCC, however, many common law courts used to refuse to enforce such agreements on the ground that their failure to specify the quantity of goods to be produced or purchased rendered them illusory. The courts also feared that a party to such an agreement might be tempted to exploit the other party. For example, subsequent market conditions could make it profitable for the seller in an output contract or the buyer in a requirements contract to demand that the other party buy or provide more of the particular commodity than the other party had actually intended to buy or sell. The Code legitimizes requirements and output contracts. It addresses the concern about the potential for exploitation by limiting a party's demands to those quantity needs that occur in *good faith* and are not unreasonably disproportionate to any quantity estimate contained in the contract, or to any normal prior output or requirements if no estimate is stated [2–306(1)]. Chapter 19, Formation and Terms of Sales Contracts, discusses this subject in greater detail.

Effect of Exclusive Dealing Contracts When a manufacturer of goods enters an agreement giving a distributor the exclusive right to sell the manufacturer's products in a particular territory, does such an agreement impose sufficient obligations on both parties to meet the legal value test? Put another way, does the distributor have any duty to sell the manufacturer's products and does the manufacturer have any duty to supply any particular number of products? Such agreements are commonly encountered in today's business world, and they can serve the legitimate interests of both parties. The Code recognizes this fact by providing that, unless the parties agree to the contrary, an exclusive dealing contract imposes a duty on the distributor to use her best efforts to sell the goods and imposes a reciprocal duty on the manufacturer to use his best efforts to supply the goods [2–306(2)].

Preexisting Duties

The legal value component of our consideration definition requires that promisees do, or promise to do, something in exchange for a promisor's promise that they had no prior legal duty to do. Thus, as a general rule, performing or agreeing to perform a preexisting duty is not consideration. This seems fair because the promisor in such a case has effectively made a gratuitous promise, since she was already entitled to the promisee's performance.

Preexisting Public Duties Every member of society has a duty to obey the law and refrain from committing crimes or torts. Therefore, a promisee's promise not to commit such an act can never be consideration. So, Thomas's promise to pay Brown $100 a year in exchange for Brown's promise not to burn Thomas's barn would not be enforceable against Thomas. Since Brown has a preexisting duty not to burn Thomas's barn, his promise lacks legal value.

Similarly, public officials, by virtue of their offices, have a preexisting legal duty to perform their public responsibilities. For example, Smith, the owner of a liquor store, promises to pay Fawcett, a police officer whose beat includes Smith's store, $50 a week to keep an eye on the store while walking her beat. Smith's promise is unenforceable because Fawcett has agreed to do something that she already has a duty to do.

Preexisting Contractual Duties and Modifications of Contracts under the Common Law The most important preexisting duty cases are those involving preexisting *contractual* duties. These cases generally occur when the parties to an existing contract agree to *modify* that contract. As the *Johnson* case (which follows shortly) indicates, the general common law rule on contract modifications holds that an agreement to modify an existing contract requires *some new consideration* to be binding.

For example, Turner enters into a contract with Acme Construction Company for the construction of a new office building for $350,000. When the construction is partially completed, Acme tells Turner that due to rising labor and materials costs it will stop construction unless Turner agrees to pay an extra $50,000. Turner, having already entered into contracts to lease office space in the new building, promises to pay the extra amount. When the construction is finished, Turner refuses to pay more than $350,000. Is Turner's promise to pay the extra $50,000 enforceable against him? No. All Acme has done in exchange for Turner's promise to pay more is build the building, something that Acme had a preexisting contractual duty to do. Therefore, Acme's performance is not consideration for Turner's promise to pay more.

Although the result in the preceding example seems fair (why should Turner have to pay $400,000 for something he had a right to receive for $350,000?) and is consistent with consideration theory, the application of the preexisting duty rule to contract modifications has generated a great deal of criticism. Plainly, the rule can protect a party to a contract such as Turner from being pressured into paying more because the other party to the contract is trying to take advantage of his situation by demanding an additional amount for performance. However, mechanical application of the rule could also produce unfair results when the parties have freely agreed to a fair modification of their contract. Some critics argue that the purpose of contract modification law should be to enforce freely made modifications of existing contracts and to deny enforcement to coerced modifications. Such critics commonly suggest that general principles such as good faith and unconscionability, rather than technical consideration rules, should be used to police contract modifications.

Other observers argue that most courts in fact apply the preexisting duty rule in a manner calculated to reach fair results, because several exceptions to the rule can be used to enforce a fair modification agreement. For example, any new consideration furnished by the promisee provides sufficient consideration to support a promise to modify an existing contract. So, if Acme had promised to finish construction a week before the completion date called for in the original contract, or had promised to make some change in the original contract specifications such as to install a better grade of carpet, Acme would have done something that it had no legal duty to do in exchange for Turner's new promise. Turner's promise to pay more would then be enforceable because it would be supported by new consideration.

Many courts also enforce an agreement to modify an existing contract if the modification resulted from *unforeseen circumstances* that a party could not reasonably be expected to have foreseen, and which made that party's performance far more difficult than the parties originally anticipated. For example, if Acme had requested the extra payment because abnormal subsurface rock formations made excavation on the construction site far more costly and time-consuming than could have been reasonably expected, many courts would enforce Turner's promise to pay more.

Courts can also enforce fair modification agreements by holding that the parties mutually agreed to terminate their original contract and then entered a new one. Because contracts are created by the will of the parties, they can be terminated in the same fashion. Each party agrees to release the other party from his contractual obligations in exchange for the other party's promise to do the same. Because such a mutual agreement terminates all duties owed under the original agreement, any subsequent agreement by the parties would not be subject to the preexisting duty rule. A court is likely to take this approach, however, only when it is convinced that the modification agreement was fair and free from coercion.

Johnson v. Maki and Associates, Inc. *682 N.E.2d 1196 (App. Ct. Ill. 1997)*

In October of 1994, Johnson listed her house in Beach Park for sale with Maki. Several months later, Johnson entered into a real estate contract to sell the house to Tim Ganley and Virginia Phillips. Ganley and Phillips deposited $2,000 in earnest money, which Maki held in an escrow account. The real estate contract provided that Maki would not disburse the earnest money unless it was provided a written demand to do so by both the buyers and the seller. Prior to closing, Johnson and the buyers could not reach agreement over which repairs Johnson would make to the home, and the deal fell through. Ganley and Phillips refused to go

through with the purchase and requested the immediate return of the earnest money. Although Johnson initially disputed this, Ganley and Phillips sued her and after litigating the issue for several months, she finally agreed to the return of the earnest money. On October 13, 1995, Johnson sent a letter to Maki directing it to return the earnest money to Ganley and Phillips. Maki refused, demanding that Johnson sign a document entitled "Cancellation Agreement for Contract to Purchase Real Estate" before it would return the earnest money. The cancellation agreement contained a general release provision which provided as follows:

> The Buyer and Seller shall indemnify, save, and hold harmless Broker and Broker's agents from all claims, litigations, judgments, and costs arising from the cancellation of the Contract.

On October 13, 1995, Johnson signed the cancellation agreement. Later a dispute arose between Johnson and Maki about whether Maki had properly carried out its duties to Johnson. Johnson filed suit against Maki in December of 1995, claiming that Maki had breached its fiduciary duty to her by making misrepresentations about Ganley and Phillips's ability to get financing and about the effect of the home inspection contingency, and that it caused her damage by instructing her to have her tenants vacate the house even though Maki should have known that the sale would not be consummated. Maki filed a motion to dismiss Johnson's lawsuit, arguing that the release that was contained in the "Cancellation Agreement for Contract to Purchase Real Estate" was an enforceable bar to Johnson's lawsuit. Johnson responded that the release was invalid because it was not supported by consideration. The trial court dismissed Johnson's suit, and Johnson appealed.

Geiger, Justice A release is a contract whereby one party abandons claims against another, and its interpretation is governed by the principles that govern contract law. Our supreme court has held that a release, like any other contract, requires consideration to be valid. In the instant case, Johnson signed a release that effectively relinquished her right to sue Maki for any reason. Not only does the release protect Maki from liability for releasing the escrow money, but it also insulates Maki from any claim arising out of the cancellation of the contract. The right to sue is significant and cannot be released absent valuable consideration given in return.

We now turn to the issue of whether Maki provided consideration in return for Johnson's release. Johnson contends that Maki was acting as an escrowee and therefore had a preexisting legal obligation to return the earnest money to the buyers at her directive. She concludes that this preexisting legal obligation cannot constitute consideration for the release. Maki argues that the cancellation agreement had been made part of the underlying real estate contract and that, therefore, the release was supported by the same consideration as the rest of the contract. Consideration for a contract consists either of some right, interest, profit, or benefit accruing to one party or some forbearance, detriment, loss of responsibility given, suffered, or undertaken by the other. The preexisting duty rule provides that where a party does what it is already legally obligated to do, there is no consideration because there has been no detriment.

An escrowee has been described as a "trustee" of both the party making the deposit of property and the party for whose benefit it is made and, therefore, has a duty to act impartially toward all parties. Like a trustee, the escrowee owes a fiduciary duty to act only in accordance with the terms of the escrow instructions. Where money is deposited in escrow in pursuit of a contract and no enforceable contract is reached, the escrowee must return the money to the buyer or depositor. Further, any transaction between a fiduciary and its principal, such as a release, is subjected to the closest scrutiny by the courts. Our review of the record indicates that Maki was acting as an escrowee on behalf of Johnson and therefore owed a fiduciary duty to act in accordance with the terms of the escrow instructions. The underlying real estate contract provided as follows: "There shall be no disbursement of earnest money unless Escrowee has been provided written agreement thereto from Buyer and Seller." Pursuant to these instructions, Johnson and buyers needed only to tender a written request to Maki in order for the earnest money to be disbursed. We find that the obligation to release the escrow money was a preexisting legal

duty under the original real estate contract and could not constitute consideration for the release contained in the cancellation agreement. Moreover, we do not believe that the consideration for the release flowed from the original contract. A review of the real estate contract indicates that such a release goes beyond the scope of the bargain agreed to between Johnson and Maki. Nowhere in the original contract does Johnson relinquish her rights to sue Maki. Therefore, the original real estate contract could not have been the basis for providing consideration for the release. For these reasons, we find that the release in the cancellation agreement lacked consideration and was therefore invalid.

Reversed and remanded in favor of Johnson.

Preexisting Duty and Contract Modification under the UCC The drafters of the Code sought to avoid many of the problems caused by the consideration requirement by dispensing with it in two important situations: As discussed in Chapter 10, The Agreement: Offer, the Code does not require consideration for firm offers [2–205]. The Code also provides that an agreement to modify a contract for the sale of goods needs *no consideration* to be binding [2–209(1)]. For example, Electronics World orders 200 XYZ televisions at $150 per unit from XYZ Corp. Electronics World later seeks to cancel its order, but XYZ refuses to agree to cancellation. Instead, XYZ seeks to mollify a valued customer by offering to reduce the price to $100 per unit. Electronics World agrees, but when the televisions arrive, XYZ bills Electronics World for $150 per unit. Under classical contract principles, XYZ's promise to reduce the price of the goods would not be enforceable because Electronics World has furnished no new consideration in exchange for XYZ's promise. Under the Code, no new consideration is necessary and the agreement to modify the contract is enforceable.

Several things should be made clear about the operation of this Code rule. First, XYZ had no duty to agree to a modification and could have insisted on payment of $150 per unit. Second, modification agreements under the Code are still subject to scrutiny under the general Code principles of good faith and unconscionability, so unfair agreements or agreements that are the product of coercion are unlikely to be enforced. Finally, the Code contains two provisions to protect people from fictitious claims that an agreement has been modified. If the original agreement requires any modification to be in writing, an oral modification is unenforceable [2–209(2)]. Regardless of what the original agreement says, if the price of the goods in the modified contract is $500 or more, the modification is unenforceable unless the requirements of the Code's statute of frauds section [2–201] are satisfied [2–209(3)].[8]

Preexisting Duty and Agreements to Settle Debts One special variant of the preexisting duty rule that causes considerable confusion occurs when a debtor offers to pay a creditor a sum less than the creditor is demanding in exchange for the creditor's promise to accept the part payment as full payment of the debt. If the creditor later sues for the balance of the debt, is the creditor's promise to take less enforceable? The answer depends on the nature of the debt and on the circumstances of the debtor's payment.

Liquidated Debts A **liquidated debt** is a debt that is both due and certain; that is, the parties have no good faith dispute about either the existence or the amount of the original debt. If a debtor does nothing more than pay less than an amount he clearly owes, how could this be consideration for a creditor's promise to take less? Such a debtor has actually done less than he had a preexisting legal duty to do—namely, to pay the full amount of the debt. For this reason, the creditor's promise to discharge a liquidated debt for part payment of the debt at or after its due date is *unenforceable* for lack of consideration.

For example, Connor borrows $10,000 from Friendly Finance Company, payable in one year. On the day payment is due, Connor sends Friendly a check for $9,000 marked: "Payment in full for all claims Friendly Finance has against me." Friendly cashes Connor's check, thus impliedly promising to accept it as full payment by cashing it, and later sues Connor for $1,000. Friendly is entitled to the $1,000 because

[8]Chapter 16 discusses § 2–201 of the Code in detail.

Connor has given no consideration to support Friendly's implied promise to accept $9,000 as full payment.

However, had Connor done something he had no preexisting duty to do in exchange for Friendly's promise to settle for part payment, he could enforce Friendly's promise and avoid paying the $1,000. For example, if Connor had paid early, before the loan contract called for payment, or in a different medium of exchange from that called for in the loan contract (such as $4,000 in cash and a car worth $5,000), he would have given consideration for Friendly's promise to accept early or different payment as full payment.

Unliquidated Debts A good faith dispute about either the existence or the amount of a debt makes the debt an **unliquidated debt.** The settlement of an unliquidated debt is called an **accord and satisfaction.**[9] When an accord and satisfaction has occurred, the creditor cannot maintain an action to recover the remainder of the debt that he alleges is due. For example, Computer Corner, a retailer, orders 50 personal computers and associated software packages from Computech for $75,000. After receiving the goods, Computer Corner refuses to pay Computech the full $75,000, arguing that some of the computers were defective and that some of the software it received did not conform to its order. Computer Corner sends Computech a check for $60,000 marked: "Payment in full for all goods received from Computech." A creditor in Computech's position obviously faces a real dilemma. If Computech cashes Computer Corner's check, it will be held to have impliedly promised to accept $60,000 as full payment. Computech's promise to accept part payment as full payment would be enforceable because Computer Corner has given consideration to support it: Computer Corner has given up its right to have a court determine the amount it owes Computech. This is something that Computer Corner had no duty to do; by giving up this right and the $60,000 in exchange for Computech's implied promise, the consideration requirement is satisfied. The result in this case is supported not only by consideration theory but also by a strong public policy in favor of encouraging parties to settle their disputes out of court. Who would bother to settle disputed claims out of court if settlement agreements were unenforceable?

Computech could refuse to accept Computer Corner's settlement offer and sue for the full $75,000, but doing so involves several risks. A court may decide that Computer Corner's arguments are valid and award Computech less than $60,000. Even if Computech is successful, it may take years to resolve the case in the courts through the expensive and time-consuming litigation process. In addition, there is always the chance that Computer Corner may file for bankruptcy before any judgment can be collected. Faced with such risks, Computech may feel that it has no practical alternative other than to cash Computer Corner's check.[10]

Composition Agreements Composition agreements are agreements between a debtor and two or more creditors who agree to accept as full payment a stated percentage of their liquidated claims against the debtor at or after the date on which those claims are payable. Composition agreements are generally enforced by the courts despite the fact that enforcement appears to be contrary to the general rule on part payment of liquidated debts. Many courts have justified enforcing composition agreements on the ground that the creditors' mutual agreement to accept less than the amount due them provides the necessary consideration. The main reason why creditors agree to compositions is that they fear that their failure to do so may force the debtor into bankruptcy proceedings, in which case they might ultimately recover a smaller percentage of their claims than that agreed to in the composition.

Forbearance to Sue An agreement by a promisee to refrain, or forbear, from pursuing a legal claim against a promisor can be valid consideration to support a return promise—usually to pay a sum of money—by a promisor. The promisee has agreed not to file suit, something that she has a legal right to do, in exchange for the promisor's promise. The courts do not wish to sanction extortion by allowing people to threaten to file spurious claims against others in the hope that those threatened will agree to some payment to avoid the expense or embarrassment associated with defending a lawsuit. On the other hand, we have a strong public policy favoring private settlement of disputes. Therefore, it is generally said that the promisee must have a good faith belief in the validity of his or her claim before forbearance amounts to consideration.

[9] Accord and satisfaction is also discussed in Chapter 18.

[10] A provision of Article 3 of the Uniform Commercial Code, section 3–311, covers accord and satisfaction by use of an instrument such as a "full payment" check. With a few exceptions, the basic provisions of section 3–311 parallel the common law rules regarding accord and satisfaction that are described in this chapter and Chapter 18.

Past Consideration

Past consideration—despite its name—is not consideration at all. Past consideration is an act or other benefit given in the past that was *not* given in exchange for the promise in question. Because the past act was not given in exchange for the present promise, it cannot be consideration. Consider again the facts of the famous case of *Hamer v. Sidway,* discussed earlier in this chapter. There, an uncle's promise to pay his nephew $5,000 for refraining from smoking, drinking, swearing, and other delightful pastimes until his 21st birthday was supported by consideration because the nephew had given legal value by refraining from participating in the prohibited activities. However, what if the uncle had said to his nephew on the eve of his 21st birthday: "Your mother tells me you've been a good lad and abstained from tobacco, hard drink, foul language, and gambling. Such goodness should be rewarded. Tomorrow, I'll give you a check for $5,000." Should the uncle's promise be enforceable against him? Clearly not, because although his nephew's behavior still passes the legal value test, in this case it was not bargained for and given in exchange for the uncle's promise.

Moral Obligation As a general rule, promises made to satisfy a preexisting moral obligation are unenforceable for lack of consideration. The fact that a promisor or some member of the promisor's family, for example, has received some benefit from the promisee in the past (e.g., food and lodging, or emergency care) would not constitute consideration for a promisor's promise to pay for that benefit, due to the absence of the bargain element. Some courts find this result distressing and enforce such promises despite the absence of consideration. In addition, a few states have passed statutes making promises to pay for past benefits enforceable if such a promise is contained in a writing that clearly expresses the promisor's intent to be bound.

Exceptions to the Consideration Requirement

The consideration requirement is a classic example of a traditional contract law rule. It is precise, abstract, and capable of almost mechanical application. It can also, in some instances, result in significant injustice. Modern courts and legislatures have responded to this

Concept Review

Consideration

Consideration*	Not Consideration
Doing something you had no preexisting duty to do	Doing something you had a preexisting duty to do
Promising to do something you had no preexisting duty to do	Promising to do something you had a preexisting duty to do
Paying part of a liquidated debt prior to the date the debt is due	Nominal consideration (unless actually bargained for)
Paying a liquidated debt in a different medium of exchange than originally agreed to	Paying part of a liquidated debt at or after the date the debt is due
Agreeing to settle an unliquidated debt	Making an illusory promise
Agreeing not to file suit when you have a good faith belief in your claim's validity	Past consideration
	Preexisting moral obligation

*Assuming bargained for.

potential for injustice by carving out numerous exceptions to the requirement of consideration. Some of these exceptions (for example, the Code firm offer and contract modification rules) have already been discussed in this and preceding chapters. In the remaining portion of this chapter, we focus on several other important exceptions to the consideration requirement.

Promissory Estoppel

As discussed in Chapter 9, Introduction to Contracts, the doctrine of promissory estoppel first emerged from attempts by courts around the turn of this century to reach just results in donative (gift) promise cases. Classical contract consideration principles did not recognize a promisee's reliance on a donative promise as a sufficient basis for enforcing the promise against the promisor. Instead, donative promises were unenforceable because they were not supported by consideration. In fact, the essence of a donative promise is that it does not seek or require any bargained-for exchange. Yet people continued to act in reliance on donative promises, often to their considerable disadvantage.

Refer to the facts of *Thorne v. Deas,* discussed earlier in this chapter. The co-owners of the *Sea Nymph* clearly relied on their fellow co-owner's promise to get insurance for the ship. Some courts in the early years of this century began to protect such relying promisees by *estopping* promisors from raising the defense that their promises were not supported by consideration. In a wide variety of cases involving gratuitous agency promises (as in *Thorne v. Deas*), promises of bonuses or pensions made to employees, and promises of gifts of land, courts began to use a promisee's detrimental (harmful) reliance on a donative promise as, in effect, a *substitute for* consideration.

In 1932, the first *Restatement of Contracts* legitimized these cases by expressly recognizing promissory estoppel in section 90. The elements of promissory estoppel were then essentially the same as they are today: a *promise* that the promisor should reasonably expect to induce reliance, *reliance* on the promise by the promisee, and *injustice* to the promisee as a result of that reliance. Promissory estoppel is now widely used as a consideration substitute, not only in donative promise cases but also in cases involving commercial promises contemplating a bargained-for exchange. The construction contract bid cases discussed in Chapter 10 are another example of this expansion of promissory estoppel's reach. In fact, although promissory estoppel has expanded far beyond its initial role as a consideration substitute into other areas of contract law, it is probably fair to say that it is still most widely accepted in the consideration context. Promissory estoppel as a substitute for consideration is discussed in the following *Calabro* case.

Calabro v. Calabro *1999 Tenn. App. LEXIS 732 (Ct. App. Tenn. 1999)*

Hope Calabro is the daughter of Arthur Calabro. Hope's mother and Arthur were divorced when Hope was four years old. From the time of the divorce until Hope finished high school, she lived in Oklahoma with her mother, while Arthur lived in Memphis, Tennessee. He provided financial support to Hope while she was living with her mother. While Hope was growing up, Arthur saw her during summers and on some holidays. Hope had an excellent academic record in high school. During her senior year in high school, Arthur offered to pay for Hope's expenses to attend a distinguished, private university if she received at least $10,000 in financial aid. At the time that Hope was applying to colleges, she knew that she was eligible to attend the University of Oklahoma and receive a full scholarship, but knowing that her father would be willing to finance her college education at a private college if she received $10,000 in financial aid, Hope applied to and was accepted at Boston University, Tulane University, Pepperdine University, Stanford University, the University of California at San Diego, Southern Methodist University, and Vanderbilt University. Several of these schools offered her financial aid. In the fall of 1991, Hope enrolled in Vanderbilt University with her father paying expenses that exceeded her scholarship. During the Christmas break of 1992, Arthur informed Hope that he was no longer willing to pay for her college expenses. At that time he had prepaid her tuition for the spring of 1993 at Vanderbilt. Hope continued to attend Vanderbilt and completed her course work in the spring of 1995, earning a B.A. in psychology. Hope financed the remainder of her education by taking out student loans that became due upon her graduation.

Hope brought a breach of contract suit against Arthur, claiming that he had breached a contract to pay for her college expenses that exceeded her scholarship. The trial granted a summary judgment in favor of Arthur, and Hope appealed.

Crawford, Judge Hope contends that there was a binding contract between the parties and that Arthur breached the contract when he refused to continue paying for her college expenses. Hope contends that she undertook to do something that she was not legally obligated to do, thereby providing the consideration needed to form a contract. She asserts that Arthur received a benefit by having his daughter close to him and away from her mother's influence, and by having a well-educated daughter. Hope further asserts that she gave up substantial scholarships and financial aid at the University of Oklahoma, Tulane, Southern Methodist University, and Pepperdine to attend Vanderbilt. Hope asserts that these foregone opportunities, along with the substantial expense she incurred to attend Vanderbilt, constitute a legal detriment to her as promisee and consideration for her father's promise to pay her education expenses. Arthur contends that the trial court properly determined that he was entitled to summary judgment as to his daughter's claim relating to expenses and debt incurred after May 1993 because there is no genuine issue of any material fact. He asserts that as a parent he has no legal obligation to pay for the educational expenses of a child that has reached the age of majority. Arthur asserts that he did not intend to enter into a contract that obligated him to pay for college expenses, but merely desired to help his daughter realize the dream she expressed to him of becoming a doctor. He further contends that even if his generosity could be construed as an obligation, it is a moral rather than a legal obligation, which is not legally enforceable. He asserts that his daughter's college attendance was not a benefit to him and that his satisfaction at having Hope attend school near his home was not an inducement, because he made no such requirement. Arthur maintains that the cause of any detriment to Hope was her failure to excel in school, and he, in fact, suffered the detriment of the expense of two years of his daughter's education. Finally Arthur asserts that in December of 1992, he made it clear to his daughter that he would pay no more after May, 1993, and it was not reasonable, necessary or justifiable for Hope to return to Vanderbilt and rely on further financial support based on his gratuitous promise.

For there to be a consideration in a contract between parties to the contract it is not necessary that something concrete and tangible move from one to the other. Any benefit to one and detriment to the other may be a sufficient consideration. The jury may draw any reasonable and natural inference from the proof and if by inference from the proof a benefit to the promisor and detriment to the promisee might be inferred this will constitute a valid consideration. In addition to the benefit, detriment paradigm, Tennessee courts have defined valid consideration in terms of the promisee's legal rights and obligations. Consideration [exists] when the promisee does something that he is under no legal obligation to do or refrains from doing [that] which he has a legal right to do. Simply stated, Hope's evidence from her deposition testimony, and the deposition of Arthur's sister, is that Arthur promised to pay her tuition and expenses over and above the $10,000 scholarship if she attended Vanderbilt. Hope had previously been entitled to various scholarship opportunities at other colleges, but she relinquished those opportunities based upon the strength of Arthur's promise. Although she preferred to go to another college, she deferred to Arthur's preference that she attend Vanderbilt. There was no condition attached to the promise to pay tuition that she maintain any sort of grade-point average or class standing, nor that she pursue any particular curriculum. Arthur's testimony by deposition indicates that he did agree to pay the tuition and other expenses, but that he did not require that his daughter attend Vanderbilt. He admits that there was no condition attached that she pursue a pre-med curriculum or maintain a certain grade-point average. We believe under the proof in this case that there is sufficient evidence to create a genuine issue of material fact as to whether there was adequate consideration flowing between the parties to constitute an enforceable contract. There is a dispute as to whether a benefit was conferred on Arthur on his promise to pay the tuition and

whether Hope suffered a detriment in her performance of the contract or agreement.

Hope also relies upon the doctrine of promissory estoppel. Detrimental action or forbearance by the promisee in reliance on a gratuitous promise, within limits, constitutes a substitute for consideration, or a sufficient reason for enforcement of the promise without consideration. This doctrine is known as promissory estoppel. A promisor who induces substantial change of position by the promisee in reliance on the promise is estopped to deny its enforceability as lacking consideration. The reason for the doctrine is to avoid an unjust result, and its reason defines its limits. No injustice results in refusal to enforce a gratuitous promise where the loss suffered in reliance is negligible, nor where the promisee's action in reliance was unreasonable or unjustified by the promise. The limits of promissory estoppel are: (1) the detriment suffered in reliance must be substantial in an economic sense; (2) the substantial loss to the promisee in acting in reliance must have been foreseeable by the promisor; (3) the promisee must have acted reasonably in justifiable reliance on the promise as made. 637 S.W.2d 862 at 864 (citing L. Simpson, *Law of Contracts* section 61 [2d ed. 1965]). The doctrine of promissory estoppel is also referred to as "detrimental reliance" because the plaintiff must show not only that a promise was made, but also that the plaintiff reasonably relied on the promise to his detriment. Furthermore, the promise upon which the promisee relied must be unambiguous and not unenforceably vague. However, a claim of promissory estoppel is not dependent upon the existence of an expressed contract between the parties. From our review of the record, we conclude that there are disputes of material fact as to the alleged promises of Arthur, Hope's action and response thereto, and any inferences that legitimately may be drawn therefrom. The trier of fact should first determine whether a valid contract exists between the parties. Alternatively, the trier of fact should determine whether Hope may rely upon the theory of promissory estoppel. Accordingly, the order of the trial court granting summary judgment is reversed and this case is remanded for such further proceedings as necessary.

Reversed and remanded in favor of Hope Calabro.

Promises to Pay Debts Barred by Statutes of Limitations

Statutes of limitations set an express statutory time limit on a person's ability to pursue any legal claim. A creditor who fails to file suit to collect a debt within the time prescribed by the appropriate statute of limitations loses the right to collect it. Many states, however, enforce a new promise by a debtor to pay such a debt, even though technically such promises are not supported by consideration because the creditor has given nothing in exchange for the new promise. Most states afford debtors some protection in such cases, however, by requiring that the new promise be in writing to be enforceable.

Promises to Pay Debts Barred by Bankruptcy Discharge

Once a bankrupt debtor is granted a discharge,[11] creditors no longer have the legal right to collect discharged debts. Most states enforce a new promise by the debtor to pay (reaffirm) the debt regardless of whether the creditor has given any consideration to support it. To reduce creditor attempts to pressure debtors to reaffirm, the Bankruptcy Reform Act of 1978 made it much more difficult for debtors to reaffirm debts discharged in bankruptcy proceedings. The act requires that a reaffirmation promise be made prior to the date of the discharge and gives the debtor the right to revoke his promise within 30 days after it becomes enforceable. This act also requires the Bankruptcy Court to counsel individual (as opposed to corporate) debtors about the legal effects of reaffirmation and requires Bankruptcy Court approval of reaffirmations by individual debtors. In addition, a few states require reaffirmation promises to be in writing to be enforceable.

Charitable Subscriptions

Promises to make gifts for charitable or educational purposes are often enforced, despite the absence of consideration, when the institution or organization to

[11] Chapter 29 discusses bankruptcy in detail.

which the promise was made has acted in reliance on the promised gift. This result is usually justified on the basis of either promissory estoppel or public policy.

Ethical and Public Policy Concerns

1. In this chapter, you learned the general rule that the law does not enforce promises that are not supported by consideration. Are there ethical arguments that one could make to support the proposition that people should generally honor their promises to others regardless of whether they are legally required to do so? What might those arguments be? Do any of them help to explain the doctrine of promissory estoppel as an exception to the consideration requirement?

2. Discuss the public policy behind the rule that courts will not inquire into the adequacy of consideration. What social benefits are purchased by such a rule and at what price?

3. Discuss the ethical dimensions of offers by debtors to satisfy a liquidated debt by part payment before the due date. Are such offers ever ethical? What factors would be relevant in determining whether such an offer was ethical?

Problems and Problem Cases

1. Niehaus was an employee of Delaware Valley Medical Center. The medical center distributed an employee handbook that stated that if an employee were granted an approved leave of absence, that employee, at the end of the leave, would be guaranteed the same position or one similar to the position occupied prior to the leave of absence. The handbook also stated, however, that the provisions in the handbook were not to be interpreted as a contract of employment and that either party could terminate the employment relationship at any time. Niehaus made a written request for a nine months' leave, and her request was approved. At the end of her leave, however, Delaware Valley refused to rehire Niehaus for any position. Niehaus sued the medical center, claiming breach of contract and promissory estoppel. Will she win?

2. T & R Excavating Inc. is solely owned and operated by Thomas Carlisle. His wife, Janis, owns a preschool. When Thomas and his wife Janis were married in 1988, she began doing all of the bookkeeping for T & R. Thomas allegedly offered to pay her for her work, but she refused. He then allegedly stated to her that he would, instead, "do [her] work for [her] on [her] building." During 1992, Janis decided to build a preschool and kindergarten facility. Thomas helped her find a location for the preschool, and she purchased the land they selected. Following this, he helped her choose a general contractor for the construction of the preschool. In September of 1992, T & R presented a "Proposal" to Janis in which it proposed the following:

> We hereby propose to do all of the excavation and site work at the above new Location. The total amount budgeted for this portion of the new building is $69,800. All labor, equipment costs, overhead and profit, necessary for the completion of this project, totaling $40,000 will be provided at no cost to Wishing Well Preschool, Inc. The $29,800 allotted for materials will be billed to Wishing Well Preschool, Inc., at T & R Excavating's cost.

Janis accepted this proposal. During December 1992, Thomas and Janis, in anticipation of a possible divorce, prepared a document in which they made provision for the division of certain property and agreed that neither would be responsible for supporting the other. Also included in that document was a paragraph regarding Ms. Carlisle's secretarial work and T & R's excavating work:

> In repayment to Jan for her secretarial services and computer programming to T & R Excavating, Inc., Tom agrees to do all the excavating and site work for The Enrichment Center in a timely manner, as set forth in his proposal dated September 1992. In this proposal, Wishing Well Preschool, Inc., agrees to pay Tom for the materials used at his cost.

Sometime during early 1993, T & R began performing excavation and site work for the preschool. Janis was no longer providing any bookkeeping or secretarial services to T & R after January 1993. They separated during March 1993, and T & R continued working on the project until it abandoned it in late May or early June 1993. By that time, Wishing Well Preschool Inc., had paid approximately $35,000 for materials used by T & R for excavation and site work. Ms. Carlisle hired other workers to finish the excavation and site work, and ultimately sued T & R for breach of contract. T & R claimed that no contract existed because the agreement lacked consideration. Is this argument correct?

3. In 1977, Dairy Specialties, Inc. (Dairy), hired Gross to develop nondairy products for customers allergic to milk and to serve as general manager. The employment contract was for a term of 15 years and provided for annual wages of $14,400 plus cost-of-living increases. It also provided that when 10 percent of Dairy's gross profits exceeded Gross's annual salary, he would receive the difference between the two figures, and it gave Gross a royalty of 1 percent of the selling price of all products Dairy produced using one or more of Gross's inventions or formulae. This royalty increased to 2 percent after the expiration of the agreement, at which time ownership of the inventions and formulae (which was jointly held during the term of the agreement) would revert to Gross. In 1982, Dairy was bought from its original owner by the Diehl family. The Diehls insisted on renegotiation of Gross's contract with Dairy as a condition of the purchase. Although he was not a party to the sale and received nothing tangible from it, Gross agreed to a new contract that had the same expiration date as the first one but that eliminated his cost-of-living increases, gave Dairy exclusive ownership of his inventions and formulae during and after the term of the agreement, and eliminated his right to royalties after the agreement expired. After the sale, Gross was given additional duties but no additional compensation. In 1984, after a business downturn, Gross was fired. He filed suit, arguing that his termination benefits should be calculated under his original contract. Was the modification of his contract valid?

4. In November 1972, when conditions in the steel industry were highly competitive and the industry was operating at about 70 percent of its capacity, Sharon Steel Corporation agreed to sell Roth Steel Products several types of steel at prices well below Sharon's published book prices for such steel. These prices were to be effective from January 1 until December 31, 1973. In early 1973, however, an attractive export market and increased domestic demand for steel caused the entire industry to operate at full capacity, and as a consequence, nearly every domestic steel producer experienced delays in delivery. On March 23, 1973, Sharon notified Roth that it was discontinuing all price discounts. Roth protested, and Sharon agreed to continue to sell at the discount price until June 30, 1973, but refused to sell thereafter unless Roth agreed to pay a modified price that was higher than that agreed to the previous November but still lower than the book prices Sharon was charging other customers. Because Roth was unable to purchase enough steel elsewhere to meet its production requirements, it agreed to pay the increased prices. When a subsequent dispute arose between the parties over late deliveries and unfilled orders by Sharon in 1974, Roth filed a breach of contract suit against Sharon, arguing, among other things, that the 1973 modification was unenforceable. Was it?

5. Tri-County Tree & Turf, Inc., which has been in the landscaping and lawn care business since 1969, routinely hires subcontractors to staff its work crews. Michael and Kimberlee Busse were experienced lawn maintenance workers who did business as Lawnmasters. Michael Busse had been an employee of Tri-County, and Tri-County sometimes hired Lawnmasters as a subcontractor. In 1990, Tri-County began doing landscaping and ground maintenance work for a new client, Michaelman, Inc., and subcontracted the job to Lawnmasters. Lawnmasters performed subcontracting work on the Michaelman account (and other accounts) for several years. In the summer of 1992, Busse informed Tri-County that Michaelman wanted a bid on additional work. Tri-County presented a bid to Michaelman that it rejected as too high. Tri-County terminated Lawnmasters' subcontracting work on two accounts, one of which was the Michaelman account. This termination was subsequently changed into a temporary suspension which was to continue "until such time as a formal contract is drawn and signed. . . . " On September 1, 1992, the parties entered into a contract stating that:

> Tri-County desires to employ Lawnmasters as a subcontractor to perform landscaping and snow removal services for Tri-County from time to time. Compensation for each job will be negotiated prior to the commencement of the job and a written memorandum made. This Contract shall run until cancelled by either party for any conduct on the part of the subcontractor which has a tendency to injure Tri-County's business. Upon termination of this Contract by either party regardless of cause, the subcontractor will not for a period of one year after the date of termination, directly or indirectly, compete with Tri-County in any way in which Tri-County is engaged in business, including the southwestern Ohio counties of Hamilton, Clermont, Butler, Warren or Montgomery. . . . During the term of this contract the subcontractor shall have no contact with the present customers of Tri-County but will be free to contract other potential customers in the market area on its own account.

In the spring of 1993, Tri-County discovered that Lawnmasters were doing work for Michaelman.

Tri-County subsequently filed a complaint in the trial court alleging Lawnmasters had breached the parties' contract. Lawnmasters claimed that the contract was unenforceable for lack of consideration. Was there consideration to support the contract?

6. Smith hired Jones Construction to build a detached garage on her property according to certain specifications for $15,000. The contract called for Smith to pay Jones $5,000 "up front," to disburse an additional $7,000 at various stages of the construction, and to make a final payment of $3,000 at the completion of construction. Jones built the garage but Smith complained that Jones's workmanship was substandard and that Jones had failed to build the garage to the specifications provided in the contract. Smith refused to make the final $3,000 payment. After Jones threatened to sue Smith for the $3,000, the parties came to an agreement that Smith would pay Jones $1,500 and Jones would accept the $1,500 as full payment of the contract. Smith paid Jones $1,500, making clear that it was for full payment of the contract, and Jones accepted the payment. However, Jones continued to try to collect the additional $1,500 provided for in the original contract, and when Smith refused to pay it, ultimately filed suit against Smith in small claims court. Is Smith legally obligated to pay the additional $1,500?

7. Gorham was a store manager for LensCrafters earning $38,000 when he received a phone call from Benson Optical offering him a job. After an interview, he was offered the job of area manager for half of North Carolina plus stores in Kentucky and Florida for $50,000. Terms were discussed over the phone and he was told a confirming letter and packet would follow. When he received nothing, he phoned and was told they were in the mail, and that he should quit his job with LensCrafters, which he did. He declined further negotiations with LensCrafters, flew to Chicago at his own expense, and reported for a nationwide sales meeting, which was his first day of employment. At this meeting, Gorham was "reinterviewed" and then terminated. When he sued for breach of contract, Benson defended by arguing there was no consideration because the promise of employment was unenforceable. Gorham had been promised employment at will, which gave the employer the right to fire him at any time for any reason, including on his first day of work. Can Gorham enforce the promise under the doctrine of promissory estoppel?

8. Passander was executive vice president of Spickelmier Industries. Because Spickelmier was facing financial difficulties, a committee of creditors had been formed to oversee its operations. In November 1971, the committee projected a small profit for the year and recommended that bonuses be given to certain key employees if the profit materialized. This recommendation was adopted by Spickelmier's board of directors in late December, and Passander was promised a $1,500 bonus. In January 1972, however, the board's executive committee discovered that the earlier profit estimates had been overly optimistic and that insufficient funds were available to pay the bonuses. Instead of taking the board's recommendation that the bonuses not be paid, the chairman of the board negotiated a compromise whereby one-half of the originally specified bonus would be paid as planned, with the balance to be paid when funds were available. Passander accepted the half bonus, and later in the month his contract with Spickelmier was renegotiated to provide for a 25 percent salary increase and guaranteed quarterly bonuses of $500. In June 1972, Passander quit his job, later filing suit against Spickelmier for the remaining half of his 1971 bonus. Can he recover it?

9. Kaufmann was employed by Fiduciary Management, Inc. (FMI). In September 1988, Lanier, president and sole shareholder of FMI, signed and gave a letter to Kaufmann, which stated in part:

> If your employment is terminated without cause before July 1, 1990, Fiduciary Management, Inc., agrees that within one month of the date on which your full salary ceases to be paid you will receive an additional payment of $150,000.

The context of this letter was that several projects serviced by FMI were experiencing financial difficulties and Lanier's sons advised him that Kaufmann was distracted, that he may have been considering leaving FMI, and that he needed to focus on his work. The letter was intended to help him focus on his work, presumably by giving him a sense of job security. After receiving the letter, Kaufmann undertook a secret and systematic search for another job. In January 1990, Kaufmann's employment with FMI ceased. He was not paid the $150,000 that had been promised in the letter, and he sued Lanier and FMI to recover the money. Was Lanier's promise to pay $150,000 enforceable?

10. *Video Case.* See "California Dreaming." Jensen offered Judy, a resident of Chicago, a position in a company in Los Angeles. Jensen gave Judy an employee handbook, extolled the low turnover of his firm's workforce, and told her that there was a "no-cut policy." Jensen told Judy that if she decided to relocate within a year, the job was hers. After deciding to accept the job, Judy called Jensen and informed him. She also told him that she did not know how long it would take to sell her house in Chicago, but Jensen told her to give him a call as soon as she arrived in Los Angeles and said, "We're really looking forward to having you onboard." Six months later, Judy and her husband quit their jobs, sold their house in Chicago, and moved to Los Angeles. When Judy called Jensen, however, he said that the position they had discussed was not available and the company had no openings. Was the company's promise to hire Judy enforceable?

11. *Video Case.* See "A Christmas Story." Tinker Construction had a contract with Scroge to build a factory addition for Scroge by a particular date. The contract contained a penalty clause exacting daily penalties for late performance, and Tinker was working hard to complete the building on time. Because prompt completion of the addition was so important to Scroge, however, Scroge offered Tinker a bonus if it completed the factory addition on time. Scroge also learned that the supplier of parts for machinery that he had contracted for had called and said that it could not deliver the parts on Scroge's schedule for the price it had agreed to. Because there was no other supplier, Scroge promised to pay the requested higher price. The factory addition was completed on time and the parts arrived on time. Scroge then refused to pay both the bonus to Tinker and the higher price for the parts. Were these promises enforceable?

Chapter Thirteen

Reality of Consent

Chapter Outline

I. Effect of Doctrines Discussed in This Chapter
- *A. Necessity for Prompt and Unequivocal Rescission*

II. Misrepresentation and Fraud
- *A. Relationship between Misrepresentation and Fraud*
  - *1. Election of Remedies*
- *B. Requirements for Rescission on the Ground of Misrepresentation*
  - *1. Untrue Assertion of Fact*
  - *2. Materiality*
  - *3. Actual Reliance*
  - *4. Justifiable Reliance*

III. Mistake
- *A. Nature of Mistake*
  - *1. What Is a Mistake?*
  - *2. Mistakes of Law*
  - *3. Negligence and the Right to Avoid for Mistake*
  - *4. Effect of Mistake*
  - *5. Mutual Mistakes in Drafting Writings*
- *B. Requirements for Mutual Mistake*
  - *1. Mistake about a Basic Assumption*
  - *2. Material Effect on Agreed-Upon Exchange*
  - *3. Party Harmed by Mistake Did Not Bear the Risk of Mistake*
- *C. Requirements for Unilateral Mistake*

IV. Duress
- *A. Nature of Duress*
- *B. Requirements for Duress*
  - *1. Improper Threat*
  - *2. Victim Had No Reasonable Alternative*
- *C. Economic Duress*

V. Undue Influence
- *A. Nature of Undue Influence*
- *B. Determining Undue Influence*
  - *1. Relation between the Parties*
  - *2. Unfair Persuasion*

In a complex economy that depends on planning for the future, it is crucial that the law can be counted on to enforce contracts. In some situations, however, there are compelling reasons for permitting people to escape or *avoid* their contracts. An agreement obtained by force, trickery, unfair persuasion, or error is not the product of mutual and voluntary consent. A person who has made an agreement under these circumstances will be able to avoid it because his consent was not *real.*

This chapter discusses five doctrines that permit people to avoid their contracts because of the absence of real consent: misrepresentation, fraud, mistake, duress, and undue influence. Doctrines that involve similar considerations will be discussed in Chapter 14, Capacity to Contract, and in Chapter 15, Illegality.

Effect of Doctrines Discussed in This Chapter

Contracts induced by misrepresentation, fraud, mistake, duress, or undue influence are generally considered to be **voidable.** This means that the person whose consent was not real has the power to **rescind** (cancel) the contract. A person who rescinds a contract is entitled to the return of anything he gave the other party.

By the same token, he must offer to return anything he has received from the other party.

Necessity for Prompt and Unequivocal Rescission

Suppose Johnson, who recently bought a car from Sims Motors, learns that Sims Motors made fraudulent statements to her to induce her to buy the car. She believes the contract was induced by fraud and wants to rescind it. How does she act to protect her rights? To rescind a contract based on fraud or any of the other doctrines discussed in this chapter, she must act promptly and unequivocally. She must object promptly upon learning the facts that give her the right to rescind and must clearly express her intent to cancel the contract. She must also avoid any behavior that would suggest that she affirms or **ratifies** the contract. (Ratification of a voidable contract means that a person who had the right to rescind has elected not to do so. Ratification ends the right to rescind.) This means that she should avoid unreasonable delay in notifying the other party of her rescission, because unreasonable delay communicates that she has ratified the contract. She should also avoid any conduct that would send a "mixed message," such as continuing to accept benefits from the other party or behaving in any other way that is inconsistent with her expressed intent to rescind.

Misrepresentation and Fraud

Relationship between Misrepresentation and Fraud

A misrepresentation is an assertion that is not in accord with the truth. When a person enters a contract because of his justifiable reliance on a misrepresentation about some important fact, the contract is voidable.

It is not necessary that the misrepresentation be intentionally deceptive. Misrepresentations can be either "innocent" (not intentionally deceptive) or "fraudulent" (made with knowledge of falsity and intent to deceive). A contract may be voidable even if the person making the misrepresentation believes in good faith that what he says is true. Either innocent misrepresentation or fraud gives the complaining party the right to rescind a contract.

Fraud is the type of misrepresentation that is committed knowingly, with the intent to deceive. The legal term for this knowledge of falsity, which distinguishes fraud from innocent misrepresentation, is **scienter.** A person making a misrepresentation would be considered to do so "knowingly" if she knew that her statement was false, if she knew that she did not have a basis for making the statement, or even if she just made the statement without being confident that it was true. The intent to deceive can be inferred from the fact that the defendant knowingly made a misstatement of fact to a person who was likely to rely on it.

As is true for innocent misrepresentation, the contract remedy for fraudulent misrepresentation is rescission. The tort liability of a person who commits fraud is different from that of a person who commits innocent misrepresentation, however. A person who commits fraud may be liable for damages, possibly including punitive damages, for the tort of **deceit.**[1] As you will learn in following sections, innocent misrepresentation and fraud share a common core of elements.

Election of Remedies In some states, a person injured by fraud cannot rescind the contract *and* sue for damages for deceit; he must elect (choose) between these remedies. In other states, however, an injured party may pursue both rescission and damage remedies and does not have to elect between them.[2]

Requirements for Rescission on the Ground of Misrepresentation

The fact that one of the parties has made an untrue assertion does not in itself make the contract voidable. Courts do not want to permit people who have exercised poor business judgment or poor common sense to avoid their contractual obligations, nor do they want to grant rescission of a contract when there have been only minor and unintentional misstatements of

[1]The tort of deceit is discussed in Chapter 6, Intentional Torts.
[2]Under every state's law, however, a person injured by fraud in a contract for the *sale of goods* can both rescind the contract and sue for damages. This is made clear by section 2–721 of the Uniform Commercial Code, which specifically states that no election of remedies is required in contracts for the sale of goods.

relatively unimportant details. A drastic remedy such as rescission should be used only when a person has been seriously misled about a fact important to the contract by someone he had the right to rely on. A person seeking to rescind a contract on the ground of innocent or fraudulent misrepresentation must be able to establish each of the following elements:

1. An untrue assertion of fact was made.
2. The fact asserted was material *or* the assertion was fraudulent.
3. The complaining party entered the contract because of his reliance on the assertion.
4. The reliance of the complaining party was reasonable.

In tort actions in which the plaintiff is seeking to recover damages for deceit, the plaintiff would have to establish a *fifth* element: injury. He would have to prove that he had suffered actual economic injury because of his reliance on the fraudulent assertion. In cases in which the injured person seeks only rescission of the contract, however, proof of economic injury usually is not required.

Untrue Assertion of Fact To have misrepresentation, one of the parties must have made an untrue assertion of fact or engaged in some conduct that is the equivalent of an untrue assertion of fact. The fact asserted must be a *past or existing fact,* as distinguished from an opinion or a promise or prediction about some future happening.

The **concealment** of a fact through some active conduct intended to prevent the other party from discovering the fact is considered to be the equivalent of an assertion. Like a false statement of fact, concealment can be the basis for a claim of misrepresentation or fraud. For example, if Summers is offering his house for sale and paints the ceilings to conceal the fact that the roof leaks, his active concealment constitutes an assertion of fact.

Nondisclosure can also be the equivalent of an assertion of fact. Nondisclosure differs from concealment in that concealment involves the active hiding of a fact, while nondisclosure is the failure to volunteer information. Disclosure of a fact—even a fact that will harm the speaker's bargaining position—is required in a number of situations, such as when the person has already offered *some* information but further information is needed to give the other party an accurate picture, or when there is a relationship of trust and confidence between the parties. In recent years, courts and legislatures have tended to impose a duty to disclose when a party has access to information that is not readily available to the other party. This is consistent with modern contract law's emphasis on influencing ethical standards of conduct and achieving fair results. Transactions involving the sale of real estate are among the most common situations in which this duty to disclose arises. Most states now hold that a seller who knows about a latent (hidden) defect that materially affects the value of the property he is selling has the obligation to speak up about this defect. *Stambovsky v. Ackley,* which follows, involves an interesting application of the duty to disclose in the context of a sale of real estate.

Stambovsky v. Ackley *572 N.Y.S.2d 672 (N.Y. Sup. Ct. App. Div. 1991)*

Jeffrey Stambovsky, a resident of New York City, contracted to purchase a house in the Village of Nyack, New York, from Helen Ackley. The house was widely reputed to be possessed by poltergeists, which Ackley and members of her family had reportedly seen. Ackley did not tell Stambovsky about the poltergeists before he bought the house. When Stambovsky learned of the house's reputation, however, he promptly commenced this action for rescission. The trial court dismissed his complaint, and Stambovsky appealed.

Rubin, Justice The unusual facts of this case clearly warrant a grant of equitable relief to the buyer who, as a resident of New York City, cannot be expected to have any familiarity with the folklore of the Village of Nyack. Not being a "local," Stambovsky could not readily learn that the home he had contracted to purchase is haunted. Whether the source of the spectral apparitions seen by Ackley are parapsychic or psychogenic, having reported their presence in both a national publication

(*Reader's Digest*) and the local press (in 1977 and 1982, respectively), Ackley is estopped to deny their existence and, as a matter of law, the house is haunted. More to the point, however, no divination is required to conclude that it is Ackley's promotional efforts in publicizing her close encounters with these spirits which fostered the home's reputation in the community. In 1989, the house was included in a five-home walking tour of Nyack and described in a November 27th newspaper article as a "riverfront Victorian (with ghost)." The impact of the reputation thus created goes to the very essence of the bargain between the parties, greatly impairing both the value of the property and its potential for resale.

[The court discussed the fact that New York law does not recognize a remedy for damages incurred as a result of the seller's mere silence, applying instead the doctrine of caveat emptor. The court then proceeded to discuss the availability of rescission.]

From the perspective of a person in the position of the plaintiff, a very practical problem arises with respect to the discovery of a paranormal phenomenon: "Who you gonna call?" as the title song to the movie *Ghostbusters* asks. Applying the strict rule of *caveat emptor* to a contract involving a house possessed by poltergeists conjures up visions of a psychic or medium routinely accompanying the structural engineer and Terminix man on an inspection of every home subject to a contract of sale. The doctrine of *caveat emptor* requires that a buyer act prudently to assess the fitness and value of his purchase. It should be apparent, however, that the most meticulous inspection and the search would not reveal the presence of poltergeists at the premises or unearth the property's ghoulish reputation in the community. Therefore, there is no sound policy reason to deny Stambovsky relief for failing to discover a state of affairs which the most prudent purchaser would not be expected to even contemplate.

Where a condition which has been created by the seller materially impairs the value of the contract and is peculiarly within the knowledge of the seller or unlikely to be discovered by a prudent purchaser exercising due care, nondisclosure constitutes a basis for rescission as a matter of equity. Any other outcome places upon the buyer not merely the obligation to exercise care in his purchase but rather to be omniscient with respect to any fact which may affect the bargain. No practical purpose is served by imposing such a burden upon a purchaser. To the contrary, it encourages predatory business practice and offends the principle that equity will suffer no wrong to be without a remedy.

In the case at bar, Ackley deliberately fostered the public belief that her home was possessed. Having undertaken to inform the public at large, to whom she has no legal relationship, about the supernatural occurrences on her property, she may be said to owe no less a duty to her contract vendee. Application of the remedy of rescission is entirely appropriate to relieve the unwitting purchaser from the consequences of a most unnatural bargain.

Judgment modified in favor of Stambovsky, reinstating his action seeking rescission of the contract.

Materiality If the misrepresentation was innocent, the person seeking to rescind the contract must establish that the fact asserted was **material.** A fact will be considered to be material if it is likely to play a significant role in inducing a reasonable person to enter the contract or if the person asserting the fact knows that the other person is likely to rely on the fact. For example, Rogers, who is trying to sell his car to Ferguson and knows that Ferguson idolizes professional bowlers, tells Ferguson that a professional bowler once rode in the car. Relying on that representation, Ferguson buys the car. Although the fact Rogers asserted might not be important to most people, it would be material here because Rogers knew that his representation would be likely to induce Ferguson to enter the contract.

Even if the fact asserted was not material, the contract may be rescinded if the misrepresentation was *fraudulent.* The rationale for this rule is that a person who fraudulently misrepresents a fact, even one that is not material under the standards previously discussed, should not be able to profit from his intentionally deceptive conduct.

Actual Reliance Reliance means that a person pursues some course of action because of his faith in an assertion made to him. For misrepresentation to exist,

Concept Review

Misrepresentation and Fraud

	Innocent Misrepresentation	Fraud
Remedy	Rescission	Rescission *and/or* tort action for damages
Elements	1. Untrue assertion of fact (or equivalent) 2. Assertion relates to material fact 3. Actual reliance 4. Justifiable reliance	1. Untrue assertion of fact (or equivalent) 2. Assertion made with knowledge of falsity (scienter) and intent to deceive 3. Actual reliance 4. Justifiable reliance 5. Economic loss (in a tort action for damages)

there must have been a causal connection between the assertion and the complaining party's decision to enter the contract. If the complaining party knew that the assertion was false or was not aware that an assertion had been made, there has been no reliance.

Justifiable Reliance Courts also scrutinize the reasonableness of the behavior of the complaining party by requiring that his reliance be *justifiable.* A person does not act justifiably if he relies on an assertion that is obviously false or not to be taken seriously.

One problem involving the justifiable reliance element is determining the extent to which the relying party is responsible for investigating the accuracy of the statement on which he relies. Classical contract law held that a person who did not attempt to discover readily discoverable facts generally was not justified in relying on the other party's statements about them. For example, under traditional law, a person would not be entitled to rely on the other party's assertions about facts that are a matter of public record or that could be discovered through a reasonable inspection of available documents or records. The extent of the responsibility placed on a relying party to conduct an independent investigation has declined in modern contract law, however. Today, a court might be more likely to follow the approach of section 172 of the *Restatement,* which provides that a relying party's failure to discover facts before entering the contract does not make his reliance unjustifiable unless the degree of his fault was so extreme as to amount to a failure to act in good faith and in accordance with reasonable standards of fair dealing. Thus, today's courts tend to place a greater degree of accountability on the person who makes the assertion rather than the person who relies on the assertion.

Mistake

Nature of Mistake

Anyone who enters a contract does so on the basis of his understanding of the facts that are relevant to the contract. His decision about what he is willing to exchange with the other party is based on this understanding. If the parties are wrong about an important fact, the exchange that they make is likely to be quite different than what they contemplated when they entered the contract, and this difference is due to simple error rather than to any external events such as an increase in market price. For example, Fox contracts to sell to Ward a half-carat stone, which both believe to be a tourmaline, at a price of $65. If they are wrong and the stone is actually a diamond worth at least $2,500, Fox will have suffered an unexpected loss and Ward will have reaped an unexpected gain. The contract would not have been made at a price of $65 if the parties' belief about the nature of the stone had been in accord with the facts. In such cases, the person adversely affected by the mistake can avoid the contract under the doctrine of mistake. The purpose of the doctrine of mistake is to prevent unexpected and unbargained for losses that result when the parties are mistaken about a fact central to their contract.

What Is a Mistake? In ordinary conversation, we may use the term *mistake* to mean an error in judgment or an unfortunate act. In contract law, however, a mistake is a *belief* about a fact that is *not in accord with the truth.*[3] The mistake must relate to facts as they exist at the time the contract is created. An erroneous belief or prediction about facts that might occur in the future would not qualify as a mistake.

As in misrepresentation cases, the complaining party in a mistake case enters a contract because of a belief that is at variance with the actual facts. Mistake is unlike misrepresentation, however, in that the erroneous belief is not the result of the other party's untrue statements.

Mistakes of Law A number of the older mistake cases state that mistake about a principle of law will not justify rescission. The rationale for this view was that everyone was presumed to know the law. More modern cases, however, have granted relief even when the mistake is an erroneous belief about some aspect of law.

Negligence and the Right to Avoid for Mistake Although courts sometimes state that relief will not be granted when a person's mistake was caused by his own negligence, they often have granted rescission even when the mistaken party was somewhat negligent. Section 157 of the *Restatement (Second) of Contracts* focuses on the *degree* of a party's negligence in making the mistake. It states that a person's fault in failing to know or discover facts before entering the contract will not bar relief unless his fault amounted to a failure to act in good faith.

Effect of Mistake The mere fact that the contracting parties have made a mistake is not, standing alone, a sufficient ground for avoidance of the contract. The right to avoid a contract because of mistake depends on several factors that are discussed in following sections. One important factor that affects the right to avoid is whether the mistake was made by just one of the parties (**unilateral mistake**) or by both parties (**mutual mistake**).

Mutual Mistakes in Drafting Writings Sometimes, mutual mistake takes the form of erroneous *expression* of an agreement, frequently caused by a clerical error in drafting or typing a contract, deed, or other document. In such cases, the remedy is *reformation* of the writing rather than avoidance of the contract. Reformation means modification of the written instrument to express the agreement that the parties made but failed to express correctly. Suppose Arnold agrees to sell Barber a vacant lot next to Arnold's home. The vacant lot is "Lot 3, block 1"; Arnold's home is on "Lot 2, block 1." The person typing the contract strikes the wrong key, and the contract reads, "Lot 2, block 1." Neither Arnold nor Barber notices this error when they read and sign the contract, yet clearly they did not intend to have Arnold sell the lot on which his house stands. In such a case, a court will reform the contract to conform to Arnold and Baker's true agreement.

Requirements for Mutual Mistake

A mutual mistake exists when both parties to the contract have erroneous assumptions about the same fact. When *both* parties are mistaken, the resulting contract can be avoided if the three following elements are present:

1. The mistake relates to a basic assumption on which the contract was made.
2. The mistake has a material effect on the agreed-upon exchange.
3. The party adversely affected by the mistake does not bear the risk of the mistake.[4]

Mistake about a Basic Assumption Even if the mistake is mutual, the adversely affected party will not have the right to avoid the contract unless the mistake concerns a basic assumption on which the contract was based. Assumptions about the identity, existence, quality, or quantity of the subject matter of the contract are among the basic assumptions on which contracts typically are founded. It is not necessary that the parties be consciously aware of the assumption; an assumption may be so basic that they take it for granted. For example, if Peterson contracts to buy a house from Tharp, it is likely that both of them assume at the time of contracting that the house is in existence and that it is legally permissible for the house to be used as a residence.

An assumption would not be considered a basic assumption if it concerns a matter that bears an indirect or collateral relationship to the subject matter of the contract. For example, mistakes about matters such as

[3] *Restatement (Second) of Contracts* § 151.

[4] *Restatement (Second) of Contracts* § 152.

a party's financial ability or market conditions usually would not give rise to avoidance of the contract.

Material Effect on Agreed-Upon Exchange It is not enough for a person claiming mistake to show that the exchange is something different from what he expected. He must show that the imbalance caused by the mistake is so severe that it would be unfair for the law to require him to perform the contract. He will have a better chance of establishing this element if he can show not only that the contract is *less* desirable for him because of the mistake but also that the other party has received an unbargained-for advantage.

Party Harmed by Mistake Did Not Bear the Risk of Mistake Even if the first two elements are present, the person who is harmed by the mistake cannot avoid the contract if he is considered to bear the risk of mistake.[5] Courts have the power to allocate the risk of a mistake to the adversely affected person whenever it is reasonable under the circumstances to do so.

One situation in which an adversely affected person would bear the risk of mistake is when he has expressly contracted to do so. For example, if Buyer contracted to accept property "as is," he may be considered to have accepted the risk that his assumption about the quality of the property may be erroneous.

The adversely affected party also bears the risk of mistake when he contracts with *conscious awareness* that he is ignorant or has limited information about a fact—in other words, he *knows that he does not know* the true state of affairs about a particular fact but he binds himself to perform anyway. Suppose someone gives you an old, locked safe. Without trying to open it, you sell it and "all of its contents" to one of your friends for $25. When your friend succeeds in opening the safe, he finds $10,000 in cash. In this case, you would not be able to rescind the contract because, in essence, you gambled on your limited knowledge . . . and lost. *State of Alaska v. Carpenter,* which follows, illustrates the effect of conscious awareness and contractual assignments of risk.

[5] *Restatement (Second) of Contracts* § 154.

State of Alaska v. Carpenter *268 P.2d 1181 (Sup. Ct. Alaska 1994)*

In April of 1978 and April of 1981, Wayne Carpenter entered into two separate purchases of land from an agency of the State of Alaska. The land sale contracts for both transactions contained the same disclaimer:

> The Seller makes no warranty, express or implied, nor assumes any liability whatever, regarding the social, economic, or environmental aspects of the Parcel, to include, without limitation, the soil conditions, water drainage, or natural or artificial hazards.

The contracts also disclaimed any guaranty of profitability. In addition, the contracts included farm conservation or development plans, requiring the buyer to improve and develop the land as a working farm. In 1980 and 1983, Carpenter borrowed money from the Agricultural Revolving Loan Fund (ARLF), a state agency created to lend money to farmers to help them develop their land.

Carpenter made repeated efforts over the years to plant, but these efforts were unsuccessful. Spring flooding of the land became a perennial problem. As soon as the ground thawed in June, the water table rose and the land became too wet to support the equipment required for planting. In 1987, Carpenter abandoned efforts to farm the land. The land was reclassified as unsuitable for agriculture. Carpenter ceased making payments toward his ARLF loans. ARLF filed an action for damages, repossession, and foreclosure. Carpenter claimed he was excused from performing the contracts because of mutual mistake and misrepresentation, among other reasons. The trial court denied the State's motion for a directed verdict as to misrepresentation and mutual mistake of fact, and the jury found that Carpenter was excused from his duty to repay the loans. The trial court entered judgment on the verdict and the State appealed.

Compton, Justice Carpenter contends that both he and the State held an honest but mistaken belief that the land could be farmed. He argues that he was not consciously uncertain of the suitability of the land for agriculture. The State contends that the disclaimer clauses are unrebutted evidence of

Carpenter's awareness of the possibility that the land might not be suitable for agriculture. Further, the disclaimers placed the risk of potential problems with the land on Carpenter. The State also argues that there was no showing that the character of the land was part of the assumption of the loan contracts. The State emphasizes that the record is devoid of any evidence that the loans were to be paid from Carpenter's agricultural earnings, or that they were in any way linked to the success of Carpenter's farming efforts.

Under Alaska law, judicial relief from a contract on the basis of mutual mistake is proper where there was a mistake of both parties at the time of contracting as to a basic assumption on which the contract was made; the mistake had a material effect on the agreed exchange of performances; and the party seeking relief did not bear the risk of the mistake. We agree with the State that the law distinguishes between mistakes concerning the nature of the subject matter of a contract and conscious uncertainty concerning that nature. John Calamari & Joseph M. Perillo, Contracts 9–26, at 382 (3d. ed. 1987) "Where there is conscious uncertainty there is an assumption of the risk that the resolution of the uncertainty may be unfavorable." *Id.* The State correctly asserts that the detailed disclaimers of warranty as to the condition of the land demonstrate that Carpenter was consciously uncertain as to the character of the land. Furthermore, the State correctly contends that even if Carpenter was not consciously uncertain as to the character of the land, he failed to demonstrate that he did not contractually bear the risk of the mistake. The disclaimers in the land sale contracts place the risk of the condition of the land on Carpenter. The contracts provide: "The Seller does not warrant by such classification that the land is suited for [agricultural] use, nor does the Seller make any warranty, express or implied, that the use by the Purchaser under such classification shall be profitable." In addition, a contractual provision provided that Carpenter "had examined the description of the parcel, had inspected the parcel, or had voluntarily declined to do so, and was satisfied with [its] description and condition." These provisions demonstrate that the risk of the condition of the land was allocated to Carpenter.

Although both parties may have intended that the land be developed for agricultural purposes, the disclaimers in the land sale contracts stand as unrebutted evidence that both parties were consciously uncertain of the suitability of the land for such a purpose. In addition, Carpenter contractually bore the risk of the condition of the land. The discharge of Carpenter's duty to pay the ARLF loans, based on mutual mistake, cannot stand. Therefore, we hold as a matter of law that the superior court should have granted the State's motion for a directed verdict as to the mutual mistake of fact claim.

Carpenter attempted to avoid his duty to repay the ARLF loans and also attempted to rescind the land sale contracts based upon the State's alleged misrepresentation of the nature of the land. Carpenter contends that despite the disclaimers in the land sale contracts, the jury could have reasonably found that the State Division of Agriculture, which oversees the "farm program and which, through its agent, [a loan examiner], advised [him] that there was money available to borrow through the ARLF, was holding out by implication that the land to be improved and developed was farmable land." He contends that the purpose of the State's loans to him was the development of his farm, consistent with the development plans incorporated in the land sale contracts. Carpenter admits that the State's alleged representations that continuous working of the land would dry it out over a period of years were made only after he had signed the land sale contracts and borrowed through the notes sued upon. Thus, these representations could not have induced him to enter the contracts. Further, his contention that he was justified in believing that the State would not sell land and make agricultural loans if the land was not suitable for agricultural development is without merit, considering the specific disclaimers in the land sale contracts. Viewing the evidence and the reasonable inference therefrom in the light most favorable to Carpenter, we conclude that fair minded jurors could not differ as to whether the State misrepresented to Carpenter the suitability of the land for agriculture, thus inducing him to enter into the land sale contracts or to enter into the loan agreements. The superior court erred in not directing a verdict in the State's favor on this misrepresentation claim.

Reversed and remanded in favor of the State of Alaska.

Requirements for Unilateral Mistake

A unilateral mistake exists when only one of the parties makes a mistake about a basic assumption on which he made the contract. For example, Plummer contracts to buy from Taylor 25 shares of Worthwright Enterprises, Inc., mistakenly believing that he is buying 25 shares of the much more valuable Worthwrite Industries. Taylor knows that the contract is for the sale of shares of Worthwright. Taylor (the "nonmistaken party") is correct in his belief about the identity of the stock he is selling; only Plummer (the "mistaken party") is mistaken in his assumption about the identity of the stock. Does Plummer's unilateral mistake give him the right to avoid the contract? Courts are more likely to allow avoidance of a contract when both parties are mistaken than when only one is mistaken. The rationale for this tendency is that in cases of unilateral mistake, at least one party's assumption about the facts was correct, and allowing avoidance disappoints the reasonable expectations of that nonmistaken party.

It is possible to avoid contracts for unilateral mistake, but to do so, proving the elements necessary for mutual mistake is just a starting point. *In addition to* proving the elements of mistake discussed earlier, a person trying to avoid on the ground of unilateral mistake must show *either* one of the following:

1. *The nonmistaken party caused or had reason to know of the mistake.* Courts permit avoidance in cases of unilateral mistake if the nonmistaken party caused the mistake, knew of the mistake, or even if the mistake was so obvious that the nonmistaken party had reason to realize that a mistake had been made.[6] For example, Ace Electrical Company makes an error when preparing a bid that it submits to Gorge General Contracting. If the mistake in Ace's bid was so obvious that Gorge knew about it when it accepted Ace's offer, Ace could avoid the contract even though Ace is the only party who was mistaken. The reasoning behind this rule is that the nonmistaken person could have prevented the loss by acting in good faith and informing the person in error that he had made a mistake. It also reflects the judgment that people should not take advantage of the mistakes of others. *Or*

2. *It would be unconscionable to enforce the contract.* A court could also permit avoidance because of unilateral mistake when the effect of the mistake was such that it would be unconscionable to enforce the contract. To show that it would be unconscionable to enforce the contract, the mistaken party would have to show that the consequences of the mistake were severe enough that it would be unreasonably harsh or oppressive to enforce the contract.[7] In the example above, Ace Electrical Company made an error when preparing a bid that it submits to Gorge General Contracting. Suppose that Gorge had no reason to realize that a mistake had been made, and accepted the bid. Ace might show that it would be unconscionable to enforce the contract by showing that not only will its profit margin not be what Ace contemplated when it made its offer, but also that it would suffer a grave loss by having to perform at the mistaken price.

[6] *Restatement (Second) of Contracts* § 153.
[7] The concept of unconscionability is developed more fully in Chapter 15.

Concept Review

Avoidance on the Ground of Mistake

	Mutual Mistake	Unilateral Mistake
Description	Both parties mistaken about same fact	Only one party mistaken about a fact
Needed for Avoidance of Contract	Elements of mistake: 1. Mistake about basic assumption on which contract was made 2. Material effect on agreed exchange 3. Person adversely affected by mistake does not bear the risk of the mistake	Same elements as mutual mistake *Plus* *a.* Nonmistaken party caused mistake or had reason to know of mistake *Or* *b.* Effect of mistake is to make it unconscionable to enforce contract

Duress

Nature of Duress

Duress is wrongful coercion that induces a person to enter or modify a contract. One kind of duress is physical compulsion to enter a contract. For example, Thorp overpowers Grimes, grasps his hand, and forces him to sign a contract. This kind of duress is rare, but when it occurs, a court would find that the contract was **void.** A far more common type of duress occurs when a person is induced to enter a contract by a *threat* of physical, emotional, or economic harm. In these cases, the contract is considered *voidable* at the option of the victimized person. This is the form of duress addressed in this chapter.

The elements of duress have undergone dramatic changes. Classical contract law took a very narrow view of the type of coercion that constituted duress, limiting duress to threats of imprisonment or serious physical harm. Today, however, courts take a much broader view of the types of coercion that will constitute duress. For example, modern courts recognize that threats to a person's economic interests can be duress.

Requirements for Duress

To rescind a contract because of duress, one must be able to establish both of the following elements:

1. The contract was induced by an improper threat.
2. The victim had no reasonable alternative but to enter the contract.

Improper Threat It would not be desirable for courts to hold that every kind of threat constituted duress. If they did, the enforceability of all contracts would be in question, because every contract negotiation involves at least the implied threat that a person will not enter into the transaction unless her demands are met. What degree of wrongfulness, then, is required for a threat to constitute duress? Traditionally, a person would have to threaten to do something she was not legally entitled to do—such as threaten to commit a crime or a tort—for that threat to be duress. Some courts still follow that rule. Other courts today follow the *Restatement* position that, to be duress, the threat need not be wrongful or illegal but must be *improper*—that is, improper to use as leverage to induce a contract.

Under some circumstances, threats to institute legal actions can be considered improper threats that will constitute duress. A threat to file either a civil or a criminal suit without a legal basis for doing so would clearly be improper. What of a threat to file a well-founded lawsuit or prosecution? Generally, if there is a good faith dispute over a matter, a person's threat to file a lawsuit to resolve that dispute is *not* considered to be improper. Otherwise, every person who settled a suit out of court could later claim duress. However, if the threat to sue is made in bad faith and for a purpose unrelated to the issues in the lawsuit, the threat can be considered improper. In one case, for example, duress was found when a husband who was in the process of divorcing his wife threatened to sue for custody of their children—something he had the right to do—unless the wife transferred to him stock that she owned in his company.[8]

Victim Had No Reasonable Alternative The person complaining of duress must be able to prove that the coercive nature of the improper threat was such that he had no reasonable alternative but to enter or modify the contract. Classical contract law applied an objective standard of coercion, which required that the degree of coercion exercised had to be sufficient to overcome the will of a person of ordinary courage. The more modern standard for coercion focuses on the alternatives open to the complaining party. For example, Barry, a traveling salesman, takes his car to Cheatum Motors for repair. Barry pays Cheatum the full amount previously agreed upon for the repair, but Cheatum refuses to return Barry's car to him unless Barry agrees to pay substantially more than the contract price for the repairs. Because of his urgent need for the return of his car, Barry agrees to do this. In this case, Barry technically had the alternative of filing a legal action to recover his car. However, this would not be a *reasonable alternative* for someone who needs the car urgently because of the time, expense, and uncertainty involved in pursuing a lawsuit. Thus, Barry could avoid his agreement to pay more money under a theory of duress.

Economic Duress

Today, the doctrine of duress is often applied in a business context. *Economic duress,* or *business compulsion,* are terms commonly used to describe situations in which one person induces the formation or modification of a contract by threatening another person's economic interests. A common coercive strategy is to threaten to

[8] *Link v. Link,* 179 S.E.2d 697 (1971).

breach the contract unless the other party agrees to modify its terms. For example, Moore, who has contracted to sell goods to Stephens, knows that Stephens needs timely delivery of the goods. Moore threatens to withhold delivery unless Stephens agrees to pay a higher price. Another common situation involving economic duress occurs when one of the parties offers a disproportionately small amount of money in settlement of a debt and refuses to pay more. Such a strategy exerts great economic pressure on a creditor who is in a desperate financial situation to accept the settlement because he cannot afford the time and expense of bringing a lawsuit.

Classical contract law did not recognize economic duress because this type of hard bargaining was considered neither improper nor coercive. After all, the victim of the sorts of economic pressure described above had at least the theoretical right to file a lawsuit to enforce his rights under the contract. Modern courts recognize that improper economic pressure can prevent a resulting contract or contract modification from being truly voluntary, and the concept of economic duress is well accepted today.

Undue Influence

Nature of Undue Influence

Undue influence is unfair persuasion. Like duress, undue influence involves wrongful pressure exerted on a person during the bargaining process. In undue influence, however, the pressure is exerted through *persuasion* rather than through coercion. The doctrine of undue influence was developed to give relief to persons who are unfairly persuaded to enter a contract while in a position of weakness that makes them particularly vulnerable to being preyed upon by those they trust or fear. A large proportion of undue influence cases arise after the death of the person who has been the subject of undue influence, when his relatives seek to set aside that person's contracts or wills.

Determining Undue Influence

All contracts are based on persuasion. There is no precise dividing line between permissible persuasion and impermissible persuasion. Nevertheless, several hallmarks of undue influence cases can be identified. Undue influence cases normally involve both of the following elements:

1. The relationship between the parties is either one of trust and confidence or one in which the person exercising the persuasion dominates the person being persuaded.
2. The persuasion is unfair.[9]

Relation between the Parties Undue influence cases involve people who, though they have capacity to enter a contract, are in a position of particular vulnerability in relationship to the other party to the contract. This relationship can be one of trust and confidence, in which the person being influenced justifiably believes that the other party is looking out for his interests, or at least that he would not do anything contrary to his welfare. Examples of such relationships would include parent and child, husband and wife, or lawyer and client.

The relationship also can be one in which one of the parties holds dominant psychological power that is not derived from a confidential relationship. For example, Royce, an elderly man, is dependent on his housekeeper, Smith, to care for him. Smith persuades Royce to withdraw most of his life savings from the bank and make an interest-free loan to her. If the persuasion Smith used was unfair, the transaction could be avoided because of undue influence.

Unfair Persuasion The mere existence of a close or dependent relationship between the parties that results in economic advantage to one of them is not sufficient for undue influence. It must also appear that the weaker person entered the contract because he was subjected to unfair methods of persuasion. In determining this, a court will look at all of the surrounding facts and circumstances. Was the person isolated and rushed into the contract, or did he have access to outsiders for advice and time to consider his alternatives? Was the contract discussed and consummated in the usual time and place that would be expected for such a transaction, or was it discussed or consummated at an unusual time or in an unusual place? Was the contract a reasonably fair one that a person might have entered voluntarily, or was it so lopsided and unfair that one could infer that he probably would not have entered it unless he had been unduly influenced by the other party? The answers to these and similar questions help determine whether the line between permissible and impermissible persuasion has been crossed. The following *Goldman* case provides an example of the factors that courts consider in determining undue influence.

[9] *Restatement (Second) of Contracts* § 177.

Goldman v. Bequai *19 F.3d 666 (D.C. Cir. 1994)*

Florence Goldman was a woman in her 80s whose husband died after a long bout with Alzheimer's and Parkinson's diseases. For several years prior to her husband's death, Goldman had cared for him at home. During much of her husband's illness and for some time afterward, she was under the care of a psychiatrist, who treated her for depression stemming from the strain and grief she experienced because of her husband's declining health. August Bequai was an attorney and a long-time friend whom Goldman regarded as almost a member of her family. After the death of Goldman's husband, she looked to Bequai as her adviser and attorney in financial affairs.

Goldman, her son, and Bequai discussed starting a business that would employ both Goldman and her son. According to Goldman and her son, Bequai had told them that he needed to be listed as an owner of property that Goldman owned on Massachusetts Avenue in Washington, D.C., in order adequately to represent the Goldmans' interests during negotiations over the property. Bequai allegedly told Goldman's son that the transfer would be temporary and solely for the limited purpose of inflating his financial worth on paper while he looked for a business to invest in. In January 1986, three months after her husband's death, Goldman conveyed to Bequai joint tenancy with a right of survivorship (a form of joint ownership) in her condominium in Bethesda, Maryland, and a partnership interest in the Massachusetts Avenue property, for $10 consideration for the transfer of each property.

Goldman had no legal counsel or independent advice of any sort, and she alleges that Bequai did not fully explain the nature of the transactions to her. There were no witnesses to the transactions other than the notary. The Massachusetts Avenue property was sold in 1990 and the proceeds attributed to the Goldman/Bequai partnership were distributed to them. Both Bequai and Goldman were represented at the closing by an attorney hired by Bequai. After the sale of the property, Bequai accompanied Goldman to the bank, where both placed their proceeds in investment accounts that were opened that day. Bequai placed his money in an account he owned jointly with his wife, whereas Goldman placed her share in a joint account with Bequai.

Eventually, Goldman came to feel that Bequai had "deceived" her. In 1991, she brought several claims against Bequai, including fraud and breach of fiduciary duty. The trial court granted a summary judgment for Bequai on the ground that the three-year statute of limitations had run on Goldman's claim. Goldman appealed this ruling, arguing in part that the statute of limitations should be equitably tolled (that is, that time for filing suit should be extended) because Bequai had exercised undue influence on her.

Edwards, Circuit Judge Goldman argued directly and unequivocally that Bequai obtained a joint tenancy in her real estate holdings through the exercise of undue influence over her. Undue influence is a contract doctrine which serves to equitably toll the statute of limitations.

Situations amounting to undue influence may be found when "a party in whom another reposes confidence misuses that confidence to gain his own advantage while the other has been made to feel that the party in question will not act against his welfare." SAMUEL WILLISTON, 13 WILLISTON ON CONTRACTS section 1625 at 776–77.

Whether a plaintiff is subject to undue influence is a question of fact. Both Williston and the *Restatement (Second) of Contracts* agree that the alleged victim's advanced age, mental condition and poor health, as well as the consideration a defendant gave for the benefit conferred by a plaintiff, are factors to be considered in establishing undue influence. Although the District Court made much of the fact that Goldman's psychiatrist stated that she was not mentally *incompetent,* this fact is hardly dispositive of the undue influence issue. Indeed, Williston specifically states that "[u]ndue influence in its essential elements has no real relation to mental incapacity." 13 WILLISTON section 1625 at 782.

It is a matter of basic contract law that if a plaintiff proves undue influence, the statute of limitations is equitably tolled so long as the influence continues. Goldman has alleged facts which a reasonable jury could find to constitute undue influence. She has suggested that her age, her lack of business experience, her long friendship with and reliance on Bequai, and

her mental condition all made her susceptible to Bequai's manipulation. In addition, Goldman argues that Bequai was acting as her attorney, and that he accordingly had both additional influence over her and additional obligations to see to her welfare. Goldman also points to the paltry consideration she received for the enormous benefit she conferred on Bequai. These factors, if proven at trial, have the makings of a classic case of undue influence.

Reversed and remanded for further proceedings in favor of Goldman.

Concept Review

Wrongful Pressure in the Bargaining Process

	Duress	Undue Influence
Nature of Pressure	Coercion	Unfair persuasion of susceptible individual
Elements	1. Contract induced by improper threat	1. Relationship of trust and confidence or dominance
	2. Threat leaves party no reasonable alternative but to enter or modify contract	2. Unfair persuasion

Ethical and Public Policy Concerns

1. You read that modern contract law has expanded the circumstances under which a contracting party has the duty to disclose facts material to the contract. Keep in mind that the facts that he is required to disclose would almost always harm his bargaining position—otherwise, he would have been only too happy to have volunteered the information. What are some ethical and public policy justifications for requiring an individual to volunteer information that is contrary to his interests?

2. Do you think the legal rules applied today regarding misrepresentation and duress encourage a higher standard of ethical dealing than did the legal rules applicable under classical contract law?

3. In this chapter, you learned a circumstance under which a contracting party owes a higher duty of conduct to someone with whom he is in a relationship of trust and confidence than he would owe to individuals with whom he stood in an arm's-length relationship. What is the justification for requiring a higher standard of ethical dealing in such relationships? Would you favor the law's imposing the same high standards of conduct in relation to the rest of the world? Why or why not?

Problems and Problem Cases

1. Mestrovic, the widow of an internationally known sculptor and artist, owned a large number of works of art created by her late husband. Mestrovic died, leaving a will in which she directed that all the works of art created by her husband were to be sold and the proceeds distributed to surviving members of the Mestrovic family. Mestrovic also owned real estate at the time of her death. 1st Source Bank, as the personal representative of the Mestrovic estate, entered into a contract to sell this real estate to the Wilkins. After taking possession of the property, the Wilkins complained to the bank that the property was left in a cluttered condition and would require substantial cleaning efforts. The trust officer of the bank offered the Wilkins two options: Either the bank would get a rubbish removal

service to clean the property or the Wilkins could clean the property and keep any items of personal property they wanted. The Wilkins opted to clean the property themselves. At the time these arrangements were made, neither the bank nor the Wilkins suspected that any works of art remained on the property. During the cleanup efforts, the Wilkins found eight drawings apparently created by Mestrovic's husband. They also found a plaster sculpture of the figure of Christ with three small children. The Wilkins claimed ownership of these works of art by virtue of their agreement with the bank. The bank claimed that there was no agreement for the sale of the artwork and that there had been mutual mistake. Is the bank correct?

2. Zeilinger was employed by the SOHIO Alaska Petroleum Company (SAPC). SAPC notified Zeilinger that a reduction in force (RIF) necessitated her termination as of September 30, 1985. Apparently as part of this notification, SAPC offered her an "Involuntary Separation Program." This program consisted of various benefits, worth approximately $10,000. To receive the benefits, Zeilinger was required to sign a separation agreement which, in part, released SAPC from any legal liability in connection with the discharge. The benefits offered Zeilinger included severance pay and three months' life and medical insurance coverage. Zeilinger, along with two other workers who had received RIF notices, met with SAPC management officials shortly after her RIF notification. At that meeting, SAPC denied Zeilinger's request for additional time within which to consider whether to sign the agreement, and refused to allow her to make any alterations to the agreement. After the meeting, Zeilinger consulted a lawyer, who told her that if she signed the agreement she was giving up her right to challenge it. After hearing about Zeilinger's finances, however, the lawyer opined that her economic situation might allow her to challenge the agreement on grounds of economic duress. Several days later, Zeilinger contacted counsel again, after learning that SAPC was inviting other employees to apply for her position. The lawyer then told her that such action might also provide a ground for challenging the document, should she decide to sign it. On September 16, 1985, Zeilinger signed the separation agreement and accepted the severance benefits offered by SAPC. According to Zeilinger, she did so because she felt her economic situation left her no choice. Even before the termination, her obligations exceeded her income by about $2,000 per month. Family medical problems made her feel that she could not forgo the medical insurance which would only be available if she signed the agreement. Moreover, there is evidence in the record from which a jury could reasonably conclude that SAPC was aware of her financial situation. When Zeilinger endorsed the check that she received as part of the separation package, she wrote on it "partial payment accepted under protest." Later, Zeilinger sued SAPC to rescind the separation agreement and brought an action for wrongful discharge. One of her theories for rescinding the severance agreement was that it was voidable because she had been under economic duress. Will she be successful in asserting economic duress?

3. The Verbas sold the Rancourts a lakeshore lot in North Hero, Vermont, for $115,000. The Verbas knew that the Rancourts intended to build a residence on the lot in close proximity to the lakeshore. The Rancourts prepared the lakeshore building site by adding fill, but because this site preparation was done without permits, it violated state and federal wetland regulations. They were later ordered to remove all fill placed on the building site. On learning that they could not build near the lake, the Rancourts demanded that the Verbas rescind the transaction, refund the purchase price, and pay damages. The Verbas refused and the Rancourts brought a rescission action based on mutual mistake. Will they win?

4. Odorizzi, an elementary school teacher, was arrested on criminal charges involving illegal sexual activity. After he was arrested, questioned by police, booked, and released on bail, and had gone 40 hours without sleep, he was visited in his home by the superintendent of the school district and the principal of his school. They told him that they were trying to help him and that they had his best interests at heart. They advised him to resign immediately, stating that there was no time to consult an attorney. They said that if he did not resign immediately, the district would dismiss him and publicize the proceedings, but that if he resigned at once, the incident would not be publicized and would not jeopardize his chances of securing employment as a teacher elsewhere. Odorizzi gave them a written letter of resignation, which they accepted. The criminal charges against Odorizzi were later dismissed, and he sought to resume his employment. When the school district refused to reinstate him, Odorizzi attempted to rescind his letter of resignation on several grounds, including undue influence. (He

also alleged duress, but the facts of his case did not constitute duress under applicable state law.) Can Odorizzi avoid the contract on the ground of undue influence?

5. The Walkers owned property in Eagle River, Alaska. In 1976, they listed the property for sale with a real estate broker. They signed a multiple listing agreement, which described the property as having 580 feet of highway frontage and stated, "ENGINEER REPORT SAYS OVER 1 MILLION IN GRAVEL ON PROP." A later listing contract signed with the same broker described the property as having 580 feet of highway frontage, but listed the gravel content as "minimum 80,000 cubic yds of gravel." An appraisal prepared to determine the property's value stated that it did not take any gravel into account, but described the ground as "all good gravel base." Cousineau, a contractor who was also in the gravel extraction business, became aware of the property when he saw the multiple listing. After visiting the property with his real estate broker and discussing gravel extraction with Mr. Walker, Cousineau offered to purchase the property. He then attempted to determine the lot's road frontage but was unsuccessful because the property was covered with snow. He was also unsuccessful in obtaining the engineer's report allegedly showing "over 1 million in gravel." Walker admitted at trial that he had never seen a copy of the report, either. Nevertheless, the parties signed and consummated a contract of sale for the purchase price of $385,000. There was no reference to the amount of highway frontage in the purchase agreement. After the sale was completed, Cousineau began developing the property and removing gravel. Cousineau learned that the description of highway frontage contained in the real estate listing was incorrect when a neighbor threatened to sue him for removing gravel from the neighbor's adjacent lot. A subsequent survey revealed that the highway frontage was 410 feet—not 580 feet, as advertised. At about the same time, the gravel ran out after Cousineau had removed only 6,000 cubic yards. Cousineau stopped making payments and informed the Walkers of his intention to rescind the contract. Cousineau brought an action against the Walkers, seeking the return of his money. Does Cousineau have the right to rescind?

6. Boskett, a part-time coin dealer, paid $450 for a dime purportedly minted in 1916 at Denver and two additional coins of relatively small value. After carefully examining the dime, Beachcomber Coins, a retail coin dealer, bought the coin from Boskett for $500. Beachcomber then received an offer from a third party to purchase the dime for $700, subject to certification of its genuineness from the American Numismatic Society. That organization labeled the coin a counterfeit. Can Beachcomber rescind the contract with Boskett on the ground of mistake?

7.  *Video Case.* Retailer opened a baseball card store in vacant premises next to an existing store. The card shop was very busy on opening day, so Retailer got a clerk from the adjacent store to help out. The clerk knew nothing about baseball cards. A boy who had a large baseball card collection asked to see an Ernie Banks rookie card, which was in a plastic case with an adhesive dot attached that read "1200." The boy asked the salesclerk, "Is it really worth $12?" The salesclerk responded, "I guess so," or "I'm sure it is." The boy bought the card for $12. In fact, the true price intended by Retailer was $1,200. Can Retailer get the card back from the boy?

8. Robert & Wendy Pfister asked Foster & Marshall, a stock brokerage firm, to evaluate some stocks that they owned. One of these stocks was 100 shares of Tracor Computing Corporation. The stock was no longer traded on the New York Stock Exchange. The Pfisters did not know the value of the stock, but they believed it to be of little value. They were surprised when Foster & Marshall told them that the stock was trading at $49.50 under its new name, Continuum Co., Inc., so that the value of the Pfisters' stock was $4,950. They asked Foster & Marshall to recheck the figures and brought their stock certificates in for verification. Based on Foster & Marshall's reassurances that they owned 100 shares of Continuum and that these were worth $4,950, the Pfisters sold the stock to Foster & Marshall. As a result of receiving this money for the stock, the Pfisters made a commitment to build a new home, which before the sale had been a "borderline decision." A year after the transaction, Foster & Marshall discovered that the Tracor Computing stock had been exchanged for Continuum stock at a 10-to-1 ratio and that the Pfisters had owned only 10 shares of Continuum. Foster & Marshall claimed relief under the doctrine of mistake and sued the Pfisters to recover the $4,466.25 it had overpaid them. Will Foster & Marshall win?

9. Krasinski listed his home in the Mount Olympus area of Los Angeles for sale with real estate agent Shore, an associate of John Douglas Company. The

property was listed in the Multiple Listing Service. The description in the Multiple Listing Service included, "APX: 5500," meaning approximately 5,500 square feet. At the bottom of the listing was stated, "Information Deemed Reliable But Not Guaranteed." Shore got the information that the house was 5,500 square feet from Krasinski's daughter, who had been one of the original owners of the house when it was built. The daughter told Shore that the architectural plans used to construct the property stated the house was 5,500 square feet. Shore relied on this information from Rappaport in submitting it to the Multiple Listing Service, and she later testified that she saw no indication that the house was not 5,500 square feet. Furla, a self-employed stock trader with an undergraduate degree in business, decided to invest in residential real estate. He was looking for bargains or distress sales. His theory of investing in real estate was to find bargains on a per square foot basis. When Furla visited the property for the first time, he picked up a copy of the Multiple Listing Service listing (which did mention approximately 5,500 square feet). Furla later testified that upon this first visit, Shore or her partner orally mentioned 5,500 square feet in their description of the house's features. Furla's real estate agent also obtained for him a computerized "property profile," apparently through a title insurance company, which gave information on tax assessments and property characteristics, including "SQR/FT: 5500." The property profile included a notation, "The accuracy of the above information is deemed reliable but is not guaranteed." On June 16, 1993, Furla made a written offer to purchase Krasinski's property. The printed "real estate purchase agreement and receipt for deposit" which Furla signed contained the following provisions: Paragraph 18F stated, "Property Lines/Size. . . . Buyer is . . . aware that Broker makes no representations with respect to the boundary lines, encroachments from or on the Property or the square footage of the subject lot or the improvements thereon. Information, if any, on square footage provided in the Multiple Listing Service, including, without limitation, room sizes, and information materials concerning the Property are approximations only. By obtaining a survey of the Property or having a professional appraiser measure the Property, Buyer may verify actual . . . square footage. Such verifications may be obtained as part of paragraph 11 above." Paragraph 11C stated, "Contingencies/Buyer's Duties. Seller shall make the Property available to inspection(s) and investigation(s) by Buyer pursuant to this paragraph 11. . . . Buyer Is Advised That Under Civil Code Section 2079.5, Buyer Has an Independent Legal Duty to Use Reasonable Care to Protect Buyer Concerning Facts About the Property Which Are Known to Buyer, or Within Buyer's Diligent Attention and Observation." On June 17, 1993, the parties negotiated further and reached agreement on a price of $935,000. Furla accepted Krasinski's written counteroffer, modified to state that price. Neither Furla's written offer nor the counteroffer contained any express provisions representing that the property was 5,500 square feet or conditioning the sale upon the square footage. Furla later stated that during the final negotiations, he had held a large calculator in his hand, and said aloud, "Okay, 5500 square feet, I'll pay $170 a foot." Furla entered those numbers into his calculator and held up the resulting figure of $935,000, and said that was his best offer. Krasinski accepted it. Furla did not take advantage of his right to have the house measured for its square footage. He did obtain a professional home inspection and a geologist's report, but the home inspector did not include, nor was he requested to include, square footage measurements in his report to plaintiff. Prior to the consummation of the sale, Furla suffered "buyer's remorse" and wondered if he had paid too much per square foot. Apparently in response to Furla's concerns, one of Krasinski's agents sent Furla a fax listing four other properties in Mount Olympus showing their approximate square footage and selling price, breaking these down on a per square foot basis ranging from $235 per square foot to $180 per square foot. After that, Furla completed the sale and took possession of the property in July of 1993. In February 1995, Furla decided to sell the property. He interviewed several realtors for listing it. When one of these realtors (Parks) came to the house and Furla stated it was 5,500 square feet, the realtor immediately responded, "There is no way this house is 5,500 square feet." Parks stepped it off informally and concluded the living area was about 4,130 square feet. Parks opined that "a knowledgeable realtor would easily recognize that the residence is substantially less than 5,500 square feet." Furla then obtained measurements by two professional real estate appraisers, who measured the gross living area as 4,437 and 4,615 square feet, respectively. Furla sued Shore, John Douglas Company, and others for misrepresentation, among other theories. Will he win?

10. H & P was a general partnership formed by Dr. James Pister and Dr. Randolph Hall in 1982. Pister formed Diagnostic Imaging Center Associates (DICA) with two other doctors in 1984, and remained a partner until 1988. Cable became a general partner in DICA in 1987. Prior to the formation of DICA, H & P entered into a lease/purchase agreement with Equitable Life Leasing Company for two ultrasound machines. On or about September 1, 1984, H & P orally agreed to sublease the two ultrasound machines to DICA. Under the terms of the sublease, DICA paid $3,878.48 monthly to H & P for the machines, an amount identical to H & P's monthly lease obligation to Equitable. In 1987 and 1988, various disputes arose between DICA and H & P. Pister was repeatedly questioned by the other DICA partners about the oral sublease. Pister told Cable and the other DICA partners that the sublease "corresponded exactly with H & P's lease/purchase agreement with Equitable Life and that both leases expired in September 1989, and that at that time, title to both pieces of equipment would vest in DICA at no additional cost." In fact, the Equitable lease ended in May and June of 1988. On February 18, 1988, H & P and DICA, each aided by lawyers, entered into a written settlement agreement to resolve a number of different disputes among the parties. Among other things, the agreement outlined the terms of the oral sublease. Although there is no mention of the length of the Equitable lease in the agreement, during the negotiations H & P's attorney represented to DICA that the Equitable lease expired in the summer of 1989. Under the terms of the settlement agreement, payments were to continue through September 1, 1989. According to DICA, this was to give H & P a few months of payments beyond that required to pay off Equitable. At the time of the settlement agreement, DICA was unaware that the Equitable lease was to expire in 1988, not 1989, and that the agreement provided H & P with fifteen months of payments after the Equitable lease ended. Cable stated that he would not have agreed to the sublease provision in the settlement agreement if he had known the truth about the Equitable lease. In April 1988, Equitable threatened to repossess the machines because H & P was not making the lease payments. DICA contacted Equitable directly and learned that the Equitable lease actually expired in 1988. DICA then made the lease payments directly to Equitable, bypassing H & P. Title to the machines was transferred from Equitable to DICA at the end of the Equitable lease. H & P sued DICA, seeking the additional sublease payments required under the terms of the settlement agreement. DICA seeks rescission, arguing that the settlement agreement was induced by a misrepresentation concerning the length of the Equitable lease or, alternatively, that the agreement was the product either of a mutual mistake as to the length of the Equitable lease, or a unilateral mistake by DICA which was or should have been appreciated by H & P. Will DICA win on either of these arguments?

11. Reed purchased a house from King. Neither King nor his real estate agents told Reed before the sale that a woman and her four children had been murdered there 10 years earlier. Reed learned of the gruesome episode from a neighbor after the sale. She sued King and his real estate agents, seeking rescission and damages on the ground that King should have disclosed the history of the house to her. Can Reed rescind the contract?

  - *1. The Right to Disaffirm*

IV. Contracts of Intoxicated Persons
- *A. Intoxication and Capacity*

One of the major justifications for enforcing a contract is that the parties voluntarily consented to be bound by it. It follows, then, that a person must have the *ability* to give consent before he can be legally bound to an agreement. For truly voluntary agreements to exist, this ability to give consent must involve more than the mere physical ability to say yes or shake hands or sign one's name. Rather, the person's maturity and mental ability must be such that it is fair to presume that he is capable of representing his own interests effectively. This concept is embodied in the legal term *capacity.*

What Is Capacity?

Capacity means the ability to incur legal obligations and acquire legal rights. Today, the primary classes of people who are considered to lack capacity are minors (who, in legal terms, are known as *infants*), persons suffering from mental illnesses or defects, and intoxicated persons.[1] Contract law gives them the right to *avoid* (escape) contracts that they enter during incapacity. This rule provides a means of protecting people who, because of mental impairment, intoxication, or youth and inexperience, are disadvantaged in the normal give and take of the bargaining process.

Usually, lack of capacity to contract comes up in court in one of two ways. In some cases, it is asserted by a plaintiff as the basis of a lawsuit for the money or other benefits that he gave the other party under their contract. In others, it arises as a defense to the enforcement of a contract when the defendant is the party who lacked capacity. The responsibility for alleging

[1] In times past, married women, convicts, and aliens were also among the classes of persons who lacked capacity to contract. These limitations on capacity have been removed by statute and court rule, however.

and proving incapacity is placed on the person who bases his claim or defense on his lack of capacity.

Effect of Lack of Capacity

Normally, a contract in which one or both parties lack capacity because of infancy, mental impairment, or intoxication is considered to be voidable. People whose capacity is impaired in any of these ways are able to enter a contract and enforce it if they wish, but they also have the right to avoid the contract. There are, however, some individuals whose capacity is so impaired that they do not have the ability to form even a voidable contract. A bargain is considered to be void if, at the time of formation of the bargain, a court had already **adjudicated** (adjudged or decreed) one or more of the parties to be mentally incompetent or one or more of the parties was so impaired that he could not even manifest assent (for example, he was comatose or unconscious).

Capacity of Minors

Minors' Right to Disaffirm

Courts have long recognized that minors are in a vulnerable position in their dealings with adults. Courts granted minors the right to avoid contracts as a means of protecting against their own improvidence and against overreaching by adults. The exercise of this right to avoid a contract is called **disaffirmance.** The right to disaffirm is personal to the minor. That is, only the minor or a legal representative such as a guardian may disaffirm the contract. No formal act or written statement is required to make a valid disaffirmance. Any words or acts that effectively communicate the minor's desire to cancel the contract can constitute disaffirmance.

If, on the other hand, the minor wishes to enforce the contract instead of disaffirming it, the adult party must perform. You can see that the minor's right to disaffirm puts any adult contracting with a minor in an undesirable position: He is bound on the contract unless it is to the minor's advantage to disaffirm it. The right to disaffirm has the effect of discouraging adults from dealing with minors.

Exceptions to the Minor's Right to Disaffirm Not every contract involving a minor is voidable, however. State law often creates statutory exceptions to the minor's right to disaffirm. These statutes prevent minors from disaffirming such transactions as marriage, agreements to support their children, educational loans, life and medical insurance contracts, contracts for transportation by common carriers, and certain types of contracts approved by a court (such as contracts to employ a child actor).

Period of Minority

At common law, the age of majority was 21. However, the ratification in 1971 of the 26th Amendment to the Constitution giving 18-year-olds the right to vote stimulated a trend toward reducing the age of majority. The age of majority has been lowered by 49 states. In almost all of these states, the age of majority for contracting purposes is now 18.

Emancipation

Emancipation is the termination of a parent's right to control a child and receive services and wages from him. There are no formal requirements for emancipation. It can occur by the parent's express or implied consent or by the occurrence of some events such as the marriage of the child. In most states, the mere fact that a minor is emancipated does *not* give him capacity to contract. A person younger than the legal age of majority is generally held to lack capacity to enter a contract, even if he is married and employed full time. See the *Mitchell* case, which follows.

Mitchell v. State Farm Mutual Automobile Insurance Co.

963 S.W.2d 222 (Ky. Ct. App. 1998)

On October 14, 1995, Sherri Mitchell was injured in an automobile accident while riding in a car owned by her father and operated by her husband. On October 26, 1995, Mitchell, age seventeen, signed a release with State Farm agreeing to settle her bodily injury claim for $2,500. No conservator was appointed

at the time this release was signed. Mitchell filed a motion for declaratory judgment alleging that she lacked capacity at the time the release was executed, rendering it null and void. State Farm argued that Mitchell's marriage emancipated her, removing any disability she had as a minor, including the capacity to contract. The trial court decided in favor of State Farm and Mitchell appealed.

Emberton, Judge Ky. Rev. Stat. 387.010 defines minor as anyone under the age of eighteen. Ordinarily, a contract executed by a minor is enforceable by the minor but may be avoided by the minor if not affirmed by him after reaching adulthood. Although the minor has the legal capacity to contract, he has the privilege of avoiding the contract. Although, there are certain exceptions to this general rule, none is applicable to this case. A settlement agreement and release of a third-party tortfeasor has been held to be voidable by the infant. A repudiation of the agreement requires that the minor return the consideration paid pursuant to that agreement.

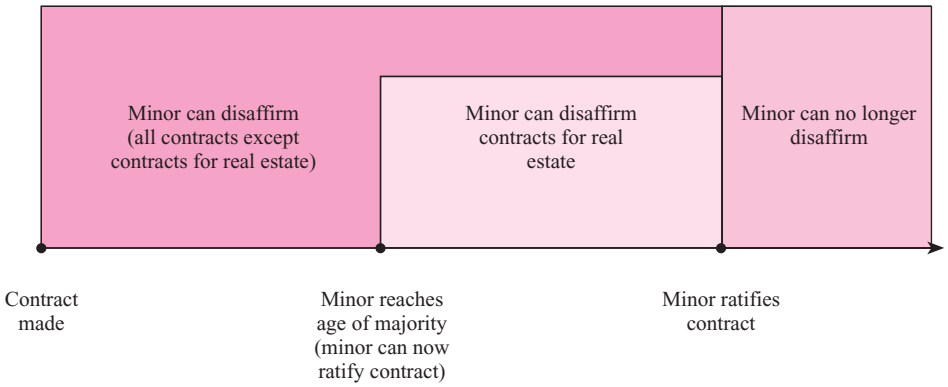
The privilege bestowed upon a minor to avoid contracts made during infancy is given for policy reasons. Infants, as with other classes of disabilities, are presumed to be insufficiently mature or experienced to effectively bargain with those who have attained legal age, and any transaction which may result in a financial loss to them or in a depletion of their estates is scrutinized with care. Marriage of the infant emancipates the minor; it does not, however, make the minor *sui juris.* In *Bensinger's CoEx'rs,* the court declined to hold that an emancipated child must be bound by his contracts and followed the general rule that:

> Although parental emancipation may free the infant from parental control, it does not remove all of the disabilities of infancy. It does not, for example, enlarge or affect the minor's capacity or incapacity to contract.

The rule may seem antiquated in view of the arguable maturity of today's youth. It may seem ironic that a minor can drive a car yet not be bound by the contract to purchase that car or be responsible for his torts and crimes yet unable to settle a dispute against a tortfeasor. The distinction to be made is that too frequently a contract involves negotiation and thought beyond the maturity of most people under the age of eighteen. We cannot adopt a rule that marriage by the minor somehow classifies him as more mature and intelligent than his unmarried counterpart. We, as did the court in *Kiefer v. Fred Howe Motors, Inc.,* find that logic and common sense would not encourage such a result since marriage by a minor too frequently may itself be indicative of a lack of wisdom and maturity.

The legislature has provided a means through which a conservator can be appointed to protect the financial interest of a married minor. Although the lack of such appointment will not render the contract void, the minor remains free to avoid his obligation under the contract.

Reversed and remanded in favor of Mitchell.



Time of Disaffirmance

Contracts entered during minority that affect title to *real estate* cannot be disaffirmed until majority. This rule is apparently based on the special importance of real estate and on the need to protect a minor from improvidently disaffirming a transaction (such as a mortgage or conveyance) involving real estate. All other contracts entered during minority may be disaffirmed as soon as the contract is formed. The minor's power to avoid his contracts does not end on the day he reaches the age of majority. It continues for a period of time after he reaches majority.

How long after reaching majority does a person retain the right to disaffirm the contracts he made while a minor? A few states have statutes that prescribe a definite time limit on the power of avoidance. In Oklahoma, for example, a person who wishes to disaffirm a contract must do so within one year after reaching majority.[2] In most states, however, there is no set limit on the time during which a person may disaffirm after reaching majority. In determining whether a person has the right to disaffirm, a major factor that courts consider is whether the adult has rendered performance under the contract or relied on the contract. If the adult has relied on the contract or has given something of value to the minor, the minor must disaffirm within

[2]Okla. Stat. Ann. tit. 15 sec. 18 (1983).

Figure 1 *Time Line Showing Effect of Ratification*

a reasonable time after reaching majority. If he delays longer than a period of time that is considered to be reasonable under the circumstances, he will run the risk of *ratifying* (affirming) the contract. (The concept and consequences of ratification are discussed in the next section.) If the adult has neither performed nor relied on the contract, however, the former minor is likely to be accorded a longer period of time in which to disaffirm, sometimes even years after he has reached majority.

Ratification

Though a person has the right to disaffirm contracts made during minority, this right can be given up after the person reaches the age of majority. When a person who has reached majority indicates that he intends to be bound by a contract that he made while still a minor, he surrenders his right to disaffirm. This act of affirming the contract and surrendering the right to avoid the contract is known as **ratification.** Ratification makes a contract valid from its inception. Because ratification represents the former minor's election to be bound by the contract, he cannot later disaffirm. Ratification can be done effectively only after the minor reaches majority. Otherwise, it would be as voidable as the initial contract. The effect of ratification is illustrated in Figure 1.

There are no formal requirements for ratification. Any of the former minor's words or acts after reaching majority that indicate with reasonable clarity his intent to be bound by the contract are sufficient. Ratification can be *expressed* in an oral or written statement, or, as is more often the case, it can be *implied* by conduct on the part of the former minor. Naturally, ratification is clearest when the former minor has made some express statement of his intent to be bound. Predicting whether a court will determine that a contract has been ratified is a bit more difficult when the only evidence of the alleged ratification is the conduct of the minor. A former minor's acceptance or retention of benefits given by the other party for an unreasonable time after he has reached majority can constitute ratification. Also, a former minor's continued performance of his part of the contract after reaching majority has been held to imply his intent to ratify the contract.

Duties upon Disaffirmance

Duty to Return Consideration If neither party has performed his part of the contract, the parties' relationship will simply be canceled by the disaffirmance. Since neither party has given anything to the other party, no further adjustments are necessary. But what about the situation where, as is often the case, the minor has paid money to the adult and the adult has given property to the minor? Upon disaffirmance, each party has the duty to return to the other any consideration that the other has given. This means that the minor must return any consideration given to him by the adult that remains in his possession. However, if the minor is unable to return the consideration, most states will still permit him to disaffirm the contract.

The duty to return consideration also means that the minor has the right to recover any consideration he has given to the adult party. He even has the right to recover some property that has been transferred to third parties. One exception to the minor's right to recover

property from third parties is found in section 2–403 of the Uniform Commercial Code, however. Under this section, a minor cannot recover *goods* that have been transferred to a good faith purchaser. For example, Simpson, a minor, sells a 1980 Ford to Mort's Car Lot. Mort's then sells the car to Vane, a good faith purchaser. If Simpson disaffirmed the contract with Mort's, he would *not* have the right to recover the Ford from Vane.

Must the Disaffirming Minor Make Restitution? A Split of Authority If the consideration given by the adult party has been lost, damaged, destroyed, or simply has depreciated in value, is the minor required to make restitution to the adult for the loss? The traditional rule is that the minor who cannot fully return the consideration that was given to her is *not* obligated to pay the adult for the benefits she has received or to compensate the adult for loss or depreciation of the consideration. Some states still follow this traditional rule. (As you will read in the next section, however, a minor's misrepresentation of age can, even in some of these states, make her responsible for reimbursing the other party upon disaffirmance.) The rule that restitution is not required is designed to protect minors by discouraging adults from dealing with them. After all, if an adult knew that he might be able to demand the return of anything that he transferred to a minor, he would have little incentive to refrain from entering into contracts with minors.

The traditional rule, however, can work harsh results for innocent adults who have dealt fairly with minors. It strikes many people as unprincipled that a doctrine intended to protect against unfair exploitation of one class of people can be used to unfairly exploit another class of people. As courts sometimes say, the minor's right to disaffirm was designed to be used as a "shield rather than as a sword." For these reasons, a growing number of states have rejected the traditional rule. The courts and legislatures of these states have adopted rules that require minors who disaffirm their contracts and seek refunds of purchase price to reimburse adults for the use or depreciation of their property. The *Dodson* case follows this approach.

Dodson v. Shrader *824 W.2d 545 (Tenn. Sup.Ct. 1992)*

Joseph Dodson, age 16, bought a 1984 Chevrolet truck from Burns and Mary Shrader, owners of Shrader's Auto Sales, for $4,900 cash. At the time, Burns Shrader, believing Dodson to be 18 or 19, did not ask Dodson's age and Dodson did not volunteer it. Dodson drove the truck for about eight months, when he learned from an auto mechanic that there was a burned valve in the engine. Dodson did not have the money for the repairs, so he continued to drive the truck without repair for another month until the engine "blew up" and stopped operating. He parked the car in the front yard of his parents' house. He then contacted the Shraders, rescinding the purchase of the truck and requesting a full refund. The Shraders refused to accept the truck or to give Dodson a refund. Dodson then filed an action seeking to rescind the contract and recover the amount paid for the truck. Before the court could hear the case, a hit-and-run driver struck Dodson's parked truck, damaging its left front fender. At the time of the circuit court trial, the truck was worth only $500. The Shraders argued that Dodson should be responsible for paying the difference between the present value of the truck and the $4,900 purchase price. The trial court found in Dodson's favor, ordering the Shraders to refund the $4,900 purchase price upon delivery of the truck. The Tennessee Court of Appeals affirmed this judgment, and the Shraders appealed.

O'Brien, Justice The law on the subject of the protection of infants' rights has been slow to evolve. The underlying purpose of the "infancy doctrine" is to protect minors from their lack of judgment and from squandering their wealth through improvident contracts with crafty adults who would take advantage of them in the marketplace.

There is, however, a modern trend among the states, either by judicial action or by statute, in the approach to the problem of balancing the rights of minors against those of innocent merchants. As a result, two minority rules have developed which allow the other party to a contract with a minor to refund less than the full consideration paid in the

event of rescission. The first of these minority rules is called the "Benefit Rule." This rule holds that, upon rescission, recovery of the full purchase price is subject to a deduction for the minor's use of the merchandise. This rule recognizes that the traditional rule in regard to necessaries has been extended so far as to hold an infant bound by his contracts, where he failed to restore what he has received under them to the extent of the benefit actually derived by him from what he has received from the other party to the transaction. The other minority rule holds that the minor's recovery of the full purchase price is subject to a deduction for the minor's "use" of the consideration he or she received under the contract, or for the "depreciation" or "deterioration" of the consideration in his or her possession.

We are impressed by the statement made by the Court of Appeals of Ohio:

> At a time when we see young persons between 18 and 21 years of age demanding and assuming more responsibilities in their daily lives; when we see such persons charged with the responsibility for committing crimes; when we see such persons being sued in tort claims for acts of negligence; when we see such persons subject to military service; when we see such persons engaged in business and acting in almost all other respects as an adult, it seems timely to re-examine the case law pertaining to contractual rights and responsibilities of infants to see if the law as pronounced and applied by the courts should be redefined.

We state the rule to be followed hereafter, in reference to a contract of a minor, to be where the minor has not been overreached in any way, and there has been no undue influence, and the contract is a fair and reasonable one, and the minor has actually paid money on the purchase price, and taken and used the article purchased, that he ought not to be permitted to recover the amount actually paid, without allowing the vendor of the goods reasonable compensation for the use of, depreciation, and willful or negligent damage to the article purchased, while in his hands. If there has been any fraud or imposition on the part of the seller or if the contract is unfair, or any unfair advantage has been taken of the minor inducing him to make the purchase, then the rule does not apply. This rule will fully and fairly protect the minor against injustice or imposition, and at the same time it will be fair to a business person who has dealt with such minor in good faith.

This rule is best adapted to modern conditions under which minors are permitted to, and do in fact, transact a great deal of business for themselves, long before they have reached the age of legal majority. Many young people work and earn money and collect it and spend it oftentimes without any oversight or restriction. The law does not question their right to buy if they have the money to pay for their purchases. It seems intolerably burdensome on everyone concerned if merchants cannot deal with them safely, in a fair and reasonable way. Further, it does not appear consistent with practice of proper moral influence upon young people, tend to encourage honesty and integrity, or lead them to a good and useful business future if they are taught that they can make purchases with their own money, for their own benefit, and after paying for them, and using them until they are worn out and destroyed, go back and compel the vendor to return to them what they have paid upon the purchase price. Such a doctrine can only lead to the corruption of principles and encourage young people in habits of trickery and dishonesty.

Reversed and remanded in favor of the Shraders.

Minors' Obligation to Pay Reasonable Value of Necessaries Though the law regarding minors' contracts is designed to discourage adults from dealing with (and possibly taking advantage of) minors, it would be undesirable for the law to discourage adults from selling minors the items that they need for basic survival. For this reason, disaffirming minors are required to pay the reasonable value of items that have been furnished to them that are classified as **necessaries.** A necessary is something that is essential for the minor's continued existence and general welfare that has not been provided by the minor's parents or guardian. Examples of necessaries include food, clothing, shelter, medical care, tools of the minor's trade, and basic educational or vocational training.

A minor's liability for necessaries supplied to him is **quasi contractual.** That is, the minor is liable for the *reasonable value* of the necessaries that she actually receives. She is not liable for the entire price agreed on if that price exceeds the actual value of the necessaries, and she is not liable for necessaries that she contracted for but did not receive. For example, Joy Jones, a minor, signs a one-year lease for an apartment in Mountain Park at a rent of $300 per month. After living in the apartment for three months, Joy breaks her lease and moves out. Because she is a minor, Joy has the right to disaffirm the lease. If shelter is a necessary in this case, however, she must pay the reasonable value of what she has actually received—three months' rent. If she can establish that the actual value of what she has received is less than $300 per month, she will be bound to pay only that lesser amount. Furthermore, she will not be obligated to pay for the remaining nine months' rent, because she has not received any benefits from the remainder of the lease.

Whether a given item is considered a necessary depends on the facts of a particular case. The minor's age, station in life, and personal circumstances are all relevant to this issue. An item sold to a minor is not considered a necessary if the minor's parent or guardian has already supplied him with similar items. For this reason, the range of items that will be considered necessaries is broader for married minors and other emancipated minors than it is for unemancipated minors.

Effect of Misrepresentation of Age

It is not unheard of for a minor to occasionally pretend to be older than he is. The normal rules dealing with the minor's right to disaffirm and his duties upon disaffirmance can be affected by a minor's misrepresentation of his age.[3] Suppose, for example, that Jones, age 17, wants to lease a car from Acme Auto Rentals, but knows that Acme rents only to people who are at least 18. Jones induces Acme to lease a car to him by showing a false identification that represents his age to be 18. Acme relies on the misrepresentation. Jones wrecks the car, attempts to disaffirm the contract, and asks for the return of his money. What is the effect of Jones's misrepresentation? State law is not uniform on this point.

The traditional rule was that a minor's misrepresentation about his age did not affect his right to disaffirm and did not create any obligation to reimburse the adult for damages or pay for benefits received. The theory behind this rule is that one who lacks capacity cannot acquire it merely by claiming to be of legal age. As you can imagine, this traditional approach does not "sit well" with modern courts, at least in those cases in which the adult has dealt with the minor fairly and in good faith, because it creates severe hardship for innocent adults who have relied on minors' misrepresentations of age.

State law today is fairly evenly divided among those states that take the position that the minor who misrepresents his age will be *estopped* (prevented) from asserting his infancy as a defense and those that will allow a minor to disaffirm regardless of his misrepresentation of age. Among the states that allow disaffirmance despite the minor's misrepresentation, most hold the disaffirming minor responsible for the losses suffered by the adult, either by allowing the adult to counterclaim against the minor for the tort of deceit or by requiring the minor to reimburse the adult for use or depreciation of his property.

Capacity of Mentally Impaired Persons

Theory of Incapacity

Like minors, people who suffer from a mental illness or defect are at a disadvantage in their ability to protect their own interests in the bargaining process. Contract law makes their contracts either void or voidable to protect them from the results of their own impaired perceptions and judgment and from others who might take advantage of them.

Test for Mental Incapacity

Incapacity on grounds of mental illness or defect, which is often referred to in cases and texts as "insanity," encompasses a broad range of causes of impaired mental functioning, such as mental illness, brain damage, mental retardation, or senility. The mere fact that a person suffers from some mental illness or defect does not necessarily mean that he lacks capacity to contract, however. He could still have full capacity unless the defect or illness affects the particular transaction in question.

[3] You might want to refer back to Chapter 13 to review the elements of misrepresentation.

The usual test for mental incapacity is a *cognitive* one; that is, courts ask whether the person had sufficient mental capacity to understand the nature and effect of the contract. Some courts have criticized the traditional test as unscientific because it does not take into account the fact that a person suffering from a mental illness or defect might be unable to *control* his conduct. Section 15 of the *Restatement (Second) of Contracts* provides that a person's contracts are voidable if he is unable to *act* in a reasonable manner in relation to the transaction and the other party has reason to know of his condition. Where the other party has reason to know of the condition of the mentally impaired person, the *Restatement (Second)* standard would provide protection to people who understood the transaction but, because of some mental defect or illness, were unable to exercise appropriate judgment or to control their conduct effectively. This standard is employed by the court in the following *Farnum* case.

Farnum v. Silvano *540 N.E.2d 202 (App. Ct. of Mass. 1989)*

Viola Farnum was 90 years old when she sold her real estate in South Yarmouth to Joseph Silvano, age 24. Farnum knew and trusted Silvano because he had done mowing and landscape work on her property. Although the fair market value of Farnum's property was $115,000 at the time of the sale, she agreed to sell it as well as the furniture and other furnishings in the house for $64,900. Silvano had reason to know of the inadequacy of the purchase price. Farnum's nephew had warned Silvano not to proceed with the sale. In addition, Silvano was able to get a mortgage for $65,000 from the bank to finance the purchase.

Farnum's mental competence had begun to fail seriously three years before the sale to Silvano. She began to engage in aberrant conduct such as lamenting not hearing from her sisters, who were dead, and she would wonder where the people upstairs in her house had gone, when there was no upstairs to her house. She offered to sell her house to a neighbor for $35,000. She became abnormally forgetful, locking herself out of her house and breaking into it rather than calling on a neighbor with whom she had left a key. She hid her cat to protect it from "the cops." She would express the desire to return to Cape Cod although she was on Cape Cod. She easily became lost. Her sister and nephew had to pay her bills and balance her checkbook. She was hospitalized several times during the three-year period preceding the sale to Silvano. Medical tests revealed organic brain disease.

During the transaction in question, Farnum was represented by a lawyer selected and paid by Silvano. That lawyer and a lawyer for the bank that was making a loan to Silvano attended the closing at Farnum's house. At the closing, Farnum was cheerful, engaged in pleasantries, and made instant coffee for those present. After the transaction, however, Farnum insisted to others, including her sister and nephew, that she still owned the property. Six months after the conveyance, Farnum was admitted to the hospital for treatment of dementia and seizure disorder. She was discharged to a nursing home.

Farnum's nephew, who was ultimately appointed her guardian, brought this suit on Farnum's behalf to rescind the sale on the ground of Farnum's mental impairment. The trial judge concluded that Farnum had been "aware of what was going on," and denied the rescission. Farnum appealed.

Kass, Judge On the basis of a finding that Farnum enjoyed a lucid interval when she conveyed her house to Silvano, for approximately half its market value, a Probate Court judge decided that Farnum had capacity to execute the deed. A different test measures competence to enter into a contract and we, therefore, reverse the judgment.

Competence to enter into a contract presupposes something more than a transient surge of lucidity. It involves not merely comprehension of what is "going on," but an ability to comprehend the nature and quality of the transaction, together with an understanding of its significance and consequences. In the act of entering into a contract there are reciprocal obligations, and it is appropriate, when mental incapacity, as here, is manifest, to require a baseline of reasonableness.

In *Krasner v. Berk,* the court cited with approval the synthesis of those principles now appearing in the *Restatement (Second) of Contracts*

section 15(1), which regards as voidable a transaction entered into with a person who, "by reason of mental illness or defect (a) . . . is unable to understand in a reasonable manner the nature and consequences of the transaction, or (b) . . . is unable to act in a reasonable manner in relation to the transaction and the other party has reason to know of [the] condition."

Applied to the case at hand, Farnum could be aware that she was selling her house to Silvano for much less than it was worth, while failing to understand the unreasonableness of doing so at a time when she faced serious cash demands for rent, home care, or nursing care charges. That difference between awareness of the surface of a transaction, i.e., that it was happening, and failure to comprehend the unreasonableness and consequences of the transaction by a mentally impaired person was recognized and discussed in *Ortolere v. Teachers' Retirement Bd.* In the Ortolere case, a teacher who was enrolled in a retirement plan suffered a psychotic break. Her age was 60 and she also suffered from cerebral arteriosclerosis. While thus afflicted, Grace Ortolere changed her selection of benefit to choose the maximum retirement allowance during her lifetime with nothing payable after her death—this in the face of severely diminished life expectancy and her husband having given up his employment to care for her full time. The court observed that her selection was so unwise and foolhardy that a fact finder might conclude that it was explainable only as a product of psychosis.

We think Farnum did not possess the requisite contextual understanding. She suffered mental disease which had manifested itself in erratic and irrational conduct and was confirmed by diagnostic test. Her physician did not think she was competent to live alone. Relatively soon after the transaction, Farnum's mental deficits grew so grave that it became necessary to hospitalize her. The man to whom she sold her property for less than its value was not a member of her family or someone who had cared for her for long duration. Farnum was not represented by a lawyer who knew her and considered her overall interests as a primary concern. The mission of the lawyer secured by Silvano, and paid by him, was to effect the transaction. As we have observed, Farnum was faced with growing cash demands for her maintenance, and, in her circumstances, it was not rational to part with a major asset for a cut-rate price.

The decisive factor which we think makes Farnum's delivery of her deed to Silvano voidable was his awareness of Farnum's inability to act in a reasonable manner. Silvano knew or had reason to know of Farnum's impaired condition from her conduct, which at the times material caused concern to her relatives, her neighbors, and her physician. Silvano was aware that he was buying the house for about half its value. He had been specifically warned by Farnum's nephew about the unfairness of the transaction and Farnum's mental disability.

Farnum is entitled to rescission of the conveyance.

Judgment reversed in favor of Farnum.

The Effect of Incapacity Caused by Mental Impairment

The contracts of people who are suffering from a mental defect at the time of contracting are usually considered to be *voidable.* In some situations, however, severe mental or physical impairment may prevent a person from even being able to manifest consent. In such a case, no contract could be formed.

As mentioned at the beginning of this chapter, contract law makes a distinction between a contract involving a person who has been *adjudicated* (judged by a court) incompetent at the time the contract was made and a contract involving a person who was suffering from some mental impairment at the time the contract was entered but whose incompetency was not established until *after* the contract was formed. If a person is under guardianship at the time the contract is formed—that is, if a court has found a person mentally incompetent after holding a hearing on his mental competency and has appointed a guardian for him—the contract is considered *void.* On the other hand, if *after* a contract has been formed, a court finds that the person who manifested consent lacked capacity on grounds of mental illness or defect, the contract is usually considered *voidable* at the election of the party who lacked capacity (or his guardian or personal representative).

The Right to Disaffirm If a contract is found to be voidable on the ground of mental impairment, the person who lacked capacity at the time the contract was made has the right to disaffirm the contract. A person formerly incapacitated by mental impairment can ratify a contract if he regains his capacity. Thus, if he regains capacity, he must disaffirm the contract unequivocally within a reasonable time, or he will be deemed to have ratified it.

As is true of a disaffirming minor, a person disaffirming on the ground of mental impairment must return any consideration given by the other party that remains in his possession. A person under this type of mental incapacity is liable for the reasonable value of necessaries in the same manner as are minors. Must the incapacitated party reimburse the other party for loss, damage, or depreciation of non-necessaries given to him? This is generally said to depend on whether the contract was basically fair and on whether the other party had reason to be aware of his impairment. If the contract is fair, bargained for in good faith, and the other party had no reasonable cause to know of the incapacity, the contract cannot be disaffirmed unless the other party is placed in *status quo* (the position she was in before the creation of the contract). However, if the other party had reason to know of the incapacity, the incapacitated party is allowed to disaffirm without placing the other party in status quo. This distinction discourages people from attempting to take advantage of mentally impaired people, but it spares those who are dealing in good faith and have no such intent.

Contracts of Intoxicated Persons

Intoxication and Capacity

Intoxication (either from alcohol or the use of drugs) can deprive a person of capacity to contract. The mere fact that a party to a contract had been drinking when the contract was formed would *not* normally affect his capacity to contract, however. Intoxication is a ground for lack of capacity only when it is so extreme that the person is unable to understand the nature of the business at hand. Section 16 of the *Restatement (Second) of Contracts* further provides that intoxication is a ground for lack of capacity only if *the other party has reason to know* that the affected person is so intoxicated that he cannot understand or act reasonably in relation to the transaction.

The rules governing the capacity of intoxicated persons are very similar to those applied to the capacity of people who are mentally impaired. The basic right to disaffirm contracts made during incapacity, the duties upon disaffirmance, and the possibility of ratification upon regaining capacity are the same for an intoxicated person as for a person under a mental impairment. In practice, however, courts traditionally have been less sympathetic with a person who was intoxicated at the time of contracting than with minors or those suffering from a mental impairment. It is rare for a person to actually escape his contractual obligations on the ground of intoxication. A person incapacitated by intoxication at the time of contracting might nevertheless be bound to his contract if he fails to disaffirm in a timely manner.

Ethical and Public Policy Concerns

1. You read that the age of majority for contracting purposes is 18 in almost all states today. We all know that maturity at a given age varies greatly from individual to individual. Does it make sense for the law to *presume* that a person is sufficiently mature to be responsible for his agreements merely because he has reached the age of 18? Would public policy be better served if the maturity of contracting parties were determined on a case-by-case basis in the same way that we now determine the capacity of those who are mentally impaired or intoxicated? Why or why not?

2. In *Dodson v. Shrader,* the court rejected the traditional view that minors who no longer have the consideration in their possession can disaffirm their contracts without reimbursing the adult party for use or depreciation of the adult's property. Which rule, the traditional rule or the rule applied in *Dodson,* makes the most sense? Was Judge O'Brien correct in his remark that the traditional rule is inconsistent with "proper moral influence upon young people"? Discuss.

3. In recent years, there has been growing public concern over alcohol and drug abuse. Through legal developments such as vigorous enforcement of drunken driving laws and the imposition of tort liability on the part of alcohol suppliers, the law encourages

moderation in the use of alcohol. Yet, the law also makes it possible for a person who is so intoxicated that he does not appreciate the business at hand to escape his contractual obligations. Is this rule about the capacity of intoxicated persons out of step with sound public policy?

Problems and Problem Cases

1. Webster Street owns real estate in Omaha, Nebraska. In September of 1982, Webster Street entered into a written contract to lease an apartment to Wilwerding and Sheridan for one year at a rental of $250 a month. Both Wilwerding and Sheridan were younger than the age of majority (which was 19 in their state) at the time they signed the contract, although Webster Street did not know this. Wilwerding and Sheridan could have lived at home with their parents but voluntarily left home to live on their own. They paid $150 as a security deposit and rent for the remainder of September and the month of October, for a total of $500. They failed to pay their November rent on time, however, and Webster Street notified them that they would be required to move out unless they paid immediately. Unable to pay rent, Sheridan and Wilwerding moved out of the apartment on November 12. Webster Street later demanded that they pay the expenses it incurred in attempting to rerent the property, rent for the months of November and December (apparently the two months it took to find a new tenant), and assorted damages and fees, amounting to $630.84. Sheridan and Wilwerding refused to pay any of the amount demanded on the ground of minority and demanded the return of their security deposit. Will they be able to rescind the contract?

2. Robertson, while a minor, contracted to borrow money from his father for a college education. His father mortgaged his home and took out loans against his life insurance policies to get some of the money he lent to Robertson, who ultimately graduated from dental school. Two years after Robertson's graduation, his father asked him to begin paying back the amount of $30,000 at $400 per month. Robertson agreed to pay $24,000 at $100 per month. He did this for three years before stopping the payments. His father sued for the balance of the debt. Could Robertson disaffirm the contract?

3. Green, age 16, contracted to buy a Camaro from Star Chevrolet. Green lived about six miles from school and one mile from his job, and used the Camaro to go back and forth to school and work. When he did not have the car, he used a car pool to get to school and work. Several months later, the car became inoperable with a blown head gasket, and Green gave notice of disaffirmance to Star Chevrolet. Star Chevrolet refused to refund the purchase price, claiming, in part, that the car was a necessary. Was it?

4. On or about December, 1992, Ervin was admitted into the care and custody of the Hosanna Ministry for treatment and rehabilitation of her drug and alcohol addiction. Funds were paid for Ervin's acceptance and admittance into the program. In January of 1993, Ervin signed a release that stated:

> I, the undersigned, being an adult, being completely free of the influence of alcohol and drugs of any kind whatsoever, and having had explained to me the importance of this paper as evidence of my present and future intent to forgive and release Hosanna Ministry, Inc., and all its officers, director employees and agents of and from all claims which I, at any time, may have against it, them or any of them; AND IN CONSIDERATION of and for my being freely admitted into the Hosanna ministry; the free lodging, board, vocational biblical, educational and general training and education which I shall receive; the free social and spiritual guidance and counseling which I shall receive and fully intending to be legally bound; AND ON BEHALF of myself and my heirs, executors, administrators and assigns I do hereby fully forgive, release and discharge Hosanna Ministry, Inc., and its officers, directors, employees and agents.

In May of 1993, Ervin slipped and fell, allegedly because of water accumulation on a slippery floor. She filed a lawsuit for her injuries and claimed that Hosanna Ministry fraudulently misrepresented that it was a drug/treatment center licensed by the state and that its agent was certified by Connecticut for the cure of substance abuse. Ervin asserts that the release that she signed was invalid because of the fraudulent representations allegedly made to her by Hosanna Ministry and because she had been suffering from crack-cocaine and alcohol addictions for some time prior to the signing of the release and she had no recollection of signing it. Hosanna Ministry moved for a summary judgment. Should it be granted?

5. At a time when the age of majority in Ohio was 21, Lee, age 20, contracted to buy a 1964 Plymouth Fury

for $1,552 from Haydocy Pontiac. Lee represented herself to be 21 when entering the contract. She paid for the car by trading in another car worth $150 and financing the balance. Immediately following delivery of the car to her, Lee permitted one John Roberts to take possession of it. Roberts delivered the car to someone else, and it was never recovered. Lee failed to make payments on the car, and Haydocy Pontiac sued her to recover the car or the amount due on the contract. Lee repudiated the contract on the ground that she was a minor at the time of purchase. Can Lee disaffirm the contract without reimbursing Haydocy Pontiac for the value of the car?

6. McCoy, age 17, attempted to rent an apartment from the Bertels, but was refused, allegedly because of her race. The government initiated a lawsuit against the Bertels, alleging that McCoy was denied the opportunity to rent the apartment based on her race, in violation of the Fair Housing Act. The Bertels filed a motion for summary judgment, arguing that McCoy lacked the capacity to enter into a lease agreement because of her age, and therefore could not have been injured by a discriminatory housing practice under the Fair Housing Act. Is this a good argument?

7. Valldejuli, age 40, filed suit against the U.S. Social Security Administration and Internal Revenue Service challenging the Social Security system. One of the grounds of his complaint was his claim that he signed a "contract" with the Social Security Administration when he was only eleven years old, and he should be able to avoid that contract because he lacked capacity at the time he entered the contract. Is this a good argument?

8. In December 1989, 16-year-old Travis brought a 1970 Pontiac GTO into M & M Precision Body and Paint to get an estimate on repairs to the vehicle from Mizerski. After examining the vehicle, Mizerski provided Travis with an estimate for $1,550.35 in repairs and informed him that a $1,000 deposit to cover the cost of parts and materials would be required before the work was begun. Travis delivered the vehicle to Mizerski's body shop in April 1990 to have the vehicle repaired. He gave the deposit in the form of a $1,000 cashier's check. In April or May of 1990, Travis and his father went to the body shop to check on the car and to discuss and authorize additional repairs. In July, they returned to the body shop and, after an argument about the balance due, compromised on a balance of $850. This amount was paid to Mizerski in the form of a cashier's check drawn on Travis's parents' account when Travis picked up the vehicle at the end of July. Travis and his father were dissatisfied with Mizerski's workmanship, and after demanding and not receiving resolution of the problems, Travis filed suit to disaffirm the contracts that he had made for the repair work and to get his money back. In a state that follows the traditional approach to the infancy doctrine, will he succeed?

9.  *Video Case.* See "In the Cards." A boy bought an Ernie Banks rookie card for $12 from an inexperienced clerk in a baseball card store owned by Johnson. The card had been marked "1200," and Johnson, who had been away from the store at the time of the sale, had intended the card to be sold for $1,200, not $12. Can Johnson get the card back by asserting the boy's lack of capacity?

Chapter Fifteen

Illegality

Chapter Outline

I. Meaning of Illegality
- *A. Determining Whether an Agreement Is Illegal*

II. Agreements in Violation of Statutes
- *A. Agreements Declared Illegal by Statute*
  - *1. Usury Statutes*
  - *2. Wagering Statutes*
- *B. Agreements That Violate the Public Policy of a Statute*
  - *1. Agreements to Commit a Crime*
  - *2. Agreements That Promote Violations of Statutes*
  - *3. Licensing Laws: Agreement to Perform an Act for Which a Party Is Not Properly Licensed*

III. Agreements That May Be in Violation of Public Policy Articulated by Courts
- *A. Agreements in Restraint of Competition*
  - *1. Enforceability of Non-Competition Clauses*
  - *2. Non-Competition Clauses in Employment Contracts*
  - *3. The Effect of Overly Broad Non-Competition Clauses*
- *B. Exculpatory Clauses*
- *C. Family Relationships and Public Policy*

IV. Unfairness in Agreements: Contracts of Adhesion and Unconscionable Contracts
- *A. Unconscionability*
  - *1. Consequences of Unconscionability*
  - *2. Meaning of Unconscionability*
- *B. Contracts of Adhesion*

V. Effect of Illegality
- *A. General Rule: No Remedy for Breach of Illegal Agreements*
- *B. Exceptions*
  - *1. Excusable Ignorance of Facts or Legislation*
  - *2. Rights of Parties Not Equally in the Wrong*
  - *3. Rescission before Performance of Illegal Act*
  - *4. Divisible Contracts*

Although the public interest normally favors the enforcement of contracts, there are times when the interests that usually favor the enforcement of an agreement are subordinated to conflicting social concerns. As you read in Chapter 13, Reality of Consent, and Chapter 14, Capacity to Contract, for example, people who did not truly consent to a contract or who lacked the capacity to contract have the power to cancel their contracts. In these situations, concerns about protecting disadvantaged persons and preserving the integrity of the bargaining process outweigh the usual public interest in enforcing private agreements. Similarly, when an agreement involves an act or promise that violates some legislative or court-made rule, the public interests threatened by the agreement outweigh the interests that favor its enforcement. Such an agreement will be denied enforcement on the ground of *illegality,* even if there is voluntary consent between two parties who have capacity to contract.

Meaning of Illegality

When a court says that an agreement is illegal, it does not necessarily mean that the agreement violates a criminal law, although an agreement to commit a crime is one type of illegal agreement. Rather, an agreement is illegal either because the legislature has declared that particular type of contract to be unenforceable or void or because the agreement violates a **public policy** that has been developed by courts or that has been

manifested in constitutions, statutes, administrative regulations, or other sources of law.

The term *public policy* is impossible to define precisely. Generally, it is taken to mean a widely shared view about what ideas, interests, institutions, or freedoms promote public welfare. For example, in our society, there are strong public policies favoring the protection of human life and health, free competition, and private property. Judges' and legislators' perceptions of desirable public policy influence the decisions they make about the resolution of cases or the enactment of statutes. Public policy may be based on a prevailing moral code, on an economic philosophy, or on the need to protect a valued social institution such as the family or the judicial system. If the enforcement of an agreement would create a threat to a public policy, a court may determine that it is illegal.

Determining Whether an Agreement Is Illegal

If a statute states that a particular type of agreement is unenforceable or void, courts will apply the statute and refuse to enforce the agreement. Relatively few such statutes exist, however. More frequently, a legislature will forbid certain conduct but will not address the enforceability of contracts that involve the forbidden conduct. In such cases, courts must determine whether the importance of the public policy that underlies the statute in question and the degree of interference with that policy are sufficiently great to outweigh any interests that favor enforcement of the agreement.

In some cases, it is relatively easy to predict that an agreement will be held to be illegal. For example, an agreement to commit a serious crime is certain to be illegal. However, the many laws enacted by legislatures are of differing degrees of importance to the public welfare. The determination of **illegality** would not be so clear if the agreement violated a statute that was of relatively small importance to the public welfare. For example, in one Illinois case,[1] a seller of fertilizer failed to comply with an Illinois statute requiring that a descriptive statement accompany the delivery of the fertilizer. The sellers prepared the statements and offered them to the buyers but did not give them to the buyers at the time of delivery. The court enforced the contract despite the sellers' technical violation of the law because the contract was not seriously injurious to public welfare.

Similarly, the public policies developed by courts are rarely absolute; they, too, depend on a balancing of several factors. In determining whether to hold an agreement illegal, a court will consider the importance of the public policy involved and the extent to which enforcement of the agreement would interfere with that policy. They will also consider the seriousness of any wrongdoing involved in the agreement and how directly that wrongdoing was connected with the agreement.

For purposes of our discussion, illegal agreements will be classified into three main categories: (1) agreements that violate statutes, (2) agreements that violate public policy developed by courts, and (3) unconscionable agreements and contracts of adhesion.

The *Straub* case provides an example of a contract that was held to violate public policy.

[1] *Amoco Oil Co. v. Toppert,* 56 Ill. App. 3d 1294 (Ill. Ct. App. 1978).

Straub v. B.M.T. *626 N.E.2d. 848 (Ind. Ct. App. 1993)*

Edward Straub and Francine Todd began dating in 1985 when both were teachers at the same elementary school. In late 1986, Todd discussed her desire to have a child with Straub after her doctor informed her that artificial insemination would not work. Straub told Todd that he did not want the responsibility of another family on account of his age and the fact that he already had children from a previous marriage. However, when Todd threatened to end their relationship, he agreed to try to impregnate her providing she would sign a "hold harmless" agreement. Straub presented Todd with the following handwritten agreement, which Todd signed:

To Whom it may concern
I Francine Todd in sound mind & fore thought have decided not to marry, but would like to have a baby of my own. To support financially & emotionally, I have approached several men who will not be held responsible financially or emotionally who's [sic] names will be kept secret for life.
Signed Francine Todd
Dec. 15, 1986

After Todd signed the agreement, the couple began to have unprotected sex, and in March 1987, Todd became pregnant. During this period, Todd was not sexually active with any other man. Todd and Straub continued their relationship during Todd's pregnancy and for three years after the birth of their child (B.M.T.), and even after Straub's marriage to someone else, but Straub did not establish a relationship with the child. He stopped seeing Todd after she filed this action on B.M.T.'s behalf to establish paternity. The trial court found that Straub was the biological father of B.M.T. and that he had the obligation to support her. Straub appealed.

Miller, Judge Indiana has long recognized the obligation of both parents to support their children. A parent's obligations to support his minor child is a basic tenet recognized in this state by statutes that provide civil and criminal sanctions against parents who neglect such duty. In addition, there is a well-established common-law duty and obligation of a *father* to assist in the support of his children.

It is apparent that our legislature has created a strong current public policy (and not merely maintained an ancient one) with the object of protecting the rights of children from the whims of their parents and the power of the state.

Straub first claims that "fundamental contract principles" allow him to contract around his statutory and common law duty to provide support to his daughter. He ignores other rights, such as inheritance. However, this argument fails because it amounts to the contracting away of his daughter's right to support. It is well settled that a parent cannot, by his own contract, relieve himself of the legal obligation to support his minor children. In *Ort v. Schage,* we held that an agreement to forgo court ordered child support even in exchange for a benefit (social security payments) to the child is unenforceable because a parent has no right to contract away a child's support benefits.

Although the primary goal of a paternity action is to secure support and education for illegitimate children, a legitimate subsidiary goal of the same action, however, is to protect the public interest by preventing the illegitimate child from becoming a ward of the state. Public policy considerations mandate that the state take an active interest in providing for the welfare of illegitimate children in order to avoid placing an undue burden on taxpayers.

Finally, Straub argues that the agreement signed by Todd should be enforced because he was acting merely as a "sperm donor." He argues that we should follow cases from other jurisdictions which look to the pre-conception intent of the parties involved in deciding whether to enforce their agreement. We first note, of course, arguing that Straub's and Todd's relationship was that of a sperm donor and donee ignores the facts. It is undisputed that Straub and Todd had an ongoing affair, one which began before Todd decided to become pregnant and only ended three years after B.M.T.'s birth.

Straub argues that he should be indemnified against any support claims because Todd is capable of supporting the child on her own and the "economic injury" to Straub due to her "breach of contract" would exceed $100,000. Because this argument merely seeks to circumvent public policy, it, too, must fail. First, because the agreement between the parties is void, there is no enforceable contract to breach. Second, Todd's *present* ability to care for the child on her own and the cost of the support to Straub do not change the law—Straub must provide his share of his daughter's support.

Affirmed in favor of B.M.T.

Agreements in Violation of Statute

Agreements Declared Illegal by Statute

State legislatures occasionally enact statutes that declare certain types of agreements unenforceable, void, or voidable. In a case in which a legislature has specifically stated that a particular type of contract is void, a court need only interpret and apply the statute. These statutes differ from state to state. Some are relatively uncommon. For example, an Indiana statute declares surrogate birth contracts to be void.[2] Others, such as *usury statutes* and *wagering statutes,* are common.

[2]Ind. Code 31–8–2–2 (1988).

Usury Statutes Federal law and the law of most states set limits on the amount of interest that can be charged for a loan or forbearance (refraining from making a demand for money that is already due). *Usury* means obtaining interest beyond the amount that is authorized by law for these transactions. The statutes that define usury and set the maximum permissible limit for interest are not uniform in their prohibitions or their penalties. When a transaction is covered by usury laws and the rate of interest charged for the use of money exceeds the statutory limit, the contract to pay that interest rate is unenforceable.

Wagering Statutes All states either prohibit or regulate wagering, or gambling. There is a thin line separating wagering, which is illegal, from well-accepted, lawful transactions in which a person will profit from the happening of an uncertain event. The hallmark of a wager is that neither party has any financial stake or interest in the uncertain event except for the stake that he has created by making the bet. The person making a wager *creates* the risk that he may lose the money or property wagered upon the happening of an uncertain event. Suppose Ames bets Baker $20 that the Cubs will win the pennant this year. Ames has no financial interest in a Cubs victory other than that which he has created through his bet. Rather, he has created the risk of losing $20 for the sole purpose of bearing that risk. If, however, people make an agreement about who shall bear an existing risk in which one of them has an actual stake or interest, that is a legal, risk-shifting agreement. Property insurance contracts are classic examples of risk-shifting agreements. The owner of the property pays the insurance company a fee (premium) in return for the company's agreement to bear the risk of the uncertain event that the property will be damaged or destroyed. If, however, the person who takes out the policy had no legitimate economic interest in the insured property (called an **insurable interest** in insurance law), the agreement is an illegal wager.

Agreements that Violate the Public Policy of a Statute

As stated earlier, an agreement can be illegal even if no statute specifically states that that particular sort of agreement is illegal. Legislatures enact statutes in an effort to resolve some particular problem. If courts enforced agreements that involve the violation of a statute, they would frustrate the purpose for which the legislature passed the statute. They would also promote disobedience of the law and disrespect for the courts.

Agreements to Commit a Crime For the reasons stated above, contracts that require the violation of a criminal statute are illegal. If Grimes promises to pay Judge John Doe a bribe of $5,000 to dismiss a criminal case against Grimes, for example, the agreement is illegal. Sometimes the very formation of a certain type of contract is a crime, even if the acts agreed on are never carried out. An example of this is an agreement to murder another person. Naturally, such agreements are considered illegal under contract law as well as under criminal law.

Agreements that Promote Violations of Statutes Sometimes a contract of a type that is usually perfectly legal—say, a contract to sell goods—is deemed to be illegal under the circumstances of the case because it promotes or facilitates the violation of a statute. Suppose Davis sells Sims goods on credit. Sims uses the goods in some illegal manner and then refuses to pay Davis for the goods. Can Davis recover the price of the goods from Sims? The answer depends on whether Davis knew of the illegal purpose and whether he intended the sale to further that illegal purpose. Generally speaking, such agreements will be legal unless there is a direct connection between the illegal conduct and the agreement in the form of active, intentional participation in or facilitation of the illegal act. Knowledge of the other party's illegal purpose, standing alone, is generally not sufficient to render an agreement illegal. When a person is aware of the other's illegal purpose *and* actively helps to accomplish that purpose, an otherwise legal agreement—such as a sale of goods—might be labeled illegal.

Licensing Laws: Agreement to Perform an Act for Which a Party Is Not Properly Licensed Congress and the state legislatures have enacted a variety of statutes that regulate professions and businesses. A common type of regulatory statute is one that requires a person to obtain a license, permit, or registration before engaging in a certain business or profession. For example, state statutes require lawyers, physicians, dentists, teachers, and other professionals to be licensed to practice their professions. In order to obtain the required license, they must meet specified requirements such as attaining a certain educational degree and passing an examination. Real

estate brokers, stockbrokers, insurance agents, sellers of liquor and tobacco, pawnbrokers, electricians, barbers, and others too numerous to mention are also often required by state statute to meet licensing requirements to perform services or sell regulated commodities to members of the public.

What is the status of an agreement in which one of the parties agrees to perform an act regulated by state law for which she is not properly licensed? This will often be determined by looking at the purpose of the legislation that the unlicensed party has violated. If the statute is **regulatory**—that is, the purpose of the legislation is to protect the public against dishonest or incompetent practitioners—an agreement by an unlicensed person is generally held to be unenforceable. For example, if Spencer, a first-year law student, agrees to draft a will for Rowen for a fee of $150, Spencer could not enforce the agreement and collect a fee from Rowen for drafting the will because she is not licensed to practice law. This result makes sense, even though it imposes a hardship on Spencer. The public interest in ensuring that people on whose legal advice others rely have an appropriate educational background and proficiency in the subject matter outweighs any interest in seeing that Spencer receives what she bargained for.

On the other hand, where the licensing statute was intended primarily as a **revenue-raising** measure—that is, as a means of collecting money rather than as a means of protecting the public—an agreement to pay a person for performing an act for which she is not licensed will generally be enforced. For example, suppose that in the example used above, Spencer is a lawyer who is licensed to practice law in her state and who met all of her state's educational, testing, and character requirements but neglected to pay her annual registration fee. In this situation, there is no compelling public interest that would justify the harsh measure of refusing enforcement and possibly inflicting forfeiture on the unlicensed person.

Whether a statute is a regulatory statute or a revenue-raising statute depends on the intent of the legislature, which may not always be expressed clearly. Generally, statutes that require proof of character and skill and impose penalties for violation are considered to be regulatory in nature. Their requirements indicate that they were intended for the protection of the public. Those that impose a significant license fee and allow anyone who pays the fee to obtain a license are usually classified as revenue raising. The fact that no requirement other than the payment of the fee is imposed indicates that the purpose of the law is to raise money rather than to protect the public. Because such a statute is not designed for the protection of the public, a violation of the statute is not as threatening to the public interest as is a violation of a regulatory statute.

It would be misleading to imply that cases involving unlicensed parties always follow such a mechanical test. In some cases, courts may grant recovery to an unlicensed party even where a regulatory statute is violated. If the public policy promoted by the statute is relatively trivial in relation to the amount that would be forfeited by the unlicensed person and the unlicensed person is neither dishonest nor incompetent, a court may conclude that the statutory penalty for violation of the regulatory statute is sufficient to protect the public interest and that enforcement of the agreement is appropriate.

Concept Review

Contracts that Violate a Licensing Statute

Type of Licensing Statute	Regulatory Statute	Revenue Raising Statute
Purpose of Statute	Protect the public welfare	Provide source of revenue
Typical Characteristics of Statute	Require proof of character, skill, and training, and impose penalties for violation	Impose fee with no or few other requirements
Status of Contracts that Violate Statute	Contracts violating statute usually illegal	Contracts violating statute still legal (validity of contract not affected by statute)

Agreements That May Be in Violation of Public Policy Articulated by Courts

Courts have broad discretion to articulate public policy and to decline to lend their powers of enforcement to an agreement that would contravene what they deem to be in the best interests of society. There is no simple rule for determining when a particular agreement is contrary to public policy. Public policy may change with the times; changing social and economic conditions may make behavior that was acceptable in an earlier time unacceptable today, or vice versa. The following are examples of agreements that are frequently considered vulnerable to attack on public policy grounds.

Agreements in Restraint of Competition

The policy against restrictions on competition is one of the oldest public policies declared by the common law. This same policy is also the basis of federal and state antitrust statutes. The policy against restraints on competition is based on the economic judgment that the public interest is best served by free competition. Nevertheless, courts have long recognized that some contractual restrictions on competition serve legitimate business interests and should be enforced. Therefore, agreements that limit competition are scrutinized very closely by the courts to determine whether the restraint imposed is in violation of public policy.

If the *sole* purpose of an agreement is to restrain competition, it violates public policy and is illegal. For example, if Martin and Bloom, who own competing businesses, enter an agreement whereby each agrees not to solicit or sell to the other's customers, such an agreement would be unenforceable. Where the restriction on competition was part of (*ancillary to*) an otherwise legal contract, the result may be different because the parties may have a legitimate interest to be protected by the restriction on competition.

For example, if Martin had *purchased* Bloom's business, the goodwill of the business was part of what she paid for. She has a legitimate interest in making sure that Bloom does not open a competing business soon after the sale and attract away the very customers whose goodwill she paid for. Or suppose that Martin hired Walker to work as a salesperson in her business. She wants to assure herself that she does not disclose trade secrets, confidential information, or lists of regular customers to Walker only to have Walker quit and enter a competing business.

To protect herself, the buyer or the employer in the above examples might bargain for a contractual clause that would provide that the seller or employee agrees not to engage in a particular competing activity in a specified *geographic area* for a specified *time* after the sale of the business or the termination of employment. This type of clause is called an **ancillary covenant not to compete,** or, as it is more commonly known, a **non-competition clause.** Such clauses most frequently appear in *employment contracts, contracts for the sale of a business, partnership agreements,* and *small-business buy–sell agreements.* In an employment contract, the non-competition clause might be the only part of the contract that the parties put in writing.

Enforceability of Non-Competition Clauses

Although non-competition clauses restrict competition and thereby affect the public policy favoring free competition, courts enforce them if they meet the following three criteria.

1. *Clause must serve a legitimate business purpose.* This means that the person protected by the clause must have some justifiable interest—such as an interest in protecting goodwill or trade secrets—that is to be protected by the non-competition clause. It also means that the clause must be *ancillary* to, or part of, an otherwise valid contract. For example, a non-competition clause that is one term of an existing employment contract would be ancillary to that contract. By contrast, a promise not to compete would not be enforced if the employee made the promise *after* he had already resigned his job, because the promise not to compete was not ancillary to any existing contract.

2. *The restriction on competition must be reasonable in time, geographic area, and scope.* Another way of stating this is that the restrictions must not be any greater than necessary to protect a legitimate interest. It would be unreasonable for an employer or buyer of a business to restrain the other party from engaging in some activity that is not a competing activity or from doing business in a territory in which the employer or buyer does not do business, because this would not threaten his legitimate interests.

3. *The non-competition clause should not impose an undue hardship.* A court will not enforce a non-competition clause if its restraints are unduly burdensome either on the public or on the party whose

ability to compete would be restrained. In one case, for example, the court refused to enforce a non-competition clause against a gastroenterologist because of evidence that the restriction would have imposed a hardship on patients and other physicians requiring his services.[3] Non-competition clauses in employment contracts that have the practical effect of preventing the restrained person from earning a livelihood are unlikely to be enforced as well. This is discussed further in the next section.

Non-Competition Clauses in Employment Contracts Restrictions on competition work a greater hardship on an employee than on a person who has sold a business. For this reason, courts tend to judge non-competition clauses contained in employment contracts by a stricter standard than they judge similar clauses contained in contracts for the sale of a business. In some states, statutes limit or even prohibit non-competition clauses in employment contracts. In others, there is a trend toward refusing enforcement of these clauses in employment contracts unless the employer can bring forth very good evidence that he has a protectible interest that compels enforcement of the clause. The employer can do this by showing that he has entrusted the employee with trade secrets or confidential information, or that his goodwill with "near-permanent" customers is threatened. In the absence of this kind of proof, a court might conclude that the employer is just trying to avoid competition with a more efficient competitor and refuse enforcement because there is no legitimate business interest that requires protection.

Furthermore, many courts refuse to enforce non-competition clauses if they restrict employees from engaging in a "common calling." A common calling is an occupation that does not require extensive or highly sophisticated training but instead involves relatively simple, repetitive tasks. Under this common calling restriction, various courts have refused to enforce non-competition clauses against salespersons, a barber, and an auto trim repairperson.

Balancing employers' and employees' legitimate interests has become even more challenging in the context of rapidly changing, information technology businesses. In addition to using non-competition clauses, employers in such businesses often seek to protect their trade secrets by including nondisclosure agreements—that is, agreements not to disclose trade secrets—in their employment contracts. The following *EarthWeb* case involves a conflict between an employer and employee concerning the interaction of these two agreements.

[3] *Iredell Digestive Disease Clinic, P.A. v. Petrozza,* 373 S.E.2d 449 (N.C. Ct. App. 1988).

Earthweb, Inc. v. Schlack *1999 U.S. Dist. LEXIS 16700 (S.D.N.Y. 1999)*

EarthWeb provides online products and services to business professionals in the information technology (IT) industry. On October 19, 1998, Mark Schlack went to work for EarthWeb in the position of Vice President, Worldwide Content, in EarthWeb's New York City office. On October 13, 1998, EarthWeb and Schlack executed a written employment contract. One of the provisions of the contract was a nondisclosure agreement stating that Schlack would not disclose any confidential or proprietary information without EarthWeb's consent, either during his employment or afterward. Another provision was entitled "Limited Agreement Not To Compete." It stated:

> (c) For a period of twelve (12) months after the termination of Schlack's employment with EarthWeb, Schlack shall not, directly or indirectly:
> (1) work as an employee, employer, consultant, agent, principal, partner, manager, officer, director, or in any other individual or representative capacity for any person or entity that directly competes with EarthWeb. For the purpose of this section, the term "directly competing" is defined as a person or entity or division on an entity that is
> (i) an online service for Information Professionals whose primary business is to provide Information Technology Professionals with a directory of third party technology, software, and/or developer resources; and/or an online reference library, and or
> (ii) an online store, the primary purpose of which is to sell or distribute third party software or products used for Internet site or software development[.]

As one of ten vice presidents at EarthWeb, Schlack was responsible for the content of all of EarthWeb's websites. Schlack's home was in Massachusetts, but while he was working at EarthWeb, he lived in a New York City hotel two or three days per week at EarthWeb's expense.

On September 22, 1999, Schlack resigned from EarthWeb because he had accepted a position with ITworld.com, a subsidiary of IDG. IDG is the world's leading provider of IT print-based information. The IDG position was based in Massachusetts and paid better than Schlack's EarthWeb position. EarthWeb filed suit against Schlack for breach of contract and misappropriation of trade secrets, and moved for a preliminary injunction enjoining Schlack from beginning employment with IDG and disclosing EarthWeb's trade secrets.

Pauley, U.S. District Judge EarthWeb argues that under the "non-compete" provision of the employment agreement, Schlack should be enjoined from commencing employment with ITworld.com because that company will "directly compete" with EarthWeb, and because enforcement of the agreement is necessary to prevent the disclosure of EarthWeb's trade secrets. EarthWeb also contends that Schlack's services to EarthWeb are unique and extraordinary, thereby providing a further basis for enforcement of the non-compete provision. EarthWeb further asserts that under the employment agreement barring the disclosure or use of "proprietary information," preliminary injunctive relief is necessary because Schlack will inevitably disclose EarthWeb's trade secrets during the course of his employment at ITworld.com. EarthWeb claims that since disclosure of trade secrets would be inevitable, Schlack may be enjoined from working for ITworld.com under this provision. In contrast, Schlack argues that by its terms, the "limited" non-compete provision to which he agreed does not apply to his employment with ITworld.com because that company's "primary business" will not involve offering "a directory of third party technology," an "online reference library," or an "online store." Schlack also denies having knowledge of any trade secrets belonging to EarthWeb and he disputes EarthWeb's characterization of his services as unique and extraordinary. Finally, Schlack contends that any trade secrets of EarthWeb that he might remember would be of no value to ITworld.com, and hence would not be disclosed or used by him, because the two companies will be fundamentally different in the way they acquire and publish content.

This case does not involve the actual misappropriation or theft of trade secrets. EarthWeb conceded that it had no evidence that Schlack had copied or otherwise absconded with documents allegedly containing trade secrets. Preliminary injunctive relief is "an extraordinary and drastic remedy which should not be routinely granted." A demonstration of irreparable harm is the "single most important prerequisite for the issuance of a preliminary injunction." In this circuit, irreparable harm may be presumed if a trade secret has been misappropriated. A trade secret, once lost, is lost forever; its loss cannot be measured in money damages. It is also possible to establish irreparable harm based on the inevitable disclosure of trade secrets, particularly where the movant competes directly with the prospective employer and the transient employee possesses highly confidential or technical knowledge concerning manufacturing processes, marketing strategies, or the like. Such a risk was present in *Pepsico, Inc. v. Redmond,* where the Seventh Circuit analogized the former employer's predicament to that of "a coach, one of whose players has left, playbook in hand, to join the opposing team before the big game." The inevitable disclosure doctrine is not new. For example, in *Eastman Kodak Co. v. Powers Film Products* (1919), the court enforced a non-compete covenant where the departing employee possessed information about Eastman Kodak's secret film manufacturing processes and formulas that he would have inevitably used in performing his new job duties for a competitor. However, more recent cases are notable because they have enjoined employees from working for competitors in the absence of an express non-compete agreement.

Pepsico is a leading example. In that case the employee, Redmond, signed a confidentiality agreement at the outset of his employment, but he did not sign a non-compete agreement. Redmond worked within the highly competitive sports-drink industry, and he eventually became a general manager for a business unit that had annual revenues of over $500 million per year and accounted for 20 percent of

Pepsico's profit for all of the United States. Redmond's position made him privy to information such as Pepsico's national and regional marketing strategies for the upcoming year. He was recruited for a similar, high level position with Quaker Oats, a direct competitor of Pepsico in the sports drink industry. Under these circumstances, the court effectively converted Redmond's confidentiality agreement into a non-compete agreement by enjoining him from working for a direct competitor of Pepsico for a six-month period. *DoubleClick* is also instructive. The defendants in *DoubleClick* were two senior executives for an Internet advertising company who were caught misappropriating trade secrets as they surreptitiously plotted to form their own company to compete directly with their former employer. Both defendants had signed confidentiality agreements and while one of them had also signed a non-compete agreement, its applicability was disputed.

Based on the evidence of actual misappropriation, which was "bolstered by . . . a high probability of 'inevitable disclosure' of trade secrets," the court enjoined the defendants from launching their company, or accepting employment with any competing company, for a period of six months. While *DoubleClick* appears to represent a high water mark for the inevitable disclosure doctrine in New York, its holding rests heavily on evidence of the defendants' overt theft of trade secrets and breaches of fiduciary duty. Such misconduct has long been recognized as an appropriate ground for enjoining the disclosure of trade secrets, irrespective of any contract between the parties.

However, in cases that do not involve the actual theft of trade secrets, the court is essentially asked to bind the employee to an implied-in-fact restrictive covenant based on a finding of inevitable disclosure. This runs counter to New York's strong public policy against such agreements and circumvents the strict judicial scrutiny they have traditionally required. Indeed, in post-employment disputes that do not involve trade secrets or tortious conduct on the part of the employee, restrictive covenants may not be implied. Thus, in its purest form, the inevitable disclosure doctrine treads an exceedingly narrow path through judicially disfavored territory. Absent evidence of actual misappropriation by an employee, the doctrine should be applied in only the rarest of cases. Factors to consider in weighing the appropriateness of granting injunctive relief are whether: (1) the employers in question are direct competitors providing the same or very similar products or services; (2) the employee's new position is nearly identical to his old one, such that he could not reasonably be expected to fulfill his new job responsibilities without utilizing the trade secrets of his former employer; and (3) the trade secrets at issue are highly valuable to both employers. Other case-specific factors such as the nature of the industry and trade secrets should be considered as well.

While the inevitable disclosure doctrine may serve the salutary purpose of protecting a company's investment in its trade secrets, its application is fraught with hazards. Among these risks is the imperceptible shift in bargaining power that necessarily occurs upon the commencement of an employment relationship marked by the execution of a confidentiality agreement. When that relationship eventually ends, the parties' confidentiality agreement may be wielded as a restrictive covenant, depending on how the employer views the new job its former employee has accepted. This can be a powerful weapon in the hands of an employer; the risk of litigation alone may have a chilling effect on the employee. Such constraints should be the product of open negotiation. Another drawback to the doctrine is that courts are left without a frame of reference because there is no express non-compete agreement to test for reasonableness. Instead, courts must grapple with a decidedly more nebulous standard of "inevitability." The absence of specific guideposts staked out in a writing will only spawn such litigation, especially as the Internet becomes a primary medium for ideas and commerce. Clearly, a written agreement that contains a non-compete clause is the best way of promoting predictability during the employment relationship and afterwards. Of course, that is precisely what Schlack got with Earthweb. The parties' employment agreement is a "limited" restrictive covenant in which Schlack agrees not to compete with EarthWeb in three narrow categories of employment: companies whose "primary business" is providing IT professionals with (1) "directory" of third party technology, (2) an "online reference library," or (3) an "online store." On the other hand, section four of the employment agreement contains extremely broad language concerning nondis-

closure of "proprietary information." Schlack viewed this distinction as critical and says he would not have knowingly agreed to a post-employment restraint on his ability to work in the field of IT journalism on the Internet. EarthWeb, however, appears to gloss over the distinctness of these provisions which it drafted. Under the banner of inevitable disclosure doctrine, EarthWeb contends that Schlack should be enjoined from working for any Internet company that targets IT professionals.

This Court declines to rewrite the parties' employment agreement under the rubric of inevitable disclosure and thereby permit EarthWeb to broaden the sweep of its restrictive covenant. As discussed above, such retroactive alterations distort the terms of the employment relationship and upset the balance which courts have attempted to achieve in construing non-compete agreements. The Court finds further support for a strict construction of the employment agreement based on its rather onerous terms. The agreement provided that Schlack's employment was at-will. While it contained a restrictive covenant, it made no provision for the payment of severance to Schlack in the event that EarthWeb terminated his employment. Moreover, EarthWeb purported to "reserve the right to modify the terms of this Agreement on a quarterly basis, subject to notice and acknowledgment by the Employee of such modifications." Read collectively, the effect of these provisions is to indenture the employee to EarthWeb.

This Court will not allow EarthWeb to expand the agreement's confidentiality provision so that it potentially has that result. Nor can EarthWeb make an end-run around the agreement by asserting the doctrine of inevitable disclosure as an independent basis for relief. Accordingly, EarthWeb's entitlement to a preliminary injunction enjoining Schlack's future employment must be found to rest, if at all, on the restrictive covenant it drafted, and not on a confidentiality provision conflated with the theory of inevitable disclosure. With this framework in mind, the Court turns to the specific terms of the employment agreement at issue here.

Even if the terms of EarthWeb's restrictive covenant reached Schlack's prospective employment at ITworld.com, EarthWeb would still have to establish that the restraint is reasonable and necessary to protect its legitimate interests. In New York, non-compete covenants will be enforced only if reasonably limited in scope and duration, and only to the extent necessary (1) to prevent an employee's solicitation or disclosure of trade secrets, (2) to prevent an employee's release of confidential information regarding the employer's customers, or (3) in those cases where the employee's services to the employer are deemed special or unique. The policy underlying this strict approach rests on notions of employee mobility and free enterprise. Once the term of an employment agreement has expired, the general public policy favoring robust and uninhibited competition should not give way merely because a particular employer wishes to insulate himself from competition. Important, too, are the powerful considerations of public policy which militate against sanctioning the loss of a man's livelihood. On the other hand, the employer is entitled to protection from unfair or illegal conduct that causes economic injury. Applying these principles here, EarthWeb's restrictive covenant would fail to pass muster even if Schlack's position at ITworld.com fell within the provision's relatively narrow parameters.

As a threshold matter, this Court finds that the one-year duration of EarthWeb's restrictive covenant is too long given the dynamic nature of this industry, its lack of geographical borders, and Schlack's former cutting-edge position with EarthWeb where his success depended on keeping abreast of daily changes in content on the Internet. By comparison, the court in *DoubleClick* enjoined the defendants for only a six-month period. The *DoubleClick* court observed that "given the speed with which the Internet advertising industry apparently changes, defendants' knowledge of DoubleClick's operation will likely lose value to such a degree that the purpose of a preliminary injunction will have evaporated before the year is up." Similar considerations predominate here, making a one-year restrictive covenant unreasonably long. While courts may "blue pencil" such provisions to make them shorter and hence enforceable, this Court would decline to exercise its discretion to do so in this case because the employment agreement as a whole overreaches. Contrary to EarthWeb's contention, Schlack's services are not "unique and extraordinary." Such characteristics have traditionally been associated with various categories of employment where the services are dependent on an employee's special talents; such categories include musicians, professional

athletes, actors and the like. However, in order to justify an enforcement of a restrictive covenant, more must be shown to establish such a quality than that the employee excels at his work or that his performance is of high value to his employer. It must also appear that his services are of such character as to make his replacement impossible or that the loss of such services would cause the employer irreparable injury. EarthWeb has not shown that the nature of Schlack's services are unique or that he cultivated the type of special client relationships.

The Court finds little in the record that could rise to the status of a trade secret. The Court finds no imminent risk that Schlack will disclose or use EarthWeb's trade secrets in connection with his employment at ITworld.com. Consequently, EarthWeb has failed to demonstrate a likelihood of irreparable injury entitling it to judicial enforcement of the restrictive covenant, even if that covenant were applicable by its terms and otherwise reasonable in duration. The Court further finds that enforcement of this provision would work a significant hardship on Schlack. When measured against the IT industry in the Internet environment, a one-year hiatus from the workforce is several generations, if not an eternity. Clearly, the balance of hardships tips decidedly in favor of Schlack.

For all these reasons, EarthWeb's motion for a preliminary injunction is denied.

Motion for preliminary injunction denied in favor of Schlack.

The Effect of Overly Broad Non-Competition Clauses The courts of different states treat unreasonably broad non-competition clauses in different ways. Some courts will strike the entire restriction if they find it to be unreasonable and will refuse to grant the buyer or employer any protection. Others will refuse to enforce the restraint as written, but will adjust the clause and impose such restraints as would be reasonable. In case of breach of an enforceable non-competition clause, the person benefited by the clause may seek damages or an injunction (a court order preventing the promisor from violating the covenant).

Exculpatory Clauses

An **exculpatory clause** is a provision in a contract that purports to relieve one of the parties from tort liability. Exculpatory clauses are suspect on public policy grounds for two reasons. First, courts are concerned that a party who can contract away his liability for negligence will not have the incentive to use care to avoid hurting others. Second, courts are concerned that an agreement that accords one party such a powerful advantage might have been the result of the abuse of superior bargaining power rather than truly voluntary choice. Although exculpatory agreements are often said to be "disfavored" in the law, courts do not want to prevent parties who are dealing on a fair and voluntary basis from determining how the risks of their transaction shall be borne if their agreement does not threaten public health or safety.

Courts enforce exculpatory clauses in some cases and refuse to enforce them in others, depending on the circumstances of the case, the identity and relationship of the parties, and the language of the agreement. A few ground rules can be stated. First, an exculpatory clause cannot protect a party from liability for any wrongdoing greater than negligence. One that purports to relieve a person from liability for fraud or some other willful tort will be considered to be against public policy. In some cases, in fact, exculpatory clauses have been invalidated on this ground because of broad language stating that one of the parties was relieved of "all liability." Second, exculpatory clauses will not be effective to exclude tort liability on the part of a party who owes a duty to the public (such as an airline) because this would present an obvious threat to the public health and safety.

A third possible limitation on the enforceability of exculpatory clauses arises from the increasing array of statutes and common law rules that impose certain obligations on one party to a contract for the benefit of the other party to the contract. Workers' compensation statutes and laws requiring landlords to maintain leased property in a habitable condition are examples of such laws. Sometimes the person on whom such an obligation is placed will attempt to escape it by inserting an exculpatory or waiver provision in a contract. Such clauses are often—though not always—found to be against public policy because, if enforced, they would frustrate the very purpose of imposing the duty in question. For example, an employee's agreement to relieve

her employer from workers' compensation liability is likely to be held illegal as a violation of public policy.

Even if a clause is not against public policy on any of the above three grounds, a court may still refuse to enforce it if a court finds that the clause was **unconscionable,** a **contract of adhesion,** or some other product of abuse of superior bargaining power. (Unconscionability and contracts of adhesion are discussed later in this chapter.) This determination depends on all of the facts of the case. As you will see in *Leon v. Family Fitness Center,* which follows, facts that tend to show that the exculpatory clause was not the product of *knowing* consent increase the likelihood that the clause will not be enforced. A clause that is written in clear language and conspicuous print is more likely to be enforced than one written in "legalese" and presented in fine print. Facts that tend to show that the exculpatory clause was the product of *voluntary* consent increase the likelihood of enforcement of the clause. For example, a clause contained in a contract for a frivolous or unnecessary activity is more likely to be enforced than is an exculpatory clause contained in a contract for a necessary activity such as medical care.

Leon v. Family Fitness Center *71 Cal. Rptr. 2d 923 (Ct. App. Cal. 1998)*

Carlos Leon joined the Family Fitness Center in June 1993, signing a contract called a "Club Membership Agreement (Retail Installment Contract)." The contract was a legal-length, single sheet of paper covered with writing front and back. The front page was divided into two columns, with the right-hand column containing blanks for insertion of financial and "Federal Truth in Lending" data plus approximately 76 lines of text of varying sizes, some highlighted with bold print. The left-hand column contained approximately 90 lines of text undifferentiated in size, with no highlighting and no paragraph headings or any other indication of its contents. The back of the agreement contained approximately 90 lines of text. The exculpatory clause was located at the bottom of the left-hand column of the front page and stated the following:

> Buyer is aware that participation in a sport or physical exercise may result in accidents or injury, and Buyer assumes the risk connected with the participation in a sport or exercise and represents that Member is in good health and suffers from no physical impairment which would limit their use of FFC's facilities. Buyer acknowledges that FFC has not and will not render any medical services including medical diagnosis of Member's physical condition. Buyer specifically agrees that FFC, its officers, employees and agents shall not be liable for any claim, demand, cause of action of any kind whatsoever for, or on account of death, personal injury, property damage or loss of any kind resulting from or related to Member's use of the facilities or participation in any sport, exercise or activity within or without the club premises, and Buyer agrees to hold FFC harmless from same.

In January 1994, Leon sustained head injuries when a sauna bench on which he was lying collapsed beneath him at Family Fitness. Leon filed an action against Family Fitness for personal injuries. The trial court granted summary judgment for Family Fitness based on the release in the Club Membership Agreement, and Leon appealed.

Work, Acting P.J. "An express release is not enforceable if it is not easily readable." *Conservatorship of Estate of Link* (1984). "Furthermore, the important operative language should be placed in a position which compels notice and must be distinguished from other sections of the document. A [layperson] should not be required to muddle through complex language to know that valuable, legal rights are being relinquished." *Id.* An exculpatory clause is unenforceable if not distinguished from other sections, if printed in the same typeface as the remainder of the document, and if not likely to attract attention because it is placed in the middle of a document. In other words, a release must not be buried in a lengthy document, hidden among other verbiage, or so encumbered with other provisions as to be difficult to find.

The trial court found the exculpatory clause was sufficiently conspicuous, citing only that it is written in 8-point type as required for retail installment contracts by Civil Code section 1803.1 and stated in

plain and simple language. Although print size is an important factor, it is not the only one to be considered in assessing the adequacy of a document as a release. The court failed to address specifically other relevant characteristics of the exculpatory clause: its size, form and location within the undifferentiated paragraph in which it appears. In fact, Civil Code section 1803.2 requires warnings to protect consumers' financial interests from potential hazards in retail installment contracts by providing notice in larger, bold-face type (14-, 12-, or 10-point). Clearly, Civil Code section 1803.1's perfunctory mandate that all retail installment sales contracts be at least in 8-point type is not legislative acknowledgment that 8-point type alone is per se evidence of adequate conspicuousness so as to universally relieve a party of liability for its general negligence. Indeed, Civil Code section 1812.85 requires even a provision of lesser import, a cancellation clause in contracts for health services offered by facilities such as Family Fitness to be at least 10-point boldface print. Here, the release clause, although a separate paragraph, is in undifferentiated type located in the middle of a document. Although some other portions are printed in bold and in enlarged print, the releasing paragraph is not prefaced by a heading to alert the reader that it is an exculpatory release, contains no bold lettering, and is in the same smaller font size as is most of the document. No physical characteristic distinguishes the exculpatory clause from the remainder of the document. The document itself is titled "Club Membership Agreement (Retail Installment Contract)" giving no notice to the reader it includes a release or waiver of liability. Of particular relevance, there is no language to alert a reader that Family Fitness intended the release to exculpate it from claims based on its own negligence. Where such exculpation is sought, the release must contain specific words "clearly and explicitly expressing that this was the intent." To be valid and enforceable, a written release purporting to exculpate a tortfeasor from damage claims based on its future negligence or misconduct must clearly, unambiguously, and explicitly express this specific intent of the subscribing parties. If a tortfeasor is to be released from such liability the language used must be clear, explicit and comprehensible in each of its essential details. Such an agreement, read as a whole, must clearly notify the prospective releasor of the effect of signing the agreement.

The membership agreement signed by Leon is prefaced with an assumption of the risk statement. The general release is unobtrusively inserted thereafter. Although some courts have treated the two interchangeably, others have separately analyzed the enforceability of either. Whether taken separately or analyzed as a whole, we conclude the general release statement is fatally ambiguous. The Restatement Second of Torts states: "In order for the agreement to assume the risk to be effective, it must also appear that its terms were intended by both parties to apply to the particular conduct of the defendant which has caused the harm. Again, where the agreement is drawn by the defendant and the plaintiff passively accepts it, its terms will ordinarily be construed strictly against the defendant." (*Rest. 2d Torts,* section 496B). In its most basic sense, assumption of risk means that one person, in advance, has given his express consent to relieve another of obligations toward himself, and to assume the chance of injury from a known risk arising from what the other is to do or leave undone. The result is the other person is relieved of a legal duty to the plaintiff; and being under no duty, he cannot be charged with negligence solely based on the occurrence of the event anticipated. Here, an individual who understandingly entered into the membership agreement at issue can be deemed to have waived any hazard known to relate to the use of the health club facilities. These hazards typically include the risk of a sprained ankle due to improper exercise or overexertion, a broken toe from a dropped weight, injuries due to malfunctioning exercise or sports equipment, or from slipping in the locker-room shower. On the other hand, no Family Fitness patron can be charged with realistically appreciating the risk of injury from simply reclining on a sauna bench. Because the collapse of a sauna bench when properly utilized is not a "known risk," we conclude Leon cannot be deemed to have assumed the risk of this incident as a matter of law.

The Family Fitness membership agreement contained a general release or hold harmless provision as well. "[W]here a participant in an activity has expressly released the defendant from responsibility for the consequences of any act of negligence, 'the law imposes no requirement that [the participant] have had a specific knowledge of the particular risk which resulted in his death [or injury.]' . . . Not every possible specific act of negligence by the defendant

must be spelled out in the agreement or discussed by the parties. . . . Where a release of all liability for any act of negligence is given, the release applies to any such negligent act, whatever it may have been. . . . 'It is only necessary that the act of negligence, which results in injury to the releasor, be reasonably related to the object or purpose for which the release is given.' " *Paralift, Inc. v. Superior Court.* Here, Family Fitness's negligence was not reasonably related to the object or purpose for which the release was given, that is, as stated, injuries resulting from participating in sports or exercise rather than from merely reclining on the facility's furniture. The objective purpose of the release Leon signed was to allow him to engage in fitness activities within the Family Fitness facilities. However, it was not this type of activity which led to his injury. Leon allegedly was lying on a fixed, nonmovable, permanent bench in the sauna room. Injuries resulting during the proper use of the bench would no more be expected to be covered by the clause than those caused by the ceiling falling on his head or from a pratfall caused by a collapsing office chair. These incidents have no relation to an individual's participation in a health club's fitness regimen. Further, the release is ineffective because, read as a whole, it does not clearly notify a customer of the effect of signing the agreement. It was not clear, unambiguous and explicit. The release begins with language that participation in a sport or physical exercise may result in accidents or injury, and buyer assumes the risk connected with the participation in such. The release is followed by a statement in large print and bold, capital letters: "Moderation Is the Key to a Successful Fitness Program and Also the Key to Preventing Injuries." Family Fitness placed the general waiver between these two statements which deal strictly with the risks inherent in an exercise or sports program without any mention that it was intended to insulate the proprietor from liability for injuries caused by its own negligence.

Reading the entire document leads to the inescapable conclusion [that] the release does not clearly, explicitly and comprehensibly set forth to an ordinary person untrained in the law, such as Leon, that the intent and effect of the document is to release claims for his own personal injuries resulting from the enterprise's own negligent acts, regardless whether related to the sports or exercise activities it marketed.

Judgment reversed in favor of Leon.

Family Relationships and Public Policy

In view of the central position of the family as a valued social institution, it is not surprising that an agreement that unreasonably tends to interfere with family relationships will be considered illegal. Examples of this type of contract include agreements whereby one of the parties agrees to divorce a spouse or agrees not to marry.

In recent years, courts have been presented with an increasing number of agreements between unmarried cohabitants that purport to agree upon the manner in which the parties' property will be shared or divided upon separation. It used to be widely held that contracts between unmarried cohabitants were against public policy because they were based on an immoral relationship. As unmarried cohabitation has become more widespread, however, the law concerning the enforceability of agreements between unmarried couples has changed. For example, in the 1976 case of *Marvin v. Marvin,* the California Supreme Court held that an agreement between an unmarried couple to pool income and share property could be enforceable.[4] Today, most courts hold that agreements between unmarried couples are not against public policy unless they are explicitly based on illegal sexual relations as the consideration for the contract or unless one or more of the parties is married to someone else.

Unfairness in Agreements: Contracts of Adhesion and Unconscionable Contracts

Under classical contract law, courts were reluctant to inquire into the fairness of an agreement. Because the prevailing social attitudes and economic philosophy strongly favored freedom of contract, American courts

[4] 134 Cal. Rptr. 815 (1976).

took the position that so long as there had been no fraud, duress, misrepresentation, mistake, or undue influence in the bargaining process, unfairness in an agreement entered into by competent adults did not render it unenforceable.

As the changing nature of our society produced many contract situations in which the bargaining positions of the parties were grossly unequal, the classical contract assumption that each party was capable of protecting himself was no longer persuasive. The increasing use of standardized contracts (preprinted contracts) enabled parties with superior bargaining power and business sophistication to virtually dictate contract terms to weaker and less sophisticated parties.

Legislatures responded to this problem by enacting a variety of statutory measures to protect individuals against the abuse of superior bargaining power in specific situations. Examples of such legislation include minimum wage laws and rent control ordinances. Courts became more sensitive to the fact that superior bargaining power often led to **contracts of adhesion** (contracts in which a stronger party is able to determine the terms of a contract, leaving the weaker party no practical choice but to "adhere" to the terms). Some courts responded by borrowing a doctrine that had been developed and used for a long time in courts of equity,[5] the doctrine of **unconscionability.** Under this doctrine, courts would refuse to grant the equitable remedy of specific performance for breach of a contract if they found the contract to be oppressively unfair. Courts today can use the concepts of unconscionability or adhesion to analyze contracts that are alleged to be so unfair that they should not be enforced.

Unconscionability

One of the most far-reaching efforts to correct abuses of superior bargaining power was the enactment of section 2–302 of the Uniform Commercial Code, which gives courts the power to refuse to enforce all or part of a contract for the sale of goods or to modify such a contract if it is found to be unconscionable. By virtue of its inclusion in Article 2 of the Uniform Commercial Code, the prohibition against unconscionable terms applies to every contract for the sale of goods. The concept of unconscionability is not confined to contracts for the sale of goods, however. Section 208 of the *Restatement (Second) of Contracts,* which closely resembles the unconscionability section of the UCC, provides that courts may decline to enforce unconscionable terms or contracts. The prohibition of unconscionability has been adopted as part of the public policy of many states by courts in cases that did not involve the sale of goods, such as banking transactions and contracts for the sale or rental of real estate. It is therefore fair to state that the concept of unconscionability has become part of the general body of contract law.

Consequences of Unconscionability The UCC and the *Restatement (Second)* sections on unconscionability give courts the power to manipulate a contract containing an unconscionable provision so as to reach a just result. If a court finds that a contract or a term in a contract is unconscionable, it can do one of three things: it can refuse to enforce the entire agreement; it can refuse to enforce the unconscionable provision but enforce the rest of the contract; or it can "limit the application of the unconscionable clause so as to avoid any unconscionable result." This last alternative has been taken by courts to mean that they can make adjustments in the terms of the contract.

Meaning of Unconscionability Neither the UCC nor the *Restatement (Second) of Contracts* attempts to define the term *unconscionability.* Though the concept is impossible to define with precision, unconscionability is generally taken to mean the *absence of meaningful choice* together with *terms unreasonably advantageous* to one of the parties.

The facts of each individual case are crucial to determining whether a contract term is unconscionable. Courts will scrutinize the process by which the contract was reached to see if the agreement was reached by fair methods and whether it can fairly be said to be the product of knowing and voluntary consent.

Procedural Unconscionability Courts and writers often refer to unfairness in the bargaining process as *procedural unconscionability.* Some facts that may point to procedural unconscionability include the use of fine print or inconspicuously placed terms, complex, legalistic language, and high-pressure sales tactics. One of the most significant facts pointing to procedural unconscionability is the lack of voluntariness

[5]Chapter 1 discusses courts of equity.

as shown by a marked imbalance in the parties' bargaining positions, particularly where the weaker party is unable to negotiate more favorable terms because of economic need, lack of time, or market factors. In fact, in most contracts that have been found to be unconscionable, there has been a serious inequality of bargaining power between the parties. It is important to note, however, that the mere existence of unequal bargaining power does not make a contract unconscionable. If it did, every consumer's contract with the telephone company or the electric company would be unenforceable. Rather, in an unconscionable contract, the party with the stronger bargaining power *exploits* that power by driving a bargain containing a term or terms that are so unfair that they "shock the conscience of the court."

Substantive Unconscionability In addition to looking at facts that might indicate procedural unconscionability, courts will scrutinize the contract terms themselves to determine whether they are oppressive, unreasonably one-sided, or unjustifiably harsh. This aspect of unconscionability is often referred to as *substantive unconscionability.* Examples include situations in which a party to the contract bears a disproportionate amount of the risk or other negative aspects of the transaction and situations in which a party is deprived of a remedy for the other party's breach. In some cases, unconscionability has been found in situations in which the contract provides for a price that is greatly in excess of the usual market price.

There is no mechanical test for determining whether a clause is unconscionable. Generally, in cases in which courts have found a contract term to be unconscionable, there are elements of *both* procedural and substantive unconscionability. Though courts have broad discretion to determine what contracts will be deemed to be unconscionable, it must be remembered that the doctrine of unconscionability is designed to prevent oppression and unfair surprise—not to relieve people of the effects of bad bargains.

The cases concerning unconscionability are quite diverse. Some courts have found unconscionability in contracts involving grossly unfair sales prices. Although the doctrine of unconscionability has been raised primarily by victimized consumers, there have been cases in which businesspeople in an inherently weak bargaining position have been successful in asserting unconscionability.

Contracts of Adhesion

A contract of adhesion is a contract, usually on a standardized form, offered by a party who is in a superior bargaining position on a "take it or leave it" basis. The person presented with such a contract has no opportunity to negotiate the terms of the contract; they are imposed on him if he wants to receive the goods or services offered by the stronger party. In addition to not having a "say" about the terms of the contract, the person who signs a standardized contract of adhesion may not even know or understand the terms of the contract that he is signing. When these factors are present, the objective theory of contracts and the normal duty to read contracts before signing them may be modified. These factors may be viewed as a form of procedural unconscionability. A court may use the word *adhesion* to describe procedural unconscionability.

All of us have probably entered contracts of adhesion at one time or another. The mere fact that a contract is a contract of adhesion does not, in and of itself, mean that the contract is unenforceable. Courts will not refuse enforcement to such a contract unless the term complained of is either substantively unconscionable or is a term that the adhering party could not reasonably expect to be included in the form that he was signing.

Unenforceable contracts of adhesion can take different forms. The first is seen when the contract of adhesion contains a term that is harsh or oppressive. In this kind of case, the party offering the contract of adhesion has used his superior bargaining power to dictate unfair terms. The second situation in which contracts of adhesion are refused enforcement occurs when a contract of adhesion contains a term that, while it may not be harsh or oppressive, is a term that the adhering party could *not* be expected to have been aware that he was agreeing to. This type of case relates to the fundamental concept of agreement in an era in which lengthy, complex, standardized contracts are common. If a consumer presented with a contract of adhesion has no opportunity to negotiate terms and signs the contract without knowing or fully understanding what he is signing, is it fair to conclude that he has consented to the terms? It is reasonable to conclude that he has consented at least to the terms that he could have expected to be in the contract, but *not* to any terms that he could not have expected to be contained in the contract. The following *Ramirez* case illustrates the concept of contract of adhesion and demonstrates the relationship between unconscionability and contracts of adhesion.

Ramirez v. Circuit City Stores, Inc. *90 Cal. Rptr. 2d 916 (Ct. App. Cal. 1999)*

Ramirez was employed by Circuit City in Fresno, California, where he installed equipment in automobiles. At the time he applied for the job with Circuit City, Ramirez was required by Circuit City to sign an arbitration agreement under which he agreed to settle any and all claims he might have relating to his application for employment, his employment, or the termination of his employment with Circuit City, by final and binding arbitration before a neutral arbitrator and in accordance with Circuit City's "Dispute Resolution Rules and Procedures." Ramirez was given no choice but to sign the document if he wished to apply for a position with Circuit City. The arbitration agreement further provided that unless Ramirez withdrew his application within three days, he would be bound by the terms of the arbitration agreement. Circuit City's "Dispute Resolution Rules and Procedures" is a separate document, containing nine single-spaced typed pages of rules. Among other things, the rules require Circuit City's employees, termed "Associates," to arbitrate any and all employment-related disputes they have against Circuit City, including any claims arising from age discrimination, violation of civil rights, or violation of the Fair Labor Standards Act. Rule 9 deprives the arbitrator of the power to hear class actions. The rules set forth the procedures for filing and prosecuting claims and limit discovery. They require claims to be filed within one year after the date the Associate knew or should have known of the facts underlying his or her claim. They place the burden of proof on the Associate, providing that in order to prevail the Associate must prove by a preponderance of the evidence that Circuit City's conduct was a violation of applicable law. The rules describe the relief available to an Associate, providing that an Associate may obtain (1) certain forms of injunctive relief, (2) reinstatement, (3) full or partial back pay and fringe benefits for up to one year from the point that the Associate knew or should have known that a law was being violated, (4) up to 24 months of pay if reinstatement is not practical or reasonable under the circumstances, or (5) compensatory damages in accordance with applicable law. Punitive damages are limited to an amount equal to any monetary award made under (3) or (4), above, or $5,000, whichever amount is greater. The rules provide that the parties will share the costs of arbitration and that the Associate will pay his or her own attorney fees. They further provide, however, that should the Associate prevail, the arbitrator has the discretion to require Circuit City to pay the Associate's costs and award the Associate reasonable attorney fees.

On July 22, 1998, Ramirez, "on behalf of himself and all others similarly situated," filed suit against Circuit City, claiming that Circuit City had violated provisions of the Labor Code and California Code of Regulations and had committed unfair and unlawful business practices. More specifically, Ramirez alleged (1) that Circuit City failed to pay its employees at least twice the minimum wage although it required them to provide many of the tools used in the installation process; (2) that Circuit City required its employees to work overtime but did not pay them overtime at the rate of one and one-half times the minimum wage; and (3) that Circuit City was misreporting the statements of gross and net earnings of its employees. Circuit City answered Ramirez's complaint and filed a petition to compel arbitration, citing the arbitration agreement. The trial court denied Circuit City's motion, and Circuit City appealed.

Stein, Judge The doctrine of unconscionability applies to arbitration agreements in the same manner as it applies to other contracts, and an unconscionable arbitration agreement will not be enforced. "Unconscionable agreements typically involve contractual provisions which operate in a harsh and one-sided manner without any justification. They have both a procedural and a substantive element. The procedural element focuses on two factors: oppression and surprise. Oppression arises from an inequality of bargaining power which results in no real negotiation and an absence of meaningful choice. . . . Surprise involves the extent to which the terms of the bargain are hidden in a "prolix printed form" drafted by a party in a superior bargaining position. . . . Substantive unconscionability inquires into whether the one-sidedness of an agreement is objectively justified. . . . This component is tied to procedural unconscionability and requires a balancing test, such that "the greater the unfair surprise or inequality of bargaining power, the less unreasonable the risk reallocation which will be tolerated." *Olsen v. Breeze, Inc.* (1996).

The contract at issue here was what has been labeled an adhesion contract; i.e., a standardized contract, which, imposed and drafted by the party of superior bargaining strength, relegates to the subscribing party only the opportunity to adhere to the contract or reject it. So-called adhesion contracts are not, in and of themselves, unenforceable or even particularly objectionable, but the manner in which their terms are drafted and the language and style in which they appear are subject to an unconscionability analysis. They can satisfy the first, procedural, element of unconscionability, when the party with the weaker bargaining power has no ability to negotiate the terms, no meaningful choice other than to agree to the terms stated by the party in the stronger bargaining position, and may have no real ability to comprehend the terms to which he or she is agreeing.

Here, if Ramirez was to be considered for a position with Circuit City, he had no choice but to sign the arbitration agreement. Circuit City argues that Ramirez had a choice in that he was free to choose not to apply for a job with Circuit City. This argument, however, ignores the realities of the marketplace. Persons such as Ramirez, applying for an entry level position, presumably need a job and lack much in the way of salable skills. Circuit City was in a position to provide the needed job. In addition, although persons familiar with employment rights and employment law probably could comprehend the nature of the rights they would be giving up by agreeing to the arbitration agreement, it is unrealistic to suppose that persons such as Ramirez, seeking work and applying for positions not requiring specialized education, would have the background to understand the significance of rights they were relinquishing. A meaningful choice requires more than the choice, for applicants such as Ramirez, between forgoing the possibility of employment or applying for a job but agreeing to what, superficially, appears to be a fair means of resolving employment disputes. It follows that the procedural element of unconscionability existed here.

The lack of meaningful choice, however, would not be enough to render the agreement unenforceable if the terms of the agreement were even-handed; however, they are not. It is by now well-settled that an agreement that requires the weaker party to arbitrate any claims he or she may have, but permits the stronger party to seek redress through the courts, is presumptively unconscionable. Circuit City contends its arbitration agreement is not unilateral, but requires both parties to arbitrate their claims. In support of this contention, Circuit City cites language in Rule 2 of the Rules and Procedures:

> Arbitration shall apply to any and all such disputes, controversies or claims whether asserted against the Company and/or against any employee, officer, alleged agent, director or affiliate company.

Any suggestion that this language includes a promise by Circuit City to arbitrate claims it might have against an employee, however, is negated by the language with which Rule 2 opens, which explains just what "such disputes" are: "Except as otherwise limited herein, any and all employment-related legal disputes, controversies or claims of an Associate. . . . " Nothing is said about claims of the Company or about claims against Associates. Circuit City also cites the only language in the arbitration agreement that expressly sets forth an obligation on Circuit City's part:

> Circuit City agrees to follow this Dispute Resolution Agreement and the Dispute Resolution Rules and Procedures in connection with the Associate whose signature appears above.

This language, however, hardly can be characterized as an agreement by Circuit City to arbitrate any claims it may have against the employee; it does nothing more than bind Circuit City to follow the Rules and Procedures in connection with any claim filed by an Associate. Although it is unnecessary to look beyond the unilateral nature of Circuit City's arbitration agreement to hold it unconscionable, the agreement is suspect for other reasons. It limits or eliminates the ability of an employee to obtain relief against Circuit City by participating in a class action. Such a limitation was condemned by the Supreme Court in *Keating v. Superior Court* (1982). The court there emphasized the importance of the class action device as a means of vindicating rights asserted by large groups of persons, in that the "class suit both eliminates the possibility of repetitious litigation and provides small claimants with a method of obtaining redress for claims which would otherwise be too small to warrant individual litigation." The court found that

the elimination of the device would unduly benefit the wrongdoer and unduly disadvantage the members of the affected class. It strongly suggested that where an arbitration agreement is part of an adhesion contract, a term precluding settlement of claims by means of a class action should not be enforced. "It is common knowledge that arbitration clauses frequently appear in standardized contracts of adhesion. A primary consideration which has led courts to uphold such clauses, despite the adhesive nature of the contract, is the belief that arbitration is not oppressive and does not defeat the reasonable expectations of the parties. If, however, an arbitration clause may be used to insulate the drafter of an adhesive contract from any form of class proceeding, effectively foreclosing many individual claims, it may well be oppressive and may defeat the expectations of the nondrafting party."

In addition, the arbitration agreement's limitations on punitive damages tends to subvert the accepted purpose of such awards: to punish wrongdoing and to deter future misconduct by either the defendant or other potential wrongdoers. It therefore has been suggested that such limitations violate public policy. Similarly, the arbitration agreement tends to discourage the prosecution of employee claims that are encouraged by statute. It thus makes discretionary awards of costs and attorney fees that by statute are mandatory. It also makes a complaining employee potentially liable for Circuit City's costs and attorney fees, a liability that is not authorized by statute. In short, and for all of the reasons stated above, we find that Circuit City's arbitration agreement is unconscionable and thus unenforceable.

Affirmed in favor of Ramirez.

Effect of Illegality

General Rule: No Remedy for Breach of Illegal Agreements

As a general rule, courts will refuse to give any remedy for the breach of an illegal agreement. A court will refuse to enforce an illegal agreement and will also refuse to permit a party who has fully or partially performed her part of the agreement to recover what she has parted with. The reason for this rule is to serve the public interest, not to punish the parties.

In some cases, the public interest is best served by allowing some recovery to one or both of the parties. Such cases constitute exceptions to the "hands off" rule. The following discussion concerns the most common situations in which courts will grant some remedy even though they find the agreement to be illegal.

Exceptions

Excusable Ignorance of Facts or Legislation

Though it is often said that ignorance of the law is no excuse, courts will, under certain circumstances, permit a party to an illegal agreement who was excusably ignorant of facts or legislation that rendered the agreement illegal to recover damages for breach of the agreement. This exception is used where only *one* of the parties acted in ignorance of the illegality of the agreement and the other party was aware that the agreement was illegal. For this exception to apply, the facts or legislation of which the person claiming damages was ignorant must be of a relatively minor character—that is, it must not involve an immoral act or a serious threat to the public welfare. Finally, the person who is claiming damages cannot recover damages for anything that he does after learning of the illegality. For example, Warren enters a contract to perform in a play at Craig's theater. Warren does not know that Craig does not have the license to operate a theater as required by statute. Warren can recover the wages agreed on in the parties' contract for work that he performed before learning of the illegality.

When *both* of the parties are ignorant of facts or legislation of a relatively minor character, courts will not permit them to enforce the agreement and receive what they had bargained for, but they will permit the parties to recover what they have parted with.

Rights of Parties Not Equally in the Wrong

The courts will often permit a party who is not equally in the wrong (in technical legal terms, not *in pari delicto*) to recover what she has parted with under an illegal agreement. One of the most common situations in which this exception is used involves the rights of

"protected parties"—people who were intended to be protected by a regulatory statute—who contract with parties who are not properly licensed under that statute. Most regulatory statutes are intended to protect the public. As a general rule, if a person guilty of violating a regulatory statute enters into an agreement with another person for whose protection the statute was adopted, the agreement will be enforceable by the party whom the legislature intended to protect.

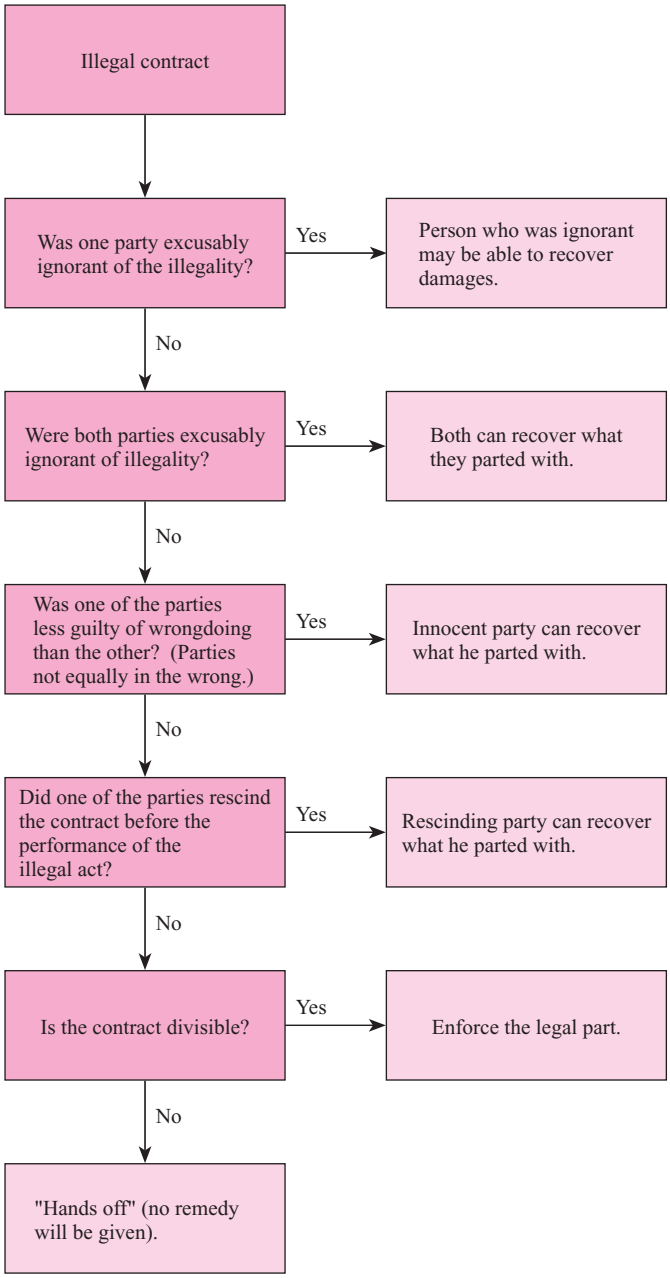
Another common situation in which courts will grant a remedy to a party who is not equally in the wrong is one in which the less guilty party has been induced to enter the agreement by misrepresentation, fraud, duress, or undue influence.

Rescission before Performance of Illegal Act Obviously, public policy is best served by any rule that encourages people not to commit illegal acts. People who have fully or partially performed their part of an illegal contract have little incentive to raise the question of illegality if they know that they will be unable to recover what they have given because of the courts' hands-off approach to illegal agreements. To encourage people to cancel illegal contracts, courts will allow a person who rescinds such a contract before any illegal act has been performed to recover any consideration that he has given. For example, Dixon, the owner of a restaurant, pays O'Leary, an employee of a competitor's restaurant, $1,000 to obtain some of the competitor's recipes. If Dixon has second thoughts and tells O'Leary the deal is off before receiving any recipes, he can recover the $1,000 he paid O'Leary.

Divisible Contracts If part of an agreement is legal and part is illegal, the courts will enforce the legal part so long as it is possible to separate the two parts. A contract is said to be *divisible*—that is, the legal part can be separated from the illegal part—if the contract consists of several promises or acts by one party, each of which corresponds with an act or a promise by the other party. In other words, there must be a separate consideration for each promise or act for a contract to be considered divisible.

Where no separate consideration is exchanged for the legal and illegal parts of an agreement, the agreement is said to be *indivisible.* As a general rule, an indivisible contract that contains an illegal part will be entirely unenforceable unless it comes within one of the exceptions discussed above. However, if the major portion of a contract is legal but the contract contains an illegal provision that does not affect the primary, legal portion, courts will often enforce the legal part of the agreement and simply decline to enforce the illegal part. For example, suppose Alberts sells his barbershop to Bates. The contract of sale provides that Alberts will not engage in barbering anywhere in the world for the rest of his life. The major portion of the contract—the sale of the business—is perfectly legal. A provision of the contract—the ancillary covenant not to compete—is overly restrictive, and thus illegal. A court would enforce the sale of the business but modify or refuse to enforce the restraint provision. See Figure 1.

Ethical and Public Policy Concerns



1. You read that the law makes a distinction between contracts that violate regulatory statutes and contracts that violate revenue-raising statutes. What is the rationale for this distinction? Would it be better for the law simply to hold that *any* contract that violates *any* statute would be illegal? Why or why not?

2. What are some ethical justifications for the decision that the court reached in the *Ramirez* case? In that case, the contract in question was held to be unconscionable even though the individual who signed the contract *could have* read it and figured out his obligations. Who should have the responsibility to make sure that the person signing a contract understands his obligations, the person who drafts and offers the contract or the person who signs it?

Problems and Problem Cases

1. Isokappacase, a product manufactured by PTX Corp., is used as a starter medium and bacteriophage preventative medium in the production of cheese. Because of its high protein content, Isokappacase can also be used as a yield enhancer by adding it directly into cheese milk. When the product is used in this way, however, federal law requires that the resulting product be labeled as an imitation cheese and that the label list the ingredients in the end product to reflect the characteristics of imitation cheese. Podell, a salesman for Blossom Farm Products, was the sole U.S. distributor of Isokappacase. Over the course of three years, Blossom sold a large volume of Isokappacase

Figure 1 *Effect of Illegality*

to Kasson Cheese. Kasson used Isokappacase as a yield enhancer, introducing it directly into cheese milk to enhance cheese yields from the milk, but it did not label its final product as imitation cheese as required by federal standards. Had Kasson labeled its end product as an imitation cheese, it would have been able to sell the end product for only $.70 per pound rather than the $1.40 per pound it received for selling it as real cheese. Blossom was aware of the fact that Kasson's extremely large volume purchases of the

product could only be accounted for by Kasson's use of Isokappacase as a yield enhancer. Podell acknowledged that once he recognized that Kasson was ordering about 100 times more Isokappacase than would be needed if it were using the products as a starter medium, he realized that such large volume orders could only mean that Kasson was using the product as a yield enhancer. Blossom also tacitly knew that Kasson was mislabeling its product. Both Kasson and Blossom benefited economically from this volume purchase and use. Kasson failed to pay Blossom $138,306 for its last order of Isokappacase, and Blossom brought suit to collect the money. Kasson defended on the ground that the contract was illegal. Was it? Must Kasson pay for the Isokappacase?

2. Broemmer, age 21, was unmarried and 16 or 17 weeks pregnant. She was a high school graduate earning less than $100 a week and had no medical benefits. Broemmer was in considerable turmoil and confusion. The father-to-be insisted that she have an abortion, but her parents advised against it. Broemmer went to Abortion Services with her mother and was escorted into an adjoining room and asked to complete three forms: a consent to treatment form, a questionnaire asking for a detailed medical history, and an agreement to arbitrate. The agreement to arbitrate stated that "any dispute arising between the Parties as a result of the fees and/or services: would be settled by binding arbitration" and that "any arbitrators appointed by the AAA [American Arbitration Association] shall be licensed medical doctors who specialize in obstetrics/gynecology." No one made any effort to explain this to Broemmer and she was not provided with a copy of the agreement. She completed all three forms in less than five minutes. After Broemmer returned the forms to the front desk, she was taken into an examination room where preoperation procedures were performed. She was then instructed to return at 7:00 A.M. the next morning. She returned the following day and a physician performed the abortion. As a result of this procedure, Broemmer suffered a punctured uterus, which required medical treatment. Broemmer later filed a malpractice lawsuit against Abortion Services. Abortion Services moved to dismiss the suit on the ground that arbitration was required under the agreement. Should the arbitration clause be enforced in this situation?

3. The Ransburgs, residents of Peoria, Illinois, orally hired David William Haase Associates, a Peoria business that designs and decorates houses, to act as the architect, construction manager, designer, and decorator of a house that the Ransburgs wanted to have built in Vail, Colorado. The parties discussed this project both in Peoria and in Colorado. The parties agreed that Haase would provide budgetary control and monitor every aspect of the design, construction, and furnishing of the house. They also agreed to a construction budget of $838,000 and a furnishing budget of $107,500, for a total project cost of $949,500. The scheduled completion date was December 18, 1988. Haase was to receive $80,000, including travel and other expenses, as compensation for his services. The Ransburgs ultimately sued Haase, alleging that he failed to complete the project on time, failed to ensure compliance with applicable building codes and easements, and failed to control the budget, so that the total cost of the project exceeded $1 million. Count II of this suit stated an alternative cause of action in which the Ransburgs alleged that Haase had held himself out as an architect but is not a registered architect in Illinois or any other state. Claiming that the contract for architectural services was against public policy, they sought recovery of the fees paid to Haase. Will they prevail?

4. Strickland attempted to bribe Judge Sylvania Woods to show leniency toward one of Strickland's friends who had a case pending before the judge. Judge Woods immediately reported this to the state's attorney and was asked to play along with Strickland until the actual payment of money occurred. Strickland gave $2,500 to the judge, who promptly turned it over to the state's attorney's office. Strickland was indicted for bribery, pled guilty, and was sentenced to a four-year prison term. Three months after the criminal trial, Strickland filed a motion for the return of his $2,500. Will the court order the return of his money?

5. Steamatic of Kansas City, Inc., specialized in cleaning and restoring property damaged by fire, smoke, water, or other elements. It employed Rhea as a marketing representative. His duties included soliciting customers, preparing cost estimates, supervising restoration work, and conducting seminars. At the time of his employment, Rhea signed a non-competition agreement prohibiting him from entering into a business in competition with Steamatic within six counties of the Kansas City area for a period of two years after the termination of his employment with Steamatic. Late in 1987, Rhea decided to leave Steamatic. In contemplation of the move, he secretly extracted the agreement restricting his postemployment activity from the

company's files and destroyed it. Steamatic learned of this and discharged Rhea. Steamatic filed suit against Rhea to enforce the non-competition agreement when it learned that he was entering a competing business. Will the non-competition agreement be enforced?

6. Ben Lee Wilson had been licensed to practice architecture in the state of Hawaii, but his license lapsed in 1971 because he failed to pay a required $15 renewal fee. A Hawaii statute provides that any person who practices architecture without having been registered and "without having a valid unexpired certificate of registration . . . shall be fined not more than $500 or imprisoned not more than one year, or both." In 1972, Wilson performed architectural and engineering services for Kealakekua Ranch, for which he billed the Ranch $33,994.36. When the Ranch failed to pay Wilson's fee, he brought an action for breach of contract. What will the result be?

7. Ray & Sons is a family-owned insurance agency. The company hired Stroman as an insurance agent in 1983, pursuant to an employment contract that extended through December 31, 1987. On December 31, 1987, Stroman and Ray & Sons executed a new agreement, entitled "Non-Competition Agreement." This agreement provided that Stroman would not engage in or have an interest in any business that sold insurance policies or engaged in the insurance agency business within Harris County and all adjacent counties for a period of five years from the date of the agreement. It also provided that Stroman would never solicit or accept, or assist or be employed by any other party soliciting or accepting insurance business from any of Ray & Sons' accounts. In consideration for entering into the agreement, Stroman was to receive a 1 percent ownership interest in the company, which was equivalent to 104 shares of common stock. The company's stock transfer ledger indicates that the stock was issued on December 31, 1987. A stock certificate was prepared in Stroman's name but it was retained by Ray & Sons and not actually placed in Stroman's possession. In June 1992, four and one-half years after execution of the agreement, Stroman left Ray & Sons and took a job with another insurance agency in Harris County. Stroman offered his shares to Ray & Sons pursuant to a shareholder's agreement, but the company chose not to buy the shares. Ray & Sons took the position that Stroman had breached the agreement and was not entitled to the stock. Stroman filed suit seeking a declaratory judgment that the stock issued in his name should be delivered to him and that the covenant not to compete was unenforceable. Is the covenant not to compete in this case valid?

8. In March 1990, Sanders first contacted Gore, an attorney, on a collection matter. Although both were married to others, Sanders and Gore began having an affair. Sanders alleged that during the affair, Gore persuaded Sanders that he wanted to divorce his wife and marry her. He persuaded her to divorce her husband, representing her in the divorce action. In June 1992, they took a trip to Hawaii where they registered for a promotional tour of time-share condos as "Brent and Brenda Gore." In November 1992, Gore presented Sanders with an engagement ring and asked her to marry him, and Sanders accepted his proposal. The affair continued until December 1993, when Gore told Sanders that he was "too weak" to leave his wife and ended the relationship with Sanders. Sanders brought suit against Gore seeking damages for breach of his promise to marry her. Will she prevail?

9. Griffin, an expert skier and certified ski instructor, entered the Ironman Decathlon held at Grand Targhee ski resort, which was owned and operated by Big Valley Corporation. The decathlon was held for fun rather than profit. It consisted of several events, including swimming five pool laps, bowling one line, drinking a quart of beer, throwing darts, and skiing in both downhill and cross-country races. The downhill ski race was the first event in the decathlon. It was held early in the morning before the resort was opened to the public. Prior to the race, Griffin and all of the other downhill contestants were required to sign a document entitled "General Release of Claim." This release provided:

> In consideration of my being allowed to participate in IRONMAN DECATHLON at Targhee Resort, Alta, Wyoming, I irrevocably and forever hereby release and discharge any and all of the employees, agents, or servants and owners of Targhee Resort and the other sponsors of IRONMAN DECATHLON officially connected with this event of and from any and all legal claims or legal liability of any kind involving bodily injury or death sustained by me during my stay at Targhee Resort. I hereby personally assume all risks in connection with said event and I further release the aforementioned resort, its agents, and operators, for any harm which might befall me as a participant in this event, whether foreseen or unforeseen and further save and hold harmless said resort and persons from any claim by me or my family, estate, heirs or assigns.
>
> /s/ Dean Griffin 4/13/84

About 10 minutes after the race began, Griffin was found unconscious approximately three-quarters of the way down the mountain. He died a few hours later. No one witnessed the incident that caused his death, but it was speculated that he lost control of his skis and hit a tree. Elizabeth Griffin, as personal representative for Griffin's estate, filed a wrongful death suit against Big Valley on behalf of Griffin's son. Will the court enforce the exculpatory agreement that Griffin signed?

10. Gianni Sport was a New York manufacturer and distributor of women's clothing. Gantos was a clothing retailer headquartered in Grand Rapids, Michigan. In 1980, Gantos's sales total was 20 times greater than Gianni Sport's, and in this industry, buyers were "in the driver's seat." In June 1980, Gantos submitted to Gianni Sport a purchase order for women's holiday clothing to be delivered on October 10, 1980. The purchase order contained the following clause:

> Buyer reserves the right to terminate by notice to Seller all or any part of this Purchase Order with respect to Goods that have not actually been shipped by Seller or as to Goods which are not timely delivered for any reason whatsoever.

Gianni Sport made the goods in question especially for Gantos. This holiday order comprised 20 to 22 percent of Gianni Sport's business. In late September 1980, before the goods were shipped, Gantos canceled the order. Was the cancellation clause unconscionable?

11. Murphy, a welfare recipient with four minor children, saw an advertisement in the local newspaper that had been placed by McNamara, a television and stereo dealer. It stated:

> Why buy when you can rent? Color TV and stereos. *Rent to own!* Use our Rent-to-own plan and let TV Rentals deliver either of these models to your home. *We feature*—Never a repair bill—No deposit—No credit needed—No long term obligation—Weekly or monthly rates available—Order by phone—Call today—Watch color TV tonight.

As a result of the advertisement, Murphy leased a 25-inch Philco color console TV set from McNamara under the "Rent to Own" plan. The lease agreement provided that Murphy would pay a $20 delivery charge and 78 weekly payments of $16. At the end of the period, Murphy would own the set. The agreement also provided that the customer could return the set at any time and terminate the lease as long as all rental payments had been made up to the return date. Murphy entered the lease because she believed that she could acquire ownership of a TV set without first establishing credit as was stressed in McNamara's ads. At no time did McNamara inform Murphy that the terms of the lease required her to pay a total of $1,268 for the TV. The retail sales price for the same TV was $499. After making $436 in payments over a period of about six months, Murphy read a newspaper article criticizing the lease plan and realized the amount that the agreement required her to pay. She stopped making payments and McNamara sought to repossess the TV. Murphy argued that the agreement was unconscionable. Was it?

12. Audley, a professional model, was bitten on the head by an adult male lion with which she had been posing during a photography shoot at Melton's studio. Audley sued Melton, claiming that he failed to take any precautionary action despite noticing that Audley's hair was agitating the lion. Melton moved to dismiss, arguing that the suit was barred by either of two releases that Audley had signed. The first release, which primarily addressed proprietary rights to the photos and negatives, included a sentence that read: "I further release the photographer, his/her agents or assigns from any and all liability whatsoever." The second release stated:

> I, *Shannon Audley* realize that working with the wild and potentially dangerous animals (i.e., lion, white tiger, hawk) can create a hazardous situation, resulting in loss of life or limb. I take all responsibility on myself for any event as described above that may take place. I hold Bill Melton and T.I.G.E.R.S. or any of their agents free of any or all liability. I am signing this of my on [*sic*] free will.

Is Melton correct?

VI. Interpretation of Contracts

Your study of contract law so far has focused on the requirements for the formation of a valid contract. You should be aware, however, that even when all the elements of a valid contract exist, the enforceability of the contract and the nature of the parties' obligations can be greatly affected by the *form* in which the contract is set out and by the *language* that is used to express the agreement. This chapter discusses the ways in which the enforceability of a contract and the scope of contractual obligations can be affected by the manner in which people express their agreements.

The Significance of Writing in Contract Law

Purposes of Writing

Despite what many people believe, there is no general requirement that contracts be in writing. In most situations, oral contracts are legally enforceable, assuming that they can be proven. Still, oral contracts are less desirable than written contracts in many ways. They are

more easily misunderstood or forgotten than written contracts. They are also more subject to the danger that a person might fabricate terms or fraudulently claim to have made an oral contract when none exists.

Writing is important in contract law and practice for a number of reasons. When people memorialize their contracts in a writing, they are enhancing their chances of proving that an obligation was undertaken and making it harder for the other party to deny making the promise. A person's signature on a written contract allows a basis for the contract to be authenticated, or proved to be genuinely the contract of the signer. In addition, signing a writing also communicates to any of us entering the contract the seriousness of the occasion. Occasionally there are problems with proving the genuineness of the writing and often there are disagreements about the interpretation of language in a contract, but the written form is still very useful in increasing the chances that you will be able to depend on the enforcement of your contracts.

Writing and E-Commerce

Being able to prove the existence of a contract is as important in online transactions as it is in the physical world. Does information stored in or transmitted through a computer even function like a "writing"? The trend in proposed and enacted legislation indicates that computer-based information will be considered the equivalent of a writing. **The Uniform Electronic Transactions Act,** (UETA), a proposed uniform statute that would apply to transactions between parties who have agreed to conduct the transaction by electronic means, would clarify that a contract may not be denied legal effect or enforceability solely because an electronic record was used in its formation. The UETA has already been adopted in several states, and is being considered in a number of other states.

The need to authenticate contracts is even greater in electronic transactions than in paper, voice, or face-to-face transactions, because none of the traditional means of authenticating a contract—reading a distinctive signature, for example, or seeing the face or hearing the voice of the other party—is possible in electronic transactions. Moreover, how can one be sure that a transmission arrives in the same condition it was in when it left the sender? Has it been altered or forged or has part of it been lost in transmission? **Digital signatures** have been developed as a way to combat these kinds of insecurity by verifying the authenticity and completeness of an electronic transmission. A digital signature is an electronic identifier that tells a person receiving the document whether it is genuinely from the sender and whether it has been altered in any way. It is important to note that a digital signature is not an electronic image of a person's signature or a person's name typed out. Rather, digital signatures employ encryption technology to create a unique identifier for a sender that can be verified by the receiver. They provide greater security in electronic transactions and ensure confidence in electronic commerce.

A number of states have enacted statutes permitting the use of digital signatures to authenticate writings, in some or all transactions. At the time of this writing, a federal statute authorizing digital signatures is under consideration.

Writing and Contract Enforcement

In contract law, there are certain situations in which a promise that is not in writing can be denied enforcement. In such situations, an otherwise valid contract can become unenforceable if it does not comply with the formalities required by state law. These situations are controlled by a type of statute called the Statute of Frauds.

Overview of the Statute of Frauds

History and Purposes

In 17th-century England, the dangers inherent in oral contracts were exacerbated by a legal rule that prohibited parties to a lawsuit from testifying in their own cases. Since the parties to an oral contract could not give testimony, the only way they could prove the existence of the contract was through the testimony of third parties. As you might expect, third parties

were sometimes persuaded to offer false testimony about the existence of contracts. In an attempt to stop the widespread fraud and perjury that resulted, Parliament enacted the Statute of Frauds in 1677. It required written evidence before certain classes of contracts would be enforced. Although the possibility of fraud exists in every contract, the statute focused on contracts in which the potential for fraud was great or the consequences of fraud were especially serious. The legislatures of American states adopted very similar statutes, also known as statutes of frauds. These statutes, which require certain kinds of contracts to be evidenced by a signed writing, are exceptions to the general rule that oral contracts are enforceable.

Statutes of frauds have produced a great deal of litigation, due in part to the public's ignorance of their provisions. It is difficult to imagine an aspect of contract law that is more practical for businesspeople to know about than the circumstances under which an oral contract will not suffice.

Effect of Violation of the Statute of Frauds

The statute of frauds applies only to executory contracts. If an oral contract has been completely performed by both parties, the fact that it did not comply with the statute of frauds would not be a ground for rescission of the contract.

What happens if an executory contract is within the statute of frauds but has not been evidenced by the type of writing required by the statute? It is not treated as an illegal contract because the statute of frauds is more of a formal rule than a rule of substantive law. Rather, the contract that fails to comply with the statute of frauds is *unenforceable.* Although the contract will not be enforced, a person who has conferred some benefit on the other party pursuant to the contract can recover the reasonable value of his performance in an action based on *quasi-contract.*

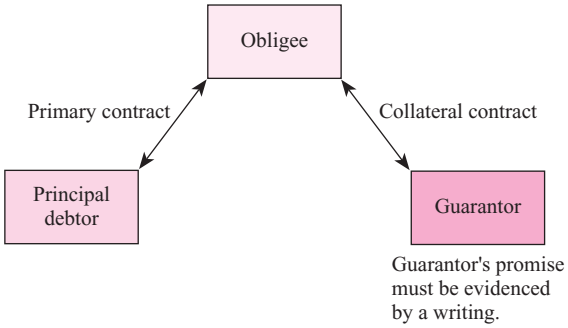
Contracts Covered by the Statute of Frauds

A contract is said to be "within" (covered by) the statute of frauds if the statute requires that sort of contract to be evidenced by a writing. In almost all states, the following types of contracts are *within* the statute of frauds:

1. Collateral contracts in which a person promises to perform the obligation of another person.
2. Contracts for the sale of an interest in real estate.
3. Bilateral contracts that cannot be performed within a year from the date of their formation.
4. Contracts for the sale of goods for a price of $500 or more.
5. Contracts in which an executor or administrator promises to be personally liable for the debt of an estate.
6. Contracts in which marriage is the consideration.

Of this list, the first four sorts of contracts have the most significance today, and our discussion will focus primarily on them.

The statutes of frauds of the various states are not uniform. Some states require written evidence of other contracts in addition to those listed above. For example, a number of states require written evidence of contracts to pay a commission for the sale of real estate. Others require written evidence of ratifications of infants' promises or promises to pay debts that have been barred by the statute of limitations or discharged by bankruptcy.



The following discussion examines in greater detail the sorts of contracts that are within most states' statute of frauds.

Collateral Contracts

A **collateral contract** is one in which one person (the *guarantor*) agrees to pay the debt or obligation that a second person (the *principal debtor*) owes to a third person (the *obligee*) if the principal debtor fails to perform. For example, Cohn, who wants to help Davis establish a business, promises First Bank that he will repay the loan that First Bank makes to Davis if Davis fails to pay it. Here, Cohn is the guarantor, Davis is the principal debtor, and First Bank is the obligee. Cohn's promise to First Bank must be in writing to be enforceable.

Figure 1 shows that a collateral contract involves at least three parties and at least two promises to perform (a promise by the principal debtor to pay

Figure 1 *Collateral Contract*

the obligee and a promise by the guarantor to pay the obligee). In a collateral contract, the guarantor promises to pay *only if the principal debtor fails to do so.* The essence of the collateral contract is that the debt or obligation is owed primarily by the principal debtor and the guarantor's debt is *secondary.* Thus, not all three-party transactions are collateral contracts.

When a person undertakes an obligation that is *not* conditioned on the default of another person, and the debt is his own rather than that of another person, his obligation is said to be *original,* not collateral. For example, when Timmons calls Johnson Florist Company and says, "Send flowers to Elrod," Timmons is undertaking an obligation to pay *her own*—not someone else's—debt.

When a contract is determined to be collateral, however, it will be unenforceable unless it is evidenced by a writing. You will see an example of this principle in the following *Gallagher* case.

Gallagher, Langlas & Gallagher, P.C. v. Burco
587 N.W.2d 615 (Ct. App. Iowa 1998)

Lynn Roose hired the law firm Gallagher, Langlas and Gallagher, P.C., to represent her in her divorce. Attorney Thomas Langlas signed an attorney fee contract in August 1994, and gave it to Roose to sign and return. He also requested a $2,000 retainer fee. Roose never signed or returned the contract, and did not pay the retainer fee in full. The firm represented Roose even though she did not sign the contract or pay the retainer fee in full. On April 10, 1995, the Gallagher attorneys met with Roose and her father, Gaylen Burco. The attorneys told Burco that the expense of his daughter's child custody trial would be approximately $1,000 per day. The firm would not guarantee Burco the trial would last only two or three days. The firm contends that during the meeting Burco agreed to be responsible for the remainder of Roose's account. Burco denies an agreement. At the end of the meeting Burco gave the firm a check for $1,000 to pay the outstanding balance of $ 814.92 on Roose's account and said he would pay for future services. Before trial, Mary Chicchelly, an attorney with the firm, contacted Burco requesting an additional retainer to secure fees to be incurred and Burco told her, "My word as a gentleman should be enough. . . . I told Mr. Langlas I would pay and I will pay." Roose failed to pay her legal fees. In July 1995, the attorneys sent Burco a letter requesting $5,000 for Roose's legal fees or the signing of a promissory note. At the end of July, they sent Burco another letter asking him to sign a promissory note for $10,000. Neither Roose nor Burco paid the attorney fees or signed the notes. The firm represented Roose in the July 1995 trial. Burco took an active part in the trial by testifying and participating in conferences with counsel during recesses. After trial, Burco returned the second letter and promissory note with a notation stating he was not responsible for his daughter's attorney fees. The firm filed a motion to withdraw from Roose's case in July 1996 and the motion was granted.

The firm filed suit against Burco and Roose for the unpaid legal fees. Among the defenses Burco raised was the statute of frauds. The trial court entered a trial judgment against Burco and a default judgment against Roose for $14,588.53. Burco appealed.

Streit, Judge Burco contends evidence of the oral contract is barred by the statute of frauds. The statute relates to the manner of proof, but does not forbid oral contracts or render them invalid. If the statute renders evidence of the guaranty incompetent and thus inadmissible, the judgment against

Burco must be reversed. The statute of frauds requires that certain contracts be evidenced by some kind of writing before they are enforceable. The statute applies to surety contracts—a promise to a creditor to answer for debt, default, or miscarriage of another. The purpose of the statute of frauds in regard to surety contracts is explained in the Restatement of Surety & Guaranty as follows:

> In the case of secondary obligations, however, the Statute also serves the cautionary function of guarding the promisor against ill-considered action. The suretyship provision of the Statute is not limited to important or complex contracts, but applies to secondary obligations created by promises made to an obligee of the underlying obligation. However, other considerations militate in favor of requiring a writing: the motivation of the secondary obligor is often essentially gratuitous; its obligation depends on a contingency that may seem remote at the time of contracting; and natural formalities that often attend an extension of credit are unlikely to provide reliable evidence of the existence and terms of the secondary obligor's undertaking. Reliance of the kinds usual in such situations—extension of credit or forbearance to pursue the principal obligor—does not render the requirement inapplicable. It should be noted that the determination of what constitutes a writing or a signature in an environment of electronic data transmission must continue to evolve. *Rest.3d Sur.* section 11 at 65 (1995).

Iowa Code section 622.32(2) codifies this doctrine:

> Except when otherwise specifically provided, no evidence of the following enumerated contracts is competent, unless it be in writing and signed by the party charged or by the party's authorized agent:
>
> . . .
>
> 2. Those wherein one person promises to answer for the debt, default, or miscarriage of another, including promises by executors to pay the debt of the decedent from their own estate.

In construing Iowa Code section 622.32(2), the Iowa Supreme Court has distinguished between collateral and original promises. Original promises are made when the promise to pay the debt of another arises out of new and original consideration between the newly contracting parties. With an original promise the surety has a personal concern in the debtor's obligation and will achieve a personal benefit out of the debtor's obligation. The "leading object of his promise is to secure some benefit or business advantage for himself." Original promises are not within the statute of frauds. Collateral promises are made when a promise is made in addition to an already existing contract and the surety has no personal concern in the debtor's obligation and gains no benefit from the debtor's obligation. The "main purpose" of the promise must not be the benefit of the surety. Collateral promises fall within the statute of frauds. In addition to ascertaining whether the promisor receives a benefit, we ascertain who the credit was extended to, the promisor or the party who was rendered the services. This intention is ascertained from the promissory words used, the situation of the parties, and all surrounding circumstances when the promise was made. Whether a promise is collateral to an existing contract or creates a primary obligation on the part of the promisor is a question of fact. Thus, it is for this court to decide whether the trial court's ruling Burco's promise was original rather than collateral is supported by substantial evidence on the record. The trial court determined the promise was original rather than collateral "inasmuch as it involved his daughter and grandchild." There is nothing in the record which supports the trial court's conclusion the promise was original rather than collateral except for a vague notion his family was affected by the matter. The evidence shows the benefit to Burco was indirect in that if his daughter won custody of his granddaughter he may get to visit her more. There is no evidence this was Burco's primary motivating factor in promising to pay his daughter's debt. From this record, it cannot be found Burco gained a benefit from his promise. This being so, his promise was collateral rather than original. There is not substantial evidence supporting the court's finding Burco made an original promise which falls outside the statute of frauds. The statute of frauds renders evidence of the contract incompetent and makes it unenforceable.

Reversed in favor of Burco.

Exception: Main Purpose or Leading Object Rule There are some situations in which a contract that is technically collateral is treated like an original contract because the person promising to pay the debt of another does so for the primary purpose of securing some personal benefit. Under the **main purpose** or **leading object** rule, no writing is required where the guarantor makes a collateral promise for the main purpose of obtaining some personal economic advantage. When the consideration given in exchange for the collateral promise is something the guarantor seeks primarily for his own benefit rather than for the benefit of the primary debtor, the contract is outside the statute of frauds and does not have to be in writing. Suppose, for example, that Penn is a major creditor of Widgetmart, a retailer. To help keep Widgetmart afloat and increase the chances that Widgetmart will repay the debt it owes him, Penn orally promises Rex Industries, one of the Widgetmart's suppliers, that he will guarantee Widgetmart's payment for goods that Rex sells to Widgetmart. In this situation, Penn's oral agreement could be enforced under the main purpose rule if the court finds that Penn was acting for his own personal financial benefit.

Interest in Land

Any contract that creates or transfers an interest in land is within the statute of frauds. The inclusion of real estate contracts in the statute of frauds reflects the values of an earlier, agrarian society in which land was the primary basis of wealth. Our legal system historically has treated land as being more important than other forms of property. Courts have interpreted the land provision of the statute of frauds broadly to require written evidence of any transaction that will affect the ownership of an interest in land. Thus, a contract to sell or mortgage real estate must be evidenced by a writing, as must an option to purchase real estate or a contract to grant an easement or permit the mining and removal of minerals on land. A lease is also a transfer of an interest in land, but most states' statutes of frauds do not require leases to be in writing unless they are long-term leases, usually those for one year or more. On the other hand, a contract to erect a building or to insure a building would not be within the real estate provision of the statute of frauds because such contracts do not involve the transfer of interests in land.[1]

[1]Note, however, that a writing might be required under state insurance statutes.

Exception: Full Performance by the Vendor An oral contract for the sale of land that has been completely performed by the vendor (seller) is "taken out of the statute of frauds"—that is, is enforceable without a writing. For example, Peterson and Lincoln enter into an oral contract for the sale of Peterson's farm at an agreed-on price and Peterson, the vendor, delivers a deed to the farm to Lincoln. In this situation, the vendor has completely performed and most states would treat the oral contract as being enforceable.

Exception: Part Performance (Action in Reliance) by the Vendee When the vendee (purchaser of land) does an act in clear reliance on an oral contract for the sale of land, an equitable doctrine commonly known as the "part performance doctrine" permits the vendee to enforce the contract notwithstanding the fact that it was oral. The part performance doctrine is based on both evidentiary and reliance considerations. The doctrine recognizes that a person's conduct can "speak louder than words" and can indicate the existence of a contract almost as well as a writing can. The part performance doctrine is also based on the desire to avoid the injustice that would otherwise result if the contract were repudiated after the vendee's reliance.

Under section 129 of the *Restatement (Second) of Contracts,* a contract for the transfer of an interest in land can be enforced even without a writing if the person seeking enforcement:

1. Has *reasonably relied* on the contract and on the other party's assent.
2. Has changed his position to such an extent that *enforcement of the contract is the only way to prevent injustice.*

In other words, the vendee must have done some act in reliance on the contract and the nature of the act must be such that restitution (returning his money) would not be an adequate remedy. The part performance doctrine will not permit the vendee to collect damages for breach of contract, but it will permit him to obtain the equitable remedy of **specific performance,** a remedy whereby the court orders the breaching party to perform his contract.[2]

A vendee's reliance on an oral contract could be shown in many ways. Traditionally, many states have required that the vendee pay part or all of the purchase

[2]Specific performance is discussed in more detail in Chapter 18.

price and either make substantial improvements on the property or take possession of it. For example, Contreras and Miller orally enter into a contract for the sale of Contreras's land. If Miller pays Contreras a substantial part of the purchase price and either takes possession of the land or begins to make improvements on it, the contract would be enforceable without a writing under the part performance doctrine. These are not the only sorts of acts in reliance that would make an oral contract enforceable, however. Under the *Restatement (Second)* approach, if the promise to transfer land is clearly proven or is admitted by the breaching party, it is not necessary that the act of reliance include making payment, taking possession, or making improvements.[3] It still is necessary, however, that the reliance be such that restitution would not be an adequate remedy. For this reason, a vendee's payment of the purchase price, standing alone, is usually *not* sufficient for the part performance doctrine.

Contracts that Cannot Be Performed within One Year

A bilateral, executory contract that cannot be performed within one year from the day on which it comes into existence is within the statute of frauds and must be evidenced by a writing. The apparent purpose of this provision is to guard against the risk of faulty or willfully inaccurate recollection of long-term contracts. Courts have tended to construe it very narrowly.

One aspect of this narrow construction is that most states hold that a contract that has been fully performed by *one* of the parties is "taken out of the statute of frauds" and is enforceable without a writing. For example, Nash enters into an oral contract to perform services for Thomas for 13 months. If Nash has already fully performed his part of the contract, Thomas will be required to pay him the contract price.

In addition, this provision of the statute has been held to apply only when the terms of the contract make it impossible for the contract to be completed within one year. If the contract is for an indefinite period of time, it is not within the statute of frauds. This is true even if, in retrospect, the contract was not completed within a year. Thus, Weinberg's agreement to work for Wolf for an indefinite period of time would not have to be evidenced by a writing, even if Weinberg eventually works for Wolf for many years. As demonstrated by *MTV Networks v. Curry,* which follows, the mere fact that performance is unlikely to be completed in one year does not bring the contract within the statute of frauds. In most states, a contract "for life" is not within the statute of frauds because it is possible—since death is an uncertain event—for the contract to be performed within a year. In a few states such as New York, contracts for life are within the statute of frauds.

[3] *Restatement (Second) of Contracts* § 129, comment *d.*

MTV Networks v. Curry *867 F. Supp. 202 (U.S. Dist. Ct. S.D.N.Y. 1994)*

Alan Curry served as a video disc jockey (VJ) for MTV Network (MTVN) under a written contract through May 1, 1992. He continued to serve as an MTVN VJ through April 1994, under "informal" terms. Curry also engaged in activities in the contemporary music industry that were not directly related to his MTVN employment, such as hosting radio programs and live entertainment events. In approximately June 1993, Curry met with MTVN Vice President Matthew Farber and discussed an Internet service he was developing with the Internet site address "mtv.com." Curry alleged that while Farber disclaimed any interest by MTVN in entering a joint venture, he indicated that Curry was free to continue development of the Internet site at his own expense. By approximately August 1993, Curry had announced the mtv.com address on MTVN broadcasts. On the afternoon of one August taping, Curry claimed to have had a conversation about mtv.com with Joel Stillerman, a senior MTVN executive. Curry alleged that in this conversation Stillerman "made clear that MTVN had no objection to Curry's use and development of the mtv.com address." Curry alleged that between August 1993 and April 1994, he discussed the mtv.com site with other MTVN personnel on numerous occasions, receiving encouragement in his continuing development efforts. During the period August 1993 , to mid-January 1994, Curry claimed that MTVN programmers placed the graphic letters "mtv.com" on the television screen for viewers of the MTVN program "Top Twenty Countdown." In reliance on his discussions with MTVN executives and personnel, Curry continued to develop mtv.com at his own expense.

On January 19, 1994, MTVN formally requested that Curry cease use of the mtv.com address. However Curry alleged not only that MTVN programming continued to make on-air references to the address, but that Stillerman asked him, sometime in February, to include certain materials at the mtv.com site. By the spring of 1994, Curry's mtv.com address had been accessed by millions of Internet users. Curry credited this success, in part, to a computer bulletin board that facilitates communication between performers and other music professionals—a service he claimed to have discussed with MTVN personnel since August 1993. Curry argued that MTVN was exploiting his development efforts to "test the waters" for their own interactive service. During the second half of 1993, MTVN and Viacom allegedly explored their options for developing online services. These efforts culminated in an agreement between MTVN and America On-Line to provide a computer link to MTVN for a fee. The AOL/MTVN service would include a performer-music professional bulletin board similar to the one Curry developed at mtv.com.

MTVN brought suit against Curry on several grounds, including trademark claims based on Curry's use of registered MTV marks and breach of Curry's employment contracts. Curry counterclaimed for breach of oral contract, among other claims. MTVN moved to dismiss Curry's counterclaims.

McKenna, District Judge Curry's breach of contract claim is grounded in his conversations with Farber, Stillerman, and others, in which he was allegedly promised that MTVN would not interfere with his development of mtv.com. MTVN argues that the purported contract is void as it violates the relevant statute of frauds. The statute provides in relevant part:

> a. Every agreement, promise or undertaking is void, unless it or some note or memorandum thereof be in writing, and subscribed by the party to be charged therewith, or by his lawful agent, if such agreement, promise or undertaking:
>
> 1. By its terms is not to be performed within one year from the making thereof . . .

In New York, oral agreements violate the statute of frauds only if "by their very terms [they] have absolutely no possibility in fact and law of full performance within one year." *D & N Boening, Inc. v. Kirsch Beverages, Inc.* "The question is not what the probable, or expected, or actual performance of the contract was; but whether the contract, according to the reasonable interpretation of its terms, required that it should not be performed within the year." *Id.* MTVN urges the following interpretation of the agreement outlined by Curry's pleadings: Curry would be free to terminate the development of his Internet site at will, but MTVN would forever be obliged not to interfere with Curry's use of the site name mtv.com. Under this view of the contract, Curry's obligations would be susceptible of completion within a year, but MTVN's obligations would continue indefinitely.

The more straightforward reading of Curry's pleadings suggest two performances that are susceptible of completion within one year: Curry's development of the Internet site—terminable by him at any time, and MTVN's forbearance to assert any rights it might have in the site—for so long as the site continued. Under this interpretation the performances are of equal duration, each terminating upon Curry's unilateral decision to discontinue operation of the site. MTVN further presents the policy argument that Curry's purported contract is of a "classic" type that the statute of frauds was intended to bar, in which the party alleging the contract has already completed its performance, but seeks to impose continuing, indeed, perpetual obligations on the other side. This argument focuses on paragraph 21 of Curry's Answer and Counterclaims, which states: In consideration of its agreement to renounce, or otherwise refrain from claiming rights to, the mtv.com address, Curry agreed that, during such period as he continued to host MTVN programming and was still operating the mtv.com address, he would use such address while on air from time to time for the purpose of facilitating communication between MTVN and its audience. MTVN argues that since Curry no longer hosts MTVN programming, his performance is now complete under the claimed oral contract, while its duties may continue forever. A line of New York cases presents some support for MTVN's position. The oral agreements in these cases involve the continuation of a salesman's commissions so long as accounts obtained for their employers remain active. Such agreements bear little similarity to the one alleged in this action.

In any event, the statute of frauds, "designed to guard against fraudulent claims supported by perjured

testimony, was never meant to be used as 'a means of evading just obligations' based on contracts 'fairly, and admittedly, made.' " *Manhattan Fuel Co. v. New England Petroleum Corp.* Assuming, arguendo, that this contract involved one-sided obligations of indefinite duration, the Court is not convinced by the arguments submitted that the statute of frauds will bar Curry's claim. Development of the record to a fuller degree than what is presented on the present motion is warranted. In June or August, 1993, MTVN may simply have failed to appreciate the commercial potential of an Internet music site, and improvidently (in retrospect), granted Curry all of the rights he has alleged. MTVN now argues that Curry's purported agreement involves a "major property right" which would ordinarily be embodied in a writing, but this characterization may derive from the 20-20 vision of hindsight.

Furthermore, the Court can infer from Curry's pleadings a claim of a loose synergetic relationship between a broadcast medium and an interactive computer service. Consideration would flow to MTVN under the alleged agreement so long as mtv.com materials stimulated interest in MTVN programming. That is, the price of MTVN's forbearance to assert any rights it would otherwise have in mtv.com was not solely Curry's promise to deliver on-air promotion.

Finally, the Court notes that the statute of frauds does not present a bar to an agreement that may be characterized as a "joint venture." A joint venture is a "special combination of two or more persons where in some specific venture a profit is jointly sought without any actual partnership or corporate designation." *Forman v. Lumm.* It is widely recognized that the statute of frauds is generally inapplicable to joint ventures, because these agreements are terminable at will. Although Farber expressly disclaimed MTVN's interest in a joint venture during the June meeting, he may have intended only to convey MTVN's lack of interest in funding the project. A joint venture does not, however, require financial support. Curry has alleged MTVN contributions of various sorts, including advertising of the mtv.com address on MTVN broadcasts and permission (or at least a request by Stillerman) to place certain MTVN materials on Curry's Internet site.

As [the statute of frauds] presents no bar to this cause of action, Curry's breach of contract counterclaim survives MTVN's motion to dismiss.

Motion to dismiss denied in favor of Curry.

Computing Time In determining whether a contract is within the one-year provision, courts begin counting time on the day when the contract comes into existence. If, under the terms of the contract, it is possible to perform it within one year from this date, the contract does not fall within the statute of frauds and does not have to be in writing. If, however, the terms of the contract make it impossible to complete performance of the contract (without breaching it) within one year from the date on which the contract came into existence, the contract falls within the statute and must meet its requirements to be enforceable. Thus, if Hammer Co. and McCrea agree on August 1, l997, that McCrea will work for Hammer Co. for one year, beginning October 1, 1997, the terms of the contract dictate that it is not possible to complete performance until October 1, 1998. Because that date is more than one year from the date on which the contract came into existence, the contract falls within the statute of frauds and must be evidenced by a writing to be enforceable.

Sale of Goods for $500 or More

The original English Statute of Frauds required a writing for contracts for the sale of goods for a price of 10 pounds sterling or more. In the United States today, the writing requirement for the sale of goods is governed by section 2–201 of the Uniform Commercial Code. This section provides that contracts for the sale of goods for the price of $500 or more are not enforceable without a writing or other specified evidence that a contract was made. There are a number of alternative ways of satisfying the requirements of section 2–201. These will be explained later in this chapter.

Modifications of Existing Sales Contracts Just as some contracts to extend the time for performance fall within the one-year provision of the statute of frauds, agreements to modify existing sales contracts can fall within the statute of frauds if the contract as

Concept Review

Contracts within the Statute of Frauds

Provision	Description	Exceptions (Situations in Which Contract Does Not Require a Writing)
Marriage	Contracts, other than mutual promises to marry, where marriage is the consideration	—
Year	Bilateral contracts that, *by their terms,* cannot be performed within one year from the date on which the contract was formed	Full (complete) performance by one of the parties
Land	Contracts that create or transfer an ownership interest in real property	1. Full performance by vendor (vendor deeds property to vendees) or 2. "Part performance" doctrine: Vendee relies on oral contract—for example, by: a. Paying substantial part of purchase price, and b. Taking possession or making improvements
Executor's Promise	Executor promises to pay estate's debt out of his own funds	—
Sale of Goods at Price $500 or More (UCC § 2–201)	Contracts for the sale of goods for a contract price of $500 or more; also applies to modifications of contracts for goods where price as modified is $500 or more	See alternative ways of satisfying statute of frauds under UCC.
Collateral Contracts Guaranty	Contracts where promisor promises to pay the debt of another if the primary debtor fails to pay	"Main purpose" or "leading object" exception: Guarantor makes promise primarily for her own economic benefit

modified is for a price of $500 or more.[4] UCC section 2–209(3) provides that the requirements of the statute of frauds must be satisfied if the contract as modified is within its provisions. For example, if Carroll and Kestler enter into a contract for the sale of goods at a price of $490, the original contract does *not* fall within the statute of frauds. However, if they later modify the contract by increasing the contract price to $510, the modification falls within the statute of frauds and must meet its requirements to be enforceable.

[4]Modifications of sales contracts are discussed in greater detail in Chapter 12.

Promise of Executor or Administrator to Pay a Decedent's Debt Personally

When a person dies, a personal representative is appointed to administer his estate. One of the important tasks of this personal representative, who is called an executor if the person dies leaving a will or an administrator if the person dies without a will, is to pay the debts owed by the decedent. No writing is required when an executor or administrator—acting in his representative capacity—promises to pay the decedent's debts from the funds of the decedent's

estate. The statute of frauds requires a writing, however, if the executor, acting in her capacity as a private individual rather than in her representative capacity, promises to pay one of the decedent's debts out of her own (the executor's) funds. For example, Thomas, who has been appointed executor of his Uncle Max's estate, is presented with a bill for $10,500 for medical services rendered to Uncle Max during his last illness by the family doctor, Dr. Barnes. Feeling bad that there are not adequate funds in the estate to compensate Dr. Barnes for his services, Thomas promises to pay Dr. Barnes from his own funds. Thomas's promise would have to be evidenced by a writing to be enforceable.

Contract in Which Marriage Is the Consideration

The statute of frauds also requires a writing when marriage is the consideration to support a contract. The marriage provision has been interpreted to be inapplicable to agreements that involve only mutual promises to marry. It can apply to any other contract in which one party's promise is given in exchange for marriage or the promise to marry on the part of the other party. This is true whether the promisor is one of the parties to the marriage or a third party. For example, if Hicks promises to deed his ranch to Everett in exchange for Everett's agreement to marry Hicks's son, Everett could not enforce Hicks's promise without written evidence of the promise.

Prenuptial (or antenuptial) agreements present a common contemporary application of the marriage provision of the statute of frauds. These are agreements between couples who contemplate marriage. They usually involve such matters as transfers of property, division of property upon divorce or death, and various lifestyle issues. Assuming that marriage or the promise to marry is the consideration supporting these agreements, they are within the statute of frauds and must be evidenced by a writing.[5]

[5]Note, however, that "nonmarital" agreements between unmarried cohabitants who do not plan marriage are not within the marriage provision of the statute of frauds, even though the agreement may concern the same sorts of matters that are typically covered in a prenuptial agreement.

Meeting the Requirements of the Statute of Frauds

Nature of the Writing Required

The statutes of frauds of the various states are not uniform in their formal requirements. However, most states require only a *memorandum* of the parties' agreement; they do not require that the entire contract be in writing. Essential terms of the contract must be stated in the writing. The memorandum must provide written evidence that a contract was made, but it need not have been created with the intent that the memorandum itself would be binding. In fact, in some cases, written offers that were accepted orally have been held sufficient to satisfy the writing requirement. Typical examples include letters, telegrams, receipts, or any other writing indicating that the parties had a contract. The memorandum need not be made at the same time the contract comes into being; in fact, the memorandum may be made at any time before suit is filed. If a memorandum of the parties' agreement is lost, its loss and its contents may be proven by oral testimony.

Contents of the Memorandum Although there is a general trend away from requiring complete writings to satisfy the statute of frauds, an adequate memorandum must still contain several things. The essential terms of the contract generally must be indicated in the memorandum. States differ in their requirements concerning how specifically the terms must be stated, however. The identity of the parties must be indicated in some way, and the subject matter of the contract must be identified with reasonable certainty. This last requirement causes particular problems in contracts for the sale of land, since many statutes require a detailed description of the property to be sold.

Contents of Memorandum under the UCC The standard for determining the sufficiency of the contents of a memorandum is more flexible in cases concerning contracts for the sale of goods. This looser standard is created by the language of UCC section 2–201, which states that the writing must be sufficient to indicate that a contract for sale has been made between the parties, but a writing can be sufficient even if it omits or incorrectly states a term agreed on. However, the memoran-

dum is not enforceable for more than the quantity of goods stated in the memorandum. Thus, a writing that does not indicate the *quantity* of goods to be sold would not satisfy the Code's writing requirement.

Signature Requirement The memorandum must be signed by the *party to be charged* or his authorized agent. (The party to be charged is the person using the statute of frauds as a defense—generally the defendant unless the statute of frauds is asserted as a defense to a counterclaim.) This means that it is not necessary for purposes of meeting the statute of frauds for both parties' signatures to appear on the document. It is, however, in the best interests of both parties for both signatures to appear on the writing; otherwise, the contract evidenced by the writing is enforceable only against the signing party. Unless the statute expressly provides that the memorandum or contract must be signed at the end, the signature may appear any place on the memorandum. Any writing, mark, initials, stamp, engraving, or other symbol placed or printed on a memorandum will suffice as a signature, as long as the party to be charged intended it to authenticate (indicate the genuineness of) the writing.

One of the questions that has arisen in attempting to apply contract law to e-commerce transactions is whether the form of electronic transactions satisfies the statute of frauds, particularly the signature requirement. Although there is a lack of case precedents, a variety of laws enacted or proposed at the state and federal level indicate that it is likely that a computer record of a transaction will meet the signature requirement. For example, under the proposed Uniform Electronic Transactions Act (UETA), a law that requires a signature would be satisfied by an electronic record. The UETA specifically states that an "electronic signature" (defined as an "electronic sound, symbol, or process attached to or logically associated with an electronic record and executed or adopted by a person with the intent to sign the electronic record") satisfies any law requiring a signature.

The signature and memorandum requirements of the statute of frauds are illustrated in the following *Rosenfeld* case.

Rosenfeld v. Basquiat *78 F.3d 84 (U.S. Ct. App. 2d Cir. 1996)*

Artist Jean-Michel, a neo-expressionist, was remarkable in his precocious talent, his prolificacy, and his eccentricity. He rapidly rose to fame and died early at age 27. Michelle Rosenfeld, an art dealer, claimed that Basquiat had agreed to sell to her three paintings entitled "Separation of the 'K,' " "Atlas," and "Untitled Head." At trial, Rosenfeld testified that she went to Basquiat's apartment on October 25, 1982, and while she was there he agreed to sell her three paintings for $4,000 each, and that she picked out the three works. According to Rosenfeld, Basquiat asked for a cash deposit of 10 percent. She left his loft and later returned with $1,000 in cash, which she paid him. When she asked for a receipt, he insisted on drawing up a "contract," and got down on the floor and wrote it out in crayon on a large piece of paper, remarking that "some day this contract will be worth money." She identified a handwritten document listing the three paintings, bearing her signature and that of Basquiat, which stated: "$12,000—$1,000 DEPOSIT—OCT 25 82." Rosenfeld also testified that she later returned to Basquiat's loft to discuss delivery, but Basquiat convinced her to wait for at least two years so that he could show the paintings at exhibitions. Other witnesses corroborated various aspects of Rosenfeld's claim.

The whereabouts of the paintings—if indeed they still actually exist—are unknown. In November of 1989, Rosenfeld sued Gerard Basquiat, as administrator of the estate of his son Jean-Michel, for damages or specific performance of the contract. The estate attempted to prevent Rosenfeld from testifying about her conversations with Basquiat at trial because of New York's "Dead Man's Statute," which prevents a person who has an interest at stake from testifying in an action against the estate of a deceased person, but the trial court rejected the estate's argument and permitted Rosenfeld to testify. A mistrial was declared at the end of the first

trial. At a second trial, the jury reached a verdict in favor of Rosenfeld, finding that Basquiat had entered into a written agreement in October 1982 to sell the three paintings to Rosenfeld for $12,000, that although there was no initial agreement establishing a delivery date, they made a separate oral agreement approximately ten days later setting the delivery date, that a reasonable delivery date was October 1987, that Rosenfeld had first learned of the breach in August 1988, when Jean-Michel Basquiat died, and that the market price of the three works at that time was $395,000. The estate filed a posttrial motion for judgment as a matter of law, claiming that the contract violated the statute of frauds. The district court ruled against this motion, and entered judgment in favor of Rosenfeld in the amount of $384,000, representing the current market value of the artworks, discounted by the outstanding portion of the purchase price. In addition, the court awarded Rosenfeld $217,301.92 in interest. The estate appealed, arguing that it was error for the trial court to admit Rosenfeld's testimony into evidence and that the alleged contract between Rosenfeld and Basquiat violated the Statute of Frauds. The Court of Appeals agreed with the estate regarding its arguments that Rosenfeld's testimony should not have been admitted into evidence. The following is its analysis of the Statute of Frauds issue.

Cardamone, Circuit Judge The estate avers it is entitled to judgment as a matter of law because the Statute of Frauds makes the alleged agreement between plaintiff and the artist unenforceable. It states that a written contract for the sale of goods must include the date of delivery if the parties have indeed agreed on a specific date, although a reasonable delivery time will be inferred in the absence of an express provision. Because the jury found that there was an oral agreement regarding a particular delivery date, the argument continues, the document bearing the signatures of Rosenfeld and Basquiat is legally insufficient. In addition, the estate maintains the oral agreement regarding the delivery date was invalid because it could not be performed within a year. None of these contentions has merit.

Because this case involves an alleged contract for the sale of three paintings, any question regarding the Statute of Frauds is governed by the UCC. Under the UCC, the only term that must appear in the writing is the quantity. See UCC section 2–201 cmt.1. Beyond that, "all that is required is that the writing afford a basis for believing that the offered oral evidence rests on a real transaction." *Id.* The writing supplied by the plaintiff indicated the price, the date, the specific paintings involved, and that Rosenfeld paid a deposit. It also bore the signatures of the buyer and seller. Therefore, the writing satisfied the requirements of 2–201.

The estate claims that a specific delivery date, if agreed upon, must be in the writing. The rule that a specific delivery date is an essential part of the contract and must be embodied in the memorandum, was rejected by the legislature—at least for sale-of-goods cases—when it enacted the UCC. That rule and the statute upon which it was based were repealed to make way for the UCC. The UCC "completely re-phrased" the provisions of prior legislation and "intended to make it clear that. . . the required writing need not contain all the material terms." UCC section 2–201 cmt.1.

The estate also urges that the alleged agreement is unenforceable because it could not be performed within a year. It relies on section 5–701(a)(1) of the New York General Obligations Law, which requires a signed writing for an agreement "not to be performed within one year from the making thereof." But a contract for the sale of goods is not subject to the one-year rule because a "writing covering the sale of goods which is sufficient . . . under UCC 2–201 is valid despite its insufficiency under General Obligation Law section 5–701." Hence, the provisions of section 5–701 do not control here.

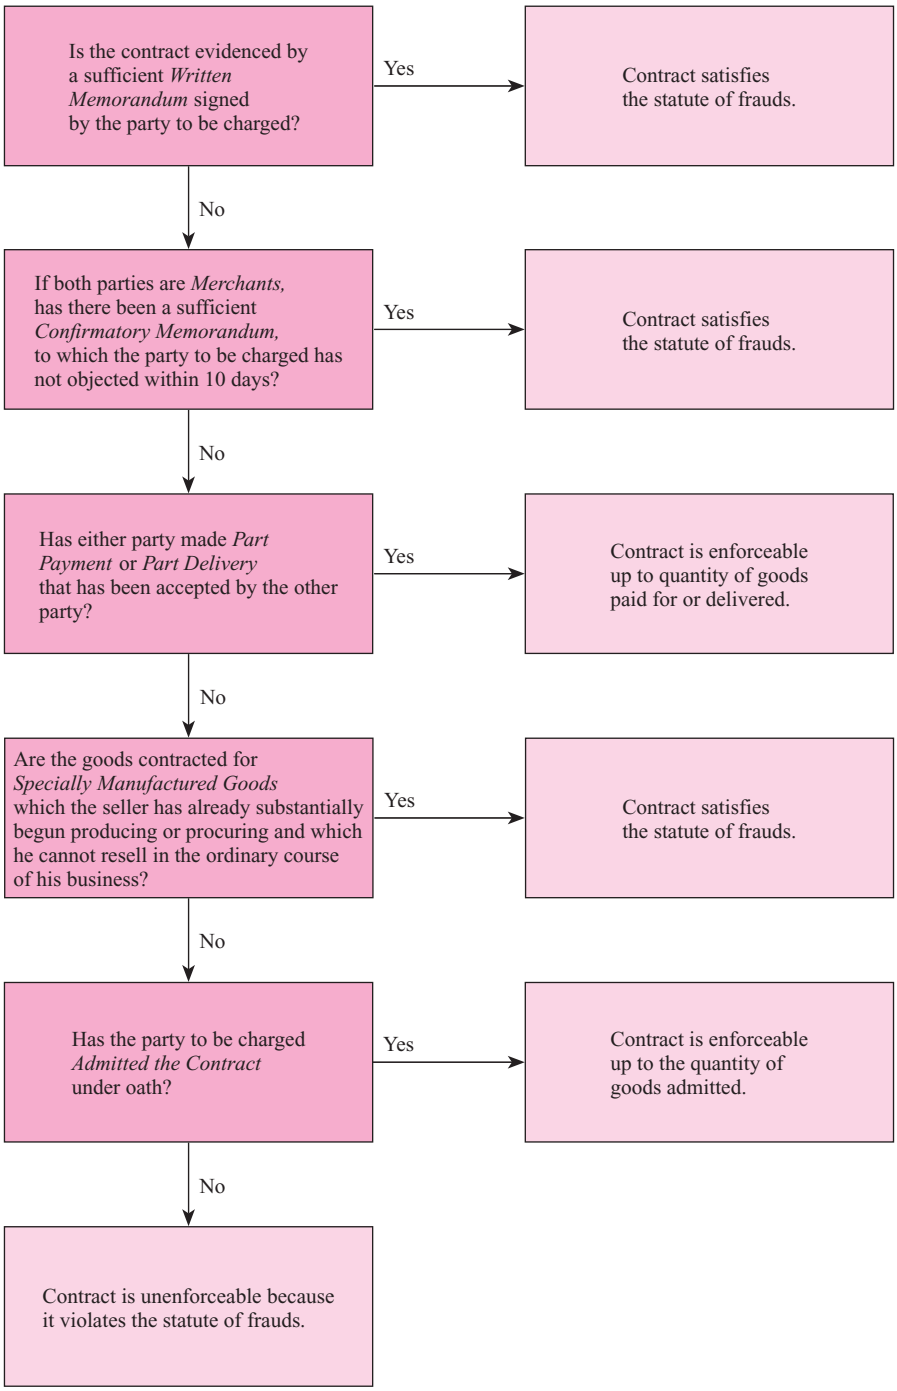
Because the writing, allegedly scrawled in crayon by Jean-Michel Basquiat on a large piece of paper, easily satisfied the requirements of section 2–201 of the UCC, the estate is not entitled to judgment as a matter of law. It is of no real significance that the jury found Rosenfeld and Basquiat settled on a particular time for delivery and did not commit it to writing; nor is it of any moment that performance may not have been possible within one year of when the agreement was made. As a consequence, though this case must be retried, the alleged contract is not invalid on Statute of Frauds grounds.

Judgment reversed and remanded for a new trial in favor of the estate. (A new trial is required because Rosenfeld should not have been permitted to testify about her conversations with Basquiat, but the Statute of Frauds will not be a bar to enforcement.)

Memorandum Consisting of Several Writings

In many situations, the elements required for a memorandum are divided among several documents. For example, Wayman and Allen enter into a contract for the sale of real estate, intending to memorialize their agreement in a formal written document later. While final drafts of a written contract are being prepared, Wayman repudiates the contract. Allen has a copy of an unsigned preliminary draft of the contract that identifies the parties and contains all of the material terms of the parties' agreement, an unsigned note written by Wayman that contains the legal description of the property, and a letter signed by Wayman that refers to the contract and to the other two documents. None of these documents, standing alone, would be sufficient to satisfy the statute of frauds. However, Allen can combine them to meet the requirements of the statute, provided that they all relate to the same agreement. This can be shown by physical attachment, as where the documents are stapled or bound together, or by references in the documents themselves that indicate that they all apply to the same transaction. In some cases, it has also been shown by the fact that the various documents were executed at the same time.

UCC: Alternative Means of Satisfying the Statute of Frauds in Sale of Goods Contracts



As you have learned, the basic requirement of the UCC statute of frauds [2–201] is that a contract for the sale of goods for the purchase price of $500 or more must be evidenced by a written memorandum that indicates the existence of the contract, states the quantity of goods to be sold, and is signed by the party to be charged. Recognizing that the underlying purpose of the statute of frauds is to provide more evidence of the existence of a contract than the mere oral testimony of one of the parties, however, the Code also permits the statute of frauds to be satisfied by any of four other types of evidence. These different methods of satisfying the UCC statute of frauds are depicted in Figure 2. Under the UCC, then, a contract for the sale of goods for a purchase price of $500 or more for which there is no written memorandum signed by the party to be charged can meet the requirements of the statute of frauds in any of the following ways:

1. *Confirmatory memorandum between merchants.* Suppose Gardner and Roth enter into a contract over the telephone for the sale of goods at a price of $5,000. Gardner then sends a memorandum to Roth confirming the deal they made orally. If Roth receives the memo and does not object to it, it would be fair to say that the parties' conduct provides some evidence that a contract exists. Under some circumstances, the UCC permits such confirmatory memoranda to satisfy the statute of frauds even though the writing is signed by the party who is seeking to enforce the contract rather than the party against whom enforcement is sought [2–201(2)]. This exception applies only when *both* of the parties to a contract are *merchants.* Furthermore, the memo must be sent within a reasonable time after the contract is made and must be sufficient to bind the person who sent it if enforcement were sought against him (that is, it must indicate that a contract was made, state a quantity, and be signed by the sender). If the party against whom enforcement is sought receives the memo, has reason to know its contents, and yet fails to give written notice of objection to the contents of the memo within 10 days after receiving it, the memo can be introduced to meet the requirements of the statute of frauds.

2. *Part payment or part delivery.* Suppose Rice and Cooper enter a contract for the sale of 1,000 units of goods at $1 each. After Rice has paid $600, Cooper refuses to deliver the goods and asserts the statute of frauds as a defense to enforcement of the contract. The Code permits part payment or part delivery to satisfy the statute of frauds, but only for the quantity of goods that have been delivered or paid for [2–201(3)(c)]. Thus, Cooper would be required to deliver only 600 units rather than the 1,000 units Rice alleges that he agreed to sell.

3. *Admission in pleadings or court.* Another situation in which the UCC statute of frauds can be satisfied without a writing occurs when the party being sued admits the existence of the oral contract in his trial testimony or in any document that he files with the court. For example, Nelson refuses to perform an oral contract he made with Smith for the sale of $2,000 worth of goods, and Smith sues him. If Nelson admits the existence of the oral contract in pleadings or in court proceedings, his admission is sufficient to meet the statute of frauds. This exception is justified by the strong evidence that such an admission provides. After all, what better evidence of a contract can there be than is provided when the party being sued admits under penalty of perjury that a contract exists? When such an admission is made, the statute of frauds is satisfied as to the quantity of goods

Figure 2 *Satisfying the Statute of Frauds through a Contract for the Sale of Goods with a Price of $500 or More*

admitted [2–201(3)(b)]. For example, if Nelson admits contracting only for $1,000 worth of goods, the contract is enforceable only to that extent.

4. *Specially manufactured goods.* Finally, an oral contract within the UCC statute of frauds can be enforced without a writing in some situations involving the sale of specially manufactured goods. This exception to the writing requirement will apply only if the nature of the specially manufactured goods is such that they are not suitable for sale in the ordinary course of the seller's business. Completely executory oral contracts are not enforceable under this exception. The seller must have made a substantial beginning in manufacturing the goods for the buyer, or must have made commitments for their procurement, before receiving notice that the buyer was repudiating the sale [2–201(3)(a)]. For example, Bennett Co. has an oral contract with Stevenson for the sale of $2,500 worth of calendars imprinted with Bennett Co.'s name and address. If Bennett Co. repudiates the contract before Stevenson has made a substantial beginning in manufacturing the calendars, the contract will be unenforceable under the statute of frauds. If, however, Bennett Co. repudiated the contract after Stevenson had made a substantial beginning, the oral contract would be enforceable. The specially manufactured goods provision is based both on the evidentiary value of the seller's conduct and on the need to avoid the injustice that would otherwise result from the seller's reliance.

Promissory Estoppel and the Statute of Frauds

The statute of frauds, which was created to prevent fraud and perjury, has often been criticized because it can create unjust results. One of the troubling features of the statute is that it can as easily be used to defeat a contract that was actually made as to defeat a fictitious agreement. As you have seen, courts and legislatures have created several exceptions to the statute of frauds that reduce the statute's potential for creating unfair results. In recent years, courts in some states have allowed the use of the doctrine of **promissory estoppel**[6] to enable some parties to recover under oral contracts that the statute of frauds would ordinarily render unenforceable.

[6]The doctrine of promissory estoppel is discussed in Chapters 9 and 12.

Courts in these states hold that, when one of the parties would suffer serious losses because of her reliance on an oral contract, the other party is estopped from raising the statute of frauds as a defense. This position has been approved in the *Restatement (Second) of Contracts.* Section 139 of the *Restatement (Second)* provides that a promise that induces action or forbearance can be enforceable notwithstanding the statute of frauds if the reliance was foreseeable to the person making the promise and if injustice can be avoided only by enforcing the promise. The idea behind this section and the cases employing promissory estoppel is that the statute of frauds, which is designed to prevent injustice, should not be allowed to work an injustice. Section 139 and these cases also impliedly recognize the fact that the reliance required by promissory estoppel to some extent provides evidence of the existence of a contract between the parties, since it is unlikely that a person would materially rely on a nonexistent promise.

The use of promissory estoppel as a means of circumventing the statute of frauds is still controversial, however. Many courts fear that enforcing oral contracts on the basis of a party's reliance will essentially negate the statute. In cases involving the UCC statute of frauds, an additional source of concern involves the interpretation of section 2–201. Some courts have construed the provisions listing specific alternative methods of satisfying section 2–201's formal requirements to be *exclusive,* precluding the creation of any further exceptions by courts.

The Parol Evidence Rule

Explanation of the Rule

In many situations, contracting parties prefer to express their agreements in writing even when they are not required to do so by the statute of frauds. Written contracts rarely come into being without some prior discussions or negotiations between the parties, however. Various promises, proposals, or representations are usually made by one or both of the parties before the execution of a written contract. What happens when one of those prior promises, proposals, or representations is not included in the terms of the written contract? For example, suppose that Jackson wants to buy Stone's house. During the course of negotiations, Stone states that he will pay for any major repairs that the house needs for the first year that Jackson owns it.

The written contract that the parties ultimately sign, however, does not say anything about Stone paying for repairs, and, in fact, states that Jackson will take the house "as is." The furnace breaks down three months after the sale, and Stone refuses to pay for its repair. What is the status of Stone's promise to pay for repairs? The basic problem is one of defining the boundaries of the parties' agreement. Are all the promises made in the process of negotiation part of the contract, or do the terms of the written document that the parties signed supersede any preliminary agreements?

The **parol evidence rule** provides the answer to this question. The term *parol evidence* means written or spoken statements that are *not contained in the written contract.* The parol evidence rule provides that, when parties enter a *written contract* that they intend as a complete **integration** (a complete and final statement of their agreement), a court will not permit the use of evidence of *prior* or *contemporaneous* statements to add to, alter, or contradict the terms of the written contract. This rule is based on the presumption that when people enter into a written contract, the best evidence of their agreement is the written contract itself. It also reflects the idea that later expressions of intent are presumed to prevail over earlier expressions of intent. In the hypothetical case involving Stone and Jackson, assuming that they intended the written contract to be the final integration of their agreement, Jackson would not be able to introduce evidence of Stone's promise to pay for repairs. The effect of excluding preliminary promises or statements from consideration is, of course, to confine the parties' contract to the terms of the written agreement. The lesson to be learned from this example is that people who put their agreements in writing should make sure that all the terms of their agreement are included in the writing. The *Slivinsky* case illustrates the application of the parol evidence rule.

Slivinsky v. Watkins-Johnson Company *270 Cal. Rptr. 585 (Ct. App. 1990)*

In July 1984, Sandra Slivinsky applied for a job as a materials scientist with Watkins-Johnson Company, a large aerospace manufacturer. Directly above the signature line on the application she signed was the statement: "I understand that employment by WATKINS-JOHNSON COMPANY is conditional upon . . . execution of an Employment Agreement. . . . I further understand that if I become employed by Watkins-Johnson Company, there will be no agreement, expressed or implied, between the company and me for any specific period of employment, nor for continuing or long-term employment." Over the next several months, Watkins-Johnson contacted Slivinsky's references, requested her transcripts, and set up a series of interviews. Slivinsky claims that at these interviews she was promised "long-term," "indefinite," and "permanent" employment, not dependent on business cycles, and subject to termination only for cause. Finally, Watkins-Johnson made a verbal offer of employment to Slivinsky and she accepted. On January 7, 1985, which was Slivinsky's first day at work, Slivinsky signed the employee agreement that had been referred to in her employment application. Set apart in bold type, the last paragraph of this agreement provided that there was no express or implied agreement between the parties regarding the duration of her employment and that the employment could be terminated at any time with or without cause.

As a result of the space shuttle Challenger *disaster in January 1986, Watkins-Johnson experienced significant business losses and government contract cancellations. The management decided that employee cutbacks were essential to cope with the loss of business. Ultimately, 24 employees, including Slivinsky, were selected for the reduction in force program. Watkins-Johnson terminated her employment in June 1986.*

Slivinsky brought suit against Watkins-Johnson for breach of the employment contract, asserting that she had been terminated without cause in violation of the parties' express and implied agreement. She also claimed that the reasons given for her termination were pretextual and that she was really fired for other reasons, such as her supervisor's disliking her. The trial court granted Watkins-Johnson's motion for summary judgment, and Slivinsky appealed.

Cottle, Associate Justice Slivinsky claims that the parties' employment agreement includes factors such as oral assurances of job security and Watkins-Johnson's personnel policies and practices not to terminate employees except for good cause. Watkins-Johnson [argues] that it is limited

to the parties' express written contract defining the employment as at-will.

The dispositive issue, therefore, is whether we can look beyond the four corners of the parties' written agreements to ascertain the complete agreement of the parties. The answer to that question involves application of the parol evidence rule, a rule of substantive law precluding the introduction of evidence which varies or contradicts the terms of an integrated written instrument. If the parties intended that the Application and Employment Agreement constituted an integration, i.e., the final expression of their agreement with respect to grounds for termination, then those agreements may not be contradicted by evidence of any prior agreement or of a contemporaneous oral agreement. No particular form is required for an integrated agreement. When only part of the agreement is integrated, the parol evidence rule applies to that part.

Applying these standards, we conclude that the contract was integrated with respect to the grounds for termination. Slivinsky's employment application specifically conditioned employment upon execution of an employment agreement. It further provided that if Slivinsky were to become employed by Watkins-Johnson, there "will be no agreement, expressed or implied, . . . for any specific period of employment, nor for continuing or long-term employment." When Slivinsky executed the Employee Agreement, she acknowledged "that there is no agreement, express or implied, between employee and the Company for any specific period of employment, nor for continuing or long-term employment. Employee and the Company each have a right to terminate employment, with or without cause." Reading these documents together, the only reasonable conclusion that can be drawn is that the parties intended that there would be no other agreement regarding termination other than that set forth in the Employee Agreement. Consequently, evidence of an implied agreement which contradicts the terms of the written agreement is not admissible. There cannot be a valid express contract and an implied contract, each embracing the same subject, but requiring different results.

Because we hold that the contract is a contract for employment terminable at will, we do not reach the issues regarding whether good cause existed for Slivinsky's termination based on Watkins-Johnson's decision to reduce its work force. Even if the reduction in force were a pretextual ground for terminating Slivinsky's employment, it would not be actionable with an at-will employment contract unless the employer's motivation for a discharge contravenes some significant public policy principle. No such public policy violation is alleged here.

Judgment for Watkins-Johnson affirmed.

Scope of the Parol Evidence Rule

The parol evidence rule is relevant only in cases in which the parties have expressed their agreement in a written contract. Thus, it would not apply to a case involving an oral contract or to a case in which writings existed that were not intended to embody the final statement of at least part of the parties' contract. The parol evidence rule has been made a part of the law of sales in the Uniform Commercial Code [2–202], so it is applicable to contracts for the sale of goods as well as to contracts governed by the common law of contracts. Furthermore, the rule excludes only evidence of statements made *prior to* or *during* the signing of the written contract. It does not apply to statements made after the signing of the contract. Thus, evidence of subsequent statements is freely admissible.

Admissible Parol Evidence

In some situations, evidence of statements made outside the written contract is admissible notwithstanding the parol evidence rule. Parol evidence is permitted in the situations discussed below either because the writing is not the best evidence of the contract or because the evidence is offered, not to contradict the terms of the writing, but to explain the writing or to challenge the underlying contractual obligation that the writing represents.

1. *Additional terms in partially integrated contracts.* In many instances, parties will desire to introduce evidence of statements or agreements that would supplement rather than contradict the written contract. Whether they can do this depends on whether the written

contract is characterized as *completely integrated* or *partially integrated.* A completely integrated contract is one that the parties intend as a *complete and exclusive statement* of their entire agreement. A partially integrated contract is one that expresses the parties' final agreement as to some but not all of the terms of their contract. When a contract is only partially integrated, the parties are permitted to use parol evidence to prove the *additional* terms of their agreement. Such evidence cannot, however, be used to contradict the written terms of the contract. To determine whether a contract is completely or partially integrated, a court must determine the parties' intent. A court judges intent by looking at the language of the contract, the apparent completeness of the writing, and all the surrounding circumstances. It will also consider whether the contract contains a **merger clause** (also known as an **integration clause**). These clauses, which are very common in form contracts and commercial contracts, provide that the written contract is the complete integration of the parties' agreement. They are designed to prevent a party from giving testimony about prior statements or agreements and are generally effective in indicating that the writing was a complete integration. Even though a contract contains a merger clause, parol evidence could be admissible under one of the following exceptions.

2. *Explaining ambiguities.* Parol evidence can be offered to explain an ambiguity in the written contract. Suppose a written contract between Lowen and Matthews provides that Lowen will buy "Matthews's truck," but Matthews has two trucks. The parties could offer evidence of negotiations, statements, and other circumstances preceding the creation of the written contract to identify the truck to which the writing refers. Used in this way, parol evidence helps the court interpret the contract. It does not contradict the written contract.

3. *Circumstances invalidating contract.* Any circumstances that would be relevant to show that a contract is not valid can be proven by parol evidence. For example, evidence that Holden pointed a gun at Dickson and said, "Sign this contract, or I'll kill you," would be admissible to show that the contract was voidable because of duress. Likewise, parol evidence would be admissible to show that a contract was illegal or was induced by fraud, misrepresentation, undue influence, or mistake.

4. *Existence of condition.* It is also permissible to use parol evidence to show that a writing was executed with the understanding that it was *not to take effect until the occurrence of a condition* (a future, uncertain event that creates a duty to perform). Suppose Farnsworth signs a contract to purchase a car with the agreement that the contract is not to be effective unless and until Farnsworth gets a new job. If the written contract is silent about any conditions that must occur before it becomes effective, Farnsworth could introduce parol evidence to prove the existence of the condition. Such proof merely elaborates on, but does not contradict, the terms of the writing.

5. *Subsequent agreements.* As you read earlier, the parol evidence rule does not forbid parties to introduce proof of *subsequent agreements.* This is true even if the terms of the later agreement cancel, subtract from, or add to the obligations stated in the written contract. The idea here is that when a writing is followed by a later statement or agreement, the writing is no longer the best evidence of the agreement. You should be aware, however, that subsequent modifications of contracts may sometimes be unenforceable because of lack of consideration or failure to comply with the statute of frauds. In addition, contracts sometimes expressly provide that modifications must be written. In this situation, an oral modification would be unenforceable.

Interpretation of Contracts

Once a court has decided what promises are included in a contract, it is faced with *interpreting* the contract to determine the *meaning* and *legal effect* of the terms used by the parties. Courts have adopted broad, basic standards of interpretation that guide them in the interpretation process.

The court will first attempt to determine the parties' *principal objective.* Every clause will then be determined in the light of this principal objective. Ordinary words will be given their usual meaning and technical words (such as those that have a special meaning in the parties' trade or business) will be given their technical meaning, unless a different meaning was clearly intended.

Guidelines grounded in common sense are also used to determine the relationship of the various terms of the contract. Specific terms that follow general terms are presumed to qualify those general terms. Suppose that a provision that states that the subject of the contract is "guaranteed for one year" is followed

Concept Review

Parol Evidence Rule

Parol Evidence Rule	**Applies when:** Parties create a writing intended as a final and complete integration of at least part of the parties' contract.	**Provides that:** Evidence of statements or promises made before or during the creation of the writing cannot be used to supplement, change, or contradict the terms of the written contract.
But Parol Evidence *Can* Be Used to	1. Prove consistent, additional terms when the contract is *partially integrated.* 2. Explain an ambiguity in the written contract. 3. Prove that the contract is void, voidable, or unenforceable. 4. Prove that the contract was subject to a condition. 5. Prove that the parties subsequently modified the contract or made a new agreement.	

by a provision describing the "one-year guarantee against defects in workmanship." Here, it is fair to conclude that the more specific term qualifies the more general term and that the guarantee described in the contract is a guarantee of workmanship only, and not of parts and materials.

Sometimes, there is internal conflict in the terms of an agreement and courts must determine which term should prevail. When the parties use a form contract or some other type of contract that is partially printed and partially handwritten, the handwritten provisions will prevail. If the contract was drafted by one of the parties, any ambiguities will be resolved against the party who drafted the contract.

If both parties to the contract are members of a trade, profession, or community in which certain words are commonly given a particular meaning (this is called a *usage*), the courts will presume that the parties intended the meaning that the usage gives to the terms they use. For example, if the word *dozen* in the bakery business means 13 rather than 12, a contract between two bakers for the purchase of 10 dozen loaves of bread will be presumed to mean 130 loaves of bread rather than 120. Usages can also add provisions to the parties' agreement. If the court finds that a certain practice is a matter of common usage in the parties' trade, it will assume that the parties intended to include that practice in their agreement. If contracting parties are members of the same trade, business, or community but do not intend to be bound by usage, they should specifically say so in their agreement.

Ethical and Public Policy Concerns

1. The statute of frauds requires written evidence of some, but not all, contracts. Is this defensible from a public policy standpoint? Would it be preferable for the law to simply require that all contracts be evidenced by a writing?

2. What ethical problem was the statute of frauds designed to prevent, and what ethical problem does the statute of frauds create? Is the "cure worse than the disease"?

3. Under the law of some states, the doctrine of promissory estoppel permits the enforcement of promises that induce reliance, even when those promises do not comply with the statute of frauds. Should all states adopt this position? What effect would this have on the statute of frauds?

4. For those parties who draft and proffer standardized form contracts, the parol evidence rule can be a powerful ally because it has the effect of limiting the scope of an integrated, written contract to the terms of the writing. Although statements and promises made to a person before he signs a contract might be highly influential in persuading him to enter the contract, the parol evidence rule effectively prevents these precontract communications from being legally enforceable. Consider also that standardized form contracts are usually drafted for the benefit of and proffered by the

more sophisticated and powerful party in a contract (e.g., the insurance company rather than the insured, the automobile dealer rather than the customer, the landlord rather than the tenant). Considering all of this, do you believe that the parol evidence rule promotes ethical behavior?

Problems and Problem Cases

1. Golomb allegedly orally agreed to sell to Lee for $275,000 the Ferrari once owned by King Leopold of Belgium. Golomb ultimately refused to sell the car and Lee sued him. At trial, Golomb denied ever promising to sell the car to Lee. Can Lee enforce this alleged promise?

2. Michael Valentine, Jr., an adult over the age of 18, was charged with criminal assault. His parents, Lorraine and Michael Valentine, Sr., contacted the law firm of Crozier and Gudsnuk about representing their son in the criminal action. In October 1990, DeGennaro, an associate in the law firm, agreed to represent Valentine. The law firm claims that Valentine's parents orally agreed to guarantee payment for the legal fees incurred by their son. Approximately 10 days after DeGennaro had agreed to represent Valentine, Mrs. Valentine paid the firm's retainer by signing a check for $250. The law firm represented Valentine in the criminal assault charge until February 1991, when its representation ended at the request of the Valentines. The law firm claims that the reasonable value of the legal services it performed was $4,200. It brought suit against Valentine's parents to recover the legal fees owed to the firm. The Valentines raised the statute of frauds as a defense. Is this a good defense under the facts of this case?

3. On two occasions in 1980, Hodge met with Tilley, president and chief operating officer of Evans Financial Corporation, to discuss Hodge's possible employment by Evans. Hodge was 54 years old at that time and was assistant counsel and assistant secretary of Mellon National Corporation and Mellon Bank of Pittsburgh. During these discussions, Tilley asked Hodge what his conditions were for accepting employment with Evans, and Hodge replied, "Number 1, the job must be permanent. Because of my age, I have a great fear about going back into the marketplace again. I want to be here until I retire." Tilley allegedly responded, "I accept that condition." Regarding his retirement plans, Hodge later testified, "I really questioned whether I was going to go much beyond 65." Hodge later accepted Evans's offer of employment as vice president and general counsel. He moved from Pittsburgh to Washington, D.C., in September 1980 and worked for Evans from that time until he was fired by Tilley on May 7, 1981. Hodge brought a breach of contract suit against Evans. Evans argued that the oral contract was unenforceable because of the statute of frauds. Is this correct?

4. Green owns a lot (Lot S) in the Manomet section of Plymouth, Massachusetts. In July 1980, she advertised it for sale. On July 11 and 12, the Hickeys discussed with Green purchasing Lot S and orally agreed to a sale for $15,000. On July 12, Green accepted the Hickeys' check for $500. Hickey had left the payee line of the deposit check blank because of uncertainty whether Green or her brother was to receive the check. Hickey asked Green to fill in the appropriate name. Green, however, held the check, did not fill in the payee's name, and neither cashed nor indorsed it. Hickey told Green that his intention was to sell his home and build on the lot he was buying from Green. Relying on the arrangements with Green, the Hickeys advertised their house in newspapers for three days in July. They found a purchaser quickly. Within a short time, they contracted with a purchaser for the sale of their house and accepted the purchaser's deposit check. On the back of this check, above the Hickeys' signatures indorsing the check, was noted: "Deposit on purchase of property at Sachem Rd. and First St., Manomet, Ma. Sale price, $44,000." On July 24, Green told Hickey that she no longer intended to sell her property to him and instead had decided to sell it to someone else for $16,000. Hickey offered to pay Green $16,000 for the lot, but she refused this offer. The Hickeys then filed a complaint against Green seeking specific performance. Green asserted that relief was barred by the statute of frauds. Is this correct?

5. In June 1976, Moore went to First National Bank and requested the president of the bank to allow his sons, Rocky and Mike, to open an account in the name of Texas Continental Express, Inc. Moore promised to bring his own business to the bank and orally agreed to make good any losses that the bank might incur from receiving dishonored checks from Texas Continental. The bank then furnished regular checking account and bank draft services to Texas Continental. Several years later, Texas Continental wrote checks totaling $448,942.05 that were returned for insufficient funds. Texas Continental did not cover the

checks, and the bank turned to Moore for payment. When Moore refused to pay, the bank sued him. Does Moore have a good statute of frauds defense?

6. Renard's late husband was in the business of the creation and sale of fine stringed musical instruments. Bartel is in the business of buying, selling, refurbishing, and renting violins, other stringed instruments, and accessories. In 1995, Renard had some discussions with Mr. Bartel in New York regarding the possible purchase of some of his violins, but the two were unable to reach agreement. Shortly after her husband's death in March 1996, Renard invited Bartel, who lives in Ohio, to travel to New York to view the instruments that remained in her late husband's collection. He did so, and on March 26, the two drew up at least two documents: a written agreement for the sale of a single violin for $45,000, and a list of other items from the collection with designated purchase prices totaling $52,750. Both documents were handwritten by Renard and designated "buyer" as Bartel and "seller" as Renard. Renard printed her name on the top of the second document rather than signing it at the end. Renard contends that she intended to enter into the first contract for the sale of the single violin. With respect to the second document, however, Renard claims that she merely recorded a list of items dictated by Bartel and that she had no intention to enter into a contract for the sale of those items at that time. She also claims the statute of frauds prevents an enforceable contract because she printed her name at the top of the document instead of signing at the end. Did the second contract satisfy the statute of frauds?

7. Dyer purchased a used Ford from Walt Bennett Ford for $5,895. She signed a written contract, which showed that no taxes were included in the sales price. Dyer contended, however, that the salesperson who negotiated the purchase with her told her both before and after her signing of the contract that the sales tax on the automobile had been paid. The contract Dyer signed contained the following language:

> The above comprises the entire agreement pertaining to this purchase and no other agreement of any kind, verbal understanding, representation, or promise whatsoever will be recognized.

It also stated:

> This contract constitutes the entire agreement between the parties and no modification hereof shall be valid in any event and Buyer expressly waives the right to rely thereon, unless made in writing, signed by Seller.

Later, when Dyer attempted to license the automobile, she discovered that the Arkansas sales tax had not been paid on it. She paid the sales tax and sued Bennett for breach of contract. What result?

8. Apollo Galileo USA Partnership, a nationwide purveyor of its reservations and ticketing services for airline flights, hotels, and rental cars (as well as other travel-related services) entered into a Subscriber Services Contract with Spain Travel. Apollo brought suit against Spain for prematurely terminating the agreement. Spain alleges that Apollo representatives, during the course of negotiating the agreement, promised that it would give Spain 12 airline tickets each year (literally give them, without any payment at all) throughout the course of the agreement. Nothing in the written agreement between the parties said anything about any free tickets. The agreement did provide:

> This Agreement constitutes the entire agreement and understanding of the parties on the subject matter hereof and, as of the effective date, supercedes [sic] all prior agreements, whether written or oral, between the parties hereto concerning the subject matter hereof, excluding amounts due ATS [Apollo] which may have accrued under a prior agreement between the parties.

Spain allegedly terminated the contract prematurely and Apollo sued it for breach of contract. Should evidence about the alleged promises for the free airline tickets be allowed at trial?

9. Grove and Stanfield entered into an arrangement in July 1986 whereby Grove was to receive a 1936 Pontiac from Stanfield in exchange for the performance of reupholstery work on Stanfield's 1953 Cadillac. Grove then took possession of the '36 Pontiac, although he did not receive the title to the car. However, Grove never did the reupholstery. In 1991, some five years after Grove had taken delivery of the Pontiac, Grove paid Stanfield $1,000 and Stanfield assigned the title to Grove. The title certificate, duly notarized and signed by Stanfield, recited that the Pontiac was thereby sold to Grove for $1,000. No other terms of sale are mentioned in the title document, nor are any incorporated by reference. In 1994, Stanfield filed suit against Grove for breach of contract and conversion and asking for the return of the car. He claimed that the parties had entered a contract for the sale of the Pontiac for $9,000 and that the $1,000 that Grove had paid in 1991 was merely for the title and not for the car itself. Is the contract to pay additional money enforceable?

10. The Peoples Bank owned approximately 66 acres, which it offered for sale. Hoping to get a real estate commission, Whatley, an attorney and real estate broker, advertised the property for sale. Whatley showed the property once to Barnes, who on that same day wrote a deposit check for $5,500, 10 percent of the listed purchase price. Although Barnes signed the check, it was Whatley who filled out all the information, including denoting the payee as Whatley Realty Trust Account and making a notation on Barnes's check: "Earnest money on 66.21 acres." Whatley also created a receipt for the check as "Binder on 66.21 acres pending title clearance and 30 days to close." Whatley held Barnes's check and did not deposit it. The next day, Whatley drafted a real estate sales agreement and mailed it to the bank. The bank's vice president signed the agreement and mailed it back to Whatley. The sales contract expressly obligated the bank to pay Whatley a real estate commission "when the sale is consummated." According to the sales contract, "This instrument shall be regarded as an offer by the Purchaser or Seller, who first signs, as to the other and is open for acceptance by the other until 4:00 P.M. on the 7th day of July, 1993." Barnes never signed the real estate sales contract and never accepted the bank's offer by July 7. Rather, on July 1, Barnes stopped payment on his earnest money check and informed Whatley that he was withdrawing his offer to purchase the land. About six weeks later, the bank sold the land to another purchaser, and Whatley did not receive a commission. Whatley sued Barnes to recover $5,000, the amount of the real estate commission to which he would have been entitled had the sale been effectuated. For Whatley to be entitled to a commission, he must have procured a ready, willing, and able purchaser. Was an enforceable contract formed between Barnes and the bank for the sale of the land?

11. *Video Case.* See "Car Deals." Acme Used Cars Sales and Service sold a used car to Jones. Prior to the signing of a written purchase contract, Acme's salesperson told Jones that he "wouldn't find a car like this at any price" and "this car is a crown jewel." However, the purchase order that Jones signed stated that the car was being sold "as is" and that "no warranties or representations concerning the car have been made or given except as contained" in the contract. Jones later discovered that the brakes were defective and needed to be rebuilt. If Jones sued Acme, would the parol evidence rule prevent the admission of testimony about the salesperson's statements?

12. *Video Case.* See "Sour Grapes." Fred, a jelly manufacturer in Chicago, ordered grapes by telephone for a price of $800 from Gus, a grape grower in California. Gus sent a written purchase order confirmation. He also shipped the grapes, but they were spoiled when they arrived. Would the statute of frauds prevent this contract from being enforced?

Chapter Seventeen

Rights of Third Parties

Chapter Outline

I. Assignment of Contracts
- *A. Nature of Assignment of Rights*
  - *1. Evolution of the Law Regarding Assignments*
  - *2. Sources of Assignment Law Today*
- *B. Creating an Assignment*
- *C. Assignability of Rights*
  - *1. Contract Clauses Prohibiting Assignment*
- *D. Nature of Assignee's Rights*
  - *1. Importance of Notifying the Obligor*
  - *2. Defenses Against the Assignee*
- *E. Subsequent Assignments*
- *F. Successive Assignments*
- *G. Assignor's Warranty Liability to Assignee*

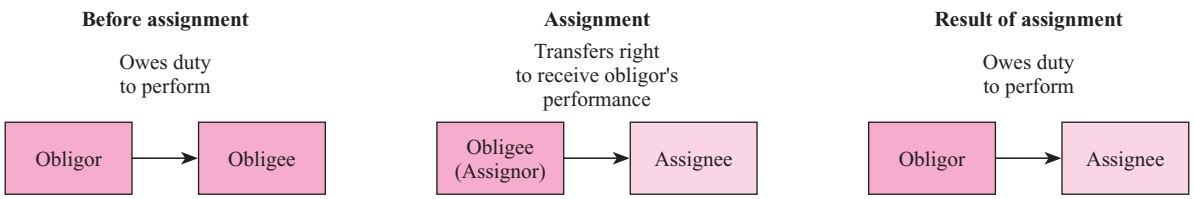
II. Delegation of Duties
- *A. Nature of Delegation*
- *B. Delegable Duties*
- *C. Language Creating a Delegation*
- *D. Assumption of Duties by Delegatee*
- *E. Discharge of Delegator by Novation*

III. Third-Party Beneficiaries
- *A. Intended Beneficiaries versus Incidental Beneficiaries*
  - *1. Creditor Beneficiaries*
  - *2. Donee Beneficiaries*
- *B. Vesting of Beneficiary's Rights*

In preceding chapters, we have emphasized the way in which an agreement between two or more people creates legal rights and duties *on the part of the contracting parties.* Since a contract is founded on the consent of the contracting parties, it might seem to follow that they are the only ones who have rights and duties under the contract. Although this is generally true, there are two situations in which people who were not parties to a contract have legally enforceable rights under it: when a contract has been *assigned* (transferred) to a third party and when a contract is *intended to benefit a third person* (a *third-party beneficiary*). This chapter discusses the circumstances in which third parties have rights under a contract.

Assignment of Contracts

Contracts give people both rights and duties. If Murphy buys Wagner's motorcycle and promises to pay him $1,000 for it, Wagner has the *right* to receive Murphy's promised performance (the payment of the $1,000) and Murphy has the *duty* to perform the promise by paying $1,000. In most situations, contract rights can be transferred to a third person and contract duties can be delegated to a third person. The transfer of a *right* under a contract is called an **assignment.** The appointment of another person to perform a *duty* under a contract is called a **delegation.**



Nature of Assignment of Rights

A person who owes a duty to perform under a contract is called an **obligor.** The person to whom he owes the duty is called the **obligee.** For example, Samson borrows $500 from Jordan, promising to repay Jordan in six months. Samson, who owes the duty to pay the money, is the obligor, and Jordan, who has the right to receive the money, is the obligee. An assignment occurs when the obligee transfers his right to receive the obligor's performance to a third person. When there has been an assignment, the person making the assignment—the original obligee—is then called the **assignor.** The person

Figure 1 *Assignment: Key Terms*

Obligor	Obligee	Assignment	Assignor	Assignee
Person who owes the duty to perform	Person who has the right to receive obligor's performance	Transfer of the right to receive obligor's performance	Obligee who transfers the right to receive obligor's performance	Person to whom the right to receive obligor's performance is transferred

Figure 2 *Assignment*

to whom the right has been transferred is called the **assignee.** Figure 1 summarizes these key terms.

Suppose that Jordan, the obligee in the example above, assigns his right to receive Samson's payment to Kane. Here, Jordan is the assignor and Kane is the assignee. The relationship between the three parties is represented in Figure 2. Notice that the assignment is a separate transaction: It occurs after the formation of the original contract.

The effect of the assignment is to extinguish the assignor's right to receive performance and to transfer that right to the assignee. In the above example, Kane now owns the right to collect payment from Samson. If Samson fails to pay, Kane, as an assignee, now has the right to file suit against Samson to collect the debt.

People assign rights for a variety of reasons. A person might assign a right to a third party to satisfy a debt that he owes. For example, Jordan, the assignor in the above example, owes money to Kane, so he assigns to Kane the right to receive the $500 that Samson owes him. A person might also sell or pledge the rights owed to him to obtain financing. In the case of a business, the money owed to the business by customers and clients is called *accounts receivable.* A business's accounts receivable are an asset to the business that can be used to raise money in several ways. For example, the business may pledge its accounts receivable as collateral for a loan. Suppose Ace Tree Trimming Co. wants to borrow money from First Bank and gives First Bank a security interest (an interest in the debtor's property that secures the debtor's performance of an obligation) in its accounts receivable.[1] If Ace defaults in its payments to First Bank, First Bank will acquire Ace's rights to collect the accounts receivable. A person might also make an assignment of a contract right as a gift. For example, Lansing owes $2,000 to Father. Father assigns the right to receive Lansing's performance to Son as a graduation gift.

Evolution of the Law Regarding Assignments

Contract rights have not always been transferable. Early common law refused to permit assignment or delegation because debts were considered to be too personal to transfer. A debtor who failed to pay an honest debt was subject to severe penalties, including imprisonment, because such a failure to pay was viewed as the equivalent of theft. The identity of the creditor was of great importance to the debtor, since one creditor might be more lenient than another. Courts also feared that the assignment of debts would stir up unwanted litigation. In an economy that was primarily

[1]Security interests in accounts and other property are discussed in Chapter 28.

land-based, the extension of credit was of relatively small importance. As trade increased and became more complex, however, the practice of extending credit became more common. The needs of an increasingly commercial society demanded that people be able to trade freely in intangible assets such as debts. Consequently, the rules of law regarding the assignment of contracts gradually became more liberal. Today, public policy favors free assignability of contracts.

Sources of Assignment Law Today Legal principles regarding assignment are found not only in the common law of contracts but also in Articles 2 and 9 of the Uniform Commercial Code. Section 2–210 of Article 2 contains principles applicable to assignments of rights under a contract for the sale of *goods*. Article 9 governs security interests in accounts and other contract rights as well as the outright sale of accounts. Article 9's treatment of assignments will be discussed in more detail in Chapter 28, Security Interests in Personal Property, but some provisions of Article 9 relating to assignments will be discussed in this chapter.

Creating an Assignment

An assignment can be made in any way that is sufficient to show the assignor's intent to assign. No formal language is required, and a writing is not necessary unless required by a provision of the statute of frauds or some other statute. Many states do have statutes requiring certain types of assignments to be evidenced by a writing, however. Additionally, an assignment for the purposes of security must meet Article 9's formal requirements for security interests.[2]

It is not necessary that the assignee give any consideration to the assignor in exchange for the assignment. Gratuitous assignments (those for which the assignee gives no value) are generally revocable until such time as the obligor satisfies the obligation, however. They can be revoked by the assignor's death or incapacity or by notification of revocation given by the assignor to the assignee.

Assignability of Rights

Most, but not all, contract rights are assignable. Although the free assignability of contract rights performs a valuable function in our modern credit-based economy, assignment is undesirable if it would adversely affect some important public policy or if it would materially vary the bargained-for expectations of the parties. There are several basic limitations on the assignability of contract rights.

First, an assignment will not be effective if it is *contrary to public policy.* For example, most states have enacted statutes that prohibit or regulate a wage earner's assignment of future wages. These statutes are designed to protect people against unwisely impoverishing themselves by signing away their future incomes. State law may prohibit assignment of lottery prizes or certain kinds of lawsuits on grounds of public policy. The *In Re The Petition of Singer Asset Finance Company* case, which follows this discussion, involves the construction of a state lottery statute restricting assignment of lottery prizes, and articulates some of the reasons that such assignments are prohibited.

Second, an assignment will not be effective if it *adversely affects the obligor* in some significant way. An assignment is ineffective if it materially changes the obligor's duty or increases the burden or risk on the obligor. Naturally, any assignment will change an obligor's duty to some extent. The obligor will have to pay money or deliver goods or render some other performance to one party instead of to another. These changes are not considered to be sufficiently material to render an assignment ineffective. Thus, a right to receive money or goods or land is generally assignable. In addition, covenants not to compete are generally considered to be assignable to buyers of businesses. For example, Jefferson sells RX Drugstore to Waldman, including in the contract of sale a covenant whereby Jefferson promises not to operate a competing drugstore within a 30-mile radius of RX for 10 years after the sale. Waldman later sells RX to Tharp. Here, Tharp could enforce the covenant not to compete against Jefferson. The reason for permitting assignment of covenants not to compete is that the purpose of such covenants is to protect an asset of the business—goodwill—for which the buyer has paid.

An assignment could be ineffective because of its variation of the obligor's duty, however, if the contract right involved a *personal relationship* or an element of *personal skill, judgment,* or *character.* For this reason, contracts of employment in which an employee works under the direct and personal supervision of an employer cannot be assigned to a new employer. An employer could assign a contract of employment, however, if the assignee-employer could perform the

[2]These requirements are discussed in Chapter 28.

contract without adversely affecting the interests of the employee, such as would be the case when an employment relationship does not involve personal supervision by an individual employer.

A purported assignment is ineffective if it significantly increases the burden of the obligor's performance. For example, if Walker contracts to sell Dwyer all of its requirements of wheat, a purported assignment of Dwyer's rights to a corporation that has much greater requirements of wheat would probably be ineffective because it would significantly increase the burden on Walker.

In Re The Petition of Singer Asset Finance Company, L.L.C., for an Order Allowing a Turnover of Barreca Lottery Winnings

714 A.2d 322 (Super. Ct. N.J., App. Div. 1998)

In June 1987 Caroline Barreca won a share in a prize of over 2 million dollars in the New Jersey Lottery. As such she became entitled to receive $63,500 each June for twenty years, i.e., *until June 22, 2006. On November 7, 1996 Ms. Barreca entered into an agreement with Singer Asset Finance Company in which she agreed to assign to Singer $50,000 of the payments due June 22, 1999 and June 22, 2000, in return for a present payment to her of $72,000. Singer is in the business of buying lottery prize payment streams from prizewinners in a number of states. New Jersey law holds that lottery prizes are generally unassignable, except in case of death of the lottery winner or an appropriate judicial order to assign prizes. The agreement between Barreca and Singer was conditioned upon the entry of a court order "directing the State Lottery to recognize [the agreement] and to make the Assigned Payments . . . directly to [Singer]" and a "written acknowledgement from the State Lottery . . . confirming that [Barreca] is the winner of [the assigned prize] and acknowledging the State Lottery's unqualified agreement to make all of the Assigned Payments to* [*Singer*]*."*

Singer assigned its right to receive the moneys to an entity entitled Lottery Receivables Trust I. Singer filed a petition in the Law Division in which it sought to proceed summarily for an order to allow the turnover of the assigned portion of Barreca's prize, an order which it characterized as an "appropriate judicial order." Over the opposition of the Division of State Lottery, the Law Division entered an order requiring that Singer's assignee be paid the assigned portion of the payments due to Barreca, ordering that taxes be withheld and credited to Singer's assignee, and requiring the Division of State Lottery to acknowledge in writing that it will unconditionally pay the lottery prize payments in accordance with the order. The Division appealed.

Bilder, J.A.D. This case involves the voluntary assignability of state lottery winnings. The sole issue is whether N.J.S.A. 5:9–13, a section of the State Lottery Law, permits such assignments. N.J.S.A. 5:9–13 provides:

> No right of any person to a prize drawn shall be assignable, except that payment of any prize drawn may be paid to the estate of a deceased prized winner, and except that any person pursuant to an appropriate judicial order may be paid the prize to which the winner is entitled.

The issue is strictly a question of statutory construction. In the only published opinion concerning this issue, *McCabe v. Director N.J. Lottery Commission,* Judge Kimmelman noted that, as an exception to the statutory general rule making the prizes unassignable, the phrase "appropriate judicial order" must be strictly construed so as not to run counter to the general statutory prohibition against assignments. Reading the phrase in context with the other exception, the death of the prize winner, he concluded that a court order sanctioning an assignment of winnings was limited to circumstances of necessity. We agree. We are not at liberty to presume the legislature intended something other than what it expressed by its plain language. If a litigant is dissatisfied with the manner in which the Legislature has spoken, its recourse lies with that branch, not with this court. As Judge Kimmelman correctly noted, the disputed language must be read in the context of the whole phrase—"No right . . . shall be assignable, except that payment . . . may be paid to the estate of a deceased prize winner, and except that any person pursuant to an appropriate judicial order

may be paid the prize to which the winner is entitled"—and not extended beyond its reasonable bounds. The Legislature has ordained that the prize rights shall not be assignable and has thereafter carved out exceptions. Read together it can be seen that the two exceptions relate to a common problem—extrinsic events necessitating a transfer of the right to receive the moneys. The first exception deals with the death of the recipient. The second exception relates to other extrinsic events creating legal necessity, e.g., spousal or child support, equitable distribution. To read the second exception more broadly so as to encompass any reason, voluntary as well as involuntary, as long as there is a court order, as Singer argues, would permit the exception to overrule the legislative prohibition against assignments—an unreasonable result. Moreover, as the Pennsylvania Supreme Court noted in construing a similar statute, the provision for "an appropriate judicial order" furnishes no standard for the court to follow in acting upon a request for approval of a voluntary assignment. Although novel to us, the construction of this statutory language is not a novel question. Section 9–13 of the New Jersey Lottery Law is not unique. The same or similar language is found in the laws relating to lotteries conducted by other states. As already noted, other courts have construed the same language to bar voluntary assignments such as petitioner proposes.

In addition to its contention that the plain language of N.J.S.A. 5:9–13 forbids voluntary assignments, the Division has pointed out that the prohibition serves an important public purpose by avoiding the administrative burden that would be created by the need to recognize assignments. Although our conclusion as to the plain meaning of N.J.S.A. 5:9–13 makes it unnecessary to seek unstated legislative purposes, particularly in the absence of any meaningful legislative history, it is useful to note that judicial recognition has already been given to the concept that a "clear legislative purpose [of the Lottery Law] was to keep the administrative machinery geared for the payment of winnings as simple and as efficient as possible." *Karafa v. N.J. State Lottery Comm.* As the Washington court noted in rejecting an assignability interpretation, "nothing would prevent a lottery winner from assigning his winnings to a number of parties, thereby burdening the Lottery with the administrative expense involved in parceling out the winner's annual payment to various assignees." *Converse v. Lottery Com'n.* Such fractionalization is present in the proposed assignment, which seeks to transfer the right to receive a portion of the winner's share for only two of the entitlement years. Moreover, an order such as that being appealed from can give rise to serious legal problems for the Lottery Division should a prize winner become in arrears of a child support order so that the assigned right to a lottery prize becomes subject to the withholding provisions of N.J.S.A. 5:9–13.5.

Finally, the Division contends that the general assignability of prize winnings may, if sufficiently pervasive, create an established market for such future benefits and raise the specter of federal taxation of all lottery winnings based on the present value on the date the prize is won, a consequence the Division foresees as disastrous to the continuation of the lottery program.

Reversed in favor of the Division.

Contract Clauses Prohibiting Assignment A contract right may also be nonassignable because the original contract expressly forbids assignment. For example, leases often contain provisions forbidding assignment or requiring the tenant to obtain the landlord's permission for assignment.[3]

Antiassignment clauses in contracts are generally enforceable. Because of the strong public policy favoring assignability, however, such clauses are often interpreted narrowly. For example, a court might view an assignment made in violation of an antiassignment clause as a breach of contract for which damages may be recovered but not as an invalidation of the assignment. Another tactic is to interpret a contractual ban on assignment as prohibiting only the delegation of duties.

The UCC takes this latter position. Under section 2–210(2), general language prohibiting assignment of "the contract" or "all my rights under the contract" is

[3]The assignment of leases is discussed further in Chapter 25.

interpreted as forbidding only the delegation of duties, unless the circumstances indicate to the contrary. Section 2–210 also states that a right to damages for breach of a whole sales contract or a right arising out of the assignor's performance of his entire obligation may be assigned even if a provision of the original sales contract prohibited assignment. In addition, UCC section 9–318(4) invalidates contract terms that prohibit (or require the debtor's consent to) an assignment of an account or creation of a security interest in a right to receive money that is now due or that will become due.

Nature of Assignee's Rights

When an assignment occurs, the assignee is said to "step into the shoes of his assignor." This means that the assignee acquires all of the rights that his assignor had under the contract. The assignee has the right to receive the obligor's performance, and if performance is not forthcoming, the assignee has the right to sue in his own name for breach of the obligation. By the same token, the assignee acquires no greater rights than those possessed by the assignor.

Because the assignee has no greater rights than did the assignor, the obligor may assert any defense or claim against the assignee that he could have asserted against the assignor, subject to certain time limitations discussed below. A contract that is void, voidable, or unenforceable as between the original parties does not become enforceable just because it has been assigned to a third party. For example, if Richards induces Dillman's consent to a contract by duress and subsequently assigns his rights under the contract to Keith, Dillman can assert the doctrine of duress against Keith as a ground for avoiding the contract.

Importance of Notifying the Obligor An assignee should promptly notify the obligor of the assignment. Although notification of the obligor is not necessary for the assignment to be valid, such notice is of great practical importance. One reason notice is important is that an obligor who does not have reason to know of the assignment could render performance to the assignor and claim that his obligation had been discharged by performance. An obligor who renders performance to the assignor without notice of the assignment has no further liability under the contract. For example, McKay borrows $500 from Goodheart, promising to repay the debt by June 1. Goodheart assigns the debt to Rogers, but no one informs McKay of the assignment, and McKay pays the $500 to Goodheart, the assignor. In this case, McKay is not liable for any further payment. But if Rogers had immediately notified McKay of the assignment and, after receiving notice, McKay had mistakenly paid the debt to Goodheart, McKay would still have the legal obligation to pay $500 to Rogers. Having been given adequate notice of the assignment, he may remain liable to the assignee even if he later renders performance to the assignor.

An assignor who accepts performance from the obligor after the assignment holds any benefits that he receives as a trustee for the assignee. If the assignor fails to pay those benefits to the assignee, however, an obligor who has been notified of the assignment and renders performance to the wrong person may have to pay the same debt twice.

An obligor who receives notice of an assignment from the assignee will want to assure himself that the assignment has in fact occurred. He may ask for written evidence of the assignment or contact the assignee and ask for verification of the assignment. Under UCC section 9–318(3), a notification of assignment is ineffective unless it reasonably identifies the rights assigned. If requested by the account debtor (an obligor who owes money for goods sold or leased or services rendered), the assignee must furnish reasonable proof that the assignment has been made, and, unless he does so, the account debtor may disregard the notice and pay the assignor.

Defenses against the Assignee An assignee's rights in an assignment are subject to the defenses that the obligor could have asserted against the assignor. Keep in mind that the assignee's rights are limited by the terms of the underlying contract between the assignor and the obligor. When defenses arise from the terms or performance of that contract, they can be asserted against the assignee even if they arise after the obligor receives notice of the assignment. For example, on June 1, Worldwide Widgets assigns to First Bank its rights under a contract with Widgetech, Inc. This contract obligates Worldwide Widgets to deliver a quantity of widgets to Widgetech by September 1, in return for which Widgetech is obligated to pay a stated purchase price. First Bank gives prompt notice of the assignment to Widgetech. Worldwide Widget fails to deliver the widgets and Widgetech refuses to pay. If First Bank brought an action against Widgetech to recover the purchase price of the widgets, Widgetech could assert Worldwide Widget's breach as a defense,

even though the breach occurred after Widgetech received notice of the assignment.[4]

In determining what other defenses can be asserted against the assignee, the time of notification plays an important role. After notification, as we discussed earlier, payment by the obligor to the assignor will not discharge the obligor.

Subsequent Assignments

An assignee may "reassign" a right to a third party, who would be called a **subassignee.** The subassignee then acquires the rights held by the prior assignee. He should give the obligor prompt notice of the subsequent assignment, because he takes his interest subject to the same principles discussed above regarding the claims and defenses that can be asserted against him.

Successive Assignments

Notice to the obligor may be important in one other situation. If an assignor assigns the same right to two assignees in succession, both of whom pay for the assignment, a question of priority results. An assignor who assigns the same right to different people will be held liable to the assignee who acquires no rights against the obligor, but which assignee is entitled to the obligor's performance? Which assignee will have recourse only against the assignor? There are several views on this point.

In states that follow the "American rule," the first assignee has the better right. This view is based on the rule of property law that a person cannot transfer greater rights in property than he owns. In states that follow the "English rule," however, the assignee who first gives notice of the assignment to the obligor, without knowledge of the other assignee's claim, has the better right. The *Restatement (Second) of Contracts* takes a third position. Section 342 of the *Restatement (Second)* provides that the first assignee has priority unless the subsequent assignee gives value (pays for the assignment) and, without having reason to know of the other assignee's claim, does one of the following: obtains payment of the obligation, gets a judgment against the obligor, obtains a new contract with the obligor by novation, or possesses a writing of a type customarily accepted as a symbol or evidence of the right assigned (such as a passbook for a savings account).

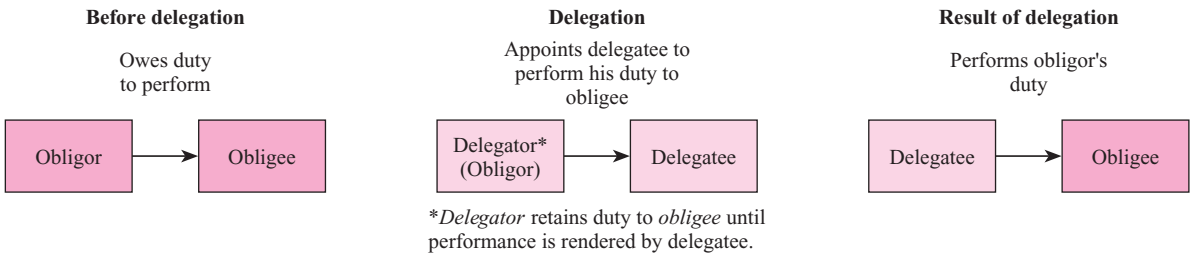
Assignor's Warranty Liability to Assignee

Suppose that Ross, a 16-year-old boy, contracts to buy a used car for $2,000 from Donaldson. Ross pays Donaldson $500 as a down payment and agrees to pay the balance in equal monthly installments. Donaldson assigns his right to receive the balance of the purchase price to Beckman, who pays $1,000 in cash for the assignment. When Beckman later attempts to enforce the contract, however, Ross disaffirms the contract on grounds of lack of capacity. Thus, Beckman has paid $1,000 for a worthless claim. Does Beckman have any recourse against Donaldson? When an assignor is paid for making an assignment, the assignor is held to have made certain implied warranties about the claim assigned.

The assignor impliedly warrants that the claim assigned is valid. This means that the obligor has capacity to contract, the contract is not illegal, the contract is not voidable for any other reason known to the assignor (such as fraud or duress), and the contract has not been discharged prior to assignment. The assignor also warrants that he has good title to the rights assigned and that any written instrument representing the assigned claim is genuine. In addition, the assignor impliedly agrees that he will not do anything to impair the value of the assignment. These guarantees are imposed by law unless the assignment agreement clearly indicates to the contrary. One important aspect of the assigned right that the assignor does not impliedly warrant, however, is that the obligor is solvent.

Delegation of Duties

Nature of Delegation



A **delegation** of duties occurs when an obligor indicates his intent to appoint another person to perform his duties under a contract. For example, White owns a furniture store. He has numerous existing contracts to deliver furniture to customers, including a contract to deliver a sofa to Coombs. White is the *obligor* of the duty to deliver the sofa and Coombs is the *obligee.* White decides to sell his business to Rosen. As a part of the sale

[4]Similarly, if the assignor's rights were subject to discharge because of other factors such as the nonoccurrence of a condition, impossibility, impracticability, or public policy, this can be asserted as a defense against the assignee even if the event occurs after the obligor receives notice of assignment. See *Restatement (Second) of Contracts* § 336(3). The doctrines relating to discharge from performance are explained in Chapter 18.

Figure 3 *Delegation: Key Terms*

Obligor	Obligee	Delegation	Delegator	Delegatee
Person who owes the duty to perform	Person who has the right to receive obligor's performance	Appointment of another person to perform the obligor's duty to the obligee	Obligor who appoints another to perform his duty to obligee	Person who is appointed to perform the obligor's duty to the obligee

Figure 4 *Delegation*

**Delegator* retains duty to *obligee* until performance is rendered by delegatee.*

of the business, White assigns the rights in the existing contracts to Rosen and delegates to him the performance of those contracts, including the duty to deliver the sofa to Coombs. Here, White is the *delegator* and Rosen is the *delegatee.* White is appointing Rosen to carry out his duties to the obligee, Coombs. Figure 3 summarizes the key terms regarding delegation.

In contrast to an assignment of a right, which extinguishes the assignor's right and transfers it to the assignee, the delegation of a *duty* does *not* extinguish the duty owed by the delegator. This point is made in *Rosenberg v. Son, Inc.,* which follows this discussion. The delegator remains liable to the obligee unless the obligee agrees to substitute the delegatee's promise for that of the delegator (this is called a *novation* and will be discussed in greater detail later in this chapter). This makes sense because, if it were possible for a person to escape his duties under a contract by merely delegating them to another, any party to a contract could avoid liability by delegating duties to an insolvent acquaintance. The significance of an effective delegation is that performance by the delegatee will discharge the delegator. In addition, if the duty is a delegable one, the obligee cannot insist on performance by the delegator; he must accept the performance of the delegatee. The relationship between the parties in a delegation is shown in Figure 4.

Delegable Duties

A duty that can be performed fully by a number of different persons is delegable. Not all duties are delegable, however. The grounds for finding a duty to be nondelegable resemble closely the grounds for finding a right to be nonassignable. A duty is nondelegable if delegation would violate public policy or if the original contract between the parties forbids delegation. In addition, both section 2–210(1) of the UCC and section 318(2) of the *Restatement (Second) of Contracts* take the position that a party to a contract may delegate his duty to perform to another person unless the parties have agreed to the contrary or unless the other party has a *substantial interest* in having the original obligor perform the acts required by the contract. The key factor used in determining whether the obligee has such a substantial interest is the degree to which performance is dependent on the individual traits, skill, or judgment of the person who owes the duty to perform. For example, if Jansen hires Skelton, an artist, to paint her portrait, Skelton could not effectively delegate the duty to paint the portrait to another artist. Similarly, an employee could not normally delegate her duties under an employment contract to some third person, because employment contracts are made with the understanding that the person the employer hires will perform the

work. The situation in which a person hires a general contractor to perform specific work is distinguishable, however. In that situation, the person hiring the general contractor would normally understand that at least part of the work would be delegated to subcontractors.

Language Creating a Delegation

No special, formal language is necessary to create an effective delegation of duties. In fact, since parties frequently confuse the terms *assignment* and *delegation,* one of the problems frequently presented to courts is determining whether the parties intended an assignment only or both an assignment and a delegation. Unless the agreement indicates a contrary intent, courts tend to interpret assignments as including a delegation of the assignor's duties. Both the UCC 2–210(4) and section 328 of the *Restatement (Second) of Contracts* provide that, unless the language or the circumstances indicate to the contrary, general language of assignment such as language indicating an assignment of "the contract" or of "all my rights under the contract" is to be interpreted as creating *both* an assignment and a delegation.

Assumption of Duties by Delegatee

A delegation gives the delegatee the right to perform the duties of the delegator. The mere fact that duties have been delegated does not always place legal responsibility on the delegatee to perform. The delegatee who fails to perform will not be liable to either the delegator or the obligee unless the delegatee has assumed the duty by expressly or impliedly undertaking the obligation to perform. However, both section 2–210(4) of the UCC and section 328 of the *Restatement (Second)* provide that an assignee's acceptance of an assignment is to be construed as a promise by him to perform the duties under the contract, unless the language of the assignment or the circumstances indicate to the contrary. Frequently, a term of the contract between the delegator and the delegatee provides that the delegatee assumes responsibility for performance. A common example of this is the assumption of an existing mortgage debt by a purchaser of real estate. Suppose Morgan buys a house from Friedman, agreeing to assume the outstanding mortgage on the property held by First Bank. By this assumption, Morgan undertakes personal liability to both Friedman and First Bank. If Morgan fails to make the mortgage payments, First Bank has a cause of action against Morgan personally. An assumption does *not* release the delegator from liability, however. Rather, it creates a situation in which both the delegator and the assuming delegatee owe duties to the obligee. If the assuming delegatee fails to pay, the delegator can be held liable. Thus, in the example described above, if Morgan fails to make mortgage payments and First Bank is unable to collect the debt from Morgan, Friedman would have secondary liability. Friedman, of course, would have an action against Morgan for breach of their contract.

Discharge of Delegator by Novation

As you have seen, the mere delegation of duties—even when the delegatee assumes those duties—does not release the delegator from his legal obligation to the obligee. A delegator can, however, be discharged from performance by **novation.**

A novation is a particular type of substituted contract in which the obligee agrees to discharge the original obligor and to substitute a new obligor in his place. The effects of a novation are that the original obligor has no further obligation under the contract and the obligee has the right to look to the new obligor for fulfillment of the contract. A novation requires more than the obligee's consent to having the delegatee perform the duties. In the example used above, the mere fact that First Bank accepted mortgage payments from Morgan would not create a novation. Rather, there must be some evidence that the obligee agrees to discharge the old obligor and substitute a new obligor. As you will see in the following *Rosenberg* case, this can be inferred from language of a contract or such other factors as the obligee's conduct or the surrounding circumstances.

Rosenberg v. Son, Inc. *491 N.W.2d 71 (Sup. Ct. N.D. 1992)*

In February 1980, Mary Pratt entered into a contract to buy a Dairy Queen restaurant located in Grand Forks's City Center Mall from Harold and Gladys Rosenberg. The terms of the contract for the franchise, inventory, and equipment were a purchase price totaling $62,000, a $10,000 down payment, and $52,000 due in quarterly payments at 10 percent interest over a 15-year period. The sales contract also contained a

provision denying the buyer a right of prepayment for the first five years of the contract. In October 1982, Pratt assigned her rights and delegated her duties under this contract to Son, Inc. The assignment between Pratt and Son contained a "Consent to Assignment" clause, which was signed by the Rosenbergs. It also contained a "save harmless" clause, in which Son promised to indemnify Pratt for any claims, demands, or actions that might result from Son's failure to perform the agreement. After this transaction, Pratt moved to Arizona and had no further knowledge of or involvement with the Dairy Queen business. Also following the assignment, the Dairy Queen was moved from the mall to a different location in Grand Forks.

Son assigned the contract to Merit Corporation in June 1984. This assignment did not include a consent clause, but the Rosenbergs knew of the assignment and apparently acquiesced in it. They accepted a large prepayment from Merit, reducing the principal balance to $25,000. After the assignment, Merit pledged the inventory and equipment of the Dairy Queen as collateral for a loan from Valley Bank and Trust. Payments from Merit to the Rosenbergs continued until June 1988, at which time the payments ceased, leaving an unpaid principal balance of $17,326.24 plus interest. The Rosenbergs attempted collection of the balance from Merit, but Merit filed bankruptcy. The business assets pledged as collateral for the loan from Valley Bank and Trust were repossessed. The Rosenbergs brought this action for collection of the outstanding debt against Son and Pratt. The trial court granted summary judgment in favor of Son and Pratt and against the Rosenbergs, and the Rosenbergs appealed.

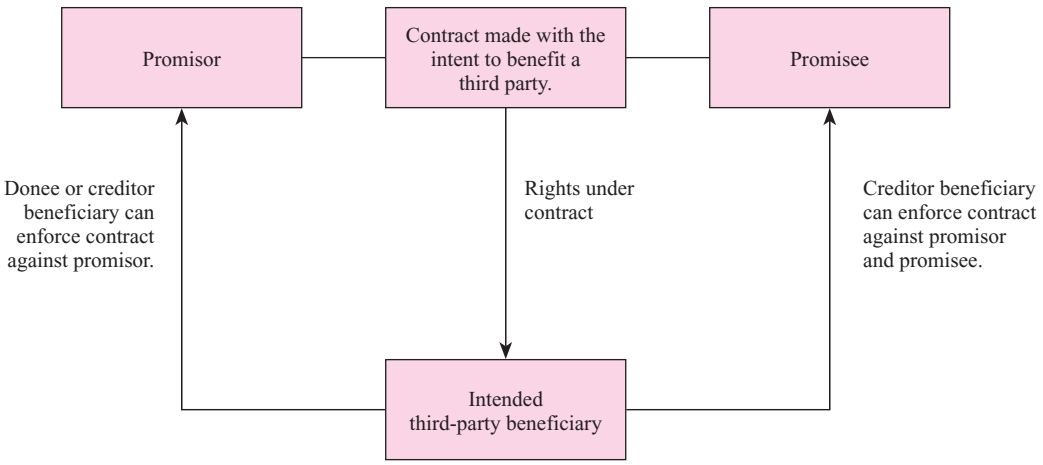
Erickstad, Chief Justice It is a well-established principle in the law of contracts that a contracting party cannot escape its liability on the contract by merely assigning its duties and rights under the contract to a third party. This rule of law applies to all categories of contracts, including contracts for the sale of goods, which is present in the facts of this case.

Thus, when Pratt entered into the "assignment agreement" with Son, a simple assignment alone was insufficient to release her from any further liability on the contract. It is not, however, a legal impossibility for a contracting party to rid itself of an obligation under a contract. It may seek the approval of the other original party for release, and substitute a new party in its place. In such an instance, the transaction is no longer called an assignment; instead, it is called a novation. If a novation occurs in this manner, it must be clear from the terms of the agreement that a novation is intended by all parties involved. Both original parties to the contract must intend and mutually assent to the discharge of the obligor from any further liability on the original contract.

It is evident from the express language of the assignment agreement between Pratt and Son that only an assignment was intended, not a novation. The agreement made no mention of discharging Pratt from any further liability on the contract. To the contrary, the latter part of the agreement contained an indemnity clause holding Pratt harmless in the event of a breach by Son. Thus, it is apparent that Pratt contemplated being held ultimately responsible for performance of the obligation. Furthermore, the agreement was between Pratt and Son; they were the parties signing the agreement, not the Rosenbergs. An agreement between Pratt and Son cannot unilaterally affect the Rosenbergs' rights under the contract. The Rosenbergs did sign a consent to the assignment at the bottom of the agreement. However, by merely consenting to the assignment the Rosenbergs did not consent to a discharge of the principal obligor—Pratt. Nothing in the language of the consent clause supports such an allegation. A creditor is free to consent to an assignment without releasing the original obligor. Thus, the express language of the agreement and intent of the parties at the time the assignment was made did not contemplate a novation by releasing Pratt and substituting Son in her stead.

The inquiry as to Pratt's liability does not end at this juncture. The trial court released Pratt from any liability on the contract due to the changes or alterations which took place following her assignment to Son. While it is true that Pratt cannot be forced to answer on the contract irrespective of events occurring subsequent to her assignment, it is also true that she cannot be exonerated for every type of alteration or change that may develop.

> The buyer can assign his right to the goods or land and can delegate performance of his duty to pay that price. But observe that he remains bound "as before"; the assignee and the seller cannot, by agreement or by waiver, make it the assignor's duty to pay a different price or on different conditions. If the seller is willing



to make such a change, he must trust to the assignee alone. 4 *Corbin on Contracts* section 866 at 458–59.

The trial court decided that any alteration in the underlying obligation resulted in a release of Pratt on the contract. It appears that not every type of alteration is sufficient to warrant discharge of the assignor. As suggested by Professor Corbin in the language highlighted above, the alteration must "prejudice the position of the assignor." 4 *Corbin on Contracts* section 866 at 459.

If the changes in the obligation prejudicially affect the assignor, a new agreement has been formed between the assignee and the other original contracting party. More concisely, a novation has occurred and the assignor's original obligation has been discharged. Although we have previously determined that the terms of the assignment agreement between Pratt and Son did not contemplate a novation, there are additional methods of making a novation besides doing so in the express terms of an agreement. The question of whether or not there has been a novation is a question of fact. The trial court should not have granted summary judgment. There are questions of fact remaining as to the result of the changes in the contract. Thus, we reverse the summary judgment and remand for further proceedings.

Reversed and remanded in favor of the Rosenbergs.

Figure 5 *Third-Party Beneficiaries*

Third-Party Beneficiaries

There are many situations in which the performance of a contract would constitute some benefit to a person who was not a party to the contract. Despite the fact that a nonparty may expect to derive advantage from the performance of a contract, the general rule is that no one but the parties to a contract or their assignees can enforce it. In some situations, however, parties contract for the purpose of benefiting some third person. In such cases, the benefit to the third person is an essential part of the contract, not just an incidental result of a contract that was really designed to benefit the parties. Where the parties to a contract *intended* to benefit a third party, courts will give effect to their intent and permit the third party to enforce the contract. Such third parties are called **third-party beneficiaries.** Figure 5 illustrates the relationship of third-party beneficiaries to the contracting parties.

Intended Beneficiaries versus Incidental Beneficiaries

For a third person (other than an assignee) to have the right to enforce a contract, she must be able to establish that the contract was made with the intent to benefit her.

A few courts have required that both parties must have intended to benefit the third party. Most courts, however, have found it to be sufficient if the person to whom the promise to perform was made (the *promisee*) intended to benefit the third party. You will see an example of this in the following *Cherry v. Crow* case. In ascertaining intent to benefit the third party, a court will look at the language used by the parties and all the surrounding circumstances. One factor that is frequently important in determining intent to benefit is whether the party making the promise to perform (the *promisor*) was to render performance directly to the third party. For example, if Allison contracts with Jones Florist to deliver flowers to Kirsch, the fact that performance was to be rendered to Kirsch would be good evidence that the parties intended to benefit Kirsch. This factor is not conclusive, however. There are some cases in which intent to benefit a third party has been found even though performance was to be rendered to the promisee rather than to the third party. Intended beneficiaries are often classified as either *creditor* or *donee beneficiaries.* These classifications are discussed in greater detail below.

A third party who is unable to establish that the contract was made with the intent to benefit her is called an *incidental beneficiary.* A third party is classified as an incidental beneficiary when the benefit derived by that third party was merely an unintended by-product of a contract that was created for the benefit of those who were parties to it. Incidental beneficiaries acquire no rights under a contract. For example, Hutton contracts with Long Construction Company to build a valuable structure on his land. The performance of the contract would constitute a benefit to Keller, Hutton's next-door neighbor, by increasing the value of Keller's land. The contract between Hutton and Long was made for the purpose of benefiting themselves, however. Any advantage derived by Keller is purely incidental to their primary purpose. Thus, Keller could not sue and recover damages if either Hutton or Long breaches the contract.

As a general rule, members of the public are held to be incidental beneficiaries of contracts entered into by their municipalities or other governmental units in the regular course of carrying on governmental functions. A member of the public cannot recover a judgment in a suit against a promisor of such a contract, even though all taxpayers will suffer some injury from nonperformance. A different result may be reached, however, if a party contracting with a governmental unit agrees to reimburse members of the public for damages or if the party undertakes to perform some duty for individual members of the public.

Creditor Beneficiaries If the promisor's performance is intended to satisfy a legal duty that the promisee owes to a third party, the third party is a **creditor beneficiary.** The creditor beneficiary has rights against both the promisee (because of the original obligation) and the promisor. For example, Smith buys a car on credit from Jones Auto Sales. Smith later sells the car to Carmichael, who agrees to pay the balance due on the car to Jones Auto Sales. (Note that Smith is delegating his duty to pay to Carmichael, and Carmichael is assuming the personal obligation to do so.) In this case, Jones Auto Sales is a creditor beneficiary of the contract between Smith and Carmichael. It has rights against both Carmichael and Smith if Carmichael does not perform.

Donee Beneficiaries If the promisee's primary purpose in contracting is to make a gift of the agreed-on performance to a third party, that third party is classified as a *donee beneficiary.* If the contract is breached, the donee beneficiary will have a cause of action against the promisor, but not against the promisee (donor). For example, Miller contracts with Perpetual Life Insurance Company, agreeing to pay premiums in return for which Perpetual agrees to pay $100,000 to Miller's husband when Miller dies. Miller's husband is a donee beneficiary and can bring suit and recover judgment against Perpetual if Miller dies and Perpetual does not pay.

Cherry v. Crow *845 F. Supp. 1520 (M. D. Fla. 1994)*

The Sheriff of Polk County employed Prison Health Services (PHS) to provide total health care services for inmates and detainees housed within the Polk County Jail and the Polk County Jail Annex. On December 22, 1922, Polk County Sheriff's Department (PCSD) employees booked Eddie Ronald Cherry into the jail to begin serving a 30-day sentence for driving under the influence of alcohol. At the time of his incarceration, Cherry informed the PHS medical staff that he consumed approximately one case of beer daily. Over the next two days, Cherry repeatedly requested medical attention for symptoms related to alcohol withdrawal.

Cherry's wife notified a PCSD employee by phone on December 25 that her husband had a history of delirium tremens ("DTs") during alcohol withdrawal and that he was in immediate need of a doctor's attention. About two hours later, the inmates sharing Cherry's cell asked PCSD employees to check on Cherry's condition. The employees found Cherry in his cell, hallucinating and shaking violently. The PCSD employees notified PHS Nurse Gill, who examined Cherry and reported his symptoms of DTs to PHS Nurse Smith. Nurse Smith requested that Cherry be sent to the infirmary for observation.

At the infirmary, a PCSD employee shackled Cherry, who was still hallucinating, to his bed, with the knowledge and acquiescence of Nurse Smith. The next morning, while still suffering from hallucinations associated with DTs, Cherry either walked or jumped off the end of his bed. Because the leg shackle did not allow his feet to advance beyond the top of the bed, Cherry landed head first on the concrete floor. Cherry died five days later as a result of his injuries. Cherry's wife filed suit on behalf of Cherry's estate against PHS, Nurse Smith, and the PCSD for breach of contract and other claims. The defendants moved to dismiss the suit and strike the complaint. The court's opinion follows.

Kovachevich, District Judge Defendants assert that no cause of action exists against PHS for breach of contract, in that Cherry was not an intended third party beneficiary of the employment contract between PHS and PCSD. The Health Services Agreement between PCSD and PHS states:

> WHEREAS, the SHERIFF has the statutory and constitutional duty and responsibility to provide necessary and proper medical, psychiatric, dental and other health care services for persons remanded to his care, custody and control within the county correctional system. . . . WHEREAS, the SHERIFF is desirous of contracting with PHS and PHS is desirous of contracting with the SHERIFF to provide total health care services *for the inmates/detainees* . . . housed within the county correctional system facilities described above . . .

The right of a third-party beneficiary to bring suit under contract as outlined in *American Surety Co. of New York v. Smith* remains clear guidance today. The Supreme Court recognized:

> Where, therefore it is manifest from the nature or terms of a contract that the formal parties thereto intended its provisions to be for the benefit of a third party, as well as for the benefit of the formal parties themselves, the benefit to such third parties being the direct and primary object of the contract, or amongst such objects, such third party may maintain an action on the contract even though he is a stranger to the consideration.

The Court finds that PCSD and PHS intended, as a result of their agreement, to benefit persons situated such as Cherry. Accordingly, defendants' motion to dismiss is denied.

Motion denied in favor of Cherry.

Vesting of Beneficiary's Rights

Another possible threat to the interests of the third-party beneficiary is that the promisor and the promisee might modify or discharge their contract so as to extinguish or alter the beneficiary's rights. For example, Gates, who owes $500 to Sorenson, enters into a contract with Connor whereby Connor agrees to pay the $500 to Sorenson. What happens if, before Sorenson is paid, Connor pays the money to Gates and Gates accepts it or Connor and Gates otherwise modify the contract? Courts have held that there is a point at which the rights of the beneficiary vest—that is, the beneficiary's rights cannot be lost by modification or discharge. A modification or discharge that occurs after the beneficiary's rights have vested cannot be asserted as a defense to a suit brought by the beneficiary. The exact time at which the beneficiary's rights vest differs from jurisdiction to jurisdiction. Some courts have held that vesting occurs when the contract is formed, while others hold that vesting does not occur until the beneficiary learns of the contract and consents to it or does some act in reliance on the promise.

The contracting parties' ability to vary the rights of the third-party beneficiary can also be affected by the terms of their agreement. A provision of the contract between the promisor and the promisee stating that the duty to the beneficiary cannot be modified would be effective to prevent modification. Likewise, a contract

provision in which the parties specifically reserved the right to change beneficiaries or modify the duty to the beneficiary would be enforced. For example, provisions reserving the right to change beneficiaries are very common in insurance contracts.

Ethical and Public Policy Concerns

1. You learned that an assignor's rights are extinguished as soon as he assigns them. Should a delegator's duties be extinguished by his delegation of them?

2. Why does public policy favor allowing third parties to enforce contracts made for their benefit? Should incidental beneficiaries have a right to enforce contracts? Why or why not?

Problems and Problem Cases

1. In 1974, Spiklevitz loaned money to Vincent and Geraldine Heron. The Herons signed a promissory note agreeing to repay the debt by January 15, 1975. In April 1980, the Herons sold their business to Markmil Corp. At that time, $3,510 of their debt to Spiklevitz remained unpaid. Markmil executed an "Assumption of Obligation," which stated that as part of the purchase price of the Herons' business, Markmil agreed to pay the list of debts written on an attached sheet of paper labeled "Exhibit A." Spiklevitz was listed as a creditor in Exhibit A for the balance owed to him. In June 1981, Spiklevitz sued Markmil to recover the amount remaining due on the note. Is Markmil obligated to pay?

2. Douglass was a highly trained servicer of hardness-testing machinery, who was employed by Page-Wilson. In August and April 1983, Douglass signed two employment agreements governing the terms and conditions of his employment with Page-Wilson. The first agreement prohibited Douglass, while he was working for Page-Wilson and for one year after the termination of his employment, from using, to Page-Wilson's detriment, any of its customer list or other intellectual property acquired from his job there. The second agreement, which applied to the same time period, prohibited Douglass from accepting employment from or serving as a consultant to any business that was in competition with Page-Wilson. In April 1987, Canrad Corporation purchased all assets and contractual rights of Page-Wilson, including Douglass's two employment contracts. Special Products Manufacturing, a wholly owned subsidiary of Canrad, assumed plant operations. Douglas worked for Special Products until his resignation in February 1988. Shortly after that time, Special Products filed suit against Douglass, alleging that Douglass had affixed his name and home telephone number to the machines he serviced, so that the ensuing maintenance calls would reach him personally. It also alleged that, following his resignation, Douglass established a competing business and actively solicited Special Products' clientele. Douglass claims that Special Products did not have the right to enforce the agreements not to compete. Is Douglass correct?

3. In May 1978, John and Judith Brooks contracted with Hayes to construct a Windsor Home (a packaged, predesigned, and precut home) on a lot that they owned. Hayes was primarily a real estate broker but also sold Windsor Homes. The construction contract required Hayes to "provide all necessary labor and materials and perform all work of every nature whatsoever to be done in the erection of a residence for" the Brookses. The Brookses and Hayes contemplated that Hayes would hire subcontractors to perform much of the home construction work and Hayes, who had no personal experience in construction, would not control the method of construction. During the construction, the Brookses requested that a "heatilator" be installed as an extra to increase the efficiency of the fireplace. Marr, the mason hired by Hayes to do the fireplace and other masonry work, installed the heatilator. The Brookses moved into the house in the winter of 1978. When they used the fireplace, they smelled smoke in areas of the house remote from the fireplace. Both the Brookses and Hayes hired several masons to inspect the fireplace system, but none of the masons was able to discover the cause of the problem. The Brookses used the fireplace with some frequency until November 1980, when a fire in the home caused structural damage around the fireplace and smoke damage to the house and the couple's personal property. It was discovered that Marr's negligence in installing the heatilator had caused the fire. The Brookses sued both Marr and Hayes. The case against Marr was dismissed because Marr went bankrupt. Is Hayes liable to the Brookses?

4. Andreson went to Monahan Beaches Jewelry Center to shop for a diamond engagement ring for his fiancée, Warren. Andreson told Monahan that the ring was to be given to Warren. Andreson and a salesperson discussed several aspects of the size, type, and style of the

ring, and the salesperson made suggestions about what would be likely to be pleasing to Warren. Shortly before Christmas, Monahan sold Andreson a ring, which Monahan represented as being a diamond ring, for $3,974.25. Andreson gave the ring to Warren for Christmas as a symbol of their engagement. Warren soon noticed a small chip in the stone under the setting. She returned the ring to Monahan shortly after the Christmas holidays and Monahan agreed to replace the stone with one of equal or greater value at no charge to Warren. After making this agreement, Warren took the ring to another jeweler to have it appraised. There she learned for the first time that the alleged diamond that Monahan sold to Andreson was in fact nothing more than cut glass or cubic zirconia. Warren filed suit against Monahan on several counts, including breach of contract. Could Warren win a breach of contract suit against Monahan, even though it was her fiancé who purchased the ring?

5. Jones paid Sullivan, the chief of the Addison Police Department, $6,400 in exchange for Sullivan's cooperation in allowing Jones and others to bring marijuana by airplane into the Addison airport without police intervention. Instead of performing the requested service, Sullivan arrested Jones. The $6,400 was turned over to the district attorney's office and was introduced into evidence in the subsequent trial in which Jones was tried for and convicted of bribery. After his conviction, Jones assigned his alleged claim to the $6,400 to Melvyn Bruder. Based on the assignment, Bruder brought suit against the state of Texas to obtain possession of the money. Will he be successful?

6. In February 1979, Bernie and Glennie Epland purchased a hospital indemnity insurance policy with a nursing home rider from Lumbermen's Mutual Casualty Company. The Eplands paid annual premiums for this policy from 1979 until 1987. In July 1987, Reserve Life Insurance Company acquired the Eplands' policy, along with many others, from Lumbermen's. In October 1987, Reserve notified the Eplands that it had acquired their Lumbermen's policy. The notice stated that Reserve would "guarantee that all of the protection and benefits provided by your [Lumbermen's] policy will remain intact." The notice included a "new Reserve Life policy number" and an ID card with Reserve's name on it. A "Certificate of Assumption" was included "to be attached to and form a part of the [Lumbermen's] policy." The "Certificate of Assumption"stated:

> [Reserve] hereby assumes as its own, direct obligation for the following numbered Policy . . . heretofore issued or assumed by [Lumbermen's], as provided in an Agreement executed by said companies. [Reserve] continues said Policy in force as a Policy of [Reserve]. All premiums now or hereafter due on said Policy are payable to [Reserve]. Subsequent premium payments made to [Reserve] shall release [Lumbermen's] from any and all liability under the Policy.

From 1987 to 1990, the Eplands made premium payments to Reserve. The Eplands never received a new or updated policy from Reserve. On May 7, 1990, Reserve and National entered into an "Insurance Acquisition Agreement." The agreement stated:

> On the Assumption Date, [National] will be the successor to [Reserve] under the Policies. As of the Assumption Date, the Policies will be direct obligations of [National], and [Reserve] will have no further obligations to the policyholders under the Policies. As of the Assumption Date, [National] will substitute itself in the place of [Reserve] as if named in the place of [Reserve]. The Insureds * * * under the Policies will thereafter disregard [Reserve] as a party to the policies and treat [National] as if it had been originally obligated under the Policies. * * * After the Assumption Date, the Insureds will have the right to file claims arising under the Policies directly with [National].

After National acquired Reserve's policies, it informed the Eplands that their policy with Reserve had been "reinsured and assumed" by National, effective July 31, 1990. The National notice stated that "there are no changes in your policy" and included an ID card with National's name on it. National also included a "Notice and Certification of Assumption" which stated that

> pursuant to the terms of an Assumption Reinsurance Agreement, [the policy] issued by [Reserve] [was] assumptively reinsured by [National]. All of the terms and conditions of the Policy remain unchanged, except that [National] is now the insurer. All premium payments, notices, claims, or actions on the Policy will hereafter be made directly to [National] as though it had issued the Policy originally.

The Eplands' first premium was due to National on February 20, 1991. The Eplands never received a new or updated policy from National. After receiving the notice, the Eplands contacted National to get the name of an insurance agent because the Eplands were dissatisfied with their insurance coverage and the financial weakness of National. The Eplands were concerned about home nursing care, which the policy did not cover, and National's $500 increase of their premiums. National gave the Eplands the name of insurance agent William Meade of Meade Insurance Agency Associated Inc. In August 1990, the Eplands asked Meade to

find new insurance coverage that included home nursing care. The Eplands sent Meade money for premium payments to be included with the new insurance applications. They applied for insurance with several companies but were denied because of their age. During this time, Meade told the Eplands he could use the premium proceeds "to keep [the policy with National] in force while . . . attempting to obtain the type of coverage they were looking for." Meade stated, however, that the Eplands told him they were not going to renew the policy with National. On March 28, 1991, National notified the Eplands that the policy had lapsed. Bernie Epland died April 21, 1991. Glennie Epland lived in a nursing home from October 1992, until her death on October 14, 1994. She accumulated more than $38,950 in nursing home costs. No insurance company accepted responsibility for the nursing home coverage. Mrs. Epland and her son sued Lumbermen's, Reserve, and National claiming that their policy with any or all of them was in force to cover the nursing home costs. The Eplands argued that the transfers of their policy from Lumbermen's to Reserve to National were novations that required their independent consent in order to be effective. The Eplands claimed they never consented to these transfers. The insurance companies argued that the agreements between Lumbermen's, Reserve, and National were all delegations of duties or assignments of rights and not novations requiring the Eplands' consent. Were they novations?

7. Francis brought suit against Piper and his law firm, alleging Piper committed legal malpractice when he drafted a series of wills for Heine, Francis's brother. Heine, who had never married, had no children; Francis was his sole sibling and closest living relative. In 1987, after Heine suffered a stroke, the district court appointed a conservator for him. In 1990, Heine met Resick, a waitress at a deli he frequented. In December 1991, Resick referred Heine, who did not have a will, to Piper. Piper prepared three successive wills for Heine. The first left all of Heine's estate to a church. The second left $20,000 to Resick and the remainder of Heine's estate to a church. The third left all of Heine's estate to Resick. If Heine had not executed a will, Francis would have been Heine's sole heir under the intestacy laws. After Heine's death, Resick submitted the third will to probate. Francis challenged the will, and eventually reached a settlement with Resick that provided Resick would receive $80,000 and Francis the remainder of Heine's estate. Francis then brought this action against Piper, alleging Piper was negligent because Heine was under a conservatorship, lacked testamentary capacity, and was suffering from the effects of undue influence. Piper moved for summary judgment, asserting Francis could not bring a legal malpractice action against him. Under applicable state law, an attorney is liable to a nonclient third party only if the client's sole purpose in retaining an attorney is to provide a benefit directly to the third party. Was Francis such an intended beneficiary?

8. Harred Fuel owns property in Allentown. Harred leased the property to the Attiyehs, who own and operate the Acorn Hotel. The lease provided that the Attiyehs would maintain liability insurance on the property. Upon the signing of the lease, the Attiyehs assumed operation of the Acorn Hotel and its public bar. Ten years later, Bryan entered the Acorn Hotel, where he was shot and injured. He and his wife sued the Attiyehs, the Acorn Hotel, and Harred Fuel. One of their claims was that Bryan was a third-party beneficiary to the liability insurance clause in the lease. Is this a good argument?

9. Lewis, a dairyman, was a member of the Mountain Empire Dairymen's Association (MEDA). MEDA was the exclusive agent for marketing Lewis's dairy products. Lewis borrowed $194,850 from Mid-States Sales and secured the loan with certain of his cattle and their products. Lewis assigned his right to receive some of the proceeds from the sale of his milk each month to Mid-States, and notified MEDA of the assignment. After paying Mid-States for over a year under this agreement, MEDA received notice from Lewis that he was canceling his membership in MEDA. MEDA notified Mid-States and other assignees of Lewis that Lewis was canceling his membership, and asked them to sign a release of assignment. The other assignees signed the releases, but Mid-States did not. MEDA made the last payout on the milk it sold for Lewis directly to Lewis rather than to Mid-States. After Lewis filed for bankruptcy, Mid-States sued MEDA for the payment. Will it prevail?

10.  *Video Case.* See "Roof Repairs." Roofer contracted with Driscoll Industries to do a roofing job. The job was too big for Roofer to handle, so he delegated his duties under the contract to another company that claimed to do that kind of roofing work all the time. However, the other company did such a poor job that it damaged the heating and cooling systems of the building. Is Roofer liable to Driscoll for the damage done by its delegatee?

Performance and Remedies

Chapter Outline

I. Conditions
- A. *Nature of Conditions*
- B. *Types of Conditions*
  - 1. *Classifications of Conditions Based on Their Effect on the Duty to Perform*
  - 2. *Classifications of Conditions Based on the Way in Which They Were Created*
- C. *Creation of Express Conditions*
  - 1. *Example of Express Condition: Satisfaction of Third Parties*
  - 2. *Example of Express Condition: Personal Satisfaction*
- D. *Excuse of Conditions*

II. Performance of Contracts
- A. *Level of Performance Expected of the Promisor*
  - 1. *Strict Performance Standard*
  - 2. *Substantial Performance Standard*
- B. *Good Faith Performance*

III. Breach of Contract
- A. *Effect of Material Breach*
  - 1. *Effect of Nonmaterial Breach*
- B. *Determining the Materiality of the Breach*
  - 1. *Time for Performance*
  - 2. *Consequences of Late Performance*
- C. *Anticipatory Repudiation*
- D. *Recovery by a Party Who has Committed Material Breach*

IV. Excuses for Nonperformance
- A. *Impossibility*
  - 1. *Illness or Death of Promisor*
  - 2. *Supervening Illegality*
  - 3. *Destruction of the Subject Matter of the Contract*
- B. *Frustration of Venture*
- C. *Commercial Impracticability*

V. Other Grounds for Discharge
- A. *Discharge by Mutual Agreement*
- B. *Discharge by Accord and Satisfaction*
- C. *Discharge by Waiver*
- D. *Discharge by Alteration*
- E. *Discharge by Statute of Limitations*
- F. *Discharge by Decree of Bankruptcy*

VI. Remedies for Breach of Contract
- A. *Types of Contract Remedies*
- B. *Interests Protected by Contract Remedies*
- C. *Legal Remedies (Damages)*
  - 1. *Limitations on Recovery of Damages in Contract Cases*
  - 2. *Compensatory Damages*
  - 3. *Alternative Measures of Damages*
  - 4. *Nominal Damages*
  - 5. *Liquidated Damages*
  - 6. *Punitive Damages*
- D. *Equitable Remedies*
  - 1. *Specific Performance*
  - 2. *Injunction*
- E. *Restitution*

Contracts are generally formed before either of the parties renders any actual performance to the other. A person may be content to bargain for and receive the other person's promise at the formation stage of a contract because this permits him to plan for the future. Ultimately, however, all parties bargain for the *performance* of the promises that have been made to them.

In most contracts, each party carries out his promise and is *discharged* (released from all of his obligations under the contract) when his performance is complete. Sometimes, however, a party fails to perform or performs

in an unsatisfactory manner. In such cases, courts are often called on to determine the respective rights and duties of the parties. This frequently involves deciding such questions as whether performance was due, whether the contract was breached, to what extent it was breached, and whether performance was excused. This task is made more difficult by the fact that contracts often fail to specify the consequences of nonperformance or defective performance. In deciding questions involving the performance of contracts and remedies for breach of contract, courts draw on a variety of legal principles that attempt to do justice, prevent forfeiture and unjust enrichment, and effectuate the parties' presumed intent.

This chapter presents an overview of the legal concepts that are used to resolve disputes arising in the performance stage of contracting. It describes how courts determine whether performance is due and what kind of performance is due, the consequences of contract breach, and the excuses for a party's failure to perform. It also includes a discussion of the remedies that are used when a court determines that a contract has been breached.

Conditions

Nature of Conditions

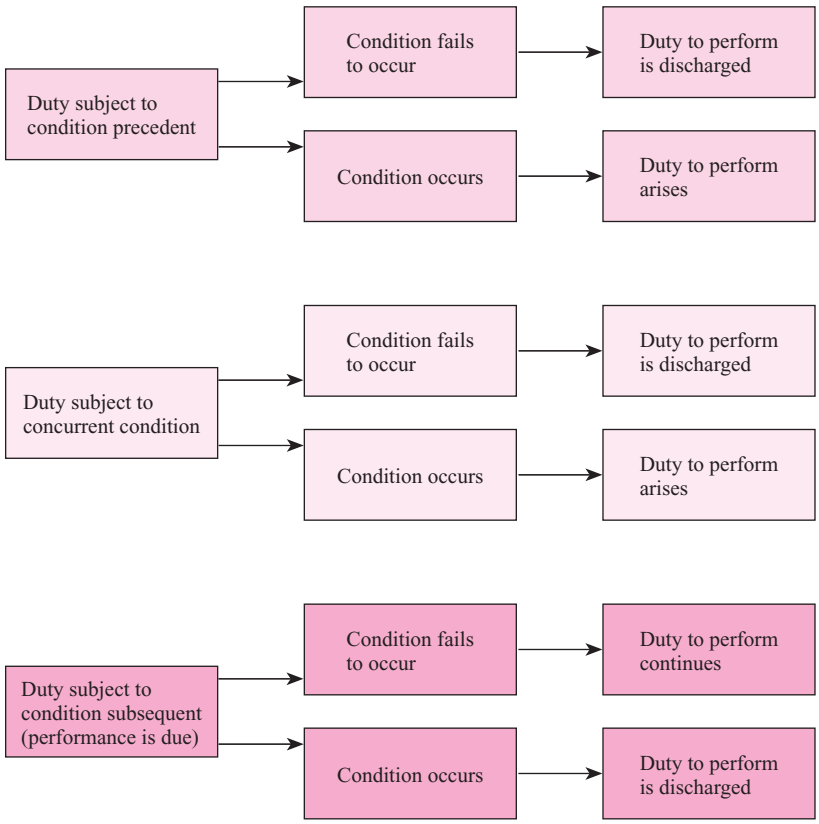
One issue that frequently arises in the performance stage of a contract is whether a party has the duty to perform. Some duties are *unconditional* or *absolute*—that is, the duty to perform does not depend on the occurrence of any further event other than the passage of time. For example, if Root promises to pay Downing $100, Root's duty is unconditional. When a party's duty is unconditional, he has the duty to perform unless his performance is excused. (The various excuses for nonperformance will be discussed later in this chapter.) When a duty is unconditional, the promisor's failure to perform constitutes a *breach of contract.*

In many situations, however, a promisor's duty to perform depends on the occurrence of some event that is called a **condition.** A condition is an uncertain, future event that affects a party's duty to perform. For example, if Melman contracts to buy Lance's house on condition that First Bank approve Melman's application for a mortgage loan by January 10, Melman's duty to buy Lance's house is *conditioned* on the bank's approving his loan application by January 10. When a promisor's duty is conditional, his duty to perform is affected by the occurrence of the condition. In this case, if the condition does not occur, Melman has no duty to buy the house. His failure to buy it because of the nonoccurrence of the condition will *not* constitute a breach of contract. Rather, he is discharged from further obligation under the contract.

Almost any event can be a condition. Some conditions are beyond the control of either party, such as when Morehead promises to buy Pratt's business if the prime rate drops by a specified amount. Others are within the control of a party, such as when one party's performance of a duty under the contract is a condition of the other party's duty to perform.

Types of Conditions

There are two ways of classifying conditions. One way of classifying conditions focuses on the effect of the condition on the duty to perform. The other way focuses on the way in which the condition is created.



Classifications of Conditions Based on Their Effect on the Duty to Perform As Figure 1 illustrates, conditions vary in their effects on the duty to perform.

1. *Condition precedent.* A condition precedent is a future, uncertain event that creates the duty to perform. If the condition does not occur, performance does not become due. If the condition does occur, the duty to perform arises. In the following *Barrington Management* case, you will see an example of a condition precedent.

2. *Concurrent condition.* When the contract calls for the parties to perform at the same time, each person's performance is conditioned on the performance or tender of performance (offer of performance) by the other. Such conditions are called **concurrent conditions.** For example, if Martin promises to buy Johnson's car for $5,000, the parties' respective duties to perform are subject to a concurrent condition. Martin does not have the duty to perform unless Johnson tenders his performance, and vice versa.

3. *Condition subsequent.* A **condition subsequent** is a future, uncertain event that **discharges** the duty to perform. When a duty is subject to a condition subsequent, the duty to perform arises but is discharged if the future, uncertain event occurs. For example, Wilkinson and Jones agree that Wilkinson will begin paying Jones $2,000 per month, but that if XYZ Corporation dissolves, Wilkinson's obligation to pay will cease. In

Figure 1 *Effect of Conditions*

this case, Wilkinson's duty to pay is subject to being discharged by a condition subsequent. The major significance of the distinction between conditions precedent and conditions subsequent is that the plaintiff bears the burden of proving the occurrence of a condition precedent, while the defendant bears the burden of proving the occurrence of a condition subsequent.

Barrington Management Co., Inc. v. Paul E. Draper Family Ltd. Partnership

695 N.E.2d 135 (Ct. App. Ind. 1998)

On December 8, 1993, Barrington Management and Paul Draper entered into a written Purchase Agreement under which Draper agreed to sell a parcel of 68 acres of commercial real estate to Barrington. Draper retained ownership of a 12-acre parcel located next to the land that was being sold. Barrington made a $1,000 earnest money deposit. The Purchase Agreement provided that "time is of the essence of this Contract." An Addendum to the Contract, which included additional terms of the Purchase Agreement, also noted that "time is important." The closing of the sale was to take place within thirty days after all conditions had been satisfied or waived. The addendum also provided as follows:

4. It is a condition ("Condition # 1") of this offer that all utilities, including but not limited to sanitary sewer . . . , city water, electric, gas, storm drainage, are available to the Phase I property line and are in an adequate supply and

capacity to serve the development of the entire 68 acres . . . Purchaser shall have one hundred eighty (180) days from date of this Purchase Agreement to satisfy or waive this condition.

15. In the event any of the above listed conditions or other condition of this Purchase Agreement are not timely satisfied, Purchaser shall have the right to either waive said conditions and close or to notify Seller of the objections and terminate this Agreement. In the event Purchaser elects to terminate this Agreement, Purchaser shall be entitled to a full and immediate return of the earnest money tendered herewith, and in the event such cancellation notice is paid to the Seller, the Purchase Agreement shall terminate and be considered null and void.

Barrington experienced delays in satisfying "Condition # 1" of the Purchase Agreement; that is, in obtaining the land use and drainage approvals necessary to develop the property. Accordingly, the parties entered into a written agreement which extended the period in which Barrington could satisfy or waive this condition until December 31, 1995. However, Barrington remained unable to obtain the necessary approvals and requested an additional extension from Draper. Draper refused to grant another extension.

On January 25, 1996, Barrington demanded that Draper close the transaction. Draper refused to close, however, and brought suit asking that the Purchase Agreement be rescinded to enable Draper to sell the real estate to another purchaser. The trial court granted Draper's petition for rescission and held that Draper could also retain Barrington's $1,000 earnest money deposit. Barrington appealed.

Bailey, Judge When a written agreement to convey real property makes time of the essence, fixes a termination date, and there is no conduct giving rise to estoppel or waiver, the agreement becomes legally defunct upon the stated termination date if performance is not tendered. Where time is of the essence of the contract and a time for performance is specified, strict performance at that point of time is necessary unless waived.

A condition precedent is either a condition which must be performed before the agreement of the parties becomes binding, or a condition which must be fulfilled before the duty to perform an existing contract arises. A condition subsequent is a condition which, if performed or violated (as the case may be), defeats the contract. In *Dvorak v. Christ,* the contract to sell real estate was subject to a condition precedent: that the purchaser obtain a mortgage loan in the amount of $451,600. The contract was also subject to a condition subsequent: the period of time in which the purchaser had to obtain the financing expired on a date certain. After the time period expired, the purchaser attempted to waive the condition precedent and demanded that the seller close the transaction. We held that where the purchaser had not communicated, either orally or in writing, an express waiver of the condition precedent before the expiration of the contract, the contract terminated and the seller was not required to close. The same result obtains in the present case. The Purchase Agreement provided a condition subsequent by allotting Barrington 180 days to satisfy or waive the condition precedent regarding the procurement of land use and drainage approvals. Obviously, the condition subsequent/expiration date was for Draper's benefit because it required Barrington either to proceed with closing or allow Draper to place the real estate back on the market to sell to another purchaser. In other words, the condition subsequent/expiration date prohibited Barrington from keeping the sale of Draper's property in limbo for an indefinite, extended period of time.

The Purchase Agreement provided that time was of the essence. The addendum reiterated that time was important. Draper specifically agreed in writing to one extension of the condition subsequent/expiration date but refused to agree to an additional extension. Thus, Draper did not waive the condition subsequent/expiration date. Barrington neither satisfied the condition precedent nor communicated its waiver until after the condition subsequent/expiration date. As time was of the essence, the Purchase Agreement became legally defunct after December 31, 1995. Thus, the trial court did not abuse its equitable discretion in granting Seller's petition for rescission. A party seeking rescission of a contract must return the defaulting party to the status quo which necessitates a return of any money paid under the contract. Accordingly, Draper [must] return Barrington's $1,000 earnest money deposit.

Granting of petition for rescission affirmed in favor of Draper but reversed in favor of Barrington as to the return of earnest money.

Classifications of Conditions Based on the Way in Which They Were Created Another way of classifying conditions is to focus on the means by which the condition was created.

1. *Express condition.* An **express condition** is a condition that is specified in the language of the parties' contract. For example, if Grant promises to sell his regular season football tickets to Carson on condition that Indiana University wins the Rose Bowl, Indiana's winning the Rose Bowl is an express condition of Grant's duty to sell the tickets.

When the contract expressly provides that a party's duty is subject to a condition, courts take it very seriously. When a duty is subject to an express condition, that condition must be strictly complied with in order to give rise to the duty to perform.

2. *Implied-in-fact condition.* An **implied-in-fact condition** is one that is not specifically stated by the parties but is *implied* by the nature of the parties' promises. For example, if Summers promises to unload cargo from Knight's ship, the ship's arrival in port would be an implied-in-fact condition of Summer's duty to unload the cargo.

3. *Constructive condition.* **Constructive conditions** (also known as *implied-in-law conditions*) are conditions that are imposed by law rather than by the agreement of the parties. The law imposes constructive conditions to do justice between the parties. In contracts in which one of the parties is expected to perform before the other, the law normally infers that that performance is a constructive condition of the other party's duty to perform. For example, if Thomas promises to build a house for King, and the parties' understanding is that King will pay Thomas an agreed-on price when the house is built, King's duty to pay is subject to the constructive condition that Thomas complete the house. Without such a constructive condition, a person who did not receive the performance promised him would still have to render his own performance.

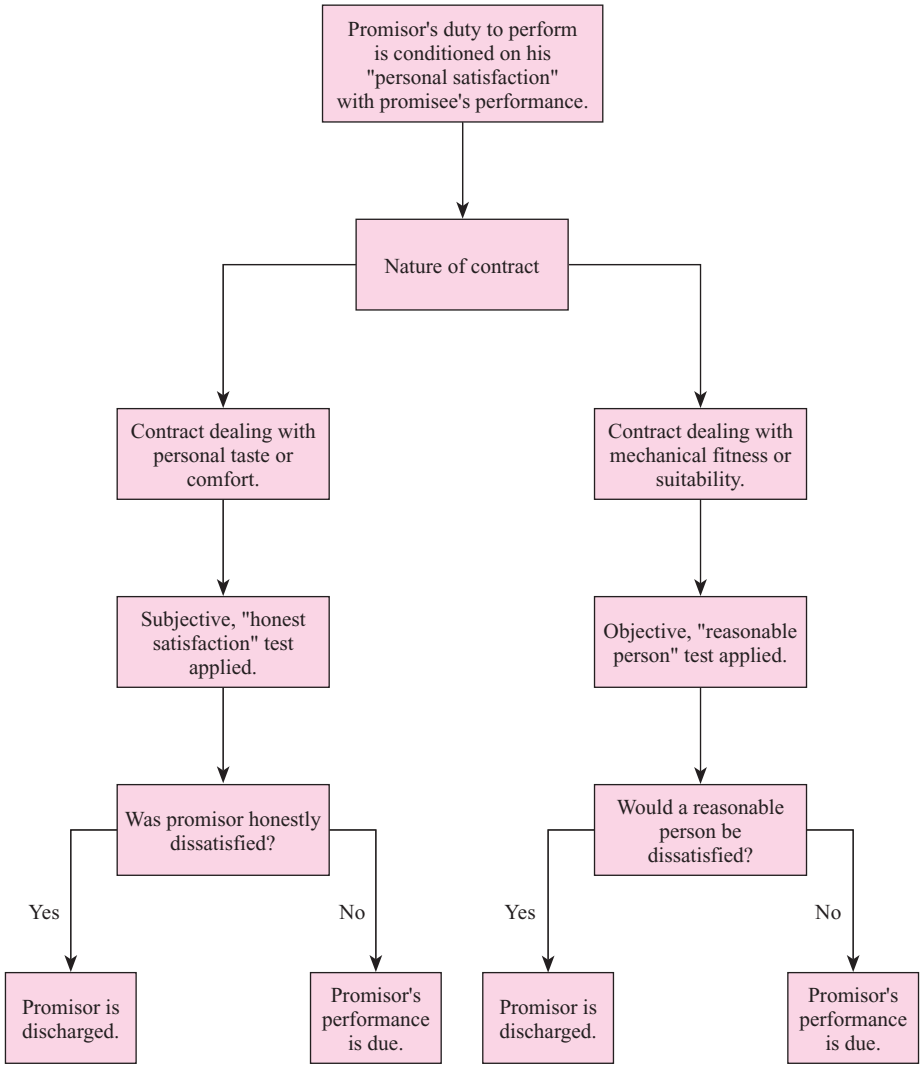
Creation of Express Conditions

Although no particular language is required to create an express condition, the conditional nature of promises is usually indicated by such words as *provided that, subject to, on condition that, if, when, while, after,* and *as soon as.* The process of determining the meaning of conditions is not a mechanical one. Courts look at the parties' overall intent as indicated in language of the entire contract.

The following discussion explores two common types of express conditions.

Example of Express Condition: Satisfaction of Third Parties It is common for building and construction contracts to provide that the property owner's duty to pay is conditioned on the builder's production of certificates to be issued by a specific architect or engineer. These certificates indicate the satisfaction of the architect or engineer with the builder's work. They are often issued at each stage of completion, after the architect or engineer has inspected the work done.

The standard usually used to determine whether the condition has occurred is a *good faith* standard. As a general rule, if the architect or engineer is acting honestly and has some good faith reason for withholding a certificate, the builder cannot recover payments due. In legal terms, the condition that will create the owner's duty to pay has not occurred.



If the builder can prove that the withholding of the certificate was fraudulent or done in bad faith (as a result of collusion with the owner, for example), the court may order that payment be made despite the absence of the certificate. In addition, production of the certificate may be excused by the death, insanity, or incapacitating illness of the named architect or engineer.

Example of Express Condition: Personal Satisfaction Contracts sometimes provide that a promisee's duty to perform is conditioned on his personal satisfaction with the promisee's performance. For example, Moore commissions Allen to paint a portrait of Moore's wife, but the contract provides that Moore's duty to pay is conditioned on his personal satisfaction with the portrait.

How does a court determine whether the condition of personal satisfaction has occurred? If the court applies a standard of actual, subjective satisfaction and Moore asserts that he is not satisfied, it would be very difficult for Allen to prove that the condition has occurred. If, on the other hand, the court applies an objective, "reasonable person" standard of satisfaction, Allen stands a better chance of proving that the condition has occurred.

In determining which standard of satisfaction to apply, courts distinguish between cases in which the performance bargained for involves personal taste and comfort and cases that involve mechanical fitness or

Figure 2 *Duty to Perform Conditioned on "Personal Satisfaction" (a form of express condition precedent)*

suitability for a particular purpose. If personal taste and comfort are involved, as they would be in the hypothetical case described above, a promisor who is honestly dissatisfied with the promisee's performance has the right to reject the performance without being liable to the promisee. If, however, the performance involves mechanical fitness or suitability, the court will apply a reasonable person test. If the court finds that a reasonable person would be satisfied with the performance, the condition of personal satisfaction has been met and the promisor must accept the performance and pay the contract price. For example, Kitt Manufacturing Company hires Pace to design a conveyor belt system for use in its factory, conditioning its duty to pay on its personal satisfaction with the system. A court would be likely to find that this is a contract involving mechanical fitness and suitability for which an objective test of satisfaction could be used. These standards are illustrated in Figure 2. Because the "honest satisfaction" standard involves a danger of forfeiture by the performing party, courts prefer the objective test of satisfaction when objective evaluation is feasible.

Excuse of Conditions

In most situations involving conditional duties, the promisor does not have the duty to perform unless and until the condition occurs. There are, however, a variety of situations in which the occurrence of a condition will be excused. In such a case, the person whose duty is conditional will have to perform even though the condition has not occurred.

One ground for excusing a condition is that the occurrence of the condition has been *prevented* or *hindered* by the party who is benefited by the condition. For example, Connor hires Ingle to construct a garage on Connor's land, but when Ingle attempts to begin construction, Connor refuses to allow Ingle access to the land. In this case, Connor's duty to pay would normally be subject to a constructive condition that Ingle build the garage. However, since Connor prevented the occurrence of the condition, the condition will be excused, and Ingle can sue Connor for damages for breach of contract even though the condition has not occurred.

Other grounds for excuse of a condition include **waiver** and **estoppel.** When a person whose duty is conditional voluntarily gives up his right to the occurrence of the condition (waiver), the condition will be excused. Suppose that Buchman contracts to sell his car to Fox on condition that Fox pay him $2,000 by June 14. Fox fails to pay on June 14, but, when he tenders payment on June 20, Buchman accepts and cashes the check without reservation. Buchman has thereby *waived* the condition of payment by June 14.

When a person whose duty is conditional leads the other party to rely on his noninsistence on the condition, the condition will be excused because of estoppel. For example, McDonald agrees to sell his business to Brown on condition that Brown provide a credit report and personal financial statement by July 17. On July 5, McDonald tells Brown that he can have until the end of the month to provide the necessary documents. Relying on McDonald's assurances, Brown does not provide the credit report and financial statement until July 29. In this case, McDonald would be *estopped* (precluded) from claiming that the condition did not occur.

A condition may also be excused when performance of the act that constitutes the condition becomes *impossible.* For example, if a building contract provides that the owner's duty to pay is conditioned on the production of a certificate from a named architect, the condition would be excused if the named architect died or became incapacitated before issuing the certificate.

Performance of Contracts

When a promisor has performed his duties under a contract, he is discharged. Because his performance constitutes the occurrence of a constructive condition, the other party's duty to perform is also triggered, and the person who has performed has the right to receive the other party's performance. In determining whether a promisor is discharged by performance and whether the constructive condition of his performance has been fulfilled, courts must consider the standard of performance expected of him.

Level of Performance Expected of the Promisor

In some situations, no deviation from the promisor's promised performance is tolerated; in others, less-than-perfect performance will be sufficient to discharge the promisor and give him the right to recover under the contract.

Strict performance standard. A **strict performance** standard is a standard of performance that requires virtually perfect compliance with the contract terms. Remember that when a party's duty is subject to an express condition, that condition must be strictly and completely complied with in order to give rise to a duty of performance. Thus, when a promisor's performance is an express condition of the promisee's duty to perform, that performance must strictly and completely comply with the contract in order to give rise to the other promisee's duty to perform. For example, if McMillan agrees to pay Jester $500 for painting his house "on condition that" Jester finish the job no later than June 1, 1994, a standard of strict or complete performance would be applied to Jester's performance. If Jester does not finish the job by June 1, his breach will have several consequences. First, since the condition precedent to McMillan's duty to pay has not occurred, McMillan does not have a duty to pay the contract price. Second, since it is now too late for the condition to occur, McMillan is discharged. Third, McMillan can sue Jester for breach of contract. The law's commitment to freedom of contract justifies such results in cases in which the parties have expressly bargained for strict compliance with the terms of the contract.

The strict performance standard is also applied to contractual obligations that can be performed either

Concept Review

Substantial Performance

Definition	Application	Effects	Limitation
Performance that falls short of complete performance in some minor respect but that does not deprive the other party of a material part of the consideration for which he bargained	Applies to performance that (1) is *not* an express condition of the other party's duty to perform and (2) is difficult to do perfectly	Triggers other party's duty to perform; requires other party to pay the contract price minus any damages caused by defects in performance	Breach cannot have been willful

exactly or to a high degree of perfection. Examples of this type of obligation include promises to pay money, deliver deeds, and, generally, promises to deliver goods. A promisor who performs such promises completely and in strict compliance with the contract is entitled to receive the entire contract price. The promisor whose performance deviates from perfection is not entitled to receive the other party's performance if he does not render perfect performance within an appropriate time. He may, however, be able to recover the value of any benefits that he has conferred on the other party under a theory of quasi-contract.

Substantial performance standard. A **substantial performance** standard is a somewhat lower standard of performance that is applied to duties that are difficult to perform without some deviation from perfection *if* performance of those duties is *not* an express condition. A common example of this type of obligation is a promise to erect a building. Other examples include promises to construct roads, to cultivate crops, and to render some types of personal or professional services. Substantial performance is performance that falls short of complete performance in minor respects. It does not apply when a contracting party has been deprived of a material part of the consideration he bargained for. When a substantial performance standard is applied, the promisor who has substantially performed is discharged. His substantial performance triggers the other party's duty to pay the contract price less any damages resulting from the defects in his performance. The obvious purpose behind the doctrine of substantial performance is to prevent forfeiture by a promisor who has given the injured party most of what he bargained for. Substantial performance is generally held to be inapplicable to a situation in which the breach of contract has been *willful,* however.

Good Faith Performance

One of the most significant trends in modern contract law is that courts and legislatures have created a duty to perform in good faith in an expanding range of contracts.[1] The Uniform Commercial Code specifically imposes a duty of good faith in every contract within the scope of any of the articles of the Code [1–203]. A growing number of courts have applied the duty to use good faith in transactions between lenders and their customers as well as insurance contracts, employment contracts, and contracts for the sale of real property.

This obligation to carry out a contract in good faith is usually called the **implied covenant of good faith and fair dealing.** It is a broad and flexible duty that is imposed by law rather than by the agreement of the parties. It is generally taken to mean that neither party to a contract will do anything to prevent the other from obtaining the benefits that he has the right to expect from the parties' agreement or their contractual relationship. The law's purpose in imposing such a term in contracts is to prevent abuses of power and encourage ethical behavior. The *Dalton* case, which follows, presents an example of the application of the implied covenant of good faith and fair dealing.

Breach of the implied covenant of good faith gives rise to a contract remedy. In some states, it can also constitute a tort, depending on the severity of the breach. A

[1]This trend is discussed in Chapter 9.

tort action for breach of the implied covenant of good faith is more likely to be recognized in situations in which a contract involves a special relationship of dependency and trust between the parties or where the public interest is adversely affected by a contracting party's practices. Numerous cases exist, for example, in which insurance companies' bad faith refusal to settle claims or perform duties to their insured and lenders' failure to exercise good faith in their dealings with their customers have led to large damage verdicts. Likewise, in states in which the implied duty of good faith has been held applicable to contracts of employment, employers who discharge employees in bad faith have been held liable for damages.[2]

[2]This is discussed in Chapter 50.

Dalton v. Educational Testing Service *663 N.E.2d 289 (N.Y. Ct. App. 1995)*

In May 1991, Brian Dalton took the SAT, which was administered by ETS, at Holy Cross High School in Queens where Dalton was a junior. Six months later, in November, he took the examination a second time, this time at John Bowne High School in Queens, and his combined score increased 410 points. Because Dalton's score increased by more than 350 points, his test results fell within the ETS category of "Large Score Differences" or "discrepant scores." In accordance with ETS policy, members of the ETS Test Security Office therefore reviewed his May and November answer sheets. Upon a finding of different handwriting, the answer sheets were submitted to a document examiner, who opined that they were completed by separate individuals. Dalton's case was then forwarded to the Board of Review, which preliminarily decided that substantial evidence supported canceling Dalton's November score.

Upon registering for the November SAT, Dalton had signed a statement agreeing to the conditions in the New York state edition of the Registration Bulletin, which reserved to ETS "the right to cancel any test score . . . if ETS believes that there is reason to question the score's validity."

As specified in the Registration Bulletin, ETS apprised Dalton of its preliminary decision to cancel his November SAT score in a letter from Eppinger, a Test Security Specialist. Noting the handwriting disparity and substantial difference between his May and November test results, Eppinger informed Dalton that "the evidence suggests that someone else may have completed your answer sheet and that the questioned scores may be invalid." She advised him that he could supply "any additional information that will help explain" this, or, alternatively, elect one of the other options that were specified in the ETS Registration Bulletin.

Dalton opted to present additional information to the Board of Review, including the following: verification that he was suffering from mononucleosis during the May examination, diagnostic test results from a preparatory course he took prior to the November examination (he had taken no similar course prior to the May SAT) that were consistent with his performance on that test; a statement from an ETS proctor who remembered Dalton's presence during the November examination, and statements from two students—one previously unacquainted with Dalton—that he had been in the classroom during that test. Dalton further provided ETS with a report from a document examiner obtained by his family who concluded that Dalton was the author of both sets of answer sheets.

ETS, after several Board of Review meetings, submitted the various handwriting exemplars to a second document examiner who, like its first, opined that the May and November tests were not completed by the same individual. As a result, ETS continued to question the validity of Dalton's November score. Dalton's father then filed an action against ETS. The trial court found that ETS failed "to make even rudimentary efforts to evaluate or investigate the information" furnished by Dalton, and that it had breached its duty of good faith, thereby breaching its contract. As a remedy for the breach, the trial court ordered ETS to release the November SAT score. The Appellate Division affirmed this ruling, and ETS appealed.

Kaye, Chief Judge By accepting ETS's standardized form agreement when he registered for the November SAT, Dalton entered into a contract with ETS. Implicit in all contracts is a covenant of good faith and fair dealing in the course of contract performance. Encompassed within the implied obligation of each

promisor to exercise good faith are "any promises which a reasonable person in the position of the promisee would be justified in understanding were included." This embraces a pledge that neither party shall do anything which will have the effect of destroying or injuring the right of the other party to receive the fruits of the contract. Where the contract contemplates the exercise of discretion, this pledge includes a promise not to act arbitrarily or irrationally in exercising that discretion. The duty of good faith and fair dealing, however, is not without limits, and no obligation can be implied that would be inconsistent with other terms of the contractual relationship.

ETS was under no duty to initiate an external investigation into a questioned score. The contract, however, did require that ETS consider any relevant material that Dalton supplied to the Board of Review. The Registration Bulletin explicitly afforded Dalton the option to provide ETS with relevant information upon notification that ETS questioned the legitimacy of his test score. Having elected to offer this option, it was certainly reasonable to expect that ETS would, at the very least, consider any relevant material submitted in reaching its final decision. Dalton triggered this implied-in-law obligation on the part of ETS by exercising his contractual option to provide ETS with information.

Where ETS refuses to exercise its discretion by declining even to consider relevant material submitted by the test-taker, the legal question is whether this refusal breached an express or implied term of the contract. Here, the courts below agreed that ETS did not consider the relevant information furnished by Dalton. By doing so, ETS failed to comply in good faith with its own test security procedures, thereby breaching its contract with Dalton.

The court modified the remedy ordered at trial by requiring ETS to give good-faith consideration of Dalton's materials rather than requiring ETS to release the scores. Otherwise the court affirmed in favor of Dalton.

Breach of Contract

When a person's performance is due, any failure to perform that is not excused is a breach of contract. Not all breaches of contract are of equal seriousness, however. Some are relatively minor deviations, whereas others are so extreme that they deprive the promisee of the essence of what he bargained for. The legal consequences of a given breach depend on the extent of the breach.

At a minimum, a party's breach of contract gives the nonbreaching party the right to sue and recover for any damages caused by that breach. When the breach is serious enough to be called a **material breach,** further legal consequences ensue.

Effect of Material Breach

A material breach occurs when the promisor's performance fails to reach the level of performance that the promisee is justified in expecting under the circumstances. In a situation in which the promisor's performance is judged by a substantial performance standard, saying that he failed to give substantial performance is the same thing as saying that he materially breached the contract.

The party who is injured by a material breach has the right to withhold his own performance. He is discharged from further obligations under the contract and may cancel it. He also has the right to sue for damages for total breach of contract.

Effect of Nonmaterial Breach By contrast, when the breach is not serious enough to be material, the nonbreaching party may sue for only those damages caused by the particular breach. In addition, he does not have the right to cancel the contract, although a nonmaterial breach can give him the right to suspend his performance until the breach is remedied. Once the breach is remedied, however, the nonbreaching party must go ahead and render his performance, minus any damages caused by the breach.

Determining the Materiality of the Breach

The standard for determining materiality is a flexible one that takes into account the facts of each individual case. The key question is whether the breach deprives the injured party of the benefits that he reasonably expected. For example, Norman, who is running for mayor, orders campaign literature from Prompt Press, to be delivered in September. Prompt Press's failure to deliver the literature until after the

election in November deprives Norman of the essence of what he bargained for and would be considered a material breach.

In determining materiality, courts take into account the extent to which the breaching party will suffer forfeiture if the breach is held to be material. They also consider the magnitude (amount) of the breach and the willfulness or good faith exercised by the breaching party. The timing of the breach can also be important. A breach that occurs early on in the parties' relationship is more likely to be viewed as material than is one that occurs after an extended period of performance. Courts also consider the extent to which the injured party can be adequately compensated by the payment of damages. The *Famiglietta* case, which follows, contains an analysis of whether a breach is material.

Famiglietta v. Ivie-Miller Enterprises, Inc. *966 P.2d 777 (Ct. App. N.M. 1998)*

On January 29, 1993, Michael and Frances Famiglietta entered into a contract to sell a Mi Ranchito Mexican Food Products distributorship to Ivie-Miller Enterprises for $50,000 plus interest. Ivie-Miller agreed to pay the Famigliettas an initial payment of $10,000 and the remaining $40,000 plus interest in three installment payments. The contract also provided that the agreement was contingent upon Famiglietta's obligation to remain with the distributorship for a period of five years in a sales capacity. About eighteen months after the parties entered into the contract, Famiglietta left the distributorship. Ivie-Miller's president, Bob Meek, testified that during his initial discussions concerning the purchase of the distributorship he told Famiglietta that he would only consider purchasing the business if Famiglietta remained with the business because Famiglietta had been in the business for many years, was good at the job, and knew the market. Meek also testified that it was important for Famiglietta to remain with the distributorship because he knew the store personnel, was an aggressive salesman, and was able to maintain display space in the stores. Famiglietta was aware of his obligation to stay with the distributorship for five years and recognized that at the time the parties entered into the contract his agreement to remain with the distributorship for five years was a material part of the contract.

Famiglietta told Ivie-Miller that he was leaving the distributorship in June of 1994. Famiglietta later testified that Meek said he understood and did not raise any objections. Meek, however, later testified that he informed Famiglietta that Famiglietta would be breaking the contract if he left and that he informed Famiglietta at least three times that Famiglietta would be breaking the contract by leaving the business. Less than six months later in December of 1994, Ivie-Miller's attorney sent a letter to Famiglietta informing him that his departure from the business was a breach of the contract and that the contract should be rescinded. Ivie-Miller's letter also offered to return the business to Famiglietta within 60 days. Famiglietta received this letter but elected not to return to the business.

Ivie-Miller refused to pay any of the remaining installment payments due under the contract and promissory note, and the Famigliettas ultimately filed suit against it to recover the remaining amounts due. The trial court ruled that Famiglietta's breach was not material, and that Ivie-Miller was liable for the remaining amounts due under the contract and promissory note. Ivie-Miller appealed.

Flores, Judge If Famiglietta committed a material breach of the contract which remained uncured, Ivie-Miller was not required to perform its remaining obligations under the contract. The district court found that Famiglietta's breach did not cause Ivie-Miller any direct monetary damage. However, the existence or extent of monetary damage caused by a breach of contract is not necessarily dispositive of the question. The challenge presented by this case is to determine what constitutes a material breach of contract. Some courts have described a material breach as the "failure to do something that is so fundamental to the contract that the failure to perform that obligation defeats an essential purpose of the contract." *Horton v. Horton.* Put another way, a material breach "is one which touches the fundamental purpose of the contract and defeats the object of the parties in entering into the contract." *Ervin Constr. Co. v. Van.* Other courts have noted that a material breach occurs when there is a breach of "'an essential and inducing

feature of the contract.'" *Lease-It, Inc. v. Massachusetts Port Auth.*

The Restatement also provides a useful framework for analyzing whether a breach of contract is material. In particular, the Restatement sets forth five factors that courts should consider when deciding the materiality of a breach of contract. See *Restatement* section 241. One factor to examine is the extent to which the injured party will be deprived of the benefit he or she reasonably expected to receive from the contract. Another factor considers the extent to which the breaching party will suffer forfeiture if the breach is deemed material. Courts should also explore whether the injured party can be adequately compensated in damages for the breach. A fourth factor focuses on the likelihood that the breaching party will cure his or her failure to perform under the contract. And the fifth factor evaluates whether the breaching party's conduct comported with the standards of good faith and fair dealing.

1. Ivie-Miller was deprived of a significant benefit it reasonably expected to receive under the contract.

Ivie-Miller argues that the contract unambiguously demonstrates that Famiglietta's promise to work for the distributorship for five years was a key reason why Ivie-Miller decided to buy the distributorship. Indeed, the contract language agreed to by the parties plainly states that the purchase of the distributorship was contingent upon Famiglietta's fulfillment of the five-year term. Under those circumstances, there is little doubt that Ivie-Miller was deprived of a significant benefit that it reasonably expected to receive under the contract.

2. The Famigliettas' forfeiture under the contract can be minimized.

As we discussed above, if a breach is found to be material, the nonbreaching party is entitled to rescind the contract and is relieved of its obligations under the contract. However, as a practical matter, if the nonbreaching party is relieved of all of its obligations under the contract, the breaching party may suffer the forfeiture of benefits it should otherwise receive under the contract in exchange for obligations he has already fulfilled. The Restatement recognizes this dilemma by encouraging courts to look at the extent to which the breaching party will suffer forfeiture if the breach is deemed material. In this case, however, Famiglietta's forfeiture is minimized by the fact that Ivie-Miller has already paid about half of the amount contemplated under the contract. Moreover, Ivie-Miller attempted to return the distributorship to the Famigliettas but they refused. Under those circumstances, we do not believe that the Famigliettas' forfeiture is so extensive that the breach should not be considered material.

3. Damages will not compensate Ivie-Miller for Famiglietta's breach.

It would be difficult if not impossible to compensate Ivie-Miller with damages for Famiglietta's breach. Ivie-Miller could not demonstrate actual monetary damages that were caused by Famiglietta's early departure from the distributorship. However, the contract itself demonstrates that Ivie-Miller was not solely concerned with the extent to which Famiglietta could maintain or increase the profitability of the distributorship. For example, Ivie-Miller agreed in the contract that even if business declined to the point that the distributorship would be forced to lay off personnel, Famiglietta would be the last one to remain with the business. This supports Ivie-Miller's claim that it relied on Famiglietta to work with the distributorship because of his experience and contacts with local markets irrespective of whether Famiglietta was able to increase or maintain the distributorship's profitability. In short, the trust and reliance that Ivie-Miller placed in Famiglietta's agreement to work with the business for five years is difficult if not impossible to value and compensate with monetary damages.

4/5. Famiglietta refused to cure his intentional breach.

The last two factors to consider under the Restatement approach also demonstrate the materiality of Famiglietta's breach. The record leaves no doubt that although Famiglietta acknowledged that he did not fulfill his five-year obligation under the contract, he had no intention of curing that breach. Famiglietta ignored Ivie-Miller's warnings not to leave the business and refused Ivie-Miller's request to return to the business. And despite the Famigliettas' unwillingness to take the business

back, the Famiglíettas nevertheless attempted to prevent Ivie-Miller from selling the distributorship. Faced with Famiglietta's willful breach of the contract and his steadfast unwillingness to cure that breach, in combination with the other factors discussed above, we are compelled to hold that the breach was material. Moreover, Famiglietta's failure to return to the business after receiving the December letter also established Famiglietta's intentional, uncured breach of the contract. In short, the record in this case leads to one conclusion: Famiglietta's breach was material.

Reversed in favor of Ivie-Miller.

Time for Performance A party's failure to perform on time is a breach of contract that may be serious enough to constitute a material breach, or it may be relatively trivial under the circumstances.

At the outset, it is necessary to determine when performance is due. Some contracts specifically state the time for performance, which makes it easy to determine the time for performance. In some contracts that do not specifically state the time for performance, such a time can be inferred from the circumstances surrounding the contract. In the Norman and Prompt Press campaign literature example, the circumstances surrounding the contract probably would have implied that the time for performance was some time before the election, even if the parties had not specified the time for performance. In still other contracts, no time for performance is either stated or implied. When no time for performance is stated or implied, performance must be completed within a "reasonable time," as judged by the circumstances of each case.

Consequences of Late Performance After a court determines when performance was due, it must determine the consequences of late performance. In some contracts, the parties expressly state that "time is of the essence" or that timely performance is "vital." This means that each party's timely performance by a specific date is an express condition of the other party's duty to perform. Thus, in a contract that contains a time is of the essence provision, any delay by either party normally constitutes a material breach. Sometimes, courts will imply such a term even when the language of the contract does not state that time is of the essence. A court would be likely to do this if late performance is of little or no value to the promisee. For example, Schrader contracts with the local newspaper to run an advertisement for Christmas trees from December 15, 2000, to December 24, 2000, but the newspaper does not run the ad until December 26, 2000. In this case, the time for performance is an essential part of the contract and the newspaper has committed a material breach.

When a contract does not contain language indicating that time is of the essence and a court determines that the time for performance is not a particularly important part of the contract, the promisee must accept late performance rendered within a reasonable time after performance was due. The promisee is then entitled to deduct or set off from the contract price any losses caused by the delay. Late performance is not a material breach in such cases unless it is unreasonably late.

Anticipatory Repudiation

One type of breach of contract occurs when the promisor indicates before the time for his performance that he is unwilling or unable to carry out the contract. This is called **anticipatory repudiation** or **anticipatory breach.** Anticipatory breach generally constitutes a material breach of contract that discharges the promisee from all further obligation under the contract.

In determining what constitutes anticipatory repudiation, courts look for some unequivocal statement or voluntary act that clearly indicates that the promisor cannot or will not perform his duties under the contract. This may take the form of an express statement by the promisor. The promisor's intent not to perform could also be implied from actions of the promisor such as selling to a third party the property that the promisor was obligated to sell to the promisee. For example, if Ross, who is obligated to convey real estate to Davis, conveys the property to some third person instead, Ross has repudiated the contract.

When anticipatory repudiation occurs, the promisee is faced with several choices. For example, Marsh and Davis enter a contract in which Davis agrees to deliver a quantity of bricks to Marsh on September 1, 2000, and Marsh agrees to pay Davis a sum of money in two installments. The agreement specifies that Marsh will pay 50 percent of the purchase price on July 15, 2000, and

Concept Review

Time for Performance

Contract Language	Time for Performance	Consequences of Late Performance
"Time is of the essence" or similar language	The time stated in the contract	Material breach
Specific time is stated in or implied by the contract and later performance would have little or no value	The time stated in or implied by the contract	Material breach
Specific time is stated in or implied by the contract, but the time for performance is a relatively unimportant part of the contract.	The time stated in or implied by the contract	Not a material breach unless performance is unreasonably late
No time for performance is stated in or implied by the contract	Within a reasonable time	Not material breach unless performance is unreasonably late

50 percent of the purchase price within 30 days after delivery. On July 1, 2000, Davis writes Marsh and unequivocally states that he will not deliver the bricks. Must Marsh go ahead and send the payment that is due on July 15? Must he wait until September 1 to bring suit for total breach of contract? The answer to both questions is no.

When anticipatory repudiation occurs, the nonbreaching party is justified in withholding his own performance and suing for damages right away, without waiting for the time for performance to arrive.[3] If he can show that he was ready, willing, and able to perform his part of the contract, he can recover damages for total breach of the contract. The nonbreaching party is not obligated to do this, however. If he chooses, he may wait until the time for performance in case the other party changes his mind and decides to perform.

Recovery by a Party Who Has Committed Material Breach

A party who has materially breached the contract (that is, has not substantially performed) does not have the right to recover the contract price. If a promisor who has given some performance to the promisee cannot recover under the contract, however, the promisor will face forfeiture and the promisee will have obtained an unearned gain. There are two possible avenues for a party who has committed material breach to obtain some compensation for the performance he has conferred on the nonbreaching party.

1. *Quasi-contract.* A party who has materially breached a contract might recover the reasonable value of any benefits he has conferred on the promisee by bringing an action under quasi-contract.[4] This would enable him to obtain compensation for the value of any performance he has given that has benefited the nonbreaching party. Some courts take the position that a person in material breach should not be able to recover for benefits he has conferred, however.

2. *Partial performance of a divisible contract.* Some contracts are divisible; that is, each party's performance can be divided in two or more parts and each part is exchanged for some corresponding consideration from the other party. For example, if Johnson agrees to mow Peterson's lawn for $20 and clean Peterson's gutters for $50, the contract is divisible. When a promisor performs one part of the contract but materially breaches another part, he can recover at the contract price for the part that

[3]Uniform Commercial Code rules regarding anticipatory repudiation in contracts for the sale of goods are discussed in Chapter 21.

[4]Quasi-contract is discussed in Chapter 9. It involves the use of the remedy of restitution, which is discussed later in this chapter.

he did perform. For example, if Johnson breached his duty to clean the gutters but fully performed his obligation to mow the lawn, he could recover at the contract price for the lawn-mowing part of the contract.

Excuses for Nonperformance

Although nonperformance of a duty that has become due will ordinarily constitute a breach of contract, there are some situations in which nonperformance is excused because of factors that arise after the formation of the contract. When this occurs, the person whose performance is made impossible or impracticable by these factors is discharged from further obligation under the contract. The following discussion concerns the most common grounds for excuse of nonperformance.

Impossibility

When performance of a contractual duty becomes impossible after the formation of the contract, the duty will be discharged on grounds of **impossibility.** This does not mean that a person can be discharged merely because he has contracted to do something that he is simply unable to do or that causes him hardship or difficulty. Impossibility in the legal sense of the word means "it cannot be done by anyone" rather than "I cannot do it." Thus, promisors who find that they have agreed to perform duties that are beyond their capabilities or that turn out to be unprofitable or burdensome are generally not excused from performance of their duties. Impossibility will provide an excuse for nonperformance, however, when some unexpected event arises after the formation of the contract and renders performance objectively impossible. The event that causes the impossibility need not have been entirely unforeseeable. Normally, however, the event will be one that the parties would not have reasonably thought of as a real possibility that would affect performance.

There are a variety of situations in which a person's duty to perform may be discharged on grounds of impossibility. The three most common situations involve illness or death of the promisor, supervening illegality, and destruction of the subject matter of the contract.

Illness or Death of Promisor Incapacitating illness or death of the promisor excuses nonperformance when the promisor has contracted to perform personal services. For example, if Pauling, a college professor who has a contract with State University to teach for an academic year, dies before the completion of the contract, her estate will not be liable for breach of contract. The promisor's death or illness does not, however, excuse the nonperformance of duties that can be delegated to another, such as the duty to deliver goods, pay money, or convey real estate. For example, if Odell had contracted to convey real estate to Ruskin and died before the closing date, Ruskin could enforce the contract against Odell's estate.

Supervening Illegality If a statute or governmental regulation enacted after the creation of a contract makes performance of a party's duties illegal, the promisor is excused from performing. Statutes or regulations that merely make performance more difficult or less profitable do not, however, excuse nonperformance.

Destruction of the Subject Matter of the Contract If something that is essential to the promisor's performance is destroyed after the formation of the contract through no fault of the promisor, the promisor is excused from performing. For example, Woolridge contracts to sell his car to Rivkin. If an explosion destroys the car after the contract has been formed but before Woolridge has made delivery, Woolridge's nonperformance will be excused. The destruction of nonessential items that the promisor intended to use in performing does not excuse nonperformance if substitutes are available, even though securing them makes performance more difficult or less profitable. Suppose that Ace Construction Company had planned to use a particular piece of machinery in fulfilling a contract to build a building for Worldwide Widgets Company. If the piece of machinery is destroyed but substitutes are available, destruction of the machinery before the contract is performed would *not* give Ace an excuse for failing to perform.

Frustration of Venture

Closely associated with impossibility is the doctrine of **frustration of venture** (also known as **commercial frustration** or **frustration of purpose**). This doctrine provides an excuse for nonperformance when events that occur after the formation of the contract would deprive the promisor of the benefit of return performance. Although courts often include frustration cases within

the general terminology of impossibility, frustration can be distinguished from impossibility and impracticability by the fact that the promisor in a frustration case is not necessarily prevented from performing. Rather, in frustration cases, the promisor is excused because the return performance by the other party has become worthless to him. For example, Boyd signs a contract for a one-year membership in an Eden Exercise Salon, for which he agrees to pay $50 per month. One week after signing the contract, Boyd is involved in a serious automobile accident and suffers injuries that cause him to be bedridden for a year. In such a case, the automobile accident and Boyd's resulting injuries did not prevent him from performing his duties under the contract (paying money each month), but this unexpected event does deprive Boyd of the benefit of receiving Eden's return performance. In such a case, a court might excuse Boyd's performance on the ground of frustration of venture.

Commercial Impracticability

Section 2–615 of the Uniform Commercial Code has extended the scope of the common law doctrine of impossibility to cases in which unforeseen developments make performance by the promisor highly impracticable, unreasonably expensive, or of little value to the promisee. Rather than using a standard of impossibility, then, the Code uses the more relaxed standard of **impracticability.** Despite the less stringent standard applied, cases actually excusing nonperformance on grounds of impracticability are relatively rare. To be successful in claiming excuse based on impracticability, a promisor must be able to establish that the event that makes performance impracticable occurred without his fault and that the contract was made with the basic assumption that this event would not occur. This basically means that the event was beyond the scope of the risks that the parties contemplated at the time of contracting and that the promisor did not expressly or impliedly assume the risk that the event would occur.

Case law and official comments to UCC section 2–615 indicate that neither increased cost nor collapse of a market for particular goods is sufficient to excuse nonperformance, because those are the types of business risks that every promisor assumes. However, drastic price increases or severe shortages of goods resulting from unforeseen circumstances such as wars and crop failures can give rise to impracticability.

If the event causing impracticability affects only a part of the seller's capacity to perform, the seller must allocate production and deliveries among customers in a "fair and reasonable" manner and must notify them of any delay or any limited allocation of the goods. You can read more about commercial impracticability in Chapter 21, Performance of Sales Contracts.

Other Grounds for Discharge

Earlier in this chapter, you learned about several situations in which a party's duty to perform could be discharged even though that party had not himself performed. These include the nonoccurrence of a condition precedent or concurrent condition, the occurrence of a condition subsequent, material breach by the other party, and excuse from performance by impossibility, impracticability, or frustration. The following discussion deals with additional ways in which a discharge can occur.

Discharge by Mutual Agreement

Just as contracts are created by mutual agreement, they can also be discharged by *mutual agreement.* An agreement to discharge a contract must be supported by consideration to be enforceable.

Discharge by Accord and Satisfaction

An **accord** is an agreement whereby a promisee who has an existing claim agrees with the promisor that he will accept some performance different from that which was originally agreed on. When the promisor performs the accord, that is called a **satisfaction.**[5] When an accord and satisfaction occurs, the parties are discharged. For example, Root contracts with May to build a garage on May's property for $30,000. After Root has performed his part of the bargain, the parties then agree that instead of paying money, May will transfer a one-year-old Porsche to Root instead. When this is done, both parties are discharged.

Discharge by Waiver

A party to a contract may voluntarily relinquish any right he has under a contract, including the right to receive return performance. Such a relinquishment of

[5]Accord and satisfaction is also discussed in Chapter 12.

rights is known as a **waiver.** If one party tenders an incomplete or defective performance and the other party accepts that performance without objection, knowing that the defects will not be remedied, the party to whom performance was due will have discharged the other party from his duty of performance. For example, a real estate lease requires Long, the tenant, to pay a $5 late charge for late payments of rent. Long pays his rent late each month for five months, but the landlord accepts it without objection and without assessing the late charge. In this situation, the landlord has probably waived his right to collect the late charge.

To avoid waiving rights, a person who has received defective performance should give the other party prompt notice that she expects complete performance and will seek damages if the defects are not corrected.

Discharge by Alteration

If the contract is represented by a *written* instrument, and one of the parties intentionally makes a material alteration in the instrument without the other's consent, the alteration acts as a discharge of the other party. If the other party consents to the alteration or does not object to it when he learns of it, he is not discharged. Alteration by a third party without the knowledge or consent of the contracting parties does not affect the parties' rights.

Discharge by Statute of Limitations

Courts have long refused to grant a remedy to a person who delays bringing a lawsuit for an unreasonable time. All of the states have enacted statutes known as **statutes of limitation,** which specify the period of time in which a person can bring a lawsuit.

The time period for bringing a contract action varies from state to state, and many states prescribe time periods for cases concerning oral contracts that are different from those for cases concerning written contracts. Section 2–725 of the Uniform Commercial Code provides for a four-year statute of limitations for contracts involving the sale of goods.

The statutory period ordinarily begins to run from the date of the breach. It may be delayed if the party who has the right to sue is under some incapacity at that time (such as minority or insanity) or is beyond the jurisdiction of the state. A person who has breached a contractual duty is discharged from liability for breach if no lawsuit is brought before the statutory period elapses.

Discharge by Decree of Bankruptcy

The contractual obligations of a debtor are generally discharged by a decree of bankruptcy. Bankruptcy is discussed in Chapter 29.

Remedies for Breach of Contract

Our discussion of the performance stage of contracts so far has focused on the circumstances under which a party has the duty to perform or is excused from performing. In situations in which a person is injured by a breach of contract and is unable to obtain compensation by a settlement out of court, a further important issue remains: What remedy will a court fashion to compensate for breach of contract?

Contract law seeks to encourage people to rely on the promises made to them by others. Contract remedies focus on the economic loss caused by breach of contract, not on the moral obligation to perform a promise. The objective of granting a remedy in a case of breach of contract is simply to compensate the injured party.

Types of Contract Remedies

There are a variety of ways in which this can be done. The basic categories of contract remedies include:

1. Legal remedies (money damages).
2. Equitable remedies.
3. Restitution.

The usual remedy is an award of money damages that will compensate the injured party for his losses. This is called a **legal remedy** or **remedy at law,** because the imposition of money damages in our legal system originated in courts of law. Less frequently used but still important are **equitable remedies** such as specific performance. Equitable remedies are those remedies that had their origins in courts of equity rather than in courts of law.[6] Today, they are available at the discretion of the judge. A final possible remedy is **restitution,** which requires the defendant to pay the value of the benefits that the plaintiff has conferred on him.

[6]The nature of equitable remedies is also discussed in Chapter 1.

Interests Protected by Contract Remedies

Remedies for breach of contract protect one or more of the following interests that a promisee may have:[7]

1. *Expectation interest.* A promisee's **expectation interest** is his interest in obtaining the objective or opportunity for gain that he bargained for and "expected." Courts attempt to protect this interest by formulating a remedy that will place the promisee in the position he would have been in if the contract had been performed as promised.

2. *Reliance interest.* A promisee's **reliance interest** is his interest in being compensated for losses that he has suffered by changing his position in reliance on the other party's promise. In some cases, such as when a promisee is unable to prove his expectation interest with reasonable certainty, the promisee may seek a remedy to compensate for the loss suffered as a result of relying on the promisor's promise rather than for the expectation of profit.

3. *Restitution interest.* A **restitution interest** is a party's interest in recovering the amount by which he has enriched or benefited the other. Both the reliance and restitution interests involve promisees who have changed their position. The difference between the two is that the reliance interest involves a loss to the promisee that does not benefit the promisor, whereas the restitution interest involves a loss to the promisee that does constitute an unjust enrichment to the promisor. A remedy based on restitution enables a party who has performed or partially performed her contract and has benefited the other party to obtain compensation for the value of the benefits that she has conferred.

Legal Remedies (Damages)

Limitations on Recovery of Damages in Contract Cases An injured party's ability to recover damages in a contract action is limited by three principles:

1. *A party can recover damages only for those losses that he can prove with reasonable certainty.* Losses that are purely speculative are not recoverable. Thus, if Jones Publishing Company breaches a contract to publish Powell's memoirs, Powell may not be able to recover damages for lost royalties (her expectation interest), since she may be unable to establish, beyond speculation, how much money she would have earned in royalties if the book had been published. (Note, however, that Powell's reliance interest might be protected here; she could be allowed to recover provable losses incurred in reliance on the contract.)

2. *A breaching party is responsible for paying only those losses that were foreseeable to him at the time of contracting.* A loss is foreseeable if it would ordinarily be expected to result from a breach or if the breaching party had reason to know of particular circumstances that would make the loss likely. For example, if Prince Manufacturing Company renders late performance in a contract to deliver parts to Cheatum Motors without knowing that Cheatum is shut down waiting for the parts, Prince will not have to pay the business losses that result from Cheatum's having to close its operation.

3. *Plaintiffs injured by a breach of contract have the duty to mitigate (avoid or minimize) damages.* A party cannot recover for losses that he could have avoided without undue risk, burden, or humiliation. For example, an employee who has been wrongfully fired would be entitled to damages equal to his wages for the remainder of the employment period. The employee, however, has the duty to minimize the damages by making reasonable efforts to seek a similar job elsewhere.

Compensatory Damages Subject to the limitations discussed above, a person who has been injured by a breach of contract is entitled to recover **compensatory damages.** In calculating the compensatory remedy, a court will attempt to protect the expectation interest of the injured party by giving him the "benefit of his bargain" (placing him in the position he would have been in *had the contract been performed as promised*). To do this, the court must compensate the injured person for the provable losses he has suffered as well as for the provable gains that he has been prevented from realizing by the breach of contract. Normally, compensatory damages include one or more of three possible items: loss in value, any allowable consequential damages, and any allowable incidental damages.

[7] *Restatement (Second) of Contracts* § 344.

1. *Loss in value.* The starting point in calculating compensatory damages is to determine the **loss in value** of the performance that the plaintiff had the right to expect. This is a way of measuring the expectation interest. The calculation of the loss in value experienced by an injured party differs according to the sort of contract involved and the circumstances of the breach. In contracts involving nonperformance of the sale of real estate, for example, courts normally measure loss in value by the difference between the contract price and the market price of the property. Thus, if Willis repudiates a contract with Renfrew whereby Renfrew was to purchase land worth $20,000 from Willis for $10,000, Renfrew's loss in value was $10,000. Where a seller has failed to perform a contract for the sale of goods, courts may measure loss in value by the difference between the contract price and the price that the buyer had to pay to procure substitute goods.[8] In cases in which a party breaches by rendering defective performance—say, by breaching a warranty in the sale of goods—the loss in value would be measured by the difference between the value of the goods if they had been in the condition warranted by the seller and the value of the goods in their defective condition.[9]

2. *Consequential damages.* **Consequential damages** (also called **special damages**) compensate for losses that occur as a consequence of the breach of contract. Consequential losses occur because of some special or unusual circumstances of the particular contractual relationship of the parties. For example, Apex Trucking Company buys a computer system from ABC Computers. The system fails to operate properly, and Apex is forced to pay its employees to perform the tasks manually, spending $10,000 in overtime pay. In this situation, Apex might seek to recover the $10,000 in overtime pay in addition to the loss of value that it has experienced.

Lost profits flowing from a breach of contract can be recovered as consequential damages if they are foreseeable and can be proven with reasonable certainty. It is important to remember, however, that the recovery of consequential damages is subject to the limitations on damage recovery discussed earlier.

3. *Incidental damages.* **Incidental damages** compensate for reasonable costs that the injured party incurs after the breach in an effort to avoid further loss. For example, if Smith Construction Company breaches an employment contract with Brice, Brice could recover as incidental damages those reasonable expenses he must incur in attempting to procure substitute employment, such as long-distance telephone tolls or the cost of printing new résumés.

Alternative Measures of Damages The foregoing discussion has focused on the most common formulation of damage remedies in contracts cases. The normal measure of compensatory damages is not appropriate in every case, however. When it is not appropriate, a court may use an alternative measure of damages. For example, where a party has suffered losses by performing or preparing to perform, he might seek damages based on his *reliance interest* instead of his expectation interest. In such a case, he would be compensated for the provable losses he suffered by relying on the other party's promise. This measure of damages is often used in cases in which a promise is enforceable under promissory estoppel.[10]

Nominal Damages **Nominal damages** are very small damage awards that are given when a technical breach of contract has occurred without causing any actual or provable economic loss. The sums awarded as nominal damages typically vary from 2 cents to a dollar.

Liquidated Damages The parties to a contract may expressly provide in their contract that a specific sum shall be recoverable if the contract is breached. Such provisions are called **liquidated damages** provisions. For example, Murchison rents space in a shopping mall in which she plans to operate a retail clothing store. She must make improvements in the space before opening the store, and it is very important to her to have the store opened for the Christmas shopping season. She hires Ace Construction Company to construct the improvements. The parties agree to include in the contract a liquidated damages provision stating that, if Ace is late in completing the construction, Murchison will be able to recover a specified sum for each day of delay. Such a provision is highly desirable from Murchison's point of view because, without a liquidated damages provision, she

[8] Remedies under Article 2 of the Uniform Commercial Code are discussed in detail in Chapter 22.

[9] See Chapter 20 for further discussion of the damages for breach of warranty in the sale of goods.

[10] Promissory estoppel is discussed in Chapters 9 and 12.

would have a difficult time in establishing the precise losses that would result from delay. Courts scrutinize these agreed-on damages carefully, however.

If the amount specified in a liquidated damages provision is reasonable and if the nature of the contract is such that actual damages would be difficult to determine, a court will enforce the provision. When liquidated damages provisions are enforced, the amount of damages agreed on will be the injured party's exclusive damage remedy. If the amount specified is unreasonably great in relation to the probable loss or injury, however, or if the amount of damages could be readily determined in the event of breach, the courts will declare the provision to be a penalty and will refuse to enforce it. The issue of reasonableness of liquidated damages is presented in the *Wojtowicz* case, which follows.

Wojtowicz v. Greeley Anesthesia Services, P.C. *961 P.2d 520 (Ct. App. Colo. 1997)*

In 1992, Greeley Anesthesia Services (GAS), a professional corporation made up of anesthesiologists who practice at a hospital in Greeley, Colorado, hired Dr. Mark D. Wojtowicz, an anesthesiologist. GAS collects fees and distributes income for its shareholders and employees. The record indicates that GAS bills patients, collects fees, and distributes income as follows: each shareholder is paid $500 for each day worked; GAS operating expenses are paid; all remaining income is distributed to each shareholder as a bonus which is proportionate to services performed. The bonus each shareholder receives generally exceeds the sum collected as base pay. In July 1993, after Dr. Wojtowicz became a shareholder in the corporation, he and GAS entered into an employment contract. The contract contained a clause stating that if Dr. Wojtowicz terminated his employment and continued practicing anesthesiology within a 25-mile radius of Greeley, he would be required to pay GAS 50 percent of fees that he generated from practicing in competition with GAS for two years following termination. It also provided that, to compensate GAS for the harm to its goodwill, Dr. Wojtowicz would pay GAS $10,000 and would immediately forfeit any amount that might otherwise be due to him as deferred compensation

On January 12, 1995, Dr. Wojtowicz gave GAS notice of his employment termination. When GAS sought to enforce the contract, Dr. Wojtowicz sought a declaratory judgment that the noncompetition and liquidated damages provisions were invalid and unenforceable. The trial court declared valid and enforceable the liquidated damages clause requiring Dr. Wojtowicz to pay 50 percent of fees generated from practicing in competition with GAS (the noncompetition provision), but declared invalid and unenforceable the $10,000 and forfeiture clause for harm to GAS's goodwill. Both parties appealed.

Plank, Judge The terms of the provision specifying the amount of damages are not enforceable. Section 8–2–113(3) states:

> Any covenant not to compete provision of an employment . . . between physicians which restricts the right of a physician to practice medicine . . . upon termination of such agreement, shall be void; except that all other provisions of such an agreement enforceable at law, including provisions which require the payment of damages in an amount that is reasonably related to the injury suffered by reason of termination of the agreement, shall be enforceable. Provisions which require the payment of damages upon termination of the agreement may include, but not be limited to, damages related to competition.

Here, although both parties agreed to the noncompetition provision of the contract, the statute permits enforcement of that provision only as to damages "reasonably related to the injury suffered by reason of termination of the agreement." Here, the parties agreed that, if plaintiff competes with GAS following termination of his employment, GAS will suffer harm in several ways, including lost profits.

The agreement expressly provides that Dr. Wojtowicz:

> . . . shall be free to engage in the practice of medicine in competition with the Company, except upon so competing with the Company, the Employee shall be obligated to pay the Company damages related to that competition in an amount reasonably related to the injuries suffered by the Company by reason of such competition.

The trial court found that the intended purpose of the noncompetition provision was "to discour-

age termination of employment without departure from the area." However, it held that such purpose was not contrary to public policy because the statute "specifically authorizes damages relating to competition," and such provisions "must necessarily discourage the setting up of rival practices." The record contains conflicting evidence, including expert testimony, as to the amount of damages GAS might suffer if plaintiff breached the agreement. Based upon the possibility that GAS and its shareholders might lose future profits if one of several hypothetical situations occurred, the trial court concluded that the noncompetition provision of the agreement provides for damages in an amount that is reasonably related to the injury. However, a damage award cannot be based on speculation or conjecture. A claim for future profits may not be sustained by evidence which is speculative, remote, imaginary, or impossible of ascertainment. Damages for lost profits are measured by the loss of net profits, meaning net earnings or the excess of returns over expenditures, but not lost gross profits or gross sales revenues. The trial court's conclusion as to the noncompetition provision is based on several theories of future lost profits which do not measure net earnings. The record indicates that net profits to GAS and its shareholders remained essentially the same as they were prior to the termination of Dr. Wojtowicz's employment contract.

Contrary to the trial court, we conclude that the noncompetition provision of the contract, which required plaintiff to pay 50 percent of his fees to GAS for two years, provides for damages that are not "reasonably related to the injury suffered" by GAS by reason of the termination of its contract with plaintiff. Hence, the language of the provision specifying the amount of damages was not enforceable under the statute.

We also conclude, as a matter of law, that the fee percentage set as liquidated damages in the noncompetition provision is disproportionate to any possible loss incurred by GAS. Thus, the noncompetition provision is also an unenforceable penalty at common law. The trial court found that there was no convincing evidence of any real harm to defendant's goodwill or its position as a service provider. The preponderance of the evidence is that no training was provided to Dr. Wojtowicz by GAS. The trial court determined that the liquidated damages portions of the goodwill provision were not enforceable because GAS suffered no harm to its goodwill and such damages were not reasonably related to its actual injury. That conclusion has support in the record, and thus, we will not disturb it on review. We conclude that the liquidated damages portions of the goodwill provision are also so disproportionate as to constitute an unenforceable penalty as a matter of law.

The portion of the judgment declaring the noncompetition provision valid and enforceable reversed in favor of Dr. Wojtowicz and the portion of the judgment declaring the goodwill provision unenforceable is affirmed in favor of Dr. Wojtowicz.

Punitive Damages **Punitive damages** are damages awarded in addition to the compensatory remedy that are designed to punish a defendant for particularly reprehensible behavior and to deter the defendant and others from committing similar behavior in the future. The traditional rule is that punitive damages are not recoverable in contracts cases unless a specific statutory provision (such as some consumer protection statutes) allows them or the defendant has committed *fraud* or some other independent tort. A few states will permit the use of punitive damages in contracts cases in which the defendant's conduct, though not technically a tort, was malicious, oppressive, or tortious in nature.

Punitive damages have also been awarded in many of the cases involving breach of the implied covenant of good faith. In such cases, courts usually circumvent the traditional rule against awarding punitive damages in contracts cases by holding that breach of the duty of good faith is an independent tort. The availability of punitive damages in such cases operates to deter a contracting party from deliberately disregarding the other party's rights. Insurance companies have been the most frequent target for punitive damages awards in bad faith cases, but employers and banks have also been subjected to punitive damages verdicts.

Equitable Remedies

In exceptional cases in which money damages alone are not adequate to fully compensate for a party's injuries, a court may grant an **equitable remedy** either alone or in combination with a legal remedy. Equitable relief is subject to several limitations, however, and will be granted only when justice is served by doing so. The primary equitable remedies for breach of contract are specific performance and injunction.[11]

Specific Performance **Specific performance** is an equitable remedy whereby the court orders the breaching party to perform his contractual duties as promised. For example, if Barnes breached a contract to sell a tract of land to Metzger and a court granted specific performance of the contract, the court would require Barnes to deed the land to Metzger. (Metzger, of course, must pay the purchase price.) This remedy can be advantageous to the injured party because he is not faced with the complexities of proving damages, he does not have to worry about whether he can actually collect the damages, and he gets exactly what he bargained for. However, the availability of this remedy is subject to the limitations discussed below.

The Availability of Specific Performance Specific performance, like other equitable remedies, is available only when the injured party has no adequate remedy at law—in other words, when money damages do not adequately compensate the injured party. This generally requires a showing that the subject of the contract is unique or at least that no substitutes are available. Even if this requirement is met, a court will withhold specific performance if the injured party has acted in bad faith, if he unreasonably delayed in asserting his rights, or if specific performance would require an excessive amount of supervision by the court.

Contracts for the sale of real estate are the most common subjects of specific performance decrees because every tract of real estate is considered to be unique. Specific performance is rarely granted for breach of a contract for the sale of goods because the injured party can usually procure substitute goods. However, there are situations involving sales of goods contracts in which specific performance is given. These cases involve goods that are unique or goods for which no substitute can be found. Examples include antiques, heirlooms, works of art, and objects of purely sentimental value.[12] Specific performance is not available for the breach of a promise to perform a personal service (such as a contract for employment, artistic performance, or consulting services). A decree requiring a person to specifically perform a personal-services contract would probably be ineffective in giving the injured party what he bargained for. It would also require a great deal of supervision by the court. In addition, an application of specific performance in such cases would amount to a form of involuntary servitude.

Injunction Injunction is an equitable remedy that is employed in many different contexts and is sometimes used as a remedy for breach of contract. An **injunction** is a court order requiring a person to do something (**mandatory injunction**) or ordering a person to refrain from doing something (**negative injunction**). Unlike legal remedies that apply only when the breach has already occurred, the equitable remedy of injunction can be invoked when a breach has merely been *threatened.* Injunctions are available only when the breach or threatened breach is likely to cause *irreparable injury.*

In the contract context, specific performance is a form of mandatory injunction. Negative injunctions are appropriately used in several situations, such as contract cases in which a party whose duty under the contract is forbearance threatens to breach the contract. For example, Norris sells his restaurant in Gas City, Indiana, to Ford. A term of the contract of sale provides that Norris agrees not to own, operate, or be employed in any restaurant within 30 miles of Gas City for a period of two years after the sale.[13] If Norris threatens to open a new restaurant in Gas City several months after the sale is consummated, a court could *enjoin* Norris from opening the new restaurant.

The following *Cyber Promotions* case, illustrates the application of standards for injunctive relief in the context of an Internet access contract.

[11] Another equitable remedy, *reformation,* allows a court to reform or "rewrite" a written contract when the parties have made an error in expressing their agreement. Reformation is discussed, along with the doctrine of mistake, in Chapter 13.

[12] Specific performance under § 2–716(1) of the UCC is discussed in Chapter 22.

[13] Ancillary covenants not to compete, or noncompetition agreements, are discussed in detail in Chapter 15.

Cyber Promotions, Inc. v. Apex Global Information Services, Inc.

1997 U.S. Dist. LEXIS 15344 (U.S. Dist. Ct. E.D. Pa. 1997)

Cyber Promotions was in the business of sending unsolicited bulk commercial e-mail. On October 25, 1996, Apex Global Information Services (AGIS) entered into a contract to grant Cyber full Internet access through one T-1 line. On March 10, 1997, the parties entered into a second contract providing Cyber with two additional T-1 lines. The only difference between the two contracts was the addition to the second contract of two paragraphs: one restricting AGIS from terminating Cyber's service without 30 days notice and the other acknowledging that Cyber was in the business of sending unsolicited bulk commercial e-mail. The first additional paragraph was added because Cyber wanted AGIS to acknowledge in writing that it was aware that Cyber was in the business of sending unsolicited bulk commercial e-mail over AGIS's system; the second was added because Cyber wanted 30 days notice in the event that AGIS terminated Cyber's service to enable it to find an alternate carrier. This provision states:

> AGIS'S DUTIES AND OBLIGATIONS: During the terms hereof, AGIS shall, subject to the terms and conditions hereof, provide CUSTOMER with access to the INTERNET through AGIS. Any and all access to other networks via AGIS must be in compliance with all policies and rules of those networks. . . . No Guarantee of end-to-end bandwidth on the Internet is made . . . AGIS makes no guarantee of service on full routing and/or peering. If AGIS is requested to provide full routing to a customer, that decision is at the complete and total option of AGIS. This full routing service is subject to termination at any time without prior notice. AGIS cannot guarantee the peering sessions between our customers and other non-AGIS companies and/or networks.

On September 16, 1997, AGIS terminated Cyber's connection to the Internet without prior notice, following a massive "ping attack" on AGIS's network, which appeared to be directed at Cyber's computers. "Pings" are generated by a software program and are designed to be used by Internet users to check network connections. These "pings" are also used illegitimately to disable computers attached to the Internet by flooding them with repeated information requests. Cyber filed suit against AGIS, seeking, among other remedies, injunctive relief.

Brody, Judge Both contracts provide that AGIS will not be responsible for delays or failure to perform due to "strikes, inclimate [*sic*] weather, acts of god or other causes beyond AGIS's reasonable control." AGIS claims that the ping attacks on its router were a factor beyond its reasonable control and thus excused AGIS's failing to reconnect Cyber without prior notice. The ping attacks on AGIS's router did not constitute a factor beyond AGIS's reasonable control that excused AGIS's failure to perform. The testimony indicated that AGIS was aware that its grant of access to Cyber might result in ping attacks on its system. Furthermore AGIS gave assurances to Cyber that it would be able to cope with such attacks. AGIS can cope with attacks albeit at some cost to the quality of the service it provides to others. Also AGIS's chief technician testified that AGIS continues to provide Internet connectivity to other promoters of unsolicited bulk commercial e-mail and that AGIS continued to be attacked with pings after it disconnected Cyber. Thus the language of paragraph #9 in no way entitled AGIS to disconnect Cyber without notice.

Cyber has demonstrated that it will be irreparably harmed by a failure to grant the injunction. An irreparable injury is a "potential harm which cannot be addressed by a legal or equitable remedy following a trial." *Instant Air Freight Co. v. C.F. Air Freight, Inc.* A showing that a plaintiff may suffer a substantial loss of business or bankruptcy if relief is not granted meets the standards for interim relief. Cyber's business will be irreparably harmed by being forced into dissolution or bankruptcy unless it is reconnected by AGIS immediately.

Giving Cyber the benefit of its 30-day notice provision will not be futile as AGIS suggests. Cyber has solicited other Internet service providers, such as AT&T and Bell Atlantic, to provide service in place of AGIS. Cyber has a reasonable possibility of securing Internet access by signing contracts with other Internet service providers. However, these services will not be able to be operational for

approximately 30 to 90 days after any contract is signed with an alternate provider. Cyber will be irreparably harmed if it does not have access to the Internet while it is waiting to be connected to these alternate providers. Subsequent to AGIS's disconnection of Cyber, Cyber was disconnected by its backup provider DIGEX. Cyber's attempts to use final backup connections to the Internet at remote locations also failed for technical reasons. Cyber cannot be reconnected to the Internet within the next few days without AGIS. Cyber's business reputation is based on its ability to provide a continuous connection to the Internet. Cyber's customer goodwill is being destroyed and it is losing customers permanently. It has already received demands from its clients seeking damages or refunds. If Cyber is not restored to the Internet immediately, Cyber will not have the capital to commit to a contract with another Internet service provider.

I have considered the possible harm to other interested parties, including the defendant, of a grant of a preliminary injunction. The reactivation of Cyber's access to the Internet may well cause the magnitude of damage to AGIS of its "backbone Internet" service, to AGIS's clients or to other users of the Internet, because of retaliatory actions by the pingers. This lawsuit, of course, was triggered by AGIS's improper termination of Cyber without notice. AGIS cannot now argue that its own malfeasance caused greater harm. Furthermore, AGIS continues to grant access to other e-mail businesses and continues to receive attacks without Cyber as a client. Also other Internet service providers have used a number of other apparently successful methods to mitigate similar attacks. AGIS has not taken significant steps to deal with pings except for attempting to use a screening program, and removing Cyber from its system. AGIS has not, to this date, hired a security expert and has not attempted to install a router for the sole use of Cyber.

The public interest also tips toward the issuance of a preliminary injunction although it is undisputed that Cyber's business of sending unsolicited bulk e-mail is a controversial one. Many computer users find the receipt of bulk e-mail annoying and intrusive. However, the fact that Cyber is an unpopular citizen of the Internet does not mean that Cyber is not entitled to have its contracts enforced in a court of law or that Cyber is not entitled to such injunctive relief as any similarly situated business. Cyber specifically bargained for the 30-day-notice provision with AGIS because both parties knew the pressures AGIS would face to cut off Cyber. It is in the public interest that parties live up to their legal contracts even if they are unpopular.

Motion for preliminary injunction granted in favor of Cyber Promotions.

Interests Protected by Contract

Restitution is a remedy that can be obtained either at law or in equity. Restitution applies when one party's performance or reliance has conferred a benefit on the other. A party's restitution interest is protected by compensating him for the value of benefits he has conferred on the other person.[14] This can be done through **specific restitution,** in which the defendant is required to return the exact property conferred on him by the plaintiff, or **substitutionary restitution,** in which a court awards the plaintiff a sum of money that reflects the amount by which he benefited the defendant. In an action for damages based on quasi-contract, substitutionary restitution would be the remedy.

Restitution can be used in a number of circumstances. Sometimes, parties injured by breach of contract seek restitution as an alternative remedy instead of damages that focus on their expectation interest. In other situations, a *breaching party* who has partially performed seeks restitution for the value of benefits he conferred in excess of the losses he caused. In addition, restitution often applies in cases in which a person rescinds a contract on the grounds of lack of capacity, misrepresentation, fraud, duress, undue influence, or mistake. Upon rescission, each party who has been benefited by the other's performance must compensate the other for the value of the benefit conferred. Another application of restitution occurs when a party to a contract that violates the statute of frauds confers a

[14]Quasi-contract is discussed in detail in Chapter 9.

benefit on the other party. For example, Boyer gives Blake a $10,000 down payment on an oral contract for the sale of a farm. Although the contract is unenforceable (that is, Boyer could not get compensation for his expectation interest), the court would give Boyer restitution of his down payment.

Ethical and Public Policy Concerns

1. Is it good public policy for a party who has materially breached a contract to be able to obtain restitution for the benefits he has conferred on the nonbreaching party?

2. How does the duty of good faith and fair dealing encourage ethical dealings? Do you see any problems with such a duty?

3. You have seen that contract remedies focus solely on the economic effect of contract breaches rather than on the moral implications of such breaches or the emotional harms that might result from a breach of contract. As a result, contract remedies are much more limited than are remedies in tort cases. Is this sound public policy? Explain.

Problems and Problem Cases

1. Linder hired Reale to build a 12 foot by 12 foot extension on his house with a raised wooden deck, sliding glass doors, and a gas-fired barbecue. Their written contract made no provision regarding obtaining a building permit or compliance with building codes, although it did contain a notation stating "plairs [sic] and permit $500 Dep." The agreed price for the improvements was $22,560. It became evident that several features of the finished addition deviated from the state building code and the building plans that had been approved by the town. Reale had built the crawl space beneath the addition some 4 to 7 inches less than the 18 inches mandated by the state building code, which prevented inspection underneath the addition for structural defects. In addition, Reale sealed the framing of the addition, where substantial problems existed, without a prior inspection by the city building department or his own architect. Serious defects existed in the roof, and the plumbing work was not done by a licensed plumber, although it was later corrected. The steps leading down from the main dwelling to the addition are each 4 inches high rather than the 6 and 8 inches each that appear in the plan. In addition, Reale did no grade survey of the property before building, although expert witnesses testified that a grade survey was necessary to build the addition properly. The city building department initially denied a certificate of occupancy because of the architect's affidavit stating that he had inspected the location and that the work had been done in conformity with the approved plans and the state fire and building code, but this was apparently based on false information that Reale gave to the architect. Linder made partial payment under the contract, but withheld $5,855. Reale sued Linder to collect the unpaid balance, claiming that he substantially performed the contract. Did he?

2. Parscale, the owner of a restaurant, entered into negotiations to acquire outdoor advertising signs for her business from Luminous Neon. At the outset of the negotiations, Luminous Neon had offered to sell the signs to Parscale for $5,600 plus tax, but Parscale ultimately leased them. Under the terms of the lease, Parscale paid a rental of $191.75 plus tax per month for a term of five years. The lease also contained a liquidated damages clause that required Parscale, in the event of breach, to pay damages equal to 80 percent of the remaining payments due. That 80 percent represented Luminous Neon's expenses incurred in manufacturing, financing, and installing the signs, as well as profit. The 20 percent of the remaining payments that were not included as liquidated damages was for maintenance and service expenses that would not be incurred due to Parscale's breach. Some time after Parscale leased the signs, the City of Topeka began construction on a street that limited access to Parscale's business. That construction had an adverse effect on Parscale's business, and it ultimately closed. Parscale stopped making payments on the signs after making a total of 19 payments. Forty-one monthly payments of $191.75 remained due and payable, resulting in liquidated damages, including tax, of $6,651.04. Luminous Neon removed the signs from Parscale's business at her request. The removal added another $300 to the damages. Luminous Neon ultimately sued Parscale to collect this money. Should Luminous Neon be able to collect these liquidated damages from Parscale?

3. Light contracted to build a house for the Mullers. After the job was completed, the Mullers refused to pay Light the balance they owed him under the contract,

claiming that he had done some of the work in an unworkmanlike manner. When Light sued for the money, the Mullers counterclaimed for $5,700 damages for delay under a liquidated damages clause in the contract. The clause provided that Light must pay $100 per day for every day of delay in completion of the construction. The evidence indicated that the rental value of the home was between $400 and $415 per month. Should the liquidated damages provision be enforced?

4. Barham entered into a contract to sell her residential building to Beverly Way Associates for $3.9 million. The contract provided for the opening of escrow (the procedure by which the sale would be consummated) and a closing within 60 days of that time. It also provided that Beverly Way's obligation to purchase the property "shall be conditioned upon" its approval of a number of specified inspections and documents and delivery of clear title. One of these items was a certified survey of the property that would show all improvements to the property and the location of all exceptions to the title. The contract gave Beverly Way 28 business days in which to inspect and approve documents after having been furnished them by Barham. On November 2, 1988, Barham furnished the material that Beverly Way required, and on December 2, Beverly Way wrote to Barham stating, "We reluctantly disapprove of the matters disclosed on the Survey and relating to the Property." This letter described in detail the reasons for its rejection. The letter expressed the hope that the parties could "keep the deal alive" and proposed two alternatives that would have changed the parties' arrangement substantially. There was no further communication between the parties until February 1989, when Beverly Way sent a second letter stating that it was prepared to waive its objections to the survey and to proceed to close the deal. Barham refused to sell the property and Beverly Way sued for specific performance. Will Beverly Way win?

5. The Bassos contracted with Dierberg to purchase her property for $1,310,000. One term of the contract stated, "[t]he sale under this contract shall be closed . . . at the office of Community Title Company . . . on May 16, 1988 at 10:00 A.M. . . . Time is of the essence of this contract." After forming the contract, the Bassos assigned their right to purchase Dierberg's property to Miceli and Slonim Development Corp. At 10:00 A.M. on May 16, 1988, Dierberg appeared at Community Title for closing. No representative of Miceli and Slonim was there, nor did anyone from Miceli and Slonim inform Dierberg that there would be any delay in the closing. At 10:20 A.M., Dierberg declared the contract null and void because the closing did not take place as agreed, and she left the title company office shortly thereafter. Dierberg had intended to use the purchase money to close another contract to purchase real estate later in the day. At about 10:30 A.M., a representative of Miceli and Slonim appeared at Community Title to begin the closing, but the representative did not have the funds for payment until 1:30 P.M. Dierberg refused to return to the title company, stating that Miceli and Slonim had breached the contract by failing to tender payment on time. She had already made alternative arrangements to finance her purchase of other real estate to meet her obligation under that contract. Miceli and Slonim sued Dierberg, claiming that the contract did not require closing exactly at 10:00 A.M., but rather some time on the day of May 16. Will they prevail?

6. During the summer of 1991, Kmart Corp. built a new Kmart store in Bolingbrook, Illinois. Leopardo Construction acted as the general contractor during construction, and Oldenstedt was a subcontractor. In March 1991, Oldenstedt received drawings, describing the site utilities and interior plumbing. Oldenstedt agreed to install the site utilities and interior plumbing for $709,500. The written contract received by Oldenstedt set out the details of the job and Oldenstedt's responsibilities. It stated that Oldenstedt agreed to "supply adequate manpower, material and equipment at all times to meet the project schedule" and "cooperate with the Contractor in scheduling and performing the work to avoid conflict, delay in or interference with the work of the Contractor, other subcontractors, or the owner's own forces." The subcontract agreement called for Oldenstedt to begin the project on May 27, and it began the interior plumbing portion of the project on or about this date. According to Leopardo's work schedule, Oldenstedt's work was to be completed on July 18. Not long after Oldenstedt began work on the project, the project superintendent, Cusimano, became concerned that Oldenstedt was working too slowly. He did not begin the site utilities work until June 13. Cusimano had numerous conversations with Oldenstedt at the job site concerning the pace of his work. On June 19, 27, and July 2, Cusimano sent letters to Oldenstedt telling him that he was in breach of the subcontract agreement by failing to work expeditiously and without delay, and that he would have to increase progress. On July 17, it was

clear that Oldenstedt would not finish his work by July 18 as required by the schedule. A meeting was held to establish a new schedule for the site utility work. The new schedule gave Oldenstedt until August 10 to complete his work. Cusimano testified that when he visited the site 10 days later on July 27, Oldenstedt was already 12 to 14 crew days behind the schedule. (A crew day is the amount of work that can be accomplished by one crew in one day.) By the last week of July, Oldenstedt had at least two crews working the site each day. When Oldenstedt fell behind the new schedule, Cusimano contacted other plumbing contractors to supplement Oldenstedt's crew and then terminated Oldenstedt, delivering a letter to him that said he had breached the contract and that the contract was therefore canceled. According to Leopardo, the new contractors had to do substantial remedial work to correct the deficient work performed by Oldenstedt as well as complete the job. Oldenstedt filed suit against Leopardo, alleging breach of contract. Will Oldenstedt be successful?

7. In early 1991, Williams entered into an installment land contract for the purchase of property on Macomb Street, Northwest, in Washington, D.C. Williams agreed to purchase the property for $289,000, with a down payment of $28,900, and a promissory note of $260,100, payable in full within five years. The contract provided that Williams was taking the property "as is," but it obligated the seller to make certain repairs and improvements, including the replacement of all water supply galvanized pipes with copper pipes and the installation of a new roof. The seller was required to provide notice to Williams when the repairs and improvements were finished. Williams then had seven days in which to notify the seller of any complaint or defect in the work. The contract provided that failure to give this notice was deemed a waiver, which relieved the seller of any further liability. The contract also provided that if Williams were to give notice of a defect in repairs, the seller's duty was to enforce its agreement with the contractor doing the repairs. The seller hired contractors to make the required repairs and gave Williams due notice when they were completed. Williams did a walk-through of the property, but did not send the seller a list of any complaints or defects within the required seven-day period. Williams signed a document stating that the seller's "preliminary obligations under the contract had been satisfied." About six months later, in September 1991, Williams discovered that a galvanized pipe located under the bathroom flooring had burst. Several months later, Williams notified the seller that leaking pipes existed in the house. However, he did not ask the seller to take any action against any of the contractors whom seller had hired to do the repair work. In February 1992, Williams discovered that there were large areas of rotten porous wood under the shingles of the roof, and a new roof was recommended. Williams did not make monthly interest payments from October 1991 through August 1992, and failed to carry the requisite insurance on the property as well. In February 1992, the seller filed a complaint against Williams to get possession of the real estate as well as rent, fees, and costs. Williams counterclaimed for breach of contract on the ground of his discovery of "latent defects." Will Williams prevail on his counterclaim?

8. Shirley MacLaine Parker entered into a contract with Twentieth Century-Fox to play the female lead in Fox's contemplated production of a movie entitled *Bloomer Girl.* The contract provided that Fox would pay Parker a minimum "guaranteed compensation" of $53,571.42 per week for 14 weeks, beginning May 23, 1966, for a total of $750,000. Fox decided not to produce the movie, and in a letter dated April 4, 1966, it notified Parker that it would not "comply with our obligations to you under" the written contract. In the same letter, with the professed purpose "to avoid any damage to you," Fox instead offered to employ Parker as the leading actress in another movie, tentatively entitled *Big Country, Big Man.* The compensation offered was identical. Unlike *Bloomer Girl,* however, which was to have been a musical production, *Big Country* was to be a dramatic "western type" movie. *Bloomer Girl* was to have been filmed in California; *Big Country* was to be produced in Australia. Certain other terms of the substitute contract varied from those of the original. Parker was given one week within which to accept. She did not, and the offer lapsed. Parker then filed suit against Fox for recovery of the agreed-on guaranteed compensation. Will she prevail?

9. Ross was recruited to play basketball at Creighton University. He came from an academically disadvantaged background, and at the time he enrolled, Ross was at an academic level far below that of the average Creighton student. Creighton realized Ross's academic limitations when it admitted him, and to induce him to attend and play basketball, assured him that he would receive sufficient tutoring so that he "would receive a meaningful education while

at Creighton." Ross attended Creighton from 1978 to 1982. He maintained a D average and earned 96 of the 128 credits needed to graduate. On the advice of the athletics department, he took many of these credits in courses such as marksmanship and theory of basketball, which did not count toward a university degree. He also alleged that the university hired a secretary to read his assignments and prepare and type his papers. When he left Creighton, Ross had the overall language skills of a fourth grader and the reading skills of a seventh grader. He took remedial classes for a year at a preparatory school at Creighton's expense, attending classes with grade-school children, and then enrolled at Roosevelt University. He was forced to withdraw there for lack of funds. Ross sued Creighton for breach of contract, among other theories. Can Ross win this suit?

10.  *Video Case.* See "Roof Repair." Roofer had a contract to repair the roof on the Seaside Hotel. After the formation of the contract, however, extensive flood damage caused the hotel to be condemned. Are the parties' duties under the contract discharged?

- D. Current Developments

In Part 3, Contracts, we introduced the common law rules that govern the creation and performance of contracts generally. Throughout much of history, special rules, known as the law merchant, were developed to control mercantile transactions in goods. Because transactions in goods commonly involve buyers and sellers located in different states—and even different countries—a common body of law to control these transactions can facilitate the smooth flow of commerce. To address this need, a Uniform Sales Act was drafted in the early 1900s and adopted by about two-thirds of the states. Subsequently, the Uniform Commercial Code (UCC or Code) was prepared to simplify and modernize the rules of law governing commercial transactions.

This chapter reviews some Code rules that govern the formation of sales contracts previously discussed. It also covers some key terms in sales contracts, such as delivery terms, title, and risk of loss. Finally, it discusses the rules governing sales on trial, such as sales on approval and consignments.

Figure 1 *Choice of Law*

*If there is no specific Uniform Commercial Code provision governing the transaction, use the common law.

Sale of Goods

The **sale of goods** is the transfer of ownership to tangible personal property in exchange for money, other goods, or the performance of services. The law of sales of goods is codified in Article 2 of the Uniform Commercial Code. While the law of sales is based on the fundamental principles of contract and personal property, it has been modified to accommodate current practices of merchants. In large measure, the Code discarded many technical requirements of earlier law that did not serve any useful purpose in the marketplace and replaced them with rules that are consistent with commercial expectations.

Article 2 of the Code applies only to *transactions in goods.* Thus, it does not cover contracts to provide services or to sell real property. However, some courts have applied the principles set out in the Code to such transactions. When a contract appears to call for the furnishing of both goods and services, a question may arise as to whether the Code applies. For example, the operator of a hair salon may use a commercial permanent solution intended to be used safely on humans that causes injury to a person's head. The injured person then might bring a lawsuit claiming that there was a breach of the Code's warranty of the suitability of the permanent solution. In such cases, the courts commonly ask whether the sale of goods is the *predominant* part of the transaction or merely an *incidental* part; where the sale of goods predominates, courts normally apply Article 2. The *Baxter* case, which follows, illustrates the type of analysis courts use to determine whether a particular contract should be governed by the Code.

Thus, the first question you should ask when faced with a contracts problem is: Is this a contract for the sale of goods? If it is not, then the principles of common law that were discussed in Part 3, Contracts, apply. If the contract is one for the sale of goods, then the Code applies. This analysis is illustrated in Figure 1.

Baxter v. Maurice's Auto Repair and Towing Service, Inc.

36 UCC Rep.2d 1020 (Fla. Cty. Ct. 1994)

In December 1992, Baxter went to Maurice's Auto Repair and Towing Service for the purpose of getting his 1985 Mercedes Benz 300SD automobile fitted with a rebuilt Mercedes motor. Maurice's was in the auto repair and towing business. He sold new, used, and rebuilt parts, incidental to his repair business. Maurice's did not sell auto parts alone and did not have a parts department.

On December 16, 1992, Maurice's purchased a rebuilt motor from Rick's European Connection, and installed it in Baxter's vehicle. The repairs were completed on January 13, 1993, and Baxter picked up the vehicle from Maurice's on January 17, 1993. The express warranty for the work completed was for six months or 6,000 miles, as evidenced by the repair invoice.

In April of 1993, the motor developed an oil leak. On April 23, 1993 Baxter returned the car, from Georgia where he resided, for repairs. Repairs on a rear seal were completed by Maurice's, and on May 22, 1993, Baxter took delivery of the vehicle. During the period of the repairs, Maurice's paid for a rental car and gasoline for Baxter. In September 1993, on a trip back to Florida, the car died. It needed another new motor. At the time of its demise, the motor had 12,716 miles on it and was eight months old.

Baxter brought suit against Maurice's seeking damages for breach of contract and breach of the implied warranty of merchantability. One of the questions in the lawsuit was whether Article 2—Sales of the Uniform Commercial Code was applicable to the transaction.

Kornstein, Judge Article 2 of the Uniform Commercial Code is limited in its application to transactions in goods. Goods are defined to mean, "all things (including specially manufactured goods) which are movable at the time of identification to the contract for sale other than the money in which the price is to be paid, investment securities and things in action." Section 2–102.

There is no doubt that the rebuilt motor in question is a good within the meaning of the statute. However, that simple determination is not dispositive of the question as to whether the entire transaction falls within the UCC, since the contract for delivery of the motor was also accompanied by the delivery of services by Maurice's. Contracts which involve both goods and services are not automatically included within the scope of Article 2 simply because the contract partially involves the exchange of goods.

One way to determine if a "mixed contract" falls within Article 2 of the UCC is the "labeling" of the arrangement. How was the contractual arrangement labeled by the parties? The first place to look would be at the invoice for this transaction. The invoice has a section identified as "DESCRIPTION OF WORK." Under that heading is the following list:

"Rebuilt Motor
"Valve Job
"Water pump
"Primer pump
"Oil Change & Filter
"Air Filter
"Fuel Filter Prim & Sec
"Antifreeze
"Thermostat & Gasket
"Fan Belt Alternator
"Upper & Lower Radiator Hoses
"Vacuum Hoses & Fuel & Shop Material."

There is also a section on the left side of the invoice for a list of parts and their costs. No parts are listed in that section. The warranty information and payment information are the only items listed on the parts section of the invoice. Below that "parts" section of the invoice is the section that either requests or waives an estimate pursuant to Florida law. The item which is marked, reads:

> I do not request a written estimate as long as the repair costs do not exceed $6,024.90. The shop may not exceed this amount without my written or oral approval.

The lower right-hand corner of the invoice is the section that calculates all of the charges. It lumps all of the repair expenses together as "Total Service $5,400," and then adds towing and taxes. Nowhere on the invoice was the arrangement labeled as a "sale." By applying the facts of this case against the "labeling" test, this court must conclude that the transaction is a repair, or service, and not labeled as a sale of goods, and thus not covered by the provisions of the Uniform Commercial Code.

Another leading method used to determine if the "mixed contract" should be controlled by Article 2 is through the application of the "predominant factor test." That test for inclusion in or exclusion from sales provisions of the UCC is whether the predominant factor and purpose of the contract is for sale of goods, with labor incidentally involved, or is the predominant factor rendition of service, with goods incidentally involved. In applying the predominant factor test, this Court finds that the

defendant, Maurice's Auto Repair, is predominantly selling its services, with auto parts a necessary incidental to that service.

Turning again to the invoice, Maurice's holds itself out as "Maurice's Body Repair & 24 Hour Towing Service." Maurice does not hold itself out as being in the auto parts business, but the auto repair business. Evidence produced at trial showed that Maurice's was not in the auto parts business, does not have an auto parts department, and does not sell auto parts to the general public. In fact, the evidence at the hearing clearly showed that Maurice's had to purchase the rebuilt engine from an independent dealer. It is obvious from these facts that Maurice's is primarily a service-oriented business which deals in goods as an incident to its performance of services in the auto repair business.

The preponderance of the testimony at trial clearly indicated that the transaction between the parties was for the repair of Baxter's automobile. Viewed in its entirety, this court holds that the transaction cannot be characterized in part or in its underlying nature as one for the sale of goods. The predominant factor, or purpose of the contract, can be reasonably stated as one for the delivery of services, to wit, the repair of the auto, accompanied by the acquisition of the necessary materials.

Judgment for Maurice's.

Leases

A lease of goods is a transfer of the right to possess and use goods belonging to another. Although the rights of one who leases goods (a lessee) do not constitute ownership of the goods, leasing is mentioned here because it is becoming an increasingly important way of acquiring the use of many kinds of goods, from automobiles to farm equipment. In most states, Article 2 and Article 9 of the UCC are applied to such leases by analogy. However, rules contained in these articles sometimes are inadequate to resolve special problems presented by leasing. For this reason, a new article of the UCC dealing exclusively with leases of goods, Article 2A, was written in 1987. Because of space limitations, this textbook does not cover Article 2A in detail.

Merchants

Many of the Code's provisions apply only to **merchants** or to transactions between merchants.[1] In addition, the Code sets a higher standard of conduct for merchants because persons who regularly deal in goods are expected to be familiar with the practices of that trade and with commercial law. Ordinary consumers and nonmerchants, on the other hand, frequently have little knowledge of or experience in these matters.

Code Requirements

The Code requires that parties to sales contracts act in good faith and in a commercially reasonable manner. Further, when a contract contains an unfair or unconscionable clause, or the contract as a whole is unconscionable, the courts have the right to refuse to enforce the unconscionable clause or contract [2–302].[2] The Code's treatment of unconscionability is discussed in detail in Chapter 15, Illegality.

A number of the Code provisions concerning the sale of goods were discussed in the chapters on contracts. The following is a list of some of the important provisions discussed earlier, together with the section of the Code and the chapters in the text where the discussion can be found.

1. *Firm offers.* Under the Code, an offer in writing by a merchant that gives assurance that the offer will be

[1]Under the Code, a "merchant" is defined as a "person who deals in goods of the kind or otherwise by his occupation holds himself out as having knowledge or skill peculiar to the practices or goods involved in the transaction or to whom such knowledge or skill may be attributed by his employment of an agent or broker or other intermediary who by his occupation holds himself out as having such knowledge or skill" [2–104(1)].

[2]The numbers in brackets refer to sections of the Uniform Commercial Code.

held open is not revocable for lack of consideration during the time stated, or for a reasonable time if no time is stated, up to a period of three months [2–205]. (See Chapter 10, The Agreement: Offer.)

2. *Formation.* Under the Code, a contract for the sale of goods may be made in any manner that shows that the parties reached agreement, even though no particular moment can be pointed to as the time when the contract was made. Where the parties intended to make a contract but left one or more terms open, the contract is valid despite the lack of definiteness so long as the court has a basis for giving a remedy [2–204]. (See Chapter 10, The Agreement: Offer.)

3. *Additional terms in acceptances.* The Code states that an expression of acceptance or written confirmation sent within a reasonable time operates as an acceptance even if it states terms additional to or different from those offered, unless acceptance is expressly made conditional on assent to the additional or different terms [2–207]. (See Chapter 11, The Agreement: Acceptance.)

4. *Statute of frauds.* The **statute of frauds** in the Code applies to the sale of goods at a price of $500 or more. The Code makes special exceptions for written confirmations between merchants, part payment or part delivery, admissions in legal proceedings, and specially manufactured goods [2–201]. (See Chapter 16, Writing.)

Terms of the Contract

General Terms

Within broad limits, the parties to a contract to sell goods may include any terms on which they agree. Many practices have become common in the everyday transactions of business, and under the Code, if a particular matter is not specifically covered in a contract or is unclear, common trade practices are used to fill out the terms of the contract.

The Code sets out in some detail the rights of the parties when they use certain terms, and those meanings apply unless the parties agree otherwise. For example, if a contract includes an open-price clause where the price is to be determined later, or if a contract is silent about price, the price is what would be considered *reasonable* at the time of delivery. If the price is to be fixed by either the buyer or the seller, that person must act in *good faith* in setting the price. However, if it is clear from their negotiations that the parties do not intend to be bound unless they agree on a price, and the price is not agreed on or fixed, no contract results [2–305].

Quantity Terms

In some cases, the parties may state the quantity of goods covered by their sales contract in an indefinite way. Contracts that obligate a buyer to purchase a seller's *output* of a certain item or all of the buyer's *requirements* of a certain item are commonly encountered. These contracts caused frequent problems under the common law because of the indefiniteness of the parties' obligations. If the seller decided to double its output, did the buyer have to accept the entire amount? If the market price of the item soared much higher than the contract price, could the buyer double or triple its demands?

Output and Needs Contracts

In an "output" contract, one party is bound to sell its entire output of particular goods and the other party is bound to buy that output. In a "needs" or "requirements" contract, the quantity of goods is based on the needs of the buyer. In determining the quantity of goods to be produced or taken pursuant to an output or needs contract, the rule of *good faith* applies. Thus, no quantity can be demanded or taken that is unreasonably disproportionate to any stated estimate in the contract or to "normal" prior output or requirements if no estimate is stated [2–306(2)].

For example, Farmer contracts to supply Sam's Grocery with all of the apples it requires for sale to customers. If Sam's has sold between 500 and 700 bushels of apples a year over the past 10 years, Farmer could not be required to deliver 5,000 bushels of apples to Sam's one year because Sam had an unusual demand for them. Similarly, it would not be reasonable for Sam to say he would take only 10 bushels one year.

The *Indiana-American Water Co.* case, which follows, involves an exclusive requirements contract.

Indiana-American Water Co., Inc. v. Town of Seelyville

698 N.E.2d 1255 (Ind. Ct. App. 1998)

In 1983, the Indiana-American Water Company and the Town of Seelyville entered into a contract, which provided in pertinent part as follows:

> Company agrees to sell to the Town, and Town agrees to purchase from Company, at the rates hereinafter mentioned, such quantities of water as the Town may hereafter from time to time need (subject to all limitations contained in this Agreement). . . .

The term of the contract was 25 years and was to expire in the year 2008. The contract limited the quantity of water the Town might purchase to 1 million gallons of water per day. The contract contained other limitations and provided that "in no event shall the Company be obligated to supply water in excess of the limitations on usage as provided for expressly in this Agreement. . . . "

In 1967 (many years before the contract was executed), the Town acquired land which could be used as a wellfield to supply water. In 1997 the Town announced its plan to sell bonds to finance the construction of the improvements necessary to obtain water from the wellfield.

The Water Company initiated a lawsuit seeking a declaratory judgment that the Town's plan to develop its own supply of water would constitute a breach of the contract which, Water Company contended, required the Town to purchase all the water it needed from Water Company. The trial court held that the Town had a binding agreement that permitted it to purchase its water needs from Water Company but did not require it to purchase all of its water from Water Company. The Court also held that the Town's development and utilization of its source of water diminished its need and did not violate the agreement.

Bailey, Judge

I. Indefinite Quantities or Exclusive Requirements Contract

Output and requirement contracts are governed by the Uniform Commercial Code ("UCC") as adopted in Indiana under section 2–306(1) as follows:

> A term which measures the quantity by the output of the seller or the requirements of the buyer means such actual output or requirements as may occur in good faith, except that no quantity unreasonably disproportionate to any stated estimate or in the absence of a stated estimate to any normal or otherwise comparable prior output or requirements may be tendered or demanded.

Water Company contends that the contract requires Town to purchase all its water from Water Company and, in effect, prohibits Town from developing its own water supply. Water Company asserts that any other interpretation of the contract renders it unenforceable for lack of mutuality or indefiniteness because, although Water Company is required to supply all the water Town needs (within the limitations provided in the contract), Town is not required to purchase any minimum amount of water from Water Company. Thus, Water Company raises the implied threat that, if Town does not purchase all of its water from Water Company, Water Company is not bound by the contract and is free to leave the Town "high and dry" unless the Town capitulates to its demands.

A requirements contract is one in which the purchaser agrees to buy all of its needs of a specified material exclusively from a particular supplier, and the supplier agrees, in turn, to fill all of the purchaser's needs during the period of the contract. On the other hand, an indefinite quantities contract is a contract under which the buyer agrees to purchase and the seller agrees to supply whatever quantity of goods the buyer chooses to purchase from the seller. A requirements contract differs from an indefinite quantities contract in that, under a requirements contract the buyer agrees to turn exclusively to the seller to purchase his requirements as they develop. However, in an indefinite quantities contract, even if the buyer needs the commodity in question, he is not obligated to purchase it from the seller. Thus, an indefinite

quantities contract, without at least the requirement that the buyer purchase a guaranteed minimum quantity from the seller, is illusory and unenforceable. As expressed under Indiana law: "it is fundamental that a contract is unenforceable if it fails to obligate the parties to do anything."

We will strive to interpret a contract as valid rather than void. Additionally, where it is apparent that a binding exclusive requirements contract was intended, the buyer's promise to purchase from seller exclusively will be implied. Moreover, the requirements of good faith, specifically imposed under UCC section 2–306, prevent requirement contracts from being illusory or too indefinite to be enforced.

The present contract under scrutiny provides that Town will purchase "such quantities of water as the Town may hereafter from time to time need . . . " from Water Company. Moreover, the contract provides that "in no event shall the Company be obligated to supply water in excess of [1 million gallons per day]."

There has never been any contention that the contract permits Town to shop around and purchase its water needs up to 1 million gallons per day from any supplier other than Water Company. Thus, we interpret the present contract as a valid and enforceable exclusive requirements contract which requires Town to use Water Company exclusively to supply all the water it must purchase to meet its needs up to the amount of 1 million gallons of water per day.

II. Good Faith Reduction or Curtailment of Requirements

The most common problem arising out of a requirements contract is the situation where the price of the commodity is advantageous to the buyer who then demands a quantity unreasonable in excess of his needs in order to resell the excess at a profit, placing himself in competition with the seller. The provision in section 2–306(1) forbidding the "demand" by a buyer under a requirements contract to a "quantity unreasonably disproportionate to any stated estimate" applies only to this type of situation where the buyer requests more, as opposed to less, of the commodity in question.

Generally, the buyer in a requirements contract governed by UCC section 2–306(1) is required merely to exercise good faith in determining his requirements and the seller assumes the risk of all good faith variations in the buyer's requirements even to the extent of a determination to liquidate or discontinue the business. However, the buyer is not free, on any whim, to quit buying from seller. How exigent the buyer's change of circumstances must be to allow him to scale down his requirements is a difficult question. The seller assumes the risk of a change in the buyer's business that results in a substantial reduction in the buyer's needs, but the buyer assumes the risk of a less urgent change in circumstances. The essential ingredient of the buyer's good faith under such circumstances is that he not merely have had second thoughts about the terms of the contract and want to get out of it. However, if the buyer has a legitimate business reason for eliminating its requirements, as opposed to a desire to avoid its contract, the buyer acts in good faith.

It is well settled that it is not bad faith to take advantage of a technological advance which reduces the buyer's requirements. In the present case, Town had acquired a wellfield many years before the execution of the contract under scrutiny. Town's decision to develop its preexisting wellfield constitutes a legitimate, long-term business decision, and not merely a desire to avoid the terms of its contract with Water Company. Therefore, based on the above, we cannot conclude that Water Company carried its burden of overcoming the negative judgment in this case by demonstrating that the evidence leads unerringly to the conclusion that Town's development of its preexisting wellfield to reduce its need to purchase water from Water Company constitutes bad faith.

Judgment for Town affirmed.

Exclusive Dealing Contracts

The Code takes a similar approach to *exclusive dealing contracts.* Under the common law, these contracts were sources of difficulty due to the indefinite nature of the parties' duties. Did the dealer have to make any effort to sell the manufacturer's products, and did the manufacturer have any duty to supply the dealer? The Code says that unless the parties agree to the contrary, sellers have an obligation to use their best efforts to supply the goods to the buyer and the buyers are obligated to use their best efforts to promote their sale [2–306(2)].

Time for Performance

If no time for performance is stated in the sales contract, a *reasonable time* for performance is implied. If a contract requires successive performances over an indefinite period of time, the contract is valid for a reasonable time; however, either party can terminate it at any time upon the giving of reasonable notice unless the parties have agreed otherwise as to termination [2–309]. For example, Farmer Jack agrees to sell his entire output of apples each fall to a cannery at the then current market price. If the contract does not contain a provision spelling out how and when the contract can be terminated, Farmer Jack can terminate it if he gives the cannery a reasonable time to make arrangements to acquire apples from someone else.

Delivery Terms

Standardized shipping terms that through commercial practice have come to have a specific meaning are customarily used in sales contracts. The terms **FOB (free on board)** and **FAS (free alongside ship)** are basic delivery terms. If the delivery term of the contract is FOB or FAS the place at which the goods originate, the seller is obligated to deliver to the carrier goods that *conform to the contract* and *are properly prepared for shipment* to the buyer, and the seller must make a *reasonable contract for transportation of the goods* on behalf of the buyer. Under such delivery terms, the goods are at the risk of the buyer during transit and he must pay the shipping charges. If the term is *FOB destination,* the seller must deliver the goods to the designated destination and they are at the seller's risk and expense during transit. These terms will be discussed in more detail later in this chapter.

Title

Passage of Title

Title to goods cannot pass from the seller to the buyer until the goods are identified to the contract [2–401(1)]. For example, if Seller agrees to sell Buyer 50 chairs and Seller has 500 chairs in his warehouse, title to 50 chairs will not pass from Seller to Buyer until the 50 chairs that Buyer has purchased are selected and identified as the chairs sold to Buyer.

The parties may agree between themselves when title to the goods will pass from the seller to the buyer. If there is no agreement, then the general rule is that the *title to the goods passes to the buyer when the seller completes his obligations as to delivery of the goods:*

1. If the contract requires the seller to "ship" the goods to the buyer, then title passes to the buyer when the seller delivers conforming goods to the carrier.
2. If the contract requires the seller to "deliver" the goods to the buyer, title does not pass to the buyer until the goods are delivered to the buyer and tendered to him.
3. If delivery is to be made without moving the goods, then title passes at the time and place of contracting. An exception is made if title to the goods is represented by a document of title such as a warehouse receipt; then, title passes when the document of title is delivered to the buyer.
4. If the buyer rejects goods tendered to him, title reverts to the seller [2–401(4)].

Importance of Title

At common law, most of the problems relating to risks, insurable interests in goods, remedies, and similar rights and liabilities were determined on the basis of who was the technical title owner at the particular moment the right or liability arose. Under the Code, however, the rights of the seller and buyer and of third persons are determined irrespective of the technicality of who has the title, unless the provision of the Code expressly refers to title.

Determination of who has title to the goods is important in instances in which the rights of the seller's or the buyer's creditors in the goods are an issue. Another instance in which the identity of the title holder may be important is in determining whether the seller's insurance policy covers a particular loss.

The *Cardwell* case, which follows, illustrates the application of these rules.

State of Connecticut v. Cardwell *718 A.2d 954 (Conn. Sup. Ct. 1998)*

The State of Connecticut brought suit against Roderick Cardwell, a resident of Connecticut and the owner of Ticketworld, contending that he was engaged in "ticket scalping" in violation of Connecticut law. A Connecticut statute makes it an unfair or deceptive trade practice to sell tickets to sporting and entertainment

events to be held in Connecticut to purchasers located in Connecticut, for a price more than $3 in excess of the price, including tax, printed on the face of the ticket, or fixed for admission.

Cardwell was engaged in the business of selling tickets to entertainment and sporting events to be held in Connecticut. Ticketworld operated from two locations, one in Hartford and one in Springfield, Massachusetts. In order to obtain business, Ticketworld advertised in newspapers, including newspapers that circulate in Connecticut. The advertisements that appeared in Connecticut newspapers instructed prospective purchasers to telephone the Hartford office of Ticketworld for tickets to events that would take place outside of Connecticut, and to telephone the Springfield office for tickets to events that would be held in Connecticut. In the event that a prospective customer telephoned the Hartford office for tickets to a Connecticut event, the prospective customer was instructed to telephone the Springfield office in order to purchase those tickets.

On many occasions, Ticketworld sold tickets to Connecticut events from its Springfield office for which it charged a price that exceeded the fixed price of the ticket, tax included, by more than $3. The trial court found, specifically, that Ticketworld: (1) had charged Mary Lou Lupovitch $125 per ticket for tickets to an event at the Connecticut Tennis Court in New Haven, although those tickets had a fixed price of $32.50 per ticket; and (2) had charged Cyrilla Bergeron $137 per ticket for tickets to an event in Hartford, although those tickets had a fixed price of $53.50 per ticket. The court determined that Ticketworld, in selling these tickets for a price in excess of the fixed price for admission, had violated section 53–289. Consequently, it issued a permanent injunction prohibiting Cardwell from engaging in any activity within the state in connection with selling, offering for sale, attempting to sell, mailing or otherwise delivering, or advertising or promoting the sale of any ticket to an event to be held in Connecticut sold for a price more than $3 in excess of the fixed price of the ticket, including tax.

Cardwell appealed, contending that since he sold tickets to events in Connecticut only through Ticketworld's office in Springfield, Massachusetts, the "sales" did not take place in Connecticut and thus did not violate Connecticut law.

Berdon, Associate Justice In Connecticut, the sale of goods is governed by the Connecticut Uniform Commercial Code—Sales (code). Under the code, a "sale" is defined as "the passing of title from the seller to the buyer for a price. . . . " Section 2–106(1). The code further provides that "[u]nless otherwise explicitly agreed title passes to the buyer at the time and place at which the seller completes his performance with reference to the physical delivery of the goods, despite any reservation of a security interest and even though a document of title is to be delivered at a different time or place. . . . " Section 2–401(2). In addition, the code provides that "if the contract requires or authorizes the seller to send the goods to the buyer but does not require him to deliver them at destination, title passes to the buyer at the time and place of shipment. . . . " Section 2–401(2)(a).

The latter provision reflects the distinction made by the code between "shipment" and "destination" contracts. Under the code, when a carrier is used to transport the goods sold, shipment contracts and destination contracts are the only two types of sales contracts recognized. Section 2–401(2). Furthermore, under the code, "[t]he 'shipment' contract is regarded as the [general rule]." Under a shipment contract, the seller is either required or authorized to ship the goods to the buyer, but is not required to deliver them at a particular destination, and delivery to the carrier constitutes delivery to the buyer. Section 2–401(2)(a). Under a destination contract, the seller is required to deliver the goods to the buyer at the named destination and delivery occurs upon tender of the goods at that destination. A strong presumption against the creation of destination contracts is contained in the code such that, in the absence of specific proof of agreement by the seller to deliver the goods to a particular destination and to bear the attendant risk of loss until such delivery, a sales contract that merely provides that the goods will be shipped to a certain location will be deemed to be a shipment contract.

In this case, the contracts made by Cardwell for the sale of tickets do not contain any explicit agreement by Cardwell to deliver the goods to a particular destination or to bear the attendant risk of loss until such time as the goods are delivered. Therefore, the contracts at issue in this case are properly classified as shipment contracts. Because delivery of the goods to the carrier constitutes delivery to the buyer under a shipment contract, section 2–401(2)(a), with

respect to each sale of tickets made by Cardwell, delivery is made to the post office or other commercial carrier, and hence to the buyer, within Massachusetts. As a result, the "sale" of the tickets, as defined by the code, occurs in Massachusetts. Consequently, the trial court's determination that Cardwell sells tickets within Connecticut, and thereby violates the Connecticut statute, was incorrect.

Judgment reversed in favor of Cardwell.

Title and Third Parties

Obtaining Good Title

A fundamental rule of property law is that a buyer cannot receive better title to goods than the seller had. If Thief steals a television set from Adler and sells it to Brown, Brown does not get good title to the set, because Thief had no title to it. Adler would have the right to recover the set from Brown. Similarly, if Brown sold the set to Carroll, Carroll could get no better title to it than Brown had. Adler would have the right to recover the set from Carroll.

Under the Code, however, there are several exceptions to the general rule that a buyer cannot get better title to goods than his seller had. The most important exceptions include the following: (1) a person who has a voidable title to goods can pass good title to a bona fide purchaser for value; (2) a person who buys goods in the regular course of a retailer's business usually takes free of any interests in the goods that the retailer has given to others; and (3) a person who buys goods in the ordinary course of a dealer's business takes free of any claim of a person who entrusted those goods to the dealer.

Transfers of Voidable Title

A seller who has a **voidable title** has the power to pass good title to a *good faith purchaser for value* [2–403(1)]. A seller has a voidable title to goods if he has obtained his title through fraudulent representations. For example, a person would have a voidable title if he obtained goods by impersonating another person or by paying for them with a bad check or if he obtained goods without paying the agreed purchase price when it was agreed that the transaction was to be a cash sale. Under the Code, **good faith** means "honesty in fact in the conduct or transaction concerned" [1–201(19)] and a buyer has given **value** if he has given any consideration sufficient to support a simple contract [1–201(44)].

For example, Jones goes to the ABC Appliance Store, convinces the clerk that he is really Clark, who is a good customer of ABC, and leaves with a stereo charged to Clark's account. If Jones sells the stereo to Davis, who gives Jones value for it and has no knowledge of the fraud that Jones perpetrated on ABC, Davis gets good title to the stereo. ABC cannot recover the stereo from Davis; instead, it must look for Jones, the person who deceived it. In this situation, both ABC and Davis were innocent of wrongdoing, but the law considers Davis to be the more worthy of its protection because ABC was in a better position to have prevented the wrongdoing by Jones and because Davis bought the goods in good faith and for value.

The same result would be reached if Jones had given ABC a check that later bounced and then sold the stereo to Davis, who was a good faith purchaser for value. Davis would have good title to the stereo, and ABC would have to pursue its right against Jones on the bounced check.

The *Alsafi Oriental Rugs* case, which follows, illustrates the importance of determining the identity and creditworthiness of a person to whom one sells goods. It also shows the importance of a subsequent buyer qualifying as a good faith purchaser for value so that he is able to get good title from a seller with a voidable title.

Alsafi Oriental Rugs v. American Loan Company

864.S.W.2d 41 (Tenn Ct. App. 1993)

In December 1990, Arlene Bradley entered Alsafi Oriental Rugs and advised the owner that she was an interior decorator and that she was interested in selling some of his rugs to one of her customers. Alsafi did not know Bradley and had never done business with her. However, he allowed her to take three rugs out on

consignment with the understanding that she would return them if her customer was not interested. In fact, however, Bradley was not obtaining the rugs for a "customer" but was instead working for another individual, Walid Salaam, a rug dealer.

A friend of Bradley's had introduced her to Salaam earlier. Salaam had advised Bradley and her friend that he was the owner of an oriental rug store that had recently closed but he was attempting to reopen it. He offered to teach them how to become decorators and told them that when his store reopened they could operate out of the store. However, Salaam advised them that until he got his store restocked, he wanted them to "check out" rugs on approval from other rug dealers in town. As they had no experience with oriental rugs, Salaam instructed them what rugs to look for. He then instructed them to go to rug dealers in Memphis and advise them that they were interior decorators with customers that wanted to purchase oriental rugs.

After Bradley obtained possession of three rugs from Alsafi, she turned them over to Salaam, who in turn took them to a pawnshop operated by the American Loan Company. There Salaam pawned the rugs, obtaining approximately $5,000 after filling out the required paperwork. Salaam failed to redeem the rugs. Following the default, the pawnshop gave the appropriate notice that it intended to dispose of them.

In April 1991, Alsafi learned that his rugs were at the pawnshop. After visiting the pawnshop and identifying the three rugs as his, he brought suit to recover possession of them. The trial court held that the rugs had been stolen from Alsafi and awarded him possession of them. The pawnshop appealed.

Tomlin, Presiding Judge Section 2–403(1) reads as follows:

> (1) A purchaser of goods acquires all title which his transferor had or had power to transfer except that a purchaser of limited interest acquires rights only to the extent of the interest purchased. A person with voidable title has power to transfer a good title to a good faith purchaser for value. When goods have been delivered under a transaction of purchase the purchaser has such power even though:
>
> (a) the transferor was deceived as to the identity of the purchaser, or
>
> (b) the delivery was in exchange for a check which is later dishonored, or
>
> (c) it was agreed that the transaction was to be a "cash sale," or
>
> (d) the delivery was procured through fraud punishable as larcenous under the criminal law.

Section 2–403(1) empowers a purchaser with a voidable title to confer good title upon a good faith purchaser for value where the goods were procured through fraud punishable as larcenous under the criminal law. The distinction between theft and fraud in this context is found in the statutory definitions of "delivery" and "purchase." Delivery concerns a voluntary transfer of possession (1–201[14]), and purchase refers to a voluntary transaction creating an interest in property (1–201[32]). As one commentator has pointed out, "a thief who wrongfully takes goods is not a purchaser . . . but a swindler who fraudulently induces the victim to voluntarily deliver them is a purchaser."

In his sworn complaint as well as in his deposition, Alsafi characterized the transfer of possession to Bradley as a consignment—i.e., a voluntary relinquishment of possession to her. She was a purchaser as defined in sections 1–201(33) and 1–201(32). As such, she was empowered by that transaction to pass title to Salaam, who in turn passed title to American Loan Company, a good faith purchaser for value, as found by the trial court, which noted that American Loan Company had no actual knowledge or reason to believe that Salaam was not the true owner of the rugs.

Judgment reversed in favor of American Loan Company.

Buyers in the Ordinary Course of Business

A person who buys goods in the ordinary course of business from a person dealing in goods of that type takes free of any security interest in the goods given by his seller to another person [9–307(1)]. **A buyer in ordinary course** is a person who in good faith and without knowledge that the sale to him is in violation of the ownership rights of a third party buys goods in the ordinary course of business of a person selling goods of that kind, other than a pawnbroker [1–201(9)].

Concept Review

Title and Third Parties

General Rule	A seller cannot pass better title to goods than he has.
Exceptions to General Rule	1. A person who has voidable title to goods can pass good title to a bona fide purchaser for value. 2. A buyer in the ordinary course of a retailer's business usually takes free of any interests in the goods that the retailer has given to others. 3. A person who buys goods in the ordinary course of a dealer's business takes free of any claims of a person who entrusted those goods to the dealer.

For example, Brown Buick may borrow money from Bank in order to finance its inventory of new Buicks; in turn, Bank may take a security interest in the inventory to secure repayment of the loan. If Carter buys a new Buick from Brown Buick, he gets good title to the Buick free and clear of the Bank's security interest if he is a buyer in the ordinary course of business and without knowledge that the sale is in violation of a security interest. The basic purpose of this exception is to protect those who innocently buy from merchants and thereby to promote confidence in such commercial transactions. The exception also reflects the fact that the bank is more interested in the proceeds from the sale than in the inventory. Security interests and the rights of buyers in the ordinary course of business are discussed in more detail in Chapter 28, Security Interests in Personal Property.

Entrusting of Goods

A third exception to the general rule is that if goods are entrusted to a merchant who deals in goods of that kind, the merchant has the power to transfer all rights of the entruster to a buyer in the ordinary course of business [2–403(2)]. For example, Gail takes her watch to Jeweler, a retail jeweler, to have it repaired, and Jeweler sells the watch to Mary. Mary would acquire good title to the watch, and Gail would have to proceed against Jeweler for conversion of her watch. The purpose behind this rule is to protect commerce by giving confidence to buyers that they will get good title to the goods they buy from merchants in the ordinary course of business. However, a merchant-seller cannot pass good title to stolen goods even if the buyer is a buyer in the ordinary course of business. This is because the original owner did nothing to facilitate the transfer.

Risk of Loss

The transportation of goods from sellers to buyers can be a risky business. The carrier of the goods may lose, damage, or destroy them; floods, tornadoes, and other natural catastrophes may take their toll; thieves may steal all or part of the goods. If neither party is at fault for the loss, who should bear the risk? If the buyer has the risk when the goods are damaged or lost, the buyer is liable for the contract price. If the seller has the risk, he is liable for damages unless substitute performance can be tendered.

The common law placed the risk on the party who had technical title at the time of the loss. The Code rejects this approach and provides specific rules governing risk of loss that are designed to provide certainty and to place the risk on the party best able to protect against loss and most likely to be insured against it. Risk of loss under the Code depends on the terms of the parties' agreement, on the moment the loss occurs, and on whether one of the parties was in breach of contract when the loss occurred.

Terms of the Agreement

The contracting parties, subject to the rule of good faith, may specify who has the risk of loss in their agreement [2–509(4)]. This they may do directly or by using certain commonly accepted shipping terms in their contract. In addition, the Code has certain general rules on risk of loss that amplify specific shipping terms and control risk of loss in cases where specific terms are not used [2–509].

Shipment Contracts

If the contract requires the seller to ship the goods by carrier but does not require their delivery to a specific destination, the risk passes to the buyer when the seller delivers the goods to the carrier [2–509(1)(a)]. Shipment contracts are considered to be the normal contract where the seller is required to send goods to the buyer but is not required to guarantee delivery at a particular location.

The following are commonly used shipping terms that create shipment contracts:

1. *FOB (free on board) point of origin.* This term calls for the seller to deliver the goods free of expense and at the seller's risk at the place designated. For example, a contract between a seller located in Chicago and a buyer in New York calls for delivery FOB Chicago. The seller must deliver the goods at his expense and at his risk to a carrier in the place designated in the contract, namely Chicago, and arrange for their carriage. Because the shipment term in this example is FOB Chicago, the seller bears the risk and expense of delivering the goods to the carrier, but the seller is not responsible for delivering the goods to a specific destination. If the term is "FOB vessel, car, or other vehicle," the seller must load the goods on board at his own risk and expense [2–319(1)].

2. *FAS (free alongside ship).* This term is commonly used in maritime contracts and is normally accompanied by the name of a specific vessel and port—for example, "FAS Calgary [the ship], Chicago Port Authority." The seller must deliver the goods alongside the vessel *Calgary* at the Chicago Port Authority at his own risk and expense [2–319(2)].

3. *CIF (cost, insurance, and freight).* This term means that the price of the goods includes the cost of shipping and insuring them. The seller bears this expense and the risk of loading the goods [2–320].

4. *C & F.* This term is the same as CIF, except that the seller is not obligated to insure the goods [2–320].

The *Windows, Inc.* case, which follows, provides an example of the risk borne by a buyer in a shipment contract.

Windows, Inc. v. Jordan Panel Systems Corp. *38 UCC Rep.2d 267 (2nd Cir. 1999)*

Windows, Inc., was a fabricator and seller of windows, based in South Dakota. Jordan Panel Systems, Inc., was a construction subcontractor, which contracted to install window wall panels at an air cargo facility at John F. Kennedy Airport in New York City. Jordan ordered custom-made windows from Windows. The purchase contract specified that the windows were to be shipped properly packaged for cross-country motor freight transit and "delivered to New York City."

Windows constructed the windows according to Jordan's specifications. It arranged to have them shipped to Jordan by a common carrier, Consolidated Freightways Corp., and delivered them to Consolidated intact and properly packaged. During the course of shipment, however, the goods sustained extensive damage. Much of the glass was broken and many of the window frames were gouged and twisted. Jordan's president signed a delivery receipt noting that approximately two-thirds of the shipment was damaged due to "load shift." Jordan, seeking to stay on its contractor's schedule, directed its employees to disassemble the window frames in an effort to salvage as much of the shipment as possible.

Jordan made a claim with Consolidated for damages it had sustained as a result of the casualty, including labor costs from its salvage efforts and other costs from Jordan's inability to perform its own contractual obligations on schedule. Jordan also ordered a new shipment from Windows, which was delivered without incident.

Jordan did not pay Windows for either the first shipment of damaged windows or the second, intact shipment. Windows filed suit to recover payment from Jordan for both shipments. Jordan counterclaimed, seeking incidental and consequential damages resulting from the damaged shipment. Windows then brought a third party claim against Consolidated. Windows settled its claims against Consolidated, and Windows later withdrew its claims against Jordan.

The district court granted Windows' motion for summary judgment on Jordan's counterclaim against Windows for incidental and consequential damages. Jordan appealed.

Leval, Circuit Judge Jordan seeks to recover incidental and consequential damages pursuant to UCC section 2–715. Under that provision, Jordan's entitlement to recover incidental and consequential damages depends on whether those damages "result[ed] from the seller's breach." A destination contract is covered by section 2–503(3); it arises where "the seller is *required to deliver* at a particular destination." Section 2–504 (emphasis added). Under a shipment contract, the seller must "put the goods in the possession of such a carrier and make such a contract for their transportation as may be reasonable having regard to the nature of the goods and other circumstances of the case." Section 2–504(a).

Where the terms of an agreement are ambiguous, there is a strong presumption under the UCC favoring shipment contracts. Unless the parties "expressly specify" that the contract requires the seller to deliver to a particular destination, the contract is generally construed as one for shipment.

Jordan's confirmation of its purchase order, by letter to Windows dated September 22, 1993, provided, "All windows to be shipped properly crated/packaged/boxed suitable for cross-country motor freight transit and delivered to New York City." We conclude that this was a shipment contract rather than a destination contract.

To overcome the presumption favoring shipment contracts, the parties must have explicitly agreed to impose on Windows the obligation to effect delivery at a particular destination. The language of this contract does not do so. Nor did Jordan use any commonly recognized industry term indicating that a seller is obligated to deliver the goods to the buyer's specified destination.

Given the strong presumption favoring shipment contracts and the absence of explicit terms satisfying both requirements for a destination contract, we conclude that the contract should be deemed a shipment contract.

Under the terms of its contract, Windows thus satisfied its obligations to Jordan when it put the goods, properly packaged, into the possession of the carrier for shipment. Upon Windows' proper delivery to the carrier, Jordan assumed the risk of loss, and cannot recover incidental or consequential damages from the seller caused by the carrier's negligence.

The allocation of risk is confirmed by the terms of UCC section 2–509(1)(a), entitled "Risk of Loss in the Absence of Breach." It provides that where the contract "does not require [the seller] to deliver [the goods] at a particular destination, the risk of loss passes to the buyer when the goods are duly delivered to the carrier." UCC section 2–509(1)(a). As noted earlier, Jordan does not contest the court's finding that Windows duly delivered conforming goods to the carrier. Accordingly, as Windows had already fulfilled its contractual obligations at the time the goods were damaged and Jordan had assumed the risk of loss, there was no "seller's breach" as is required for a buyer to claim incidental and consequential damages under section 2–715. Summary judgment for Windows was therefore proper.

We are mindful of Jordan's concern that it not be left "holding the bag" for the damages it sustained through no fault of its own. The fact that Jordan had assumed the risk of loss under section 2–509(1)(a) by the time the goods were damaged does not mean it is without a remedy. Under the 1906 Carmack Amendment to the Interstate Commerce Act, a buyer or seller has long been able to recover directly from an interstate common carrier in whose care their goods are damaged. Liability attaches unless the carrier can establish one of several affirmative defenses; for example, by showing that the damage was the fault of the shipper or caused by an Act of God.

Judgment affirmed in favor of Windows.

Destination Contracts

If the contract requires the seller to deliver the goods to a specific destination, the seller bears the risk and expense of delivery to that destination [2–509(1)(b)]. The following are commonly used shipping terms that create destination contracts:

1. *FOB destination.* An FOB term coupled with the place of destination of the goods puts the expense and risk of delivering the goods to that destination on the

seller [2–319(1)(b)]. For example, a contract between a seller in Chicago and a buyer in Phoenix might call for shipment FOB Phoenix. The seller must ship the goods to Phoenix at her own expense, and she also retains the risk of delivery of the goods to Phoenix.

2. *Ex-ship.* This term does not specify a particular ship, but it places the expense and risk on the seller until the goods are unloaded from whatever ship is used [2–322].

3. *No arrival, no sale.* This term places the expense and risk during shipment on the seller. If the goods fail to arrive through no fault of the seller, the seller has no further liability to the buyer [2–324].

For example, a Chicago-based seller contracts to sell a quantity of shirts to a buyer FOB Phoenix, the buyer's place of business. The shirts are destroyed en route when the truck carrying the shirts is involved in an accident. The risk of the loss of the shirts is on the seller, and the buyer is not obligated to pay for them. The seller may have the right to recover from the trucking company, but between the seller and the buyer, the seller has the risk of loss. If the contract had called for delivery FOB the seller's manufacturing plant, then the risk of loss would have been on the buyer. The buyer would have had to pay for the shirts and then pursue any claims that he had against the trucking company.

Goods in the Possession of Third Parties

If the goods are in the possession of a bailee and are to be delivered without being moved, the risk of loss passes to the buyer upon delivery to him of a negotiable document of title for the goods; if no negotiable document of title has been used, the risk of loss passes when the bailee indicates to the buyer that the buyer has the right to the possession of the goods [2–509(2)]. For example, if Farmer sells Miller a quantity of grain currently stored at Grain Elevator, the risk of loss of the grain will shift from Farmer to Miller (1) when a negotiable warehouse receipt for the grain is delivered to Miller or (2) when Grain Elevator notifies Miller that it is holding the grain for Miller.

Risk Generally

If the transaction does not fall within the situations discussed above, the risk of loss passes to the buyer upon *receipt* of the goods if the seller is a merchant; if the seller is not a merchant, then the risk of loss passes to the buyer upon the *tender of delivery* of the goods to the buyer [2–509(3)]. If Jones bought a television set from ABC Appliance on Monday, intending to pick it up on Thursday, and the set was stolen on Wednesday, the risk of loss remained with ABC. However, if Jones had purchased the set from his next-door neighbor and could have taken delivery of the set on Monday (i.e., delivery was tendered then), the risk of loss was Jones's.

Effect of Breach on Risk of Loss

When a seller tenders goods that do not conform to the contract and the buyer has the right to reject the goods, the risk of loss remains with the seller until any defect is cured or until the buyer accepts the goods [2–510(1)]. Where the buyer rightfully revokes his acceptance of goods, the risk of loss is with the seller to the extent that any loss is not covered by the buyer's insurance [2–510(2)]. This rule gives the seller the benefit of any insurance carried by the buyer.

For example, if Adler bought a new Buick from Brown Buick that he later returned to Brown because of serious defects in it and if through no fault of Adler the automobile was damaged while in his possession, then the risk of loss would be with Brown. However, if Adler had insurance on the automobile covering the damage to it and recovered from the insurance company, Adler would have to turn the insurance proceeds over to Brown or use them to fix the car before returning it to Brown.

When a buyer repudiates a contract for goods and those goods have already been set aside by the seller, the risk of loss stays with the buyer for a commercially reasonable time after the repudiation if the seller's insurance is not sufficient to cover any loss [2–510(3)]. Suppose Cannery contracts to buy Farmer's entire crop of peaches. Farmer picks the peaches, crates them, tenders delivery to Cannery, and stores them in his barn. Cannery then tells Farmer that it does not intend to honor the contract. Shortly thereafter, but before Farmer has a chance to find another buyer, the peaches are spoiled by a fire. If Farmer's insurance covers only part of the loss, Cannery must bear the rest of the loss.

Insurable Interest

The general practice of insuring risks is recognized and provided for under the Code. A buyer may protect his interest in goods that are the subject matter of a sales contract before he actually obtains title. The

Concept Review

Risk of Loss

The point at which the risk of loss or damage to goods identified to a contract passes to the buyer is as follows:

1. If there is an agreement between the parties, the risk of loss passes to the buyer at the time they have agreed to.
2. If the contract requires the seller to ship the goods by carrier but does not require that the seller guarantee their delivery to a specific destination (shipment contract), the risk of loss passes to the buyer when the seller has delivered the goods to the carrier and made an appropriate contract for their carriage.
3. If the contract requires the seller to guarantee delivery of the goods to a specific destination (destination contract), the risk of loss passes to the buyer when the seller delivers the goods to the designated destination.
4. If the goods are in the hands of a third person and the contract calls for delivery without moving the goods, the risk of loss passes to the buyer when the buyer has the power to take possession of the goods—for example, when he receives a document of title.
5. In any situation other than those noted above where the seller is a merchant, the risk of loss passes to the buyer on his receipt of the goods.
6. In any situation other than those noted above where the seller is not a merchant, the risk of loss passes to the buyer on the tender of delivery to the buyer by the seller.
7. When a seller tenders goods that the buyer lawfully could reject because they do not conform to the contract description, the risk of loss stays on the seller until the defect is cured or the buyer accepts them.
8. When a buyer rightfully revokes acceptance of goods, the risk of loss is on the seller from the beginning to the extent it is not covered by the buyer's insurance.
9. If a buyer repudiates a contract for identified, conforming goods before risk of loss has passed to the buyer, the buyer is liable for a commercially reasonable time for any loss or damage to the goods that is not covered by the seller's insurance.

buyer obtains an insurable interest in existing goods when they are identified as the goods covered by the contract even though they are in fact nonconforming. The seller retains an insurable interest in goods so long as he has either title or a security interest in them [2–501(2)].

Sales on Trial

A common commercial practice is for a seller of goods to entrust possession of goods to a buyer to either give the buyer an opportunity to decide whether or not to buy them or to try to resell them to a third person. The entrusting may be known as a **sale on approval,** a **sale or return,** or a **consignment,** depending on the terms of the entrusting. Occasionally, the goods may be damaged, destroyed, or stolen, or the creditors of the buyer may try to claim them; on such occasions, the form of the entrusting will determine whether the buyer or the seller had the risk of loss and whether the buyer's creditors can successfully claim the goods.

Sale on Approval

In a sale on approval, the goods are delivered to the buyer with an understanding that he may use or test them for the purpose of determining whether he wishes to buy them [2–326(1)(a)]. In a sale on approval, neither the risk of loss nor title to the goods passes to the buyer until he accepts the goods. The buyer has the right to use the goods in any manner consistent with the purpose of the trial, but any unwarranted exercise of ownership over the goods is considered to be an acceptance of the goods. Similarly, if the buyer fails to notify the seller of his election to return the goods, he is considered to have accepted them [2–327]. For example, if Dealer agrees to let Hughes take a new automobile home to drive for a day to see whether she wants to buy it and Hughes takes the car on a two-week vacation trip, Hughes will be considered to have accepted the automobile because she used it in a manner beyond that contemplated by the trial and as if she were its owner. If Hughes had driven the automobile for a day, decided not to buy it, and parked it in her driveway for two weeks without telling Dealer

of her intention to return it, Hughes would also be deemed to have accepted the automobile.

Once the buyer has notified the seller of his election to return the goods, the return of the goods is at the seller's expense and risk. Because the title and risk of loss of goods delivered on a sale on approval remain with the seller, goods held on approval are not subject to the claims of the buyer's creditors until the buyer accepts them [2–326].

Sale or Return

In a sale or return, goods are delivered to a buyer for resale with the understanding that the buyer has the right to return them [2–326(1)(b)]. Under a sale or return, the title and risk of loss are with the buyer. While the goods are in the buyer's possession, they are subject to the claims of his creditors [2–326 and 2–327]. For example, if Publisher delivers some paperbacks to Bookstore on the understanding that Bookstore may return any of the paperbacks that remain unsold at the end of six months, the transaction is a sale or return. If Bookstore is destroyed by a fire, the risk of loss of the paperbacks was Bookstore's and it is responsible to Publisher for the purchase price. Similarly, if Bookstore becomes insolvent and is declared a bankrupt, the paperbacks will be considered part of the bankruptcy estate. If the buyer elects to return goods held on a sale or return basis, the return is at the buyer's risk and expense.

Sale on Consignment

Sometimes, goods are delivered to a merchant on consignment. If the merchant to whom goods are consigned maintains a place of business dealing in goods of that kind under a name other than that of the person consigning the goods, then the consignor must take certain steps to protect his interest in the goods or they will be subject to the claims of the merchant's creditors. The consignor must (1) make sure that a sign indicating the consignor's interest is prominently posted at the place of business, or (2) make sure that the merchant's creditors know that he is generally in the business of selling goods owned by others, or (3) comply with the filing provisions of Article 9 of the Code—Secured Transactions.

For example, Jones operates a retail music store under the name of City Music Store. Baldwin Piano Company delivers some pianos to Jones on consignment. If no notices are posted indicating Baldwin's interest in the pianos, if Jones is not generally known to be selling from a consigned inventory, and if Baldwin does not file its interest with the recording office pursuant to Article 9 of the Code, then the goods are subject to the claims of Jones's creditors. This is crucial to Baldwin because it may have intended to retain title. However, the Code treats a consignment to a person doing business under a name other than that of the consignor as a "sale or return" [2–326(3)]. If Jones did business as the Baldwin Piano Company, Baldwin's interest would be protected from the claims of Jones's creditors without the need for Baldwin to post a sign or to file under Article 9.

The case that follows, *In Re Auclair,* illustrates the risks borne by a person who makes goods available on a sale or return or consignment basis.

In Re Auclair: Mc Gregor v. Jackson *131 BR 185 (Bankr, MD Mass. 1991)*

Edd and Diane Auclair maintained a place of business in Covington County, Alabama, where they operated a gun shop and convenience store named Heath Grocery and Final Chapter Firearms. In November 1989, Luke Jackson delivered about 70 firearms to the Auclairs to sell on consignment. The consignment agreement provided as follows:

I Edd Auclair have received a number of guns, of which a list will be attached and I will sign. As I sell a gun I will pay James E. "Luke" Jackson or Betty King with them giving me a receipt for that particular gun. If something should happen to Luke Jackson the guns are to be returned to Betty King or at that time Betty King and Edd Auclair can enter into an agreement. If something should happen to Edd Auclair, Diane agrees to return all guns that have not been paid for to Luke Jackson or Betty King and pay for any that has [sic] been sold.

The agreement was signed by Jackson, King and the Auclairs.

On June 28, 1990, the Auclairs filed a petition in bankruptcy under Chapter 11 of the Bankruptcy Act. Shortly thereafter, Jackson removed the firearms he had consigned from the Auclairs' store. The bankruptcy trustee representing the Auclairs' creditors claimed that the firearms were the property of the bankruptcy estate.

Gordon, Bankruptcy Judge Both parties agree that section 2–326(3) regarding consignments applies to the facts of this case. Under that subsection, goods delivered on consignment are "deemed to be on sale or return." Thus, by deeming the consignee a purchaser of the goods, the consignor is precluded from asserting an ownership claim to the goods vis-a-vis the consignee's creditors.

Applying that section to the instant case, Jackson is precluded from asserting his ownership of the firearms vis-a-vis the trustee. However, the subsection is not applicable to a consignor who—

> (a) Complies with an applicable law providing for a consignor's interest or the like to be evidenced by a sign, or
>
> (b) Establishes that the person conducting the business is generally known by his creditors to be substantially engaged in selling the goods of others, or
>
> (c) Complies with the filing provisions of the article on secured transactions (Article 9)." Section 2–326(3).

Jackson is not protected under (a) because Alabama does not have a sign law applicable to consignments. Jackson is not protected under (c) because he did not comply with the filing provisions of Article 9.

Jackson contends, but has failed to prove, that he is protected under (b). The evidence does not reflect that the debtors were "generally known by [their] creditors to be substantially engaged in selling the goods of others."

Jackson admitted that he did not notify any of the Auclairs' creditors that the firearms were placed with the Auclairs on consignment. The evidence reveals, *at best,* that only one of the Auclairs' 18 creditors had knowledge of the consignment. The court concludes that the debtors were not "generally known by [their] creditors to be substantially engaged in selling" consigned firearms.

The court holds that the firearms in question are property of this bankruptcy estate which the trustee may sell. A separate order will be entered requiring Jackson to deliver the firearms to the trustee and to account for such property or its value. Jackson will have an unsecured claim for the value of the property returned to the trustee, for which he may file a proof of claim in this case.

Judgment in favor of bankruptcy estate and against Jackson.

Bulk Transfers

Bulk Transfer Legislation

There is one other situation in which the creditors of a party to a sales contract may claim an interest (other than an Article 9 security interest) in the goods. This is in the case of a bulk transfer as covered by Article 6 of the Code. A bulk transfer occurs when a person whose main business is selling goods from stock (a retailer, a wholesaler, and in some cases a manufacturer) sells a major part of the materials, supplies, merchandise, or other inventory of the business in bulk and not in the ordinary course of business [6–102].

The danger in such cases is that financially troubled sellers may secretly dispose of their assets, pocket the proceeds, and disappear. In order to protect such a seller's creditors from being defrauded in this manner, Article 6 is designed to give them notice of the sale and enable them to file any claims they may have against the goods. The seller must give the buyer a sworn list of the seller's creditors and a schedule of the property to be transferred [6–104]. The buyer must keep this list available for inspection and copying by the seller's creditors for six months after the sale [6–104].

Notice to Creditors

The buyer must notify all known creditors of the sale at least 10 days before taking possession of the goods [6–105]. Failure to comply with the requirements means that the buyer holds the goods in trust for the seller's creditors. In some states (Pennsylvania, for example), an optional provision of the Code has been enacted requiring that the proceeds of the bulk transfer be paid to the seller's creditors [6–106].

Statute of Limitations

Creditors have only six months from the time the transfer took place to enforce their rights under Article 6, unless the transfer was concealed from them.

In such a case, they have six months after the transfer was discovered [6–111].

Current Developments

For some time there has been general dissatisfaction with the current bulk sales law. The National Conference of Commissioners on Uniform State Laws has prepared a draft revision to UCC Article 6 (Bulk Sales) for consideration by the states; at the same time, the commissioners voted to recommend to the states that they repeal Article 6 and do without a bulk sales law. At the time this book went to press, a significant majority of states had repeated Article 6.

Ethical and Public Policy Concerns

1. Suppose you are the owner of a small jewelry store that sells new and antique jewelry. A customer leaves a family heirloom—an elaborate diamond ring—with you for cleaning and resetting. By mistake, a clerk in your store sells it to another customer. What would you do? If you were the buyer of the ring and had given it to your fiancé as a gift and then were informed of the circumstances, what would you do?

2. Under the pre-Code law, most issues relating to risks and insurable interests in goods were determined on the basis of who was technical title owner at the particular moment the problem of a right or liability arose. What policy considerations do you believe were involved in the decision by the drafters of the Code to provide for resolution of issues concerning risk of loss and insurable interest independent of who was the technical title owner?

3. In the *In Re Auclair* case, the owner that made the firearms available to the retailers for resale lost out to other creditors of the retailers when they filed for bankruptcy. Does this strike you as a reasonable result? What policy considerations underlie the Code provisions on which the court based its decision?

Problems and Problem Cases

1. Suchy Funeral Home brought suit against Waldenmaier to recover the contracted price for a funeral, including the provision of a casket. Waldenmaier claimed that the lawsuit was commenced more than four years after the funeral and thus was barred by the Code's four-year statute of limitations. Suchy contended that the Code's statute of limitations did not apply because no "sale of goods" was involved. Should the court apply the Code's provisions to this contract?

2. CMD *Video Case.* See "Software Horror Story." Chuck Mason, a computer consultant, was hired to develop customized software for a client, Clark. Mason's plan was to purchase off-the-shelf software and to modify it to meet the customer's need. After identifying several software packages that might meet his need, he contacted a software retailer, Bits and Bytes, by phone and explained that he needed to be able to modify the package at the source code level and to have the source code. He then asked Bits and Bytes to recommend a package that would meet these criteria and be easy to modify. After receiving the recommended software (D-Base Hit) from Bits and Bytes, Chuck modified the software but was unable to get it to work as envisioned. Bits and Bytes refused to take it back because Chuck's modifications prevented it from being resold or returned to the software publisher. Chuck refused to pay Bits and Bytes for the package. Chuck then purchased a different software package (Customized Amazing Base) and customized it for his customer. However, the customized software never functioned satisfactorily for the client, and she refused to pay Chuck for it. Does the UCC apply to the sale of the software by the retailer? Does it apply to the sale of the customized software by Chuck to the customer?

3. On June 3, 1991, Donald and Sonna Hummel executed a written purchase order invoice for the purchase of a 1989 Chevrolet Corsica from Raisor Pontiac in Lafayette, Indiana. The purchase order indicated that the total retail price of the Corsica would be $7,681.98, that the Hummels would make a cash down payment of $624.50, and that the Purdue Employees Federal Credit Union would be the lienholder for the $7,057.48 balance. The Hummels signed a Retail Installment Contract and Security Agreement with Raisor Pontiac, presented a check for $350.00, and took delivery of the Corsica. The next day the Hummels gave Raisor Pontiac a second check for $274.50. On June 5, 1991, Donald Hummel was driving the Corsica when it collided with a vehicle driven by Matthew Lyons. At the time of the accident, Raisor Pontiac held the certificate of title to the Corsica and the vehicle bore an interim license plate.

Lyons was injured in the accident and Sean O'Donnell, a passenger in the Lyons vehicle, died in the collision.

The day after the accident, the Hummels' $274.50 check to Raisor Pontiac was debited to their account and on June 7, the $350.00 check was debited. Also on June 7, Raisor Pontiac assigned the Installment Contract with the Hummels to the Credit Union, which remitted a check to Raisor Pontiac for $7,057.48, the amount financed. Raisor Pontiac transferred the Certificate of Title to the Hummels on June 11. At the time of the accident, Raisor Pontiac was insured by American Employers Insurance Co. under a policy that covered its ownership, maintenance, or use of covered automobiles. Sean O'Donnell's parents sued Hummel for the wrongful death of their son, alleging that he was negligent in his operation of the automobile at the time of the collision. They also sought a declaratory judgment that the American Employers' policy covered this situation on the grounds that Raisor Pontiac was the owner of the vehicle at the time of the accident. Was Raisor Pontiac the owner or title holder of the Corsica at the time of the accident?

4. John Clark rented a car from Alamo Rent-A-Car, using an alias. Clark kept that car beyond the date it was due back, and Alamo attempted to contact him and get the car back. When Alamo was unable to get the car back or find Clark, it reported the vehicle stolen. In the interim, Clark had fraudulently re-registered the vehicle and obtained a title. Clark then sold the car to Terry and Vyonne Mendenhall. The Department of Motor Vehicles, while running a 50-state check on the vehicle Alamo had reported stolen, found that the stolen vehicle had been registered to the Mendenhalls, seized it from them, and returned the car to Alamo. The Mendenhalls then sued Alamo claiming they had acquired valid title to the vehicle when they purchased it from Clark. Are the Mendenhalls entitled to ownership of the car?

5. Shaker Valley Auto & Tire purchased a pickup truck at an auction and brought the vehicle for service to Fred Madore Chevrolet-Pontiac-Oldsmobile, an automobile dealership that sells and services vehicles. A few weeks later, Madore sold the truck to Winston Titus. Titus was unaware of Shaker Valley's ownership of the vehicle. In a subsequent court proceeding, both Titus and Shaker Valley claimed valid title to the truck. Shaker Valley argued that it never authorized the sale of the vehicle and that Madore had no title to transfer to Titus because Shaker Valley never transferred title to Madore. Does Titus have good title to the truck under the Code?

6. CMD *Video Case.* See "TV Repair." Arnold took his old TV to an appliance store for repair. The appliance store developed financial problems and was unable to pay its debts to its creditors as they became due. Facing bankruptcy, the appliance store held a going-out-of-business sale and sold everything in the store, including Arnold's TV, to individual customers who had no knowledge of anyone else's interest in the goods. Does Arnold have the legal right to recover the TV from the person who bought it at the going-out-of-business sale?

7. In June, Ramos entered into a contract to buy a motorcycle from Big Wheel Sports Center. He paid the purchase price of $893 and was given the papers necessary to register the cycle and get insurance on it. Ramos registered the cycle but had not attached the license plates to it. He left on vacation and told the salesperson for Big Wheel Sports Center that he would pick up the cycle on his return. While Ramos was on vacation, there was an electric power blackout in New York City and the cycle was stolen by looters. Ramos then sued Big Wheel Sports Center to get back his $893. Did Big Wheel Sports Center have the risk of loss of the motorcycle?

8. CMD *Video Case.* See "Sour Grapes." Jelly Manufacturer, a food processor in Chicago, placed a phone order with Grape Grower, a grower in California, for a quantity of perishable produce. The shipping term was CIF with payment to be made on delivery (COD). Grower delivered the goods called for in the contract to a carrier and contracted for their shipment. However, it neglected to provide that the goods be shipped under refrigeration. The goods were loaded on a non-refrigerated boxcar and as a result the produce was spoiled when it reached Chicago. Who had the risk of loss, Grape Grower or Jelly Manufacturer?

9. Richard Burnett agreed to purchase a mobile home with a shed from Betty Jean Putrell, Executrix of the Estate of Lena Holland. On Saturday, March 3, 1990, Burnett paid Putrell $6,500 and was given the certificate of title to the mobile home as well as a key to it, but no keys to the shed. At the time the certificate of title was transferred, the following items remained in the mobile home: the washer and dryer, mattress and box

springs, two chairs, items in the refrigerator, and the entire contents of the shed. These items were to be retained by Putrell and removed by her. To facilitate removal she retained one key to the mobile home and the only keys to the shed. On Sunday, March 4, the mobile home was destroyed by fire through the fault of neither party. At the time of the fire, Putrell still had a key to the mobile home as well as the keys to the shed and she had not removed the contents of the mobile home or of the shed. The contents of the shed were not destroyed and were subsequently removed by Putrell. Burnett brought suit against Putrell to recover the $6,500 he had paid for the mobile home and shed. Did the seller, Putrell, have the risk of loss of the trailer?

10. Collier, a retail store operator, accepted a delivery of stereo tapes, cartridges, and equipment from B & B Sales. The invoice noted that the goods had been "sold to" Collier and stated: "Terms 30-60-90; this equipment will be picked up if not sold in 90 days." Shortly thereafter, Collier's store was burglarized and all the merchandise was stolen. B & B filed suit against Collier for the purchase price of the merchandise, claiming that the transaction was a sale and that Collier was liable to pay for the merchandise. Collier argued that the transaction was a consignment and that B & B had the risk of loss. Did Collier or B & B have the risk of loss of the merchandise?

Suppose that you are the president of a firm making products for sale to the public. One of your worries would be the company's exposure to civil liability for defects in those products. In particular, you might worry about changes in the law that make such liability more likely or more expensive. In other situations, however, the same changes might appeal to you. This is especially true if *you* are harmed by defective products you purchase as a consumer. You might also appreciate such changes if your firm wants to sue a supplier that has sold it defective products.

Each of these situations involves the law of *product liability.* Product liability law is the body of legal rules governing civil suits for losses resulting from

defective goods.[1] After sketching product liability law's historical evolution, this chapter discusses the most important *theories of product liability recovery.* These theories are rules of law saying that, once plaintiffs prove certain facts, they recover for losses resulting from defective goods. The second part of the chapter considers certain legal problems that are common to all the theories of recovery but that may be resolved differently from theory to theory.

The Evolution of Product Liability Law

The 19th Century

A century or so ago, the rules governing suits for defective goods were very much to sellers' and manufacturers' advantage. This was the era of *caveat emptor* (let the buyer beware). In contract suits involving defective goods, there usually was no liability unless the seller had made an express promise to the buyer and the goods did not conform to that promise. Some courts even required that the words *warrant* or *guarantee* accompany the promise before liability would exist. In negligence suits, the "no liability without fault" principle was widely accepted, and plaintiffs often had difficulty proving negligence because the necessary evidence was under the defendant's control. In both contract and negligence cases, finally, the doctrine of "no liability outside privity of contract"—that is, no liability without a direct contractual relationship between plaintiff and defendant—often prevented plaintiffs from recovering against parties with whom they had not directly dealt.

One reason for these prodefendant rules was the laissez-faire values that strongly influenced public policy and the law. One expression of those values was the belief that sellers and manufacturers should be contractually bound only when they deliberately assumed such liability by actually making a promise to someone with whom they dealt directly. Another factor limiting manufacturers' liability for defective products, some say, was the desire to promote industrialization by preventing potentially crippling damage recoveries against infant industries. Yet another explanation for this limited liability is that it might not have been too harmful to plaintiffs. Chains of distribution tended to be short, so the no-liability-outside-privity defense was not always available to sellers. Because goods tended to be simple, buyers sometimes could inspect them for defects. Before the emergence of large corporations late in the 19th century, sellers and buyers often were of relatively equal size, sophistication, and bargaining power. Thus, they could deal on a relatively equal footing.

The 20th Century

Today, laissez-faire values, while still influential, do not pack the weight they did a century ago. Instead, a more protective, interdependent climate has emerged. With the development of a viable industrial economy, there has been less perceived need to protect manufacturers from liability for defective goods. The emergence of long chains of distribution has meant that consumers often do not deal directly with the parties responsible for defects in the products they buy. Because large corporations tend to dominate the economy, consumers are less able to bargain equally with such parties in any event. Finally, the growing complexity of goods has made buyer inspections more difficult.

In response to all these changes, product liability law has moved from its earlier *caveat emptor* emphasis to a stance of *caveat venditor* (let the seller beware). To protect consumers, modern courts and legislatures intervene in private contracts for the sale of goods and impose liability regardless of fault. As a result, sellers and manufacturers face greater liability and higher damage recoveries for defects in their products. Underlying the shift toward *caveat venditor* is the belief that sellers, manufacturers, and their insurers are best able to bear the economic costs associated with product defects, and that they usually can pass on these costs through higher prices. Thus, the economic risk associated with defective products has been effectively spread throughout society, or "socialized."

The Current "Crisis" in Product Liability Law

Modern product liability law and its socialization-of-risk strategy have come under increasing attack over the past 20-odd years. Such attacks often focus on the difficulty sellers and manufacturers encounter in obtaining product liability insurance and the increased

[1] Chapter 47 discusses federal consumer protection and product safety regulation.

costs of such insurance. Some observers blame the insurance industry for these developments, while others trace them to the increased liability and greater damage recoveries just discussed. Whatever their origin, these problems have sometimes put sellers and manufacturers in a bind. Businesses unwilling or unable to buy expensive product liability insurance run the risk of being crippled by large damage awards unless they self-insure, which can be an expensive option today. Firms that purchase insurance, on the other hand, often must pay higher prices for it. In either case, the resulting costs may be difficult to pass on to consumers. In addition, those costs may deter the development and marketing of innovative new products.

For these reasons and others, recent years have witnessed many efforts to scale back the pro-plaintiff thrust of modern product liability law. This is one aspect of the tort reform movement discussed in Chapter 7. However, despite the introduction of many federal reform bills, Congress has yet to make significant changes in product liability law. As we note later in this chapter, however, some tort reform efforts have occurred in the states.

Theories of Product Liability Recovery

Some theories of product liability recovery are contractual and some are tort-based. The contract theories involve a product **warranty**—a contractual promise about the nature of the product sold. In warranty cases, plaintiffs claim that the product failed to live up to the seller's promise. In tort cases, on the other hand, plaintiffs usually argue that the defendant was negligent or that strict liability should apply.[2]

Express Warranty

Creating an Express Warranty UCC section 2–313(1) states that an **express warranty** is created in any of three ways.

1. Any *affirmation of fact or promise* regarding the goods creates an express warranty that the goods will conform to that affirmation. For instance, if a computer manufacturer's web site says that a computer has a certain amount of memory, this statement creates an express warranty to that effect.

2. Any *description* of the goods creates an express warranty that the goods will conform to the description. Descriptions include: (1) statements that goods are of a certain brand, type, or model (e.g., an IBM dot-matrix computer printer); (2) adjectives that characterize the product (e.g., shatterproof glass); and (3) drawings, blueprints, and technical specifications.

3. A *sample* or *model* of goods to be sold creates an express warranty that the rest of the goods will conform to the sample or model. A sample is an object drawn from an actual collection of goods to be sold, while a model is a replica offered for the buyer's inspection when the goods themselves are unavailable.

The first two kinds of express warranties probably overlap; also, each can be either written or oral. In addition, magic words like *warrant* or *guarantee* no longer are needed to create an express warranty.

Value, Opinion, and Sales Talk Statements of *value* ("This chair would bring you $2,000 at an auction") or *opinion* ("I think that this chair is a genuine antique Louis XIV") do not create an express warranty. The same is true of statements that amount to *sales talk* or *puffery* ("This chair is a good buy"). No sharp line separates such statements from express warranties. In close cases, a statement is more likely to be an express warranty if it is specific rather than indefinite, if it is stated in the sales contract rather than elsewhere,[3] or if it is unequivocal rather than hedged or qualified. The relative knowledge possessed by the seller and the buyer also matters. For instance, a car salesperson's statement about a used car is more likely to be an express warranty where the buyer knows little about cars than where the buyer is another car dealer. The *Hall Farms* case, which follows, discusses some of the points made in this paragraph.

The Basis-of-the-Bargain Problem Under pre-Code law, there was no recovery for breach of an express warranty unless the buyer significantly relied on that warranty in making the purchase. The UCC,

[2]Negligence and strict liability are discussed in Chapter 7.

[3]Parol evidence rule problems can arise in express warranty cases. For example, a seller who used a written sale contract may argue that the rule excludes an alleged oral warranty. On the parol evidence rule, see Chapter 16.

however, ambiguously requires that the warranty be *part of the basis of the bargain.* Some courts read the Code's basis-of-the-bargain test as saying that significant reliance still is necessary. Others require only that the seller's warranty have been a *contributing factor* in the buyer's decision to purchase. Still others do not require any reliance on the buyer's part.

Advertisements Statements made in advertisements, catalogs, or brochures may be express warranties. However, such sources often are filled with sales talk. Also, basis-of-the-bargain problems may arise if it is unclear whether or to what degree the statement really induced the buyer to make the purchase. For example, suppose that the buyer read an advertisement containing an express warranty one month before actually purchasing the product.

Multiple Express Warranties What happens when a seller gives two or more express warranties and those warranties arguably conflict? UCC section 2–317 says that such warranties should be read as consistent with each other and as cumulative if this is reasonable. If not, the parties' intention controls. In determining that intention: (1) exact or technical specifications defeat a sample, a model, or general descriptive language; and (2) a sample defeats general descriptive language.

Martin Rispens & Son v. Hall Farms, Inc. *601 N.E.2d 429 (Ind. Ct. App. 1992)*

Hall Farms, Inc. ordered 40 pounds of Prince Charles watermelon seed from Martin Rispens & Son, a seed dealer. Rispens had obtained the seed from Petoseed Company, Inc., a seed producer. The label on Petoseed's can stated that the seeds are "top quality seeds with high vitality, vigor and germination." Hall Farms germinated the seeds in a greenhouse, before transplanting the small watermelon plants to its fields. Although the plants had a few abnormalities, they grew rapidly. By mid-July, however, purple blotches had spread over most of the crop, and by the end of July the crop was ruined. It was later determined that the crop had been destroyed by "watermelon fruit blotch." Hall Farms' lost profits on the crop came to $180,000.

Hall Farms sued Petoseed for, among other things, breach of express warranty. Petoseed moved for summary judgment, but the trial court denied the motion. Petoseed appealed.

Baker, Judge An express warranty is created by an affirmation of fact or promise made by the seller to the buyer which relates to the goods and becomes part of the basis of the bargain; it warrants that the goods shall conform to the affirmation or promise. It is not necessary that the seller use formal words such as "warrant" or "guarantee" or that he have a specific intention to make a warranty. On the other hand, an affirmation merely of the value of the goods or a statement purporting to be merely the seller's opinion or commendation of the goods does not create a warranty.

Whether a given representation is a warranty or merely an expression of the seller's opinion is determined in part by considering whether the seller asserts a fact of which the buyer is ignorant, or merely states an opinion or judgment on a matter of which the seller has no special knowledge and on which the buyer may be expected also to have an opinion and to exercise his judgment. Courts must also consider the degree of specificity expressed in the representation.

The label on Petoseed's can stated that the seeds are "top quality seeds with high vitality, vigor and germination." We consider the words "top quality seeds" as a classic example of puffery. The precise meaning of "top quality" is subject to considerably different interpretations.

Petoseed [also] claimed that its seeds possessed "high vitality, vigor and germination." Although reasonable people may differ as to the particular degree of vitality, vigor, and germination meant by the word "high," Petoseed did expressly warrant that its seeds would possess at least a modicum of vitality, vigor, and germination. If this affirmation became a basis of the bargain, an express warranty was created. We need not address this question, however, because even assuming Hall Farms relied on the affirmation, no breach occurred.

"Vitality" is the capacity to live, grow, or develop. "Vigor" is the capacity for natural growth

and survival. "Germination" is the beginning of growth or sprouting. Here, there is no dispute that the watermelon seeds sprouted, grew, and developed a normal fruit set. Thus, the seeds conformed to the affirmation on Petoseed's labels; consequently, there was no breach. Partial summary judgment is appropriate when there is no conflict over facts dispositive of a portion of the litigation. Hall Farms may not recover from Petoseed based on an express warranty theory.

Trial court decision denying Petoseed's motion for summary judgment on Hall Farms' express warranty claim reversed.

Implied Warranty of Merchantability

An **implied warranty** is a warranty created by operation of law rather than the seller's express statements. UCC section 2–314(1) creates the Code's **implied warranty of merchantability** by stating that "a warranty that the goods shall be merchantable is implied in a contract for their sale if the seller is a merchant with respect to goods of that kind." This is a clear example of the 20th-century tendency for government to intervene in private contracts to protect consumers.

In an implied warranty of merchantability case, the plaintiff argues that the seller breached the warranty by selling nonmerchantable goods. Under section 2–314, such claims can succeed only where the seller is a *merchant with respect to goods of the kind sold.*[4] A housewife's sale of homemade preserves or a hardware store owner's sale of a used car, for example, do not trigger the implied warranty of merchantability.

UCC section 2–314(2) states that, to be merchantable, goods must at least: (1) pass without objection in the trade; (2) be fit for the ordinary purposes for which such goods are used; (3) be of even kind, quality, and quantity within each unit (case, package, or carton); (4) be adequately contained, packaged, and labeled; (5) conform to any promises or statements of fact made on the container or label; and (6) in the case of fungible goods, be of fair average quality. The most important of these requirements is that the goods must be *fit for the ordinary purposes for which such goods are used.* The goods need not be perfect to be fit for their ordinary purposes. Rather, they need only meet the reasonable expectations of the average consumer.

This broad, flexible test of merchantability is almost inevitable given the wide range of products sold in the United States today and the varied defects they can present. Still, a few generalizations about merchantability determinations are possible. Goods that fail to function properly or that have harmful side effects normally are not merchantable. A computer that fails to work properly or that destroys the owner's programs, for example, is not fit for the ordinary purposes for which computers are used. In cases involving allergic reactions to drugs or other products, courts frequently find the defendant liable if it was reasonably foreseeable that an appreciable number of consumers would suffer the reaction. As the following *Marriott* case reveals, there is some disagreement about the standard for food products that are alleged to be nonmerchantable because they contain harmful objects or substances. Under the *foreign–natural* test, the defendant is liable if the object or substance is "foreign" to the product, but not liable if it is "natural" to that product. Increasingly, however, courts ask whether the food product met the consumer's reasonable expectations.

[4]The term *merchant* is defined in Chapter 9.

Yong Cha Hong v. Marriott Corporation *3 UCC Rep. Serv. 2d 83 (D. Md. 1987)*

Yong Cha Hong bought some take-out fried chicken from a Roy Rogers Family Restaurant owned by the Marriott Corporation. While eating a chicken wing from her order, she bit into an object that she perceived to be a worm. Claiming permanent injuries and great physical and emotional upset from this incident, Hong sued Marriott for $500,000 in federal district court under the implied warranty of merchantability. After introducing

an expert's report alleging that the object in the chicken wing was not a worm, Marriott moved for summary judgment. It claimed that the case involved no disputed issues of material fact, and that there was no breach of the implied warranty of merchantability as a matter of law.

Smalkin, District Judge It appears that the item encountered by plaintiff was probably not a worm or other parasite, although plaintiff, in her deposition, steadfastly maintains that it was a worm. If it was not a worm (i.e., if the expert analysis is correct), it was either one of the chicken's major blood vessels (the aorta) or its trachea, both of which would appear worm-like (although not meaty like a worm, but hollow). For [present] purposes, the court will assume that the item was not a worm. Precisely how the aorta or trachea wound up in this hapless chicken's wing is a fascinating, but as yet unanswered (and presently immaterial), question.

Does Maryland law provide a breach of warranty remedy for personal injury flowing from an unexpected encounter with an inedible part of the chicken's anatomy in a piece of fast food fried chicken? Marriott contends that there can be no recovery unless the offending item was a foreign object, i.e., not part of the chicken itself.

In many cases that have denied [implied] warranty recovery as a matter of law, the injurious substance was, as in this case, a natural (though inedible) part of the edible item consumed. Thus, in *Shapiro v. Hotel Statler Corp.* (1955), recovery was denied for a fish bone in "Hot Barquette of Seafood Mornay." But in all these cases the natural item was reasonably to be expected in the dish by its very nature, under the prevailing expectation of any reasonable consumer. Indeed, precisely this "reasonable expectation" test has been adopted in a number of cases. The reasonable expectation test has largely displaced the foreign–natural test adverted to by Marriott. This court is confident that Maryland would apply the reasonable expectation rule.

The court cannot conclude that the presence of a trachea or an aorta in a fast food fried chicken wing is so reasonably to be expected as to render it merchantable, as a matter of law. This is not like the situation [in a previous case] involving a one centimeter bone in a piece of fried fish. Everyone but a fool knows that tiny bones may remain in even the best filets of fish. This case is more like [another decision], where the court held that the issue was for the trier of fact, on a claim arising from a cherry pit in cherry ice cream. Thus, a question is presented that precludes the grant of summary judgment. The jury must determine whether a piece of fast food fried chicken is merchantable if it contains an inedible item of the chicken's anatomy. Of course, the jury will be instructed that the consumer's reasonable expectations form a part of the merchantability concept.

Marriott's motion for summary judgment denied.

Implied Warranty of Fitness

UCC section 2–315's **implied warranty of fitness for a particular purpose** arises where: (1) the seller has reason to know a particular purpose for which the buyer requires the goods, (2) the seller has reason to know that the buyer is relying on the seller's skill or judgment to select suitable goods, and (3) the buyer actually relies on the seller's skill or judgment in purchasing the goods. If these tests are met, there is an implied warranty that the goods will be fit for the buyer's *particular* purpose.

In many fitness warranty cases, buyers effectively put themselves in the seller's hands by making their needs known and saying that they are relying on the seller to select goods that will satisfy those needs. This may happen, for example, where a seller sells a computer system specially manufactured or customized for a buyer's particular needs. But sellers also can be liable where the circumstances reasonably indicate that the buyer has a particular purpose and is relying on the seller to satisfy that purpose, even though the buyer fails to make either explicit. However, buyers may have trouble recovering where they are more expert than the seller, submit specifications for the goods they wish to buy, inspect the goods, actually select them, or insist on a particular brand.

As the following *Dempsey* case states, the implied warranty of fitness differs from the implied warranty of merchantability. The tests for the creation of each war-

ranty plainly are different. Under section 2–315, moreover, sellers only warrant that the goods are fit for the buyer's *particular* purposes, not the *ordinary* purposes for which such goods are used. If a 400-pound man asks a department store for a hammock that will support his weight but is sold a hammock that can support only average-sized people, there is a breach of the implied warranty of fitness but no breach of the implied warranty of merchantability. If the hammock cannot support *anyone's* weight, however, both warranties are breached.

Dempsey v. Rosenthal *468 N.Y.S.2d 441 (N.Y. Civ. Ct. 1983)*

Ruby Dempsey purchased a nine-week-old pedigreed male poodle from the American Kennels Pet Stores. She named the poodle Mr. Dunphy. Dempsey later testified that before making the purchase, she told the salesperson that she wanted a dog suitable for breeding purposes. Five days after the sale, she had Mr. Dunphy examined by a veterinarian, who discovered that the poodle had one undescended testicle. This condition did not seriously affect Mr. Dunphy's fertility, but it was a genetic defect that would probably be passed on to any offspring sired. Also, a dog with this condition could not be used as a show dog.

Dempsey demanded a refund from American Kennels, but her demand was denied. She then sued in small claims court, alleging that American Kennels had breached the implied warranty of fitness.

Saxe, Judge UCC sections 2–314 and 2–315 make it clear that the warranty of fitness for a particular purpose is narrower, more specific, and more precise than the warranty of merchantability, which involves fitness for the *ordinary* purposes for which goods are used. The following are the conditions that are not required by the implied warranty of merchantability, but that must be present if a plaintiff is to recover on the basis of the implied warranty of fitness: (1) the seller must have reason to know the buyer's particular purpose, (2) the seller must have reason to know that the buyer is relying on the seller's skill or judgment to furnish appropriate goods, and (3) the buyer must, in fact, rely upon the seller's skill or judgment.

I find that the warranty of fitness for a particular purpose has been breached. Dempsey testified that she specified to the salesperson that she wanted a dog that was suitable for breeding purposes. Although this is disputed by the defendant, the credible testimony supports Dempsey's version of the event. Further, it is reasonable for the seller of a pedigreed dog to assume that the buyer intends to breed it. But it is undisputed by the experts here (for both sides) that Mr. Dunphy was as capable of siring a litter as a male dog with two viable and descended testicles. This, the defendant contends, compels a finding in its favor. I disagree. While it is true that Mr. Dunphy's fertility level may be unaffected, his stud value, because of this hereditary condition (which is likely to be passed on to future generations), is severely diminished.

Judgment for Dempsey.

Negligence

Product liability suits based on the **negligence** theory discussed in Chapter 7 usually allege that the seller or manufacturer breached a duty to the plaintiff by failing to eliminate a reasonably foreseeable risk of harm associated with the product.[5] Such suits typically claim one or more of the following: (1) negligent *manufacture* of the goods (including improper materials and packaging), (2) negligent *inspection,* (3) a negligent failure to provide *adequate warnings* of hazards or defects, and (4) negligently defective *design.*

Negligent Manufacture Negligence suits alleging the manufacturer's improper assembly, materials, or packaging often encounter problems because the evidence needed to prove a breach of duty is under the defendant's control. However, liberal modern discovery

[5]Occasionally, such suits may proceed under the theory of *negligence per se* discussed in Chapter 7—for example, where the product violates a consumer product safety regulation or pure food law.

rules and the doctrine of *res ipsa loquitur* can help plaintiffs establish a breach in such situations.[6]

Improper Inspection Manufacturers have a duty to inspect their products for defects that create a reasonably foreseeable risk of harm, if such an inspection would be practicable and effective. As before, *res ipsa loquitur* and modern discovery rules can help plaintiffs prove their case against the manufacturer.

Most courts have held that middlemen such as retailers and wholesalers have a duty to inspect the goods they sell only when they have actual knowledge or reason to know of a defect. In addition, such parties generally have no duty to inspect where this would be unduly difficult, burdensome, or time-consuming. Unless the product defect is obvious, for example, middlemen usually are not liable for failing to inspect goods sold in the manufacturer's original packages or containers.

On the other hand, sellers who prepare, install, or repair the goods they sell ordinarily have a duty to inspect those goods. Examples include restaurants, automobile dealers, and installers of household products. In general, the scope of the inspection need only be consistent with the preparation, installation, or repair work performed. Thus, it is unlikely that such sellers must unearth hidden or latent defects.

If there is a duty to inspect and the inspection reveals a defect, further duties can arise. For example, a seller or manufacturer may be required not to sell the product in its defective state, or at least to give a suitable warning.

[6]Chapter 2 discusses discovery, and Chapter 7 discusses *res ipsa loquitur.*

Failure to Warn Sellers and manufacturers have a duty to give an appropriate warning when their products pose a reasonably foreseeable risk of harm. But in determining whether there was a duty to warn and whether the defendant's warning was adequate, courts often consider other factors besides the reasonable foreseeability of the risk. These include the *magnitude or severity* of the likely harm, the *ease or difficulty of providing an appropriate warning,* and the likely *effectiveness of a warning.* As the following *Daniell* case makes clear, moreover, there is no duty to warn where the risk is *open and obvious.*

Design Defects Manufacturers have a duty to design their products so as to avoid reasonably foreseeable risks of harm. Like failure-to-warn cases, however, design defect cases frequently involve other factors besides reasonable foreseeability. As before, one of these factors is the *magnitude or severity* of the foreseeable harm. Three others are *industry practices* at the time the product was manufactured, the *state of the art* (the state of existing scientific and technical knowledge) at that time, and the product's compliance or noncompliance with *government safety regulations.*

Sometimes courts employ *risk–benefit analysis* when weighing these factors. In such analyses, three other factors—the design's *social utility,* the *effectiveness of alternative designs,* and the *cost of safer designs*—may figure in the weighing process. Even where the balancing process indicates that the design was not defective, courts still may require a suitable warning.

Daniell v. Ford Motor Company *581 F. Supp. 728 (D.N.M. 1984)*

Connie Daniell attempted to commit suicide by locking herself inside the trunk of her 1973 Ford LTD. Daniell remained in the trunk for nine days, but survived after finally being rescued. Later, Daniell sued Ford in negligence to recover for her resulting physical and psychological injuries. She contended that the LTD was defectively designed because its trunk did not have an internal release or opening mechanism. She also argued that Ford was liable for negligently failing to warn her that the trunk could not be unlocked from within. Ford moved for summary judgment.

Baldock, District Judge As a general principle, a design defect is actionable only where the condition of the product is unreasonably dangerous to the user or consumer. Under negligence, a manufacturer has a duty to consider only those risks of injury which are foreseeable. A risk is not foreseeable where a product is used in a manner which could not reasonably be anticipated by the

manufacturer and that use is the cause of the plaintiff's injury.

The purposes of an automobile trunk are to transport, stow, and secure the spare tire, luggage, and other goods and to protect those items from the weather. The design features of a trunk make it well near impossible that an adult intentionally would enter the trunk and close the lid. The dimensions of a trunk, the height of its sill and its load floor, and the efforts to first lower the lid and then to engage its latch, are among the design features which encourage closing and latching the trunk lid while standing outside the vehicle. The court holds that the plaintiff's use of the trunk compartment as a means to attempt suicide was an unforeseeable use as a matter of law. Therefore, the manufacturer had no duty to design an internal release or opening mechanism that might have prevented this occurrence.

Nor did the manufacturer have a duty to warn the plaintiff of the danger of her conduct, given the plaintiff's unforeseeable use of the product. Another reason why the manufacturer had no duty to warn the plaintiff of the risk inherent in crawling into an automobile trunk and closing the lid is [that] such a risk is obvious. There is no duty to warn of known dangers. Moreover, the potential efficacy of any warning, given the plaintiff's use of the trunk for a deliberate suicide attempt, is questionable.

Having held that the plaintiff's conception of the manufacturer's duty is in error, the court need not reach the issues of comparative negligence or other defenses such as assumption of risk.

Ford's motion for summary judgment granted; Daniell loses.

Strict Liability

Strict products liability is a relatively recent development. Only during the 1960s did courts begin to impose such liability in significant numbers. The movement toward strict liability received a big boost when the American Law Institute promulgated section 402A of the *Restatement (Second) of Torts* in 1965. By now, the vast majority of the states have adopted some form of strict products liability. The most important reason is the socialization-of-risk strategy discussed earlier. By not requiring plaintiffs to prove a breach of duty, strict liability makes it easier for them to recover; and sellers then are supposed to pass on the costs of this liability through higher prices. Another justification for strict products liability is that it stimulates manufacturers to design and build safer products.

Section 402A's Requirements Because it is the most common version of strict products liability, we limit our discussion of the subject to section 402A. Section 402A provides that a "seller . . . engaged in the business of selling" a particular product is liable for physical harm or property damage suffered by the ultimate user or consumer of that product, if the product was "in a defective condition unreasonably dangerous to the user or consumer or to his property." This rule applies even though "the seller has exercised all possible care in the preparation and sale of his product." Thus, section 402A states a rule of strict liability that does not require plaintiffs to prove a breach of duty.

However, the liability imposed by section 402A is not absolute, for the section applies only if certain tests are met.

1. The seller must be *engaged in the business of selling the product that harmed the plaintiff.* Thus, section 402A binds only parties who resemble UCC merchants because they regularly sell the product at issue. For example, the section does not apply to a college professor's or a clothing store's sale of a used car.

2. The product must be in a *defective condition* when sold, and also must be *unreasonably dangerous* because of that condition. The usual test of a product's defective condition is whether the product meets the reasonable expectations of the average consumer. An unreasonably dangerous product is one that is dangerous to an extent beyond the reasonable contemplation of the average consumer. For example, good whiskey is not unreasonably dangerous even though it can cause harm, but whiskey contaminated with a poisonous substance qualifies. Some courts balance the product's social utility against its danger when determining whether it is unreasonably dangerous.

Due to section 402A's unreasonably dangerous requirement, it covers a smaller range of product defects than the implied warranty of merchantability. A power mower that simply fails to operate is not unreasonably

dangerous, although it would not be merchantable. Some courts, however, blur the defective condition and unreasonably dangerous requirements, and a few have done away with the latter test.

3. Finally, defendants can avoid section 402A liability where the product was *substantially modified* by the plaintiff or another party after the sale, and the modification contributed to the plaintiff's injury or other loss.

Applications of Section 402A Design defect and failure-to-warn suits can be brought under section 402A. Even though section 402A is a strict liability provision, the standards applied in such cases resemble the negligence standards discussed in the previous section.

Because it applies to sellers, section 402A covers retailers and other middlemen who market goods containing defects that they did not create and may not have been able to discover. Even though such parties often escape negligence liability, some courts have found them liable under section 402A's strict liability rule. However, other states have given middlemen some protection against 402A liability, and/or have required the manufacturer or other responsible party to indemnify them.

What about products, such as some drugs, that have great social utility, but that pose serious risks that cannot be eliminated? Imposing strict liability on such "unavoidably unsafe" products might deter manufacturers from developing and marketing them. Where products of this kind cause harm and a lawsuit follows, many courts follow comment k to section 402A. Comment k says that unavoidably unsafe products are neither defective nor unreasonably dangerous if they are properly prepared and accompanied by proper directions and a proper warning. For this rule to apply, the product must be genuinely incapable of being made safer.

Sometimes 402A claims fail because the product in question was defective, but not unreasonably dangerous. The *Buckingham* case, which follows, is one court's response to the reverse situation: a product that allegedly was unreasonably dangerous, but was not defective.

Buckingham v. R. J. Reynolds Tobacco Co. *713 A.2d 381 (N.H. Sup. Ct. 1998)*

Even though she did not smoke cigarettes, Roxanne Ramsey-Buckingham was diagnosed with terminal lung cancer. Claiming that she contracted this disease from environmental tobacco smoke, Ramsey-Buckingham sued several prominent tobacco companies under section 402A. She asserted that the defendants' cigarettes were defective because they were unreasonably dangerous, and that they were unreasonably dangerous because they were dangerous beyond the expectations of the ordinary consumer and because the utility of smoking did not outweigh the risk posed by environmental smoke. She did not allege any other defect in the defendants' cigarettes.

The defendants moved to dismiss the plaintiff's claim for failure to state a claim upon which relief could be granted. The trial court granted the motion because the complaint failed to state separately that the cigarettes were defective and that the defect caused them to be unreasonably dangerous. The administrator of Ramsey-Buckingham's estate then appealed to the New Hampshire Supreme Court.

Horton, Justice We hold that the plaintiff has failed to state a claim upon which relief may be granted because the complaint does not allege that the product was "defective" and "unreasonably dangerous" as separate elements. Instead, the plaintiff alleges only that "the cigarettes sold by the defendants were defective or unsuitable at the time of sale in that they were in an unreasonably dangerous condition for innocent bystanders such as the plaintiff." The plaintiff's argument that "defect" is not a "separate and distinct element of proof" from the "unreasonably dangerous" element is not borne out by the language of section 402A, the history of its adoption, or our case law.

Section 402A imposes liability for selling "any product in a defective condition unreasonably dangerous to the user or consumer" when the product causes injury to the user or consumer. In other words, the basis of any [402A] claim is an allegation of a defect associated with the product, which makes

the product unreasonably dangerous, and causes the injury for which recovery is sought. If the plaintiff were correct that a product is per se defective if it is unreasonably dangerous, then it would be redundant for section 402A to include both the terms "defective" and "unreasonably dangerous." The operative phrase used in section 402A—a product "in a defective condition unreasonably dangerous"—was deliberately chosen to make it clear that the product must be defective, and that the manufacturer of a product that may involve some danger, but that is not defective, will not be held liable.

Comment i to section 402A supports this reading of strict liability: "The rule stated in this section applies only where the defective condition of the product makes it unreasonably dangerous to the user or consumer." The comment cites several products, such as tobacco, whiskey, and butter, that may be dangerous in their intended form, but notes that liability will not be imposed absent an additional ingredient which the ordinary consumer would not expect to be present.

When the plaintiff cannot allege that something is "wrong" with the product, strict liability should not be used as a tool of social engineering to mandate that manufacturers bear the entire risk and costs of injuries caused by their products. Accordingly, because the plaintiff has failed to allege separately that cigarettes are "defective" and "unreasonably dangerous," she has failed to state a claim upon which relief may be granted. Therefore, we need not decide whether bystanders may recover under section 402A.

Trial court decision dismissing Ramsey-Buckingham's 402A claim affirmed.

The *Restatement (Third)*

In 1998, the American Law Institute published its *Restatement (Third) of Torts: Product Liability.* Although many courts now discuss the new *Restatement,* it probably has not supplanted negligence and section 402A as we write late in 1999. But the *Restatement (Third)* might well signal the future evolution of product liability law.

Basic Provisions The *Restatement (Third)*'s basic product liability rule states: "One engaged in the business of selling or otherwise distributing products who sells or distributes a defective product is subject to liability for harm to persons or property caused by the defect." Like section 402A, this rule covers only those who are engaged in the business of selling the kind of product that injured the plaintiff. The rule also resembles 402A in covering not only manufacturers, but other sellers down the product's chain of distribution. Unlike 402A, however, the *Restatement (Third)* does not require that the product be unreasonably dangerous.

Specific Rules The *Restatement (Third)* states special rules governing the sale of product components, prescription drugs, medical devices, food products, and used goods. More importantly, it puts some meat on the general rule just stated by describing three kinds of product defects.

1. *Manufacturing defects.* A manufacturing defect occurs when the product does not conform to its intended design at the time it leaves the manufacturer's hands. This includes products that are incorrectly assembled, physically flawed, or damaged.
2. *Inadequate instructions or warnings.* The *Restatement (Third)* applies strict liability to manufacturing defects. Liability for inadequate instructions or warnings, however, resembles negligence more than strict liability. This liability exists when reasonable instructions or warnings could have reduced the product's foreseeable risk of harm, the seller did not provide such instructions or warnings, and for this reason the product was not reasonably safe. Manufacturers and sellers are liable only for failing to instruct or warn about *reasonably foreseeable* harms, and not about every conceivable risk their products might present. As with negligence and 402A, moreover, they need not warn about obvious and generally known risks. Most likely the many other failure-to-warn factors discussed earlier apply under the new *Restatement* as well.
3. *Design defects.* Like liability for inadequate warnings or instructions, design defect liability under the

Restatement (Third) involves negligence principles. A product is defective in design when its foreseeable risks of harm could have been reduced or avoided by a reasonable alternative design, and the omission of that design rendered the product not reasonably safe. The plaintiff must prove that a reasonable alternative design was possible at the time of the sale. In determining whether an alternative design is reasonable and whether the product is unsafe without it, courts should consider the many factors outlined in the following *Martinez* case. Note the decision's main message: under the *Restatement (Third),* manufacturers cannot escape defective design liability by giving an adequate warning.

Uniroyal Goodrich Tire Co. v. Martinez *977 S.W.2d 328 (Tex. Sup. Ct. 1998)*

Roberto Martinez was injured while installing a Goodrich tire on a motor vehicle. The injury occurred after the 16-inch tire exploded while Martinez was attempting to mount it on a 16.5-inch rim. He did so despite the presence of a prominent warning label on the tire. The warning specifically stated that one should never mount a 16-inch tire on a 16.5-inch rim, and that doing so could cause severe injury or death because the tire would explode.

Martinez sued Goodrich under strict liability in a Texas trial court. His theory was not that the warning was inadequate, but rather that the exploding tire was defective because Goodrich had failed to use a safer alternative bead design that would have kept it from exploding. The jury found for Martinez, awarding him $5.5 million in actual damages and $11.5 million in punitive damages. After reducing the punitive damages award, the trial judge awarded Martinez about $10.3 million. A Texas appeals court upheld the trial court's award of actual damages, but reversed its punitive damages award. Goodrich appealed to the Texas Supreme Court. The question before the court was whether a manufacturer that knew of a safer alternative product design is strictly liable for injuries caused by the plaintiff's failure to follow a suitable warning.

Phillips, Chief Justice This court has adopted the products liability standard in section 402A of the *Restatement (Second) of Torts.* To prove a design defect, a claimant must establish that the defendant could have provided a safer alternative design. Implicit in this holding is that the safer alternative design must be reasonable, i.e., that it can be implemented without destroying the utility of the product. The newly released *Restatement (Third) of Torts: Product Liability* carries forward this focus on reasonable alternative design. To determine whether a reasonable alternative design exists, the finder of fact may weigh various factors bearing on the risk and utility of the product. One of these factors is whether the product contains suitable warnings and instructions. The new *Restatement* likewise carries forward this approach:

> The factors include, among others, the magnitude and probability of the foreseeable risks of harm, the instructions and warnings accompanying the product, and the nature and strength of consumer expectations regarding the product, including expectations arising from product portrayal and marketing . . . The relative advantages and disadvantages of the product as designed and as it alternatively could have been designed may also be considered. Thus, the likely effects of the alternative design on production costs; the effects of the alternative design on product longevity, maintenance, repair, and aesthetics; and the range of consumer choice among products are factors that may be taken into account.

Goodrich urges this court to depart from this standard by following comment j of the *Restatement (Second) of Torts.* Comment j provides in part: "Where warning is given, the seller may reasonably assume that it will be read and heeded; and a product bearing such a warning, which is safe for use if it is followed, is not in defective condition, nor is it unreasonably dangerous." The new *Restatement,* however, expressly rejects the comment j approach, [in part because] instructions and warnings may be ineffective because users of the product may not be adequately reached, may be likely to be inattentive, or may be insufficiently motivated to follow the instructions or heed the warnings. Thus, warnings are not a substitute for a reasonably safe design.

Goodrich argues that it is still entitled to judgment as a matter of law because no safer alternative was available. In response, Martinez points to the evidence that Goodrich's competitors, and eventually Goodrich itself, adopted [a safer tire bead design]. Goodrich counters that this alternative design is not in fact safer because if the tire is matched to the wrong rim size, the bead will never seat on the rim and it will inevitably explode during use. Martinez, however, offered some evidence that his alternative design not only would have prevented the injury, but also that it would not have introduced other dangers of equal or greater magnitude. [The] evidence does not conclusively prove that the [new design] would have introduced into the product other dangers of equal or greater magnitude. There was thus an issue of fact regarding whether a reasonable alternative design existed, which the jury resolved in favor of Martinez.

Intermediate appellate court decision in favor of Martinez affirmed.

Concept Review

Comparing the Major Product Liability Theories

Theory	Tort or Contract?	Type of Defendant	Nature of Goods
Express Warranty	Contract	Seller of goods	Not as warranted
Implied Warranty of Merchantability	Contract	Merchant for goods sold	Not merchantable; usually, this means not fit for ordinary purposes for which such goods used
Implied Warranty of Fitness	Contract	Seller of goods	Not fit for buyer's particular purposes
Negligence	Tort	Manufacturer or seller of goods	Defective due to improper manufacture, inspection, design, or failure to give suitable warning
Section 402A	Tort	Seller engaged in business of selling product sold	Defective and unreasonably dangerous
Restatement (Third)	Tort	One engaged in business of selling product	Defective

Other Theories of Recovery

Warranty of Title Normally, a seller of goods impliedly warrants that: (1) the title he conveys is good and transfer of that title is rightful, and (2) the goods are free from any lien or security interest of which the buyer lacks knowledge. Thus, a buyer may recover damages against his seller where, for example, the seller has marketed stolen goods or goods that are subject to a third party's security interest. Also, a seller who is a merchant in goods of the kind sold normally warrants that the goods are free of any rightful patent or trademark infringement claim, or any similar claim, by a third party.

The Magnuson-Moss Act The relevant civil-recovery provisions of the federal Magnuson-Moss Warranty Act apply to sales of *consumer products*

costing more than *$10 per item.*[7] A consumer product is tangible personal property normally used for personal, family, or household purposes. If a seller gives a *written warranty* for such a product to a *consumer,* the warranty must be designated full or limited. A seller who gives a full warranty promises to: (1) *remedy* any defects in the product and (2) *replace* the product or *refund* its purchase price if, after a reasonable number of attempts, it cannot be repaired.[8] A seller who gives a limited warranty is bound to whatever promises it actually makes. However, neither warranty applies if the seller simply declines to give a written warranty.

Misrepresentation Product liability law has long allowed recoveries for misrepresentations made by sellers of goods. The *Restatement (Third)* does likewise. Its rule applies to merchantlike sellers engaged in the business of selling the product in question. The rule includes fraudulent, negligent, or innocent misrepresentations made by such sellers. The misrepresentation must involve a *material fact* about the product—a fact that would matter to a reasonable buyer. This means that sellers are not liable for inconsequential misstatements, sales talk, and statements of opinion. However, the product need not be defective. Unlike past law, moreover, the misrepresentation need not be made to the public, and the plaintiff need not have justifiably relied upon it. However, it must have made the plaintiff suffer personal injury or property damage.

Industrywide Liability

The development we call industrywide liability is a way for plaintiffs to bypass problems of causation that exist where several firms within an industry have manufactured a harmful standardized product, and it is impossible for the plaintiff to prove which firm produced the product that injured her. The main reasons for these proof problems are the number of firms producing the product and the time lag between exposure to the product and the appearance of the injury. Many of the cases presenting such problems have involved DES (an antimiscarriage drug that has produced various ailments in daughters of the women to whom it was administered) or diseases resulting from long-term exposure to asbestos. In such cases, each manufacturer of the product can argue that the plaintiff should lose because she cannot show that its product harmed her.

How do the courts handle these cases? Some continue to deny recovery under traditional causation rules. However, using various theories whose many details are beyond the scope of this text, other courts have made it easier for plaintiffs to recover. Where recovery is allowed, some of these courts have apportioned damages among the firms that might have produced the harm-causing product. Typically, the apportionment is based on market share at some chosen time.

Time Limitations

At this point, we begin to consider several problems that are common to each major theory of product liability recovery but that may be resolved differently from theory to theory.[9] One such problem is the time within which the plaintiff must sue or else lose the case. Traditionally, the main time limits on product liability suits have been the applicable contract and tort **statutes of limitations.** The usual UCC statute of limitations for express and implied warranty claims is four years after the seller offers the defective goods to the buyer (usually, four years after the sale).[10] In tort cases, the applicable statute of limitations generally is shorter, but it begins to run only when the defect was or should have been discovered—often, the time of the injury.

[7]Other portions of the Magnuson-Moss Act are discussed later in this chapter and in Chapter 47.

[8]Also, many states have enacted so-called lemon laws that may apply only to motor vehicles or to various other consumer products as well. The versions applying to motor vehicles generally require the manufacturer to replace the vehicle or refund its purchase price once certain conditions are met. These conditions may include the following: a serious defect covered by warranty, a certain number of unsuccessful attempts at repair or a certain amount of downtime due to attempted repairs, and the manufacturer's failure to show that the defect is curable.

[9]We do not consider how these problems are resolved under the warranty of title, the Magnuson-Moss Act, or misrepresentation.

[10]Also, in express and implied warranty cases, the buyer must notify the seller of the breach within a reasonable time after the buyer discovers or should have discovered it. There is no notice requirement for tort suits.

Due in part to tort reform, some states now impose various other limitations on the time within which product liability suits must be brought. Often, these limitations apply only to claims for death, personal injury, and property damage, but they override the states' other time limitations where they do apply. Among these additional time limitations are: (1) special statutes of limitations for product liability cases involving death, personal injury, or property damage (e.g., from one to three years after the time the death or injury occurred or should have been discovered); (2) special time limits for "delayed manifestation" injuries such as those resulting from exposure to asbestos; (3) useful safe life defenses (which prevent plaintiffs from suing once the product's "useful safe life" has passed); and (4) statutes of repose (whose aim is similar). Statutes of repose usually run for a 10- to 12-year period that begins when the product is sold to the first buyer not purchasing for resale—usually an ordinary consumer. In a state with a 10-year statute of repose, for example, such parties cannot recover for injuries that occur more than 10 years after they purchased the product causing the injury. This is true even when the suit is begun quickly enough to satisfy the applicable statute of limitations.

Damages in Product Liability Suits

The damages obtainable under each theory of product liability recovery strongly influence a plaintiff's strategy. Here, we describe the major kinds of damages awarded in product liability cases, along with the theories under which each can be recovered. One lawsuit can involve claims for all these sorts of damages.

1. *Basis-of-the-bargain damages.* Buyers of defective goods have not received full value for the goods' purchase price. The resulting loss, usually called basis-of-the-bargain damages or direct economic loss, is the value of the goods as promised under the contract, minus the value of the goods as received.

Basis-of-the-bargain damages usually are not awarded in tort cases. In express and implied warranty suits, however, basis-of-the-bargain damages are recoverable where there was *privity of contract* (a direct contractual relation) between the plaintiff and the defendant. As discussed in the next section, however, only occasionally will a warranty plaintiff who lacks privity with the defendant obtain basis-of-the-bargain damages. Such recoveries most often occur where an express warranty was made to a remote plaintiff through advertising, brochures, or labels.

2. *Consequential damages.* Consequential damages include: **personal injury, property damage** (damage to the plaintiff's other property), and **indirect economic loss** (e.g., lost profits or lost business reputation) resulting from a product defect. Consequential damages also include **noneconomic loss**—for example, pain and suffering, physical impairment, mental distress, loss of enjoyment of life, loss of companionship or consortium, inconvenience, and disfigurement. Noneconomic loss usually is part of the plaintiff's personal injury claim. Recently, several states have limited noneconomic loss recoveries, typically by imposing a dollar cap on them.

Plaintiffs in tort cases normally can recover for personal injury and property damage. Recoveries for foreseeable indirect economic loss sometimes are allowed.

In express and implied warranty suits where *privity exists* between the plaintiff and the defendant, the plaintiff can recover for: (1) personal injury and property damage, if either proximately resulted from the breach of warranty; and (2) indirect economic loss, if the defendant had reason to know that this was likely. As discussed in the next section, a UCC plaintiff who *lacks privity* with the defendant has a fairly good chance of recovering for personal injury or property damage. But recovery for indirect economic loss is rare because remote sellers usually cannot foresee such losses.

3. *Punitive damages.* Punitive damages are intended to punish defendants who have acted in an especially outrageous fashion, and to deter them and others from so acting in the future. Of the various standards for awarding punitive damages, perhaps the most common is the defendant's conscious or reckless disregard for the safety of those likely to be affected by the goods. Examples include concealment of known product hazards, knowing violation of government or industry product safety standards, failure to correct known dangerous defects, and grossly inadequate product testing or quality control procedures. Due to their perceived frequency, size, and effect on business and the economy, punitive damages have been subjected to state tort reform regulation throughout the 1980s and 1990s. The approaches taken by these

Figure 1 *When the Various Kinds of Damages Are Recoverable*

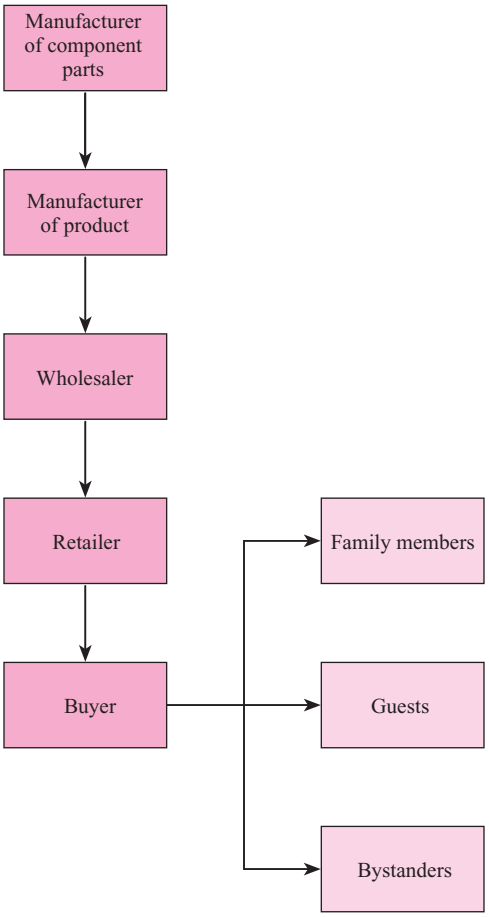
Types of Damages	Express and Implied Warranty	Tort
Basis of the Bargain	Within privity: Yes Outside privity: Occasionally	Rarely
Personal Injury and Property Damage	Within privity: If proximate result of breach Outside privity: Fairly good chance	Yes
Indirect Economic Loss	Within privity: If defendant has reason to know this likely Outside privity: Rarely	Sometimes
Punitive Damages	Rarely	Yes, in appropriate cases

statutes vary. Some set the standards for punitive damage recovery and the plaintiff's burden of proof; some articulate factors courts should consider when ruling on punitive damage awards; and some create special procedures for punitive damage determinations. Also, many states have limited the size of punitive damage recoveries, usually by restricting them to some multiple of the plaintiff's actual damages or by putting a flat dollar cap on them.

Assuming that the standards just described have been met, punitive damages are recoverable in tort cases. Due to the traditional rule that punitive damages are not available in contract cases, they usually are not awarded in express and implied warranty suits.

Figure 1 summarizes the plaintiff's chances of recovering the most important kinds of damages in contract and tort cases.

The No-Privity Defense



Today, defective products often move through long chains of distribution before reaching the person they harm. This means that a product liability plaintiff often has not dealt directly with the party ultimately responsible for his losses. Figure 2 depicts a hypothetical chain of distribution in which goods defectively produced by a manufacturer of component parts move vertically through the manufacturer of a product in which those parts are used, a wholesaler, and a retailer, ultimately reaching the buyer. The defect's consequences may move horizontally as well, affecting members of the buyer's family, guests in his home, and even bystanders. If the buyer or one of these parties suffers loss due to the defect in the component parts, can he successfully sue the component parts manufacturer or any other party in the vertical chain of distribution with whom he did not directly deal?

Such suits were unlikely to succeed under 19th-century law. At that time, there was no recovery for defective goods without privity of contract between the plaintiff and the defendant. In many cases, above, a buyer would have been required to sue his dealer. If the buyer was successful, the retailer might have sued the wholesaler, and so on up the chain. For various reasons (including a middleman's limited negligence liability for failure to inspect), the party ultimately responsible for the defect often escaped liability.

Tort Cases

By now, the old no-liability-outside-privity rule has been severely eroded in tort suits. It has little, if any, effect in strict liability cases, where even bystanders can recover against remote manufacturers. In negligence cases, a plaintiff generally recovers against a remote defendant if the plaintiff's loss was a reasonably foreseeable consequence of the defect. Depending on the circumstances, therefore, bystanders and other distant parties might recover against a manufacturer in negligence as well. The *Restatement (Third)* suggests that tort principles should govern the privity determination. This should mean a test of reasonable foreseeability more often than not.

Figure 2 *A Hypothetical Chain of Distribution*

Warranty Cases

The no-privity defense still retains some vitality in UCC cases. Unfortunately, the "law" on this subject is complex and confusing. Under the Code, the privity question is formally governed by section 2–318, which comes in three alternative versions. Section 2–318's language, however, is a questionable guide to the courts' actual behavior in UCC privity cases.

UCC Section 2–318 Alternative A to section 2–318 says that a seller's express or implied warranty runs to natural persons in the family or household of *his* (the seller's) buyer and to guests in his buyer's home, if they suffer personal injury and if it was reasonable to expect that they might use, consume, or be affected by the goods sold. On its face, Alternative A does little to undermine the traditional no-privity defense. In Figure 2, Alternative A would merely allow the buyer, his family, and guests in his home to sue the retailer for their personal injury.

Alternatives B and C go much further. Alternative B extends the seller's express or implied warranty to any natural person who has suffered personal injury, if it was reasonable to expect that this person would use, consume, or be affected by the goods. Alternative C is much the same, but it extends the warranty to any person (not just natural persons) and to those suffering injury in general (not just personal injury). If the reasonable-to-expect test is met, these two provisions should extend the warranty to many remote parties, including bystanders.

Departures from Section 2–318 For various reasons, section 2–318's literal language is of questionable relevance in UCC privity cases. Some states have adopted privity statutes that differ from any version of 2–318. Also, one of the comments to section 2–318 lets courts extend liability farther than the section expressly permits. Finally, versions B and C are fairly open-ended as written. Thus, the plaintiff's ability to recover outside privity in warranty cases varies from state to state and situation to situation. The most important factors affecting resolution of this question are:

1. Whether it is *reasonably foreseeable* that a party like the plaintiff would be harmed by the product defect in question.
2. The *status of the plaintiff.* On average, consumers and other natural persons fare better outside privity than corporations and other business concerns.
3. The *type of damages* the plaintiff has suffered. In general, remote plaintiffs are: *(a)* most likely to recover for personal injury, *(b)* somewhat less likely to recover for property damage, *(c)* occasionally able to obtain basis-of-the-bargain damages, and *(d)* rarely able to recover for indirect economic loss. Recall from the previous section that a remote plaintiff is most likely to receive basis-of-the-bargain damages where an express warranty was made to him through advertising, brochures, or labels.

The following *Minnesota Mining & Manufacturing* case grapples with a version of Alternative C to section 2–318. How might the case be decided under the factors just listed?

Minnesota Mining & Manufacturing Co. v. Nishika, Ltd.

565 N.W.2d 16 (Minn. Sup. Ct. 1997)

James Bainbridge and Daniel Fingarette [the claimants] formulated a plan for a three-dimensional photography business through four independent companies. In January of 1988, Bainbridge met with officials of the Minnesota Mining & Manufacturing Company (3M) to seek assistance with the three-dimensional film development process. In mid-1989, 3M formulated a new emulsion that it claimed would work well with the film development process. 3M apparently understood that this emulsion would be used in combination with a backcoat sauce that 3M had also developed. In December of 1989, 3M began selling the new emulsion and backcoat sauce to two of the claimants' four companies, but not to the two others. After Bainbridge and Fingarette began using 3M's new emulsion, they encountered a problem with the film development process: the photographs faded, losing their three-dimensional effect. By early 1990, the claimants experienced a significant decline in camera sales. 3M eventually solved the problem, but the claimants' business ultimately failed.

The claimants' four companies sued 3M in a Texas trial court for, among other things, breach of express and implied warranties. They argued that the photographic fading was caused by the incompatibility of 3M's new emulsion and its old backcoat sauce. The jury concluded that 3M breached an express warranty for the emulsion and implied warranties for the emulsion and the backcoat sauce. Applying Minnesota law, the trial court awarded the four firms $29,873,599 in lost profits. An intermediate appellate court upheld this award. The Texas Supreme Court withheld final judgment and certified the following question to the Minnesota Supreme Court: "For breach of warranty under [Minnesota's version of UCC section 2–318], is a seller liable to a person who never acquired any goods from the seller, directly or indirectly, for pure economic damages (e.g., lost profits), unaccompanied by any injury to the person or the person's property?" This question arose because two of the plaintiff companies, while suffering losses due to 3M's breaches of warranty, had not dealt directly with 3M. In the following opinion, the Minnesota Supreme Court answers the Texas Supreme Court's question.

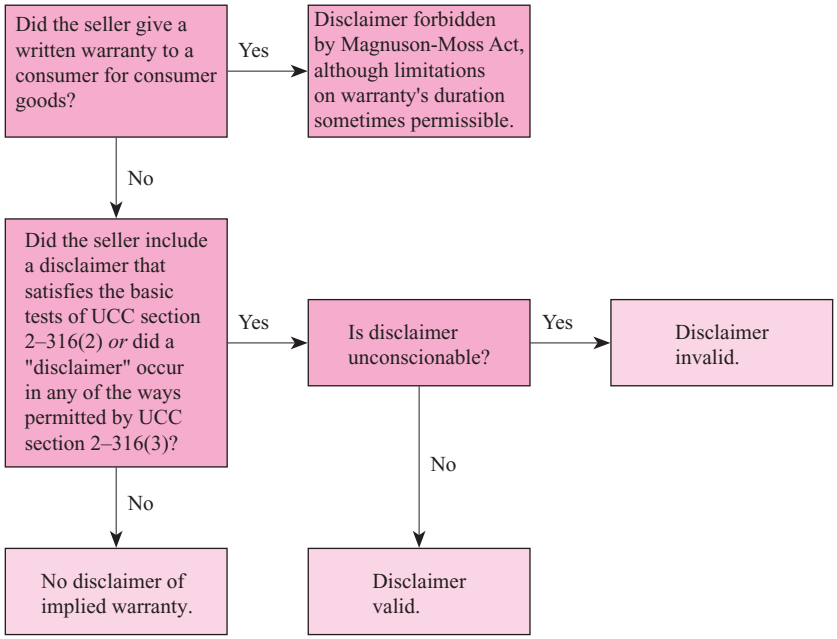
Keith, Chief Justice The certified question asks whether a seller may be held liable for breach of warranty to a plaintiff, who never used, purchased, or otherwise acquired goods from the seller, for lost profits unaccompanied by personal injury or property damage. Unlike the other two plaintiffs, two of them did not deal directly with 3M nor did they use, purchase, or otherwise acquire the 3M goods at issue. Hence, they premise their recovery of lost profits on the statutory extension of warranty protection to certain noncontracting parties ("third-party beneficiaries"). The third-party beneficiaries provision of Minnesota's Uniform Commercial Code addresses the reach of express and implied warranties to "injured" parties lacking privity of contract with the seller. Essentially, the provision broadens the reach of warranties by narrowing the lack-of-privity defense: "A seller's warranty whether express or implied extends to any person who may reasonably be expected to use, consume or be affected by the goods and who is injured by breach of the warranty." The term "person" includes corporations and other business organizations. Minnesota's current version [of section 2–318] is somewhat broader than the broadest of three options recommended by the drafters of the model U.C.C. in 1966. We agree with 3M that the statute is not so clear and free from ambiguity that we may disregard legislative intent or the consequences of a particular construction. The term "injured" is not defined in the UCC, nor is it used elsewhere in the text of Article 2. As applied to two of the plaintiffs, the reach of the section is unclear.

Under this privity provision, this court has sanctioned the recovery of lost profits (one form of economic loss) by a third-party beneficiary whose damages arose from a remote seller's breach of warranty. We have also indicated that plaintiffs who never used, purchased, or otherwise acquired defective goods may qualify as third-party beneficiaries when they suffer property damage. But this court has never gone so far as to hold that the statute reaches a plaintiff who is seeking lost profits unaccompanied by physical injury or property damage

and who never used, purchased, or otherwise acquired the goods in question. To do so would expand warranty liability well beyond the limits contemplated by the legislature.

The background and aims of this state's privity provision lead us to conclude that the scope of a seller's liability for breach of warranty should recede as the relationship between a "beneficiary" of the warranty and the seller's goods becomes more remote. Those who purchase, use, or otherwise acquire warranted goods have standing to sue for purely economic losses. Those who lack any such connection to the warranted goods must demonstrate physical injury or property damage before economic losses are recoverable. Any other result implies almost unlimited liability for sellers of warranted goods. If the section were interpreted as the plaintiffs advocate, it seems that their individual employees, or perhaps even their families, would have standing to sue 3M for causing the loss of their jobs or even a decline in their wages. The plaintiffs appear to advocate warranty recovery as a catch-all alternative for parties with no viable legal basis for suit. The risk, however, is that the fortuitous existence of a warranty—between some seller and some buyer, somewhere—would allow remote yet foreseeable parties to recover for their hampered expectations, while others in similar circumstances—but who could not identify a warranty—would not.

Confronted with liability of this magnitude, sellers would be encouraged to attempt to disclaim warranties or exclude consequential damages remedies—affecting both the immediate buyer and third-party beneficiaries alike. We therefore reject the plaintiffs' reading of the statute—an interpretation that would likely lead to a variety of unreasonable, unjust, and absurd results that we cannot imagine were intended by the legislature. In light of the statute's language and purpose, and consistent with the legislature's apparent intent, the best reading of the statute is that noncontracting parties who never used, purchased, or otherwise acquired the seller's warranted goods may not seek lost profits, unaccompanied by physical injury or property damage, for breach of warranty under the statute.



The Minnesota Supreme Court answered the Texas Supreme Court's certified question in the negative. This meant that two of the four plaintiff corporations could not recover lost profits. Later, the Texas Supreme Court applied the present case to deny these two firms recovery.

Disclaimers and Remedy Limitations

A product liability **disclaimer** is a clause in the sales contract whereby the seller tries to eliminate its *liability* under one or more theories of recovery. A **remedy limitation** is a clause attempting to block recovery of certain *damages.* Disclaimers attack the plaintiff's theory of recovery; if a disclaimer is effective, no damages of any sort are recoverable under that theory. A successful remedy limitation prevents the plaintiff from recovering certain types of damages but does not attack the plaintiff's theory of recovery. Damages not excluded still may be recovered because the theory is left intact.

The main justification for enforcing disclaimers and remedy limitations is freedom of contract. But why would any rational contracting party freely accept a disclaimer or remedy limitation? Because sellers need not insure against lawsuits for defective goods accompanied by an effective disclaimer or remedy limitation, they should be able to sell those goods more cheaply. Thus, enforcing such clauses allows buyers to get a lower price by accepting the economic risk of a product defect. For purchases by ordinary consumers and other unsophisticated buyers, however, this argument often is illusory. Normally sellers present the disclaimer or remedy limitation in a standardized, take-it-or-leave-it fashion. More important, it is doubtful whether many consumers read disclaimers and remedy limitations at the time of purchase, or would comprehend them if they were read. As a result, there usually is little or no genuine bargaining over disclaimers or remedy limitations in consumer situations. Instead, they are effectively dictated by a seller with superior size and organization. These observations, however, are less valid where the

Figure 3 *The Enforceability of Implied Warranty Disclaimers*

buyer is a business entity with the capability to engage in genuine bargaining with sellers.

Because the realities surrounding the sale differ from situation to situation, and because some theories of recovery are more hospitable to contractual limitation than others, the law on product liability disclaimers and remedy limitations is complicated. We begin with a lengthy discussion of implied warranty disclaimers. Then we examine disclaimers of express warranty liability, negligence liability, 402A liability, and liability under the *Restatement (Third),* before considering remedy limitations separately.

Implied Warranty Disclaimers

To determine the enforceability of implied warranty disclaimers, we must consider several sets of legal rules.[11] Figure 3 structures the steps in this analysis.

The Basic Tests of UCC Section 2–316(2) UCC section 2–316(2) apparently makes it easy for sellers to disclaim the implied warranties of merchantability and fitness for a particular purpose. The section states that to exclude or modify the implied warranty of merchantability, a seller must: (1) use the word *merchantability,* and (2) make the disclaimer conspicuous if it is written. To exclude or modify the implied warranty of fitness, a seller must: (1) use a writing, and (2) make the disclaimer conspicuous. A disclaimer is conspicuous if it is written so that a reasonable person ought to have noticed it. Capital letters, larger type, contrasting type, and contrasting colors usually suffice.

Unlike the fitness warranty disclaimer, a disclaimer of the implied warranty of merchantability can be oral. Also, while disclaimers of the latter warranty must use the word *merchantability,* no special language is needed to disclaim the implied warranty of fitness. For example, a conspicuous written statement that "THERE ARE NO WARRANTIES WHICH EXTEND BEYOND THE DESCRIPTION ON THE FACE HEREOF" disclaims the implied warranty of fitness but not the implied warranty of merchantability.

Other Ways to Disclaim Implied Warranties: Section 2–316(3) According to UCC section 2–316(3)(a), sellers also can disclaim either implied warranty by using such terms as "with all faults," "as

[11]The same rules probably apply where a seller tries to modify an implied warranty or to limit its duration.

is," and "as they stand." Some courts have held that these terms must be conspicuous to be effective as disclaimers.

UCC section 2–316(3)(b) describes two situations where the buyer's *inspection* of the goods or her *refusal to inspect* can act as a disclaimer. If a buyer examines the goods before the sale and fails to discover a defect that should have been reasonably apparent to her, there can be no implied warranty suit based on that defect. Also, if a seller requests that the buyer examine the goods and the buyer refuses, the buyer cannot base an implied warranty suit on a defect that would have been reasonably apparent had she made the inspection. The definition of a reasonably apparent defect varies with the buyer's expertise. Unless the defect is blatant, ordinary consumers may have little to fear from section 2–316(3)(b).

Finally, UCC section 2–316(3)(c) says that an implied warranty can be excluded or modified by *course of dealing* (the parties' previous conduct), *course of performance* (the parties' previous conduct under the same contract), or *usage of trade* (any practice regularly observed in the trade). For example, if it is accepted in the local cattle trade that buyers who inspect the seller's cattle and reject certain animals must accept all defects in the cattle actually purchased, such buyers cannot mount an implied warranty suit for those defects.

Unconscionable Disclaimers From the previous discussion, it seems that any seller who retains a competent attorney can escape implied warranty liability at will. In fact, however, a seller's ability to disclaim implied warranties sometimes is restricted by the doctrine of **unconscionability** established by UCC section 2–302 and discussed in Chapter 15. By now, almost all courts apply section 2–302's unconscionability standards to implied warranty disclaimers even though those disclaimers satisfy UCC section 2–316(2). Despite a growing willingness to protect smaller firms that deal with corporate giants, however, courts still tend to reject unconscionability claims where business parties have contracted in a commercial context. But implied warranty disclaimers often are declared unconscionable in personal injury suits by ordinary consumers.

The Impact of Magnuson-Moss The Magnuson-Moss Act also limits a seller's ability to disclaim implied warranties. If a seller gives a consumer a full warranty on consumer goods whose price exceeds $10, the seller may not disclaim, modify, or limit the duration of any implied warranty. If a limited warranty is given, the seller may not disclaim or modify any implied warranty but may limit its duration to the duration of the limited warranty if this is done conspicuously and if the limitation is not unconscionable. These are significant limitations on a seller's power to disclaim implied warranties. Presumably, however, a seller still can disclaim by refusing to give a written warranty while placing the disclaimer on some other writing.

Express Warranty Disclaimers

UCC section 2–316(1) says that an express warranty and a disclaimer should be read consistently if possible, but that the disclaimer must yield if such a reading is unreasonable. Because it normally is unreasonable for a seller to exclude with one hand what he has freely and openly promised with the other, it is difficult to disclaim an express warranty.

Disclaimers of Tort Liability

Disclaimers of negligence liability and strict liability are usually ineffective in cases involving ordinary consumers. However, some courts enforce such disclaimers where both parties are business entities that: (1) dealt in a commercial setting, (2) had relatively equal bargaining power, (3) bargained the product's specifications, and (4) negotiated the risk of loss from product defects (e.g., the disclaimer itself). Even though it has a provision that seems to bar all disclaimers, the same should be true under the *Restatement (Third)*.

Limitation of Remedies

Due to the expense they can create for sellers, consequential damages are the usual target of remedy limitations. Where a limitation of consequential damages succeeds, buyers of the product may suffer. For example, suppose that Dillman buys a computer system for $20,000 under a contract that excludes consequential damages and limits the buyer's remedies to the repair or replacement of defective parts. Suppose also that the system never works properly, causing Dillman to suffer $10,000 in lost profits. If the remedy limitation is enforceable, Dillman could only have the system replaced or repaired by the seller and could not recover his $10,000 in consequential damages.

In tort cases, the tests for the enforceability of remedy limitations resemble the previous tests for disclaimers. Under the UCC, however, the standards for remedy limitations differ from those for disclaimers. UCC section 2–719(3) allows the limitation of consequential damages in express and implied warranty cases but also states that such a limitation may be unconscionable. The section adds that a limitation of consequential damages is very likely to be unconscionable where the sale is for *consumer goods* and the plaintiff has suffered *personal injury.* Where the loss is "commercial," however, the limitation may or may not be unconscionable. The following *Farm Family Insurance* case applies this provision, along with the Code's basic implied warranty disclaimer rules.

Farm Family Mutual Insurance Co. v. Moore Business Forms, Inc.

625 N.Y.S.2d 798 (N.Y. Sup. Ct., Albany County 1995)

The Farm Family Mutual Insurance Company purchased various insurance forms, including New York cancellation notices, from Moore Business Forms, Inc. The cancellation notices turned out to be unsuited for their task due to a change in New York law. Consequently, Farm Family was compelled to make payments under policies it thought it had cancelled.

Farm Family sued Moore for, among other things, breach of the UCC's implied warranties of merchantability and fitness. Moore argued that it had disclaimed these warranties and also had excluded the consequential damages Farm Family was seeking. Moore's standard form contract said that Moore did not warrant its forms' fitness for their intended use, and limited a buyer's remedies to the replacement or reworking of defective forms or the return of their purchase price. Then it stated: "THIS WARRANTY IS GIVEN IN LIEU OF ANY OTHER REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE." After this, the contract said that "except for personal injuries, in no event shall Moore be liable for incidental or consequential damages arising from any cause whatsoever." Both parties then moved for summary judgment.

Harris, Justice UCC section 2–719(3) states that "[c]onsequential damages may be limited or excluded unless the limitation or exclusion is unconscionable. Limitation of consequential damages for injury to the person in the case of consumer goods is prima facie unconscionable but limitation of damages where the loss is commercial is not." The limitation of consequential damages clause herein relates to commercial loss and not to personal injury. It therefore is not prima facie unconscionable.

Where, as here, businessmen contract in a commercial setting, a presumption of conscionability arises. As a general rule, unconscionability requires some showing of an absence of meaningful choice on the part of one of the parties together with contract terms which are unreasonably favorable to the other party. Prior to entering into a contractual relationship with Moore, Farm Family purchased its forms from another company. Therefore, Farm Family did not lack a meaningful choice. Accordingly, Moore effectively excluded consequential damages as a matter of law.

UCC section 2–316(2) states that "to exclude or modify the implied warranty of merchantability or any part of it the language must mention merchantability and in case of a writing must be conspicuous, and to exclude or modify any implied warranty of fitness the exclusion must be in writing and conspicuous." UCC section 1–210(10) states that "[a] term or clause is conspicuous when it is so written that a reasonable person against whom it is to operate might have noticed it. A printed heading in capitals (as: NON-NEGOTIABLE BILL OF LADING) is conspicuous. Language in the body of a form is 'conspicuous' if it is in larger or other contrasting type or color." Moore's disclaimers satisfy, as a matter of law, [these] conspicuousness requirements.

Moore's summary judgment motion on Farm Family's implied warranty claims granted; Farm Family's summary judgment motion denied.

Defenses

Many things—for example, the absence of privity or a valid disclaimer—can be considered defenses to a product liability suit. Here, however, our concern is with product liability defenses that involve the plaintiff's behavior. Although the *Restatement (Third)* has a "comparative responsibility" provision that apportions liability among the plaintiff, the seller, and distributors, and many states have similar rules, the following discussion is limited to two-party situations.

The Traditional Defenses

Traditionally, the three main defenses in a product liability suit have been the overlapping trio of product misuse, assumption of risk, and contributory negligence.[12] **Product misuse** (or abnormal use) occurs when the plaintiff uses the product in some unusual, unforeseeable way, and this causes the loss for which she sues. Examples include ignoring the manufacturer's instructions, mishandling the product, and using the product for purposes for which it was not intended. But if the defendant had reason to foresee the misuse and failed to take reasonable precautions against it, there is no defense. Product misuse traditionally has been a defense in warranty, negligence, and strict liability cases.

Assumption of risk is the plaintiff's voluntary consent to a known danger. It can occur any time the plaintiff willingly exposes herself to a known product hazard—for example, by consuming obviously adulterated food. Like product misuse, assumption of risk ordinarily has been a defense in warranty, negligence, and strict liability cases.

Contributory negligence is the plaintiff's failure to act with reasonable, prudent self-protectiveness. In the product liability context, perhaps the most common example is the simple failure to notice a hazardous product defect. Contributory negligence clearly is a defense in a negligence suit, but courts have disagreed about whether or when it should be a defense in warranty and strict liability cases.

Comparative Principles

Where they are allowed and proven, the three traditional product liability defenses completely absolve the defendant from liability. Dissatisfaction with this all-or-nothing situation has spurred the increasing use of comparative principles in product liability cases.[13] Rather than letting the traditional defenses completely absolve the defendant, courts and legislatures now apportion damages on the basis of relative fault. They do so by requiring that the fact finder establish the plaintiff's and the defendant's percentage shares of the total fault for the injury and then award the plaintiff his total provable damages times the defendant's percentage share of the fault.

Unsettled questions persist among the states that have adopted comparative principles. First, it is not always clear what kinds of fault will reduce the plaintiff's recovery. However, some state comparative negligence statutes have been read as embracing assumption of risk and product misuse, and state comparative fault statutes usually define fault broadly. Second, comparative principles may assume either the *pure* or the *mixed* forms described in Chapter 7. In "mixed" states, for example, the defendant has a complete defense where the plaintiff is more at fault than the defendant. Finally, there is some uncertainty about the theories of recovery and the types of damage claims to which comparative principles apply.

Ethical and Public Policy Concerns

1. As suggested earlier in the chapter, one explanation for the prodefendant thrust of 19th-century product liability law is the courts' desire to protect infant industries by preventing them from suffering potentially crippling damage awards. If this explanation is accurate, it means that those injured by defective products and the survivors of those killed by such products were denied compensation so that the country might be industrialized. Is this right? Should people's rights be sacrificed in this way? In answering this question, assume for the sake of argument that these denials of recovery actually were necessary for industrialization to proceed.

2. Courts are much more likely to find disclaimers and remedy limitations enforceable when the plaintiff is a business firm than when the plaintiff is an

[12]Chapter 7 discusses contributory negligence and assumption of risk.

[13]Comparative negligence and comparative fault are discussed in Chapter 7. Although courts and commentators often use the terms comparative fault and comparative negligence interchangeably, comparative fault usually includes forms of blameworthiness other than negligence.

ordinary consumer. What is the justification for this difference in treatment?

One possible way to get around the arguments against enforcing disclaimers and remedy limitations in consumer cases is to enforce them when the seller has used various kinds of "superdisclosure" to make buyers aware of the disclaimer. Possibilities include: positioning the disclaimer or limitation outside the product package, using signs to alert buyers to it, explaining it to buyers, and requiring the buyer to sign separately near a conspicuous disclaimer or limitation. Try to think of some problems with superdisclosure itself and with allowing disclaimers and remedy limitations to be enforced on this basis.

3. Most likely, consumers would pay a somewhat lower price for the products they purchase if the implied warranty of merchantability did not exist. Why is this so? Assuming that it is so, why shouldn't consumers have the choice whether to buy products with the "insurance policy" the warranty provides or to get a lower price by forgoing this protection? Or would this choice be too difficult for individual sellers and manufacturers to provide? Nonetheless, shouldn't consumers at least know what deal sellers are offering so that they can pick the seller whose terms they prefer? In theory, how does current law make this possible? What probably would *really* be necessary for consumers to get the necessary information? *Hint:* Look at the second paragraph of the previous question.

Problems and Problem Cases

1. *Video Case.* See "TV Repair." Allen, a salesperson for an electronics store, is talking to Arnold, a customer, while Arnold picks up a portable TV and puts it on the counter preparatory to buying it. Allen tells Arnold that he "won't have any problems" with the set because he's "buying the best." He also tells Arnold, "I'm sure you'll enjoy your new set." After buying the set, taking it home, and plugging it in, Arnold finds that the set does not work. Assuming that Allen has the authority to bind the store, has the store breached an express warranty to Arnold? Assuming that the store is a merchant and has not disclaimed the implied warranty of merchantability, is it liable under that theory?

2. Ewers, who owns a saltwater aquarium with tropical fish, bought several seashells, a piece of coral, and a driftwood branch from the Verona Rock Shop. Just before the purchase, the salesclerk told Ewers that these items were "suitable for saltwater aquariums, if they [are] rinsed." After making the purchase, Ewers took the items home, rinsed them for 20 minutes in a saltwater solution, and put them in his aquarium. Within a week, 17 of his tropical fish died. The "rinsing" required to prevent their deaths is a week-long cleansing process that involves soaking the shells and the coral in boiling water. Suppose that you are Ewers's attorney in his express warranty suit against the shop. Make an argument that the clerk's statement is an express warranty. Make an argument that this warranty was breached. Assume that Ewers did not know the correct "rinsing" procedure.

3. Steven Taterka purchased a 1972 Ford Mustang from a Ford dealer in January 1972. In October 1974, after Taterka had put 75,000 miles on the car and Ford's express warranty had expired, he discovered that the taillight assembly gaskets on his Mustang had been installed in such a way that water was permitted to enter the taillight assembly, causing rust to form. Even though the rusting problem was a recurrent one of which Ford was aware, Ford did nothing for Taterka. Is Ford liable to Taterka under the implied warranty of merchantability?

4. Peter Vamos purchased a sealed bottle of Diet Coke at a grocery store. After Vamos drank from the bottle, he discovered that it contained two AA batteries. Vamos testified that he then became ill for several days. However, there apparently was no evidence that the liquid Vamos drank was poisonous or noxious. Can the Coca-Cola Bottling Company of New York, which bottled the liquid Vamos drank, be liable to him under the implied warranty of merchantability if the liquid in fact was harmless? If so, what result under the foreign–natural test? What result under the reasonable consumer expectations test?

5. *Video Case.* See "Software Horror Story." Chuck contacts the Bits and Bites Computer Superstore to get a software package suitable for some customized computer program work he is performing for a client. He tells the store's salesperson that he needs a database management system that he can customize at the source code level. However, there is little discussion of his other needs, including the work Chuck is doing for the client. The salesperson recommends a

system called "D-Base Hit" for $649, and Chuck relies on the salesperson's judgment in buying that package. As it turns out, D-Base Hit *can* be modified at the source code level, but it is otherwise unsuitable for the job Chuck is doing. Assuming that Article 2 of the UCC applies, has Bits and Bites breached the implied warranty of fitness for a particular purpose?

6. David Rauscher bought a new Buick Century automobile in March of 1981. In May of that year, with the car's odometer showing 2,476 miles, Rauscher took it to a local Buick dealer for service because the car's engine sometimes would hesitate and die. The dealer failed to fix the problem, which intermittently continued over the next five years despite at least five additional service trips by Rauscher. On June 5, 1986, Rauscher's 16-year-old daughter Madonna drove the Buick to school. When she pulled out from a stop sign to make a left turn on U.S. 40, the car stalled. It then was struck by another car proceeding along U.S. 40, causing personal injury to Madonna. Is General Motors liable to Madonna under section 402A?

7. Gari West used Ovulen-28, a birth control medication manufactured by Searle & Company. She claimed that the Ovulen-28 caused her to develop a hepatic adenoma (a benign liver tumor), which eventually ruptured, causing a life-threatening situation. Assuming that the Ovulen-28 actually caused West's problem, what argument can Searle make to avoid the imposition of strict liability under section 402A? *Hint:* Assume that the Ovulen-28 has considerable social utility and cannot feasibly be made safer than it now is.

8. Curtis Hagans lost the ring finger of his left hand while operating an industrial table saw manufactured by the Oliver Machinery Company. The saw originally was equipped with a detachable blade guard assembly that would have prevented Hagans's injury had it been attached to the saw while Hagans was working. This assembly was detachable rather than permanently affixed to the saw because many common woodworking functions could not be performed with the assembly in place. Also, the saw exceeded industry safety practices and national and associational safety standards in effect at the time of its manufacture. In addition, few competing manufacturers included blade guards as standard equipment, and none offered a table saw with a permanently affixed blade guard.

Hagans sued Oliver in negligence and under section 402A, alleging that the saw was defectively designed because it did not include a permanent blade guard assembly. Did Hagans win? You can assume that injuries of the kind Hagans suffered were foreseeable consequences of manufacturing the saw without a permanent guard, and that Hagans was not careless in his operation of the saw.

9. Arlyn and Rose Spindler were dairy farmers who leased a feed storage silo from Agristor Leasing. The silo was supposed to limit the oxygen reaching the feed and thus to hinder its spoilage. The Spindlers alleged that the silo was defective and that the dairy feed it contained was spoiled as a result. They further alleged that due to the spoilage of the feed, their dairy herd suffered medically and reproductively, and their milk production dropped. The Spindlers sued Agristor in negligence and under section 402A for their resulting lost income. What *type* of damages are they claiming? Under the majority rule, can they recover for such damages in negligence or under section 402A? Would your answer be different if the Spindlers had sued for the damage to the *dairy feed* itself? Assume for purposes of argument that both section 402A and negligence suits are possible under this equipment lease.

10. CMD *Video Case.* See "Car Deals." Jake, a car salesman, is discussing a particular car with Jones, a customer at Jake's dealership. Jake tells Jones that "you won't find a car like this at any price. This car is a crown jewel." Later, Jake says that he bought the car at an auction in Kentucky. Influenced by these statements, Jones buys the car. The bill of sale conspicuously says that the car is being sold "AS IS," and that no warranties or representations concerning the car have been made or given, except as stated in the bill of sale. Later, Jones discovers that the car's brakes are so defective that the car is unsafe to drive.

Which, if any, of Jake's statements are express warranties? Which, if any, have been breached here? Does the language in the bill of sale disclaim any express warranties that might exist? Does that language disclaim the implied warranty of merchantability? If the implied warranty of merchantability has not been disclaimed, is it breached here?

11. Duane Martin, a small farmer, placed an order for cabbage seed with the Joseph Harris Company, a large national producer and distributor of seed. Harris's order form included the following language:

> NOTICE TO BUYER: Joseph Harris Company, Inc. warrants that seeds and plants it sells conform to the label descriptions as required by Federal and State seed laws.

IT MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, OF MERCHANTABILITY, FITNESS FOR PURPOSE, OR OTHERWISE, AND IN ANY EVENT ITS LIABILITY FOR BREACH OF ANY WARRANTY OR CONTRACT WITH RESPECT TO SUCH SEEDS OR PLANTS IS LIMITED TO THE PURCHASE PRICE OF SUCH SEEDS OR PLANTS.

All of Harris's competitors used similar clauses in their contracts.

After Martin placed his order, and unknown to Martin, Harris stopped using a cabbage seed treatment that had been effective in preventing a certain cabbage fungus. Later, Martin planted the seed he had ordered from Harris, but a large portion of the resulting crop was destroyed by fungus because the seed did not contain the treatment Harris had previously used. Martin sued Harris for his losses under the implied warranty of merchantability.

Which portion of the notice quoted above is an attempted disclaimer of implied warranty liability, and which is an attempted limitation of remedies? Will the disclaimer language disclaim the implied warranty of merchantability under UCC section 2–316(2)? If Martin had sued under the implied warranty of fitness for a particular purpose, would the disclaimer language disclaim that implied warranty as well? Assuming that the disclaimer and the remedy limitation contained the correct legal boilerplate needed to make them effective, what argument could Martin still make to block their operation? What are his chances of success with this argument?

12. Moulton purchased a 1969 Ford LTD from Hull-Dobbs, a Ford dealer. His sales contracts with Ford and Hull-Dobbs contained valid disclaimers of the implied warranty of merchantability that satisfied UCC section 2–316(2). One year later, while Moulton was driving his car along an interstate highway, the Ford suddenly veered to the right, jumped the guardrail, and fell 26 feet to the street below. The accident was caused by a defect in the car's steering mechanism, and Moulton was seriously injured. Moulton sued Ford under the implied warranty of merchantability. Ford defended on the basis of its disclaimer. Moulton argued that the disclaimer was invalid in a personal injury case under UCC section 2–719(3), which makes the exclusion of consequential damages unconscionable in a case involving consumer goods and personal injury. Did Moulton's argument succeed?

13. Richard Jimenez was injured when a disc for the handheld electric disc grinder he had purchased from Sears Roebuck shattered while he used the grinder to smooth down a steel weld. When Jimenez sued Sears in strict liability, Sears argued that he had misused the grinder, and that this misuse caused his injury. Assuming that Sears was right, what effect would this have in a state that has not adopted comparative negligence or comparative fault? What result it would have in a comparative fault state?

14. On June 25, 1986, a general contractor completed the Oceanside at Pine Point Condominium. In the construction, the contractor used windows manufactured by Peachtree Doors, Inc. Peachtree delivered the windows to the contractor in December of 1985. After sale of the condominium units to the public, the condominium building suffered significant water damage around the windows. Thus, Pine Point's owners' association brought a class action product liability suit against Peachtree on December 31, 1991. The suit included claims based on Article 2 of the UCC. Have the plaintiffs satisfied Article 2's statute of limitations?

15. Susan, a retired college professor who has never sold an automobile before, sells a used car to Madeline. The car's engine is in very poor shape, and soon enough it simply refuses to run. Madeline sues Susan under section 402A. Will her suit succeed? Why or why not? In answering, go through the elements of section 402A. How would your analysis differ under the *Restatement (Third)?*

Chapter Twenty-One

Performance of Sales Contracts

Chapter Outline

I. General Rules
- *A. Good Faith*
- *B. Course of Dealing*
- *C. Usage of Trade*
- *D. Modification*
- *E. Waiver*
- *F. Assignment*

II. Delivery
- *A. Basic Obligation*
- *B. Place of Delivery*
- *C. Seller's Duty of Delivery*

III. Inspection and Payment
- *A. Buyer's Right of Inspection*
- *B. Payment*

IV. Acceptance, Revocation, and Rejection
- *A. Acceptance*
- *B. Effect of Acceptance*
- *C. Revocation of Acceptance*
- *D. Buyer's Rights on Improper Delivery*
- *E. Rejection*
- *F. Right to Cure*
- *G. Buyer's Duties after Rejection*

V. Assurance, Repudiation, and Excuse
- *A. Assurance*
- *B. Anticipatory Repudiation*
- *C. Excuse*

In the two previous chapters, we discussed the formation and terms of sales contracts, including those terms concerning express and implied warranties. In this chapter, the focus is on the legal rules that govern the performance of contracts. Among the topics covered are the basic obligations of the buyer and seller with respect to delivery and payment, the rights of the parties when the goods delivered do not conform to the contract, and the circumstances that may excuse the performance of a party's contractual obligations.

General Rules

The parties to a contract for the sale of goods are obligated to perform the contract according to its terms. The Uniform Commercial Code (UCC or Code) gives the parties great flexibility in deciding between themselves how they will perform a contract. The practices in the trade or business as well as any past dealings between the parties may supplement or explain the contract. The Code gives both the buyer and the seller certain rights, and it also sets out what is expected of them on points that they did not deal with in their contract. It should be kept in mind that the Code changes basic contract law in a number of respects.

Good Faith

The buyer and seller must act in **good faith** in the performance of a sales contract [1–203].[1] Good faith is defined to mean "honesty in fact" in performing the

[1]The numbers in brackets refer to sections of the Uniform Commercial Code.

duties assumed in the contract or in carrying out the transaction [1–201(19)]. Thus, if the contract requires the seller to select an assortment of goods for the buyer, the selection must be made in good faith; the seller should pick out a reasonable assortment [2–311]. It would not, for example, be good faith to include only unusual sizes or colors.

Course of Dealing

The terms in the contract between the parties are the primary means for determining the obligations of the buyer and seller. The meaning of those terms may be explained by looking at any performance that has already taken place. For example, a contract may call for periodic deliveries of goods. If the seller has made a number of deliveries without objection by the buyer, the way the deliveries were made shows how the parties intended them to be made. Similarly, if there were any past contracts between the parties, the way the parties interpreted those contracts is relevant to the interpretation of the present contract. If there is a conflict between the express terms of the contract and the past course of dealing between the parties, the express terms of the contract prevail [1–205(4)].

Usage of Trade

In many kinds of businesses, there are customs and practices of the trade that are known by people in the business and that are usually assumed by parties to a contract for goods of that type. Under the Code, the parties and courts may use these trade customs and practices—known as usage of trade—in interpreting a contract [2–202; 1–205]. If there is a conflict between the express terms of the contract and trade usage, the express terms prevail [1–205(4)]. The *Weisz Graphics* case illustrates how a court may consider the terms of a contract, the course of dealing between the parties, and trade usage in determining the interpretation of a contract between merchants.

Weisz Graphics v. Peck Industries, Inc. *403 S.E2d 146 (S.C. Ct. App. 1991)*

Weisz Graphics is a custom manufacturer and seller of decals, markings, and other graphic materials and competes in a national market. Weisz manufactures its products to customer specifications based on blueprints, samples, art, or mechanical drawings. It manufactures only to order and does not maintain a general inventory. However, it regularly engages in what are known as "release programs" with its customer; such programs are common in the industry. Under a release program, Weisz manufactures a large quantity of goods to customer order, then warehouses the goods for the customer. As the customer needs the goods, Weisz releases them in specified lots and bills the buyer when it ships the goods. Release programs in the industry are generally limited to one year, due in part to the shelf life of the goods.

Peck Industries, a manufacturer of commercial signs for national and Memphis, Tennessee, accounts, uses pressure-sensitive vinyl letters, numbers, and other products. Beginning in 1985, Peck began purchasing some of its requirements from Weisz; some contracts were for immediate manufacture and delivery while others were for extended delivery under a release program. A November 1985 order (P.O. 4426) provided: "BREAK UP INTO MULTIPLE SHIPMENTS." Weisz's acknowledgment contained the following shipment term: "On Releases Bill & Ship on release for 12 months." In April 1986, Peck sent a purchase order (P.O. 5885) for a quantity of goods that provided "TO BE BILLED AND SHIPPED AS RELEASED." Weisz sent back its standard acknowledgment form on which a clerk had typed "On Releases over 12 months." Other orders (P.O. 4037 and P.O. 4426) were placed by Peck that stated on their face: "ORDER AS NEEDED FOR A PERIOD OF 1 YEAR." In each case Weisz immediately manufactured the items ordered and over a period of a year released and billed shipments at Peck's request. At the end of the 12 months, Weisz refused to make further shipments until Peck paid in full the remaining balance on the shipment. Peck refused to pay, choosing instead to obtain its requirements from other manufacturers at higher prices. Weisz then brought suit for the balance due on the goods sold to Peck.

Bell, Judge Section 1–205(3) states:

> A course of dealing between parties and any usage of trade in the . . . trade in which they are engaged or should be aware [*sic*] give particular meaning to supplement or qualify terms of the agreement.

Similarly, section 2–208(1) provides that a course of performance between the parties which is accepted or acquiesced in without objection by a party with opportunity to object is relevant to determine the meaning of the agreement.

As to Purchase Order 4037, Peck itself specified that delivery was on release for one year. There is no evidence that Weisz's acknowledgment contained a similar notation. However, Weisz did not object and began delivering the goods on release.

Purchase Order 4426 specified multiple shipments, but no release period. Weisz's uncontradicted evidence showed that a time limitation is standard in the industry. It also showed that its prior course of dealing with Peck had been to ship on 12-month release. None of its release contracts with Peck exceeded 12 months. Moreover, Peck accepted performance of Order 4426 without objection. Therefore, under sections 1–205(3) and 2–208(1) the 12-month release period that supplemented the express provisions of the written form was part of the contract.

The same is true of Purchase Order 5885. Like Purchase Order 4426, it specified no release period. However, its express provisions were supplemented by trade usage and prior course of dealing which established the 12-month release period as a term of the contract.

In the alternative, the 12-month release period became a term of the contract under section 2–207(2). In response to Purchase Order 4426 and 5885, Weisz's acknowledgment forms added a 12-month release period. Neither of Peck's orders expressly limited Weisz's acceptance to the express terms of its standard form. Nor did Peck give Weisz a notification of objection to the acknowledgments. Instead, Peck began accepting performance of the contract without objection. Finally, the 12-month limit was not a material alteration of the contract. Because it conformed to existing trade usage and prior course of dealing between the parties, it did not result in unreasonable surprise or hardship. Accordingly, both contracts incorporated a term for delivery on 12-month release. Payment in full of the balance on the purchase price was due at the end of the 12th month.

Judgment for Weisz.

Modification

Under the Code, consideration is not required to support a modification or rescission of a contract for the sale of goods. However, the parties may specify in their agreement that modification or rescission must be in writing, in which case a signed writing is necessary for enforcement of any modification to the contract or its rescission [2–209].

Waiver

In a contract that entails a number of instances of partial performance (such as deliveries or payments) by one party, the other party must be careful to object to any late deliveries or payments. If the other party does not object, it may waive its rights to cancel the contract if other deliveries or payments are late [2–208(3), 2–209(4)]. For example, a contract calls for a fish market to deliver fish to a supermarket every Thursday and for the supermarket to pay on delivery. If the fish market regularly delivers the fish on Friday and the supermarket does not object, the supermarket will be unable to cancel the contract for that reason. Similarly, if the supermarket does not pay cash but sends a check the following week, then unless the fish market objects, it will not be able to assert the late payments as grounds for later canceling the contract. A party that has waived rights to a portion of the contract not yet performed may retract the waiver by giving reasonable notice to the other party that strict performance will be required. The retraction of the waiver is effective unless it would be unjust because of a material change of position by the other party in reliance on the waiver [2–209(5)].

Assignment

Under the Code, the buyer and/or the seller may delegate their duties to someone else. If there is a strong

reason for having the original party perform the duties, perhaps because the quality of the performance might differ otherwise, the parties may not delegate their duties. Also, they may not delegate their duties if the parties agree in the contract that there is to be no assignment of duties. However, they may assign rights to receive performance—for example, the right to receive goods or payment [2–210].

Delivery

Basic Obligation

The basic duty of the seller is to deliver the goods called for by the contract. The basic duty of the buyer is to accept and pay for the goods if they conform to the contract [2–301]. The buyer and seller may agree that the goods are to be delivered in several lots or installments. If there is no such agreement, then a single delivery of all the goods must be made. Where delivery is to be made in lots, the seller may demand the price of each lot upon delivery unless there has been an agreement for the extension of credit [2–307].

Place of Delivery

The buyer and seller may agree on the place where the goods will be delivered. If no such agreement is made, then the goods are to be delivered at the seller's place of business. If the seller does not have a place of business, then delivery is to be made at his home. If the goods are located elsewhere than the seller's place of business or home, the place of delivery is the place where the goods are located [2–308].

Seller's Duty of Delivery

The seller's basic obligation is to tender delivery of goods that conform to the contract with the buyer. Tender of delivery means that the seller must make the goods available to the buyer. This must be done during reasonable hours and for a reasonable period of time, so that the buyer can take possession of the goods [2–503]. The contract of sale may require the seller merely to ship the goods to the buyer but not to deliver the goods to the buyer's place of business. If this is the case, the seller must put the goods into the possession of a carrier, such as a trucking company or a railroad. The seller must also make a reasonable contract with the carrier to take the goods to the buyer. Then, the seller must notify the buyer that the goods have been shipped [2–504]. Shipment terms were discussed in Chapter 19, Formation and Terms of Sales Contracts.

If the seller does not make a reasonable contract for delivery or notify the buyer and a material delay or loss results, the buyer has the right to reject the shipment. Suppose the goods are perishable, such as fresh produce, and the seller does not ship them in a refrigerated truck or railroad car. If the produce deteriorates in transit, the buyer can reject the produce on the ground that the seller did not make a reasonable contract for shipping it.

In some situations, the goods sold may be in the possession of a bailee such as a warehouse. If the goods are covered by a negotiable warehouse receipt, the seller must indorse the receipt and give it to the buyer [2–503(4)(a)]. This enables the buyer to obtain the goods from the warehouse. Such a situation exists when grain being sold is stored at a grain elevator. The law of negotiable documents of title, including warehouse receipts, is discussed in Chapter 33, Checks and Documents of Title.

If the goods in the possession of a bailee are not covered by a negotiable warehouse receipt, then the seller must notify the bailee that it has sold the goods to the buyer and must obtain the bailee's consent to hold the goods for delivery to the buyer or release the goods to the buyer. The risk of loss as to the goods remains with the seller until the bailee agrees to hold them for the buyer [2–503(4)(b)].

Inspection and Payment

Buyer's Right of Inspection

Normally, the buyer has the right to inspect the goods before he accepts or pays for them. The buyer and seller may agree on the time, place, and manner in which the buyer will inspect the goods. If no agreement is made, then the buyer may inspect the goods at any reasonable time and place and in any reasonable manner [2–513(1)].

If the shipping terms are cash on delivery (COD), then the buyer must pay for the goods before inspecting them unless they are marked "Inspection Allowed." However, if it is obvious even without inspection that the goods do not conform to the contract, the

buyer may reject them without paying for them first [2–512(1)(a)]. For example, if a farmer contracted to buy a bull and the seller delivered a cow, the farmer would not have to pay for it. The fact that a buyer may have to pay for goods before inspecting them does not deprive the buyer of remedies against the seller if the goods do not conform to the contract [2–512(2)].

If the goods conform to the contract, the buyer must pay the expenses of inspection. However, if the goods are nonconforming, he may recover his inspection expenses from the seller [2–513(2);2–715(1)].

Payment

The buyer and seller may agree in their contract that the price of the goods is to be paid in money or in other goods, services, or real property. If all or part of the price of goods is payable in real property, then only the transfer of goods is covered by the law of sales of goods. The transfer of the real property is covered by the law of real property [2–304].

The contract may provide that the goods are sold on credit to the buyer and that the buyer has a period of time to pay for them. If there is no agreement for extending credit to the buyer, the buyer must pay for them upon delivery. The buyer usually can inspect goods before payment except where the goods are shipped COD, in which case the buyer must pay for them before inspecting them.

Unless the seller demands cash, the buyer may pay for the goods by personal check or by any other method used in the ordinary course of business. If the seller demands cash, the seller must give the buyer a reasonable amount of time to obtain it. If payment is made by check, the payment is conditional on the check's being honored by the bank when it is presented for payment [2–511(3)]. If the bank refuses to pay the check, the buyer has not satisfied the duty to pay for the goods. In that case, the buyer does not have the right to retain the goods and must give them back to the seller.

Acceptance, Revocation, and Rejection

Acceptance

Acceptance of goods occurs when a buyer, after having a reasonable opportunity to inspect them, either indicates that he will take them or fails to reject them. To **reject** goods, the buyer must notify the seller of the rejection and specify the defect or nonconformity. If a buyer treats the goods as if he owns them, the buyer is considered to have accepted them [2–606].

For example, Ace Appliance delivers a new color television set to Baldwin. Baldwin has accepted the set if, after trying it and finding it to be in working order, she says nothing to Ace or tells Ace that she will keep it. Even if the set is defective, Baldwin is considered to have accepted it if she does not give Ace timely notice that she does not want to keep it because it is not in working order. If she takes the set on a vacation trip even though she knows that it does not work properly, this is also an acceptance. In the latter case, her use of the television set would be inconsistent with its rejection and the return of ownership to the seller.

If a buyer accepts any part of a **commercial unit** of goods, he is considered to have accepted the whole unit [2–606(2)]. A commercial unit is any unit of goods that is treated by commercial usage as a single whole. It can be a single article (such as a machine), a set or quantity of articles (such as a dozen, bale, gross, or carload), or any other unit treated as a single whole [2–105(6)]. Thus, if a bushel of apples is a commercial unit, then a buyer purchasing 10 bushels of apples who accepts 8 1/2 bushels is considered to have accepted 9 bushels.

In the *Starr Fireworks* case, which follows, the buyer was considered to have accepted goods that it had handled inconsistently with a claim of rejection and return of ownership of the goods to the seller.

Ford v. Starr Fireworks, Inc. *874 P.2d 230 (Wyo. Sup. Ct. 1994)*

In the spring of 1991, Vince Ford, a retailer, contracted with a wholesaler, Starr Fireworks, for the purchase of various types of fireworks at an agreed price of $6,748.86. In May 1991, Starr delivered the 138 cases of fireworks in one lot to Ford's warehouse in Lusk, Wyoming. Ford did not immediately inspect the fireworks; instead, he distributed them to his retail outlets throughout Wyoming for resale to the public.

Approximately 10 days after the fireworks were distributed to the retail outlets, Ford discovered that some

fireworks were unsalable because of water damage and packaging problems. However, Ford did not inspect the remainder of the fireworks from the shipment. Ford telephoned Starr's representative to report the problems. Although Ford claimed that he instructed his employees not to sell any products received from Starr, a month later one of his stores sold several cases of the fireworks that had been purchased from Starr to another fireworks retailer. The buyer reported no problem with those fireworks, and they were subsequently resold to customers without reported problems.

After several unsuccessful efforts by Starr representatives to pick up the fireworks, they did pick up 10 cases of fireworks, worth $1,476.87, on August 3, 1991. At that time, Ford signed an acknowledgment that he still owed $5,251.99 to Starr. Ford claimed to have returned the remaining fireworks to Starr's Denver office on August 13, 1991. He said that no one was available in the office so he left the fireworks outside a side door; Starr never received those fireworks.

Starr brought suit to recover the balance due on the fireworks that Ford had acknowledged retaining. Ford claimed that he had rejected the entire shipment on the grounds they were unmerchantable and counterclaimed for damages he asserted he had sustained. Ford contended that his inspection of some of the fireworks disclosed packages with torn wrappings, mold, or mildew on some fireworks, and paper wrapping that fell apart, exposing the fireworks. Ford argued that from this sampling it was reasonable to assume all the goods delivered by Starr were unmerchantable.

Taylor, Justice The Uniform Commercial Code, as enacted in Wyoming, permits a buyer to return nonconforming goods to a seller. If the goods or tender or delivery fail in any respect to conform to the contract, the buyer is permitted to reject the whole, accept the whole, or accept any commercial unit or units and reject the remainder. Section 2–601(a). The substance of this dispute involves which of the three alternatives Ford exercised in returning the fireworks. Ford broadly argues that he rejected the whole. The evidence, however, supports a conclusion that Ford effectively rejected some commercial units. Those units were returned to Starr and Ford's account was properly credited. Meanwhile, Ford's exercise of ownership over the other commercial units which he claimed to have rejected constituted an acceptance of those goods.

The evidence established that at least some of the fireworks Ford claimed were unmerchantable passed without objection in the trade. After Ford rejected the fireworks, Ford sold two to three cases of the bottle rockets received from Starr to another fireworks dealer. This resale implies the merchantability of at least some of the fireworks. If the fireworks were unmerchantable within trade standards, another retailer would not have purchased the bottle rockets. Also, no customer complaints were ever received about the merchantability of the fireworks sold by the second retailer from the lot delivered to Ford by Starr. Furthermore, Starr indicated that it received no complaints from any other purchaser of the remaining fireworks from the same shipment Ford claimed was unmerchantable. Accordingly, we hold that the fireworks which Ford did not inspect or return to Starr were merchantable.

Next, Ford argues that the district court erred in concluding that Ford had wrongly exercised ownership of the rejected goods. While Ford admits he sold some of the rejected goods, he argues that the remainder was effectively rejected. Ford also contends that holding the goods at his retail outlets was not unreasonable.

A buyer who takes any action which is inconsistent with the claim that the goods have been rejected risks accepting the goods. A buyer's rejection can be converted into an acceptance by acts which are inconsistent with the seller's ownership rights.

Lorenzo Banfi di Banfi Renzo & Co. v. Davis Congress Shops, Inc. (N.D. Ill. 1983) illustrates the obligation of a buyer to avoid the exercise of ownership of goods which the buyer claims are unmerchantable. The buyer, a retailer of men's shoes, purchased over 500 pairs of shoes from the seller. After the buyer allegedly rejected the shipment, the buyer placed the shoes in inventory in his store, offered the shoes for sale, and sold a number of these shoes to customers. The buyer's actions in placing the shoes in inventory and offering the shoes for sale were an exercise of ownership by the buyer. Furthermore, the court found that offering allegedly

defective goods for retail sale was not a reasonable use of the goods consistent with rejection. The court held the buyer's actions constituted an acceptance of the goods.

Similarly, Ford placed the rejected fireworks in inventory at his retail outlets. While he claimed to have withdrawn the goods from sale after the defects were discovered, Ford later sold several cases of the rejected bottle rockets to another retailer. Ford also held the rejected fireworks for at least two months after providing notice of rejection to Starr. As a result Starr's agents made two unsuccessful trips to Ford's warehouse to obtain the goods. In an industry with seasonal sales peaks, such a delay in making the rejected fireworks available to Starr was unreasonable. We hold Ford wrongfully exercised ownership of the rejected fireworks.

Although Ford did not have any duty to return the fireworks to Denver, section 2–602(b)(ii) requires a buyer to use reasonable care in holding the fireworks for the seller. A buyer who is also a merchant (section 2–104(a)) has a duty to follow any reasonable instructions received from the seller. Section 2–603(a). Once Ford gratuitously offered to return the fireworks to Starr's Denver location, Ford was under a duty to return the fireworks in a reasonable manner. Starr's sales representatives informed Ford that the fireworks were to be delivered to a responsible person at Starr. The evidence discloses that Ford left the fireworks unattended outside Starr's downtown Denver business location. We agree with the district court that leaving the fireworks unattended outside a business on a busy street is unreasonable. We hold that Ford failed to follow reasonable instructions in returning the fireworks to Starr.

Judgment for Starr affirmed.

Effect of Acceptance

Once a buyer has accepted goods, he cannot later reject them unless at the time they were accepted, the buyer had reason to believe that the nonconformity would be cured. By accepting goods, the buyer does not forfeit or waive all remedies against the seller for any nonconformities in the goods. However, if the buyer wishes to hold the seller responsible, he must give the seller timely notice that the goods are nonconforming.

The buyer is obligated to pay for goods that are accepted. If the buyer accepts all of the goods sold, she is, of course, responsible for the full purchase price. If the buyer accepts only part of the goods, she must pay for that part at the contract rate [2–607(1)].

Revocation of Acceptance

Under certain circumstances, a buyer may **revoke** or undo the acceptance. A buyer may revoke acceptance of nonconforming goods where: (1) the nonconformity substantially impairs the value of the goods and (2) the buyer accepted them without knowledge of the nonconformity because of the difficulty of discovering the nonconformity, or the buyer accepted the goods because of the seller's assurances that it would cure the defect [2–608(1)].

The buyer must exercise her right to revoke acceptance within a reasonable time after the buyer discovers or should have discovered the nonconformity. Revocation is not effective until the buyer notifies the seller of the intention to revoke acceptance. After a buyer revokes acceptance, her rights are the same as they would have been if the goods had been rejected when delivery was offered [2–608].

The right to revoke acceptance could arise, for example, where Arnold buys a new car from Dealer. While driving the car home, Arnold discovers that it has a seriously defective transmission. When she returns the car to Dealer, Dealer promises to repair it, so Arnold decides to keep the car. If the dealer does not fix the transmission after repeated efforts to fix it, Arnold could revoke her acceptance on the grounds that the nonconformity substantially impairs the value of the car, that she took delivery of the car without knowledge of the nonconformity, and that her acceptance was based on Dealer's assurances that he would fix the car. Similarly, revocation of acceptance might be involved where a serious problem with the car not discoverable by inspection shows up in the first month's use.

Revocation must occur prior to any substantial change in the goods, however, such as serious damage in an accident or wear and tear from using them for a

period of time. What constitutes a "substantial impairment in value" and when there has been a "substantial change in the goods" are questions that courts frequently have to decide when an attempted revocation of acceptance results in a lawsuit. The *North River Homes* case illustrates a number of the issues that arise in situations where a buyer is seeking to revoke her acceptance.

North River Homes, Inc. v. Bosarge *17 U.C.C Rep.2d 121 (Miss. Sup. Ct. 1992)*

On August 20, 1983, Elmer and Martha Bosarge purchased from J & J Mobile Home Sales a furnished mobile home manufactured by North River Homes. The mobile home, described by a J & J salesperson as the "Cadillac" of mobile homes, cost $23,900. Upon moving into their new home, the Bosarges immediately discovered defect after defect. The defects included a bad water leak that caused water to run all over the trailer and into the insulation, which in turn caused the trailer's underside to balloon downward, loose moldings, a warped dishwasher door, a warped bathroom door, holes in the walls, a defective heating and cooling system, cabinets with chips and holes in them, furniture that fell apart, rooms that remained moldy and mildewed, a closet that leaked rainwater, and spaces between the doors and windows and their frames that allowed the elements to come in. The Bosarges had not been able to spot the defects before taking delivery because they viewed the mobile home at night on J & J's lot and there was no light on in the mobile home.

The Bosarges immediately and repeatedly notified North River Homes of the defects, but it failed to repair the home satisfactorily. In November 1983, the Bosarges informed North River of their decision to revoke their acceptance of the defective home. On some occasions, repairmen came but did not attempt to make repairs, saying they would come back. Other times, the repairs were inadequate. For example, while looking for the water leak, a repairman cut open the bottom of the mobile home and then taped it back together with masking tape that failed to hold and resulted in the floor bowing out. Another repairman inadvertently punctured a septic line and did not properly repair the puncture, resulting in a permanent stench. Other repairmen simply left things off at the home, such as a new dishwasher door and a countertop, saying they did not have time to make the repairs.

In June 1984, the Bosarges provided North River with an extensive list of problems that had not been corrected. When they did not receive a satisfactory response, they sent a letter on October 4, 1984, saying they would make no further payments. North River made no further efforts to correct the problems. In March 1986, the Bosarges' attorney wrote to North River formally revoking acceptance of the mobile home because of its substantially impaired value, tendering the mobile home back to it, and advising North River that it could pick the home up at its earliest convenience. They then brought a lawsuit requesting return of the purchase price and seeking damages for breach of various warranties.

Prather, Justice When a consumer has accepted goods and subsequently discovers defects or a breach of implied merchantability, the consumer may invoke statutory and case law which conditions revocation of acceptance on:

> (1) a nonconformity [or defect] which substantially impairs the value of the "lot or commercial unit";
> (2) an acceptance
> (a) (with discovery of the defect) on the reasonable assumption that the nonconformity [or defect] would be cured or
> (b) (without discovery) reasonably induced by the difficulty of the discovery or by the seller's assurances;
> (3) revocation within a reasonable time after the nonconformity [or defect] was discovered or should have been discovered; and
> (4) revocation before a substantial change occurs in the condition of the goods not caused by their own defects.

Once the consumer has properly notified the seller of his or her intent to revoke acceptance, the seller has a right to attempt to cure the alleged defect. This right is not unlimited; that is, Mississippi law does not permit a seller to postpone revocation in perpetuity by fixing everything that goes wrong with the good. "There is a time when enough is enough"—when a consumer no longer must tolerate

or endure a seller's repeated (though good faith) attempts to cure the defect. As aptly stated by a Florida Court of Appeals:

> The buyer . . . is not bound to permit the seller to tinker with the article indefinitely in the hope it may ultimately be made to comply with the warranty. At some point in time, if major problems continue . . . , it must become obvious to all people that a particular [article] simply cannot be repaired or parts replaced so that the same is made free of defect.

When the "time has come," the consumer may revoke once and for all.

North River contends that the Bosarges' failure to move out of their mobile home after "rejecting it" constituted an exercise of ownership (or dominion) and waiver of their right to revoke acceptance. The Bosarges did not move out of their home in November 1983 and in October 1984—the dates when they notified North River of their intention to revoke acceptance—because they were repeatedly assured that the defects would be repaired. Their mistaken belief that North River would fulfill its assurances to repair the defects is but one reason why the Bosarges did not move out of their home. Another reason is simple and understandable:

> When you tie up all your savings into purchasing a home, you cannot take it and park it somewhere. You have to live in it until you can get the people to clear your lot so you can put another one on it. It's just not like a car you can drive on the lot and hand them the keys and say, it's yours. (Testimony of Martha Bosarge.)

North River's contention that the Bosarges should have moved out reflects ignorance of case law which requires a consumer, who expresses an intention to revoke acceptance, to provide a seller with a reasonable attempt to cure the defect. The evidence unequivocally shows that the Bosarges complied with this law; indeed, one could arguably contend that they complied to an unnecessary extent. But the Bosarges' great patience is not surprising in view of their financial inability to move elsewhere.

Any excessive or unreasonable use of the home by the Bosarges may be remedied through quantum meruit recovery—*not* through ineffectuation of revocation.

North River also contends that the Bosarges "failed to prove that the mobile home in question was substantially impaired." The Bosarges counter "that the evidence showed that their North River trailer was literally falling apart." The Bosarges testimony revealed that each North River repairman who visited their home admitted to the Bosarges that their home was so defective that it "ought to be replaced." Notably, Ronnie Wilson, a HUD mobile home inspector provided testimony which is also supportive of the jury's finding; when asked if he would live in that kind of home (heating, cooling, leaking roof, mildew, ice), he answered "No, sir, my wife wouldn't let me, sir."

In sum the record is replete with evidence to support the jury's finding that the Bosarges' home was substantially impaired.

Judgment for Bosarges affirmed.

Buyer's Rights on Improper Delivery

If the goods delivered by the seller do not conform to the contract, the buyer has several options. The buyer can (1) reject all of the goods, (2) accept all of them, or (3) accept any commercial units and reject the rest [2–601]. The buyer, however, cannot accept only part of a commercial unit and reject the rest. The buyer must pay for the units accepted at the price per unit provided in the contract.

Where the contract calls for delivery of the goods in separate installments, the buyer's options are more limited. The buyer may reject an installment delivery only if the nonconformity *substantially affects the value* of that delivery and *cannot be corrected* by the seller in a timely fashion. If the nonconformity is relatively minor, the buyer must accept the installment. The seller may offer to replace the defective goods or give the buyer an allowance in the price to make up for the nonconformity [2–612].

Where the nonconformity or defect in one installment impairs the value of the whole contract, the buyer may treat it as a breach of the whole contract but must proceed carefully so as not to reinstate the remainder of the contract [2–612(3)].

Rejection

If a buyer has a basis for rejecting a delivery of goods, the buyer must act within a *reasonable time* after delivery. The buyer must also give the seller *notice* of the rejection, preferably in writing [2–602]. The buyer should be careful to state all of the defects on which he is basing the rejection, including all of the defects that a reasonable inspection would disclose. This is particularly important if these are defects that the seller might cure (remedy) and the time for delivery has not expired. In that case, the seller may notify the buyer that he intends to redeliver conforming goods.

If the buyer fails to state in connection with his rejection a particular defect that is ascertainable by reasonable inspection, he cannot use the defect to justify his rejection if the seller could have cured the defect had he been given reasonable notice of it. In a transaction taking place between merchants, the seller has, after rejection, a right to a written statement of all the defects in the goods on which the buyer bases his right to reject, and the buyer may not later assert defects not listed in justification of his rejection [2–605].

If the buyer wrongfully rejects goods, she is liable to the seller for breach of the sales contract [2–602(3)].

Right to Cure

If the seller has some reason to believe that the buyer would accept nonconforming goods, then the seller can take a reasonable time to reship conforming goods. The seller has this opportunity even if the original time for delivery has expired. For example, Ace Manufacturing contracts to sell 200 red baseball hats to Sam's Sporting Goods, with delivery to be made by April 1. On March 1, Sam's receives a package from Ace containing 200 blue baseball hats and refuses to accept them. Ace can notify Sam's that it intends to cure the improper delivery by supplying 200 red hats, and it has until April 1 to deliver the red hats to Sam's. If Ace thought that Sam's would accept the blue hats because on past shipments Sam's did not object to the substitution of blue hats for red, then Ace has a reasonable time even after April 1 to deliver the red hats [2–508]. The following *Central District Alarm* case illustrates a situation where the seller did not comply with the requirements for establishing a right to cure.

Concept Review

Acceptance, Revocation, and Rejection

Acceptance	1. Occurs when buyer, having had a reasonable opportunity to inspect goods, either (a) indicates he will take them or (b) fails to reject them. 2. If buyer accepts any part of a commercial unit, he is considered to have accepted the whole unit. 3. If buyer accepts goods, he cannot later reject them *unless* at the time they were accepted the buyer had reason to believe that the nonconformity would be cured. 4. Buyer is obligated to pay for goods that are accepted.
Revocation	1. Buyer may revoke acceptance of nonconforming goods where (a) the nonconformity *substantially impairs the value* of the goods and (b) buyer accepted the goods without knowledge of the nonconformity because of the difficulty of discovering the nonconformity *or* buyer accepted because of assurances by the seller. 2. Right to revoke must be exercised within a *reasonable* time after buyer discovers *or* should have discovered the nonconformity. 3. Revocation must be invoked before there is any *substantial* change in the goods. 4. Revocation is not effective until buyer notifies seller of his intent to revoke acceptance.
Rejection	1. Where the goods delivered do not conform to the contract, buyer may (a) reject all of the goods, (b) accept all of the goods, or (c) accept any commercial unit and reject the rest. Buyer must pay for goods accepted. 2. Where the goods are to be delivered in installments, an installment delivery may be rejected *only if* the nonconformity substantially affects the value of that delivery and cannot be corrected by the seller. 3. Buyer must act within a reasonable time after delivery.

Central District Alarm, Inc. v. Hal-Tuc, Inc.

886 S.W.2d 210 (Mo. Ct. App. 1994)

Prior to January 1991, John Halton, president of Hal-Tuc, Inc., a company that operates retail lingerie and novelty stores, contacted Ron Weber, a security consultant for Central District Alarm (CDA), about purchasing a video surveillance system for one of its stores. Weber recommended a Javelin system and designed a system for Hal-Tuc.

On January 3, 1991, CDA and Hal-Tuc entered into a written sales agreement that provided that CDA would sell and install security equipment as described on an equipment list attached to the contract. This list included a Javelin VCR. The equipment was supposed to be new. The contract price was $7,692, of which $2,533 was paid when the contract was executed, with the balance to become due after CDA installed the equipment.

CDA ordered a new Javelin VCR but its supplier sent a new JVC VCR. CDA's supplier told CDA it would take another month to get a Javelin. When the system was installed on January 28, 1991, CDA installed a used JVC VCR instead of a new Javelin VCR. CDA did not install the new JVC VCR sent by its supplier because it would not be able to return the VCR after it had replaced it with the Javelin.

Halton called Weber the day after the installation and complained that the equipment was not Javelin and that the VCR was a used JVC VCR. Weber told Halton that the equipment was not used and that a JVC VCR was better than a Javelin. Halton telephoned other CDA personnel over a two-week period during which they denied that the equipment was used. After two weeks, when CDA's installation manager, Brian Modglin, went to the store to see the equipment, Modglin admitted for the first time that the VCR was used. No one from CDA advised Halton in advance that CDA was installing used equipment temporarily. After CDA admitted it had supplied a used JVC VCR, it offered to replace it with a new Javelin as soon as one arrived, which would take one or two months. Halton asked CDA to return Hal-Tuc's $2,533 deposit in exchange for CDA taking its equipment back. CDA refused to return the deposit. Hal-Tuc put all the equipment in boxes and stored it.

CDA brought suit against Hal-Tuc seeking damages for breach of contract. Hal-Tuc filed a counterclaim alleging fraud. The trial court found for Hal-Tuc, and CDA appealed.

Crane, Judge In this case there is no dispute that CDA supplied a VCR that did not conform. CDA argues that it has a right to cure under section 2–508(2) which provides:

> (2) Where the buyer rejects a nonconforming tender which the seller had reasonable grounds to believe would be acceptable with or without money allowance the seller may if he seasonably notifies the buyer have a further reasonable time to substitute a conforming tender.

Under section 2–508(2) the seller must "seasonably" notify the buyer of the intention to cure. Seasonably means "within a reasonable time." Section 1–204(3). A "reasonable time" depends on the nature, purpose and circumstances of such action. Section 1–204(2). There was evidence from which the trial court could conclude that CDA did not seasonably notify Hal-Tuc of an intent to cure. CDA did not advise Hal-Tuc in advance that it was installing used equipment on a temporary basiss. Hal-Tuc notified CDA after it discovered that CDA had installed the wrong equipment. Only after inspecting the equipment two weeks later did CDA admit the equipment was used and offer to cure with new equipment. These circumstances support a finding that CDA did not seasonably notify Hal-Tuc of its intention to cure.

Further, in order to establish a right to cure under section 2–508(2), the seller must have had reasonable grounds to believe the nonconforming tender would be acceptable. Such reasonable grounds can lie in prior course of dealing, course of performance or usage of trade as well as in the particular circumstances surrounding the making of the contract. CDA did not show any prior course of dealing, course of performance or usage of trade by which used equipment could be substituted for new equipment. CDA argues that CDA had reasonable

grounds to believe the used JVC would be acceptable until the new Javelin could be obtained because Hal-Tuc wanted the security system installed as soon as possible. Although there was evidence that Hal-Tuc wanted a security system installed as soon as possible, there was no evidence that Hal-Tuc told or otherwise indicated to CDA that time was more essential than new equipment.

Under these circumstances, CDA could not have had reasonable grounds to believe that a used VCR would be acceptable when a new one had been ordered. Further, CDA could not have had reasonable grounds to believe the tender of a used VCR would be acceptable until a new one could be supplied where that tender was not accompanied by a disclosure that a used VCR was only being supplied on a temporary basis. Without such a communication, the tender was strictly a tender of a used VCR in lieu of a new VCR.

Because it did not establish seasonable notification and reasonable grounds, CDA did not establish a right to cure under section 2–508.

Judgment affirmed for Hal-Tuc on the breach of contract claim.

Buyer's Duties after Rejection

If the buyer is a merchant, then the buyer owes certain duties concerning the goods that he rejects. First, the buyer must follow any reasonable instructions that the seller gives concerning disposition of the goods. The seller, for example, might request that the rejected goods be shipped back to the seller. If the goods are perishable or may deteriorate rapidly, then the buyer must make a reasonable effort to sell the goods. The seller must reimburse the buyer for any expenses that the buyer incurs in carrying out the seller's instructions or in trying to resell perishable goods. In reselling goods, the buyer must act reasonably and in good faith [2–603(2) and (3)].

If the rejected goods are not perishable or if the seller does not give the buyer instructions, then the buyer has several options. First, the buyer can store the goods for the seller. Second, the buyer can reship them to the seller. Third, the buyer can resell them for the seller's benefit. If the buyer resells the goods, the buyer may keep his expenses and a reasonable commission on the sale. If the buyer stores the goods, the buyer should exercise care in handling them. The buyer also must give the seller a reasonable time to remove the goods [2–604]. The *Ford v. Starr Fireworks, Inc.,* case, which appeared earlier in this chapter, discusses the obligations of a buyer who receives nonconforming goods.

If the buyer is not a merchant, then her obligation after rejection is to hold the goods with reasonable care for a sufficient time to give the seller an opportunity to remove them. The buyer is not obligated to ship the goods back to the seller [2–602].

Assurance, Repudiation, and Excuse

Assurance

The buyer or seller may become concerned that the other party may not be able to perform his contract obligations. If there is a reasonable basis for that concern, the buyer or seller can demand **assurance** from the other party that the contract will be performed. If such assurances are not given within a reasonable time not exceeding 30 days, the party is considered to have repudiated the contract [2–609].

For example, a farmer contracts to sell 1,000 bushels of apples to a canner, with delivery to be made in September. In March, the canner learns that a severe frost has damaged many of the apple blossoms in the farmer's area and that 50 percent of the crop has been lost. The canner has the right to demand assurances in writing from the farmer that he will be able to fulfill his obligations in light of the frost. The farmer must provide those assurances within 30 days. Thus, he might advise the canner that his crop sustained only relatively light damage or that he had made commitments to sell only a small percentage of his total crop and expects to be able to fulfill his obligations. If the farmer does not provide such assurances in a timely manner, he is considered to have repudiated the contract. The canner then has certain remedies against the farmer for breach of contract. These remedies are discussed in the next chapter.

Anticipatory Repudiation

Sometimes, one of the parties to a contract repudiates the contract by advising the other party that he does not intend to perform his obligations. When one party repudiates the contract, the other party may suspend his performance. In addition, he may either await performance for a reasonable time or use the remedies for breach of contract that are discussed in Chapter 22 [2–610].

Suppose the party who repudiated the contract changes his mind. Repudiation can be withdrawn by clearly indicating that the person intends to perform his obligations. The repudiating party must do this before the other party has canceled the contract or has materially changed position, for example, by buying the goods elsewhere [2–611].

Excuse

Unforeseen events may make it difficult or impossible for a person to perform his contractual obligations. The Code rules for determining when a person is excused from performing are similar to the general contract rules. General contract law uses the test of **impossibility.** In most situations, however, the Code uses the test of **commercial impracticability.**

The Code attempts to differentiate events that are unforeseeable or uncontrollable from events that were part of the risk borne by a party. If the goods required for the performance of a contract are destroyed without fault of either party prior to the time that the risk of loss passed to the buyer, the contract is voided [2–613]. Suppose Jones agrees to sell and deliver an antique table to Brown. The table is damaged when Jones's antiques store is struck by lightning and catches fire. The specific table covered by the contract was damaged without fault of either party prior to the time that the risk of loss was to pass to Brown. Under the Code, Brown has the option of either canceling the contract or accepting the table with an allowance in the purchase price to compensate for the damaged condition [2–613].

If unforeseen conditions cause a delay or the inability to make delivery of the goods and thus make performance impracticable, the seller is excused from making delivery. However, if a seller's capacity to deliver is only partially affected, the seller must allocate production in any fair and reasonable manner among his customers. The seller has the option of including any regular customer not then under contract in his allocation scheme. When the seller allocates production, he must notify the buyers [2–615]. When a buyer receives this notice, the buyer may either terminate the contract or agree to accept the allocation [2–616].

For example, United Nuclear contracts to sell certain quantities of fuel rods for nuclear power plants to a number of electric utilities. If the federal government limits the amount of uranium that United has access to, so that United is unable to fill all of its contracts, United is excused from full performance on the grounds of commercial impracticability. However, United may allocate its production of fuel rods among its customers by reducing each customer's share by a certain percentage and giving the customers notice of the allocation. Then, each utility can decide whether to cancel the contract or accept the partial allocation of fuel rods.

The *Harriscom Svenska, AB,* case, which follows, illustrates a situation where government action excused a seller's nonperformance of a contract.

In the absence of compelling circumstances, courts do not readily excuse parties from their contractual obligations, particularly where it is clear that the parties anticipated a problem and sought to provide for it in the contract.

Harrisom Svenska, AB v. Harris Corp. *3 F. 3d 56 (2nd Cir. 1993)*

RF Systems, a division of Harris Corporation, manufacturers radio communication products in Rochester, New York. In 1983, it appointed Harriscom Svenska, AB, a Sweden–based dealer, as its exclusive distributor of RF Systems' products in Iran.

On December 6, 1985, U.S. Customs Service officials detained a shipment of RF Systems' model 2301 radio spare parts ordered by Harriscom and bound for Iran. The shipment was worth $663,869. According to a 1982 determination by the United States Department of Commerce, the model 2301 radio could be exported

under a general license to almost any country. But upon detaining the model 2301 radio in December 1985, the government decided to reevaluate it. State Department officials began a commodity jurisdiction proceeding, authorized by the Arms Export Control Act, to decide whether this particular radio was a military product that should be on the "Munitions List" and subject to more stringent export controls. For more than six months, RF Systems managers negotiated with officials from the Departments of Commerce, State, and Defense in an effort to speed up these administrative proceedings. The extensive negotiations revealed that the government, particularly the Defense Department, was not concerned so much with the model 2301 radio itself as with its export to Iran. RF Systems eventually negotiated a compromise in late July 1986 under which it agreed to "voluntarily withdraw from all further sales to the Iranian market." The company asserted that by so doing it would lose $5.9 million in already contracted-for orders and $10 million in potential orders to Iran. In exchange, the government ruled in September 1986 that the model 2301 radio was not subject to the stringent export controls of Munitions List products.

The State Department proceedings and resulting compromise that RF Systems and the government reached directly impacted on Harriscom's business. First, while negotiations were ongoing RF Systems could not fill any Harriscom order to Iran. Second, the government, as a result of the compromise, allowed RF Systems to fill only three of eight outstanding orders to Iran. These orders involved the disputed model 2301 radio and the model 301 radio. Harriscom's third alleged injury concerned performance bonds. In July 1986 RF Systems had performance bond guarantees of $240,000 in favor of Harriscom, but these bonds expired with shipment of the three outstanding orders. At the same time Harriscom itself had $550,000 of unconditional bond guarantees in favor of its customer, the Iranian government, and it lost $270,000 of these bonds as a result of RF Systems' failure to fill the five pending orders. Fourth, Harriscom sustained lost profits on those unfilled contracts.

Harriscom brought suit for breach of contract against RF Systems. RF Systems moved for summary judgment, citing a force majeure clause in the contract. The court granted summary judgment in favor of Harris Corporation, and Harriscom appealed.

Cardamone, Circuit Judge Before us on this appeal are two companies that contracted with one another for the sale of radios and spare parts. One is the radios' domestic manufacturer, the other is a Swedish organization, the manufacturer's distributor to the Islamic Republic of Iran. Having some doubt as to the continued viability of such trade, a force majeure clause, which is the subject of this litigation was inserted into the parties' written agreement. What began as a doubt ripened into a certainty when the United States government prohibited all sales to Iran of goods it categorized as military equipment. A shipment of the contracted-for radio spare parts enroute to Sweden, but destined for Iran, was later detained by U.S. Customs.

One of the issues before us is whether the manufacturer's refusal to ship the spare parts was a voluntary act on its part, subjecting it to liability to its distributor for damages for breach of contract. We think it a foregone conclusion that a government bureaucracy determined to prevent what it considers military goods from leaving this country and with the will to compel compliance with its directives is an irresistible force, one that cannot reasonably be controlled. The government in these circumstances may be likened to the wife of "Rumpole of the Bailey," John Mortimer's fictional barrister, who describes his wife as "she who must be obeyed."

Harriscom's first contention is that RF Systems acted voluntarily when it and the United States government reached a compromise in which RF Systems agreed not to sell its products in Iran. As support, Harriscom points to the language of RF Systems' July 24, 1986, letter to the State Department. What Harriscom ignores is the overwhelming and uncontradicted evidence that the government would not allow RF Systems to continue sales to Iran. RF Systems established the affirmative defense of commercial impracticability because it complied in good faith with the government's informal requirements. See UCC section 2–615. We reject Harriscom's assertion that good faith automatically presents an issue of fact precluding summary judgment because the record contains no evidence that RF Systems

acted in bad faith. Harriscom must demonstrate more than "some metaphysical doubt as to the material facts," in order to avoid dismissal. Further, for RF Systems to have failed to comply would have been unusually foolhardy and recalcitrant, for the government had undoubted power to compel compliance.

Like commercial impracticability, a force majeure clause in a contract excuses nonperformance when circumstances beyond the control of the parties prevent performance. The contracts between these parties specifically contained force majeure clauses to excuse RF Systems' performance under the present circumstances, namely, "governmental interference."

Judgment for Harris Corporation affirmed.

Ethical and Public Policy Concerns

1. Problem cases 2 and 10 in this chapter illustrate situations where supplies of the goods that are the subject of a contract are either in significantly shorter or more plentiful supply than when the agreement was made and/or there has been a significant change in the market price. When, if ever, is a buyer or seller ethically justified in trying to find a way out of a contractual obligation because the supply or market price conditions have so changed that he can make a better deal elsewhere? Concomitantly, are there circumstances under which the other party, acting in an ethically responsible manner, should voluntarily release the disadvantaged party from her contractual commitment?

2. Suppose that you recently purchased a new automobile. The automobile has a number of problems that the dealer is unable to completely fix after you have left it with the dealer on two occasions. Although the dealer indicates a willingness to fix the remaining problems and confidence that they can be remedied quickly and completely, you have now concluded that you would prefer to have a car made by another manufacturer. Are there any ethical considerations involved in a decision on your part to attempt to revoke your acceptance of the automobile?

3. Where a contract calls for delivery in installments, the buyer can reject an installment delivery containing nonconforming goods only where the nonconformity substantially affects the value of the delivery and cannot be corrected; where the defects are relatively minor, the buyer has to keep the installment if the seller, for example, offers an allowance to make up for the nonconformity. Suppose you are a seller with some goods you know have minor defects that you would like to get rid of. Would it be ethical for you to send them to a customer with whom you have a contract for installment deliveries of the goods, knowing that they do not conform to the contract and that the customer will have to accept them as long as you give him a price allowance?

Problems and Problem Cases

1. Umlas signed a contract to purchase a new Oldsmobile from Acey Oldsmobile. The contract provided that Umlas would receive $650 for trading in his old car and allowed him to continue to drive it until his new car was delivered. Another clause in the contract provided that Acey could reappraise the used car when the new car was delivered. When Umlas brought his trade-in to the dealer to exchange for his new car, an employee of Acey took it for a test drive. The employee told Umlas it was worth $300 to $400. Acey told Umlas that his trade-in had been reappraised at $50. Umlas refused to go through with the sale and bought a car from another dealer. That dealer gave him $400 for trading in his old car. Umlas then sued Acey for breach of contract. Did Acey breach the contract by not acting in good faith in its reappraisal of the car?

2. Ray Williams, a resident of Georgia, contracted to sell the "slaw cabbage" to be grown on 30 acres of farmland in Georgia to Thomas Curtin, a resident of New York, who intended to resell the cabbage to cole slaw manufacturers. The expected yield was 600 to 800 tons of cabbage and the agreed price was $136 per ton. Large cabbages are generally preferable for making cole slaw, and Curtin orally advised Williams that he desired large cabbage (i.e., 12 heads or less per 50-pound bag); this request was not, however, incorporated into the written memorandum of agreement. Earlier agreements between Williams and Curtin had

called for the sale of "large cabbage." The cabbage was planted in a way to provide the best assurance possible that the cabbage would be large cabbage as requested by Curtin. As a result of poor growing conditions, most of the cabbages grown on the acreage were small; moreover, prices for cabbage were generally higher than the price at which Williams had agreed to make the sale to Curtin. Curtin inspected the cabbage during the growing season and was aware of the small size of the cabbage. He advised Williams that he wanted all of the cabbage from the 30 acres, regardless of size. Williams, however, delivered only the large cabbages to Curtin (approximately 150 tons) and sold the smaller cabbages to other buyers at a price about three times higher than the price at which he had contracted to sell cabbage to Curtin. Williams claimed that in the trade in Georgia, "slaw cabbage" referred only to large cabbage with 12 cabbage heads or less per 50-pound bag. However, the other witnesses said that the term "slaw cabbage" was seldom used, that in their experience it had never been used to define a specific cabbage size, and that it meant simply cabbage suitable for processing into cole slaw. Did trade usage support Williams' contention that he was obligated to deliver only the large cabbages?

3. Harold Ledford agreed to purchase three used Mustang automobiles (a 1966 Mustang coupe, a 1965 fastback, and a 1966 convertible) from J. L. Cowan for $3,000. Ledford gave Cowan a cashier's check for $1,500 when he took possession of the coupe, with the understanding he would pay the remaining $1,500 on the delivery of the fastback and the convertible. Cowan arranged for Charles Canterberry to deliver the remaining vehicles to Ledford. Canterberry dropped the convertible off at a lot owned by Ledford and proceeded to Ledford's residence to deliver the fastback. He refused to unload it until Ledford paid him $1,500. Ledford refused to make the payment until he had an opportunity to inspect the convertible, which he suspected was not in the same condition that it had been in when he purchased it. Canterberry refused this request and returned both the fastback and the convertible to Cowan. Cowan then brought suit against Ledford to recover the balance of the purchase price. Was Ledford entitled to inspect the car before he paid the balance due on it?

4. Spada, an Oregon corporation, agreed to sell Belson, who operated a business in Chicago, two carloads of potatoes at "4.40 per sack, FOB Oregon shipping point." Spada had the potatoes put aboard railroad cars; however, it did not have floor racks placed under the potatoes, as was customary during the winter months. As a result, there was no warm air circulating and the potatoes were frozen while in transit. Spada claims that its obligations ended with the delivery to the carrier and that the risk of loss was on Belson. What argument would you make for Belson?

5. Maxwell Shoe Co., a wholesale shoe distributor, ordered a quantity of shoes from Martini Industries. When Maxwell Shoe received the shipment, it discovered that all of the shoes were cracked and peeling. Maxwell Shoe contacted Martini Industries and stated that it was rejecting the shipment because the shoes were defective. Maxwell Shoe wanted to ship the shoes back to Martini Industries but received no communication from Martini Industries regarding what was to be done with the shipment. Maxwell Shoe did not pay the remainder owed for the shipment and stopped payment on the check that had been initially issued for the order. Subsequently, Maxwell Shoe had the shoes refinished by another company and distributed and sold the shoes. Martini Industries sued for the value of the shipment. Did Maxwell Shoe accept the shipment of shoes and owe Martini Industries for the goods?

6. On May 23, Deborah McCullough, a secretary, purchased a Chrysler LeBaron from Bill Swad Chrysler-Plymouth. The automobile was covered by both a limited warranty and a vehicle service contract (extended warranty). Following delivery, McCullough advised the salesperson that she had noted problems with the brakes, transmission, air conditioning, paint job, and seat panels, as well as the absence of rust proofing. The next day, the brakes failed and the car was returned to the dealer for the necessary repairs. When the car was returned, McCullough discovered that the brakes had not been properly repaired and that none of the cosmetic work had been done. The car was returned several times to the dealer to correct these problems and others that developed subsequently. On June 26, the car was again returned to the dealer, who kept it for three weeks. Many of the defects were not corrected, however, and new problems with the horn and brakes arose. While McCullough was on a shopping trip, the engine abruptly shut off and the car had to be towed to the dealer. Then, while she was on her honeymoon, the brakes again failed. The car was taken back to the dealer with a list of 32 defects that needed correction. After repeated efforts to repair the car were unsuccess-

ful, McCullough sent a letter to the dealer calling for rescission of the purchase, requesting return of the purchase price, and offering to return the car on receipt of shipping instructions. She received no answer and continued to drive it. McCullough then filed suit. In the following May, the dealer refused to do any further work on the car, claiming that it was in satisfactory condition. By the time of the trial, in June of the next year, it had been driven 35,000 miles, approximately 23,000 of which had been logged after McCullough mailed her notice of revocation. By continuing to operate the vehicle after notifying the seller of her intent to rescind the sale, did McCullough waive her right to revoke her original acceptance?

7. *Video Case.* See "Sour Grapes." Jelly Manufacturer, a food processor in Chicago, placed a phone order with Grape Grower, a grower in California, for a quantity of perishable produce. The shipping term was CIF with payment to be made on delivery (COD). Grower delivered the goods called for in the contract to a carrier and contracted for their shipment. However, it neglected to provide that the goods be shipped under refrigeration. The goods were loaded on a nonrefrigerated boxcar and as a result the produce was spoiled when it reached Chicago. Jelly Manufacturer, as required by the COD term, paid for the produce by check before discovering the spoilage. By paying for the produce, has Jelly Manufacturer accepted the goods so that it cannot subsequently reject them as nonconforming?

When Jelly Manufacturer called Grower to complain, Grower offered to rush a replacement shipment. Jelly Manufacturer declined the offer, stating that it would not arrive in time for the produce to be processed and delivered to Grocery Chain in time to meet Jelly Manufacturer's contract with Grocery Chain. Was Jelly Manufacturer required to accept Grower's promise to make a replacement shipment?

8. Haralambos Fekkos purchased from Lykins Sales & Service a Yammar Model 165D, 16-horsepower diesel tractor and various implements. On Saturday, April 27, Fekkos gave Lykins a check for the agreed-on purchase price, less trade-in, of $6,596, and the items were delivered to his residence. The next day, while attempting to use the tractor for the first time, Fekkos discovered it was defective. The defects included a dead battery requiring jump starts, overheating while pulling either the mower or tiller, missing safety shields over the muffler and the power takeoff, and a missing water pump. On Monday, Fekkos contacted Lykins's sales representative who believed his claims to be true and agreed to have the tractor picked up from Fekkos's residence; Fekkos also stopped payment on his check. Fekkos placed the tractor with the tiller attached in his front yard as near as possible to the front door without driving it onto the landscaped area closest to the house. Fekkos left the tractor on the lawn because his driveway was broken up for renovation and his garage was inaccessible, and because the tractor would have to be jump-started by Lykins's employees when they picked it up. On Tuesday, Fekkos went back to Lykins's store to purchase an Allis-Chalmers tractor and reminded Lykins's employees that the Yammar tractor had not been picked up and remained on his lawn. On Wednesday, May 1, at 6:00 A.M., Fekkos discovered that the tractor was missing although the tiller had been unhitched and remained in the yard. Later that day, Lykins picked up the remaining implements. The theft was reported to the police. On several occasions, Fekkos was assured that Lykins's insurance would cover the stolen tractor, that it was Lykins's fault for not picking it up, and that Fekkos had nothing to worry about. However, Lykins subsequently brought suit against Fekkos to recover the purchase price of the Yammar tractor. Was Fekkos liable for the purchase price of the tractor that had been rejected and was stolen while awaiting pickup by the seller?

9. Creusot-Loire, a French manufacturing and engineering concern, was the project engineer to construct ammonia plants in Yugoslavia and Syria. The design process engineer for the two plants—as well as a plant being constructed in Sri Lanka—specified burners manufactured by Coppus Engineering Corporation. After the burner specifications were provided to Coppus, it sent technical and service information to Creusot-Loire. Coppus expressly warranted that the burners were capable of continuous operation using heavy fuel oil with combustion air preheated to 260 degrees Celsius. The warranty extended for one year from the start-up of the plant but not exceeding three years from the date of shipment. In January 1989, Creusot-Loire ordered the burners for the Yugoslavia plant and paid for them; in November 1989, the burners were shipped to Yugoslavia. Due to construction delays, the plant was not to become operational until the end of 1993. In 1991, however, Creusot-Loire became aware that there had been operational difficulties with the Coppus burners at the Sri Lanka and Syria

plants and that efforts to modify the burners had been futile. Creusot-Loire wrote to Coppus expressing concern that the burners purchased for the Yugoslavia plant, like those in the other plants, would prove unsatisfactory and asking for proof that the burners would meet contract specifications. When subsequent discussions failed to satisfy Creusot-Loire, it requested that Coppus take back the burners and refund the purchase price. Coppus refused. Finally, Creusot-Loire indicated that it would accept the burners only if Coppus extended its contractual guarantee to cover the delay in the start-up of the Yugoslavia plant and if Coppus posted an irrevocable letter of credit for the purchase price of the burners. When Coppus refused, Creusot-Loire brought an action for breach of contract, seeking a return of the purchase price. Coppus claimed that Creusot-Loire's request for assurance was unreasonable. How should the court rule?

10. In July 1980, Alimenta (U.S.A.), Inc., and Gibbs, Nathaniel (Canada), Ltd., each an international dealer in agricultural commodities, entered into three separate contracts in advance of the 1980 peanut harvest. Each contract called for the delivery in installments by Gibbs to Alimenta of "1980 crop U.S. runner split peanuts." When Gibbs failed to make delivery of the quantities specified in the contract, and made some deliveries later than the scheduled dates, Alimenta brought suit against Gibbs seeking damages for breach of contract. Gibbs claimed that it was excused from full performance by the recurrence of a drought in the peanut-growing areas. The 1980 peanut crop had been planted in April and May. Rainfall was adequate in April, May, and June, and the crop came up in good condition. In the 25 years preceding 1980, the nation's peanut industry had experienced a steady growth in total production, with yield per acre increasing 250 percent over that period. In addition to Alimenta, Gibbs sold 1980 crop peanuts to 75 other customers and had contracted to purchase peanuts from 15 shellers in quantities 7 percent in excess of its sales. In early July, a hot and dry spell developed and became a full-fledged drought that did not break until late September. July and August were among the hottest and driest months on record in the last 100 years. In October, Gibbs received notices from 13 of its 15 shellers stating that because of the crop shortage, they were invoking section 2–615 of the UCC and would be delivering only a portion of the peanuts they had contracted to deliver. Gibbs expected to receive only 52 percent of the peanuts it had contracted for, and in turn notified its customers, including Alimenta, to expect reduced quantities. Alimenta ultimately received 87 percent of the contract quantity from Gibbs. Was Gibbs excused from full performance of its contract by the occurrence of the drought?

Chapter Twenty-Two

Remedies for Breach of Sales Contracts

Chapter Outline

I. Agreements as to Remedies
- *A. Statute of Limitations*

II. Seller's Remedies
- *A. Remedies Available to an Injured Seller*
- *B. Cancellation and Withholding of Delivery*
- *C. Resale of Goods*
- *D. Recovery of the Purchase Price*
- *E. Damages for Rejection or Repudiation*
- *F. Seller's Remedies Where Buyer Is Insolvent*
- *G. Seller's Right to Stop Delivery*
- *H. Liquidated Damages*

III. Buyer's Remedies
- *A. Buyer's Remedies in General*
- *B. Buyer's Right to Cover*
- *C. Incidental Damages*
- *D. Consequential Damages*
- *E. Damages for Nondelivery*
- *F. Damages for Defective Goods*
- *G. Buyer's Right to Specific Performance*
- *H. Buyer and Seller Agreements as to Remedies*

Usually, both parties to a contract for the sale of goods perform the obligations that they assumed in the contract. Occasionally, however, one of the parties to a contract fails to perform his obligations. When this happens, the Uniform Commercial Code (UCC or Code) provides the injured party with a variety of remedies for breach of contract. This chapter will set forth and explain the remedies available to an injured party, as well as the Code's rules that govern buyer-seller agreements as to remedies and the Code's statute of limitations. The objective of the Code remedies is to put the injured person in the same position that he would have been in if the contract had been performed. Under the Code, an injured party may not recover consequential or punitive damages unless such damages are specifically provided for in the Code or in another statute [1–106].[1]

[1]The numbers in brackets refer to sections of the Uniform Commercial Code.

Agreements as to Remedies

The buyer and seller may provide their own remedies in the contract, to be applied in the event that one of the parties fails to perform. They may also limit either the remedies that the law makes available or the damages that can be covered [2–719(1)]. If the parties agree on the amount of damages that will be paid to the injured party, this amount is known as **liquidated damages.** An agreement for liquidated damages is enforced if the amount is reasonable and if actual damages would be difficult to prove in the event of a breach of the contract. The amount is considered reasonable if it is not so large as to be a penalty or so small as to be unconscionable [2–718(1)].

For example, Carl Carpenter contracts to build and sell a display booth for $5,000 to Hank Hawker for Hawker to use at the state fair. Delivery is to be made to Hawker by September 1. If the booth is not delivered on time, Hawker will not be able to sell his wares

at the fair. Carpenter and Hawker might agree that if delivery is not made by September 1, Carpenter will pay Hawker $2,750 as liquidated damages. The actual sales that Hawker might lose without a booth would be very hard to prove, so Hawker and Carpenter can provide some certainty through the liquidated damages agreement. Carpenter then knows what he will be liable for if he does not perform his obligation. Similarly, Hawker knows what he can recover if the booth is not delivered on time. The $2,750 amount is probably reasonable. If the amount were $500,000, it likely would be void as a penalty because it is way out of line with the damages that Hawker would reasonably be expected to sustain. And if the amount were too small, say $1, it might be considered unconscionable and therefore not enforceable.

If a liquidated damages clause is not enforceable because it is a penalty or unconscionable, the injured party can recover the actual damages that he suffered. The following *Baker* case illustrates a situation where a court enforced a liquidated damages clause in a contract.

Baker v. International Record Syndicate, Inc. *812 S.W.2d 53 (Tex.Ct. App. 1991)*

International Record Syndicate (IRS) hired Jeff Baker to take photographs of the musical group Timbuk-3. Baker mailed 37 "chromes" (negatives) to IRS via the business agent of Timbuk-3. When the chromes were returned to Baker, holes had been punched in 34 of them. Baker brought an action for breach of contract to recover for the damage done to the chromes.

A provision printed on Baker's invoice to IRS stated: "[r]eimbursement for loss or damage shall be determined by a photograph's reasonable value which shall be no less than $1,500 per transparency."

Enoch, Chief Judge The Uniform Commercial Code provides:

> Damages for breach by either party may be liquidated in the agreement but only at an amount which is reasonable in light of the anticipated harm caused by the breach, the difficulties of proof of loss, and the inconvenience or nonfeasibility of otherwise obtaining an adequate remedy. A term fixing unreasonably large liquidated damages is void as a penalty.

Under Texas law a liquidated damages provision will be enforced when the court finds (1) the harm caused by the breach is incapable of estimation, and (2) the amount of liquidated damages is a reasonable forecast of just compensation. This might be termed the "anticipated harm" test. The party asserting that a liquidated damages clause is, in fact, a penalty provision has the burden of proof. Evidence related to the difficulty of estimation and the reasonable forecast must be viewed as of the time the contract was executed.

Baker testified that he had been paid as much as $14,000 for a photo session, which resulted in 24 photographs and that several of these photographs had also been resold. Baker further testified that he had received as little as $125 for a single photograph. Baker also testified that he once sold a photograph for $500. Subsequently, he sold reproductions of the same photograph three additional times at various prices; the total income from this one photograph was $1,500. This particular photograph was taken in 1986 and was still producing income in 1990. Baker demonstrated, therefore, that an accurate demonstration of the damages from a single photograph is virtually impossible.

Timbuk-3's potential for fame was also an important factor in the valuation of the chromes. At the time of the photo session, Timbuk-3's potential was unknown. In view of the difficulty in determining the value of a piece of art, the broad range of values and long-term earning power of photographs, and the unknown potential for fame of the subject, $1,500 is not an unreasonable estimate of Baker's actual damages.

Additionally, liquidated damages must not be disproportionate to actual damages. If the liquidated damages are shown to be disproportionate to the actual damages, then the liquidated damages can be declared a penalty and recovery limited to actual damages proven. This might be called the "actual harm" test. The burden of proving this defense is upon the party seeking to invalidate the clause. The party asserting this defense is required

to prove the amount of the other party's actual damages, if any, to show that the actual loss was not an approximation of the stipulated sum.

While evidence was presented that showed the value of several of Baker's other projects, this was not evidence of the photographs in question. The evidence clearly shows that photographs are unique items with many factors bearing on their actual value. Each of the 34 chromes may have had a different value. Proof of this loss is difficult; where damages are real but difficult to prove, injustice will be done the injured party if the court substitutes the requirements of judicial proof for the parties' own informed agreement as to what is a reasonable measure of damages. The evidence offered to prove Baker's actual damages lacks probative force. IRS failed to establish Baker's actual damages as to these particular photographs.

Judgment reversed in favor of Baker.

Liability for consequential damages resulting from a breach of contract (such as lost profits or damage to property) may also be limited or excluded by agreement. The limitation or exclusion is not enforced if it would be unconscionable. Any attempt to limit consequential damages for injury caused to a person by consumer goods is considered prima facie unconscionable [2–719(3)].

Suppose an automobile manufacturer makes a warranty as to the quality of an automobile that is purchased as a consumer good. It then tries to disclaim responsibility for any person injured if the car does not conform to the warranty and to limit its liability to replacing any defective parts. The disclaimer of consequential injuries in this case would be unconscionable and therefore would not be enforced. Exclusion of or limitation on consequential damages is permitted where the loss is commercial, as long as the exclusion or limitation is not unconscionable. Where circumstances cause a limited remedy agreed to by the parties to fail in its essential purpose, the limited remedy is not

Star-Shadow Productions, Inc. v. Super 8 Sync Sound System

38 UCC Rep. 2d 1128 (R.I. Sup.Ct. 1999)

Star-Shadow Productions, Inc., and Bruce J. Haas produce and film low budget movies. One of their projects, "The Night of the Beast," was scheduled for filming from March 12 through 18, 1994, at the General Stanton Inn in Charlestown, Rhode Island. In preparation for the filming, Star-Shadow rented a Beaulieu 7008 Pro 8-millimeter camera and bought 108 rolls of Super 8 Sound high-resolution color negative film from Super 8 Sync Sound system. Unfortunately, on the first day of filming, Star-Shadow's cameraman was unable to use the Super 8 film because of loading and jamming problems. A representative of Super 8, Lisa Mattei, offered advice by phone and subsequently traveled to Charlestown with a replacement camera and Kodak Reverse film. When her troubleshooting efforts proved fruitless, she replaced the Super 8 film with Kodak Reverse film and the camera operated successfully. On March 22, 1994, Star-Shadow returned the camera and Star-Shadow's account was credited for the unused film.

Star-Shadow subsequently sued Super 8 for damages allegedly caused by the Super 8 film's inability to operate correctly. Super 8 filed a motion for summary judgment arguing that it had complied with all the terms of the contract by replacing the defective film and crediting Star-Shadow's account for the unused film. Super 8 pointed to the limitation of liability clause contained on price sheets and film boxes provided to Star-Shadow to show that Super 8 could not be subject to any additional liabilities. The limitation of liability clause's pertinent part reads: "Limitation of Liability: This product will be repaired if defective in manufacture or packing. Except for such replacement this product is sold without warranty or liability even though defect, damage, or loss is caused by negligence or other fault. . . . "

The trial court granted the motion for summary judgment. The judge found that the limitation of liability clause contained on the Super 8 film package was valid; therefore, Super 8 could not be held liable for damages beyond the value of replacement film. Star-Shadow appealed.

Per Curiam Star-Shadow maintains that the limitation of liability clause failed its essential purpose—to adequately protect the filmmakers from damages arising from defective film. They point to the fact that the limitation of liability clause leaves them without recourse against Super 8 for the thousands of dollars of damages caused by the defective film. We have held in an analogous situation that the purchase price of goods is "not a premium for . . . insurance," and consequently, limitation of liability clauses are not unconscionable merely because buyers are not fully protected for damages that may arise from the malfunction of their purchased goods or service. In the case of defective film, the commercial film maker is not abandoned without protection [by limitation of liability clauses] but is free to purchase raw stock insurance.

The fact that Star-Shadow in this case has no protection other than their bargained-for remedy of replacement film does not make the limitation of liability clause unconscionable. "In an industry where the undertaking may vary from a multimillion dollar extravaganza to a low-budget instructional film," plaintiffs were in the better position to assess their risks and "mold the protection to the scope of [the] project" than defendant who was unaware of the breadth of plaintiffs' undertaking. Thus, Star-Shadow received what it bargained for, and the risk of equipment failure properly lay on them, not Super 8.

Judgment for Super 8 affirmed.

enforced and the general Code remedies are available to the injured party.

The *Star-Shadow Productions* case involves the enforcement of a limitation of liability clause.

Statute of Limitations

The Code provides that a lawsuit for breach of a sales contract must be filed within four years after the breach occurs. The parties to a contract may shorten this period to one year, but they may not extend it for longer than four years [2–725]. Normally, a breach of warranty is considered to have occurred when the goods are delivered to the buyer. However, if the warranty covers future performance of goods (for example, a warranty on a tire for four years or 40,000 miles), then the breach occurs at the time the buyer should have discovered the defect in the product. If, for example, the buyer of the tire discovers the defect after driving 25,000 miles on the tire over a three-year period, he would have four years from that time to bring any lawsuit to remedy the breach.

Seller's Remedies

Remedies Available to an Injured Seller

A buyer may breach a contract in a number of ways. The most common are: (1) by wrongfully refusing to accept goods, (2) by wrongfully returning goods, (3) by failing to pay for goods when payment is due, and (4) by indicating an unwillingness to go ahead with the contract. When a buyer breaches a contract, the seller has a number of remedies under the Code, including the right to:

- Cancel the contract [2–703(f)].
- Withhold delivery of undelivered goods [2–703(a)].
- Complete manufacture of unfinished goods and identify them as to the contract or cease manufacture and sell for scraps [2-704].
- Resell the goods covered by the contract and recover damages from the buyer [2–706].
- Recover from the buyer the profit that the seller would have made on the sale or the damages that the seller sustained [2–708].
- Recover the purchase price of goods delivered to or accepted by the buyer [2–709].

In addition, a buyer may become insolvent and thus unable to pay the seller for goods already delivered or for goods that the seller is obligated to deliver. When a seller learns of a buyer's insolvency, the seller has a number of remedies, including the right to:

- Withhold delivery of undelivered goods [2–703(a)].
- Recover goods from a buyer upon the buyer's insolvency [2–702].
- Stop delivery of goods that are in the possession of a carrier or other bailee before they reach the buyer [2–705].

Cancellation and Withholding of Delivery

When a buyer breaches a contract, the seller has the right to cancel the contract and to hold up her own performance of the contract. The seller may then set aside any goods that were intended to fill her obligations under the contract [2–704].

If the seller is in the process of manufacturing the goods, she has two choices. She may complete manufacture of the goods, or she may stop manufacturing and sell the uncompleted goods for their scrap or salvage value. In choosing between these alternatives, the seller should select the alternative that will minimize the loss [2–704(2)]. Thus, a seller would be justified in completing the manufacture of goods that could be resold readily at the contract price. However, a seller would not be justified in completing specially manufactured goods that could not be sold to anyone other than the buyer who ordered them.

The purpose of this rule is to permit the seller to follow a reasonable course of action to mitigate (minimize) the damages. In *Madsen,* which follows, the seller, who did not complete the manufacture of goods on the buyer's repudiation, but rather dismantled and largely scrapped the existing goods, was held not to have acted in a commercially reasonable manner.

Madsen v. Murrey & Sons Co., Inc. *743 P.2d 1212 (Utah Sup. Ct. 1987)*

Murrey & Sons Co., Inc. (Murrey), was engaged in the business of manufacturing and selling pool tables. Erik Madsen was working on an idea to develop a pool table that, through the use of electronic devices installed in the rails of the table, would produce lighting and sound effects in a fashion similar to a pinball machine. Murrey and Madsen entered into a written contract whereby Murrey agreed to manufacture 100 of its M1 4-foot by 8-foot six-pocket coin operated pool tables with customized rails capable of incorporating the electronic lighting and sound effects desired by Madsen. Under the agreement, Madsen would design the rails and provide the drawings to Murrey, who would manufacture them to Madsen's specifications. Madsen was to design, manufacture, and install the electronic components for the tables. Madsen agreed to pay $550 per table or a total of $55,000 for the 100 tables and made a $42,500 deposit on the contract.

Murrey began the manufacture of the tables while Madsen continued to work on the design of the rails and electronics. Madsen encountered significant difficulties and notified Murrey that he would be unable to take delivery of the 100 tables. Madsen then brought suit to recover the $42,500 he had paid Murrey.

Following Madsen's repudiation of the contract, Murrey dismantled the pool tables and used salvageable materials to manufacture other pool tables. A good portion of the material was simply used as firewood. Murrey made no attempt to market the 100 pool tables at a discount or at any other price in order to mitigate the damages. It claimed the salvage value of the materials it reused as $7,448. The trial court ordered Murrey to return $21,250 to Madsen and Murrey appealed.

Howe, Justice Murrey contends that the trial court erred in concluding that it had failed to mitigate or minimize its damages in a commercially reasonable manner by not attempting to sell the 100 pool tables on the open market. It is a well-settled rule of the law of damages that "no party suffering a loss as the result of a breach of contract is entitled to any damages which could have been avoided if the aggrieved party had acted in a reasonably diligent manner in attempting to lessen his losses as a consequence of that breach." We have held:

> Where a contractual agreement has been breached by a party thereto, the aggrieved party is entitled to those damages that will put him in as good a position as he would have been had the other party performed pursuant to the agreement. A corollary to this rule is that the aggrieved party may not, either by action or inaction, aggravate the injury occasioned by the breach, but has a duty actively to mitigate his damages.

Murrey asserts that it sufficiently mitigated its damages by dismantling the pool tables and salvaging various components that could be used to manufacture other pool tables. The salvage value to Murrey was claimed to be $7,448. Murrey presented testimony that selling the tables as "seconds" would damage its reputation for quality and that the

various holes, notches and routings placed in the tables to accommodate the electrical components to be installed by buyer weakened the structure of the tables so as to submit seller to potential liability if they were sold on the market.

On the other hand, Ronald Baker, who had been involved with the manufacturing and marketing of pool tables for 25 years testified on behalf of the buyer that the notches, holes and routings made in the frame to accommodate electrical wiring would not adversely affect the quality or marketability of the 100 pool tables. According to Baker, the tables could have been sold at full value or at a discounted price. In addition to this testimony, the trial court had the opportunity to view the experimental table developed by Madsen and his associates and observe the holes, notches, and routings necessary for the electrical components.

The trial court found that Murrey's action in dismantling the tables and using the materials for salvage and firewood, rather than attempting to sell or market the tables at full or discounted price, was not commercially reasonable. The court then concluded that seller had a duty to mitigate its damages and failed to do so. The finding is supported by competent evidence.

Applying the trial court's finding that the pool tables, if completed, could have been sold for at least $21,250, Murrey's damages are the difference between the market price ($21,250) and the contract price ($55,000) or $33,750. The trial court found that Murrey was not entitled to any incidental damages. Under section 2–718(2), (3), Madsen's right to restitution of advance payments on the contract ($42,500) is subject to offset to the extent that seller establishes damages ($33,750), for a total recovery of $8,750.

Judgment for Madsen affirmed, with the recovery set at $8,750.

Resale of Goods

If the seller sets aside goods intended for the contract or completes the manufacture of such goods, he is not obligated to try to resell the goods to someone else. However, he may resell them and recover damages. The seller must make any resale in good faith and in a commercially reasonable manner. If the seller does so, he is entitled to recover from the buyer as damages the difference between the resale price and the price the buyer agreed to pay in the contract [2–706].

If the seller resells, he may also recover incidental damages, but the seller must give the buyer credit for any expenses that the seller saved because of the buyer's breach of contract. Incidental damages include storage charges and sales commissions paid when the goods were resold [2–710]. Expenses saved might be the cost of packaging the goods and/or shipping them to the buyer.

If the buyer and seller have agreed as to the manner in which the resale is to be made, the courts will enforce the agreement unless it is found to be unconscionable [2–302]. If the parties have not entered into an agreement as to the resale of the goods, they may be resold at public or private sale, but in all events the resale must be made in good faith and in a commercially reasonable manner. The seller should make it clear that the goods he is selling are those related to the broken contract.

If the goods are resold at private sale, the seller must give the buyer reasonable notification of his intention to resell [2–706(3)]. If the resale is a public sale, such as an auction, the seller must give the buyer notice of the time and place of the sale unless the goods are perishable or threaten to decline in value rapidly. The sale must be made at a usual place or market for public sales if one is reasonably available; and if the goods are not within the view of those attending the sale, the notification of the sale must state the place where the goods are located and provide for reasonable inspection by prospective bidders. The seller may bid at a public sale [2–706(4)].

The purchaser at a public sale who buys in good faith takes free from any rights of the original buyer even though the seller has failed to conduct the sale in compliance with the rules set out in the Code [2–706(5)]. The seller is not accountable to the buyer for any profit that the seller makes on a resale [2–706(6)].

Recovery of the Purchase Price

In the normal performance of a contract, the seller delivers conforming goods (goods that meet the contract specifications) to the buyer. The buyer accepts

the goods and pays for them. The seller is entitled to the purchase price of all goods accepted by the buyer. She also is entitled to the purchase price of all goods that conformed to the contract and were lost or damaged after the buyer assumed the risk for their loss [2–709].

For example, a contract calls for Frank, a farmer, to ship 1,000 dozen eggs to Sutton, a grocer, with shipment "FOB Frank's Farm." If the eggs are lost or damaged while on their way to Sutton, she is responsible for paying Frank for them. Risk of loss is discussed in Chapter 19, Formation and Terms of Sales Contracts.

In one other situation, the seller may recover the purchase or contract price from the buyer. This is where the seller has made an honest effort to resell the goods and was unsuccessful or where it is apparent that any such effort to resell would be unsuccessful. This might happen where the seller manufactured goods especially for the buyer and the goods are not usable by anyone else. Assume that Sarton's Supermarket sponsors a bowling team. Sarton's orders six green-and-red bowling shirts to be embroidered with "Sarton's Supermarket" on the back and the names of the team members on the pocket. After the shirts are completed, Sarton's wrongfully refuses to accept them. The manufacturer will be able to recover the agreed purchase price if it cannot sell the shirts to someone else.

If the seller sues the buyer for the contract price of the goods, she must hold the goods for the buyer. Then, the seller must turn the goods over to the buyer if the buyer pays for them. However, if resale becomes possible before the buyer pays for the goods, the seller may resell them. Then, the seller must give the buyer credit for the proceeds of the resale [2–709(2)].

Damages for Rejection or Repudiation

When the buyer refuses to accept goods that conform to the contract or repudiates the contract, the seller does not have to resell the goods. The seller has two other ways of determining the damages that the buyer is liable for because of the breach of contract: (1) the difference between the contract price and the market price at which the goods are currently selling and (2) the "profit" that the seller lost when the buyer did not go through with the contract [2–708].

The seller may recover as damages the difference between the contract price and the market price at the time and place the goods were to be delivered to the buyer. The seller also may recover any incidental damages, but must give the buyer credit for any expenses that the seller has saved [2–708(1)]. This measure of damages most commonly is sought by a seller when the market price of the goods dropped substantially between the time the contract was made and the time the buyer repudiated the contract.

For example, on January 1, Toy Maker, Inc., contracts with the Red Balloon Toy Shop to sell the shop 100,000 trolls at $3.50 each, with delivery to be made in Boston on June 1. By June 1, the troll fad has passed and trolls are selling for $1 each in Boston. If Toy Shop repudiates the contract on June 1 and refuses to accept delivery of the 100,000 trolls, Toy Maker is entitled to the difference between the contract price of $350,000 and the June 1 market price in Boston of $100,000. Thus, Toy Maker could recover $250,000 in damages plus any incidental expenses, but less any expenses saved by it in not having to ship the trolls to Toy Shop (such as packaging and transportation costs).

If getting the difference between the contract price and the market price would not put the seller in as good a financial position as the seller would have been in if the contract had been performed, the seller may choose an alternative measure of damages based on the lost profit and overhead that the seller would have made if the sale had gone through. The seller can recover this lost profit and overhead plus any incidental expenses. However, the seller must give the buyer credit for any expenses saved as a result of the buyer's breach of contract [2–708(2)].

Using the troll example, assume that the direct labor and material cost to Toy Maker of making the trolls was 75 cents each. Toy Maker could recover as damages from Toy Shop the profit Toy Maker lost when Toy Shop defaulted on the contract. Toy Maker would be entitled to the difference between the contract price of $350,000 and its direct cost of $75,000. Thus, Toy Maker could recover $275,000 plus any incidental expenses and less any expenses saved.

Seller's Remedies Where Buyer Is Insolvent

If the seller has not agreed to extend credit to the buyer for the purchase price of goods, the buyer must make payment on delivery of the goods. If the seller tenders delivery of the goods, he may withhold delivery unless the agreed payment is made. Where the seller has agreed to extend credit to the buyer for the purchase

price of the goods, but discovers before delivery that the buyer is insolvent, the seller may refuse delivery unless the buyer pays cash for the goods together with the unpaid balance for all goods previously delivered under the contract [2–702(1)].

At common law, a seller had the right to rescind a sales contract induced by fraud and to recover the goods unless they had been resold to a bona fide purchaser for value. Based on this general legal principle, the Code provides that where the seller discovers that the buyer has received goods while insolvent, the seller may reclaim the goods upon demand made within 10 days after their receipt. This right granted to the seller is based on constructive deceit on the part of the buyer. Receiving goods while insolvent is equivalent to a false representation of solvency. To protect his rights, all the seller must do is to make a demand within the 10-day period; he need not actually repossess the goods.

If the buyer has misrepresented his solvency to this particular seller in writing within three months before the delivery of the goods, the 10-day limitation on the seller's right to reclaim the goods does not apply. However, the seller's right to reclaim the goods is subject to the rights of prior purchasers in the ordinary course of the buyer's business, good faith purchasers for value, creditors with a perfected lien on the buyer's inventory [2–702(2) and (3)], and of a trustee in bankruptcy. The relative rights of creditors to their debtor's collateral are discussed in Chapter 28, Security Interests in Personal Property.

The *Conoco* case, which follows, illustrates some of the issues that may arise when a creditor seeks to reclaim goods from an insolvent buyer.

Conoco Inc. v. Braniff Inc. *11 UCC Rep.2d 519 (Bankr. M.D. Fla. 1990)*

Braniff, an airline, had an agreement with Conoco whereby Conoco supplied Braniff with its needs for Jet A aviation fuel. The fuel was sent through an interstate common carrier pipeline used by numerous suppliers, including Conoco. The pipeline contained breakout points where fuel was directed out of the pipeline and into tank farm storage facilities operated by Ogden Allied Aviation Services, Braniff's designated fueling agent, at the Dallas–Fort Worth and Kansas City airports.

The agreement called for Braniff to make advance payments for its designated fuel needs for the following week, with settlement of overages or shortages on a monthly basis. Braniff made a payment of $320,000 on September 20, 1989, for its anticipated needs through September 27 and was scheduled to make a $420,000 payment on September 27, 1989. The payment was not made on September 27, and early the next morning Braniff filed a petition in bankruptcy under Chapter 11 of the Bankruptcy Code.

On September 29, 1989, Conoco sent Braniff a "Notice of Reclamation" seeking reclamation of unpaid fuel delivered into the tank farms at the Dallas–Fort Worth airports and Kansas City during the previous 10-day period. The reclamation notice identified the fuel it sought to reclaim by specifying 14 bills of lading representing unpaid shipments occurring from September 19 through September 27.

Corcoran, Bankruptcy Judge In order to establish entitlement to reclamation from a debtor under section 2–702 of the UCC and section 546 of the Bankruptcy Code, a reclaiming seller must satisfy the following four-part test:

1. The debtor was insolvent at the time the goods were delivered by the seller;
2. A written demand was made on the debtor within 10 days after the goods were delivered to the debtor;
3. The goods were identifiable at the time the demand was made; and
4. The goods were in the possession and control of the debtor at the time the demand was made.

Braniff contends that the fuel at issue here was neither identifiable nor in its possession and control at the time the reclamation demand was made because of the commingling that occurred in the common carrier pipelines and at the airport tank farms. Braniff points out that the fuel was pumped through a common carrier pipeline from Conoco's refineries with petroleum products belonging to numerous other suppliers. Once the fuel was received at the Ogden Allied tank farms, it was then

commingled in large tanks with fuel supplied by other suppliers and allocated to and for the use of numerous users. At Dallas–Fort Worth, the commingled fuel allocated to Braniff had been supplied solely by Conoco. At Kansas City, the fuel allocated to Braniff had been supplied by four suppliers, including Conoco.

In the case of fungible, bulk petroleum products, such as jet fuel, the "identification" and "possession and control" requirements of the Code and the UCC mandate that the reclaiming party:

> trace the [fuel] from its possession into an identifiable mass and to show that the mass contains only [fuel] of like kind and grade. If the mass of [fuel into which the fuel is traced] is subject to [the debtor's] control, then it is both "identifiable" and "in the possession of the debtor."

In this case the jet fuel type A was shipped from Conoco's refineries through a common carrier pipeline where it was commingled with other jet fuel type A refined by other suppliers and sold to other users. The commingling further occurred in the airport tank farms, from which many airlines withdrew the fuel that was ultimately pumped into airplanes. Plainly, on these facts, Conoco has traced its fuel into an identifiable mass containing only fuel of like grade and quality.

Likewise Conoco has shown that the mass of fuel in the airport tank farms was subject to Braniff's control. The tank farms were owned and operated by Braniff's fueling agent. The fueling agent would then draw down from the fuel in the storage tanks the amount needed to fuel Braniff aircraft. On this record, it is clear that the fueling agent abided by Braniff's instructions.

The fact that the tanks contained fuel allocated to other airlines, by itself, is irrelevant to the "identification" and "possession and control" issue. The inquiry here deals solely with the fuel in the tanks allocated to Braniff.

The fact that the fueling agent also served as fueling agent for other airlines and that other airlines controlled their allocable portion of the fuel in the tank farm storage tanks does not diminish the control Braniff exercised over its allocable portion. The point, of course, is that Braniff had the ability and authority to control the disposition of its fuel at the time the reclamation notice was received.

Conoco desires to reclaim 284,107 gallons for which it is unpaid from the ending pool of 397,735. In effect, Conoco wants the court to assume that Braniff used during the 10-day reclamation period the fuel that it had on hand before the period began, the fuel that Conoco supplied during the reclamation period for which payment was made, and the fuel provided by three other suppliers during the reclamation period. In other words, Conoco says only Conoco fuel for which payment had not been made was left in the tank at the end of the reclamation period and that Conoco can now claim this "identified" fuel.

Braniff, of course, contends just the opposite. Braniff would have the court assume that Braniff used during the 10-day reclamation period the Conoco fuel for which payment was not made so that the fuel remaining in the tank at the end of the period represents only fuel that was there before the reclamation period began, fuel supplied by Conoco for which payment was made during the reclamation period, and fuel supplied by other suppliers.

The court concludes that it is required to reject both approaches. Where, as here, there are several suppliers delivering fungible, bulk goods into a common tank, the supplier must do more than merely trace its fungible, bulk goods into the pool. The supplier must go further and show what quantity of goods was in the pool at the beginning of the relevant reclamation period. The supplier must also show when, and how much of the goods, each of the suppliers contributed to the pool during that period. Finally, the supplier must show how much of the total remained in the pool at the end of the relevant period. With that information the court can then determine the amount of each bulk shipment that was consumed by the debtor during the period. The court also can determine to which supplier the amount remaining in the tank at the end of the period should be attributed or the proportional way in which the amount remaining should be allocated among the suppliers. Implicit in the rule the court states here is a "first in, first out" theory of bulk fuel use to be used in cases such as this where fungible, bulk goods are pooled or commingled.

On the evidence presented, Conoco established its right to reclaim only the 100,002 gallons of fuel it delivered to Dallas–Fort Worth on September 26.

Judgment for Conoco.

Concept Review

Problem	Seller's Remedy
Buyer Refuses to Go Ahead with Contract and Seller Has Goods	1. Seller may cancel contract, suspend performance, and set aside goods intended to fill the contract. *a.* If seller is in the process of manufacturing, he may complete manufacture or stop and sell for scrap, picking alternative that in his judgment at the time will minimize the seller's loss. *b.* Seller can resell goods covered by contract and recover difference between contract price and proceeds of resale. *c.* Seller may recover purchase price where resale is not possible. *d.* Seller may recover damages for breach based on difference between contract price and market price, or in some cases based on lost profits.
Goods Are in Buyer's Possession	1. Seller may recover purchase price. 2. Seller may reclaim goods in possession of insolvent buyer by making a demand within 10 days after their receipt. If the buyer represented solvency to the seller in writing within three months before delivery, the 10-day limitation does not apply.
Goods Are in Transit	1. Seller may stop any size shipment if buyer is insolvent. 2. Seller may stop carload, truckload, planeload, or other large shipment for reasons other than buyer's insolvency.

Seller's Right to Stop Delivery

If the seller discovers that the buyer is insolvent, he has the right to stop the delivery of any goods that he has shipped to the buyer, regardless of the size of the shipment. If a buyer repudiates a sales contract or fails to make a payment due before delivery, the seller has the right to stop delivery of any large shipment of goods, such as a carload, a truckload, or a planeload [2–705].

To stop delivery, the seller must notify the carrier or other bailee in time for the bailee to prevent delivery of the goods. After receiving notice to stop delivery, the carrier or other bailee owes a duty to hold the goods and deliver them as directed by the seller. The seller is liable to the carrier or other bailee for expenses incurred or damages resulting from compliance with his order to stop delivery. If a nonnegotiable document of title has been issued for the goods, the carrier or other bailee does not have a duty to obey a stop-delivery order issued by any person other than the person who consigned the goods to him [2–705(3)].

Liquidated Damages

If the seller has justifiably withheld delivery of the goods because of the buyer's breach, the buyer may recover any money or goods he has delivered to the seller over and above the agreed amount of liquidated damages. If there is no such agreement, the seller may not retain an amount in excess of $500 or 20 percent of the value of the total performance for which the buyer is obligated under the contract, whichever is smaller. This right of restitution is subject to the seller's right to recover damages under other provisions of the Code and to recover the amount of value of benefits received by the buyer directly or indirectly by reason of the contract [2–718].

Buyer's Remedies

Buyer's Remedies in General

A seller may breach a contract in a number of ways. The most common are: (1) failing to make an agreed

delivery, (2) delivering goods that do not conform to the contract, and (3) indicating that he does not intend to fulfill the obligations under the contract.

A buyer whose seller breaks the contract is given a number of alternative remedies. These include:

- Buying other goods (covering) and recovering damages from the seller based on any additional expense that the buyer incurs in obtaining the goods [2–712].
- Recovering damages based on the difference between the contract price and the current market price of the goods [2–713].
- Recovering damages for any nonconforming goods accepted by the buyer based on the difference in value between what the buyer got and what he should have gotten [2–714].
- Obtaining specific performance of the contract where the goods are unique and cannot be obtained elsewhere [2–716].

In addition, the buyer can in some cases recover consequential damages (such as lost profits) and incidental damages (such as expenses incurred in buying substitute goods).

Buyer's Right to Cover

If the seller fails or refuses to deliver the goods called for in the contract, the buyer can purchase substitute goods; this is known as cover. If the buyer does purchase substitute goods, the buyer can recover as damages from the seller the difference between the contract price and the cost of the substitute goods [2–712]. For example, Frank Farmer agrees to sell Ann's Cider Mill 1,000 bushels of apples at $10 a bushel. Farmer then refuses to deliver the apples. Cider Mill can purchase 1,000 bushels of similar apples, and if it has to pay $11 a bushel, it can recover the difference ($1 a bushel) between what it paid ($11) and the contract price ($10). Thus, Cider Mill could recover $1,000 from Farmer.

The buyer can also recover any incidental damages sustained, but must give the seller credit for any expenses saved. In addition, he may be able to obtain consequential damages. The buyer is not required to cover, however. If he does not cover, the other remedies under the Code are still available [2–712].

The case that follows, *KGM Harvesting Co.,* illustrates a situation where the aggrieved buyer chose to seek damages based on its cost of cover from the defaulting seller.

KGM Harvesting Co. v. Fresh Network *26 UCC Rep.2d 1028 (Cal. App. 1995)*

KGM Harvesting Company, a California lettuce grower and distributor, and Fresh Network, an Ohio lettuce broker, began dealing with each other in 1989, and over the years the terms of the agreement were modified. As of May 1991, their agreement called for KGM to deliver 14 "loads" of lettuce a week at a price of 9 cents a pound. A load of lettuce consists of 40 bins, each of which weighs 1,000 to 1,200 pounds. At an average bin weight of 1,100 pounds, one load would equal 44,000 pounds, and the 14 loads called for in the contract would weigh 616,000 pounds. At 9 cents per pound, the cost would be approximately $55,440 per week.

Fresh Network, in turn, resold all of the lettuce to another broker (Castellani Company) who sold it to Club Chef, a company that chopped and shredded it for the fast food industry (specifically, Burger King, Taco Bell, and Pizza Hut). The transactions between Fresh Network and Castellani, and in turn between Castellani and Club Chef, were on a cost-plus basis. This meant each paid its buyer its actual cost plus a small commission.

In May and June 1991, when the price of lettuce went up dramatically, KGM refused to supply Fresh Network with lettuce at the contract price of 9 cents per pound. Instead, it sold the lettuce to others at a profit between $800,000 and $1,100,000. Fresh Network then went out on the open market and purchased lettuce to satisfy its obligations to Castellani Company. Castellani covered all of Fresh Network's extra expense except for $70,000. Fresh Network then sought to recover from KGM as damages the difference between what it was forced to spend to buy replacement lettuce and the contract price of 9 cents a pound (approximately $700,000). KGM objected on the grounds that Fresh Network had been able to pass some of the increased cost along to Castellani.

Cottle, Presiding Judge Section 2–711 of the California Uniform Commercial Code provides a buyer with several alternative remedies for a seller's breach of contract. The buyer can " 'cover' by making in good faith and without unreasonable delay any reasonable purchase of . . . goods in substitution for those due from the seller." Section 2–712(1). In that case, the buyer "may recover from the seller as damages the difference between the cost of cover and the contract price." Section 2–712(2). If the buyer is unable to cover or chooses not to cover, the measure of damages is the difference between the market price and the contract price. Section 2–713.

In the instant case, buyer "covered" in order to fulfill its own contractual obligations to the Castellani Company. Accordingly, it was awarded the damages called for in cover cases—the difference between the contract price and the cover price.

In appeals from judgments rendered pursuant to section 2–712, the dispute typically centers on whether the buyer acted in "good faith," whether the "goods in substitution" differed substantially from the contracted for goods, whether the buyer unreasonably delayed in purchasing substitute goods in the mistaken belief the price would go down, or whether the buyer paid too much for the substitute goods.

In this case, however, none of these typical issues is in dispute. Seller does *not* contend that buyer paid too much for the substitute lettuce or that buyer was guilty of "unreasonable delay" or lack of "good faith" in its attempt to obtain substitute lettuce. Nor does seller contend that the lettuce purchased was of a higher quality or grade and therefore not a reasonable substitute.

Instead, seller takes issue with section 2–712 itself, contending that despite the unequivocal language of section 2–712, a buyer who covers should not *necessarily* recover the difference between the cover price and the contract price. Seller points out that because of buyer's "cost plus" contract with Castellani Company, buyer was eventually able to pass on the extra expenses (except for $70,000) occasioned by seller's breach and buyer's consequent purchase of substitute lettuce on the open market. It urges this court under these circumstances not to allow buyer to obtain a "windfall."

The basic premise of contract law is to effectuate the expectations of the parties to the agreement, to give them the "benefit of the bargain" they struck when they entered into the agreement. In this case, the damage formula of section 2–712 put buyer in the identical position performance would have: it gave buyer the contracted for 14 loads of lettuce with which to carry on its business at the contracted for price of 9 cents per pound.

Despite the obvious applicability and appropriateness of section 2–712, seller argues in this appeal that the contract-cover differential of section 2–712 is inappropriate in cases, as here, where the aggrieved buyer is ultimately able to pass on its additional costs to other parties. Seller contends that section 1–106's remedial injunction to put the aggrieved party "in as good a position as if the other party had fully performed" demands that all subsequent events impacting on *buyer's* ultimate profit or loss be taken into consideration (specifically, that buyer passed on all but $70,000 of its loss to Castellani Company, which passed on all of its loss to Club Chef, which passed on most of its loss to its fast food customers).

No section 2–712 case has ever held that cover damages must be limited by section 1–106. The obvious reason is that the cover-contract differential puts a buyer who covers in the exact same position as performance would have done. This is precisely what is called for in section 1–106. In this respect, the cover/contract differential of section 2–712 is very different than the market/contract differential of section 2–713, which need bear no close relation to the buyer's actual loss.

Judgment affirmed for Fresh Network.

Incidental Damages

Incidental damages include expenses that the buyer incurs in receiving, inspecting, transporting, and storing goods shipped by the seller that do not conform to those called for in the contract. Incidental damages also include any reasonable expenses or charges that the buyer has to pay in obtaining substitute goods [2–715(1)].

Consequential Damages

In certain situations, an injured buyer is able to recover consequential damages, such as the buyer's lost profits caused by the seller's breach of contract. The buyer must be able to show that the seller knew or should have known at the time the contract was made that the buyer would suffer special damages if the seller did not perform

his obligations. In case of commercial loss, the buyer must also show that he could not have prevented the damage by obtaining substitute goods [2–715(2)(a)].

Suppose Knitting Mill promises to deliver 15,000 yards of a special fabric to Dorsey by September 1. Knitting Mill knows that Dorsey wants to acquire the material to make garments suitable for the Christmas season. Knitting Mill also knows that in reliance on the contract with it, Dorsey will enter into contracts with department stores to deliver the finished garments by October 1. If Knitting Mill fails to deliver the fabric or delivers the fabric after September 1, it may be liable to Dorsey for any consequential damages that she sustains if she is unable to acquire the same material elsewhere in time to fulfill her October 1 contracts.

Consequential damages can also include an injury to a person or property caused by a breach of warranty [2-715(2)(b)]. For example, an electric saw is defective. Hanson purchases the saw, and while he is using it, the blade comes off and severely cuts his arm. The injury to Hanson is consequential damage resulting from a nonconforming or defective product.

Damages for Nondelivery

If the seller fails or refuses to deliver the goods called for by the contract, the buyer has the option of recovering damages for the nondelivery. Thus, instead of covering, the buyer can get the difference between the contract price of the goods and their market price at the time he learns of the seller's breach. In addition, the buyer may recover any incidental damages and consequential damages, but must give the seller credit for any expenses saved [2–713].

Suppose Biddle agreed on June 1 to sell and deliver 1,500 bushels of wheat to a grain elevator on September 1 for $7 per bushel and then refused to deliver on September 1 because the market price was then $10 per bushel. The grain elevator could recover $4,500 damages from Biddle, plus incidental damages that could not have been prevented by cover.

Damages for Defective Goods

If a buyer accepts defective goods and wants to hold the seller liable, the buyer must give the seller notice of the defect within a reasonable time after the buyer discovers the defect [2–607(3)]. Where goods are defective or not as warranted and the buyer gives the required notice, he can recover damages. The buyer is entitled to recover the difference between the value of the goods received and the value the goods would have had if they had been as warranted. He may also be entitled to incidental and consequential damages [2–714].

For example, Al's Auto Store sells Anders an automobile tire, warranting it to be four-ply construction. The tire goes flat when it is punctured by a nail, and Anders discovers that the tire is really only two-ply. If Anders gives the store prompt notice of the breach, she can keep the tire and recover from Al's the difference in value between a two-ply and a four-ply tire.

The *Jetpac* case, which follows, illustrates the damages available to a buyer who received defective goods.

Jetpac Group, Ltd. v. Bostek, Inc. *942 F. Supp. 716 (D.Mass. 1996)*

Jetpac Group, Ltd., is an export/import company based in Shreveport, Louisiana. Formed in 1988, Jetpac's business generally involves selling food products, such as frozen chicken, in various countries around the world, including Russia. In 1992, it partnered with Natashquan Korotia Systems (NKS), a Canadian company headed by a former citizen of what had been the Soviet Republic of Georgia. NKS held a contract to sell 3,000 computers—in a configuration known as "Russian 286s"—to a buyer in Russia at a price of $1,050 per unit.

Jetpac contacted Bostek, Inc., a Hanover, Massachusetts, supplier of computer hardware and software that, among other things, built integrated systems to consumers' specifications, buying the components from various sources and then assembling them. On June 11, 1992, Jetpac and Bostek agreed that Bostek would build a "test shipment" of 100 units that would be shipped to the Russian customer on June 15. Bostek's price was to be $630 per unit for this smaller production run; its quote for the larger number eventually desired was $605 per unit. The parties agreed on the components to be included in the computers, including a 286/16 motherboard, a 220 volt power supply, a VGA monitor, a mouse, and a Cyrillic/English keyboard. Bostek was

to ship the units directly to the customer in Russia with Jetpac paying the freight costs for shipping from Boston of $8,184. NKS and Jetpac were to split the profit on the Russian sale.

When the computers arrived in Russia, the customer notified NKS that there were significant problems. Not all the specified components were included; for example, no "mice" were shipped, although the specifications called for them. Some of the wiring in the central processing unit was either missing or disconnected. Further, the monitors did not switch automatically from 110 to 220 volts, and as a result, several of them "blew up" when initially switched on. When Jetpac's President went to Russia to meet with the very dissatisfied customer, he observed the wiring problems and when he tried to turn on five separate systems that had been in the shipment, only one booted up. In short, the "test shipment" that had been designed to impress the Russian customer and open the way to more sales was a disaster. In an effort—unsuccessful it turned out—to regain the customer's confidence, NKS and Jetpac bought and supplied the customer with another 200 units from another supplier.

The Russian customer refused to pay fully for the first shipment and refused to buy the balance of the 3,000 computers. Thus, reasonably probable sales of 2,700 computers at $1,050 were lost. NKS charged back to Jetpac its share of the shortfall on the first shipment ($23,517). Jetpac brought suit against Bostek, claiming damages for breach of warranty, consequential damages in the form of lost profits and incidental expense, including the cost of its president's travel to Moscow to try to mollify the unhappy customer and additional shipping expenses it incurred to get components to the customer that had been omitted from the initial shipment.

O'Toole, District Judge Jetpac and Bostek entered into a valid and binding contract for the sale of 100 computers conforming to the specifications set forth in the Bostek invoice of June 11, 1992. The contract was one for the sale of goods, and the implied warranty of merchantability imposed under the Uniform Commercial Code ("UCC") applied.

Bostek committed a breach of the contract by failing to furnish goods that conformed to the contract description. In addition, the goods furnished were defective, in breach of the warranty of merchantability.

For the breach of contract Jetpac is entitled to damages in the amount of any loss that resulted "in the ordinary course of events from the seller's breach as determined in any manner which is reasonable." [2–714(1)] For breach of the warranty, Jetpac is entitled to damages in the amount of the difference "between the value of the goods accepted and the value they would have had if they had been as warranted." [2–714(2)] In both cases, the damages can be determined by Jetpac's share of the loss incurred by NKS when the customer in Russia refused to pay the full price for the goods. Jetpac's share, as described above, was $23,517.

In addition, "[i]n a proper case any incidental and consequential damages under section 2–715 may also be recovered." Under section 2–715, recoverable consequential damages include "any loss resulting from general or particular requirements and needs of which the seller at the time of contracting had reason to know and which could not reasonably be prevented by cover or otherwise." [2–715(2)(a)]. Such damages include "prospective profits lost as the natural, primary and probable consequence of the breach."

In this case, Jetpak's president had told Bostek that the shipment of 100 computers was only the initial one in a prospective sale of 3,000 units to the buyer in Russia. Bostek thus had reason to know that a defective shipment could jeopardize that business opportunity and bring about a loss of the profits that could reasonably be earned if the full 3,000 units were to be shipped. To be sure, there was no assurance that for some other unforeseen reason the full 3,000 would not ultimately be sold. There was a firm contract for that number, however, and it is a reasonable inference that if the initial shipment had conformed to the contract specifications and the warranty of merchantability, the contract would have been fulfilled. Damages cannot be assessed upon conjecture or surmise, but by

the same token the reasonable prospect of damages—such as is shown by the existence of NKS's contract with the Russian buyer—should not be defeated by conjecture or surmise, either. The plaintiff's burden is not to demonstrate its damages with mathematical certainty but only to a "fair degree of certainty." The calculation of lost profits set forth above meets the test.

Jetpac is also entitled under section 2–715(1) to incidental damages, which include the increased shipping costs and the cost of its president's trip to Moscow to try to solve the problem caused by the defective goods and thus to mitigate potential damages.

Accordingly, on its claim of breach of contract, Jetpac is entitled to damages for the direct loss in the transaction in the sum of $23,517, for consequential damages for lost prospective profits in the sum of $148,500, and for incidental damages in the sum of $6,778.33, for a total of $178,795.33.

Judgment for Jetpac affirmed.

Buyer's Right to Specific Performance

Sometimes, the goods covered by a contract are unique and it is not possible for a buyer to obtain substitute goods. When this is the case, the buyer is entitled to specific performance of the contract.

Specific performance means that the buyer can require the seller to give the buyer the goods covered by the contract [2–716]. Thus, the buyer of an antique automobile such as a 1910 Ford might have a court order the seller to deliver the specified automobile to the buyer because it was one of a kind. On the other hand, the buyer of grain in a particular storage bin could not get specific performance if he could buy the same kind of grain elsewhere.

Buyer and Seller Agreements as to Remedies

As mentioned earlier in this chapter, the parties to a contract may provide remedies in addition to or as substitution for those expressly provided in the Code [2–719]. For example, the buyer's remedies may be limited by the contract to the return of the goods and the repayment of the price or to the replacement of nonconforming goods or parts. However, a court looks to see whether such a limitation was freely agreed to or whether it is unconscionable. In the latter case, the court does not enforce the limitation and the buyer has all the rights given to an injured buyer by the Code.

The *Baker* case, which follows, involves a situation where a merchant was unsuccessful in seeking to restrict an aggrieved buyer's efforts to recover the purchase price paid for defective goods.

Baker v. Burlington Coat Factory Warehouse

34 UCC Rep.2d 1052 (N.Y. City Ct. 1998)

Catherine Baker purchased a fake fur coat from the Burlington Coat Factory Warehouse store in Scarsdale, New York, paying $127.99 in cash. The coat began shedding profusely, rendering the coat unwearable. The shedding was so severe that Baker's allergies were exacerbated, necessitating a visit to her doctor and to the drugstore for a prescription.

She returned the coat to the store within two days and demanded that Burlington refund her $127.99 cash payment. Burlington refused, indicating that it would give her a store credit or a new coat of equal value, but no cash refund. Baker searched the store for a fake fur of equal value and found none. She refused the store credit, repeated her demand for a cash refund, and brought a lawsuit against Burlington when it again refused to make a cash refund.

In its store, Burlington displayed several large signs which stated, in part,

WAREHOUSE POLICY
Merchandise, in New Condition, May be Exchanged Within 7 Days of Purchase for Store Credit and Must be Accompanied by a Ticket and Receipt. No Cash Refunds or Charge Credits.

On the front of Baker's sales receipt was the following language:

Holiday Purchases May be Exchanged Through January 11th, 1998, In House Store Credit Only No Cash Refunds or Charge Card Credits.

On the back of the sales receipt was the following language:

We will be Happy to Exchange Merchandise in New Condition Within 7 Days When Accompanied By Ticket and Receipt. However, Because of Our Unusually Low Prices: No Cash Refunds or Charge Card Credits Will Be Issued. In House Store Credit Only.

At the trial, Baker claimed that she had not read the language on the receipt and was unaware of Burlington's No Cash Refunds policy.

Dickerson, Judge Under most circumstances retail stores in New York State are permitted to establish a no cash and no credit card charge refund policy and enforce it. Retail Store refund policies are governed, in part, by New York General Business Law section 218–a, Disclosure of Refund Policies, which requires conspicuous signs on the item or at the cash register or on signs visible from the cash register or at each store entrance, setting forth its refund policy including whether it is "in cash, or as credit or store credit only." If the store violates GBL section 218–a, the consumer has twenty days to return "merchandise (which) has not been used or damaged."

Baker returned the undamaged and unworn, albeit shedding, Fake Fur to Burlington Coat within two days of purchase thus coming within Burlington Coat's "7 Days of Purchase" policy and within the twenty-day claim filing period in GBL 218–a(3). Although Baker professed ignorance of Burlington Coat's refund policy, the Court finds that Burlington Coat's signs and the front and back of its sales receipt reasonably inform consumers of its no cash and no credit card charge refund policy.

Notwithstanding its visibility Burlington Coat's no cash and no credit card charge refund policy as against Baker is unenforceable. Stated simply, when a product is defective as was Baker's common and, hardly unique, shedding Fake Fur, Burlington Coat cannot refuse to return the consumer's payment whether made in cash or with a credit card.

UCC section 2–314 mandates that "a warranty that the goods shall be merchantable is implied in a contract of their sale if the seller is a merchant with respect to goods of that kind . . . (2) Goods to be merchantable must be . . . fit for the ordinary purposes for which such goods are used" [UCC section 2–314]. Should there be a breach of the implied warranty of merchantability then consumers may recover all appropriate damages including the purchase price in cash [UCC section 2–714]. The court finds that Burlington Coat sold Baker a defective and unwearable Fake Fur and breached the implied warranty of merchantability. Baker is entitled to the return of her purchase price of $127.99 in cash and all other appropriate damages. However, Baker's claim for the $15.00 co-pay for visiting her doctor and the cost of allergy medicine is denied. Baker admitted having allergies, but it is not clear that the Fake Fur exacerbated those allergies.

As between the implicit cash refund policy contained in UCC sections 2–314 and 2–714, the no cash refund policy explicitly authorized in GBL section 218–a(2), the UCC provisions are paramount and preempt any contrary provisions in GBL 218–a. To hold otherwise would allow a merchant whether in good faith or otherwise, to place in commerce a defective product and merely give credit exchange upon (the product's return).

Judgment for Baker.

Concept Review

Buyer's Remedies (on breach by seller)

Problems	Buyer's Remedy
Seller Fails to Deliver Goods or Delivers Nonconforming Goods That Buyer Rightfully Rejects or Justifiably Revokes Acceptance Of	1. Buyer may cancel the contract and recover damages. 2. Buyer may "cover" by obtaining substitute goods and recover difference between contract price and cost of cover. 3. Buyer may recover damages for breach based on difference between contract price and market price.
Seller Delivers Nonconforming Goods That Are Accepted by Buyer	Buyer may recover damages based on difference between value of goods received and value of goods if they had been as warranted.
Seller Has the Goods but Refuses to Deliver Them and Buyer Wants Them	Buyer may seek specific performance if goods are unique and cannot be obtained elsewhere, or buyer may replevy (obtain from the seller) goods identified to contract if buyer cannot obtain cover.

Ethical and Public Policy Concerns

1. Problem case 6 involves the sale of a yacht as new that previously had sunk in salt water. How would you assess the ethicality of the representations made by the salesperson to the purchaser in response to his question? In a case like this, should it be incumbent on a purchaser to ask the "right" questions in order to protect himself, or should there be an ethical obligation on the seller to disclose voluntarily material facts that may be relevant to the purchaser making an informed decision?

2. Suppose you own an automobile dealership. The manufacturer whose cars you sell produces a limited edition of a particular model, sets a sticker price of $60,000 on it, and makes only two of the cars available to you. You agree to sell one of the cars to a customer for $60,000. Before you deliver the car, another customer, who collects rare and classic cars, offers you a $30,000 per car premium over the sticker price if you will sell both cars to him. Would you accept his offer? What ethical considerations are involved in making your decision?

Problems and Problem Cases

1. Lobianco contracted with Property Protection, Inc., for the installation of a burglar alarm system. The contract provided in part:

> Alarm system equipment installed by Property Protection, Inc., is guaranteed against improper function due to manufacturing defects of workmanship for a period of 12 months. The installation of the above equipment carries a 90-day warranty. The liability of Property Protection, Inc., is limited to repair or replacement of security alarm equipment and does not include loss or damage to possessions, persons, or property.

As installed, the alarm system included a standby battery source of power in the event that the regular source of power failed. During the 90-day warranty period, burglars broke into Lobianco's house and stole $35,815 worth of jewelry. First, they destroyed the electric meter so that there was no electric source to operate the system, and then they entered the house. The batteries in the standby system were dead, and thus the standby system failed to operate. Accordingly, no outside siren was activated and a telephone call that was supposed to be triggered was not made. Lobianco brought suit, claiming damage in the amount of her stolen jewelry because of the failure of the alarm system to work properly. Did the disclaimer effectively eliminate any liability on the alarm company's part for consequential damages?

2. On April 11, 1984, Neville Riley purchased a new Chevrolet Camaro from a Chevrolet dealer in Boston, Massachusetts. The car came equipped with a hydraulic jack that was designed, manufactured, and sold by General Motors. The Camaro and jack subsequently
